According to the Regulations, the Authorities will allow discharge ballast water into the sea subject to the oil content of the ballast wat being less than 10 p.p.m. However, as a matter of fact, any ballast wat loaded in cargo tanks is not allowed to be discharged into sea for th reason that the Master cannot give them any evidence of the oil conte of the ballast water.

Therefore, there is no necessity for cleaning cargo tanks for ballastin purpose.

Customs Allowances: Ship's bonded stores are not sealed. No limitatio to cigarettes or wine/spirit for use on board.

Identification Cards: Shore leave is granted from sunrise to midnight Shore passes are issued by the Immigration Officer.

Crew members going ashore must carry the shore passes togeth with their Passports or Discharge Books.

There is a seamen's club with a Chinese restaurant and some souvenir shops. Bus service is also available between the terminal and the seamen's club.

Cargo: The crude oil shipped at this terminal is the Daqing Crude. The properties of Daqing Crude which the vessel loaded in September 1980 at this terminal were as follows:

a)	API	32.84
b)	Temperature of cargo loaded	41.0°C. (106.0°F)
c)	Pour point	24.0° – 25.0°C (77.0°F)

Cargo heating may be required.

Loading:

Berth	Size of arm flange	Number of arm
No. 1	12 in.	5
No. 2	12 in.	3

Max. loading rate is reported to be about 7,000 t.p.h. using 3 arms.

Notice of Readiness will be accepted at the time of completion of the general examination.

Agent: China Ocean Shipping Agency, Dalian Branch (Penavico Dalian).

Provisions: Available at a low price. Ship chandler will be arranged by the Agent.

SHIPMASTER'S REPORT: April, 1984.

I made a port call at Dalian in April 1984 and found after anchoring without Pilot that I had made a wrong passage in the channel, switching off radar, etc. in accordance with previous regulations.

There is now no restrictions or prohibitions on using navigational aids in the harbour.

When entering the Inner Harbour Anchorage without Pilot it is important for the Master, on the first visit, to know that there is a Traffic Separation Scheme and it is sometimes congested with vessels.

SHIPMASTER'S REPORT: October, 1984.

Master received following telex from Dalian Agent:

"When entering Dalian Harbour you must pass through Dasanshan Channel and navigate within Right Traffic Lane of Traffic Separation Scheme.

Separation Zone, 0.3 nautical miles wide, is centred upon following geographical positions:

Lat. 38° 51′ 00″ N., Long. 121° 46′ 12″ E.
Lat. 38° 54′ 24″ N., Long. 121° 46′ 12″ E.

Separation Lane is connecting following:

Lat. 38° 55′ 00″ N., Long. 121° 46′ 12″ E.
Lat. 38° 57′ 00″ N., Long. 121° 46′ 12″ E.

and turn into Ganjingzi Channel at Light Buoy H2 (Lat. 38° 57′ 21″ N., Long. 121° 46′ 12″ E.) then enter into Quarantine Anchorage:

Lat. 38° 59′ 08″ N., Long. 121° 42′ 30″ E.,
Lat. 38° 57′ 39″ N., Long. 121° 42′ 30″ E.,
Lat. 38° 57′ 39″ N., Long. 121° 45′ 00″ E.,
Lat. 38° 59′ 08″ N., Long. 121° 45′ 00″ E.

The East Boundary Line between the Separation Lane and the Inshore Traffic Zone is:

Lat. 38° 51′ 00″ N., Long. 121° 48′ 30″ E.,
Lat. 38° 54′ 24″ N., Long. 121° 48′ 00″ E.".

SHIPMASTER'S REPORT: December 1986.

Documents: Only 1 copy of each document required except for Crew List (6 required). Refused to accept 'Marine Declaration of Health' as it was in English only. All documents had to be in Chinese/English – all available from Agent as well as 'application' forms (de-ballast, postage, etc.). Main papers were Customs Declaration (including Foreign Currency List) Vaccination List, and 'normal' ship's papers. (Register, Derat, etc.).

Officials: Boarded by 'Joint Inspection Team', which consists of 8 people (Immigration, Customs, Port Authority and Agent).

Bond sealed by Customs and unsealed prior to sailing, when the 'Joint Inspection Team' clears the vessel for sailing.

Anchorage: Instructed by Agent to anchor in 'Tanker Quarantine Anchorage' (North of fairway). No problems encountered in entering, buoys in position, but lights rather weak.

No. 1 General Cargo Anchorage very crowded with small vessels.

Unable to contact Port Radio (VHF) on entering and had to wait until following morning.

All vessels are visited at anchor; possibly in order of arrival.

Radio Station: Receives and transmits as per ALRS; but not very good at answering on H/F. Once within M/F range, Radio Officer reported the station as reasonable.

Berth: Vessel berthed starboard side to Pier No. 1, which has a maximum draft of 9.5 m. Pier No. 2, to the East, is believed to be restricted to 8.7 m.

Cargo: 18,000 tonnes of gas oil. Pumping rate: 750 t.p.h. – 800 t.p.h.

Shore Leave: No apparent restrictions, except that all crew have to be back onboard by midnight. Shore pass and Passport/CDC book to be carried when going ashore.

Local Seaman's Club and Friendship Store will change any foreign currency.

Taxis to and from club or store apparently paid for by them; from elsewhere taxis appeared to be a little expensive.

SHIPMASTER'S REPORT: January 1987.

Vessel: 105,000 d.w.tonnes with segregated ballast tanks.

Berth: No. 1 Berth.

Max. Draft Allowed: 15.0 m.

Loading: The shore loading rate was given as 2,000 tonnes p.h./boom. This was an optimistic estimate as we received at a maximum rate of 5,200 tonnes p.h. with 4×12 in. booms connected. This decreased to about 4,000 tonnes p.h. when a vessel was loading at Berth No. 2.

Ballast: During entry formalities, the Harbour Master checked the Oil Record Book and the Deck Log Book to confirm where the ballast was shipped. Any ballast taken in Singapore or the Malacca area is considered 'infected' and must be discharged ashore.

Mooring Wires: Vessel is fitted with mooring wires and this caused a delay when sailing as there were not enough personnel to heave in sufficient slack to let go.

Shore Leave: A minibus is available to take personnel ashore to the International Seaman's Club and times are organised to suit ship's staff. For 8 round trips during the vessel's stay the charge was approximately £7 and the journey takes about 10 minutes. Local cash is available but almost any currency can be used at the Seaman's Club, where there is a bar/restaurant, shop and facilities for International telephone calls (£2.00 per minute to the U.K.)

Documents: Discharge Books only were checked by Immigration Officials on arrival, no passports or vaccination cards were required.

AUTHORITY: Port of Dalian Authority, 1 Gangwan Street, Zhongshan District, Dalian, China. *Tel:* 237873, 222824. *Telex:* 86246 DHAB CN. *Contact:* Shen Chun, Deputy Director.

AGENT: See "Shanghai".

DANDONG: 40.08 N. 124.20 E.

LOCATION: *Langtou Port District:* 40° 07′ N., 124° 09′ 02″ E.
Dandong Port District: 39° 49′ 05″ N., 124° 09′ 02″ E.

PILOTAGE: Pilotage is compulsory and is undertaken day and night. For Dandong Port District, Pilot boards at the Quarantine Anchorage. For Langtou Port District, Pilot boards at Jiangkou Anchorage.

ANCHORAGES:

Name	*Depth of Water* (m.)	*Max. size of Vessel* tons	*Use of Anchorage*
Jiangkou	8.0-10.0	10,000	Shelter
Langtou	4.0- 5.0	1,000	Waiting
Donggang	8.0-13.0	10,000	Lightering
Quarantine	over 10.0	10,000	Quarantine
Dandong	9.0-10.0	10,000	Quarantine

RESTRICTIONS: Max. draft in the channel 6.3 m.-8.0 m.

VHF: Radio Station 'XSB 48' maintains a 24 hour service. Calling on Channel 16 and working on Channel 11.

TUGS: 1×40 h.p., 1×600 h.p. and 1×900 h.p.

BERTHING:

Name of District	*No. of Berth*	*Length* (m.)	*Depth* (m.)	*Use*
Langtou	No. 1	68	5.2	Grain
	No. 2	122	8.2	Grain
	No. 3	126	8.2	Metal
Dandong	No. 1	198	10.0	Metal and Coal
Old Berth	–	68	5.2	General Cargo

REPAIRS: Facilities available for carrying out repairs.

FANGCHENG: 21.31 N. 108.20 E. (See Plan)

PILOTAGE: Compulsory. Pilotage is undertaken day and night, subject to tidal variation. The pilot boards from a tug which flashes its lights when approaching the vessel. The boarding place is 1 mile South of the Quarantine Light Buoy.

ANCHORAGE: *Quarantine Anchorage:* A Quarantine Anchorage has been established in position Lat. 21° 27′ 56″ N., Long. 108° 21′ 13″ E. The anchorage can accept vessels up to 25,000 d.w.t. Nature of bottom is mud and sand.

RESTRICTIONS: There is a depth of 5.8 m. on the bar. The channel has a minimum width of 80 m. and is dredged to a minimum depth of 7.4 m. The channel is 7.5 miles long and is marked by light buoys and leading light beacons. The width of the turning basin off the berths is 1,200 ft.

Vessels may enter and sail after sunset.

MAX. SIZE: Maximum draft 9.5 m.

VHF: Port Radio Station on Channel 16 throughout 24 hours.

TUGS: 1 × 2,600 h.p., 1 × 1,200 h.p. and 2 × 600 h.p.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Cargo Handled*
No. 1	180	9.0	General Cargo
No. 2	180	9.0	General Cargo
No. 3	180	9.6	Heavy Cargo
No. 4	180	9.6	Grain
No. 5	180	9.6	Cement
No. 6	205	10.6	Coal or Ore
No. 7	205	10.6	Coal or Ore

CRANES: Berth No. 1: 2 × 10 ton.
2: 2 × 10 ton.
3: 2 × 10 ton.
4: 2 × 10 ton.
5: 2 × 10 ton.

FRESH WATER: Available, contact China Marine Bunker Supply Co.

FUEL: Available, contact China Marine Bunker Supply Co.

REPAIRS: No facilities.

GENERAL: *Floating Cranes:* None available.
Provisions: Available. Contact China Shipping Supply Corporation.
Cargoes Handled: Sugar, coal, grain, fertiliser, cement, ore, timber, steel and general cargo.
Storage:
Warehouse: 4,500 sq.m.
Open storage space: 200,000 sq.m.
DEVELOPMENTS: Upon completion of the port modernisation program, 54 berths will be available for handling of vessels up to 50,000 d.w.t.

SHIPMASTER'S REPORT: March 1989.
Location: The port is located in position Lat. 21° 37′ N., Long. 108° 20′ E. It is a small port at the end of a dredged channel which is 7 miles long and 80 m. wide.
Formalities: Customs, Immigration and Health Officials board on arrival, together with the Agent. We prepared ships papers in advance of arrival and all were accepted, except for the Crew List which has to be made out on Chinese forms. The Agent will deliver Chinese clearance forms and assist with completing them.

Shore passes are issued for each crew member and are collected prior to departure. The port rules are also handed over to the Master and these again are collected prior to departure.

The bonded store was sealed by Customs but the beer store is left unsealed.
Pilotage: The Pilot boards the vessel from a tug, one mile South of the pilot buoy. There are 4 pilots available at the port.

On arrival the vessel should call Fangcheng Radio on VHF Channel 16, who will connect the vessel with the pilot office, after which the vessel may communicate with the pilot station on VHF Channel 16. The language of communication is English and no difficulties were encountered.
Pilot Ladder: No special requirements.
Approaches: The charts used on our visit were B.A. Chart No. 3990 and Chinese Chart Nos. 16791 and 16792.

No difficulties were encountered on our approach, Cape Pak Loung is a good radar target and the yellow pilot buoy is visible at 5 miles on the radar.
Channel: The Channel is marked by light buoys and leading lights and has a width of 80 m. Vessels with a draft of 7.0 m. may use the Channel at any time day or night.
Anchorage: Quarantine Anchorage: A Quarantine Anchorage has been established between parallels of 21° 21.5′ N. and 21° 28′ N., and the meridians of 108° 20′ E. and 108° 26′ E. This anchorage is not marked on B.A. Chart No. 3990.

We anchored on the Northern border of this anchorage, which was 2 miles to the South of the pilot buoy. The depth of water is approximately 16.0 m. and nature of the bottom is mud and sand.
Tide: Most arriving vessels have to anchor, due to the tidal situation. The tidal range is about 4.0 m.
Max. Size: The port can accommodate vessels up to LOA 185 m.

Vessels up to LOA 210 m. may be accepted if the Agent seeks Harbour Master's approval.

The maximum permissible draft on the highest tide is 11.0 m. If a vessel has a draft greater than 11.0 m. it may be lightened in the outer roads if advanced notice is given to the Agent.
Tugs: There are 4 tugs available, of which 2 are powerful tugs of international standard. When berthing alongside the tugs use their own lines and make fast fore and aft.
Berthing: The port of Fangcheng has 7 berths. Berths No. 1 and 2 have a depth of 8.0 m. and Berths No. 3 – 7 have a depth of 9.0 m. – 10.0 m. at lowest low water.

All berths are fitted with rubber spring fenders and at high water they are below the water surface.
Stevedores: Work is carried out throughout 24 hours in 3 shifts (0800 hrs. – 1600 hrs., 1600 hrs – 2400 hrs. and 2400 hrs. – 0800 hrs.). Meal hours are 0400 hrs. – 0500 hrs., 1130 hrs. – 1300 hrs. and 1930 hrs. – 2100 hrs. The gangs consist mainly of labourers from farms and mines.
Cranes: There are 10 cranes of 10 tons capacity which are available at all berths.
Medical: Medical facilities and doctors available locally.
Fresh Water: Fresh water is available. As the water is not frequently used by vessels, the first water in the line is very rusty and may take as long as one hour before clear water is running. Fresh water is also available by barge at the outer roads on request.
Fuel: Fuel is available by barge from other ports in an emergency but it is very expensive.
Watchmen: There are 2 watchmen (Immigration Officers) on board day and night.
Surveyors: No surveyors available locally. If required Lloyd's and ABS can provide surveyors from Hong Kong.

Local surveyors for bunkers or off-hire surveys can be ordered from nearby Chinese ports.
Repatriation: Possible. Information should be provided to the Agent when the vessel is alongside.
Airport: Nanning Airport is approximately 180 km. from the port by bus.
Time: GMT plus 8 hours. In Summertime from April 21st to September 22nd, clocks are advanced one hour.
Shore Leave: Possible. Shore passes and passports must be carried when going ashore.
General:
Seaman's Club: There is a Seaman's Club locally from which overseas telephone calls may be made.
Telephone/Telex: Available in the Agent's office. Connections to foreign countries are made through the operator, waiting time of 30 minutes or more can be expected. Within the next year or so a direct dialling system will be established.
Garbage: Form for garbage removal is signed by the Master on arrival. Garbage will be removed daily by the collector and should be in plastic bags.
Ship Chandler: The ship chandler boards on request with a price lis and speaks good English.
Laundry: Laundry service is available and is handled by the shi chandler.
Currency: The currency is the Yuan. The official rate of exchange i March 1989 was 3.62 Yuan to U.S. $1.00.
Imports: Grain, fertiliser and raw sugar.
Exports: Manganese ore, coal, bauxite, cement and refined sugar.
Agent: PENAVICO (China Ocean Shipping Agency). The Agent speak good English and was very helpful in every respect.

FUZHOU (Foochow): 26.03 N. 119.18 E.

PILOTAGE: Compulsory. Pilot available between 0400 hrs. an 2000 hrs. Pilot boards vessel in the anchorage (position: Lat 26° 07′ 44″ N., Long. 119° 38′ 44″ E.).
ANCHORAGE: Tingjing Guantou Anchorage has a depth o 6.0 m. – 12.0 m. and accepts vessels up to 20,000 d.w.t.
MAX. SIZE: Max. draft in channel is 8.0 m. at LW and 8.5 m. at HW. Tidal range: 6.0 m. maximum and 3.5 m. minimum.
VHF: Port radio on Channel 16 throughout 24 hours.
TUGS: 1 × 600 h.p., 1 × 900 h.p., 1 × 1,600 h.p., 1 × 2,300 h.p. an 1 × 3,200 h.p.
BERTHING:

District	*Berth No.*	*Length (m.)*	*Depth (m.)*	*Use*
Ma Wei	1	592	9.0	General Cargo
	2		9.0	General Cargo
	3		7.0	Passenger
	4		7.0	Container
Tai Jiang	—	80 + 30	4.0	General Cargo

CRANES: 1 floating crane of 35 tons capacity.

Ma Wei:	Berth No. 1	4 × 10 tons
	2	6 × 16 tons
	3	10 × 8 tons
	4	8 × 8 tons
Tai Jiang		1 × 4.5 tons
		3 × 3.8 tons

FRESH WATER: Contact Xia Mean Hua Hang Co.
FUEL: Contact Xia Mean Hua Hang Co.
REPAIRS: Facilities available.
GENERAL:
Provisions: Contact China Ocean Shipping Supply Co.
Storage: Warehouse: 5,500 sq.m. Open storage: 5,700 sq.m. Containe storage: 4,000 sq.m. – 30,000 sq.m.
Imports: Cement, fertiliser, rice, coal and general cargo.
Exports: General cargo and stone.

SHIPMASTER'S REPORT: July 1985 (Updated 1990).
Documents: Documents required are same as for other Chinese Ports 7 copies of Notice of Readiness must be provided. Inspection par boards with Agents and all formalities are carried out promptly Formalities include Port Health Inspection (granting of Quarantine) an Immigration and Customs clearance. 2 Police Officials remain on boar throughout until vessel's departure.
Pilotage: At Quarantine Anchorage 2 Pilots board, and the vessel i taken 5 miles up river to either Guantou Anchorage or a few miles furthe up river to Minan Anchorage.
Approach: From 5 miles S.W. of Baiquan Liedo pass around its S.W side and approach position Lat. 26° 06.22′ N., Long. 119° 52′ E. The turn West to cross bar at HW (daytime only). Set course 265.5°T agains Baiyun Shan leading lights. (These are visible clearly as white concret structures on hills in daytime at least 15 miles off). On reaching La 26° 05′ 37″ N., Long. 119° 41′ 40″ E. and 0.21 miles Southward of Buo No. 3 in position Lat. 26° 05′ 49″ N., Long. 119° 41′ 42″ E. alter cours to 308°T against Culudao leading lights. These leading lights are no marked on BA. Chart 2400. The forward light (white concrete structure is on Xifengshi Point in approximate position Lat. 28° 08.2′ N. Long 119° 38.3′ E. Thence approach Quarantine Anchorage centred on La 26° 07′ 42″ N., Long. 119° 38′ 44″ E. Whilst awaiting daylight HW vess can anchor in position Lat. 26° 06′ 30″ N., Long. 119° 50′ 00″ E. Ther is no restriction on use of Radar or echo sounder.
General: Vessel must cross bars and arrive at Quarantine Anchorag marked on BA. Chart 2400. Time of arriving at Quarantine Anchorag is time of Arrival at the Port. Pilots usually do not reply when called o VHF, however, Fuzhou Radio can be called on Channel 16 at any tim and asked to convey message to Pilots. Fuzhou Radio will also mak VHF contact with Penavico. Thus for any assistance Fuzhou Radio o VHF Channel 16 can be contacted at any time.

Authorities do not board at this anchorage, since it is far from Ma We Agents main Office is situated in Fuzhou City but their full Operatio Department is stationed in Ma Wei within the dock area. Fro Quarantine Anchorage vessel is Piloted to either Guantou or Mina waiting anchorage, about 12 miles and 6 miles respectively from M Wei. The Arrival formalities are carried out at these anchorages.
Restrictions: Navigation and all movements during daylight HW onl Max. draft 8.0 m. for going to Ma Wei. No navigation is possible beyon Ma Wei. If vessel is drawing more than 8.5 m. she can be lightened anchorage, but this will be difficult and cause delays due to shortage barges, etc. In any case maximum draft permissible is 8.5 m. Howev it is advisable not to load to more than 8.0 m. if complications are to avoided. Vessels of more than 180 m. length may find difficulties anchorages. Ideally vessels of 10,000 tons gross are suitable.
Note: If drawing more than 8.0 m., vessel should contact "Penavi Fuzhou" before arrival.

There are 2 spring tides each month. A draft of less than 9.0 m. can be handled at spring tides.

Prohibited area for Navigation is bounded by Beipiao Peninsular Lat. 26° 21′ N., Long. 119° 55′ E.; Mazuleidao Lat. 26° 09′ N., Long. 119° 55′ E.; Baiquan Liedo Lat. 25° 57′ N., Long. 119° 58′ E. and Tongyindao Lat. 26° 22′ N., Long. 120° 30′ E.

Radio: 48 hours and 24 hours Notices of Arrival must be sent via Fuzhou Radio. Call sign "XSL". Frequencies: MF-430 kHz all day, and HF-4343 kHz (1800 hrs. – 0600 hrs. local time) or 8598 kHz (0600 hrs. – 1800 hrs. local time) to "PENAVICO Fuzhou". All foreign vessels are handled by Penavico. They will reply with radio message giving tide times and arrival instructions which are similar to those found in BA. Pilot.

Berthing: Four ships can be berthed at Ma Wei. Berth No. 1 is suitable for ships drawing 7.5 m., other berths can accommodate vessels drawing 7.00 m. About 5 to 6 vessels can work at anchorages off Ma Wei. Discharge rate about 1,000 tons per day (Bags/about 4 gangs).

Cargo Gear: There are 4 cranes of about 5 tons capacity, one for each berth. Cargo work is mostly carried out with ship's derricks. There are several new mobile cranes, and new fork lifts capable of handling 20 ton containers. Cargo is discharged on to trailers and taken to storage sites or directly to railway wagons.

Stevedores: State controlled. Work is continuous in three shifts daily.

Medical: Hospitals situated very close to dock area with full facilities. Inoculations can be carried out.

Fresh Water: Laid on at wharf. Rate 50 t.p.h. Due to waiting period vessels must arrive with tanks full, and water must be rationed during waiting period. With difficulty water is supplied at anchorages by barge (capacity 60 tons.)

Fuel: All grades available.

Density: 1000 at LW. 1015 at HW.

Time: GMT plus 8 hours.

Delays: Vessels may have to wait for berths for long periods. Sometimes 30 to 40 days.

Developments: Large areas are being reclaimed and long term plans exist to increase berthing facilities. Extensive dredging is also in progress.

General: Provisions: Reasonable amounts of fresh provisions are available at very good prices. However dairy products like butter and frozen provisions not available. Vegetables in limited variety. Fresh meat, poultry and fish are plentiful.

Laundry: Local Seamen's Club handles laundry. Delivery after about 10 days. Service is unreliable.

Agents: China Ocean Shipping Agency, 20 Wuyi Road (South), Fuzhou. Cable Address: Penavico Fuzhou. Tel: (0591) 569572. Telex: 92137 FAHN CN. Fax: (0591) 568150.

AUTHORITY: Fuzhou Port Authority, Mawe, Fuzhou. *Tel:* (0591) 582132.

GUANGZHOU, including Huangpu (Whampoa): 23.05 N. 113.25 E.

Also see "General" before first port.

TUGS: 21 tugs up to 1,800 h.p.

BERTHING: The Port of Guangzhou spreads over some 40 km. along the Pearl River from Huangpu's new port area located at the mouth of the East River in the East to the terminals located at the East Bridge, crossing the Pearl River in the West.

The port offers 21 berths for vessels up to 10,000 d.w.t., 43 berths for vessels up to 1,000 d.w.t. 15 mooring buoys and 15 operational anchorages. The depth of the channel is 9 m. and vessels up to 25,000 d.w.t. can enter this port at high tide. Vessels with deeper draft can be lightened at anchorage before entering the port.

The Huangpu area within the Port of Guangzhou is divided as follows:

Old Port Area: 17 berths (on both sides of the river) accommodating vessels of up to 10,000 d.w.t. and one berth for vessels of maximum 5,000 d.w.t. Depths alongside up to 7.0 m. There are over 20 warehouses of about 50,000 sq.m. and stockyards covering about 147,000 sq.m.

New Port Area: 10 specialised berths for bulk grain, bulk fertiliser, containers and bulk oil handling, accommodating vessels up to 20,000 d.w.t. Depth alongside 11.9 m. Ample warehouses and stockyards for all kinds of cargo, one grain silo and facilities to handle bulk fertiliser, including bagging, are provided. General cargo ships may use these berths when space available.

Container Terminal: Two berths totalling 471 m. in length with 12.0 m. depth and a container yard of 90,000 sq.m. The three container gantry cranes have lifting capacities of 30.5 tonnes.

Coal Terminal: There are 3 berths at this terminal capable of accommodating 2 vessels up to 20,000 d.w.t. or 3 vessels of maximum 10,000 d.w.t. 1 × 1,000 t.p.h. shiploader and 4 × 500 t.p.h. ship unloaders.

While the Huangpu area of the Port of Guangzhou has the general restrictions of LOA 180 m. and draft of 9.0 m., the Port Authority is prepared, on a case to case basis, to consider acceptance of vessels with LOA/draft slightly over these limits.

CRANES: Quay cranes of 3 tons – 10 tons capacity and 5 floating cranes with capacity 30 tons – 250 tons.

MEDICAL: Hospital available.

FRESH WATER: Available.

FUEL: Available.

AIRPORT: Guangzhou Airport.

DEVELOPMENTS: The Port of Guangzhou is presently expanding. Tenders are being called for the construction of 10 multi-purpose berths for vessels up to 35,000 d.w.t. in the Xin Sha project, 5 of which are planned to be completed by 1994 and in the Li Jiao Terminal with capacity of 3 million tonnes of cargo annually, to be completed by 1990.

SHIPMASTER'S REPORT: July 1981 and October 1984.

Item Nos. 6 – 9 amended by report received in October 1984.

Southern Approaches to Huangpu:

1. Vessels approaching from the South, bound for Canton and Whampoa should steer a course of 005°, so as to arrive approximately 5 miles West of Wen-Wei Chou (Gap Rock). An occasional light is exhibited from Gap Rock Lighthouse, but more often this light does not function and therefore should not be relied upon.

2. On approaching Gap Rock the first land mark that appeared on the horizon was the group of Great Ladrone Islands at a distance of approximately 20 miles on a clear afternoon. On closing Great Ladrone to a distance of about 10 miles, the group of islets to the East of Gap Rock were seen. Closing further to a range of 8 miles only, the Gap Rock was seen and identified.

3. The Gap Rock Islet is rugged in appearance and devoid of any vegetation. The lighthouse is located at the centre of the islet and differs slightly from the illustration in the Pilot, in that the dome-like structure is non-existent. The structure is slightly inclined and looks neglected.

4. The light on the Chuk Wan Shan Island is prominent and was visible at a distance of approximately 15 miles and is located at the summit. It is whitish and dome-like in appearance.

5. On identifying Gap Rock, vessel should proceed on the recommended course of 013°, keeping clear of the wreck marked 3 miles (approximately) West of Gap Rock and follow the recommended track so as to arrive at the Quarantine Anchorage demarcated West of La Sa Wei Island. It was observed that most ships prefer to anchor closer to the Ma Wan Light due to deeper waters. The anchorage off La Sa Wei affords good holding ground and shelter from all types of weather.

6. Vessels remain at this Quarantine Anchorage for a considerable length of time and all ships requirements, Pilot, berthing instructions, movements, etc., will have to be sought from the Agents "Penavico" through Guangzhou Radio on 8490 MHz.

7. Loaded vessels may have to anchor at the Bar before entering the Chuen Pi Channel at Lat. 22° 45′ N., Long. 113° 39′ E. (B.A. 1741) to await the next tide. Once ready for heaving anchor and swinging the vessel's bow into port direction, Pilots ask for the lights "Red" over "White" to be switched on for turning and to switch them off again after completing the turning manoeuvre.

Pilots listen on VHF Channels 9 and 16 and vessels can try to contact them once approaching La-Sa-Wei Quarantine Anchorage but vessels have to be patient as not many of shore personnel appear to understand English and they will not reply unless there is a Pilot standing by to attend.

8. The usual muster of crew is not carried out. However, a very thorough inspection is carried out by Immigration at Pratt Point, about 3.5 miles downstream (B.A. 1742). At that position the vessel drops anchor and awaits Immigration, who once on board order all the crew into one messroom, leaving wardrobes, lockers and cabin doors open. Then 4 men of the crew will be chosen, 1 to go with 1 soldier through the accommodation, 1 to go with another through the engine room and 2 others to accompany 2 other soldiers through the cargo holds. This procedure takes about 1 hour. Only after this inspection does Master obtain his clearance and is able to sail.

9. Huangpu Port (Whampoa) has been extended enormously. There are pier facilities for at least 6 medium size general cargo ships and at appprox. position Lat. 23° 03.25′ N., Long. 113° 28.5′ E. near Shuang Kang (B.A. 1742) there exists a new container and Ro/Ro pier for 3 ships.

The cargo of my vessel (ST 14 of 11,363 tonnes) of bagged urea was discharged in 62 hours after working with up to 9 gangs (5 hatches) day and night.

10. The Seaman's Club Representatives board the vessel soon after arrival and will arrange any sight seeing tours at nominal cost. Seaman's Club provides good meals and club facilities. Seaman's Store and the Friendship Stores afford good shopping at reduced prices. Ship provisions and fresh vegetables are available in abundance.

11. Vessels leaving Whampoa, Northbound will have to follow the same route unless prior approval is sought from the Agents to go through the Lema Channel.

AGENT: Jardine Matheson (China) Ltd., Room 801, China Hotel, Liu Hua Lu, Guangzhou, People's Republic of China. Tel: 677464, 677460. Telex: 44407 JMCGZ CN.

Associated with Jardine Shipping Agencies.

HAIKOU: 20.01 N. 110.16 E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilot boards vessel at quarantine anchorage.

Also see "Anchorage".

ANCHORAGE: Depth 4.0 m. – 18.0 m. Can accommodate vessels 20,000 d.w.t. – 25,000 d.w.t.

Pilotage Anchorage: Between Lat. 20° 05′ 14″ N. and Lat. 20° 05′ 36″ N. and Long. 110° 16′ 08″ E. and Long. 110° 16′ 51″ E.

Depth 15 m. – 18 m. Bottom: Mud and sand.

RESTRICTIONS: Entry and sailing after sunset is possible.

MAX. SIZE: Max. draft in channel 6.0 m.

Tidal range: 0.5 m. – 2.4 m. at Spring tides. 1.1 m. – 2.0 m. at Neap tides.

Also see "Berthing".

VHF: Haikou Radio on Channel 16 (24 hours). Penavico on Channel 9 (24 hours).

TUGS: 1×1,440 h.p., 1×1,320 h.p., 1×900 h.p. and 1×600 h.p.
BERTHING: For ocean-going vessels.

District	*Berth* No.	*Length* (m.)	*Max. LOA* (m.)	*Max. Draft* (m.)	*Remarks*
2nd District	9 – 11	340	120	6.0	General cargo
	14 – 18	440	150	8.0	Bulk
	15 – 16	230	50	4.0	General

Vessels arriving with a draft of over 6.2 m. are normally required to lighter at anchorage or await a suitable tide.

Warehouse and Open Store Space:

Warehouse	29,000 sq.m.
Open store space	86,000 sq.m.

Main Import and Export Cargoes:
Ore, local products and general cargo.
STEVEDORES: Work throughout 24 hours, 7 days a week.
FRESH WATER: Supplied by Haikou branch of China Marine Bunker Supply Company.
FUEL: Supplied by Haikou branch of China Marine Bunker Supply Company.
GENERAL: *Stores:* Supplied by Haikou Ocean Shipping Supply Company.
Floating Cranes: Not available.

HANGZHOU: 30.43 N. 121.20 E.

PILOTAGE: The pilot boards in position Lat. 30° 38′ N., Long. 121° 20.3′ E.
BERTHING: *Jinshan Tanker Terminal:* The recently completed tanker terminal has 2 berths where vessels with draft 6.5 m. can berth.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: Officials travel from Shanghai which is 100 Km. from the port.

LAN SHUI TERMINAL: 20.50 N. 115.42 E.

LOCATION: The converted tanker "Lan Shui" (F.S.P.U.) is moored in position Lat. 20° 50′ 04.3″ N., Long. 115° 41′ 47.1″ E.

The offtaking tanker is to be rigged in accordance with OCIMF Requirements for bow loading.

Vessels will be moored by the bow, to the stern of the F.S.P.U. by a 14 in. hawser.

LOADING: Crude oil only handled.
GENERAL: China Ocean Shipping Agency (COSA) is the only Agent available for this port. The vessel or her owner should contact COSA approximately 6 days prior to the vessel's expected arrival into Chinese waters and appoint COSA as the vessel's Agent. COSA will normally require full payment before clearing the vessel, so it is important for the vessel/owner to establish contact with COSA as early as possible. COSA can be contacted at the following address:

China Ocean Shipping Agency,
2/F, Skiz Building,
Shekou, Shenzen,
The People's Republic of China.
Telephone: Shekou 691136.
Telex: 420834 COSAS CN.
Cable: Penavico Shekou.

LANSHANTOU (Lanshan): 35.06 N. 119.22 E.

SHIPMASTER'S REPORT: December 1989.

DOCUMENTS:

Maritime Declaration of Health (a Chinese form is presented on arrival).
Report of Entry for Foreign Vessels (Chinese form).
6 copies Crew List.
Customs Declaration (Chinese forms brought on board on arrival by the Agent).
Additional forms are provided for next Chinese port of call.

Formalities: Officials board for Port Health Inspection (quarantine) and Immigration and Customs Clearance. Two customs officials, 2 cargo surveyors, the Agent and a Port Captain remain on board throughout the vessel's stay and have to be provided with accommodation and food.
PILOTAGE: Two pilots boarded the vessel from a large new tug which comes from Shijiu, which is one hour by tug. The boarding position is Lat. 35° 02.24′ N., Long. 119° 25.18′ E.

The distance from the boarding position to the berth is 4.5 miles.

APPROACHES: BA. Chart No. 1253 is the only available chart. No larger scale charts exist. Approach is clear from the East with good radar targets.

There is a black buoy at the pilot boarding position but it is not marked on the chart. The buoy is unlit and was sighted at 3.5 miles with a wind of Force 3 – 4.

ANCHORAGE: The anchorage is located one mile South of the pilot station. The bottom is mud.
RESTRICTIONS: All movements are during daylight only.

After the Pilot boarded we sighted 2 more small black buoys which were unlit. The first buoy is left on the port side and the second buoy is left on the starboard side. In the near future, this will be the position of the fairway buoys.

Pilotage is suspended when the wind reaches Force 4 – 5 as the tug has to come from Shijiu, also there are draft restrictions at low water.

MAX. SIZE: Maximum draft 10.2 m., but preferably below 10.0 m.

Vessels with an LOA of 175 m. can be berthed. Vessels over 175 m. LOA can only berth and unberth at high water as the range of the tide is about 4.0 m. The time of high water is based on mean high water Shinjiu plus 30 minutes (tide times will be given by Agent).

RADIO/VHF: Notice of Arrival should be sent to "Penavico Shijiu" 48 hours and 24 hours prior to arrival. This notice should be confirmed 3 hours prior to arrival by VHF on Channels 16 and 11.

Penavico handle all foreign vessels and it is important to contact them as soon as possible in order that they may arrange pilotage and clearance.

TUGS: 3 tugs available for mooring.
BERTHING: There is only one berth available for the discharge of oil cargoes. The length of the pier is 180 m. and Pilot advised that the maximum depth alongside was 10.2 m., the actual depth alongside is no more than 9.78 m. at low water. Nature of the bottom is sand.

The vessel moored starboard side alongside and ship arranged mooring ropes to own requirements. Port anchor also used.

CARGO OPERATIONS: There is 1 × 6 in. hose available. The vessel provided 2 lengths of rubber hose. The hose was connected to the ship's starboard manifold by the ship's crew.

The storage tanks are about one mile from the berth and are at an elevation of 40 m. There are several sharp bends in the pipe so the back pressure was considerable (about 5 bars).

We achieved a pumping rate of approximately 120 cu.m.p.h. The pumping arrangement is not fixed and was removed after completion of discharge as this berth is also used for the export of sea sand for which 2 movable cranes are available.

STEVEDORES: The stevedores are state controlled and work is continuous in 3 shifts.
MEDICAL: Facilities are available in a village nearby.
TIME: GMT plus 8 hours.
SHORE LEAVE: Possible. Shore passes are issued on arrival. Crew going ashore must show the Immigration Officer at the gangway their shore passes and passports.
GENERAL: This vessel was the second foreign vessel to discharge at the port. The local officials were inexperienced but were willing to learn and assist as much as possible. All officials come from Shijiu and vessel must allow for 10 – 12 extra meals at each meal time. The bonded store was sealed but was opened on request.

The number of English speaking personnel was very limited and the Agent was required on occasions for translation purposes.

Six hours' notice was given prior to departure for arranging of tugs, pilots and the immigration search.

Prior to departure a strict search is made for stowaways and all shore passes are collected before clearance papers are issued.

LIANYUNGANG: 34.45 N. 119.27 E.

PILOTAGE: Compulsory. Pilotage undertaken day and night.
ANCHORAGE: Between Lat. 34° 46′ 54″ N. and Lat. 34° 49′ 00″ N. and Long. 119° 34′ 45″ E. and Long. 119° 41′ 00″ E. Depth of water 9.0 m – 11.0 m. The holding ground is poor. Vessels of 30,000 d.w.t. – 40,000 d.w.t., subject to draft, can use the anchorage.
RESTRICTIONS: Vessels up to LOA 165 m. can enter or sail after sunset, weather permitting.

Tidal range: Max. 5.0 m., minimum 0.01 m.

VHF: Lianyungang Radio on Channel 16 throughout 24 hours.
TUGS: 1 × 428 h.p., 1 × 660 h.p., 1 × 980 h.p., 2 × 1,200 h.p. 2 × 1,670 h.p. and 2 × 3,200 h.p.
BERTHING:

Working District	*Berth* No.	*Length* (m.)	*Depth* (m.)	*Use*	*Cranes Capacity* (tons)
No. 1	1 2	309	9.0	General Cargo	5 × 10

	B	370	17.0	Coal	Loader
Gen. Cargo Wharf	—	220	8.5	For vessel under 10,000 d.w.t.	1 × 10

CRANES: Floating crane with lifting capacity 60 tons.
Also see "Berthing".
FUEL: Contact China Marine Bunker Supply Co., Lianyungang Branc
REPAIRS: Facilities available.
GENERAL: *Provisions:* Contact Lianyungang Foreign Vessel Supp Corporation.
Imports: Steel, timber, fertiliser, sugar.
Exports: Coal, agricultural products and general cargo.

LONGKOU: 37.39 N. 120.20 E.

PILOTAGE: Compulsory. Pilotage undertaken in daytime only.
ANCHORAGE: The Anchorages are bounded by the following co-ordinates:

Name of Anchorage	Quarantine Anchorage	No. 1 Working Area	No. 2 Working Area
	37° 37.48′ N. 120° 12.30′ E.	37° 39.40′ N. 120° 12.30′ E.	37° 38.03′ N. 120° 15.00′ E.
	37° 37.48′ N. 120° 13.52′ E.	37° 39.40′ N. 120° 14.00′ E.	37° 37.26′ N. 120° 15.00′ E.
	37° 37.00′ N. 120° 12.30′ E.	37° 38.50′ N. 120° 14.00′ E.	37° 38.03′ N. 120° 16.38′ E.
	37° 37.00′ N. 120° 13.52′ E.	37° 38.50′ N. 120° 12.30′ E.	37° 37.26′ N. 120° 16.38′ E.
Depth	8.6 m.	9.0 m.	6.2 m.

VHF: Radio station on Channel 13 throughout 24 hours.
TUGS: Tugs of up to 900 h.p. are available.
BERTHING: The port is open to foreign shipping and can accept vessels of 5,000 d.w.t.

Berth No.	*Depth* (m.)	*Use*
1-2	–	Tugs
3	6.8	Sand
4	6.8	Coal
5	6.8	General cargo
6	6.8	Passengers
7	4.5	Salt
8	4.5	Salt
9	7.5	Salt
10	7.5	Salt

CRANES: Cranes with up to 16 tons capacity are available at Berths No. 7-10. No floating cranes available.
BULK HANDLING FACILITIES: There is a conveyor belt at Berths No. 3-4 for handling of sand and coal.
New Coal Terminal: A large coal port has been commissioned at the port.

The port will have an annual handling capacity of 1.5 million tons and the ability to berth 2 × 10,000 d.w.t. vessels at the same time.

The new port utilises an automatic transfer system of coal from trucks to ships. The new establishment will also immensely facilitate transport from Shanxi, one of the main coal producers, to Shandong, relieving the fuel shortage in the region.

The channel is to be dredged to handle these larger vessels.

STEVEDORES: *Working Hours:*

Weekdays:	0730 – 1130
	1300 – 1700
	1900 – 0600
Sundays and Holidays:	0730 – 1130
	1300 – 1700

FUEL: Not available.
REPAIRS: Facilities available.
GENERAL: *Tidal Range:* Maximum 1.40 m., minimum 0.4 m. – 0.5 m.
Storage: Warehouse: 2,065 sq.m.
Open Storage: 116,445 sq.m.
Imports/Exports: Sand, salt, coal, grain, fertiliser, timber, ore and general cargo.

NANJING (Nanking): 32.03 N. 118.47 E.

PILOTAGE: Compulsory. Pilotage is undertaken between 0600 and 1900 hrs.

Pilotage is in two parts, the first being from the mouth of the Chang Jia River to Baoshan (sea pilotage) and the second part from Baoshan to Nanjing.

ANCHORAGE: Depth of water 13.0 m. – 16.0 m. The anchorage can accept vessels up to 30,000 d.w.t.
BERTHING:

District	*Berth*	*Length* (m.)	*Permissible Draft LOA* (m.) (m.)	*Use*	*Cranes* (tons)
1st Cargo Handling Ward	No. 15	90	6.0/130	General/ Bulk	2 × 8

FUEL: Contact China Marine Bunker Supply Company, Nanjing Branch.
REPAIRS: Repair services available through Wuhu Shipyard.
GENERAL:
Provisions: Contact Nanjing Foreign Shipping Supply Corporation.
Storage:
Warehouse: 30,000 sq.m.
Open Storage Space: 120,000 sq.m.
Imports: Steel, timber and ore.
Exports: General cargo, cotton, oil, agricultural and chemical products.

SHIPMASTER'S REPORT: May 1988.
Location: The Port of Nanjing is located about 195 miles upriver on the Changjiang (Yangtse River) in position 32° 03′ N., 118° 47′ E. The oil port is located in approx. position 32° 10′ N., 118° 57′ E., about 180 miles upriver.
Note: All distances stated are in nautical miles upriver from Wusong Kou (entrance to Shanghai), unless otherwise stated.
Port Limits: In the opinion of the Agent, a vessel is considered to be an 'arrived ship' only when she reaches Nanjing Port, or at the Nanjing Waiting Anchorage or Quarantine Anchorage, located in position 32° 14.5′ N., 119° 10′ E., about 165 miles upriver, or 15 miles before Nanjing Oil Port. The Joint Inspection (Inward Clearance) is carried out at this anchorage.
Documents: The documents required are as stated in the 'Guide'. Details are as given below:-
For Joint Inspection on Arrival:
Crew List – 6 copies.
Report of Entry – 2 copies.
Maritime Health Declaration – 1 copy.
Crew Effects Declaration – 1 copy.
Ship's Equipment List – copy.
Bonded Stores List – 1 copy.
For Joint Inspection on Departure:
Maritime Health Declaration – 1 copy.
Report of Clearance – 4 copies.
Note: Chinese forms must be used for Report of Entry, Report of Clearance and Maritime Health Declaration. Ship's own forms can be used for the other documents, if it is the vessel's first call. On arrival obtain blank forms for Report of Clearance and have them filled out prior to departure.
Pilotage: Pilotage upriver is in two stages. The first stage is from Changjiang Kou to Baoshan, which is by Shanghai Pilots. The second stage is from Baoshan to Nanjing, which is by Nanjing Pilots. The pilotage up to Baoshan is arranged by "Penavico Shanghai". Changjiang Kou is the customary waiting anchorage for vessels for Shanghai or proceeding upriver.

Application for pilot should be made to Shanghai agent "Penavico Shanghai" by cable or telex prior to arrival. When the arrangements are made, they will reply by cable/telex and it is recommended that vessel does not proceed to pilot station unless they receive this message. The Pilot boards at South Channel, No. 5 Buoy, as indicated on B.A. Chart No. 1602.

The distance from Changjiang Kou to Baoshan is 53 miles. Baoshan is located 3 miles upriver. The vessel may have to anchor here for Nanjing Pilots, in our case, they boarded on arrival, the Shanghai Pilot disembarked, and vessel continued without stopping. Three pilots board at Baoshan to do the passage up to Nanjing, which is a distance of 177 miles.

Navigation/Anchorages: Our vessel picked up pilot at 0645 hrs. and was at Baoshan by 1030 hrs., where the pilots changed. Shortly after Baoshan the fishing and small boat traffic increases. At times the number of fishing boats and river barges appear as an impenetrable wall, however by repeated use of the ship's whistle, a path is created for the ship to pass through. The barges are tied in a line (as many as 13/14) and under tow, thus they have difficulty manoeuvring. The navigable channel in the river is clearly marked by buoys. The buoys were green/black on the starboard hand and red on the port hand. The traffic generally remains to the right hand side of the channel, and vessels pass port-to-port. The pilots call up the vessels on Channel 6. This is helpful in conditions of restricted visibility.

Depths were checked regularly on the echo sounder and the average depth obtained was about 18 m. – 20 m. On one or two occasions the depth reduced to 11 m., but in most cases it was 18 m. – 20 m. or in excess, at times up to 40 m.

Due to the heavy traffic, the vessel proceeds at manoeuvring speed. In our case this was 12 knots, however as the flood tide was flowing right through, the ship averaged a speed of 15 knots, despite having to slow down frequently for the fishing boats.

As there is no night pilotage, the vessel anchors for the night at Kouan Shuiddo (32° 18.5′ N., 119° 47′ E., about 125 miles upriver). This appears to be the normal anchorage as two other vessels anchored with us. The vessel anchored by about 1830 hrs. The pilots stay onboard and suitable accommodation is to be arranged.

The anchorage has good holding ground and is about 3 cables from the shore. The pilot produced a chart for the anchorage area. 6 shackles are used in depths of 15 m. The maximum current experienced was 2 knots.

Transit was resumed at 0600 hrs. on the following day and the vessel arrived at Nanjing Waiting Anchorage (32° 14.5′ N., 119° 10′ E.) by 1100 hrs. The pilots leave the vessel after arrival at this anchorage.

The vessel had to wait 3 days at this anchorage as the berth was occupied. Here too, the holding ground is good and 6 shackles are used in 18 m. depth. Distance to the shore was 2.4 cables, which reduced to 1.4 cables whenever vessel swung to the tide. Even when vessel swung closest to the bank, the depths were in excess of 15 m. There were no tide tables for the area but it was noticed that vessel used to lie for about 3 hours to the flood and 7 hours to the ebb. The maximum current experienced was 2 knots. No chart is available for this anchorage and one has to rely on radar distances to verify vessel's position. A couple of light beacons and buoys are also visible.

The Berthing Pilot boards at this position and the distance to the berth is about 15 miles, which is covered in 2 hours.

Restrictions: There is a restriction on night navigation and vessels also anchor in times of poor visibility. The only information obtained regarding size restrictions was 30,000 d.w.t. No information could be obtained regarding LOA and beam. The draft restriction as advised by the agent is 9.00 m. (FW). At the anchorage I noticed a Chinese vessel with a draft of 9.50 m. (FW). It appears that the draft restrictions are for the mouth of the river, near Changjiang Kou, as the depths in the river were more than adequate.

There is no night berthing or unberthing.

In position Lat. 32° 13.5′ N., Long. 119° 40′ E. there is an overhead electric cable with clearance at the centre of 55 m. This may vary due to the seasonal tidal range.

Health: No Radio Pratique available. On arrival at Quarantine Anchorage, the Quarantine Officer boards and grants Pratique.

Radio: Communications: Communications were by Inmarsat telex. If cables are used Shanghai Radio would be the best.

Telex Numbers: Penavico Shanghai: 33052 Penav C Cn.
Penavico Nanjing: 34059 Njpen Cn.
Sinochem Nanjing: 34109 Cienj Cn. (Shippers)

VHF: On arrival at Changjiang Kou, contact Shanghai Pilots on Channel 16. They use Channel 16 for calling and working. For information regarding pilots, agents "Penavico Shanghai" can be contacted on Channel 11.

At Nanjing, agents "Penavico" should be contacted on Channel 8 about all matters, including berthing, etc. When at anchorage, watch should be kept on this channel.

Tugs: Two tugs were used for berthing and unberthing. One of the tugs gave a tug's line while the other one asked for a ship's line.

Berthing: The berth is a barge which is 90 m. in length, anchored by chains fore and aft. It is also connected to the shore by 2 steel arms located at the fore and aft end. The steel arms are mounted on swivels (at the shore end), which permits vertical movement due to the tide. All pipelines also have a flexible section, which permits vertical movement. All this is to cater for the great tidal range. The daily range is very low, about 1.0 m. However, the seasonal range is as high as 7.0 m. In the Summer months, after the snow melts, the river levels increase by as much as 7.0 m. Our vessel was 170 m. LOA and rather long for the berth, hence the mooring arrangement was not very satisfactory.

The moorings consisted of 5 lines each fore and aft. One line is picked up from shore at each end. Four ship's lines are sent to the barge. Due to this, no lines lead out as head or stern lines, and all the ropes act as breast or spring lines. The Pilot advised that the current was less than a knot and the winds not very strong, hence the vessel would be safe in this condition. Soundings (by hand lead) taken at the berth, at low water indicated a depth of about 12.0 m. all round the vessel.

Loading: The vessel loaded unleaded gasoline. Loading is via 1×8 in. ASA connection. This branches to a "Y" piece to which 2×6 in. flexible hoses are connected. The hose length is adequate for a freeboard (waterline to deck level) of 10.7 m. This information was not given to us by the terminal, but deduced by our own observation. Ship's crane/ derrick is required to lift the hose on board. A crane is fitted on the berth but was not able to operate due to the ship's high freeboard.

The density of the cargo was 0.7305 at 15°C. The density supplied by the terminal is at 20°C., and has to be converted to 15°C. The density is given only after completion of loading. The average loading rate achieved was 450 tonnes p.h. – 500 tonnes p.h. Bill of Lading is based on the ship's figures which are obtained by the surveyors. The only documents given to the vessel are Bill of Lading and Manifest.

There were 6 berths identical to the one described above. Some laden tankers were coming alongside, which I would assume were carrying crude oil for the refinery.

Medical: Medical and dental facilities available. Agent must make the necessary arrangements.

Fresh Water: Available by barge and no limitation on quantity. Barge is not permitted to come alongside while the vessel is loading dangerous cargo. Cost is 1.5 RMB per ton. Barging is an additional charge.

Fuel: Fuel and diesel available in small quantities. 3 days' notice is required.

Specification of diesel oil available as follows:-

	No. 0 Type	No. 20 Type
Density at 20°C.	0.83	0.85
Viscosity at 20°C.	4.70	2-8
Pourpoint	0°C.	20°C.

No. 0 Type is more expensive than No. 20 Type and is also referred to as LDO.

Bunkers *will not* be supplied during loading or *after* loading dangerous cargo. Hence it should be supplied before the vessel commences loading. This is the regulation as advised by the agent. In our case, the barge came alongside, and loading had to be suspended during the period the barge was alongside.

Surveyors: Cargo tank inspection prior to loading and cargo calculations on completion of loading is carried out by CCIB - China Commodity Inspection Bureau.

China Register Surveyor available on behalf of other Classification Societies.

Storing: Provisions and bonded stores available. They are inexpensive and of average quality. Fresh vegetables are seasonal. Only the government chandler is available. He stated that he was unable to provide any labour to load the provisions.

The truck can come to a distance of about 80 m. from the ship and a hand trolley is used to carry the stores to the ship's side, and crane used to lift on board. Ship's staff must do this work. In case funds have been remitted, the agent/chandler will permit the invoices to be signed, otherwise cash payment must be made.

Shore Leave: Shore leave is permitted. Nanjing town is located about 15 miles away and takes about 50 minutes by car. Transport must be arranged by the agent, as taxis, etc., are not available at the berth. A round trip by Minibus costs about 80 RMB. Nanjing is a pleasant town with a few modern hotels and high rise buildings. Overseas calls can be made from Jinling Hotel.

General: The agent stayed on board throughout the vessel's stay in port. He was of great assistance in all matters, i.e. bunkering, discussions with surveyors, Loading Master, shipchandler, etc. He also acts as interpreter where necessary. He stated that this was the normal procedure in the case of foreign vessels calling at Nanjing. I assume this only applies to the oil port, due to the great distance from town. On completion of loading and cargo calculations, he prepares the Bill of Lading and Manifest on board.

One problem encountered, was the inability to get accurate information. When the vessel was at Nanjing Anchorage, the Agent was called daily at 0900 hrs. for berthing information. On the day the vessel berthed, we called at 0900 hrs. and were informed that there was no berthing information, and we should call back the next day. One hour later, a pilot boat came alongside and 2 pilots boarded and requested that heaving of anchor be commenced as vessel was berthing.

After berthing, the agent and cargo surveyor confirmed that the refinery would be able to supply the entire nomination plus 10% (i.e. 22,000 tonnes). The Shipper's Representative boarded the next day and informed us likewise. When the vessel had loaded about 18,000 tonnes, the Loading Master boarded and stated that no more cargo was available, and loading was completed. On enquiring about the loading rate, we were informed that it was 200 tonnes p.h. During loading the actual rate was about 500 tonnes p.h. This should be borne in mind and any information received should be treated with care.

Outward Passage: The passage downriver was identical to the passage upriver. Vessel departed berth at 1200 hrs. and anchored for the night at Kouan Shuddo. In addition, the vessel also had to anchor at Baoshan on the next night as Shanghai Pilot was not available to take the vessel to sea.

NANTONG: 32.01 N. 120.49 E.

LOCATION: The port is situated on the North bank on the lower reaches of the Changjiang (Yangtse River), Nantong port is in Nantong City which is about 51 miles East of Wusong Kou. The position of the port is Lat. 32° 00′ 45″ N., Long. 120° 48′ 45″ E.

PILOTAGE: Compulsory. Pilot available from sunrise to sunset from Baoshan Anchorage.

Pilot for Nantong boards at Baoshan Anchorage.

ANCHORAGE: Baoshan Anchorage 31° 28′ N., 121° 28′ E.

APPROACHES: Foreign vessels proceeding upstream from Baoshan Anchorage are required to be well informed of the water depth along Baimaosha Nan Shuidao, the South Channel, so that they may safely pass with the tide. Before approaching light buoy No. 12A a close watch should be paid to see if any ship is steaming down the river. If a vessel is outward bound it is advisable to reduce speed and wait until it is clear of the channel, in order to avoid meeting at the shallow part of the channel.

All foreign vessels entering or leaving the port are requested to observe the following regulations:

1. "The Regulations on Supervision and Control of Foreign Vessels by the People's Republic of China".
2. "The Regulations on Supervision and Control of Vessels Flying Foreign Flags Sailing in the Changjiang by the People's Republic of China".
3. "Regulations for Prevention of Collision at Inland Waters".

Foreign vessels are requested to take great care, as the buoyage system of the coastal waters and the river are different.

ANCHORAGE: *Joint Inspection Anchorage:* The anchorage is situated at Dong Shuidao on the lower reaches of the Changjiang (Yangtse River). This is within the harbour limits and has an area of 2,500 m.×600 m., depths range from 7.0 m. – 25.0 m. and the nature of the bottom is sand and mud.

RESTRICTIONS: Entry and departure not permitted after sunset.

MAX. SIZE: See "Berthing".

VHF: Pilots: Channels 16 and 6.
Penavico: Channels 16 and 27.
Oil Terminal: Agent on Channel 11.
Pilot on Channels 11 and 20.
Port on Channel 20.

TUGS: 1×2,400 h.p., 1×1,670 h.p., 2×980 h.p. and 2×480 h.p.

BERTHING:

Name of District	No. of Berth	Length (m.)	Depth (m.)	Max. Draft (m.)	Max. LOA (m.)	Use
Langshan	No. 1	180	(D) 10.0 (F) 16.0	9.5	180	Coal/Containers/Ore
	No. 2	180		9.5	180	Feed/Sugar/Containers
	No. 3	187		9.5	180	Timber/Pig iron/Fertiliser
Nangtong	No. 3	74.0	(D) 5.5 (F) 10.8	5.0	70	General Cargo
	No. 4 No. 5 No. 7	–	–	–	–	Passengers
Tian Sheng Gang	No. 1	65	(D) 4.8	–	–	Coal
	No. 2	65	(F) 4.8	–	–	Coal

Note: (D) Dry Season.
(F) Flood Season.

With prior agreement vessels can also load/discharge certain types of cargoes at buoys.

CRANES:
Langshan: 2×5 tons and 3×10 tons.
Nantong: 3×5 tons.
One floating crane of 10 tons capacity available.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Facilities available.

GENERAL: *Imports:* Timber, ore, bulk sugar, fertiliser and pig iron.
Exports: General cargo and cotton.
Meteorology and Hydrography: The tide at this port is irregular semi-diurnal, with Spring rise of 3.4 m., Neap rise of 2.7 m. and mean sea level of 2.1 m.

The direction of the stream, either floor or ebb, is approximately parallel to the bank of the river. The rate of flood is 0.8 knots, while that of the ebb may reach 4.3 knots.

The wind is variable in direction and force, due to the effect of the monsoons. The average wind force is 3.1 m. per second. Gales may arise suddenly, but mostly occur in Winter. The annual average of "gale days" is 12.8. This port may be threatened by typhoons from July to September with wind forces ranging from Force 6 to Force 8. In August a wind Force 11 is sometimes experienced.
Aids to Navigation: The aids mainly consist of light buoys. The lateral port hand buoys are black in colour with spherical shaped top-marks. Starboard hand buoys are painted red in colour.

AGENT: Penavico. Tel: 6500. Telex: 36501. Cables: Penavico Nantong.

NINGBO (Ningpo), Including Beilun: 29.52 N. 121.31 E. (See Plan)

LOCATION: Ningbo Port District: 29° 52′ 54″ N., 121° 33′ 24″ E.
Zhenhai Port District: 29° 57′ 00″ N., 121° 43′ 05″ E.
Beilun Port District: 29° 56′ 8.6″ N., 121° 51′ 05″ E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night at Qi Li Yu Anchorage and Jin Tang Anchorage, but only in daytime at Xin Qi Anchorage.

ANCHORAGES:

Anchorage	Location	Nature	Depth (m.)	Bottom	Size for Vessels (d.w.t.)
Qi Li Yu	29° 59′ 18″ N. 121° 46′ 30″ E. 30° 00′ 18″ N. 121° 47′ 30″ E.	Pilotage	8.0	Mud	3,000–5,000
Jin Tang	30° 00′ 00″ N. 121° 48′ 12″ E. 30° 02′ 30″ N. 121° 50′ 00″ E.	Pilotage	15.0	Mud & Sand	10,000
Xia Qi	29° 43′ 30″ N. 122° 20′ 30″ E. 29° 46′ 00″ E. 122° 21′ 30″ E.	Pilotage	17.0	Mud	10,000–100,000
Bei Lun		Operating	20.0	Mud	Lightening for over 10,000

RESTRICTIONS: Day and night entry and departure possible at Ningbo and Zhenhai Port Districts but not at Beilun Port District.
Tidal Range: Ningbo: Maximum 3.62 m. Minimum 0.92 m.
Zhenhai: Maximum 3.51 m. Minimum 0.02 m.
Beilun: Maximum 3.36 m. Minimum 0.40 m.

MAX. SIZE: *Draft Limitation in the Channel:*
Ningbo 5.5 m.
Zhenhai 9.0 m.
Beilun 18.0 m.
Also see "Berthing".

TUGS: 2 × 370 h.p., 1 × 428 h.p., 2 × 600 h.p., 4 × 980 h.p., 1 × 1,670 h.p. and 3 × 3,200 h.p.

VHF: Pilot on Channels 16 and 9. Agent on Channel 12, contact through Ningbo Harbour Radio on Channel 16.

BERTHING:

Working District	Berth No.	Length (m.)	Depth (m.)	Permissible Draft/Length (m.)/d.w.t.	Remarks

CRANES: 16 ton crane at Zhenhai Berth No. 7.
3 ton crane at Zhenhai Berth No. 8.

CONTAINER FACILITIES: New berth with length 200 m. and depth 12.0 m. Two cranes available.

BULK HANDLING FACILITIES: 2 unloaders × 2,100 t.p.h. each. 2 loaders × 4,200 t.p.h. each.

TANKERS: The VLCC "Beilun" is anchored a mile or so off Beilun, storing crude oil and other products delivered by smaller tankers from the onshore fields. Depth of water 23.0 m.

The petroleum berth is operated by Sinochem, Ningbo branch, and accepts at one end loading product tankers and at the other discharging crude oil tankers.

Also see "Berthing".

STEVEDORES:
Weekdays: 0730 hrs. – 1130 hrs.
1200 hrs. – 1600 hrs.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Facilities available.

TIME: GMT plus 8 hours. GMT plus 9 hours in Summer.

GENERAL:
Storage: Warehouse: 46,900 sq.m.
Open Storage: 260,000 sq.m.
Exports/Imports: Oil, ore, coal, fertiliser, timber, steel, cement and containers.

DEVELOPMENTS: Additional deepwater berths are to be constructed.

SHIPMASTER'S REPORT: May, 1983.
Beilun
Port Limits: The port is part of Ningbo Port Complex and situated at approx. Lat. 29° 55.7′ N., Long. 121° 52.6′ E. Port consists of a pier accommodating 1 ship of 100,000 d.w.t. and a pier accommodating 2 ships of 25,000 d.w.t. – See B.A. Chart 1429.
Documents:
12 copies Crew List (preferably Chinese forms).
1 copy Customs List (Chinese form mandatory).
2 copies Health Declaration (Chinese forms mandatory).
4 copies List of Narcotics (free form).
2 copies Master's Report (Chinese forms mandatory).
12 copies Passenger List (free form).
4 copies Arms and Munitions List (free form).

Regarding Customs List: Following to be declared: tobacco, spirits, watches, cameras, radios, tape-recorders, T.V. sets, video recorders. Gold, silver jewels, foreign currency. All electronic equipment and cameras to be named with brand, number, etc.
Pilotage: Following received by cable from agents before arrival: "From outer sea steer to position Lat. 30° 10′ 15″ N., Long. 123° 03′ 20″ E. Then, course 218° to reach position Lat. 29° 45′ 00″ N., Long. 122° 40′ 36″ E. at 8.3 miles from Tung Ting Tae L/H bearing 326°. Then course 270° steering directly to pilot station between Lat. 29° 44′ 30″ N., – 29° 46′ 00″ N. – Long. 122° 20′ 30″ E. – 122° 22′ 30″ E. Use of other channels is forbidden. Please contact Pilots through VHF Channel 16 one hour before arrival pilot station."
Call: Ningbo Pilot VHF Channel 16. Pilot boards from pilot vessel which comes from Ningbo. Pilot vessel is same size as a large harbour-tug, white hull and long white superstructure. Funnel placed aft-part of superstructure, and painted in chinese colours – red band with yellow stars. Equipped with radar and VHF. Difficulties experienced in contacting Pilot on arrival and the difficulties are believed to be because of distance from the pilot vessels stationed in Ningbo and the ship waiting on the above pilot station.

3 Pilots boarded the ship, and the ship continued via the narrow but deep strait of Shih-Peng-Chiang.
Anchorages: Above designated pilotage area considered to be a good anchorage for large vessels. Minimum depths of 10 fathoms. Current setting NW and SE with rates up to 4 knots.
Restrictions: No information on restrictions upon entry. The Strait of Shih-Peng-Chiang and inwards to the port was found to be well equipped with lighthouses and other navigational aids (not shown on the chart). Shore based Decca-radars cover the area and give instructions to Pilots during navigation in these waters. The outermost of the radar station is situated in approx. position Lat. 29° 44.4′ N., Long. 122° 18.3′ E. Our vessel arrived at pilot station on LW. Echo-sounder was used and there was not found to be less water than charted.
Max. Size: The port is designed to accommodate 1 ship of 100,000 d.w.t. and 2 ships of 25,000 d.w.t. Minimum depth on the outer-pier said to be not less than 18 m. on LLW.

During ship's stay in Beilun at Outer Pier the LLW depth alongside the pier was found to be 22.30 m. Only measured by echo-sounder.
Health: No special requirements. Ship cleared by Health Authorities after arrival.
Radio: No special instructions. During voyage cables regarding ETA and arrival-conditions were sent to Penavico Beijing and Penavico Ningbo via Shanghai Radio XSG. When within range Ningbo Radio was used (XSN).
VHF: See "Pilotage".
Radar: See "Restrictions".
Tugs: 2 tugs of 3,200 h.p. stationed in port. Very efficient. Meet ships off the pier using tug's lines. They handle vessels "Japanese style" in making fast on ship's sides.
Berthing: The port consists of 2 piers built out into the sea, parallel to the coast. The piers are connected to the coast by a long bridge, estimated 3 km. long. The density of water was measured to be 1019 but varies.

The outermost pier is used for large vessels. It is equipped with a sonar docking system, which shows the distance between the pier and the ship's bow and stern, and the vessel's approach speed in cm. per second. This pier is for bulk cargo discharge only. It is well protected with large rubber fenders. The pier is high and fenders keep ship so far from the pier that most ships unable to use normal accommodation ladder. Necessary to use gangway at right angles to the ship. No gangway supplied from shore.
Cranes: The outermost pier is equipped with 2 large gantry cranes with grabs. They are Japanese built Hitachi-cranes 30 ton SWL. Grabs used are 9.5 cu.m. The cranes discharge from ship to a belt conveyor leading to storage facilities on shore. Estimated length of conveyor belt 3.5 km. During our stay the cranes did not work in wind force exceeding 10.8 m./sec., or in dense fog. Also not working during periods of rain.

The innermost pier is equipped with 2 plants designed for loading bags into ships. The plants are fed with bags from 2 belt conveyors coming from the storage/packing area on shore. The bags slide from the top of the plant to the ship's hold via a "snail".

None of the piers are designed for anything other than discharging bulk or loading bags. Maximum discharge rate unknown. Our ship, which was unloading potash was guaranteed 1,500 tons per day but more than 5,000 tons per day was experienced. Only one crane was used, and it was only working slowly, because of delays in the packing area. All cargo from the ship was bagged immediately after discharge.
Stevedores: Labour arranged by Agent. Working day and night without any stops, weather permitting.
Medical: Seaman's hospital in Ningbo about 45 km. from the port.
Density: Varying with tide but average 1019. Water discoloured by mud.
Fresh Water: Available from pipes on the pier. Delivery rate 18 t.p.h. Approximate cost 1.5 Yuan/Tons.
Fuel: No fuel on the pier. Not known whether any bunker supply in the area.
Consuls: None.
Hatches: Operated by ship's crew.
Customs Allowances: On arrival each man had max. 1 bottle of spirits and 200 cigarettes. No objections was made to this. No cabins were searched. Neither were the Chief Steward's lockers with spirits, beer and slop chest checked. Chief Steward was allowed to take out any of the above mentioned goods for use during stay in port.
Cargo Gear: All cargo work carried out with shore gear.
Repatriation: Arrangements can be made. Crew members are transported to Shanghai by ship or train.
Time: GMT plus 8 hours.
Holidays: None.
Shore Leave: Crew members not allowed to go outside the gate situated on the shore end of the bridge connecting pier to shore. Distance from pier to gate about 3 km. There is a seaman's club in Ningbo. On request the club will arrange tours and sightseeing. The cost for a tour to Ningbo and return to the ship is 7.5 Yuan per man.
Identification Cards: Shore passes are issued on arrival. Each time a crew member steps ashore or comes aboard the ship, the shore pass and national passport should be shown to the Emigration Officer.
Watchman: An Emigration Officer is constantly on board checking passports each time people leave or come to the ship.
Telephones: Telephone placed on board for convenience of Agents, Stevedores, etc.
Regulations: Following received by cable from Agent before arrival: "Not permitted to use radio transmitters at anchorage or in port unless emergency. Must keep main engine, steering gear, rudder indicator, telegraph communication equipment, whistle/siren, gyro compass repeaters, radars and echo sounder in good condition, but not permitted to use any of them unless allowed by Pilot. Photographing and survey are not allowed in Chinese territorial waters, stay at anchorage or in port. The above regulations must be observed strictly."
Delays: No delays observed.
General: A ship's chandler from Ningbo is able to deliver all usual kinds of provisions.

Agent will arrange for laundry.

During the stay I was invited to see the packing area. The potash goes from the belt conveyor to 8 spouts, which weigh out the cargo and fill it into bags. Each spout capable of average 45 t.p.h. I was told that more equipment would be installed this year thereby doubling the packing capacity. Behind the packing house, there was a large area where ore of various kinds, which was discharged from large bulk-carriers at the outer pier, could be stored. The ore is reloaded into smaller ships at the inner pier using the same plants as when loading bags. These plants are designed for both bags and bulk. The loading rate of ore is said to be up to 4,000 t.p.h.
Agent: China Ocean Shipping Agency, Ningbo Branch. No agent's port office at Beilun. No telex available from Ningbo. Cables from ship to Owners/Charterers and vice versa are taken by car to/from Ningbo which makes communication slow and expensive.

SHIPMASTER'S REPORT: December 1985
Location: Beilun Oil Terminal in position 29° 57.4′ N., 121° 48.7′ E., about 45 km. by road from the town of Ningbo.
Chart: B.A. Chart No. 1429.
Documents:

Required on arrival:
*5 Crew Lists.
*1 Personal Effects List (see 'note' below).
*1 Health Declaration.
1 Vaccination List.
2 Cargo Manifests ('Nil' return if in ballast).
1 Drugs List.
*1 List of Arms and Ammunition.
*3 Copies of Application for Entry and Inspection.
*Indicates a Chinese form, others not acceptable.

On Personal Effects List individual crew members must declare radios, cassette players, cameras, watches, jewellery and currency.

No Stores Lists of any kind required. Bond is not sealed and crew issues may be made without restriction.
Formalities: All Officials board in Quarantine anchorage (believe occasionally in Ching Tang Yang). Pratique granted first and then vessel berths, remainder of formalities completed alongside.

Formalities are minimal and consist mainly of checking arrival papers, Register and Statutory certificates. No searches, crew inspections, etc. 2 Immigration Officers (Frontier Police) remain on board throughout vessel's stay and require accommodation.
Approaches/Pilotage: Telex from Agents prior to arrival with information as to approach track to follow and position of Pilot Station Anchorage - see "copy of telex" below. Communications with Pilot on VHF Channel 16. Difficult from outer anchorage due distance involved. Pilot establishes contact from pilot vessel or an outward bound ship about 1 hour to 2 hours before boarding. Pilot boards within Shih Peng Chiang which is well sheltered. It should be noted that this approach to Ningbo Gang is the only one permitted to foreign vessels and passage is in daylight only.

Thereafter navigation to anchorages/berth is straightforward. No objections raised to use of any of the vessel's navigational equipment or charts. Pilot brought his own charts of certain sections which could be referred to but not copied.

From entrance to Shih Peng Chiang inwards there are a considerable number of navigation marks and lights not marked on B.A. chart.

There is a Harbour Radar System with a chain of stations which would appear to give complete coverage from outer approaches to Ningbo; this was not in operation on either our inward or outward passage. Pilot stated that radar itself was excellent (Decca) but standard of operators poor and information received on VHF link unreliable.

Copy of Telex: Ningbo approaching guidance as follows please steer from high-seas to position 28° 53′ 00″ N., 122° 26′ 45″ E. 10 miles East of Beiyushan lighthouse (disused), therefrom take course of 013 degrees to reach position 29° 45′ 00″ N., 122° 40′ 36″ E. at 8.3 miles from Dongtingshan lighthouse (bearing 326 degrees) stop Then A/C 270 degrees and steer directly to p/anchorage (situated between 29° 44′ 30″ N.-29° 46′ 00″ N., 122° 20′ 30″ E.-122° 22′ 30″ E.) and must await Pilot there stop Other channels forbidden stop Photographing and survey are not allowed after entering China's territorial waters stop Please contact Pilot through VHF Channel 16 one hour before arrival at p/anchorage and keep on listening VHF Channel 16 until Pilot aboard stop Not allowed to use radio transmitter at anchorage unless emergency stop Must keep main-engine steering-gear rudder-indicator telegraph communication equipment whistle/siren gyro-compass repeaters radar and echo-sounders in good condition but not allowed to use any of them after arrival at anchorage unless permitted by Pilot stop Above regulations must be observed strictly stop Please confirm upon receiving.
PENAVICO

Anchorages:

1. Outer (pilot station) Anchorage as given in pre-arrival telex (See "Approaches/Pilotage".)
2. 'Mashi' Anchorage, to North and N.W. of Tieng-fing Shan (29° 52.5′ N., 122° 13.6′ E.), which is used for bad weather and typhoon shelter.
3. Quarantine Anchorage in area between Latitudes 30° 00.3′ N. and 30° 02.4′ N. and Longitudes 121° 48.0′ E. and 121° 49.7′ E (approximate position).

Note: Quarantine Anchorage already marked on chart, centred on approximate position 29° 59.8′ N., 121° 46.9′ E. is used for small vessels only.

4. There were a number of vessels anchored in Ching Tang Yang between the Ore and Oil terminals, apparently awaiting cargo.

Also a crude oil storage tanker of approximately 220,000 d.w.t. on a permanent mooring here. Good holding ground reported at a anchorages.
Radio: Agents: China Ocean Shipping Agency, Ningbo Branch, 20 X Cao Ma Road, Ningbo, China. Telephone: 55375, 56449, 55744-573 Cable address: PENAVICO. Telex: 37028, 35289 NBPEN CN.

All communications prior to arrival by sat/comm telex without problem.

W/T traffic lists copied from Ningbo Radio (M/F only) and Shanghai Radio; both stations appeared to handle traffic efficiently. Good weather forecasts in English from Shanghai Radio. As mentioned initial VHF contact with Pilot difficult. Within the port, Agents may be contacted on VHF through 'Ningbo Harbour Radio'; call on Channel 16 and then switch to working Channel 12. Agents listen on Channel 12 but this is th preferred method of contact. Use of main transmitter prohibited afte arrival at pilot station, as is use of sat/comm.

When in port all cables and telex messages are required to be route through Agents; these can be passed by VHF. If Agent has to collec deliver messages it can take some time due to distances involved – a port offices and telex facilities are at Ningbo town.

All Chinese personnel dealing with vessel, i.e. Pilot, Agents and Port Officials spoke excellent English.

Tugs: 4 tugs available of 3,200 h.p. 2 tugs used when berthing and unberthing, tugs' lines used. Tugs well handled to Pilot's instructions. It was noted that Chinese tankers of about 20,000 d.w.t. berthed/unberthed without tugs.

Berthing: Vessel moored to No. 2 Berth. Conventional berth (See "Plan") with good mooring points and fendering. Ship's gangway used.

Berthing and unberthing daylight only at any state of the tide; berthing in wind up to Force 5/6, unberthing up to Force 8 (Pilot's estimate).

No mooring boats; all lines passed by messenger with winches adjacent to each shore bollard (except for springs). Offshore anchor used.

Shore based berthing approach aid on No. 1 and No. 2 berth. Visual display on top of jetty house gives speed of approach (cm./sec.) and distance off (metres) of each end of vessel. No details available.

Strong tidal streams (probably up to 5 knots) but run along line of berth, i.e. 134° – 314° and did not cause any difficulties.

Berth exposed to North and N.W.; a Northwesterly gale gave rise to some swell movement.

Maximum permitted draft on berth given variously as 9.0 m. and 12.0 m. Echo sounder indicated a minimum depth of approximately 15.0 m. at LW but not permitted to sound round the vessel.

Cargo Facilities: Cargo hoses on No. 2 berth all of 6 in. diameter and handled by ship's equipment and small (mobile) shore crane.

An English speaking interpreter on duty at jetty head throughout vessel's stay alongside.

Communication between jetty head and pump station/tank farm appeared to be slow and difficult.

Berth No. 1 (of similar construction to No. 2 – see "Plan") is understood to handle only crude oil imports from North China; apparently all by Chinese tankers.

Berth No. 2 handles all export products. Understand only products available are gas oil, gasoline, naphtha and fuel oil. A cargo of approximately 20,000 tonnes of gas oil is exported each month. No information on other grades.

Berth No. 3 is for LPG. No information available.

The previously mentioned 220,000 d.w.t. storage tanker (Chinese) (See "Anchorages") moored in Ching Tang Yang is understood to be for transhipment of crude oil (from North China) for export. Equipped with Yokohama type fenders on starboard side. No other information available.

Ballast Facilities: No ballast may be discharged overboard without Harbour Master's permission. This is virtually automatic in case of segregated/permanent ballast.

Permission to discharge clean cargo tank ballast must be requested in writing and ballast water is subjected to analysis before permission is granted. Analysis takes about 6 hours.

Dirty ballast or ballast which fails analysis, may be discharged ashore. Receiving rate approximately 250 cu.m.p.h., maximum capacity unknown. There is a charge for this, understood to be 1.5 Yuan/ton.

Medical Facilities: Hospital at Ningbo. Transport provided by Seamen's Club.

Fresh Water: Available on jetty at cost of U.S.$1.00/ton. Rate and quantity unknown. Also available by barge at Quarantine and Ching Tang Yang anchorages but 3 days' notice required. Cost unknown.

Fuel: Agents advise that marine diesel and also fuel oil bunkers are available but minimum of 7 days' notice required.

Repairs: No information on facilities available. Harbour Master's permission required for immobilisation of main engines.

Cargo Surveyors: Zhejiang Import & Export Commodity Inspection Bureau who attended for final ullaging and sampling were efficient.

Repatriation: No difficulties with repatriation of sick crew members or arranging routine changes. It takes 1 to 2 days to arrange visas and Agents will only arrange flights as far as Hong Kong. Airline Prepaid Ticket Advice accepted.

Shore Leave: Allowed. Passes issued on arrival by Immigration (must be returned). Transport provided by Seamen's Club at Ningbo and arranged through Agent.

General: Chandler: Not used. Understand meat/fish available at any time. Vegetables and salad seasonal.

Laundry: Available. Not used. Reputed to be good quality service and fast.

QINGDAO (Tsingtao): 36.03 N. 120.20 E. (See Plan)

Also see "General" before first port.

PILOTAGE: Available 24 hours. Pilots will board at the relative pilot station.

ANCHORAGE: Anchorage in Jian Zhou Bay. The depth of water is 8.0 m. – 27 m., bottom mud and sand. Vessels of 5,000 d.w.t. – 130,000 d.w.t. can use the anchorage.

RESTRICTIONS: *Available Depths:*

Bulk grain vessels	32 ft.
Ore carriers	34 ft.
General cargo vessels	30 ft.
Oil tankers	41 ft.

Length: There is no length restriction for vessels at Huang Dao Oil Wharf.

Tidal Range: Maximum 4.5 m., minimum 0.25 m.

VHF: Qingdao Radio on Channel 16 throughout 24 hours.

TUGS: 2 × 1,000 h.p., 2 × 1,670 h.p. and 5 × 3,200 h.p.

BERTHING:

CRANES: See "Berthing".

FRESH WATER: Contact China Marine Bunker Supply Co., Qingdao Branch. Fresh water lines available at Wharves No. 1, 2, 6 and 7.

FUEL: Contact China Marine Bunker Supply Co.

REPAIRS: Facilities available.

AIRPORT: Qingdao airport.

GENERAL:

Stores: Contact Qingdao Foreign Supply Corporation.

Storage: Warehouse: 57,574 sq.m.
Open Storage: 340,253 sq.m.

Imports: Steel, ore, fertiliser, timber and other general cargoes.

Exports: Crude oil, peanut oil, groundnut cake, corn, cotton, hardware and other general cargoes.

SHIPMASTER'S REPORT: September 1979.

Documents: On arrival: 1 Report on Entry, 4 Crew Lists, 1 Import Cargo Manifest, 1 List of specified Articles, Currency, gold, etc. and all ship's certificates.

Navigation: BA Chart 876. On passing Cha Lien Tao Island, call "Qingdao Radio" for entry instructions. The outer quarantine anchorage for which Pilot is not compulsory is in position Lat. 36° 02′ N., Long. 120° 18.3′ E. The approach is straightforward and the lighthouses are in good working order. The authorities board at the outer anchorage via pilot ladder from a tug. The use of radar in the harbour area must be sanctioned by Pilot or Harbour Authorities. All other navigational gear may be used as required.

Communications: Both Agents and Harbour Authorities have VHF with most Channels. When vessel is at Inner anchorage, Agency contact vessel twice daily for berthing times, etc.

Currency: Local Yuan available.

Draft: Up to 35 ft. alongside at discharging berth – in approach entrance off Horseshoe Reef up to 34 ft. depending on tide.

Agents: China Ocean Shipping Agency are sole Agents. They visit vessels twice daily and are also in VHF contact from their office. Communications with other countries from Qingdao is by cable only, telex is due to be installed next year.

Medical: Hospital and doctors available.

Laundry: Excellent and not expensive.

Provisions: Not expensive but very limited in both content and availability. Not to be relied on, especially if in port for short stay.

Fresh Water: Alongside from quay – 35 t.p.h. Also available at anchorage from water barge.

Time: GMT plus 8 hours.

Immobilisation: Permitted by arrangement with Harbour Authorities.

Opening/Closing Hatches: Either ship's crew or stevedores. In the case of the latter, a charge is payable.

Garbage: Removed when requested by small barge.

Repatriation: Difficult at present as no regular air passenger flights from Qingdao. Only way would be overnight train journey to Beijing then flight to Europe.

Repairs: Possible, large repair shops and naval yards in port area.

Bunkers: Available to Chinese vessels. Gas oil also available if adequate notice given.

Cargo Working: Discharged 24,000 m/tons sulphur in 6.75 working days, using shore cranes and grabs. Discharged into railway wagons on twin rail tracks also into large "silo" adjacent to the berth. Good standard of crane operation. Cargo tonnage discharged determined by draft surveys performed by Government surveyors and ship's staff. Statement of facts drawn up by Agents.

Watchmen: One gangway guard for inspecting Crew members' passes.

Tugs: Four large tugs – one of 3,000 h.p.

Pilots: Usually three on each vessel – reasonable English.

Density: Varies between 1020 and 1025.

Tours, etc.: Tours are arrangeable via the Seaman's Club and are good value. There are no shore leave restrictions and cameras may be used. Inter ship visiting is allowed also film and book exchanges between ships.

Shore leave is possible from the Inner anchorage by tug.

Mail: From Europe by air freight via Tokyo and Beijing takes 7 days.

Bond, etc.: Not sealed or inspected by Authorities. Stores Lists NOT required.
Floating Crane: Available, lifts estimated 150 tons.
General: Stevedore labour appeared plentiful – delays are occurring due to large increase in foreign trade. New berths are being planned and dredging is taking place continuously. Officials, Agents, etc. most pleasant and helpful and very eager to learn English. It is advisable to make a 'sea protest' to the Harbour Authorities if any bad weather experienced on voyage.

SHIPMASTER'S REPORT: June 1981.
Berth: Huang Dao Oil Terminal. 36° 04′ N., 120° 13.5′ E.
Departure Draft: Forward 11.7 m. Aft 12.1 m.
Charts: BA 1255, 876, 857. Chinese (up to date) 9106, 9408, 9432.
Approach: Only by 'defined routes':
from: 35° 56′ 24″ N., 121° 05′ 00″ E. or 35° 43′ 15″ N., 120° 53′ 09″ E.
Course 270°T Course 338°T
to 35° 56′ 24″ N., 120° 46′ 42″ E.
then Course 283°T
to 36° 02′ 00″ N., 120° 18′ 16″ E. (Pilot boarding/Arrival Inspection Anchorage)
and reverse courses to same positions outward.
Entry: Arrival inspection formalities carried out at above anchorage, by boarding party of 8 persons from Agents, Customs, Immigration and Harbour Authority. We arrived at 1700 hrs. and inspection party boarded at 0930 hrs. next morning. China Ocean Shipping Agents, representatives spoke very good English and most helpful. Chinese documents required, including crew declaration form but Bonded Stores list not required and Bond not sealed. After inspection, about 30 minutes, shifted to Inner Tanker Anchorage with 2 Pilots.
Agents: China Ocean Shipping Agents, Cable: Penavico 2213 Qingdao.
VHF: Channel 16 to Qingdao Radio who will give you a channel to Agents, usually Channel 11.
Anchorage: Inner Tanker Anchorage is 1 mile North of Oil terminal with varying depths from 11 m. to 30 m.
Berths: Concrete dolphin structure, adequately fendered. West berth max. draft 12 m., berth port side to, approach from North. East berth max. draft 13 m., approach from South rounding No. 23 buoy to starboard when coming from Inner anchorage, Port side to. No shore gangway. Connection with flexible hoses so derrick required. Usual moorings. Head and stern line dolphins have small winches on them but out of order so mooring gang reluctant to handle wires.
Berthing/Unberthing: Competently carried out by 3 Pilots and 2 tugs. Tugs, Nos. 10 and 11 are 3,200 h.p. Gather vessels of our size (55,000 d.w.t.), and above only depart during daylight and on HW.
Cargo: Loaded Shengli Crude API. 23.3, loading temperature 40°C. Terminal state maximum loading rate 2,500 tonnes per hour. We achieved 1,980 t.p.h. Connection is by 2×10 in. 'Y' connectors at manifold connected to flexible hoses. After completion documents take 3/5 hours to prepare and bring on board.
Ballast: As first cargo after dry dock we received permission from Harbour Authority to deballast to sea although pumped tank bottoms ashore just in case. I gather that it is normal to deballast to shore reception at maximum rate of 600 t.p.h. and believe charge per ton is quite high so it is prudent to arrive with minimum dirty ballast.
Repairs: Appear to be quite readily available. We had some boiler tubes welded and Chief Engineer reported that the work was competently carried out. Chinese surveyors also act on behalf of Lloyd's.
Fresh Water: Available at anchor from powered barge at 50 t.p.h. and also available on terminal but pressure is unreliable.
Shore Leave: Allowed from anchorage and terminal. Request for launch to be passed to Agents by VHF before 1100 hrs. and launch alongside around 1230/1300 hrs. and returns from shore between 1700/1900 hrs. There is a Seamen's Club with a new hotel attached which was opened during our stay. Seamen's Club will arrange football matches, and various tours. International telephone calls can be made from Agents' office.
Garbage: A garbage collection boat calls every other day whilst at anchor.
General: During our 16 day stay in June there was fog during some part of nearly every day, occasionally dense.

SHIPMASTER'S REPORT: May 1989.
Vessel: 35,000 g.r.t., 64,440 d.w.t. Vessel discharged 47,250 tonnes of bulk wheat. Length of stay 38 days.

Vessel arrived with a draft of 12.0 m. and proceeded to Pier No. 8 – Berth No. 49 and lightened to a draft of 9.6 m. She then proceeded to Pier No. 1 – Berth No. 3.

Self-sustaining vessels may lighten into barges at the anchorage.
Documents: Officers from Harbour Master's office, Quarantine Department, Customs, Immigration and Agent's office board the vessel upon arrival at the Inner Quarantine Anchorage.

The following documents are required on arrival:

2 Reports of Entry for Foreign Going Vessels.
2 Reports of Articles Restricted for use in port.
5 copies Crew List (IMO Form accepted).
4 copies Passenger List (Not required if no passengers on board).
2 Lists of specified articles (Foreign currencies, gold, silver belonging to ship or members of crew).
1 copy Maritime Declaration of Health.
1 copy Ammunition List (Not required if no ammunition on board.)
1 copy Bonded Stores List.
3 copies Ship's Particulars.
1 copy Vaccination List (required if the vessel coming from a suspected country).
2 copies Ports of Call within last 6 months.
1 copy Import Manifest.
1 copy Bills of Lading.

Last Port Clearance and all ship's certificates submitted for examination on board.

After inspection, Harbour Master's officers issue 30 days, 60 days, or 90 days optional Tonnage Due Certificate as requested by the Master.
Pilotage: Compulsory. Pilotage available throughout 24 hours. Master should send ETA at Chaolien Dao to Harbour Master through Qingdao Radio 24 hours in advance, any change of ETA must be advised. VHF Channel 16 may be used to contact pilot station after passing Chaolien Dao. Within pilot area limited with a circle 3 cables radius centered on position Lat. 36° 02′ N., Long. 120° 18.02′ E., 1 senior Pilot and 1 junior Pilot board the vessel from a tug boat, which displays pilot signal while on duty.
Anchorage: Vessels may anchor South of pilot area, according to Pilot's instructions, without a Pilot, otherwise Inner Quarantine Anchorage is used. In case of congestion, West of Inner Quarantine Anchorage may be used. Good holding ground.
Health: Vessels should hoist 'Q' flag on arrival. Pratique is obtained at the Inner Quarantine Anchorage on arrival.
Radio: Qingdao Radio (XST).
VHF: Qingdao Radio on Channel 16, Pilot on Channels 16 and 14, Sinoagent on Channel 74 and Penavico on Channel 11.
Tugs: 7 × 3,200 b.h.p. tugs operating in the port. Tug's lines are used for berthing and ship's lines for unberthing. Tugs join the vessel before entering breakwater. Number of tugs to be used depends on Pilot's advice and Master's demand. Generally, 2 tugs used for large vessels.
Berthing:

Pier No.	*Berth* No.	*Cranes & Use*
1	1, 2	8 × 10 tons and 1 × 15 tons. Coal cargoes.
	3	5 × 10 tons. Grain cargoes.
	4, 5, 6, 7,	No cranes. Bulk and general cargo.
2	8, 9, 10, 11, 12, 13, 14	Equipped with cranes. General cargo and ore cargoes.
3, 4, 5		For naval vessels.
6	36, 37, 38	4 × 10 ton. General cargo and No. 38 generally for bulk sand.
7		Coal loading terminal for small size vessels.
8	45	Clean bulk cargo.
	46	Bulk ore.
	47	Bulk ore and logs.
	48	Logs and large foreign passenger vessels.
	49, 50	Lightening deep draft vessels.
	50, 51	Sugar and occasionally foreign passenge vessels.
		Berths No. 45, 46 and 47 equipped wit 13 × 10 ton cranes.
		Berths No. 49, 50 and 51 equipped wit 11 × 10 ton cranes.

Berth No. 52 (between Piers No. 5 and 8) and No. 53 berth (at the East end of Pier No. 5) are used by container vessels. Also the berth between Piers No. 6 and No. 1 is used by Chinese passenger liners. The berth between Piers No. 1 and No. 2 is for tugs and passenge catamarans. The berths between Piers No. 2 and No. 3 and Piers No. and No. 4 are for naval use.

All shore cranes are on rails and all cargo piers except No. 4 an No. 48 berths, are rail-served. Cargo can be handled direct betwee ship and train.
Stevedores: Gangs are arranged by the Agent. Crane operators are competent. Hold sweeping is done by stevedores. Generally a few o the foremen can speak English.
Medical: 24 hours' advance notice is required for medical attention Arranged by Seamen's Club through Agent. All hospital facilitie available. Dental facilities available.
Density: 1022.5 at low water and 1024 at high water observed by shi but draft surveys at 1024 all the time.
Fresh Water: Good quality water available by pipeline at Piers No. 1, and 6 and by barge at all berths at the other piers and at the anchorag Rate 50 tonnes/hr. Cost U.S.$ 1.0 per ton by pipeline and U.S.$ 3.0 pe ton if supplied by barge.
Fuel: Fuel comes from Dairen and all grades are not available at a times. Appropriate advance notice is required. Minimum supply quantit for fuel oil and diesel oil is 100 tonnes. MDO is not available, only LD and HDO available at Qingdao.
Consuls: No consuls locally. Nearest at Peking.
Dry Docks/Repairs: One dry dock for vessels up to 30,000 d.w.t. a Fushansuo Bay. All kinds of temporary repairs can be undertaken foreign vessels.
Surveyors: Only Z.C. China Classification Society acts on behalf of othe classification societies when authorised.
Gangway/Deck Watchman: Gangway watchman compulsor Maintained by ship's crew.
Hatches: Opening/closing hatches is optional. If by ship's crew, Maste has to sign a formal paper on arrival.
Customs Allowances: For the first 10 days, 2 cartons of cigarettes an 1 bottle spirits for each crewman. 15 cartons of cigarettes and 5 bottle spirits for the Master. Seal can be opened on request after 10 days.
Repatriation: Possible.
Airport: Located at about 37 km. N.W. of Qingdao. It only ha international connections with Hong Kong. Regular flights once a da on Monday, Wednesday and Saturday, sometimes there is an extra flig on Sunday by China Airlines only.
Time: GMT plus 8 hours. Summertime is kept from first Sunday afte April 10th until September.
Communications: Cable, telex, direct telephone and Fax available all over the world from the agent's office. Direct trunk calls also availab from large hotels.
Shore Leave: Permitted from 0700 hrs. – 2400 hrs. with I.D. and sho passes which are issued by Immigration Officer on arrival. The sho passes are valid for all Chinese ports to be called at consecutively. Sho leave is also possible from the Inner Quarantine Anchorage by laun on request.

Regulations: If shifting more than 100 m. or from berth to berth, use of Pilot is compulsory.

Approval must be obtained from the Harbour Superintendency Administration in advance through Ship's Agent, if the following are to be undertaken whilst in port.

1. Hull painting
2. Deck cleaning and washing
3. Discharging of ballast water and bilge water (including tail shaft water).
4. Discharging of hold washings (including crude oil tanker washing).
5. Use of oily water separating equipment to dispose of any sewage containing oil.
6. Using any type of dispersants.
7. Discharging sewage and waste oil into reception facilities.
8. Funnel cleaning and boiler water discharging.
9. Discharging of any harmful or corrosive substances into the harbour.
10. Whistle testing.

Approval is generally received from the Agent orally.

Provisions & Supplies: Limited kinds and amounts available at low prices through ship's Agent (ships supply branch). Chinese charts also available.

Garbage: Collecting service is available by barge at anchorage and by truck at berth if requested.

Agents: There are 2 governmental agents at Qingdao.

1. China Ocean Shipping Agency Co. Cables: Penavico–Qingdao.
2. China Marine Shipping Agency Co. Cables: Sinoagent – Qingdao. Telex 32132 TRSQ DCN.

Both Agents have VHF.

AUTHORITY: Qingdao Harbour Administration Bureau, 4 Dai Gang Yan Road, Qingdao, People's Republic of China. *Tel:* 27641. *Contact:* Bai Wen-Xuan, Deputy Director.

QINHUANGDAO (Chinwangtao), including Shanhaiguan: 40.00 N. 119.30 E. (See Plan)

Also see "General" before first port.

NOTICE: Chinese Notice June 1984.

Anchorages with bearings and distances from Nanshan Tou light (Lat. 39° 54.6′ N., Long. 119° 36.9′ E. approx.):

(a) Oil tanker anchorage. Sector between bearings 100° and 110° and distances 3.0 miles and 7.0 miles.

(b) East Anchorage. Sector between bearings 110° and 135° and distances 3.0 miles and 7.0 miles.

(c) West Anchorage. Sector between bearings 165° and 190° and distances 3.0 miles and 5.0 miles.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilot boards at the relative pilotage quarantine anchorages.

ANCHORAGES: There are 3 anchorages in the Port of Qinhuangdao.

1. Eastern Pilotage Quarantine Anchorage:

Location:	A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 119° and 135° and between two arcs of 3 miles and 7 miles in radius.
Depth:	14.0 m.
Bottom:	Mud and sand.
Vessel size:	50,000 d.w.t.

2. Western Pilotage Quarantine Anchorage:

Location:	A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 165° and 190° and between two arcs of 3 miles and 5 miles in radius.
Depth:	12.0 m.
Bottom:	Mud and sand.
Vessel size:	35,000 d.w.t.

3. Anchorage for Tankers:

Location:	A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 110° and 119° and between two arcs of 3 miles and 7 miles in radius.
Depth:	14.0 m.
Bottom:	Mud and sand.
Vessel size:	50,000 d.w.t.

RESTRICTIONS: Entry and departure possible after sunset.

Draft limitation in channel is 13.5 m.

TUGS: 7 × 3,200 h.p. and 3 × 167 h.p.

BERTHING:

District	*Berth No.*	*Length (m.)*	*Present Depth (m.)*	*Cargo Handled*

SHIPMASTER'S REPORT: March 1981.

Lat. 39° 54.6′ N., Long.: 119° 36.7′ E.

Chart: BA No. 3378.

Documents:

5 copies Crew Lists.
1 copy Import Manifest.
1 copy List of Specified Articles belonging to Ship and/or Members of Crew.
1 copy Maritime Declaration of Health.

Anchorage: In case there is ice at anchorage in Winter it is advisable to anchor further off and not pay out too long scope of chain.

Also see "Notice".

Pilotage: Pilotage is compulsory for foreign vessels entering and leaving the port. Pilots board ships at pilotage/quarantine anchorage. Pilotage is undertaken day and night. Pilot boat (tugboat) displays the International Pilot Signal when on pilotage duty. There are about 12 Pilots available. Pilots can speak and understand English sufficiently.

Channels: In port there are three channels. Original channel, new channel and oil pier channel.

Original channel is about 1.7 miles in length, 100 m. in width and 9 m. to 10.4 m. depth. It is used bys berthing and leaving the large pier and the small pier.

New channel about 0.9 miles in length, 100 m. in width and 9.4 m. to 10.4 m. in depth. It is a branch of the original channel and is used by ships berthing and leaving the new pier.

Oil pier channel is about 2 miles in length, 100 m. in width and 10.7 m. in depth. It is used by ships berthing and leaving the oil pier.

Berthing:

Name			Capacity
Small pier	Berth No. 2		1 × 5,000 ton
Large pier	Berth No. 4		1 × 7,000 ton
Large pier	Berth No. 5		1 × 10,000 ton
Large pier	Berth No. 6		1 × 10,000 ton
Large pier	Berth No. 7		1 × 10,000 ton
New pier	Berth No. 8	Pier B	1 × 10,000 ton
New pier	Berth No. 9		1 × 10,000 ton
New pier	Berth No. 14	Pier A	1 × 10,000 ton
New pier	Berth No. 15		1 × 10,000 ton
Oil pier	East Berth		1 × 10,000 ton
Oil pier	West Berth		1 × 10,000 ton

Radio: Foreign ships calling at this port may according to International Radio Regulations communicate with Qinhuangdao Coastal Radio Station.

Name	Qinhuangdao Radio
Call sign	XSE
Medium frequency (kHz)	486
Hours of service	0000 – 2400
High frequency (kHz)	8484
Hours of service	0600 – 2400
Time of traffic list	At H + 10 each given hour.

There is VHF Channel 16 at port control and Channel 11 at 'Penavico' Agents. To call Agents first call port control and then change to Channel 11 after informing the vessel's intention to use VHF.

General: The port is equipped with lifting machinery, tippers, universal lifting machines, belt conveyors. Cargo is unloaded directly into railway wagons. Coal loading is done by conveyor belts. Hatches are opened by ship's crew. Stevedores are not competent in derrick work. Stevedores work in three shifts of eight hours each commencing at 0600 hours. Discharging rate is fully dependent on availability of wagons. There are 11 tugs available. Fresh water and fuel are available by boats. Limited provisions are available.

There is a Seaman's club in the city, well equipped with recreation facilities. A trip to Great Wall of China can be arranged through the club.

SHIPMASTER'S REPORT: June 1990.
Port: Sub-Port of Shanhaiguan.
Location: 10 miles E.N.E. of Qinhuangdao.
Exports: The Port is now a major exporter of coal and oil. China exported 15.29 million tons of coal during 1989, and a majority passed through this Port.

The Port also exports soyabean meal, maize and pig iron, in small geared vessels up to a maximum draft of about 6.5 m., mostly working cargo at Berth No. 1.

Radio: ETA to be sent to "Penavico Qinhuangdao".
Pilotage: Pilot boards at Qinhuangdao.

After passing Joint Inspection, vessel is piloted to an anchorage off the Port of Shanhaiguan, pilot then returns to Qinhuangdao.

Dockyard pilot, with the assistance of Dockyard and/or Qinhuangdao tugs, berths the ship.

Health: Formalities take place at Qinhuangdao Quarantine Anchorage. Standard Chinese forms used.

Berthing:
Berths No. 1 – 4: Length 450 m. Max. draft 6.5 m.
Berths No. 5 – 6: Length 300 m. Max. draft 6.5 m.

Cranes:
Berths No. 1 – 4: One crane for repair work.
Berths No. 5 – 6: Two cranes for repair work.
Mobile cranes available.

Fuel: Available from Qinhuangdao by barge.

Dry Docks:
1 dry dock 240 m. × 38 m. × 6.0 m. over sill. 2 cranes available.
1 dry dock 170 m. × 28 m. × 6.0 m. over sill. 2 cranes available.
1 × 63 tonne crane and 6 × 25 tonne cranes available.

Shan Hai Guan Shipyard, Tel: 551131. Telex: 27131 QH SHG CN. Fax: 0335-551350. The Shipyard also monitors VHF Channel 12.

General: Telephone, Fax and Telex facilities available.

Agency and ship chandler services are from Qinhuangdao, about 45 minutes drive.

The Port is an hour's walk from the seaward end of the Great Wall of China, described as "The Old Dragon's Head".

On sailing, a Qinhuangdao pilot is required to take the vessel to the Joint Inspection Anchorage. Only after Outward Clearance has been completed, can the vessel sail, which may cause delay.

AUTHORITY: Qinhuangdao Port Adminstration, 6 Haibin Road, Qinhuangdao, The People's Republic of China. *Tel:* 34812-3522. *Telex:* 271051 QH PEN CN. *Cables:* 2156 Qinhuangdao. *Contact:* Huang Guo-sheng, Port Director.

QUANZHOU: 24.53 N. 114.43 E.

PILOTAGE: Compulsory. Pilotage undertaken during daylight hours only.

ANCHORAGES:

Name of Anchorage	*Depth* (m.)	*Bottom*	*Size of Mooring Vessels* (d.w.t.)
Hou Zhu	7.0	Mud and sand	1 × 3,000
Bai Oi	6.8	Mud and sand	2 × 3,000
Xiu Tu	7.0	Mud and sand	2 × 3,000
Bei Wu Jian – South	8.5	Mud and sand	2 × 5,000
Shi Hu	11.0	Mud and sand	2 × 10,000

RESTRICTIONS: Entry and sailing not possible after sunset.
MAX. SIZE: Draft limitation in channel is 8.5 m.
Tidal Range: Maximum 6.3 m. Minimum 5.1 m.
VHF: Quanzhou Radio on Channel 16 throughout 24 hours.
TUGS: 3 × 250 h.p. and 1 × 600 h.p.
BERTHING: See "Anchorages".
STEVEDORES: *Working Hours:* 0730 – 1130 and 1330 – 1730.
FRESH WATER: Contact Quanzhou Marine Supply Corporation.
FUEL: Contact Quanzhou Marine Supply Corporation.
REPAIRS: No facilities available.
GENERAL: *Provisions:* Contact Quanzhou Foreign Vessel Supply Corporation.

Storage:
Warehouse: 3,125 sq.m.
Open Storage: 27,458 sq.m.

Imports/Exports: Salt, grain, coal, building materials and petroleum.

SANYA: 18.14 N. 109.30 E.

PILOTAGE: Compulsory. Pilot boards in Quarantine/Pilot anchorage.
ANCHORAGE: *Quarantine/Pilot Anchorage:* Depth 20 m. – 28 m. Bottom: Mud. Max. Size: 50,000 d.w.t.
Sheltered Anchorage: Depth: 5.0 m. –16.0 m. Bottom: Mud and sand. Max. size: 50,000 d.w.t.
Loading/Discharging Anchorage: Depth 8.0 m. – 16.0 m. Bottom: Mud. Max. size: 50,000 d.w.t.
RESTRICTIONS: Entry and departure possible day and night. Depth in channel 7.0 m.

Tidal Range: 0.06 m. – 2.26 m.

VHF: Sanya Radio on Channel 16 (24 hours).
TUGS: 2×248 h.p., 1×400 h.p. and 1×300 h.p.
GENERAL: *Floating Cranes:* Available if notified in advance.
Supply Services: Arranged by Hainan Autonomous Prefective Sanya Ocean Shipping Supply Corporation.
Stevedores Working Hours: As per advanced arrangement with Haikou.
Warehouse and Open Store Space:

Warehouse:	9,034 sq.m.
Store Space:	51,000 sq.m.

Main Imports and Exports:
Imports: Grain, cement, chemical, fertilisers, coal and steel.
Exports: Salt, sugar, rubber and local products.

SHANGHAI: 31.14 N. 121.28 E.

Also see "General" before first port.

DOCUMENTS: China Ocean Shipping, Shanghai Branch, as ship's Agent, must submit to Shanghai Customs one complete set of the cargo manifests covering all the cargoes to be discharged at Shanghai (including the transit cargoes via Shanghai) for the declaration and the clearance within 24 hours after the completion of the joint inspection. If there is any shortage of the cargo manifests such as the incomplete cargo manifest or the missing/omitting of some bills of lading, the Agent is forced to bear the penalty (maximum RMB 30,000.00), in accordance with the Customs Law in order to improve the quality of the cargo manifest and other relevant documents from abroad.

In consideration of the above, principals are kindly requested to pay special attention to this matter and ensure that all the documents, especially the cargo manifest, made and sent by principals should be perfectly correct. Otherwise, the Agent will transfer all the fines imposed upon them by Shanghai Customs to the ship owner or the agents at the loading ports.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilot available 24 hours. Working VHF Channels 16 and 6.

Pilot boards in position Lat. 31° 03′ 34″ N., Long. 122° 08′ 14″ E.

Send ETA at the outer roundabout, when at least 4 nautical miles from it, on Channels 6 or 16. Vessels making for Beicao Hancao should make a safety broadcast 3 nautical miles before entering it and on entry, broadcast their name and the time. Vessels intending to navigate in Yawosha Hangcao should be equipped with VHF Channel 6.

RESTRICTIONS: Vessels may enter and sail day and night.
MAX. SIZE: Maximum fresh water draft in channel is 9.5 m.
Tidal Range: Maximum 3.45 m., minimum 2.60 m.
VHF:

Station	*Hours*	*Channels*
Penavico	24	11 or 27
Sinoagent	24	73 or 74

TUGS: 7 × 980 h.p., 5 × 1,670 h.p., 1 × 1,900 h.p., 1 × 2,200 h.p., 3 × 2,600 h.p., 5 × 3,200 h.p. and 1 × 3,500 h.p.

CRANES: *Floating Cranes:* 1 × 32 tons, 1 × 63 tons, 1 × 100 tons, 1 × 200 tons, 1 × 500 tons, 1 × 2,500 tons.

Also see "Berthing".

SPECIALISED CARGO HANDLING FACILITIES:
Chemicals/Fertilisers: The special wharf for handling bulk chemical fertiliser and bulk soda has a quay length of 350 m. able to accommodate two 10,000 d.w.t. vessels or one 30,000 d.w.t. vessel. The wharf is equipped with cranes with capacity exceeding 15 tonnes and various types of hold cleaning machinery. With 22 sets of advanced bagging machines available, bulk cargoes can be bagged in warehouses or at ship's side.

Bulk Grain: With a quay length of 383 m., the mechanised bulk grain handling wharf can accommodate 25,000 d.w.t. ocean-going vessels and smaller coastal vessels simultaneously. The wharf is equipped with 6 sets of pneumatic suckers with capacity of 150-200 tonnes p.h.

After discharge by suckers, grain is transferred to silos. The silos having a total capacity of 51,000 cu.m. are equipped with 6 elevators with capacity of 300 tonnes p.h. each. 6,000 tonnes of grain can be bagged per 24 hours.

Timber: Handling of timber takes place at 4 specialised berths with a total quay length of 689 m. for 10,000 d.w.t. ocean-going vessels as well as at mooring buoys. The terminal has a stacking yard of 40,000 sq.m. and a river basin of over 10,000 cu.m. for timber storage. Timber is handled with 6 portal gantry cranes of 10 tonnes capacity and other specialised equipment.

Containers: There are 4 container berths enabling 4 second generation full container vessels to be handled simultaneously. The 2 container terminals are equipped with 6 gantry cranes, 14 straddle carriers, and forklifts. The well laid out container yards and container freight stations cover an area of 240,000 sq.m. and have railway connection.

MEDICAL: Facilities available.
FRESH WATER: Available.
FUEL: Available
REPAIRS: Facilities available.
AIRPORT: Located 30 km. from the port.
DEVELOPMENTS: Container wharves at Wusong under construction. Two berths. Hitachi container crane (30.5 tonne) under construction.

Two coal wharves (4 berths) being re-built.

Seven new berths for vessels of 10,000 d.w.t. to be built.

SHIPMASTER'S REPORT: March 1980.

Tanker's Particulars:
Ship's Length: 170.75 m. Breadth: 26.09 m. Depth: 14.9 m.
Summer Deadweight: 31,600 tonnes. Draft: 11.33 m.
Loaded Shanghai: 19,897.184 tonnes Chinese motor gasoline.
Sailing Draft: Forward 8.54 m. Aft 9.02 m.

Navigation: British Admiralty Charts 1601 and 1602 (T) proved most reliable with all buoys in their correct position exhibiting the correct lights. Where the channel is constantly dredged, there are a few extra buoys but they follow the normal numbering of odd on the starboard hand and even to port when proceeding up river.

Anchorage: Anchorage is obtained in the area shown S.E. of Chang Kiang Kou Lightvessel. There is a constant strong tide running here and at least 6 shackles in the water are recommended.

Pilotage: The pilot vessel is anchored at Lat. 31° 03.4′ N., Long. 122° 12′ E. The Pilots listen on Channel 16 but berthing information usually comes from the Agents "Penavico", through Shanghai Radio. When picking up the Pilot, vessels are told to approach as close to the pilot vessel as possible and the Pilot boards from a small boat. An approach to the pilot station may be made either by keeping well South of the Yangtze Channel or going up the channel until Buoy No. 14, then cutting down South.

Radio: Pilots listen to VHF Channel 16. The national agency "Penavico" listen on Channel 11 for all ships. Foreign ships are especially asked to listen at the following times when they will normally be contacted. 0715 hrs., 1115 hrs., 1515 hrs. and 1915 hrs.

The Agents "Penavico" also have Channel 27 if Channel 11 is busy.

Papers: The following papers are required, and must be on the Chinese printed forms:

2 Report of Entry for foreign-going ship
1 Maritime Declaration of Health
1 Report on articles restricted for use in port
7 Crew Lists
1 List of specified articles, foreign currencies, gold, silver belonging to the ship and/or members of the crew.
1 Import manifest showing goods to be imported into Shanghai

A boarding official came aboard with the Pilot and all the Chinese forms were completed en route to the Quarantine Anchorage. At the Outer Anchorage, no persons boarded.

Clearance and Pratique at the Quarantine Anchorage took about an hour. After this all the officials and the Pilot left.

All non-Chinese are given Identity cards. Each man receives a currency card and all cash drawn on the ship is noted and stamped by the Agent. All unused cash must be returned.

Shore leave is allowed from the Quarantine Anchorage. There are two boats daily, one at 0900 hrs. and the other 1600 hrs. Vessels requiring this boat must hoist the flag signal "DI".

Berthing: All berthing information comes from the Agent via VHF. Berthing is carried out day or night at Kao Chiao Sha which is on the North bank of the river between Buoy Nos. 107 and 108. Berth is in position Lat. 31° 20.75′ N., Long. 121° 32.1′ E. Vessels loading berth starboard side alongside so they can turn around in the narrow river whilst still light draft. Vessels turn in the river off Buoy No. 110. The turn is made to starboard using the engines and a tug which pushes on the port bow. Sometimes the starboard anchor is used. At the berth one tug only is used, this not being made fast at all. It simply pushes where required.

Moorings are 4 headlines plus 2 springs forward with 4 sternlines and 2 springs aft. Whilst approaching the berth, the port anchor is run out although its usefulness is doubtful.

The actual berth is a "T" shaped concrete pier on wooden piles. It is about 400 ft. long with a maximum depth of 9.5 m. 560 ft. is about the maximum length for the berth. Springs go to the jetty whilst other lines go to the shore. Despite the heavy traffic on the river, very little surging was experienced on the berth.

No fuel, water, diesel available ex-berth. All available from a barge but not during cargo operations. No slop facilities ashore, again a barge is available if required.

No ballast to be discharged into the river without the permission of the Harbour Authorities. A written application must be made through the Agents for the authorities to inspect the ballast. After inspection, permission may then be given to start de-ballasting, This ballast check is most stringent and samples of every tank are taken plus a really good visual check carried out. The oil record book is also checked by the authorities.

Whilst at the berth, no visitors are allowed on board. Four border guards are on the vessel at all times. Two maintain a continuous gangway watch recording the arrivals and departures. Customs Officials also stay on board throughout. Whilst at the berth, an Agent's representative also stays aboard.

Facilities: Medical facilities are good and they are arranged by the ship chandler. Provisions and stores are readily available and found to be of good quality and inexpensive. The bond was not sealed.

There is a free transport to and from the seaman's club in Shanghai which was about 1 hour's drive. Photography is allowed in all areas except the docks and military areas.

Notice of Readiness is only accepted during office working hours. Anything required such as cargo surveyors, tank inspectors, bills of lading or certificates of quality and quantity must be applied for in writing well in advance.

Repatriation is possible, the ship chandler provides all the necessary alien application forms.

If tankers wish to take a shore line sample at the start of loading, written permission must be applied for.

Tankers should be well advised to ballast well out to sea as the water 20 miles from shore tends to contain a lot of mud and sand.

Sailing: All unused cash, plus currency cards and passes are collected prior to sailing. Papers take about 4 hours. The maximum river draft is 9.0 m. fresh water.

Two tugs are used for unmooring, one each end and use either tug's or ship's gear. Before singling up, the anchor is pulled home if possible. Ships with deep draft have 2 Pilots who speak good English. Once the vessel is off the berth, the tugs depart. There seemed to be no radar assistance or traffic control on the river. Each Pilot depended greatly on the whistle and smaller craft seemed to keep the main channel clear. Pilots sometimes talked ship to ship on VHF, Channel 6.

In the main Chanjiang (Yangtse River) there are 3 shallow areas and if drawing 9.0 m., they cannot all be transitted in one passage. First after un-mooring day or night, the vessel clears the shallow area off Buoy No. 58 at HW. Anchor is then dropped with 6 shackles on deck in the anchorage just off Buoy No. 57. Just prior to the next high tide, vessels weigh anchor to pass shallow areas off Buoy Nos. 55 and 23, the latter being passed at HW. The minimum under keel clearance recorded was 1.0 m.

Pilots depart as close to the pilot vessel as possible, taking ships South of the channel to do this. It is up to the Master whether he remains outside the channel or goes back in it after the Pilot has left.

Conclusion: There were no musters of officers or crew. No problems were encountered and all shore personnel seemed pleasant and polite.

The berth itself was rather old with no gear at all. Ship's gangway was used and ship's derrick was required to handle 2×6 in. hoses. Loading rate was 450 t.p.h. and the jetty was manned at all times.

Agency Notice: To the Master,
m.v. ". . . . ."

Dear Captain,

Please find attached herewith the following forms required by the Port Authorities at the Joint Inspection which is to be conducted on your vessel's arrival at the Quarantine Anchorage:

2 Report of Entry for foreign-going ship
1 Marine Declaration of Health
1 Report on articles restricted for use in port.
1 set of specified articles, foreign currencies, gold, silver belonging to ship and/or members of crew
7 sets Crew List

Please have the above forms filled in now and be ready to submit them to the port officials on their boarding for Joint Inspection.

Yours faithfully,
China Ocean Shipping Agency
Shanghai Branch

SHIPMASTER'S REPORT: October 1980.

Shanghai pilot vessel will now give orders about proceeding inwards to pilot vessel or remaining outside at designated anchorage. Pilot checked to make sure we had anchored in the correct anchorage. Channel buoys as per "Guide to Port Entry". See "Circulars – Guide to foreign vessels calling at Shanghai – Para 3(c)". These buoy positions and descriptions were transmitted to vessel but only 4 hours before arrival at channel entrance. Pilot vessel tends to be between Buoy Nos. 14 and 18. All other information in the Shipmaster's reports appears to be still valid.

Since about July 1980 foreigners changing money ashore are issued with Bank of China foreign exchange certificates, likewise if drawing cash from Agent. Denominations of 50, 10, 5, 1, 0.50, 0.10 yuans. The certificates (like banknotes) are printed with the following:

"The yaun expressed in this certificate is equivalent in value to the Renminbi yuan. This certificate can only be used within China at designated places. No request to register its loss will be accepted by the Bank".

The Renminbi Yuan is the official currency unit. Designated places are Seaman's Club, Seaman's Store and Friendship Store. The two former have cheaper prices for seamen. Other designated places are the tourist hotels.

For tankers, authorities require a cargo manifest of nil cargo, no special form required.

For entry papers the official Chinese forms must now be used for 'Report of Entry for Foreign-Going Ship, Crew List and List of Specified Articles, Foreign Currencies, Gold, Silver belonging to Ship and/or Members of Crew'. If not available on board before arrival then vessel must now transfer the information to the Chinese forms.

If vessel coming from what they describe as a cholera infected port then the following are required. A statement of ballast quantities and disposition (required from clean port also) and where the ballast came from, i.e. open sea or which river. They are most concerned that no ballast is imported from a cholera infected port. Ballast is inspected by quarantine officials and the slightest "rainbow" on top means the top one third of that tank will have to be pumped into a barge. They will not give statement to say they consider any tank is not suitable to pump overboard into river. A statement of where you last took fresh water, amounts taken and amounts remaining on board. They analysed our water from Bangkok and declared it was not very good and chlorinated the drinking water tank and also the wash water tanks but again they would not give a statement to say what was wrong with it, although they do not give a certificate to say the tanks have been chlorinated. A list of stores taken at any 'cholera infected port'. If any fresh stores were taken then samples are taken ashore for analysis. Obviously, it is best to endeavour to ascertain beforehand whether they consider your last port cholera infected.

Other papers required are crew declaration (to include makers names for items like watches, radios, etc.). Ten copies of Notice of Readiness. They do not consider a vessel ready until all ballast has been discharged. They did not require lists of bridge navigational equipment or lists of pyrotechnics or lists of radio equipment.

Light dues are payable for 3 months or 30 days. For 30 days, dues are calculated at Yuan 0.90 per nett registered ton. For 3 months it is more expensive.

At Quarantine Anchorage, accommodation required for 2 guards. At berth same required plus accommodation for 2 Customs Officials, 1 Agent and possibly 1 cargo surveyor.

Inspection is carried out on arrival at the Quarantine Anchorage and prior to departure berth. This was just the entry and departure formalities. No search was made and there was no crew assembly. Passes issued to everyone and collected prior to sailing.

Apparently fresh water and bunkers are available. There appeared to be no restrictions on use of radar, echo sounder, binoculars, etc.

Gasoline cargo loaded was about average S.G. with a loading temperature of 23.5°C. Cargo papers on sailing are manifests and Bills of Lading only.

SHIPMASTER'S REPORT: July, 1984.
Shanghai Entrance. Buoys as follows:
AAA Changkiangkou Lightvessel Lat. 31° 03′ 30″ N., Long. 122° 23′ 1″ E.
BBB Changkiangkou Lightbuoys M1 H11-H20 replaced by Buoys 44 – 49.

Buoy 44	Lat. 31° 03′ 22″ N.,	Long. 122° 19′ 52″ E.	Fl. 3/10 secs.
Buoy 45	Lat. 31° 03′ 14″ N.,	Long. 122° 16′ 58″ E.	Fl. 3/6 secs.
Buoy 46	Lat. 31° 03′ 06″ N.,	Long. 122° 14′ 02″ E.	Fl. 3/10 secs.
Buoy 47	Lat. 31° 03′ 00″ N.,	Long. 122° 11′ 06″ E.	Fl. 3/6 secs.
Buoy 48	Lat. 31° 03′ 34″ N.,	Long. 122° 08′ 14″ E.	Fl. 3/10 secs.
Buoy 49	Lat. 31° 04′ 11″ N.,	Long. 122° 05′ 26″ E.	Fl. 3/6 secs.

Pilot vessel moving in/area Buoys 47 – 49 serving/as pilot station.

SHIPMASTER'S REPORT: January 1986
Documents: The following papers are required by the Port Authorities:

1 copy Maritime Declaration of Health.
2 copies Report of Entry for Foreign Going Vessels.
4 copies Crew List.
1 copy List of Specified Articles, Foreign Currency, Gold, Silver belonging to the ship or crew members.
1 Import Manifest.

The following certificates and papers are to be submitted for examination by the Port Authorities:

Registry Certificate.
Tonnage Certificate.
International Load Line Certificate.
Derat Certificate.
Deck and Engine Log Books.
Tonnage Dues Certificate.
Manifest of Cargo for Discharging and Transit Cargo.
Oil Record Books.

Clearance: Clearance of the vessel usually takes place at the Shanghai Quarantine Anchorage located in the following position between the buoys:

Buoy No. 25	Lat. 31° 20.8′ N.,	Long. 121° 39.7′ E.
Buoy No. Q1	Lat. 31° 21.9′ N.,	Long. 121° 37.8′ E.
Buoy No. 29	Lat. 31° 23.0′ N.,	Long. 121° 35.9′ E.
Buoy No. Q4	Lat. 31° 23.5′ N.,	Long. 121° 36.3′ E.
Buoy No. Q3	Lat. 31° 22.6′ N.,	Long. 121° 38.4′ E.
Buoy No. Q2	Lat. 31° 21.8′ N.,	Long. 121° 40.4′ E.

After clearance vessel proceeds for berthing/mooring. Occasionally Port Authorities instruct Pilots to proceed direct for berthing/mooring and Entry Clearance of the vessel carried out after berthing or mooring.

Navigation: B.A. Charts No. 1601 and No. 1602 proved most useful when entering the South Channel in order to receive Pilots.

The positions and new numbers of the buoys are indicated below:

Changjiang Kou Lightvessel	Lat. 31° 03.4′ N.,	Long. 122° 23.2′ E.
Buoy No. 1 (ex-Buoy No. 44)	Lat. 31° 03.4′ N.,	Long. 122° 19.8′ E.
Buoy No. 2 (ex-Buoy No. 45)	Lat. 31° 03.2′ N.,	Long. 122° 17.0′ E.
Buoy No. 3 (ex-Buoy No. 46)	Lat. 31° 03.1′ N.,	Long. 122° 14.0′ E.
Buoy No. 4 (ex-Buoy No. 47)	Lat. 31° 03.0′ N.,	Long. 122° 11.1′ E.
Buoy No. 5 (ex-Buoy No. 48)	Lat. 31° 03.6′ N.,	Long. 122° 08.2′ E.
Buoy No. 6 (ex-Buoy No. 49)	Lat. 31° 04.2′ N.,	Long. 122° 05.4′ E.
Buoy No. 7 (ex-Buoy No. 50)	Lat. 31° 05.4′ N.,	Long. 122° 02.8′ E.
Buoy No. 8 (ex-Buoy No. 51)	Lat. 31° 06.6′ N.,	Long. 122° 00.2′ E.
Buoy No. 9 (ex-Buoy No. 52)	Lat. 31° 07.6′ N.,	Long. 121° 57.7′ E.

The characteristics of all the above buoys of the South Channel are Red/White with radar reflector on top.

The South Channel is used for vessels in light condition or vessels with a draft up to 7.5 m. (FW).

The North Channel is used for large vessels or vessels with a draft over 7.5 m.

The numbering of the buoys of the North Channel is still the same as indicated on B.A. Chart No. 1602 but in the near future this channel will also be re-numbered.

Pilotage: During good weather the pilot vessel is anchored in position Lat. 31° 03.8′ N., Long. 122° 07.2′ E. and Pilots board vessels between Buoys Nos. 5 and 6 in the South Channel.

For vessels using the North Channel, boarding area is between Changjiang Kou Lightvessel and Buoy No. 1 of South Channel.

During bad weather or strong winds Pilots board between Buoys No. 6 and No. 7 of South Channel and occasionally near Buoy No. 8.

For entry or departure through the South Channel all ships navigate anti-clockwise within a radius of 1.3 miles of the Changjiang Kou Lightvessel but clear of an inner radius of 0.3 miles centred on Changjiang Kou Lightvessel and then entering South Channel within 500 m. North of the line joining mid-channel Buoys No. 1 – 9 or 500 m. South of the line joining mid-channel Buoys No. 1 – 9 on leaving.

Pilots listen on VHF Channel 16, and give instructions to vessels entering or berthing at Shanghai. They also give instructions as to the Pilots' boarding position. Foreign vessels contact the pilot station at 0845 hrs., 1115 hrs., 1515 hrs. and 1915 hrs. to enquire if they are on the daily list for entering.

Local Agents "Penavico Shanghai" also inform vessels by cable via Shanghai Radio of berthing prospects and Pilots' boarding time. Two Pilots board vessel and they stay on board until vessel is berthed or moored.

Anchorage: Vessels anchor in the area indicated to the S.E. of Changjiang Kou Lightvessel (between 30° 35′ N. and 31° 00′ N. and between 122° 25′ E. and 122° 32′ E.).

Due to strong current and tide at least 6 – 7 shackles are recommended when anchoring in the above anchorage.

Radio: All telexes transmitted to Agents via Singapore Radio and Shanghai. Agents "Penavico" relay cables via Shanghai Radio only.

The following information is required by the Agents:

Forward and aft arrival draft (Salt Water).

Crew/Passengers on board and if all healthy.

Ports of call from Loading Port with dates of arrival/departure each port.

Quantity of main provisions, drinking water, ballast water on board and when and where taken.

Derat or Derat Exemption Certificate, port and date of issue.

"Penavico" use VHF Channel 11 for all ships when giving any information required by the vessels.

Berthing: All berthing information received from the Agent via VHF. Berthing or shifting carried out day and night.

For discharging of soyabean oil, vessel moored to Buoys No. 81 – 82 located on the ninth section of the river. The actual berth for soyabean oil is a small wooden pier used only by small coasters and barges. During mooring 1 tug used only for pushing. 4 headlines and 1 slip wire used forward and only 4 stern lines used aft.

No ballast water can be discharged into the river without the permission of the Harbour Master.

For a short period (6 – 8 hours) the Port Authorities (through the Agent) give permission for engine inspection and overhauling of pistons.

Discharging: Notice of Readiness tendered on vessel's arrival at the Outer Anchorage but accepted by "Penavico" after berthing and only during office hours.

Cargo Surveyors (3 persons), board vessel and check the quality of the cargo, taking ullages and samples. The Surveyors company is the national firm China Commodity Inspection Bureau.

After cargo inspection and test, and if they find cargo in good order, they give permission for discharge to commence. No ship's papers or cargo calculations signed by them.

Cargo discharged into the barges at a maximum rate of 350 tonnes/p.h. through a flexible 6 in. hose. Each barge has a capacity of about 350 – 500 tonnes. There is always a shortage of barges. For a quantity of 10,000 tonnes the discharging time is usually 4 – 7 days.

The daily quantity discharged was:

Day 1 – 350 tonnes (1 barge).
Day 2 – 685 tonnes (2 barges).
Day 3 – No discharging. No barges available.
Day 4 – 1,250 tonnes (3 barges).
Day 5 – 1,745 tonnes (4 barges).
Day 6 – 2,200 tonnes (5 barges).
Day 7 – 3,515 tonnes (9 barges) maximum.
Day 8 – 485 tonnes (1 barge).

The daily maximum quantity which they can receive is approximately 3,500 tonnes.

After discharging and squeezing of the cargo the Surveyors inspected all the tanks carefully and gave their own Dry Certificate. If there is a difference between the ship's figures and shore figures, vessel's departure is postponed until a final settlement is reached.

Unberthing: 2 tugs are used for unmooring, one each end, using tugs lines.

Large vessels always use 2 Pilots and they speak good English. The Pilots use the ship's whistle a lot in order to keep the main channel clear as no safety regulations followed by small craft, barges, ferries, etc.

Both anchors to be ready for use at all times when berthing/unberthing.

Facilities: Free transportation by a small ferry is available from the ship to the ferry station.

Two guards and 1 Customs Officer stay on board from arrival until sailing.

Provisions, stores, bunkers and water are available with 2 – 3 days notice. The water is not very good quality so should be avoided if possible. Bonded stores are not sealed. Port Authorities and Agents are very pleasant and polite. The vessel did not face any problems during entering, stay alongside or when leaving Shanghai.

SHIPMASTER'S REPORT: March 1986.

Vessel anchored with 6 shackles in the water; Changjiang Kou Lightvessel bearing 277°×9.5 miles. Strong winds (Force 6) were experienced and vessel rolled 20°. Ebb tide is stronger than the flood. All messages were passed on to the Agents via W/T, who keep watch 24 hours on VHF Channel 11, but there was no answer. Entry and departure is through the South Channel (Nancao Hangdoa). Changjiang Kou Lightvessel and the buoys are in position as marked on Chart No. 1602; but no racon was observed on any of the lightvessels. Light Buoy Nos. 44 onwards are re-numbered as Nos. 1 onwards; and are red and white can buoys with spherical topmarks. The lightvessel and all the buoys are to be passed on the port side. 2 pilot vessels were cruising between Buoys No. 5 and 6 and Pilot boards from a small boat coming alongside.

Vessel had to anchor for Free Pratique at Woosung Quarantine Anchorage, which was granted in 30 minutes. After the vessel was tied up at berth between Buoys No. 44 and 45, Customs and Immigration boarded the vessel (4 people). The following documents were required: 6 Crew Lists; 1 Private Property List including currency; List of Provisions and where purchased; quantity of fresh water, ballast and where and when taken; List of Ports of Call during last 30 days.

All passports and health books to be collected. Bonded Stores not sealed. No separate List of Foreign Currency on Board required. Foreign currency can only be changed at "Friendship Stores", Seamen's Club or big hotels in exchange for specially made notes for use of foreigners – but can also be used in any other stores or hotels. No restrictions on the use of VHF, radar, echo sounder or any other navigational equipment. Cargo Manifest was sighted.

Two officials from Customs and Immigration stay on board and a cabin has to be made available. Everyone has to show shore passes before going ashore. There is a launch every hour – last one at 2330 hrs. Charges U.S.$10.0 per day for every ship on the buoys.

Exports: General Cargo.

SHIJIUSUO (Shijiu): 35.22 N. 119.17 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards vessel at Quarantine Anchorage, day and night.
ANCHORAGE: Depth 17.0 m. – 19.0 m. Bottom is mud and sand. Vessels up to 200,000 d.w.t. may use anchorages.

The anchorages are within the following areas.

Anchorage No. I:	35° 20′ 29″ N., 119° 37′ 23″ E.
	35° 20′ 29″ N., 119° 39′ 53.5″ E.
	35° 16′ 29″ N., 119° 37′ 23″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
Anchorage No. 2:	35° 20′ 29″ N., 119° 39′ 53.5″ E.
	35° 20′ 29″ N., 119° 42′ 24″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 42′ 24″ E.
Anchorage No. 3:	35° 18′ 29″ N., 119° 37′ 23″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 37′ 23″ E.
	35° 16′ 29″ N., 119° 39′ 53.5″ E.
Anchorage No. 4:	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 42′ 24″ E.
	35° 16′ 29″ N., 119° 39′ 53.5″ E.
	35° 16′ 29″ N., 119° 42′ 24″ E.

RESTRICTIONS: Vessels may enter and sail after sunset.
MAX. SIZE: Max. draft in Channel is 14.0 m. Maximum tidal range 4.9 m.
VHF: Shijiu Radio operates throughout 24 hours on Channel 16, working on Channels 1, 10, 23 and 26.
TUGS: 1×1,600 h.p. and 4×3,200 h.p.
BERTHING:

Area	*Berth*	*Length/Depth* (m.)	*Max. LOA* (m.)	*Berth Use*
Coal Wharf	A	370/17.0	280	Coal
	B	370/17.0	280	Coal
General Cargo Wharf	–	220/8.5	165 (under 10,000 d.w.t.)	General Cargo

CRANES: 1×10 ton crane at General Cargo Wharf, and 1 floating crane with capacity of 200 tonnes.
FRESH WATER: Available.
FUEL: Available from Qingdao or Lianyungang.
REPAIRS: Facilities available.

SHIPMASTER'S REPORT: July 1989.
Documents: The following are to be completed on Chinese Forms:
1 copy Crew Declaration (should include currency, gold items, cameras, watches, etc.).
1 copy Report of Articles restricted for use in port.
1 copy detailed Ship Information Sheet.
1 copy Quarantine Declaration.
Ship's forms may be used for the following:
1 copy Crew Declaration.
1 copy Vaccination List (Cholera vaccinations to be up to date).
4 copies Crew List.
2 copies Bills of Lading.
2 copies Cargo Manifest.
2 copies Cargo Plans.

Formalities: The authorities require the "Q" flag to be flown until Pratique has been granted. The Agent and 12 Port Control Officials come on board at the anchorage by tug and require a large room for completing formalities. The Port Control party consists of 2 Port Health Officials, 2 Immigration Officials, 2 Officials from the Harbour Master's Department, 4 Customs Officials and 2 other persons. The documentation listed above is dealt with at this time. Pratique is granted prior to all other business, after which papers are processed and the Customs seal the bond locker. The formalities take 1.5 – 2 hours. A routine search is made of the accommodation.
Pilotage: 2 Pilots boarded the vessel from a tug. The approach to the general cargo quay was through a channel and was carried out confidently.

The distance from the pilot station to the berth is 1.5 miles.
Anchorage: Port Control advised the vessel to anchor in position Lat. 35° 19′ 30″ N., Long. 119° 35′ 30″ E., which is South East of the Fairway Buoy. The bottom is heavy mud and the holding ground good. The tidal stream is strong in this area.
Restrictions: The controlling depth in the approaches is 20 m. The depth in the dredged channel is 9.5 m. No night time berthing or unberthing at present.
Max. Size: Maximum permissible draft alongside 6.5 m., plus height of tide (maximum 4.0 m.), less 0.5 m. for keel clearance. There is no restriction on length.
VHF: The Agent's office may be contacted during the working day on Channel 16, working on Channel 11.
Tugs: Large powerful tugs available. Use of 2 tugs is compulsory.

The tugs were secured when the vessel was East of the quay. One tug forward and one tug aft, tugs lines used.
Berthing: There is only one general cargo berth in operation. If a tanker wishes to berth and a general cargo ship is alongside at the time, the general cargo vessel will have to vacate the berth.

Vessel berthed starboard side alongside on a heading of 045°. Moorings consisted of 2 head/stern lines, 2 breast lines and 2 springs at each end. All lines had a good drift. The anchor may be used for berthing but only in an emergency.
Bulk Handling Facilities: There is a very efficient coal berth in the South East part of the port. The berth is operated by Japanese interests and coal is brought from inland mines by train. The coal berth will accept 2 bulk carriers and is capable of loading 4,000 t.p.h.
Cargo Operations: If a vessel is to discharge oil, 10 officials representing the Port Public Health Board come on board to take tank samples and ullages and calculate cargo quantity. Analysis of samples takes about 2 hours, after which permission is given to pump cargo ashore.

The distance from the manifold to the shore line is about 20 m.

Hoses: Ship's hose is used as no shore hoses available. Reducers also supplied by the ship. 5 sections of ship's 6 in. hose used for connecting to the 6 in. shore line. The distance to the 2 shore tanks is approximately 1,000 m. The maximum pressure allowed on the line is 7 kg./sq.cm. – 8 kg./sq.m. There are no facilities for ship's slops.
Tank Dry Certificate: If a Tank Dry Certificate is required on completion of operations a formal written application must be made through the Agent for such inspection.
Cranes: There are 3 modern luffing cranes with limited travel along the quay.
Ballast: Discharge of any clean ballast is not permitted unless a written application has been made to the Harbour Master's office. This application should indicate the amount to be discharged and the time required. Officers from the Harbour Master's office make frequent visits to the ship to check that all port regulations are being complied with, especially anti-pollution regulations. If any scuppers are found unplugged or uncemented or if any discolouration of the water is found in the vicinity of the ship, an explanation is required.
Bridges: None.
Density: 1025.
Fresh Water: Available. Rate of delivery 15 t.p.h.
Fuel: Gas oil is available with notice from Qingdao.
Surveyors: No surveyors locally, nearest are at Qingdao which is approximately 140 km. to the North.
Customs Allowances: On arrival, Customs allow 15 cartons of cigarettes and 5 bottles of spirits to be kept out of the bond.
Airport: Qindao Airport is 140 km. by road. There are flights to Hong Kong, Osaka and Chinese cities.
Repairs: Minor repairs can be undertaken.
Shore Leave: An Immigration guard is on duty at the foot of the gangway at all times while the ship is in port. All crew members must produce a pass and identity card when going ashore.
General:
Stores: Fresh stores can be obtained from the State Shipchandler.
Chart: BA. Chart No. 1253.
Developments: Extensive expansion of the port is currently being undertaken. An area adjacent to the general cargo quay is being filled in to make a large container area.

Inspection is carried out on arrival at the Quarantine Anchorage and prior to departure berth. This was just the entry and departure formalities. No search was made and there was no crew assembly. Passes issued to everyone and collected prior to sailing.

Apparently fresh water and bunkers are available. There appeared to be no restrictions on use of radar, echo sounder, binoculars, etc.

Gasoline cargo loaded was about average S.G. with a loading temperature of 23.5°C. Cargo papers on sailing are manifests and Bills of Lading only.

SHIPMASTER'S REPORT: July, 1984.

Shanghai Entrance. Buoys as follows:

AAA Changkiangkou Lightvessel Lat. 31° 03′ 30″ N., Long. 122° 23′ 1″ E.

BBB Changkiangkou Lightbuoys M1 H11-H20 replaced by Buoys 44 – 49.

Buoy 44	Lat. 31° 03′ 22″ N.,	Long. 122° 19′ 52″ E.	Fl. 3/10 secs.
Buoy 45	Lat. 31° 03′ 14″ N.,	Long. 122° 16′ 58″ E.	Fl. 3/6 secs.
Buoy 46	Lat. 31° 03′ 06″ N.,	Long. 122° 14′ 02″ E.	Fl. 3/10 secs.
Buoy 47	Lat. 31° 03′ 00″ N.,	Long. 122° 11′ 06″ E.	Fl. 3/6 secs.
Buoy 48	Lat. 31° 03′ 34″ N.,	Long. 122° 08′ 14″ E.	Fl. 3/10 secs.
Buoy 49	Lat. 31° 04′ 11″ N.,	Long. 122° 05′ 26″ E.	Fl. 3/6 secs.

Pilot vessel moving in/area Buoys 47 – 49 serving/as pilot station.

SHIPMASTER'S REPORT: January 1986

Documents: The following papers are required by the Port Authorities:

1 copy Maritime Declaration of Health.
2 copies Report of Entry for Foreign Going Vessels.
4 copies Crew List.
1 copy List of Specified Articles, Foreign Currency, Gold, Silver belonging to the ship or crew members.
1 Import Manifest.

The following certificates and papers are to be submitted for examination by the Port Authorities:

Registry Certificate.
Tonnage Certificate.
International Load Line Certificate.
Derat Certificate.
Deck and Engine Log Books.
Tonnage Dues Certificate.
Manifest of Cargo for Discharging and Transit Cargo.
Oil Record Books.

Clearance: Clearance of the vessel usually takes place at the Shanghai Quarantine Anchorage located in the following position between the buoys:

Buoy No. 25	Lat. 31° 20.8′ N.,	Long. 121° 39.7′ E.
Buoy No. Q1	Lat. 31° 21.9′ N.,	Long. 121° 37.8′ E.
Buoy No. 29	Lat. 31° 23.0′ N.,	Long. 121° 35.9′ E.
Buoy No. Q4	Lat. 31° 23.5′ N.,	Long. 121° 36.3′ E.
Buoy No. Q3	Lat. 31° 22.6′ N.,	Long. 121° 38.4′ E.
Buoy No. Q2	Lat. 31° 21.8′ N.,	Long. 121° 40.4′ E.

After clearance vessel proceeds for berthing/mooring. Occasionally Port Authorities instruct Pilots to proceed direct for berthing/mooring and Entry Clearance of the vessel carried out after berthing or mooring.

Navigation: B.A. Charts No. 1601 and No. 1602 proved most useful when entering the South Channel in order to receive Pilots.

The positions and new numbers of the buoys are indicated below:

Changjiang Kou Lightvessel	Lat. 31° 03.4′ N.,	Long. 122° 23.2′ E.
Buoy No. 1 (ex-Buoy No. 44)	Lat. 31° 03.4′ N.,	Long. 122° 19.8′ E.
Buoy No. 2 (ex-Buoy No. 45)	Lat. 31° 03.2′ N.,	Long. 122° 17.0′ E.
Buoy No. 3 (ex-Buoy No. 46)	Lat. 31° 03.1′ N.,	Long. 122° 14.0′ E.
Buoy No. 4 (ex-Buoy No. 47)	Lat. 31° 03.0′ N.,	Long. 122° 11.1′ E.
Buoy No. 5 (ex-Buoy No. 48)	Lat. 31° 03.6′ N.,	Long. 122° 08.2′ E.
Buoy No. 6 (ex-Buoy No. 49)	Lat. 31° 04.2′ N.,	Long. 122° 05.4′ E.
Buoy No. 7 (ex-Buoy No. 50)	Lat. 31° 05.4′ N.,	Long. 122° 02.8′ E.
Buoy No. 8 (ex-Buoy No. 51)	Lat. 31° 06.6′ N.,	Long. 122° 00.2′ E.
Buoy No. 9 (ex-Buoy No. 52)	Lat. 31° 07.6′ N.,	Long. 121° 57.7′ E.

The characteristics of all the above buoys of the South Channel are Red/White with radar reflector on top.

The South Channel is used for vessels in light condition or vessels with a draft up to 7.5 m. (FW).

The North Channel is used for large vessels or vessels with a draft over 7.5 m.

The numbering of the buoys of the North Channel is still the same as indicated on B.A. Chart No. 1602 but in the near future this channel will also be re-numbered.

Pilotage: During good weather the pilot vessel is anchored in position Lat. 31° 03.8′ N., Long. 122° 07.2′ E. and Pilots board vessels between Buoys Nos. 5 and 6 in the South Channel.

For vessels using the North Channel, boarding area is between Changjiang Kou Lightvessel and Buoy No. 1 of South Channel.

During bad weather or strong winds Pilots board between Buoys No. 6 and No. 7 of South Channel and occasionally near Buoy No. 8.

For entry or departure through the South Channel all ships navigate anti-clockwise within a radius of 1.3 miles of the Changjiang Kou Lightvessel but clear of an inner radius of 0.3 miles centred on Changjiang Kou Lightvessel and then entering South Channel within 500 m. North of the line joining mid-channel Buoys No. 1 – 9 or 500 m. South of the line joining mid-channel Buoys No. 1 – 9 on leaving.

Pilots listen on VHF Channel 16, and give instructions to vessels entering or berthing at Shanghai. They also give instructions as to the Pilots' boarding position. Foreign vessels contact the pilot station at 0845 hrs., 1115 hrs., 1515 hrs. and 1915 hrs. to enquire if they are on the daily list for entering.

Local Agents "Penavico Shanghai" also inform vessels by cable via Shanghai Radio of berthing prospects and Pilots' boarding time. Two Pilots board vessel and they stay on board until vessel is berthed or moored.

Anchorage: Vessels anchor in the area indicated to the S.E. of Changjiang Kou Lightvessel (between 30° 35′ N. and 31° 00′ N. and between 122° 25′ E. and 122° 32′ E.).

Due to strong current and tide at least 6 – 7 shackles are recommended when anchoring in the above anchorage.

Radio: All telexes transmitted to Agents via Singapore Radio and Shanghai. Agents "Penavico" relay cables via Shanghai Radio only.

The following information is required by the Agents:

Forward and aft arrival draft (Salt Water).

Crew/Passengers on board and if all healthy.

Ports of call from Loading Port with dates of arrival/departure each port.

Quantity of main provisions, drinking water, ballast water on board and when and where taken.

Derat or Derat Exemption Certificate, port and date of issue.

"Penavico" use VHF Channel 11 for all ships when giving any information required by the vessels.

Berthing: All berthing information received from the Agent via VHF. Berthing or shifting carried out day and night.

For discharging of soyabean oil, vessel moored to Buoys No. 81 – 82 located on the ninth section of the river. The actual berth for soyabean oil is a small wooden pier used only by small coasters and barges. During mooring 1 tug used only for pushing. 4 headlines and 1 slip wire used forward and only 4 stern lines used aft.

No ballast water can be discharged into the river without the permission of the Harbour Master.

For a short period (6 – 8 hours) the Port Authorities (through the Agent) give permission for engine inspection and overhauling of pistons.

Discharging: Notice of Readiness tendered on vessel's arrival at the Outer Anchorage but accepted by "Penavico" after berthing and only during office hours.

Cargo Surveyors (3 persons), board vessel and check the quality of the cargo, taking ullages and samples. The Surveyors company is the national firm China Commodity Inspection Bureau.

After cargo inspection and test, and if they find cargo in good order, they give permission for discharge to commence. No ship's papers or cargo calculations signed by them.

Cargo discharged into the barges at a maximum rate of 350 tonnes p.h. through a flexible 6 in. hose. Each barge has a capacity of about 350 – 500 tonnes. There is always a shortage of barges. For a quantity of 10,000 tonnes the discharging time is usually 4 – 7 days.

The daily quantity discharged was:

Day 1 – 350 tonnes (1 barge).
Day 2 – 685 tonnes (2 barges).
Day 3 – No discharging. No barges available.
Day 4 – 1,250 tonnes (3 barges).
Day 5 – 1,745 tonnes (4 barges).
Day 6 – 2,200 tonnes (5 barges).
Day 7 – 3,515 tonnes (9 barges) maximum.
Day 8 – 485 tonnes (1 barge).

The daily maximum quantity which they can receive is approximately 3,500 tonnes.

After discharging and squeezing of the cargo the Surveyors inspected all the tanks carefully and gave their own Dry Certificate. If there is a difference between the ship's figures and shore figures, vessel's departure is postponed until a final settlement is reached.

Unberthing: 2 tugs are used for unmooring, one each end, using tugs' lines.

Large vessels always use 2 Pilots and they speak good English. The Pilots use the ship's whistle a lot in order to keep the main channel clear as no safety regulations followed by small craft, barges, ferries, etc.

Both anchors to be ready for use at all times when berthing/unberthing.

Facilities: Free transportation by a small ferry is available from the ship to the ferry station.

Two guards and 1 Customs Officer stay on board from arrival until sailing.

Provisions, stores, bunkers and water are available with 2 – 3 days notice. The water is not very good quality so should be avoided if possible. Bonded stores are not sealed. Port Authorities and Agents are very pleasant and polite. The vessel did not face any problems during entering, stay alongside or when leaving Shanghai.

SHIPMASTER'S REPORT: March 1986.

Vessel anchored with 6 shackles in the water; Changjiang Kou Lightvessel bearing 277°×9.5 miles. Strong winds (Force 6) were experienced and vessel rolled 20°. Ebb tide is stronger than the flood. All messages were passed on to the Agents via W/T, who keep watch 24 hours on VHF Channel 11, but there was no answer. Entry and departure is through the South Channel (Nancao Hangdoa). Changjiang Kou Lightvessel and the buoys are in position as marked on Chart No. 1602; but no racon was observed on any of the lightvessels. Light Buoy Nos. 44 onwards are re-numbered as Nos. 1 onwards; and are red and white can buoys with spherical topmarks. The lightvessel and all the buoys are to be passed on the port side. 2 pilot vessels were cruising between Buoys No. 5 and 6 and Pilot boards from a small boat coming alongside.

Vessel had to anchor for Free Pratique at Woosung Quarantine Anchorage, which was granted in 30 minutes. After the vessel was tied up at berth between Buoys No. 44 and 45, Customs and Immigration boarded the vessel (4 people). The following documents were required: 6 Crew Lists; 1 Private Property List including currency; List of Provisions and where purchased; quantity of fresh water, ballast and where and when taken; List of Ports of Call during last 30 days.

All passports and health books to be collected. Bonded Stores not sealed. No separate List of Foreign Currency on Board required. Foreign currency can only be changed at "Friendship Stores", Seamen's Club or big hotels in exchange for specially made notes for use of foreigners – but can also be used in any other stores or hotels. No restrictions on the use of VHF, radar, echo sounder or any other navigational equipment. Cargo Manifest was sighted.

Two officials from Customs and Immigration stay on board and a cabin has to be made available. Everyone has to show shore passes before going ashore. There is a launch every hour – last one at 2330 hrs. Charges U.S.$10.0 per day for every ship on the buoys.

SHANTOU: 23.21 N. 116.40 E.

PILOTAGE: Compulsory. The pilot station is located in position Lat. 23° 17′ N., Long. 116° 48′ E.

ANCHORAGES: There are 11 anchorages which are numbered 1, 2, 3, 4, 5, 6, 7, 11, 12, 13 and 14. The depths vary from 4.8 m. to 12.0 m. The nature of the bottom is mud and the holding ground is good. Vessels up to 40,000 d.w.t. may use the anchorages.

MAX. SIZE: The draft limitation in the channel is 6.0 m.

Tidal Range: Maximum 2.1 m., minimum 0.54 m.

VHF: The port radio station is on Channel 16 throughout 24 hours. Penavico are on Channel 11 from 0800 hrs. to 1800 hrs.

TUGS: 1 × 428 h.p. and 1 × 980 h.p.

BERTHING:

District	*Berth No.*	*Length (m.)*	*Max. Draft (m.)*	*Max. Size (d.w.t.)*	*Type of Cargo*	*Crane Capacity (tons)*
First	1	250	4.0	5,000	General	1 × 5
	2	250	4.0	5,000	General	1 × 5
	3 M	100	4.0	3,000	General	—
Second	Coal	130	7.5	16,000	Coal	1 × 100
Passenger	—	133	6.0	5,000	Passenger	—
Third	1	75	4.2	1,000	General	—

FRESH WATER: Contact Harbour Administration.

FUEL: Not available.

REPAIRS: Repair facilities available.

GENERAL:

Provisions: Contact China Ocean Shipping Agency, Shantou Branch or Shantou Ocean Shipping Supply Company.

Storage: Warehouse: 20,401 sq.m.
Open Storage: 17,189 sq.m.

Imports: Cement, chemical, fertiliser and steel.

Exports: General Cargo.

SHIJIUSUO (Shijiu): 35.22 N. 119.17 E. **(See Plan)**

PILOTAGE: Compulsory. Pilot boards vessel at Quarantine Anchorage, day and night.

ANCHORAGE: Depth 17.0 m. – 19.0 m. Bottom is mud and sand. Vessels up to 200,000 d.w.t. may use anchorages.

The anchorages are within the following areas.

Anchorage No. I:	35° 20′ 29″ N., 119° 37′ 23″ E.
	35° 20′ 29″ N., 119° 39′ 53.5″ E.
	35° 16′ 29″ N., 119° 37′ 23″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
Anchorage No. 2:	35° 20′ 29″ N., 119° 39′ 53.5″ E.
	35° 20′ 29″ N., 119° 42′ 24″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 42′ 24″ E.
Anchorage No. 3:	35° 18′ 29″ N., 119° 37′ 23″ E.
	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 37′ 23″ E.
	35° 16′ 29″ N., 119° 39′ 53.5″ E.
Anchorage No. 4:	35° 18′ 29″ N., 119° 39′ 53.5″ E.
	35° 18′ 29″ N., 119° 42′ 24″ E.
	35° 16′ 29″ N., 119° 39′ 53.5″ E.
	35° 16′ 29″ N., 119° 42′ 24″ E.

RESTRICTIONS: Vessels may enter and sail after sunset.

MAX. SIZE: Max. draft in Channel is 14.0 m. Maximum tidal range 4.9 m.

VHF: Shijiu Radio operates throughout 24 hours on Channel 16, working on Channels 1, 10, 23 and 26.

TUGS: 1×1,600 h.p. and 4×3,200 h.p.

BERTHING:

Area	*Berth*	*Length/Depth (m.)*	*Max. LOA (m.)*	*Berth Use*
Coal Wharf	A	370/17.0	280	Coal
	B	370/17.0	280	Coal
General Cargo Wharf	–	220/8.5	165 (under 10,000 d.w.t.)	General Cargo

CRANES: 1×10 ton crane at General Cargo Wharf, and 1 floating crane with capacity of 200 tonnes.

FRESH WATER: Available.

FUEL: Available from Qingdao or Lianyungang.

REPAIRS: Facilities available.

SHIPMASTER'S REPORT: July 1989.

Documents: The following are to be completed on Chinese Forms:

1 copy Crew Declaration (should include currency, gold items, cameras, watches, etc.).
1 copy Report of Articles restricted for use in port.
1 copy detailed Ship Information Sheet.
1 copy Quarantine Declaration.

Ship's forms may be used for the following:

1 copy Crew Declaration.
1 copy Vaccination List (Cholera vaccinations to be up to date).
4 copies Crew List.
2 copies Bills of Lading.
2 copies Cargo Manifest.
2 copies Cargo Plans.

Formalities: The authorities require the "Q" flag to be flown until Pratique has been granted. The Agent and 12 Port Control Officials come on board at the anchorage by tug and require a large room for completing formalities. The Port Control party consists of 2 Port Health Officials, 2 Immigration Officials, 2 Officials from the Harbour Master's Department, 4 Customs Officials and 2 other persons. The documentation listed above is dealt with at this time. Pratique is granted prior to all other business, after which papers are processed and the Customs seal the bond locker. The formalities take 1.5 – 2 hours. A routine search is made of the accommodation.

Pilotage: 2 Pilots boarded the vessel from a tug. The approach to the general cargo quay was through a channel and was carried out confidently.

The distance from the pilot station to the berth is 1.5 miles.

Anchorage: Port Control advised the vessel to anchor in position Lat. 35° 19′ 30″ N., Long. 119° 35′ 30″ E., which is South East of the Fairway Buoy. The bottom is heavy mud and the holding ground good. The tidal stream is strong in this area.

Restrictions: The controlling depth in the approaches is 20 m. The depth in the dredged channel is 9.5 m. No night time berthing or unberthing at present.

Max. Size: Maximum permissible draft alongside 6.5 m., plus height of tide (maximum 4.0 m.), less 0.5 m. for keel clearance. There is no restriction on length.

VHF: The Agent's office may be contacted during the working day on Channel 16, working on Channel 11.

Tugs: Large powerful tugs available. Use of 2 tugs is compulsory.

The tugs were secured when the vessel was East of the quay. One tug forward and one tug aft, tugs lines used.

Berthing: There is only one general cargo berth in operation. If a tanker wishes to berth and a general cargo ship is alongside at the time, the general cargo vessel will have to vacate the berth.

Vessel berthed starboard side alongside on a heading of 045°. Moorings consisted of 2 head/stern lines, 2 breast lines and 2 springs at each end. All lines had a good drift. The anchor may be used for berthing but only in an emergency.

Bulk Handling Facilities: There is a very efficient coal berth in the South East part of the port. The berth is operated by Japanese interests and coal is brought from inland mines by train. The coal berth will accept 2 bulk carriers and is capable of loading 4,000 t.p.h.

Cargo Operations: If a vessel is to discharge oil, 10 officials representing the Port Public Health Board come on board to take tank samples and ullages and calculate cargo quantity. Analysis of samples takes about 2 hours, after which permission is given to pump cargo ashore.

The distance from the manifold to the shore line is about 20 m.

Hoses: Ship's hose is used as no shore hoses available. Reducers also supplied by the ship. 5 sections of ship's 6 in. hose used for connecting to the 6 in. shore line. The distance to the 2 shore tanks is approximately 1,000 m. The maximum pressure allowed on the line is 7 kg./sq.cm. – 8 kg./sq.m. There are no facilities for ship's slops.

Tank Dry Certificate: If a Tank Dry Certificate is required on completion of operations a formal written application must be made through the Agent for such inspection.

Cranes: There are 3 modern luffing cranes with limited travel along the quay.

Ballast: Discharge of any clean ballast is not permitted unless a written application has been made to the Harbour Master's office. This application should indicate the amount to be discharged and the time required. Officers from the Harbour Master's office make frequent visits to the ship to check that all port regulations are being complied with, especially anti-pollution regulations. If any scuppers are found unplugged or uncemented or if any discolouration of the water is found in the vicinity of the ship, an explanation is required.

Bridges: None.

Density: 1025.

Fresh Water: Available. Rate of delivery 15 t.p.h.

Fuel: Gas oil is available with notice from Qingdao.

Surveyors: No surveyors locally, nearest are at Qingdao which is approximately 140 km. to the North.

Customs Allowances: On arrival, Customs allow 15 cartons of cigarettes and 5 bottles of spirits to be kept out of the bond.

Airport: Qindao Airport is 140 km. by road. There are flights to Hong Kong, Osaka and Chinese cities.

Repairs: Minor repairs can be undertaken.

Shore Leave: An Immigration guard is on duty at the foot of the gangway at all times while the ship is in port. All crew members must produce a pass and identity card when going ashore.

General:

Stores: Fresh stores can be obtained from the State Shipchandler.

Chart: BA. Chart No. 1253.

Developments: Extensive expansion of the port is currently being undertaken. An area adjacent to the general cargo quay is being filled in to make a large container area.

TAKU BAR: 38.56 N. 117.53 E.

Also see "General" before first port.
Also see "Tianjin".

Guide to foreign vessels calling at Taku Bar (Xiang Jiang, Tanggu and Tianjin): Issued by the Harbour Master at Tianjin.

1. Foreign vessels entering Bohai (Pohai Gulf) are only allowed to pass through Changshan Channel and/or Laotiehshan Channel. If the latter way is taken, the vessel must send a wireless message to "Harbour Master, Dalian" for directory 8 hours prior to passage. It should be noted that no other Channels are permitted for navigation. (Also see "Dalian").

2. Vessels passing Laotiehshan Channel for Dalian must make a detour along the East of "Encounter Rock".

3. Position of sunken dredger "Se Ho" is at Lat. 38° 31′ N., Long. 119° 10.5′ E. Vessels should keep far away from the above-mentioned area during navigation.

4. Vessel may anchor to wait for Pilot.

5. Vessel may send radiogram to "Penavico Xingang" (via Xingang Coastal Radio Station XSV, calling frequency 500 kHz, working frequency 445 kHz, reserve frequency calling 8630 kHz. Listening 8364 kHz, working hours 0000 – 2400), giving exact ETA also fore and aft draft, before entering Bohai (Pohai Gulf).

6. The pilot station is at Tanggu. All vessels are required to have a Pilot when entering or leaving the Ports of Tanggu and Xingang. The Pilot will board the vessel at the anchorage after receipt of exact ETA given by the Master.

Regulations Issued by the Harbour Superintendent's Office:

1. All foreign vessels (hereafter referred to as vessels) entering or leaving the Port of Tianjin (hereafter referred to as this port) are required to observe strictly the provisions of the Regulations Governing the Entry and Departure of Foreign Vessels into and from Ports of the People's Republic of China (hereafter referred to as Regulations Governing Foreign Vessels) and of the Port Regulations of Tianjin.

2. On arrival at this port, vessels are prohibited to use the articles enumerated in Article VII of the Regulations Governing Foreign Vessels. Should it be necessary to repair any of the articles enumerated in Item 2 of the same article, permission to do so must be obtained beforehand from the Harbour Superintendent's Office.

3. Articles placed under seal shall not be used and the seals shall not be removed without permission. Should any of the paper seals be found falling off, the fact shall be reported to the Harbour Superintendent's Office immediately.

4. Whilst in port, vessels are not allowed to dress ship or hoist flag at half mast without the permission from the Harbour Superintendent's Office.

5. Vessels in port desiring to undertake any of the following work must first apply in writing to the Harbour Superintendent's Office. After permission is obtained the work can then be carried out at the appointed place.
(a) Lifeboat practice;
(b) Overhauling boiler, main engine, steering engine or windlass;
(c) Engaging in welding work or burning anything on board;
(d) Pumping out ballast water regardless of whether the water is contaminated with oil or not.

6. After a vessel's arrival at this port, sounding, survey sketching, photo-taking, fishing and swimming are strictly prohibited.

7. After arrival at this port, vessels are strictly prohibited to dump ballast materials, coal ashes, garbage, rubbish and mud, or to discharge dirty oil or oily bilge water into the harbour. It is also prohibited to wash double bottom oil tanks or oil deep tanks inside the harbour.

8. Vessels in port must provide secure gangways or gang planks with rails or manropes for passengers, crew and all workers to embark or disembark. All gangways or gang planks are to be provided with lights at night.

9. Vessels lying alongside the pier should properly cover up all their exhaust valves and discharge openings on the ship's side facing the pier.

10. Garbage bins or drums with tight covers must be provided on board. The bins or drums should not be filled to overflow. When the garbage-collecting cart comes daily to the ship to collect the garbage and rings the bell on its arrival, the ship should arrange to deliver the ship's garbage into the cart.

11. If, owing to some special reasons, a vessel desires to return to this port after departure, the Master should first telegraph to the Harbour Superintendent for permission and must act according to the instructions given.

Frontier Inspection Station:

1. All the officers and crew of a foreign vessel and the passengers on board should produce their passports or other certificates to the Frontier Inspection Station and submit to the inspection of the Station.

2. When the ship's crew or passengers in transit desire to go ashore, the Master is to apply to the Frontier Inspection Station and the passport endorsing authorities, respectively, for landing permits.

3. A landing permit is valid only at the port where it is issued. On the ship's departure, all landing permits for the crew should be returned to the Frontier Inspection Station for cancellation.

4. The time limit for going ashore is from sunrise to midnight. When any Crew member wishes to stay overnight on shore, the Master should apply for permission on his behalf. Staying overnight ashore without permission is not allowed.

5. All laws and regulations of the People's Republic of China must be observed.

Quarantine Office:

1. During a vessel's stay in port, if any person on board is found to be in high fever or to be feverish continuously for several days (or with the swelling of the lymphatic gland), or to suffer from acute rash on the skin with or without fever, or to suffer from acute diarrhoea and in a state of collapse, or to suffer from jaundice with fever, the matter should first be reported to the Quarantine Office. The patient can go ashore for medical treatment only when he has been examined and allowed to do so by the Quarantine Officer.

2. Effective rat-guards or other rat-preventing devices should be fixed on all mooring ropes.

3. Gangways and gangplanks are not allowed to be put on to the wharf when not required. Should they be used at night, strong electric lights should be provided.

4. Should any dead rats or mice be found or any rats or mice caught on board a vessel, the fact should be reported to the Quarantine Office for the necessary inspection to be made.

The above regulations are in force at most Chinese ports.

Berthing: In the fairway and on the West side of the first pier vessels may pass on 34 ft. draft. Length of pier about 1,500 ft.

Another pier is under construction, and when ready will have berths for 5 vessels of about 600 ft. length. The depth alongside will be 34 ft.

On the first pier 7 cranes with a capacity of about 10 tons. It was not possible to obtain information on the older berths. Four tugs with up to 1,000 h.p.

All bunkers to be brought in from Dalian.

SHIPMASTER'S REPORT: June 1990.

Tientsin is closed for navigation.

Tungku for small vessel above lock and not likely to be used by foreign ocean going vessels.

SHIPMASTER'S REPORT: July 1990.

Taku Bar is not a port but the shallow bar at the entrance to the channel, where a light vessel was stationed in earlier years and which was removed at least 4 to 5 years ago.

All references now taken from Dagu Lighthouse which also fitted with a Racon.

TIANJIN/XINGANG, including Tanggu: 39.06 N. 117.10 E.

Also see "General" before first port.
Also see "Taku Bar".

PILOTAGE: Compulsory. Pilotage undertaken day and night.

APPROACHES: *Tianjin:* The channel to Tianjin is dredged to allow vessels with max. draft 4.0 m. to be handled. The distance from Dagukou Maodi (anchorage) to the city is 54 miles.

Tianjin New Port: The new port is situated in position Lat. 38° 59′ N. Long. 117° 45′ E. in Bohai Bay at the mouth of the Haihe River. The main channel has a depth of 11.0 m. at H.W. and is 150 m. wide.

ANCHORAGE: Da Gu Kou anchorage has a depth of 10 m. – 13 m. and can accept vessels up to 50,000 g.r.t. The anchorage is unprotected and provides no shelter from wind, sea or swell. With a North Westerly or Westerly wind the sea is slight but when the wind is strong the tide is greatly reduced. Ships should take great care in selecting a suitable anchorage position.

RESTRICTIONS: Vessels may enter and sail throughout 24 hours.

MAX. SIZE: Draft limitation in channel is 10.0 m.

The general draft restrictions are as follows:

Vessels loaded with bulk grain (Winter)	10.1 m.
Vessels loaded with bulk grain (Summer)	10.4 m.
Vessels loaded with steel products and general cargo for import	8.5 m.
export	8.2 m.

Tidal Range: Maximum 3.5 m., minimum 2.0 m.

VHF: Penavico on Channel 11 throughout 24 hours. Sinoagent on Channels 73 and 74 throughout 24 hours.

TUGS: 5 × 980 h.p., 6 × 1,670 h.p., 1 × 1,900 h.p., 1 × 1,960 h.p. 3 × 2,600 h.p. and 2 × 3,200 h.p.

BERTHING: *Tianjin:* The Tianjin area for smaller ships and barges further upstream is situated along the right bank of the river within the Urban district of Tianjin.

Tianjin New Port: The new port lies on the North side of the river and is a man-made harbour. Between two breakwaters, constructed on the South and North sides of the work area is the entrance to this harbou with a width of 1,300 m. 5,000 ton vessels can pass through the 13 mile long, two-way channel of the port at high water. The channel is being dredged to 16 m. (now 13 m.) and will enable 10,000 ton general cargo vessels to pass through.

Area	*Berth* No.	*Water Depth* (m.)	*LOA* (m.)	*Capacity* (tons)	*Cargo Handled*
No. 1	1-4	7.5	175 × 4	7,000	General
	5	8.5	179	7,000	General
	6	10.5	201	10,000	General

	29	12.0	295	30,000	Containers
Passenger Terminal	River Port	4.5	250	3,000	Passenger
	Sea Port	8.1	311	7,000	Passenger

Tanggu: Also see Area No. 3 above.

There is a lock at the Western end of the New Port, connecting it with the Tanggu area on the left bank of the river. The river from the lock is narrow and winding and its water level varies greatly with the seasons. The lock is 180 m. long×21 m. wide and 5,000 ton vessels in a laden condition can pass at high water.

Tanggu has 7 berths – five for general cargo and two for passenger vessels. Berths No. 5 and No. 6 have a total length of 230 m. for 1×3,000 ton and 1×5,000 ton vessel. Berths No. 10 and No. 11 have a combined length of 355 m. for 5,000 ton vessels. Connection with railway system.

CRANES: 4 × 40.5 tonne cranes at container terminal.

1 × 200 tonne and 1 × 120 tonne floating cranes.

MEDICAL: Facilities available.

FRESH WATER: Contact China Marine Bunker Supply Co., Tianjin Branch.

FUEL: Contact China Marine Bunker Supply Co., Tianjin Branch.

REPAIRS: There are ship repair facilities at Tianjin and at the New Port.

AIRPORT: Tianjin Airport. Flights to Shanghai and other major cities.

GENERAL:

Storage:

Warehouse: 188,832 sq.m.
Open Storage: 840,596 sq.m.

Imports: Grain, steel and machinery, etc.

Exports: General cargo and maize, etc.

Provisions: Contact Tianjin Ocean Shipping Supply Co.

SHIPMASTER'S REPORT: June 1990.

Xiang Jiang is the primary port for ocean-going shipping delivering cargo for Tientsin and Beijing and is under ongoing development. About 28 berths are in use, and the number will increase. A number of portainer cranes are available on the container berths and there are heavy lift cranes on some of the general cargo berths, also 10 ton cranes. Berths No. 1-5 have no cranes. General draft is 9.0 m., but channel has 11.0 m. at low water. Dredging dues are levied on excess draft over 9.0 m. One berth for grain, with 2 "siporters" and grab cranes, but it is necessary to turn round to complete discharge. Coal and minerals are exported.

SHIPMASTER'S REPORT: July 1990.

Tianjin: Tianjin is the city situated about 54 miles to West of the port of "Tianjin Xingang". Tianjin was previously called "Tientsin" and with the policy of changing all names into a national language, i.e. Mandarin, all the port names were changed (Peking became Beijing). Vessels cannot navigate to Tianjin, except small barges.

For guidance: New name Tianjin Xingang, old name Hsingkang. New name: Tianjin (City), old name Tientsin.

Name of Port: Tianjin Xingang or commonly called "Xingang" (old English name Hsingkang).

Position: Latitude 38° 59′ N., Longitude 117° 45′ E.

Information: One of the busiest ports in The People's Republic of China and believed to be second only to Shanghai with regard to cargo handled. Being the closest port to Beijing and to the economic zone of Tianjin, the port has become the most important port for North China.

Navigation: Reference B.A. Chart No. 2653 – Tianjin Xingang approaches.

Vessels bound for Xingang should advise Harbour Master "Dalian", 8 hours prior to passing Laotieshen Shuidao via Dalian Radio (XSZ), the following information:

(1) Name.
(2) Nationality.
(3) Port of departure and destination.
(4) Call Sign.
(5) Speed.
(6) Colour of hull and funnel.
(7) ETA at line joining 38° 43.5′ N., 121° 08.0′ E. and 38° 23.8′ N., 120° 54.6′ E. (Please also see Admiralty List of Radio Signals Vol. 2, part 6).

When approaching the port, it is advisable to be a minimum of 8 miles – 10 miles South of the "Caofeidian" Lighthouse (38° 56.1′ N., 118° 30.4′ E.) (fitted with a Racon "C"), to avoid numerous fishing boats and nets.

Pilotage: Pilot boards at anchorage or 2 miles East of the Dagu Light. Pilotage provided for Xingang and Tanggu.

Vessels should send their ETA's to "Penavico Xingang" as required with all relevant information.

As a general rule the pilots do not instruct vessels when approaching, and vessels should call "Penavico" on Channel 11 (VHF) for information and instructions.

Penavico requires following information after anchoring:

(1) Time of anchoring.
(2) Position – bearing and distance from Dagu Lighthouse.
(3) Fuel, diesel and water remaining on board and arrival drafts.

Vessels should keep listening watch on Channel 11 throughout the stay at anchorage.

Berthing information announced daily by Penavico at 1100 hrs. and 1600 hrs. local time.

At times agents do not give sufficient notice for vessels berthing and vessel's main engine should be kept prepared.

Vessels under "Sino Chart" should advise their ETA's as required.

Port Facilities: Large passenger terminal available West of Berth No. 1, draft up to 8.0 m. Regular local passenger service to Dalian. Many foreign passenger vessels call at this port.

Berths No. 1-5: Used for general cargo up to 7.0 m.
6: Used for general cargo up to 8.5 m.
7: Used for general cargo up to 9.0 m.
8: Used for discharging bulk sugar up to 9.0 m.
9: Used for loading bulk coke, drafts allowed 9.0 m. Loading by shore cranes with grabs.
12-13: For bulk grain discharging. Main berth is No. 13, discharged by evacuators. Draft allowed up to 11.0 m., but may allow deeper drafts depending on tide.

Prior to completion vessels are shifted to Berth No. 12.

Large vessels up to 60,000 d.w.t. can berth. Average discharging time for 40,000 tonnes of grain at this berth is about 5 days.

Due to only one proper grain berth, and due to large amounts of grain imported via Xingang, grain vessels may be delayed by 3-4 weeks when 2 or 3 grain vessels are at anchor.

14, 15, 16: Used for general cargo up to 9.0 m. or more.
17, 18: Used for discharging bulk fertiliser. Draft allowed up to 10.5 m. Discharging done by shore cranes and cargo bagged automatically at the pier.
19, 20: For loading coal in bulk. Draft up to 10.5 m. to 11.0 m.
21: Containers – regular container service to Hong Kong.

All depths are given only as guide and believe depths allowed at some berths are more than indicated.

Port charges extra for vessels berthing with deeper drafts and for quick discharging, when discharging with a falling tide.

Masters are warned regarding signing invoices for quick discharging and deeper drafts, as charges may be exorbitant.

Port Developments: Extensive dredging and land reclamation taking place at present, including extending the present breakwater.

Fresh Water: Fresh water supplied by barge, even alongside, as not many hydrants available at the berths.

Water can be supplied at the anchorage at approximately U.S.$4.50 per metric tonne, but 3 to 4 days notice required to agents. Due to uncertain berthing prospects, vessels should arrive with maximum water on board.

Repairs: Xingang Shipyard can provide all services required. If required, shipyard can board at the anchorage, but prior permission should be obtained by agents from Immigration.

Large dry dock available, vessel of length 200 m. and beam 26 m. can enter.

Shipyard has new building yard, where vessels of 30,000 d.w.t. are built.

Draft at shipyard berths up to 6.0 m.

Shipyard can be contacted on VHF. Vessel must first call "Tianjin Radio" on Channel 16, who will allocate a channel for communication.

Medical: Special medical facilities available for foreigners at Tanggu Hospital and arranged by agents, about 20 minutes by taxi.

Airport: Situated at the city of Tianjin, about 54 miles to the West of the port of Xingang, about one hour by car.

Daily flights to and from Hong Kong, and to many other Chinese cities.

Cranes: Many heavy lift floating cranes available.

Mail Service: Speedpost parcel service available to Hong Kong. Parcels arrive within 4 days from Hong Kong. Believe courier service will be available in the very near future.

Provisions: Available, but during the Winter months fresh provisions may be difficult to obtain.

Bonded stores available at moderate prices.

Port of Tanggu: All regulations and arrival information to be sent to "Penavico Xingang" for vessels bound for Tanggu.

Lock gates situated South of the Xingang shipyard area.

Mainly used by coastal vessels of 3,000 d.w.t. tonnes, 5 berths are available for general cargo and small tankers.

AGENT: See "Shanghai".

WEI HAI: 37.31 N. 122.08 E.

PILOTAGE: Compulsory. Pilot boards in the Quarantine Anchorage and pilotage only undertaken during day time.
ANCHORAGE: *Lightering Anchorage:* A lightering anchorage is located in Lat. 37° 29′ 44″ N., Long. 122° 09′ 41″ E. The depth of water is 7.8 m. – 16.40 m. The nature of the bottom is mud and vessels up to 10,000 d.w.t. may use the anchorage.
RESTRICTIONS: Vessels may only enter and sail during daylight hours.
MAX. SIZE: Draft limitation in the channel is 6.5 m.
VHF: Radio Station "Qing 234" on Channel 16 throughout 24 hours.
TUGS: 1 × 1,200 h.p.
BERTHING:

Working District	*Berth Name*	*Length (m.)*	*Depth (m.)*	*Cargo Handled*	*Shore Cranes*
Foreign Vessels Working District	First Working District	234	7.0	Bulk Grain Bulk Salt Coal	4 × 5 tons

STEVEDORES: *Working Hours:* Weekday: 0700 – 1100, 1200 – 1600. Sundays and Holidays: 0700 – 1100, 1200 – 1600.
FRESH WATER: Supplied by Wei Hai Harbour Authority Bureau.
REPAIRS: No facilities available.
GENERAL: *Storage Areas:* Warehouse: 3,012 sq.m. Open storage space: 90,000 sq.m.
Imports: Timber.
Exports: Various bulk cargoes and bulk salt.
Provisions: Contact Wei Hai Foreign Supply Corporation.

WENZHOU: 28.02 N. 120.39 E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilots board vessels at Huang Da Can Quarantine Anchorage (57° 56′ N., 121° 06′ 41″ E.).
ANCHORAGE: Pan Shi Anchorage accepts vessels up to 10,000 d.w.t. Depth of water 9.0 m. – 12.0 m., holding ground is good.
RESTRICTIONS: Large vessels cannot enter or sail after sunset.
MAX. SIZE: *Draft Limitation in the Channel:*
Pilot Anchorage to Pan Shi Lightening Anchorage – 9.0 m.
Pan Shi Lightening Anchorage to Shuo Wharf (by tidal) – 6.0 m.
VHF: "Wenzhou Radio" on Channels 16 and 13.
Penavico on Channel 11.
TUGS: 5 tugs up to 600 h.p. available.
BERTHING:

FRESH WATER: If vessel requires fresh water alongside, she should contact Xiamen Waterboat Bureau. If vessel is at the anchorage, she should contact Xiamen Tug Water Company.
FUEL: Contact China Marine Bunkers Supply Co., Xiamen Branch.
REPAIRS: Repair facilities available.
GENERAL:
Storage: Warehouse: 41,000 sq.m. Open Storage Space: 354,000 sq.m.
Imports: Wheat, fertiliser, cement, steel, coal and sugar.
Exports: Salt, tea and graphite powder.
Provisions: Contact China Ocean Shipping Supply Corporation.

SHIPMASTER'S REPORT: February 1986.
Documents: Standard Chinese Forms.
Pilots: Pilots ordered by Agents only if the vessel shifting from working anchorage to alongside after clearance.
Approaches: As per sailing directions and charts. The swept channel is very narrow, and the ship must pass 3 cables off a rock awash to port soon after an alteration. Then 3 cables off another rock to starboard. The channel is not marked for night navigation, and navigation should only be attempted with good radars and very careful planning. Navigation lights are weak and extinguished. Pilotage is not available from sea to Quarantine/Working Anchorage and vice versa. (Quemoy and Matsu lie close to starboard of channel).
Anchorage: Quarantine and cargo working anchorages are to the South and West of Gulang Yu Island. Cable crossing area to Eastward, some dangers as shown on chart. Good shelter from monsoon.
Health: Standard Chinese Health Declaration and Vaccination Lists required.
Radio: Xiamen Radio Station used when within range and if the operator is on watch. Otherwise vessel should use Guangzhou or Shanghai Radio.
VHF: Xiamen Radio. Call on Channel 16, ask for 'Penavico' and the station will patch through, normally on Channel 12.
Tugs: For berthing 2 tugs pushing, for sailing 1 tug pushing.
Berthing: The Inner Harbour or Neigang is only suitable for small coastal vessels. Ocean-going vessels may berth at Dong Du (24° 30′ N., 118° 04′ E.) at new wharf for 5 vessels. Large range and fall of tide, loaded vessel's bulwarks drop below wharf level. Said to be capable of berthing two 50,000 ton vessels, and others of 10,000 tons.
Cranes: At Dong Du, one standard container crane on rails at No. 1 Berth. A number of standard Chinese two wire grabbing/general cranes. Ship's gear also used which may work ashore or overside.
Bulk Cargo Facilities: At Dong Du, 2 berths equipped for bagging bulk cargo discharged by grabs. Artificial fertilisers are worked at wharf and anchorage.
Specialised Cargo Handling Facilities: Full container terminal behind container crane.
Density: About 1022 at Dong Du.
Fresh Water: By barge at anchorage or by low pressure shore hose at Dong Du.
Fuel: Fuel oil and diesel oil said to be available but details not known.
Repairs: A small local shipyard, and several boatyards but details not known.
Repatriation: Possible. Local airfield with flights to major cities in China and some times to Hong Kong. Twice weekly overnight ferry to Hong Kong.
Time: GMT plus 8 hours.
Telephones: Telephones/Telexes: Recently modernised as part of the Special Economic Zone centred on the nearby Huli Industrial Estate. Direct dialling to Hong Kong. Quick operator service to the U.K.

Mail service was erratic, 7-20 days from Hong Kong, one despatch went missing.
Storing: Provisions supplied by light truck to foot of gangway at Dong Du.
Shore Leave: Allowed. Shore passes issued for non-Chinese personnel.
Developments: 4 berths to be built. One berth for container vessels and 3 berths for general cargo and bulk (3×25,000 d.w.t. vessels). The port is likely to have a Free-port within the next few years.
Agent: China Ocean Shipping Agency. Cables: "Penavico".

YANTAI (Yentai): 37.33 N. 120.24 E. (See Pla

LOCATION: The Port of Yantai is situated on the Northern shore of the Shandong Peninsula, facing the Huang Hai. The harbour is embrace by the Northern Chefoo Island and other islands providing natural shelte for it, and is an ice-free port owing to its moderate climate.
PILOTAGE: Compulsory. Pilot service is available throughout 24 hours Pilot boards vessel at the No. 1 or No. 2 Pilot and Quarantine Anchorag
RESTRICTIONS: Vessels may enter and sail after sunset.
MAX. SIZE: Draft limitation in Channel is 9.2 m.
VHF: Station "XSU" on Channel 16 throughout 24 hours.
TUGS: 10×3,200 h.p.
BERTHING: Yantai Port, with rail connection, has 14 berths for loadin and unloading, including 3 berths for vessels of 15,000 d.w.t. with designed water depth of 9.9 m. The storage area covers 94,000 sq.m and warehouse area 30,000 sq.m.
CARGO HANDLING FACILITIES: The port is equipped with mode cranes, conveyors, loaders, tractors and carriers. The maximum liftin capacity of the shore cranes is 36.5 tons and that of a floating cran 63 tons. The coal wharf has 3 unloaders.
Packing and Transhipment Services: Automatic bagging machin available. The production lines of the bagging machines for bulk fertilis and bulk aluminium are completely automated.
REPAIRS: Facilities available.

DEVELOPMENTS: The construction of 6 berths in the West Basin is underway and they are expected to be put into operation in 1989.

REGULATIONS:

Regulations Relating to Port Administration:

1. While entering or leaving the port of Yantai, all foreign vessels and domestic ocean-going vessels are required to observe, in addition to the Regulations Governing Supervision and Control of Foreign Vessels by the People's Republic of China and these Regulations, all the relevant laws, decrees, rules and regulations promulgated by the People's Republic of China.

2. Port boundaries and anchorages
 (1) Port Boundaries.
  The port boundaries are the lines connecting the Eastern point of Zhifudao and Northern extremity of Kongtongdao, the Southeastern point of Kongtongdao and Yutaizui of Yudaishan.
 (2) Anchorages.
  A. No. 1 Pilotage and Quarantine Anchorage:
   Lat. 37° 34′ 54″ N. Long. 121° 24′ 44″ E.
   Lat. 37° 34′ 54″ N. Long. 121° 26′ 44″ E.
   Lat. 37° 33′ 54″ N. Long. 121° 26′ 44″ E.
   Lat. 37° 33′ 54″ N. Long. 121° 24′ 44″ E.
  B. No. 2 Pilotage and Quarantine Anchorage:
   Lat. 37° 40′ 30″ N. Long. 121° 29′ 15″ E.
   Lat. 37° 40′ 30″ N. Long. 121° 31′ 45″ E.
   Lat. 37° 39′ 00″ N. Long. 121° 31′ 45″ E.
   Lat. 37° 39′ 00″ N. Long. 121° 29′ 15″ E.
  C. Tanker Cargo-Oil Transferring Anchorage:
   Lat. 37° 38′ 50″ N. Long. 121° 24′ 00″ E.
   Lat. 37° 38′ 50″ N. Long. 121° 25′ 30″ E.
   Lat. 37° 38′ 00″ N. Long. 121° 25′ 30″ E.
   Lat. 37° 38′ 00″ N. Long. 121° 24′ 00″ E.
  E. Anchorage for Shelter:
   Lat. 37° 34′ 32″ N. Long. 121° 27′ 30″ E.
   Lat. 37° 33′ 42″ N. Long. 121° 28′ 36″ E.
   Lat. 37° 33′ 08″ N. Long. 121° 30′ 10″ E.
   Lat. 37° 32′ 29″ N. Long. 121° 29′ 50″ E.
   Lat. 37° 32′ 29″ N. Long. 121° 27′ 30″ E.

3. Vessels entering or leaving this port shall pass through the North Channel between Xiaoshanzi and Dajiaoshi. No foreign vessels are allowed to navigate within the East Channel between Kongtongdao and Yudaishan.

4. Vessels with a draft of more than 10.0 m. or those with length of 200 m. or over shall anchor in the No. 2 Pilotage and Quarantine Anchorage. Foreign vessels must not enter or leave the Tanker Cargo-Oil Transferring Anchorage without a pilot appointed by the Harbour Superintendency Administration.

5. Vessels intending to enter this port (or No. 2 Pilotage and Quarantine Anchorage) by day shall, prior to approaching the port boundary (or No. 2 Pilotage and Quarantine Anchorage), hoist such flags as nationality, signal letters as well as those flags as have to be hoisted. On leaving the port, vessels shall keep flying those flags until they get out of the port boundary (or No. 2 Pilotage and Quarantine Anchorage).

6. Vessels navigating within the port area shall keep radio watch on VHF Channel 6, in case of emergencies, such as typhoon warning, vessels at anchor shall, by day and night, keep radio watch on VHF Channel 16.

7. Vessels handling or carrying dangerous cargoes shall comply strictly with the Regulations Governing Supervision and Control of Vessels Carrying Dangerous Goods issued by the Ministry of Communications of the People's Republic of China.

Vessels intending to work with naked fire shall, 24 hours in advance, submit a written application to the Harbour Superintendency Administration and the work can only be done after being verified and granted.

8. If any ballast water, tank washings or bilges are to be discharged from any vessel which stays in this port, a written application shall be made 12 hours in advance to Harbour Superintendency Administration. No such discharging operation can be carried out unless permission has been obtained.

9. Judging from the extent of the violation of these Regulations, the Harbour Superintendency Administration may impose such penalties as warning, suspension or withdrawal of Certificate of Competency, fine and/or other penalties.

Rules to be Observed by Crew Members and Passengers of Foreign Ships:

1. Foreign ships, crew members and passengers shall be subject to the inspection of the Frontier Defence Inspection Station, and observe all laws and regulations of the Chinese Government.

2. When a foreign ship is entering or leaving port, crew members and passengers on board should present their passports or other identity certificates to the Frontier Defence Inspection Station for inspection.

3. When entering or leaving China, everybody should present their luggage and articles to the Frontier Defence Inspection Station for inspection.

4. Foreign crew members and their dependants intending to go ashore must apply, through the Master, to the Frontier Defence Inspection Station for the "landing permits", with which and their passports or other identity certificates they are permitted to land, while the Chinese crew members and their dependants may go ashore on producing their valid identity certificates with photos, which sufficiently certify their Chinese nationality.

5. Foreign passengers without valid transit visas for China intending to go ashore should apply, through the Master, to the local visa-issuing authorities for landing formalities, with which they are permitted to land.

6. On embarking or disembarking, crew members and passengers must produce the landing permits and their valid certificates to the inspectors of the Frontier Defence Inspection Station.

7. Crew members go on board each others vessels in the same port by their valid passports or other identity certificates and the landing permits, while the Chinese crew members only by their valid identity certificates.

8. The time-limit for landing is from sunrise to 2400 hrs. (local time) of the same day.

9. The crew members going ashore are only permitted within the area confined by the local administration.

10. Any crew having the need to stay ashore must apply, through the Master, to the Frontier Defence Inspection Station for lodging certificates, with which he is permitted to stay ashore.

11. Crew members travelling beyond the port city or leaving China, the Master shall report the circumstances to the Frontier Defence Inspection Station, and the crew member himself should go through with all necessary formalities in compliance with the regulations concerned. Only after the certificates and visas have been granted and submitted to the Frontier Defence Inspection Station for inspection, can he be permitted to leave the ship.

12. If Chinese crews wives or children intend to go onboard the ship, the Master should make a written application to the Frontier Defence Inspection Station. With the issued embarking permits they may go on board the ship on presentation of their permits. The Master should also make a written application for permission when they intend to go to other ports in China by the ship, or else they are not allowed. But with them on board, the ship must not deviate from her set course and go abroad.

Parents or wives and children of Chinese crew who have been sent by China to work on the foreign ships intending to go on board the ship, the Master should also apply for the embarking permits for them. But generally they are not allowed to stay on board.

13. If there are any arms and ammunition on board the ship, the Master must declare to the Frontier Defence Inspection Station when the foreign ship is entering the port. The arms and ammunition should be sealed up by the Frontier Defence Officers. The sealing labels are not allowed to be unsealed by the ship during the ship's stay in port. Air guns and toy guns projecting metallic pellets are not allowed to be used or taken ashore.

14. If there is any stowaway on board the ship, the Master must report the fact to the Frontier Defence Inspection Station immediately. The stowaway should be watched carefully on the ship side, waiting for the decision.

15. Those (crew members and passengers) who break the above mentioned rules shall be given punishment, varying from warning, fining, signing a statement of repentance, to prohibiting going ashore, according to the seriousness of their case. Those who violate the criminal law of China shall be brought to justice by the Public Security Organs according to Chinese law.

Customs Notice to Shipmasters and Seamen:

1. It is prohibited to carry the national currency of the People's Republic of China into or out of the country.

2. After exchange of foreign currencies, gold or silver for Chinese national currency, shipmaster's and seamen shall carefully keep the bank's exchange memo for Customs inspection.

3. Bringing ashore or taking on board of any articles must be reported to the Customs Officer on duty for permission. Selling of articles thus brought ashore is strictly prohibited.

4. The seals affixed by the Customs to any place on board shall not be tampered with.

5. Shipmasters shall declare to the Customs all un-manifested cargo or parcels on board while performing formalities for ship's entry.

6. Ships sailing between Chinese ports shall not deviate from the set course and go abroad without Customs approval. Previous permission must be obtained for such deviation if these is such a need.

The Importation of the Following Articles is Prohibited:

Arms, ammunition and explosives of all kinds; radio transmitter receivers and principal parts, Renminbi (with the exception of those in compliance with an agreement or protocol on the exchange of national currency notes).

Manuscripts, printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, etc., detrimental to Chinese political, economical, cultural and moral interests.

Poisonous drugs, habit-forming drugs, opium, morphine, heroin, etc.

Animals, plants, and products thereof, infected with or carrying disease germs and insect pests.

Unsanitary foodstuffs and germ-carrying foodstuffs from infected areas.

Other articles the importation of which is prohibited by state regulations.

The Exportation of the Following Articles is Prohibited:

Arms, ammunition and explosives of all kinds.

Radio transmitter-receivers and principal parts.

Renminbi and securities, etc., in Renminbi.

Foreign currencies, bills and securities in foreign currencies (with the exception of those allowed to be taken out).

Manuscripts, printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, etc., which contain state secrets or otherwise prohibited exports.

Valuable cultural relics and rare books relating to Chinese revolution, history, culture and art.

Rare animals, rare plants and their seeds.

Precious metals and articles made thereof, jewellery, diamonds and ornaments made thereof (with the exception of those within the quantity allowed to be taken out by outgoing passengers).

Other articles the exportation of which is prohibited by state regulations.

The Sanitary Measures to be taken by Vessels while in Port:

1. If a case or a suspected case of any quarantinable disease or any death not from an accident trauma is found on board, the responsible person on duty shall at once report to the quarantine service for temporary quarantine.

2. When rats are found dead or rodents are caught on board, the Master (or responsible person on duty) shall report to the quarantine service for examination.

3. Efficient rat guards or other means against rats shall be properly put on all mooring ropes.
4. When a gangway or gangplank is used in the night it is to be illuminated by a strong electric light.
5. When flies, mosquitoes, cockroaches or other disease-spreading insects are found aboard, necessary measures should be taken immediately to destroy them.
6. Waste and garbage on board shall not be thrown overboard or discharged into the port waters.
7. The sanitary measures put down on the Pratique Form must be continued as long as the vessel is in the harbour.

SHIPMASTER'S REPORT: March 1987.

Documents: See "General" before first port.

Pilotage: Refer to BA. Charts 1255 & 1260. Pilot usually boards at Inner Quarantine Anchorage in position Lat. 37° 34.5′ N., Long. 121° 25.7′ E. For deep draft vessels, Pilot will board on request at Quarantine Anchorage No. 2 in position Lat. 37° 39′ N., Long. 121° 29.5′ E. Yantai Gang is a large sheltered bay and may only be entered by the Bei Shuidao. Passage through Dong Shuidao is prohibited.

Navigation: Vessels may enter Yantai Gang without a Pilot and proceed to the Quarantine Anchorage. Entry presents no problems, except for deeper draft vessels which have little choice of anchorages. Most navigation lights are low powered and Diliuxing and Dajiaoshi are fishing lights and will probably not be seen. The bay is exposed to Northerly gales which are frequent in Winter and heavy swell will develop inside the bay. The bottom is soft mud and poor holding ground. During gales both anchors will be needed with a large amount of cable.

Restrictions: Despite occasional ice in Winter the port is always open. Maximum depths in the Quarantine Anchorage, where ships are lightened, is 13 m. to 15 m. The inner harbour has been dredged to give 10 m. at a number of berths. Largest ship berthed 225 m. LOA.

Tugs: 2 large tugs of 3,200 h.p. and 7 smaller tugs are available.

Berthing: Depth alongside berths is 10.0 m.

Cranes: 9 large grab cranes are available on the main quay. There are 2 floating cranes, one with a lifting capacity of 60 tons and a larger one of unknown capacity.

Lightening operations are carried out at the anchorage, weather permitting.

Fresh Water: Water can be supplied alongside the quay at a rate of 5 t.p.h. Water barges of 200 tons and 400 tons capacity are also available.

Fuel: IFO and MDO available by barge from Dalian.

Consuls: None locally.

Repairs: Minor repair facilities available. Repair squads can be brought in from Qingdao.

Repatriation: Partial crew change of some 20 crew members undertaken with difficulty.

Airport: Adjacent to the city. Services available to Shanghai, Nanking, Beijing, etc.

General:

Trade & Developments: Yantai had a population in 1987 of about 380,000. It has little export trade, but is a large importer of logs and fertiliser. Some steel is also imported. A ship breaking yard is also in operation. The port area and the Western shore of the bay are under development.

Communications: Yantai is connected, by road and rail and has regular passenger ship services to Dalian and other coastal cities on daily basis.

Agent: China Ocean Shipping Agency, 23 Hai Gang Road, Yantai. Cables: "PENAVICO YANTAI". Telephone: 23181. Telex: 32562 OSAYT CN.

SHIPMASTER'S REPORT: August 1989.

Vessel:

Type:	Log/bulk carrier
Summer draft:	9.54 m.
LOA:	167 m.
Beam:	26 m.
DWT:	26,500 tonnes
Holds:	5
Cranes:	4

Navigation:

1. Advance Notices: The usual 7 days/4 days/2 days and 1 days ETA notice despatched to "Penavico Yantai" agents. Four days prior to arrival, Penavico responded by advising the vessel's port schedule.
2. Radio pratique not available.
3. Pilotage compulsory for foreign vessels. Pilots, consisting of one senior pilot with two assistant pilots who board at the anchorage. Pilots monitors VHF Channel 11. Services available 24 hours with prior arrangement through Agents. Same number of pilots board on departure.
4. Anchorage area as shown in Chart No. 1260. The depth of Quarantine Anchorage No. 1 was reportedly dredged to 12.0 m. The bottom consists mainly of mud. Good shelter is afforded from the South side.
5. Approaches to port: From a position South of Quarantine Anchorage No. 2, a SW'ly course was steered to enter the North Channel (Bei Shuidao) between Xiaoshanzi and Dajiaoshi, after which vessel steered direct to the anchorage/pilot station.
6. On berthing, with starboard anchor on stand-by, the vessel was moored with 4 head/stern lines and 2 springs. Shore bollards are spaced every 10 m.
7. No special entry/sailing restrictions at the new wharf, except in the old berths (Nei Gang) where local passenger liners' movements are given priority by the Harbour Master.
8. Communications: Two hours prior to arrival (about 30 miles from the port), Yantai Port Radio was raised on VHF Channel 16.

While at anchorage, vessels are advised to keep watch on Channel 16 for port movements and berthing instructions, which are announced in good English. The agent could be reached at any time during office hours on Channel 14, through Yantai Port Radio.

Tugs: On shifting to berth from anchor position, one tug was secured at the bow (tug lines used) as vessel manoeuvres through the channel. Another tug meets the vessel by the jetty. Two tugs also used on sailing.

Facilities: The new wharf has an alongside depth of 11.5 m. at low tide and can accommodate 6 Panamax size vessels.

Four shore mobile cranes were used to discharge the log cargoes. Exact maximum capacity of the cranes was not available at the time, but they were prone to breakdowns. Vessel's cranes were used simultaneously to shift deck cargoes.

Cargo Operations: Shore labour works 24 hours (including Sundays) in 3 shifts from 0700 – 1500, 1500 – 2300 and 2300 – 0700. Except for occasional shore crane breakdowns, discharging was fast. Crane operators are good and a minimum of damage was reported.

Repairs/Dock Yards: Not available. Minor repairs possible. Welding repairs, due to stevedores damage, carried out prior to ship's departure.

Supplies/Services: Provisions available through the government ship suppliers at prices remarkably higher than local retail shops.

Fresh water available by barge only.

Fuel not available in Yantai.

Time: GMT plus 9 hours in Summer.

General:

1. During vessel's stay in port, the weather has been generally fair. Northerly/Southerly shifts of tidal current (about 1 knot) was experienced whilst at Anchorage No. 1. The tidal range whilst alongside was observed as about 1.0 m.
2. No size limitations at the new wharf. Construction of transit sheds, rails and roads are in progress. Bottom soundings of berth indicates average depths of 11.5 m. alongside. The buoyed channel that leads to the wharf is, according to the Pilots, dredged to 12.0 m. (Echo sounder readings shows approx. 11.5 m. along the length of the channel).
3. Chart used: B.A. Chart No. 1260.
4. If vessel wishes to undertake welding on deck, either by shore labour or by ship's crew, Harbour Police will first board the vessel to inspect the work area to see if safety precautions have been complied with. They will then give the final approval to start the repairs. No welding work should be started unless the Harbour Police are at hand, otherwise the vessel will incur a fine.

Authority: Port formalities are carried out at the anchorage on arrival. Chinese forms should be used for papers. However, they also accept vessel's forms and will transfer the information to their Chinese forms themselves. They will hand out blank Chinese forms if vessel has none. Boarding officials are courteous and direct. They speak little but understandable English. With agent's assistance, entry formalities were carried out in a quick and efficient manner.

YINGKOU, Including Ba Yu Quan: 40.41 N. 122.15 E.

LOCATION:

Yingkou Working District: 40° 41′ N., 122° 15′ E.

Ba Yu Quan Working District: 40° 17′ N., 122° 06′ E.

PILOTAGE: Compulsory. Pilotage is undertaken day and nigh Pilot boards vessel at Pilot/Quarantine Anchorage and (or) Lightenin Anchorage.

ANCHORAGE: *Lightening Anchorage:* Depth: 9.0 m. – 12.0 m Max. size: 30,000 d.w.t.

Ba Yu Quan Working Anchorage: Depth 11.0 m. – 12.0 m.

VHF: Harbour Bureau on Channels 16 and 18 (24 hours). Penavico o Channel 14.

TUGS: 1×3,600 h.p., 1×1,600 h.p., 2×980 h.p., 1×600 h.p 1×428 h.p., 1×240 h.p. and 2×150 h.p.

Ice breaker of 3,000 h.p. available.

	Warehouse	Open Store Space
Yingkou	270,000 sq.m.	240,000 sq.m.
Ba Yu Quan	77,000 sq.m.	—

Main Imports and Exports:

Exports: Maize and magnesium.

Imports: Steel, fertiliser, waste paper, cars and general cargo.

FUEL: Not available.

GENERAL: *Barges:* 3×1,000 tons (self propelled), 7×2,000 tons a 2×1,000 tons.

Floating Crane: Not available.

Supplies: Available from Foreign Shipping Supply Corporation.

ZHANGJIAGANG: 31.58 N. 120.24 E.

LOCATION: Zhangjiagang is situated at the South bank of the Changjiang, about 114 km. East of Wusong Kou (anchorage for Shanghai).

The port is almost land-locked, with Changshan on the West; Wushan and Xiangshan on the South and Fujiangsha on the North; all of which shelter the port from strong winds and heavy seas. The port is a natural harbour having deep water, able to accommodate vessels of 10,000 tons which can enter or leave whenever necessary.

The port is under the administration of the Shanghai Harbour Bureau.

PILOTAGE: Pilotage is compulsory for vessels flying foreign flags on entering or leaving. The Pilot Station is off Baoshan, within the area bounded by a line connecting Buoys No. 67, 69, 15 and 14, where the depth of water varies from 8 m. – 17 m., mud bottom.

APPROACHES: *Tidal Stream:* During the dry period, the tidal stream is multi-directional, while during the flood period it changes between multi and single directions. The rate of ebb is greater than that of flood. The direction of flood or ebb stream is somewhat parallel to the river bank and the direction of the deep channel, with the exception of a few places.

Wind: Year round the prevailing wind is S.S.E. and E.S.E. or E.N.E. and S.E. The strong wind is from E.S.E. and S.E. The annual average wind force is 3.8 m. per second. Typhoons may threaten the port in the period from July to September, especially in August, with a force up to Force 10.

Aids to Navigation: The harbour is provided with 16 light buoys numbered Funan No. 1 to 14, beginning from the lower entrance. There are two No. 7 and two No. 8 light buoys. No. 14 light buoy stands as a Fairway Buoy, navigable on both sides. Port hand buoys are painted black with a black spherical topmark, starboard hand buoys are painted red.

Obstructions: At the West side of the lower entrance along the channel, there is a large shoal patch, extending Eastward with a depth of less than 5 m. over it.

ANCHORAGE: Quarantine Anchorage is situated in the area North of the line connecting No. 30 light buoy and No. 30B light buoy. Water depth is 10 m. – 13 m., bottom sand and mud, capacity of four to five vessels. This anchorage is also for Joint Inspection.

TUGS: 2 × 960 h.p.

BERTHING: There are 2 groups of floating wharves consisting of 4 berths each, of which two are for taking vessels of 10,000 tons. No. 1 and No. 2 floating wharves are each composed of 3 pontoons and 2 joint bridges and connected to the shore by 6 steel bridges.

There are also floating piers for harbour tugs, and temporary floating piers.

There are 7 mooring buoys numbered from No. 1 to No. 7, beginning from the lower entrance.

Warehouses: There are warehouses and storage ground along the wharves for cargo stowage.

ZHANJIANG (Tsamkong): 21.11 N. 110.24 E. (See Plan)

Also see 'General' before first port.

PILOTAGE: Pilotage is compulsory and is undertaken day and night.

ANCHORAGE: The anchorage is located between the following positions, Lat. 21° 11′ 36″ N., Long. 110° 25′ 17″ E. and Lat. 21° 04′ 55″ N., Long. 110° 33′ 20″ E. The depth in the anchorage is 15 m. – 35 m. and the bottom is sand and mud. Vessels up to 100,000 d.w.t. may use the anchorage.

RESTRICTIONS: Vessels may enter and sail after sunset.

MAX. SIZE: The draft limitation in the Channel is 9.5 m.

Tidal Range: Maximum 4.51 m., minimum 0.70 m.

VHF: Zhanjiang Radio is on Channel 16 throughout 24 hours.

TUGS: 1 × 400 h.p., 1 × 500 h.p., 1 × 1,200 h.p., 2 × 1,360 h.p. and 4 × 3,200 h.p.

BERTHING:

Working District	*No. of Berths*	*Length (m.)*	*Depth (m.)*	*Cargo Handled*	*Shore Cranes*
No. 1	7	906	9.0	General	14
No. 2	3	336	12.5	Oil	
No. 3	5	966	12.0	Ore and General	15
No. 4	6	1,352	12.0	Grain	8
				Coal	2

CRANES: There is a floating crane with lifting capacity of 15 tons. Also see "Berthing".

FUEL: Contact China Marine Bunker Supply Company, Zhanjiang Branch.

REPAIRS: Facilities available.

GENERAL:

Storage: Warehouse: 443,973 sq.m. Open space: 329,417 sq.m.

Imports: Steel, fertiliser and grain.

Exports: Bauxite and general cargo.

Provisions: Contact Xhanjiang Ocean Shipping Supply Corporation.

SHIPMASTER'S REPORT: December 1987.

Port Limits: Port Limits extend to Longitude 110° 38′ E.

Notes: Vessel not normally 'Arrived' until cleared.

Notice of Readines may not be accepted until the vessel has berthed.

Documents: Standard Chinese Forms used.

6 copies Arrival Crew List required.

Anchorages: There are about 18 anchorages designated by the Harbour Master. In addition there are 12 mooring buoys that may be used by vessels of 10,000 tons during a typhoon.

Pilotage: Total distance about 22 miles. Vessels over 9.5 m. draft and vessels of irregular dimensions embark the Pilot at the Outer Pilot Station from a large tug.

Regular size vessels and vessels of light draft embark the Pilot at the Inner Pilot Station.

There is a heavy concentration of fishing vessels between the dredged channel and the Inner Pilot Station.

Restrictions: Channel said to be 9.5 m. (Datum) and Inner Basin Channel 8.5 m. (Datum).

Max.Size: Tankers up to 11.73 m. and cargo vessels up to 11.4 m. draft. It is however necessary to confirm this on each visit.

Health: Standard Chinese Arrival Inspection Procedure carried out at anchorage, preferably as near to the port as is accessible at the time. The Inspection Party consists of 8 or more persons.

Pratique is only required at the first port of entry.

Radio: Radio Station 'XSJ' on W/T MF and HF and VHF Channels 16, 11 and 13. No public telephone correspondence available.

VHF: Call Radio Station on Channel 16 and change to Channel 13 to speak to Harbour Master, Stevedores, Agents, etc.

Radar: The Harbour Master's Office is equipped with radar. However, we do not believe it is used to assist vessels in harbour.

Tugs: There are 4 'Duck-Peller' tugs equipped with VHF and fire fighting equipment. Normally 2 tugs are used, with ship's lines. There is a dedicated fire float and 2 large and older tugs used as pilot boats.

Berthing: The harbour operates in 4 sections (length 1,700 m., depths up to 12.5 m.).

Section One: The original wharf, with a new extension to the North of the basin. There are 8 berths and an 'end-on' berth for Ro-Ro operations of local ferries.

Section Two: Located at the South end of the harbour. All oil operations are carried out at this section.

Section Three: Located upstream from the port.

Section Four: Newly built on reclaimed land. Six berths, including a silo at the end of the quay, with depths of 11.0 m. or more.

Cranes:

Section One: 2 Portal grabbing cranes on the newest berths.

Section Three: Number of cranes not known.

Section Four: There are cranes available at all berths, suitable for grabbing.

Bulk Handling Facilities:

Imports: Wheat is handled by pneumatic elevators or crane and grab. Other cargoes handled by crane and grab into mobile hoppers. All bulk cargoes are bagged for onward carriage into hinterland.

Exports: Barytes, talc lumps, fluorspar, etc. Cargo is tipped by lorries onto the quay and loaded by grab and crane. Phosphate and coal also handled.

Bridges: None.

Stevedores: Cargo worked throughout 24 hours in 3 shifts.

Medical: Facilities available. Foreign seamen handled by ship chandler at the request of the agency.

Tankers: Mostly domestic Chinese vessels observed. No details of berths obtained.

Density: 1018 – 1020.

Fresh Water: Available ex-wharf and by barge.

Fuel: Standard Chinese Grades available. Vessels should be aware of the wax content and high pour points. Bunkers available by barge, normally in daylight. Also available at anchorage.

Repairs: Minor repairs possible.

Surveyors: The Chinese Classification Society 'ZC' acts on behalf of most major Societies for survey work. Cargo Surveyors and Draft Surveyors available from Chinese National Organisations.

Gangway/Deck Watchmen: Immigration Police act as gangway guards on all foreign vessels.

Customs Allowances: Crew allowed 200 cigarettes on arrival. The bond is sealed. Weekly issues are allowed upon written application.

Cargo Gear: All berths are equipped with railway lines and have standard Chinese two wire portal cranes of possibly 10 tons SWL, but unmarked. Various designs of grabs available according to normal commodities handled.

One four wire crane observed handling 20 ft. containers. Floating crane observed. Some mobile cranes also available. In the main, ship's gear is used as a last resort.

There are a number of mechanical handling units such as front end loaders, tipping lorries, tractors and trailers. Some fork lifts with tines or hook gantries. Mobile conveyors, bagging plants, hoppers, etc.

Repatriation: Possible via Kwangchow and/or Hong Kong. Land communication is mostly by overnight bus. Occasional ferry to Hong Kong.

Airport: Domestic flights, but recently 2 charter flights per week to Hong Kong direct.

Time: GMT plus 8 hours. Summertime of GMT plus 9 hours has been introduced.

Telephones: Section 4: Some berths have telephones whose installation is compulsory. Foreign ships are charged 200 F.E.C. for connection.

Storing: Permitted alongside but usually in limited quantities, delivery is by trishaw or minivan.

Shore Leave: Permitted until midnight only. Foreign seamen are logged out and back at the Dock gate by Immigration Officials.

Identification: Seamen's I.D. or Passports to be carried at all times. Foreigners also require 'Landing Permit'.

Regulations: Standard uniform Port Regulations for China.

Delays: Possible due to congestion or for operational reasons. Port is also in the typhoon area, which may require ship's to clear the wharves.

Supercargo's can sometimes arrange despatch agreements.

Developments: Nine berths newly built and in use, five berths under reconstruction on the old quay.

Authority: Harbour Superintendancy Administration.

Agent: China Ocean Shipping Agency, No. 7 Ren Min Road, E.1. Xia Shan, Zhanjiang, Guangdong, China. Telephones: 24936, 24255. Telex: 45234 PNVCZ CN. Cables: PENAVICO, Zhanjiang.

ZHENJIANG: 32.13 N. 119.27 E. (See Plan)

PILOTAGE: Pilot boards vessel at Bao Shan Pilot Station. Pilotage is undertaken between sunrise and sunset.
ANCHORAGE: Vessels anchor in Luo Cheng Zhou Anchorage in a depth of 12.0 m. – 16.0 m. The nature of the bottom is mud and sand. Maximum size vessel that can anchor is 25,000 d.w.t.

The anchorage is contained within the following coordinates:

A.	32° 16′ 41″ N.	119° 41′ 53″ E.
B.	32° 16′ 31″ N.	119° 42′ 05″ E.
C.	32° 17′ 26″ N.	119° 42′ 16″ E.
D.	32° 17′ 21″ N.	119° 42′ 28″ E.

RESTRICTIONS: Vessels may only enter and sail during daylight hours.
MAX. SIZE: Draft limitation in Channel is 9.5 m.
Tidal Range: Maximum 2.10 m., minimum 1.0 m.
VHF: Radio station on Channels 11, 16 and 23. 24 hour service maintained.
TUGS: 2 × 428 h.p., 3 × 980 h.p. and 2 × 1,670 h.p.
BERTHING:

Working District	*Berth*	*Length (m.)*	*Depth (m.)*	*LOA (m.)*	*Cargo Handled*	*Crane Capacity (tons)*

	No. 2-3	280	11.0	185	General	–

CRANES: There is a floating crane with capacity 150 tonnes. Also see "Berthing".
FUEL: Contact Chang Jiang Bunker Supply Station.
GENERAL:
Provisions: Contact Zhen Jiang Ocean Ship Supply Company.
Storage: Warehouse: 14,500 sq.m. Open storage: 124,000 sq.m.
Imports: Timber, ore, coal, scrap and oil products.
Exports: Cotton, grain and general cargo.

ZHOUSHAN: 30.01 N. 122.06 E.

PILOTAGE: Pilotage is undertaken from 0700 hrs. to 1800 hrs. Pilots board vessels at Xia Si Men Anchorage (29° 43′ N., 122° 21′ E.).
ANCHORAGE: Ma Si Men Wai Achorage for quarantine and Yeji Shan Anchorage for lightening. Depth is 15.8 m. – 30.0 m. Vessels of 150,000 d.w.t. and 200,000 d.w.t. may use the anchorage.
RESTRICTIONS: Vessels may enter and sail after sunset.
MAX.SIZE: Draft limitation in channel is 15.0 m. Tidal range is 0.45 m. – 4.32 m.
VHF: Zhoushan Radio on Channel 16 throughout 24 hours.
TUGS: 1 × 600 h.p., 1 × 1,200 h.p. and 1 × 1,800 h.p.
BERTHING:

FRESH WATER: Available.
REPAIRS: Facilities available.
GENERAL:
Storage: Warehouse 3,970 sq.m. and open storage space of 10,000 sq.m.
Cargo Handled: Imports: Grain, cement, timber, steel, bagged fertiliser and petroleum. Exports: Sea products, frozen cargo and tin.

NOTES

Please also advise Shipping Guides Ltd.

Christmas Island

CHRISTMAS ISLAND, Indian Ocean:

10.25 S. 105.43 E. **(See Plan)**

PORT LIMITS: The area of sea in and adjacent to Flying Fish Cove in the Territory of Christmas Island enclosed by a line commencing at a point where a line bearing 270° True from the flagstaff at Government House intersects the coastline of Christmas Island at MHW thence bearing 270° True for a distance of 2 km. thence bearing 360° True for a distance of 2 km. thence S.E. by a straight line to Rocky Point thence generally S.W. along the coastline of Christmas Island at MHW to the point of commencement.

DOCUMENTS:

Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Manifests.
Health Certificate.
Certificate of Registry.
Load Line Certificate.

On arrival at the Island, all usual customs formalities must be observed.

Immigration Officers will board to clear vessel inward. Until the vessel has been cleared, crew members and passengers must not go ashore.

PILOTAGE: Vessels must not close the moorings nearer than one mile until such time as the Harbour Master, or his Assistant, boards to supervise securing to the mooring system. All Harbour Masters are qualified Master Mariners and will render pilotage assistance.

ANCHORAGE: No sea anchorage is available at Christmas Island, the depth of water being too great. Vessels unable to moor due to adverse weather, berth occupancy or late arrival, usually drift off the port and return by daylight next morning, or when advised to do so by the Harbour Master.

RESTRICTIONS: It is not normal practice to moor vessels at night, but unmooring is carried out at all hours.

MAX. SIZE: LOA 192 m. Beam 28 m. Summer d.w.t. 35,000 tons.

HEALTH: Health procedures are basically as those set out by the World Health Organisation in their International Sanitary Regulations. Vessel whose last port of call was in Australia, do not need Pratique clearance.

All other vessels should request Free Pratique by radio when less than 48 hours from the Island.

The Pratique cable should state:

Last port of call and date of departure.

Number of persons on board and number of passengers for the Island.

Any suspected or confirmed infectious diseases on board.

The Port Health Officer may board to inspect passengers, crew, medical papers and/or cargo.

Also see "Regulations".

RADIO: *ETA Advice:* The telegraphic address is "CIPHOS, Christmas Island", and through Perth, Western Australia, or Singapore Radio. On sailing from the previous port, an ETA should be radioed to the Harbour Master. 48 hours before arrival, a confirmation of the ETA should be sent.

Also, the Island should be advised of:

the passengers on board,
number of bags of mail,
total quantity of inward cargo, and
the hatch disposition of the inward cargo.

Ships in Port: In conformity with international regulations, no radio transmissions are allowed by vessels whilst berthed at Christmas Island. Any telegrams requiring despatch must be lodged at the Post Office for transmission. Post Office hours are 0800-1200 and 1300-1500, Monday to Friday only.

VHF: The Marine Office is equipped with VHF and may be called on Channel 16 from 0000-0900 hrs. (G.M.T.), Monday to Friday, weekends by arrangement only.

Call sign is "Christmas Island Marine".

TUGS: None.

BERTHING: On receipt of radioed advice, arrangements should be made to arrive at the boarding position, i.e. one mile West of Smith Point, at the appointed time. On arrival, the way should be taken off the ship and the engines stopped, as, when the weather permits, the mooring gear is also loaded at this position. Six 52 mm. mooring lines will be placed on board. Shore labour carry out this operation and also moor the vessel.

Main Engines and Deck Machinery: It is imperative for the vessel's safety that the main engines are ready for proceeding to sea at all times, as occasionally sharp squalls set in which make it necessary for the ship to proceed offshore at very short notice.

When the vessel is moored, the engines must not be used except for proceeding to sea. This also applies to moving engines for testing, for which the prior permission of the Harbour Master must be obtained.

Power, whether steam, electric or hydraulic, must be kept on the windlass and all winches the whole time the vessel is in port. It is particularly important that the windlass and aft mooring winch are in first class order.

BULK CARGO HANDLING: Vessels Loading Bulk Phosphate:

Loading Plant: Bulk phosphate is loaded by 2 cantilever arms. When the ship is moored in the loading position, the arms are swung over the appropriate hatches and the cargo poured directly into the holds. The capacity of each arm is 1,500 tonnes per hour; i.e. 3,000 tonnes per hour overall loading rate.

Ballast: Vessels should arrive with sufficient ballast to allow them to be handled without tugs in a strong breeze. However, on ships loading bulk phosphate the amount of ballast should be restricted to the amount which can be discharged comfortably whilst loading. The bottom of the loading chute, when fully raised, is 16 m. above MHWS.

The Loading Berth: The bulk loading plant is served by a system of outer and inner buoys. Initially, a vessel is secured to the outer buoys, which are anchored in very deep water and then breasted to an inner buoy system (Inner Berth).

Preparation Before Arrival:

i) The forecastle head should be left as clear as possible of chain, lashings, etc., so that all pipes, fairleads and bitts are available for use.

ii) The derricks or cranes at No. 1 and at the aftermost hatch should be ready for loading cantilever mooring gear. At the other hatches, all derricks should be hoisted and swung over to the port side so that derricks, guys, preventers and runners are well clear of the hatchway. Hatches should be open before the Pilot boards ready for immediate loading once the ship is secured in the berth. It is essential that all lower holds are clean and free of dunnage on arrival. Hatch beams need not be removed.

iii) If general cargo is to be discharged, a good boat rope should be rigged on the both sides for the full length of the vessel going well forward and well aft with "stirrups" abreast of the ends of each hatchway.

iv) Any jumper stay, mast stay, or wireless aerial which obstructs a hatch should be free and ready for releasing.

v) The ship is required to have ready 3 mooring ropes forward and 3 mooring ropes aft. These ropes should be at least 52 mm. in diameter and in good condition. One rope forward and one rope aft should be at least 200 m. in length.
If there is doubt about the condition, size or length of ship's ropes, the Harbour Master should be requested, by telegram, 24 hours before arrival, to supply extra shore ropes.

vi) The pilot ladder should be rigged on the starboard side sufficiently far forward to be on the flat side of the vessel clear of the overhang of the hull aft. The bottom rung should be one metre above the water. Manropes must be fitted.

vii) All discharges or scuppers in the vicinity of cargo boats, pilot ladders or gangways, must be effectively screened or blocked off.

viii) As the loading rate is high (approximately 3,000 tonnes per hour) vessels should endeavour to arrange the discharge of water ballast so that loading can be completed without interruption. However, the vessel should not arrive trimmed excessively by the stern as this could make her extremely difficult to handle in the prevailing fresh South East breeze.

ix) All derricks, hatch boards, and beams will be handled by ship's crew only.

x) Mooring winches aft and windlass forward should have power on ready for shore labour to handle mooring ropes.

Stowage Factor: The free pour stowage factor of Christmas Island phosphate is 0.75-0.84 cu.m./tonne in bulk carriers. The angle of repose is about 35°.

Weighing Machine: A weighing machine is installed at the loading plant *but it must only be used as a guide to the quantity loaded and scale figures should be checked against the vessel's draft.*

Loading will be stopped at any quantity desired short of the final figure to allow the draft to be determined and alterations made to end hatch figures for adjusting the vessel's trim.

Loading Distribution Plan: A loading distribution plan should be made up, to be presented to the Loading Master on arrival.

Fastest overall loading time will be achieved if amounts can be more or less evenly distributed between the two loading arms.

Draft gauges are supplied from shore and fitted to ship's side to assist with draft readings.

It is recommended that planned loading allows a balance of 500/1,000 tonnes for trimming after draft survey. No draft surveys are carried out by shore personnel. The ship must carry out is own draft survey and call for additional cargo required to make up Bill of Lading or Manifest quantity as per charter party.

Vessels Loading Bagged Phosphate Dust:

The Loading Plant: Bagged phosphate dust is loaded by ship's gear. The bags, stowed on cloverleaf slings, are brought alongside by powered barges, hoisted inboard and block stowed in the hold. The net weight on each sling is 2 tonnes.

Ballast: Ships loading bagged dust should, to expedite loading, retain all their ballast until approximately half the cargo is on board.

The Loading Berth: Bagged phosphate is usually loaded at 'B2' mooring. Here the vessel is moored between two buoys, the bow to the main mooring and the stern to a buoy further inshore.

Preparation Before Arrival:

i) The derricks should be raised and ready to work. Weather permitting, 2 hatches should be open and ready to commence loading with 2 gangs immediately upon arrival.

ii) A good boat rope should be rigged on both sides of the vessel going well forward and well aft with supporting "stirrups" abreast of the ends of each hatchway.

iii) Two heavy mooring ropes should be ready forward to run from either bow to the buoy. In addition to the head mooring lines, 2 good mooring ropes should be available aft. These ropes should be positioned so that they can be run from either quarter.

iv) All ropes should be at least 200 m. long. If there is doubt about the condition or length of the ship's ropes, the Harbour Master should be requested by telegram 24 hours before arrival to supply extra shore ropes.

v) The pilot ladder should be rigged on the starboard side sufficiently far forward to be on the flat side of the vessel clear of the overhang of the hull aft. The bottom rung should be one metre above the water. Manropes must be fitted.

vi) All discharges or scuppers in the vicinity of cargo boats, pilot ladders or gangways must be effectively screened or blocked off.

vii) All derricks, hatch boards and beams will be handled by ship's crew only.

Stowage Factor: Bagged dust stows at approximately 45 cu.ft. per ton (1.25 cu.m./tonne).

Bill of Lading Tonnage: Loading will be stopped at any quantity desired short of the final figure to allow the draft to be determined and alterations made to end hatch figures for adjusting the vessel's trim.

CRANES: On wharf, 1 Favco 20 tonne S.W.L. and 1 Babcock & Wilcox 4 tonne S.W.L.

STEVEDORES: Supplied by Agents.

MEDICAL: The Medical Superintendent may be consulted on payment of the usual fees. Members of the ship's company requiring treatment should be provided with a letter from the Master stating the nature of their ailments. This letter will also be an undertaking from the Master that the Doctor's fees will be paid.

If Hospital accommodation is desired, please apply to the Medical Superintendent beforehand, regarding fees, etc.

TANKERS: Furnace and diesel oils pumped ashore simultaneously through floating pipe-lines, 8 in. and 6 in. diameter respectively.

DENSITY: 1023 constant.

FRESH WATER: In an emergency, a limited quantity of fresh water may be obtained. Requirements should be advised by radio the day prior to arrival and confirmed with the Harbour Master when he boards.

Sufficient water should be carried to allow for a prolonged period of drifting off the Island in unfavourable weather conditions.

FUEL: No facilities are available for the provision of fuel oil, other than very small quantities of diesel oil for boats or visiting yachts.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: All beams and hatches to be handled by ship's crew.

CERTIFICATES: Register of Cargo Gear and Test Certificates.

CARGO GEAR: To comply with requirements of the Australian Navigation Act, 1912-58.

CONSULS: Administrator's Office performs some consular functions.

REPAIRS: No facilities exist.

SURVEYORS: Cargo Surveyors: The Harbour Master or his assistant in his capacity as Lloyd's Agent. There are no authorised hull surveyors.

REPATRIATION: Only for medical emergencies.

AIRPORT: Weekly flights from Perth and Singapore.

TIME: GMT plus 7 hours throughout the year.

HOLIDAYS: New Year's Day; Australia Day (26th January); Hari Raya Haji; Chinese New Year – two days; Good Friday; Easter Monday; Queen's Birthday; Territory Day (1st October); Hari Raya Puasa; Christmas Day; Boxing Day.

No work performed on New Year's Day, Hari Raya Puasa, Good Friday, 1st day of Chinese New Year and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 444. Ambulance Tel: 333. Fire Tel: 222.

EMERGENCY CO-ORDINATION CENTRE: The nearest Co-ordination Centre is the Coastal Surveillance Centre, Canberra. Tel: Canberra 476666. Cables: "Marineops" Canberra.

BANKS: The Bank of New South Wales, Christmas Island, Indian Ocean. Telex linked direct to head office of the Bank of New South Wales in Perth, Australia.

STORING: See "Prelims".

1. The Island is stored purely for local needs with limited quantities and range of supplies. It would therefore only be in cases of extreme emergency that stores would be supplied to ships.
2. In such cases vessels would be stored by barge, and this would take place at any convenient time prior to or during loading.
3. Not applicable as moorings are off shore.
4. Fork lifts are available to assist in loading stores.
5. There are no Customs regulations or requirements pertaining to the loading of ship's stores.
6. Local labour is available to load stores onto ships.

TELEPHONES: Placed aboard when required by Port Authorities. No charge.

SHORE LEAVE: See "Regulations."

IDENTIFICATION CARDS: Not required.

REGULATIONS: The importation of animals and poultry into Christmas Island is subject to strict control. No animals or poultry may be imported into Christmas Island without a permit from the Administrator; therefore animals or poultry must not be accepted on board a ship for carriage to the Island unless the following documents are produced:–

(a) A Permit from the Administrator.
(b) A Certificate of Health and Declaration by Owners on Form B301 signed by a Government Veterinary Surgeon and Quarantine Officer (Animal).
(c) A Certificate of Stock signed by an Inspector of Stock.
(d) A permit to embark animals on Overseas vessels signed by a Quarantine Officer (Animal).

Shore leave is, in normal weather, at the discretion of the Master and shall *expire at 1700 hours local time.* When the weather is doubtful the Harbour Master may prohibit shore leave altogether.

We must ask the Master to take action to prevent the Steward and other members of the crew selling or supplying liquors or other goods to any person on the Island. Breaches of the Liquor and Trading Laws render offenders liable to heavy penalties.

Whilst the vessel is in port the disposal of garbage overboard is prohibited.

The port of Christmas Island is a gazetted port regulated by the Australian Navigation Act and the Merchant Shipping Ordinance of the former Colony of Singapore. The Mining Corporation's Harbour Master and Assistant Harbour Masters are appointed by the Government as Deputy Harbour Masters responsible for enforcing these regulations. Your co-operation with them is earnestly requested.

WEATHER: The barometer is not a reliable guide in these latitudes. While the wind is steady from the Eastward with a clear sky, fine weather may be expected; but if the wind falls light or if clouds bank up in any quarter, squalls blowing onshore can be expected. Also, lightning in any quarter is usually followed by unsettled weather.

Whilst shore labour is on board, a Harbour Master is on duty. He wi advise if the weather conditions necessitate taking the vessel to sea and will supervise the unmooring operations. However, when the ship is moored, but idle, sea watches must be kept. Should the wind blow onshore at Force 3 or more, or the vessel's movements place undue strain on the moorings, the ship must be taken to sea at once.

QUESTIONNAIRE: To facilitate loading the vessel, the questionnaire should be completed and forwarded to the Corporation's Genera Manager on arrival.

The General Manager,
Phosphate Mining Corporation of Christmas Island,
CHRISTMAS ISLAND,
INDIAN OCEAN.

Dear Sir,

I acknowledge receipt of your brochure giving information in connectio with mooring and loading at Christmas Island which I have carefull noted.

The following are the particulars of this ship:–
Call Sign____________
Tonnage – Gross____________Net____________
Tonnage Summer Displacement____________
Length____________Breadth____________Depth____________
Size of Panama Lead – if fitted____________
Size of Chain Cable____________
Weight of Anchors____________
Last Port of Departure____________
Date of Sailing____________
Quantity of Phosphate required for full cargo this voyage______tonne
Number of hatches into which Phosphate will be loaded____________
Quantity to be loaded into each Hatch : No. 1________No. 2________
No. 3________No. 4________No. 5________No. 6________
Spare cabins available____________
Additional cabins which can be made available if required____________
Number of berths in additional cabins____________
Total number of passengers who can be taken____________
Quantity of fuel on board on arrival____________
Service Speed____________
Daily Fuel Consumption – Steaming____________Drifting____________

____

NOTES

Please also advise Shipping Guides Ltd.

Colombia

GENERAL:

DOCUMENTS:

Consular Documents:

In foreign ports where cargo for Colombia is loaded, the Colombian Consulate must receive two copies of the Cargo Manifest, on a special form (Colombian Freight List), one of which is returned to the vessel and the other is filed at the Consulate.

Prior to Arrival:

Notice of arrival:

The agency must prepare the standard Colombian document for confirmation of vessel arrival, giving the characteristics of vessel and indicating the services requested: pilotage, towing, anchorage, berthing, cargo to be loaded and unloaded, as well as water, electric power, telephone, fuel and lubricants.

This form is addressed to the Director of Operations of the Marine Terminal of the Colombian Port Authority (COLPUERTOS) and is submitted in seven copies (original and three copies for the Marine Terminal and a copy each to the Port Captain, the Customs Security Office, and the Port Public Health Officer). If passengers disembark, an additional copy must be submitted to Migration.

Information on cargo for the port:

At least 24 hours in advance of the vessel's arrival, the agency must receive the following documents by airmail, for distribution as indicated:

Documents	*Customs*	*Marine Terminal*	*Agency*	*Total*
Freighted Manifest (Freight List)	–	–	1	1
Freighted Bills of Lading	1(a)	3	1	5
List of Cargo by Hatch	–	1	1	2
List of Dangerous Cargo in Transit	–	1	1	2
Stowage Plans	–	1	1	2

(a) Stamped.

Request for Port Services:

The agency must submit to COLPUERTOS, 8 hours in advance of the vessel's arrival, the following documents, in original and two copies: request for berthing crew, cranes, terminal crew, motorised equipment and storage; request for inward pilotage and towing.

On Arrival:

On the entrance of a vessel, the following documents must be submitted, either on the model forms established by LAFTA Resolution 254 (IX), or on similar forms, except the cargo manifest, which will be made out on the Colombia Freight List form.

Type of Documents	*Number and Distribution of Documents*						
Basic Forms	*Port Capt.*	*Cus. Sec.*	*Marine Term.*	*Port Pub. Health*	*Migr.*	*Agency*	*Total*
1. General Declaration	1	1	–	–	–	1	3
2. Cargo Manifest	–	1	1	–	–	–	2
3. Crew List	1	2	–	1	1	1	6
4. Passenger List	1	1	–	1	1(a)	1	5
5. Ship's Stores	1	2	–	–	–	1	4
6. Crew Effects Declaration	1	2	–	–	–	1	4
7. Maritime Declaration of Health	–	–	–	1	–	–	1
8. Mail List	–	2(b)	–	–	–	1	3
Additional Documents:							
9. Clearance from Last Port	–	–	–	–	–	–	+
10. List of Passengers in Transit	1	1		1	–	1	4
11. "No Passengers" Declaration (c)	1	2	–	1	–	1	5
12. List of Dangerous Cargo in Transit (c)	1	–	1	–	–	1	3
13. "No Mail" Declaration (c)	–	2(b)	–	–	–	1	3
14. List of Passengers' Baggage (a)	–	3	–	–	–	–	3

(a) Only for those disembarking.
(b) One copy for the Post Office.
(c) When required.

Other Requirements:

The agency provides a landing permit for each crew member and passenger, which is stamped on board by the Captain of the Port.

Prior to Departure:

Clearance for the vessel is requested from the Captain of the Port on a special form. It is prepared in triplicate (original for the vessel, one copy for the Port Captain's file and one for the agency). The following documents accompany it:

1 Crew List.
1 Passenger List or "No Passengers" Declaration.
1 Ship's Stores List, and
1 Fuel Supply Declaration or negative

Request for Pilotage:

At least 2 hours before departure, a request for pilotage, clearance and unberthing crew must be submitted to the COLPUERTOS Maritime Section.

Port Authority Circular: July 1986.

Documentation Required:

The Maritime Agencies must present:

(a) Maritime Sector Discharge (imports and transit):

Up to date stevedoring plans showing the location of the cargo for the port and hazardous cargo.

List of Cargo per Discharge Hold.

List of Containers for the Port.

Sets of Bills of Lading.

Sets of Check Lists of Cargo with Manifest.

Tally Books.

List of Missing Cargo showing the ship which recorded them but did not load them, together with their Bills of Lading and Check Lists against the Manifest.

For cargoes in-transit, national or international, transhipment, Declaration of Final Destination, with presentation of the Memorandum of Authorisation of Customs.

Certificate of the draft survey of the port of shipment for bulk cargo.

(b) Maritime Sector Cargo (Exports):

List of Cargo for Shipment by Port of Destination.

List of Empty Containers to be Shipped.

Shipment Orders Authorised by the Customs.

Sets of lists checking loading against Manifest once loading has been completed.

PILOTAGE: Pilotage is compulsory for all vessels over 200 g.r.t. The Pilot must be requested by the Agent at least 24 hours in advance.

Berthing preference will be given as follows:

1. Warships.
2. Passenger vessels and Mail Boats on a fixed itinerary.
3. Vessels with livestock and perishable cargoes.
4. Passenger vessels not on a fixed itinerary.
5. Vessels loading cargo for export.
6. Vessels discharging cargo for import.
7. Tankers.
8. Coasters.
9. Vessels carrying explosives.

On sailing all vessels must fly the "P" flag.

Vessels at anchor can be authorised to work to lighters.

All Colombian ports are open 24 hours a day.

ARRIVAL ADVICE:

(1) The local Agent must advise Empocol 72 hours, 48 hours and 24 hours in advance the vessel's ETA.

(2) With the ETA pre-arrival advice, Owner or Master must advise the Agent the following:

(a) Estimated arrival draft, forward and aft
(b) Full vessel's particulars, including breadth
(c) Vessel's side for which she must be docked (port side or starboard)
(d) Cargo hatch distribution

(3) At least with 48 hours in advance, the Agent must receive in order to give to Empocol (together with others issued by the Agent according to the information supplied by the Master and Owner), the following documents:

(a) 5 original copies (not photocopies) of each Bill of Lading, duly freighted and signed by the shipper
(b) Stowage plan.

(4) Also 24 hours prior vessel's arrival, the Agent must pay to Empocol the proforma invoice which amounts to the estimated port expenses plus 25 per cent surcharge. Hence it is of paramount importance the Agent receives well in advance the funds required, in order to convert the U.S. Dollars into local currency and proceed to effect the corresponding payment.

It is important to point out that in case the above mentioned instructions are not fulfilled, or the documents are not presented and the proforma invoice is not paid in due time by the Agent, Empocol will not authorise docking and operations of the vessel.

FREE PRATIQUE: There is no Radio Pratique. The standard W.H.O. Health Certificate must be used.

STEVEDORES: Supplied by the Port Authorities although it is often necessary to employ extra labour through the Agent, due to the fact that gangs are seldom complete. At week-ends, gangs required for Monday must be ordered by 1000 hrs. on Saturday. Masters should bear this in mind when sending their ETA.

Cargo in a damaged condition or showing signs of pilferage will not be handled until inspected by a Port Official and ship's officer, leaving on record the actual condition of the cargo.

Containers are discharged or loaded as all other cargo, though if they are stuffed or unstuffed immediately this must be done with the Port Labour provided.

Opening and closing of hatches, and the rigging of gear, is done by a gang of riggers. The ship's crew can do this work, but it is advisable to use Union Labour.

Rain tents are not supplied by the port.

All gear, slings, spreaders, etc., must be supplied by the ship.

Rat guards must be fitted on all mooring lines whilst in port.

PORT SECURITY MEASURES: All ports are rigorously patrolled by Port Police, and crew members are advised to carry Identification Cards at all times when ashore.

FUMIGATION: This can only be carried out alongside with the permission of the Port Authority.

GARBAGE: No garbage may be thrown overboard. This includes flakes of paint from vessels chipping or scraping the hull. No paint must be allowed to drop into the water or onto the quayside. Overboard discharges must be kept off the quay.

POLLUTION: The standard requirements for the prevention of oil pollution must be adhered to within the continental shelf off the Colombian coast.

All vessels calling at Colombian ports must have "Pollution Policy" onboard. If not onboard vessel will be heavily fined and clearance will not be granted by the Port Captaincy.

All vessels must ensure that the Oil Record Book is up to date prior to arrival, as it is likely to be inspected.

Fines can range from 50,000 to 500,000 Pesos, not including the cost of any clean up operation.

No vessel contaminating the waters of any port may sail until the corresponding fine has been paid.

Oil Tankers are not permitted to clean tanks within 60 miles of the Colombian shores. A vessel arriving in port with dirty ballast will be ordered to proceed to sea beyond the 60 mile limit, and take on clean ballast.

CREW: The authorities will not allow crew to be of unkept appearance or improperly dressed at any time while the vessel is in port.

FUEL: Bunkers are only supplied to vessels which were supplied in 1972, and are actually trading to Colombia. Vessels may not take more bunkers than the amount they received in that year. Requests for bunkers must be made to Agents at least 1 week in advance.

TIME: GMT minus 5 hours. Summertime is not observed.

STOWAWAYS: In 1988 70 stowaways were found on one vessel.

Likely hiding places are containers and palletised cargo.

BARRANQUILLA: 10.58 N. 74.47 W. (See Plan)

DOCUMENTS:

Clearance from Last Port.
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Cargo Gear.
Oil Pollution Certificate – Policy of Insurance.
6 Crew List.
5 Crew Personal Effects List.
5 Provision List.
5 Store List.
6 Passenger List (In Transit).
6 Passenger List (Disembarking).
4 Declarations of Passenger Baggage.
4 List Port Mail.
1 Sanitation Declaration.
Sets of manifests covering port cargo.

PILOTAGE: Compulsory for all vessels over 200 g.r.t. The Pilot Department of Empresa Puertos de Colombia at Barranquilla require that the vessel's Agent advises them with at least 24 hours in advance, the best vessel's ETA, together with the estimated arrival draft (fresh water).

Therefore it is important that Masters of vessels advise Agent 72, 48 and 24 hours in advance the best ETA to the port, in order to avoid any delays because of unavailability of Pilot.

The Pilot will board and leave vessels at Bocas de Ceniza, 1 mile North of the Western Breakwater, and they are not authorised any more to pick up/leave vessels at either Cartagena or Santa Marta, except when the weather does not permit such operation at Bocas, in which case the Pilot Department will decide whether the Pilot must be picked up/left at any other place.

Radio telephone frequency of pilot station 2738 alternative 2638 or 2182 kHz and VHF Channel 16. 2 pilot boats speed 7 – 9 knots. Sufficient depth to allow vessels wait for Pilot in boarding position, including trade wind season end November to beginning April.

ANCHORAGE: If awaiting Pilot, anchor 1 or 2 miles West of West Breakwater during non-windy season. After Pilot boards and when no berthing space at the quay, anchorage is made in the river, about 1,500 ft. off the dock in approximately 40 ft. of water. 3 shackles of chain required in good holding ground.

RESTRICTIONS: Depth at the river bar is being maintained at a minimum of 34 ft., however, the actual permissible draft has been curtailed to 30 ft. or less (check with Agent) on account of silting conditions of the river and low river levels, particularly around the area known as Siape, approximately 4 miles from the dock area.

MAX. SIZE: Recommended max. LOA 600 ft. due necessity for turning vessel before sailing. Also see "Restrictions". Rate of current 2.5 knots during dry season, 4 knots in rainy season.

HEALTH: On arrival port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port doctor visits vessel even if previous port was in Colombia.

RADIO: Messages to and from Agents routed through station HKB. Ship's messages should include call letters.

TUGS: Generally no tugs required for river entrance. Tug assists berthing and turning vessels before sailing. 1×1,225 h.p. tug available.

BERTHING: 7 berths. Total length of quay 1,058 m. Depth alongside 32 ft. Vessels berth starboard side alongside.

CRANES: 2×10 ton quay cranes and 1×60 ton floating crane.

6 privately operated cranes of 30 tons – 100 tons capacity.

STEVEDORES: Agents should receive advance copies of stowage plan and adequate notice ETA order arrange gangs. Working hours: First shift Monday to Saturday and Holidays: 0800 – 1200 hrs. and 1400 – 1800 hrs. Second shift Monday to Friday: 1800 – 0200 hrs. No work on Sundays.

MEDICAL: All facilities available.

TANKERS: No facilities.

FRESH WATER: Available. Rate about 20 t.p.h.

FUEL: Only small quantities of gas oil available.

FIRE PRECAUTIONS: No vessel requirements. Terminal has own fire-extinguishing equipment.

REPAIRS: Good facilities for mechanical or electrical and radio repairs.

DRY DOCKS: Only one dry dock for very small vessels.

GANGWAY/DECK WATCHMEN: Request watchmen through Agents.

CUSTOMS ALLOWANCES: No limitations for individual consumption.

DRY DOCKS: Only one dry dock for very small vessels.

REPATRIATION: Good facilities available.

AIRPORT: 6 km. from city. Airport served by major airlines.

TIME: GMT minus 5 hours.

HOLIDAYS: 1st January, 6th January, 8th April, 9th April, 1st May, 23rd May, 2nd June, 29th June, 20th July, 7th August, 15th August, 12th October, 1st November, 11th November, 8th December, 25th December.

POLICE/FIRE/AMBULANCE: Fire 411828, ext 38. Ambulance 410736 or 319594. Police 411937.

TELEPHONES: Arrangements available for placing telephones on board.

SPECIAL RECOMMENDATION: Masters to warn crew to close and lock cabins.

IDENTIFICATION CARDS: Supplied by Agents.

REGULATIONS: No special facilities for discharging explosives.

If explosives on board vessel not allowed berth.

DEVELOPMENTS: Two more berths under construction. Dredging under way in access channel.

AUTHORITY: Direccion General Maritime Y Portuaria – Capitania de Puerto de Barranquilla.

BUENAVENTURA: 03.53 N. 77.05 W. (See Plan)

DOCUMENTS: On vessel's arrival, Master must present following documents to Port Captain's Office:

Travel Memorandum.
Sole document or Consular despatch from the last port or ports where vessel disembarked or embarked passengers.
3 Crew Lists.
3 Provision Lists.
3 Lists Crew's Personal Effects.
3 Lists Passengers in transit (or negative).
3 Lists Disembarking Passengers (or negative).
3 Lists Port Mail (or negative).
1 Sobordo or Manifest of Cargo for the port.
2 Declarations of Passenger Baggage, if any.

Destined to Maritime Terminal:

3 Sets Sobordos or Manifests covering port cargo (or negative).
1 Set of Bills of Lading, covering discharge cargo.
20 Tally Books for discharge cargo.

Destined to the Custom House:

3 Sets of Sobordos or Manifests for cargo destined to the port.
1 Set of Bill of Lading for port of destination.
1 Tally Book for cargo to be discharged in port.
2 Declaration Lists for Passenger Baggage, if disembarking.

Destined to the Health Doctor:

Vessel's Travel Memorandum.
International Health Certificate.
1 Crew List.
List of Passengers in Transit (or negative).
1 Vessel's Fumigation Certificate (for presentation only).
1 Port Passengers List (or negative).
Certificate of Exemption of Derat (for presentation only).

Destined to Immigration Authorities:

1 Crew List.
1 List of Transit Passengers (or negative).
1 List of Port Passengers (or negative).

Destined to Agents:

1 Travel Memorandum as above mentioned.
9 Crew Lists for Consular despatch and handling of sailing permit.
6 Lists of Passengers in Transit (or negative), for Consular despatch
6 Lists of Personal Effects for Consular despatch.
2 Mail Lists for the Port (or negative).
3 Sets of Sobordos or Manifests covering port discharge cargo (o negative).
4 Sets of Bills of Lading covering port discharge cargo.
10 Tally Books covering discharge cargo.
2 Lists of Passenger Baggage Declaration for the port, if any baggage

PILOTAGE:

(a) Entry marked by Channel having minimum depth of 3.25 fathoms low tide. Advisable enter Channel or leave wharf 1 hour after low tide and 2 hours after high tide, restricting departure during any other periods particularly when draft exceeding 20 ft. Pilot boards in vicinity of No. 1 Buoy (Position: Lat. 03° 50′ 00″ N., Long. 77° 10′ 00″ W.).

(b) 72, 48, 24 and 12 hours before reaching port, Master must cabl separately to Agent and Port Captain confirming hour of arrival Punta Basan (pilot station). Message to Agency must indicate, in addition t ETA, quantity of cargo destined for the port, number of disembarking o in-transit passengers, number of gangs required for operations, draf mail for the port, if fresh or running water is required; fuel-oil, cash t Master or any other special requirement; whether special side of wha is required for berthing, and whether dangerous cargo (explosive) o inflammable cargo, and what quantity. Message to Port Captain mus also indicate arrival time, quantity of cargo destined to the port, numbe of disembarking or in transit passengers, mail, whether dangerous o inflammable cargo is carried and in what quantity, and any other dat that may be considered useful in accordance with Internationa regulations.

(c) Radio beacon at Punta Soldado, characteristics: Frequenc 317 kHz. Letters, B.T. Time 0000 – 2400 hrs. every day and eve 10 minutes with 20 minutes of rest during 30 minutes work. Flashe 12 seconds duration.

(d) Radio-telephone in pilot station of Punta Basan or La Bocan (opposite to Punta Soldado), characteristics: VHF Channels 11 and 1 every day from 0600 – 2400 hrs.

(e) Since Master's advice to Agency serves as notification to pil station, Pilot will be at Punta Basan ready for vessel. In case of dela due to any circumstance, vessel may anchor and request Pilot by 4 sho blasts.

(f) Port has 8 Pilots.

(g) Pilot ladder must be lowered a few feet from the surface. Vess must proceed slowly in order facilitate boarding.

(h) Pilotage compulsory.

ANCHORAGE: Marked by Buoy No. 7, located Lat. 03° 53′ 59″ N., Long. 77° 04′ 04″ W.; depth from 33 ft. to 70 ft. and distance from wharves approximately 1,000 yards.

There are 3 additional anchorage zones and their use will be ordered by the Authorities.

RESTRICTIONS: Max. draft for crossing bar is 28 ft. one hour before/after HW. Bar is located in position 03° 48′ N., 77° 19′ W.

MAX. SIZE: No restrictions on the length of vessel, depth alongside wharf approximately 12 ft. – 30 ft. under terms "not always afloat but safely aground", low tide.

HEALTH: *(a)* As soon as vessel anchored by Pilot within bay, Port Authorities including doctor, will board by means of ladder which must be lowered when port area entered.

(b) In case of sickness on board, Master must advise in order doctor may determine whether vessel will be under quarantine or not. This will apply even if vessel arriving from a port of the same country.

(c) Time-table for meeting vessel: Ordinary or regular time – ordinary time: 0800/1200-1400/1800 hrs.; overtime – 0700/0800-1200/1400-1800/2200 hrs. Sundays and holidays, overtime.

(d) After 2000 hrs. and up to 0700 hrs. of following day it is not possible to make arrangements for meeting vessels, unless in emergency.

RADIO: (Also see "Pilotage"). Port has receiving-transmitting radio station Buenaventura/Colradio HKC. For listening and transmitting there are following frequencies:

Listening	*Transmitting*
8354 to 8374 kHz	8574 kHz
12531 to 12561 kHz	13087.5 kHz
6265 to 6280 kHz	6386.5 kHz

In emergency: Listening: 500 kHz. Transmitting: 441 kHz. Station operates 24 hours a day.

TUGS: Normally only required for berthing. Tug operation handled by Pilot. Generally tug service consists of pushing from stern or bow as required. When necessary to use ropes, they must be supplied by vessel. 2 tugs of 1,200 h.p. each and 1 of 350 h.p.

BERTHING: Main wharf 2,136 m. long, where import and export cargoes handled. There are 3 warehouses for the storage of export cargoes, including Colombian coffee.

Berthing arranged by turn according to time of anchoring in bay for each vessel. Tidal currents exist alongside berths.

Berth	*Length*	*Depth at LW*
Shed No. 1	202 m.	12 ft.
Shed No. 2 – No. 9	1,257 m.	23 ft. – 25 ft.
New Pier	80 m.	30 ft.
	597 m.	17 ft. – 20 ft.

Depth 25 m. off the quays is 30 ft. – 32 ft.

BULK HANDLING FACILITIES: The port is equipped with an automated bulk sugar loading installation which can load 12,000 tonnes in about 4 days.

STEVEDORES: Port has 80 gangs of 16 men each.

Working Hours: First Shift: Monday to Saturday and holidays from 0800 – 1700 hrs. Second Shift: Monday to Friday and holidays from 1700 – 0100 hrs. and Saturdays from 1700 – 2400 hrs.

No work from 2400 hrs. Saturday until 0800 hrs. Monday.

MEDICAL: Agent must be given advance notice of urgent medical attention. Properly equipped hospital.

TANKERS: Independent oil pier with depth 33 ft. (25 m. off) with capacity to accommodate vessels of medium size. 4×8 in. hoses for discharge of petroleum products, and 2×6 in. and 1×4 in. hoses for unloading chemicals. Average rate of discharge of gasoline is 5,000 b.p.h. (approx.) Fuel oil and chemicals 1,500 b.p.h.

DENSITY: 1012 (approx.) average.

FRESH WATER: Drinking water unlimited quantity. Delivered through hose from end of wharf. Rate of delivery: 6 t.p.h.

FUEL:

(a) Two kinds of fuel, marine gas oil and bunker "C" fuel. Characteristics of gas oil: API gravity 33.0 at 60°F. Specific gravity: 0.8602. Characteristics of bunker "C" fuel: API gravity, 13.2 at 60°F. Specific gravity, 0.9779.

(b) To take bunkers vessel must berth between warehouse 2 to 9, and for delivery of gas oil between warehouse 1 to 5.

(c) Rate of delivery (approx.), 250 b.p.h. for bunkers and 700 b.p.h. for gas oil.

(d) Deliveries depend on quantity available when order placed, consequently Agent must know well in advance (10 – 15 days) vessel's requirements.

(e) Cash payment according to prevailing prices at time of delivery; otherwise, according to contracts between Shipowner and supplier.

FIRE PRECAUTIONS: Fire station within port installations with proper equipment. In city also another fire station, co-operating if necessary.

CONSULS: Panama Tel: 2 22 50. Most countries have consuls in Cali – approximately 120 km. from Buenaventura.

REPAIRS: According to port regulations vessels must at all times be ready with engines to sail, consequently repairs of engines not allowed when ship berthed at wharf. No prohibition against minor repairs on deck. When engine or deck repairs taking a long time are necessary, vessels not being loaded and/or discharged simultaneously with repairs must go to anchoring ground, since crowding of vessels at port does not permit vessel being inactive occupying space while other vessels are anchored waiting for berth.

WATCHMEN: Service necessary both by crew members' and Agents' personnel. There is an established body of watchmen named "Policia de Vigilancia Portuaria" (National Police); additionally, the steamship agencies carry out this work with their own personnel with previous request by Master. The port has a Port Police body and Custom House Guards which co-operate in vessels' watch.

Piracy: Mariners are advised to be alert to unusual, abnormal or hostile activities by pirates (especially during darkened hours) in the approaches to and in Buenaventura Harbour/Anchorage.

OPENING/CLOSING HATCHES: All Agents have special gangs to handle this operation and to fix the vessel's gear for discharge and/or loading. These personnel permanently stand by on board on account of climatic conditions of port with frequent and sudden rains. No prohibition against crew carrying out such operations when charter parties are involved and which stipulate that such operation must be done by crew. It is known from experience, however, that vessel's personnel are not, on occasions, sufficient to do this work.

CUSTOMS ALLOWANCES: No regulations establishing quantities which each crew member may have outside bond, but must not be excessive order avoid problems with authorities.

CARGO GEAR: Ship's gear used. Also see "General".

REPATRIATION: Authorities render co-operation for change of crew and arrangements of repatriation in co-ordination with ship's Agent.

AIRPORT: Located 18 km. from Buenaventura. Airport is small and is inactive. Agent in charge of the repatriation of a crew member must handle necessary connection in Cali or Bogota, where there are international airports.

TIME: GMT minus 5 hours. Permanent.

HOLIDAYS: New Year's Day; Good Friday; Workers Day (May 1st); July 14th and 16th (from 1200 hrs. to 2400 hrs.); December 24th and 31st (from 1200 hrs. to 2400 hrs.); Christmas Day (no working in the port). On Sundays there is no work in the port, but sometimes when required there is working, especially to finish loading or unloading vessels.

POLICE/AMBULANCE/FIRE: A voluntary firemen corps in the city. Alarm, Tel: 22222; Guard, Tel: 23720; Firemen, Tel: 15; Ambulance, Tel: 22830, 22638, 23708, 24475; Police, Tel: 22738.

BANKS: Colombia Republic Bank, Popular Bank, Bogota Bank, etc.

SHORE LEAVE: Permitted (with ID cards).

IDENTIFICATION CARDS: Agent will supply special cards to crew and passengers in transit so that they may go ashore. Cards valid for entering and leaving port installations and for identification with the Immigration authorities. Must be returned before vessel departure.

DELAYS: At anchorage in Bay average delay of 1 day while waiting for berth. On account of the rainy condition of the port, discharge or loading is at times stopped up to 12 hours.

DEVELOPMENTS: Container and general cargo yards are being rebuilt and expanded to improve storage and other facilities. Sheds are also being constructed, and a general port modernisation plan is under way.

GENERAL: Provisions available. Cable service to all parts of the world. Telephone and telex service inside country and to foreign countries through Bogota. Weather conditions: generally rainy. Explosives: if the vessel is transporting dynamite and detonating caps they are placed in separate lighters, and armed guards are required on board any vessel transporting explosives. In such cases, the vessel must anchor in front of Buoy No. 9 and discharge to lighters during daylight. No vessel can berth at the wharf if transporting explosives, and only permitted with dynamite in closed hatches, which will not be opened at the wharf according to government regulations. Port is equipped with following shore cranes and equipment: 2×80,000 lb. capacity (mobile), 1×60,000 lb. capacity (mobile), 3×20,000 lb. capacity (mobile), 2×14,000 lb. capacity (mobile), and 1×10,000 lb. capacity (fixed). New equipment includes 3×16 ton mobile cranes to work in yard operations only and 2×40 ton Hyster heavy lift trucks for container handling.

1×60 ton Hyster heavy lift truck has recently been purchased and is expected to arrive in the port in the near future.

Floating crane: 1×45 tons capacity.

Lighters available: 3 with following characteristics:

Size *Length/width*	*Capacity*	*Type*
24.40 m.× 9.45 m.	280 tons	Flat surface
34.40 m.× 7.60 m.	150 tons	Flat surface
38.80 m.×10.60 m.	150 tons	Flat surface

No refrigeration space available.

SHIPMASTER'S REPORT No. 1: 1978.

Pilotage: Normally the Pilot boards at Punta Basan but can be arranged at Buoy No. 1 at request of Master as most shallow water is from Buoy No. 1 to Buoy No. 5.

Anchorage: Vessels are warned not to anchor near Buoy No. 1 or at Punta Basan because of piracy. Pirates steal ships' cargoes at these anchorages.

Buoys: All buoys marked on chart are not dependable (for example the No. 1 Buoy has been shifted 070° about 1 mile).

Berthing: Depth 9 m. at LW, capacity for 12 ocean going vessels.

Stevedores: For general cargo, each gang 6 – 8 persons. Working hours 0800 – 1130, 1400 – 1730, 1800 – 2300, 0000 – 0300 hrs.

Watchmen: Policemen engaged on board on arrival as gangway watchmen and hatch watchmen. Vessel to victual those persons.

Caution: Strong tidal current up to 3 knots in this port, vessel must keep strict watch when anchored and when berthed.

Shallower depth may exist due to silting at fairway and at inner side of the pier.

SHIPMASTER'S REPORT No. 2: 1978.

Whilst at the port we were boarded by two well organised gangs of thieves. The first incident took place in the Roads, when thieves managed to steal cases of whisky and a Xerox machine from No. 1 lower hold before being seen and chased off by the ship's crew. The second incident, which could have had serious consequences, occurred whilst at anchor in the estuary awaiting sufficient water to cross the river bar. Here, an aggressive, well disciplined gang, armed with parangs and staves boarded, and only after a running skirmish with the ship's officers did they retreat having stolen one box of cargo from No. 2 lower hold. A constant two-man deck patrol has been in operation since arriving at Buenaventura, but the only method of deterring these experienced thieves is effective hold security.

SHIPMASTER'S REPORT No. 3: August 1979.

Silting of Berths: Whilst berthed at No. 2 considerable problems have been experienced due to lack of water alongside the berth (See "Plan").

The berth is charted as having 9.1 m. alongside, maximum draft of vessel being 7.64 m. However, 2 hours before first LW alongside, the vessel had clearly taken the mud and began to come off the wharf. Considerable slacking was necessary in order to prevent parting of moorings. At LW the vessel had come to rest 30 ft. off the quay fore and aft whilst still maintaining reasonable weight on moorings. After draft was indicating 7.00 m. and vessel listed 3° to port. This tide was particularly low, being −0.5 m. below chart datum. It had been previously observed from anchorage that the previous vessel alongside, a large Colombian vessel, had been having similar problems but it was noted that she had been 2 ft. deeper draft.

As the tide flooded the vessel was gradually heaved alongside, but it was 2 hours after LW before she was fully alongside. Similar tending of moorings was necessary during the following 4 days alongside. However, it was found beneficial to give her a list to port which had the effect of lessening the movement of the berth. During this period, 4 hours cargo work was lost at each LW (2 hours before and after) as the derricks could not plumb the wharf. However, I am assured that we were not paying for this lost period. In addition, the Chief Engineer experienced considerable cooling problems due to the intake of mud, leaves and organic matter.

On the Sunday during the period alongside when there is normally no cargo work, all 10 vessels alongside were shifted out to anchor so that soundings could be taken by the Port Authority. The vessel was returned to Berth No. 3, but there proved to be a similar lack of water. (See "Plan").

The silt alongside these berths is very soft mud and therefore does not pose any danger to the hull, however the situation is entirely unsatisfactory and as can be seen from the Plan, soundings alongside the jetty show depths of 3 m. to 4 m. less than charted. I am told by the Agent and Port Authority that a large contract dredger is due to begin work within one month.

SHIPMASTER'S REPORT No. 4: November 1979.

Vessel called at Buenaventura recently, drawing 27 ft. The vessel was berthed 1 hour before HW and experienced no difficulty getting alongside the berth. The draft was then reduced to 25 ft.

However, on the falling tide, the vessel could not be kept alongside and also listed 2.5°. On sounding the berth I found only 20 ft. of water at low tide.

On taking up the matter with the Agents I was informed that it is quite normal to sit on the bottom, which is soft mud. Furthermore, the berths have not been dredged in the last 10 years and the depth of 24 ft. cannot be relied upon.

I am also advised that plans are afoot for a massive dredging operation, due to commence sometime in November this year.

SHIPMASTER'S REPORT No. 5: May 1990.

Vessel's max. draft was 27 ft.

We tried to contact pilot 2 hours before arrival (ETA 0400 hrs.) but received no reply.

When we arrived at the Sea Buoy (Buoy No.1) a small boat approached, without navigation lights or pilot lights. We stopped the engine when we saw the pilot flag.

The pilot boarded and advised that we would berth at high water (1100 hrs.).

When vessel proceeded inward we passed 6 cables North of Buoy No.1 and headed for Buoy No.4 (sailing outside the channel). At high water we had at least 5.0 m. under the keel.

It was not possible to use the main channel as it was shifting.

AUTHORITY: Puertos de Colombia, Terminal Maritimo de Buenaventura, Apartado 570, Buenaventura, Colombia. *Tel:* 24421, 24425. *Telex:* 052371. *Cables:* Termarit. *Contact:* Edgardo Caicedo Rivas, General Manager. Victor Julio Gonzalez R., Operations Director.

CARTAGENA (Incl. Mamonal and Ecopetrol):
10.26 N. 75.33 W. **(See Plan)**

(A) GENERAL CARGO (B) TANKERS

(A) GENERAL CARGO

DOCUMENTS:

Clearance from Last Port.
7 Crew Lists.
Ships Papers and Certificates.
Oil Pollution Certificates.
7 Personal Effects Lists.
3 Sets of Cargo Manifests of each port with respective bills of lading. Tally books of cargo for each port.
Health Declaration, Certificate of Vaccination, Derat Certificate.
7 Lists of Passenger to Disembark (or negative).
7 Lists of Passengers in Transit (or negative).

PILOTAGE: Compulsory. Boarding position, at sea buoy in position: Lat. 10° 19′ 44″ N., Long. 75° 36′ 14″ W. 2 Pilot boats, black hull, white superstructure. Speed 6 knots. Sound signals, 4 long blasts for all type of vessels. Radio: VHF – standing by on Channels 11 and 16. Also Channels 6 and 26 to shift. Service 24 hours every day. At Central Radio Terminal there is A.M. radio on frequency 2738 and 2638 kHz and VHF.

ANCHORAGE: Anchorage in foul weather or other reasons 0.5 mile S.W. from Buoy No. 1. For vessels awaiting berth in Cartagena, South from Punta Castillo Grande. For tankers in Mamonal, West of the pier of Refineria Ecopetrol.

RESTRICTIONS: Depth in access channel 38 ft. Entry day or night.

MAX. SIZE: Cartagena: Length 600 ft., beam 79 ft., draft 30 ft. (for berthing).

Tankers: Length 853 ft., beam 125 ft., draft 38 ft. Tankers anchor and berth in port of Mamonal, within bay, using same approach.

HEALTH: Doctor requires the Crew Lists with data of vaccination. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla – HKB

VHF: Pilot station, pilot boat, Terminal Superintendent and Agents on Channel 16.

TUGS: 1×750 h.p. tug. Compulsory for all vessels over 2,000 g.r.t. at Cartagena and in Mamonal.

BERTHING: Port has two piers: Berth No. 1, outside length 202.60 m., depth 32 ft.; inside length 184.76 m., depth 32 ft.; Berth No. 2, outside length 184.76 m., depth 32 ft. A new marginal dock is in service with length 258 m. and depth 32 ft., located West of piers. Between the two piers there is a 134 m. dock with 32 ft. depth. Docking and undocking around the clock. Berthing shifts or turns: 1st, Passenger vessels (Tourist). 2nd, Cargo vessels with live animals. 3rd, Vessels with mail. 4th, Cargo vessels according to arrival in port.

Cranes and Cargo Handling Equipment:

Floating crane: 1×40 tons capacity
Truck cranes: 1×30 tons capacity
1×20 tons capacity
3×10 tons capacity
Fork lift trucks: 1×62,000 lbs.
2×45,000 lbs.
30× 6,000 lbs.
2×15,000 lbs.
Tractors: 13
Trailers: 24

Over a three year period the Port of Cartagena will acquire:

Fork lift trucks: 3×15 tons
for empty containers: 3
for loaded containers: 3
for loading and unloading containers: 3×4,000 lbs.
cranes: 1×4 ton capacity
3×16 ton capacity
5th wheel tractors: 5
Trailers for 20 ft. containers: 17
Trailers for 40 ft. containers: 7

STEVEDORES: Can be requested with 24 hours notice. Services fo Mondays must be requested on Saturdays before 1000 hrs. Ship startin work after a Holy Day, must request personnel the day before the Hol Day, before 1500 hrs. No work on Sundays, January 1st; Good Friday November 11th; December 25th; May 1st. When ship is delayed ther is a conventional waiting time of 4 hours, after that time stevedores retir charging the vessel with 4 hours work (union arrangement). Po Authority charges commence when Pilot boards on arrival and ceas when the Pilot disembarks on sailing.

Working Hours: First shift: Monday to Saturday and holidays, from 080 – 1200 hrs. and from 1400 – 1800 hrs. Second shift: Monday to Friday from 1800 – 0200 hrs.

BULK HANDLING FACILITIES: Grain unloading undertaken wi clamshell or vacuum equipment for bagging on the quay. Rate in exces of 1,200 tons for a 14 hour shift.

MEDICAL: Requests for medical service through Telecom Rad Station. 6 hospitals. Also dental services. Vaccinations can be given.

TANKERS: See "Section B".

DENSITY: 1015 (At Mamonal)

FRESH WATER: Available at all berths.

FUEL: Requirements should be ordered at least 8 – 10 days in advanc via the vessel's Agent.

Agent requires the following details:

(i) Vessel's name and nationality.
(ii) Daily consumption at sea and in port.
(iii) BHP.
(iv) N.r.t. and g.r.t.
(v) Next port after Colombia.
(vi) Port of origin.
(vii) ETA.
(viii) Quantity and type of bunkers required.

DRY DOCK/REPAIRS: Commercial Shipyard "Conastil":

Synchrolift 120 m. length, 22 m. width. Lifting capacity 5,000 tons.

8 repair positions ashore; 4 with a capacity of 5,000 tons and 4 w a capacity of 10,000 tons.

600 m. length of piers with 18 ft. depth with all services and rep facilities.

Mechanical, fitting, welding, electrical, motor, and carpentry shops

SURVEYORS: The following cargo inspectors and surveyors a available: Saybolt, P&I, Lloyd's Register of Shipping, American Bure of Shipping, Bureau Veritas and Germanischer Lloyd.

WATCHMEN: Watch service at the gangway and deck. Officially t service is done by port's guards. It is recommended that members crew assist in this service.

OPENING/CLOSING HATCHES: Undertaken by port stevedores.
REPATRIATION: Facilities available for crew changes.
AIRPORT: Only local airlines Avianca and SAM serve flights from/to Cartagena.

All international airlines serve Bogota (the capital).

HOLIDAYS: Eighteen days of holidays during year, but at terminal there is no service on following dates only: New Year Day (January 1st); Good Friday (Viernes Santo); Labour Day (May 1st); Cartagena Independence Day (November 11th); Christmas Day (December 25th). During the days December 24th and other holidays there is 24 hour service with 50% surcharges.

POLICE/AMBULANCE/FIRE:

Police Radio patrol	04
Red Cross	20360
Hospital Universitario	22380
Hospital Bocagrande	40270
Hospital Naval	40248
Clinica de Manga	40762
Clinica Cartagena	20910
Ambulance of Terminal	Channel 16 VHF
Firemen of Terminal	Channel 16 VHF
Firemen of Cartagena	42222, 20903

TIME: Colombian official time: 5 hours behind GMT. Permanent.
TELEPHONES: May be placed aboard.
SHORE LEAVE: Crew allowed disembark. Every member of crew is given card signed by Port Captain and Master of the vessel.
IDENTIFICATION CARDS: Agents supply cards signed by Port Captain and Master.
REGULATIONS: To clear the wharf if required for tourist vessels or export cargo vessels.
SERVICES: Contact: Maritima Comercial Agencia Naviera Ltda., P.O.Box 207, Cartagena, Colombia. *Tel:* 45-557, 45-752 and 46-532. After Hours: 43-481. *Telex:* 37804 Marco Co.

Services: Ships agency, ship chandler, launch and tug service, private Pilot, medical assistance for sick crew, crew repatriation, etc.

GENERAL: Cartagena can be entered or left at any time day or night. Vessels can also berth or unberth in dry season or rain seasons, and services are rendered during 24 hours.

There is a very tight security system with a detachment of 145 port police, watch towers, dogs, sodium vapour lighting, access control, full identification, cargo control unit. This new unit, and the administrative controls that complement it, has reduced losses to near vanishing point.

The port has international communications with telex, phone and cable. Complete marine service with VHF and can communicate with Bogota and the other Colombian ports with S.S.B. radio.

AUTHORITY: Puertos de Colombia, Terminal Maritimo de Cartagena, Apartado Aereo 94, Nacional 200, Cartagena. *Tel:* 64655, 63478. *Telex:* 37718. *Cables:* Termarit. *Contact:* Vivian Dahl Pareja, Chief of Information Office. Gilberto Rengifo Varon, Port Captain.

(B) TANKERS

LOCATION: Cartagena is located on the Bay of Cartagena, North coast of Colombia, Lat. 10° 19′ N., Long. 75° 31′ W.

DOCUMENTS: Documents necessary for a petroleum tanker arriving at Cartagena are as follows:

1 copy Clearance (Despacho) from Last Port (if vessel was directed while en-route, Master's affidavit). Consular visa unnecessary.
1 copy Consular Dispatch.
4 copies Crew List.
4 copies Personal Effects Lists.
2 copies Ballast Manifest (Manifiesto de Lastre).
4 copies Stores List.

PILOTAGE: Pilotage is compulsory. If, on arrival outside the entrance to the channel leading to Cartagena harbour, a Pilot does not meet vessel, vessel is to sound the whistle signal, 4 long blasts, and display International Code Flag "G" for a Pilot.

Vessels are not to pass each other in the channel leading into the harbour of Cartagena and inbound vessels are to give way to outbound vessels.

Vessels entering or leaving the port must have a Pilot on board, otherwise they might be subject to a fine for failure to comply with this regulation.

The vessel must sound 4 long whistle blasts so that it will be met by the Mooring Master inside the harbour and who will take it alongside immediately if berth is available. If the ship's Master sees that another ship is at the loading berth, he must anchor.

It will be necessary to deliver to the Mooring Master a report stating the exact time he arrived on board and left vessel outside the channel. If, when inbound, the Pilot does not meet vessel outside the channel, Master is to note this fact on the Pilot's Report.

NAVIGATION AIDS: For information pertaining to Navigation Aids, consult the latest edition of the Light List (H.O. III A) or equivalent British Light List; also the Sailing Directions covering the area.

RESTRICTIONS/MAX. SIZE:

		Refinery Terminal	*Nestor Pineda Terminal*
		Max. – Min.	Max. – Min.
Size of vessel that can safely berth:	Length (ft.):	853 – 492	853 – 577
	Beam (ft.)	125 – 65	125 – 82
	Draft (ft.):	38	38
	d.w.t.:	85,000 – 12,000	85,000 – 25,000

Depth of water at Terminal at Mean Low Tides:	40 ft.	40 ft.
Mean Tidal Range at Terminal:	1.5 ft.	1.5 ft.
Nature of bottom at Terminal:	Mud	Mud
Docking and unloading:	Night and day	Night and day

Also see "Berthing".

RADIO: Masters of vessels proceeding to the Cartagena Terminals are to send a radio notice at least 48 hours prior to arrival to the Agent at Cartagena; this should be corrected promptly in the event of any change in the time of arrival.

The Agency, upon receipt of the arrival cable, will cable the vessel with pertaining instructions about the cargo, if not ready, or if the berth is occupied at the time of arrival by another vessel. In these instructions, the Agency will indicate the estimated docking time.

BERTHING: Ecopetrol owns 2 terminals on the Bay of Cartagena:

Refinery Terminal: The dock of the Refinery Terminal consists of a "T" loading platform with trestle connection to shore, 4 breasting dolphins and 2 mooring dolphins. These facilities are used for receiving crude oil, gas oil and white products and shipping refined products and spent caustic in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.

Nestor Pineda Terminal: Consists of an isolated loading platform, connected to the shore by 7 submarine pipe-lines, 3 breasting dolphins, and 2 mooring dolphins. These facilities are used for receiving crude oil and shipping fuel oil and aromatics in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.

The size of tankers entering Cartagena's bay is limited by the depth of the entrance channel (Boca Chica), which is limited to ships with a maximum draft of 38 ft.

Vessels are supposed to berth alongside the dock with bow and stern lines from both the port and starboard bow and stern.

To dock vessels over 2,000 d.w.t., Maritime and Port Authorities request the use of tugs. Tug costs are on the ship's account. It is recommended that 2 mooring lines be bent together on the starboard quarter. The Mooring Master boards the vessel about 0.5 mile from dock and remains aboard during the entire stay of the vessel at the dock. The Loading Master is to be supplied with room and meals on board.

LOADING/DISCHARGING:

Name of grades handled at Refinery Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipe-line (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Crude Oil	3 – 12 in. × 60 ft.	20	20,000	150
Fuel Oil	3 – 12 in. × 60 ft.	2 – 14	5,000	150
Gasoline	3 – 12 in. × 60 ft.	18	10,000	150
Kerosene-turbo	1 – 12 in. × 60 ft.	8 – 10	2,100	150
Diesel	2 – 12 in. × 60 ft.	12	7,000	150
Spent Caustic Soda	1 – 12 in. × 60 ft.	6	2,000	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000	150

Name of grades handled at Nestor Pineda Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipe-line (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Fuel Oil	3 – 12 in. × 60 ft.	24	10,000	150
Crude Oil	3 – 12 in. × 60 ft.	20	20,000 (1)	150
White Products (2)	2 – 12 in. × 60 ft.	6	1,500	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000 (1)	150

(1) From ship to shore facilities.
(2) Includes facilities for loading Aromatics (Benzenes and Xilenes).

BALLAST: Vessels must arrive with sufficient ballast to permit safe handling in port. Vessels in ballast shall not have greater than 4 ft. trim difference between the fore and after draft. Dock Master requirements in this connection under normal weather conditions are interpreted as drawing approximately 14 ft. forward and 18 ft. aft.

The deballasting facilities are as follows:

In the Refinery Terminal the pipe-line to the shore installations is 2,835 ft. long and 16 in. diameter, 3×12 in. loading arms are available to a maximum rate of deballasting of 20,000 bbls.p.h. In the Nestor Pineda Terminal the pipe-line to the shore is 3,600 ft. long, and 16 in. diameter, also there are 3×12 in. loading arms to a maximum rate of deballasting 20,000 bbls.p.h.

No dirty or clean ballast, nor engine room, or pump room material must be pumped overboard while inside the port.

The Ship's Master should be fully aware of the Colombian laws and regulations pertaining to pollution of the environment and the sanctions derived from their infringement.

Extreme care must be taken to avoid spillage of oil or any other contaminants. In the occurrence of any spillage attributable to the crew's responsibility, immediate action must be taken in order to clean the affected areas. The costs of this action are on the ship's account.

There are strict legal regulations concerning pollution problems. Those responsible for this type of situation will be heavily fined by the Port Authority.

FRESH WATER: Fresh water is available only at Nestor Pineda Marine Terminal. This water is not recommended for drinking.

FUEL: Bunker C, Marine Diesel and Diesel Oil are available only in the tanker anchorage area, from local suppliers.

GANGWAY/DECK WATCHMEN: An accommodation ladder shall be lowered on the port side upon arrival at the port.

SHORE LEAVE: Shore leave is granted to members of the crews of vessels calling at Cartagena. Before granting shore leave, the Master must address a letter to the Port Authority requesting permission to grant shore leave and must assume all responsibility for his men.

Crew deserters will be arrested by the local police and the vessel in all probability will be fined. Every precaution, therefore, is to be taken to prevent members of the crew from going ashore without permission from the Master. The Port Authority restricts, under penalty of fine, the boarding of any tanker while at the loading terminal by all persons except those having official duties to perform on board. Masters are to make sure that no unauthorised persons are permitted to come on board their vessel while at the terminal.

REGULATIONS: Ecopetrol requires that all vessels loading or unloading at their terminals comply with the following regulations:

a. Tankers must arrive in port with hose derricks rigged and mooring lines on deck.
b. During the time the tanker is at the loading platform a sufficient number of the ship's crew must be on duty to properly attend the mooring and hose lines; so that necessary changes can be promptly made.
c. The tanker must furnish one member of the crew to operate the ship's winch, which operation, however, is to be under the direction of the Loading Master.
d. The tanker's crew must handle all ship's valves.
e. The ship's officers must follow the instructions, in all aspects, from the Loading Master as to all the signals to be given to the shore loading stations. When the tanker is about to be loaded, a "stand-by" signal is to be given. The "Slow-down" signal must be given at least 5 minutes before the "Shut-down" signal.
f. In order to facilitate the above, the crew should be on deck immediately following the "stand-by" signal and preparations must start to unberth the ship on completion.
g. No ship will be berthed except under the sole direction of the Mooring Master.
h. While the ship is berthed, the propellers must not be moved; engines shall be ready for immediate use and steam, or power must be available to work winches and windlasses to meet emergencies at all times.
i. All instructions from the Loading Master, whether contained in these regulations or not, must be followed by the ship's officers and if not, all operations will be discontinued, and, if necessary, the ship removed from the loading berth until such time as the ship's officers comply with orders of the Loading Master.
j. No maintenance, or repair to the ship, such as welding, or any other hot work will be undertaken, while at the berth and which will endanger the safety of the installations, or equipment, owned by Ecopetrol.
k. When loading/unloading operations are complete, the crew shall endeavour toward clearing the facilities in the shortest period of time possible.

SHIPMASTER'S REPORT: August 1979 (Updated 1986).

Approaches: Cape Santa Domingo shows up at 35 miles on radar. During Summer months May to September strong N.E. winds with heavy swell are prevalent in the approaches.

Thunderstorms and squalls are usual in Summer near the coast with a marked shift in wind.

Boca Chica Light and Fairway Buoy Light are conspicuous. Bancas Salmedina Light on wreck merges with shore lights from the West.

Generally even with strong N.E. winds in Summer it is fairly calm off Fairway Buoy, even if blowing strongly a few miles further seaward.

Pilotage: Pilot boards off Fairway Buoy, usually starboard side, using gangway/pilot ladder arrangement.

The pilot station is on Isla Draga on the South side of Boca Chica Channel, 24 hour service maintained.

The proper launch is a large black hulled craft but at present (August '79) it is being re-engined. A small pleasure type craft is being used at present of very low speed and light construction. In the bay the Pilots have a turbo craft, small but very fast. The Boca Chica Pilots are a Government service and dock vessels at public piers only, otherwise take vessels to area off private piers and hand over to private Pilot, same when leaving. Pilots speak some English.

The private Pilot at Mamonal Pier is good and speaks good English.

VHF: Appear to use Channel 16 only.

Boca Chica: The narrow entrance to Cartagena Bay Channel well lighted by buoys as per British Admiralty Chart. Max. draft 38 ft. accepted. Sometimes cross currents are Southerly across the entrance with strong Northerly winds. Course steered 086°.

Anchorages: For Mamonal Oil Pier, 1 mile S.W. of pier, with 3 shackles, whole of bay affords good shelter and all the bay is compulsory pilotage.

Berths: Mamonal Pier virtually due East of Boca Chica Channel. It is owned by Ecopetrol and leased to Amocar Refinery behind the berth. Both state owned. Max. size 75,000 d.w.t. (approx.).

Draft: Limited by Boca Chica Channel. This vessel's draft: 41 ft. 3 in. forward and 50 ft. aft.

Jetty: Vessel berthed heading North. A short jetty, length 50 m. with pipe gantry and dolphin each end connected by catwalk. Total length 100 m.

The pier ashore is for the pipes and has a narrow catwalk. No stores could be loaded along jetty. No fresh water on the berth. Gangway is a problem and is nearly impossible to land. Ships with long "B.O.T. type" can be landed on the jetty. We lowered ours to the water and used mooring boat which is on constant stand-by at jetty.

Fenders in a bad state of repair. The aft dolphin has no fender and vessel is kept off by port quarter buoy line. Fender is under repair.

Tugs: Generally two small tugs used for pushing, however, we used only one. A larger tug of 2,500 h.p. should be back in service after repairs.

Mooring: (See "Plan"). The first two lines fast each end are the springs, then the port quarter line aft to keep vessel off the damaged dolphin.

A line boat is used which goes backwards and forwards each end. The berth is approached from the South and port anchor is let go off the berth. Vessel eventually had 5 shackles in water. It takes about three hours from picking up Boca Chica Pilot to all fast.

Cargo: The pier handles gasoline, ammonia, propane and butane outward and crude oil inward. About 6,000 tonnes a month of ammonia is shipped for export.

About three 40,000 ton shipments of crude per month are brought in mostly from the Colombian Pacific coast but an occasional Nigerian shipment is also received.

Hoses: All flexible hoses, no Chicksan arms. Ammonia 8 in. 150 ASA with gate valve at ship's manifold, flexible wire braided with rubber covering. Joints liable to leak. Generally two connected ready, but we had to use three and P&O 'Galara' class have to use four due to high freeboard.

No vapour line. No Nitrogen purging. Shore labour connect. Can take up to 1.5 hours to connect/disconnect.

Rate: Maximum Ammonia rate 450 t.p.h. Four pumps at refinery, using two only seems to make 50 t.p.h. difference. Emergency stop - recirculates on jetty.

Survey: Bill of Lading on ship's tanks.

Loading Master: Speaks good English and very helpful. He requires a cabin as does a Pollution Inspector, Agent's runner and Surveyor.

Pratique: No radio pratique available.

N.O.R.: Signed by Pier Master on behalf of 'AMOCAR' refinery on arrival alongside or at anchor if waiting for berth.

Holidays: Public holidays with banks closed. 1st January, 1st May, 20th July, 7th August, 25th December.

Documents:

5 Crew Lists.
2 Personnel Effects.
2 Stores Lists.
Vaccination List.
Maritime Declaration of Health.
Ship's Papers.

Generally very good co-operation with four persons boarding, none on departure, Agent brings clearance. Require to sight register, load line certificate, radio certificate, safety certificate and DTI/P&I Pollution Certificate.

In some publications a document called 'SOLE' form is mentioned. The Agent said this was a form from Colombian Consul at last port to say all papers in order but no longer required. Shore passes valid for 3 days are issued, no photographs required. Passes are not returned.

Customs: Will only board between 0700 hrs. and 1900 hrs. If the vesse has not cleared before 1900 hrs. she cannot start cargo. This is a new law by the Port Captain since the end of July 1979, previously he used to issue a waiver and allow loading but some Agencies didn't apply to him and started before Customs came with waiver. A meeting is due to be held before the end of August 1979 on this subject between Agencies, Customs and Port Captain. This means, at present, that it is not advisable to pick up the Boca Chica Pilot between 1730 hrs. and 0530 hrs. as vessel will not be able to work cargo and will probably have to pay an extra day's port costs as they are on 24 hour arrival Pilo basis.

Communications: Barranquilla "HKB". Frequencies: 476; 6463.5; 8666, 13087.5. HF: Channels 5/6; 6, 8, 12 MHz.

Telex: Good.

Telephones: To Europe from Cartagena, 2 to 3 hours delay.

Bunkers/Fresh Water: At Bay piers, can easily be obtained by barge.

Agent: Did not seem aware of new Port Captain decree on not starting cargo at night which cost extra day's port charges, which could have been avoided, until he boarded with Customs.

Apart from the above, very good and attentive. Can be contacted on VHF Channels 16 and 6. A "runner" is on board all the time with a walkie-talkie.

I was told that crew changes are easily done as long as 24 hours notice is given for Immigration clearance. It is quite normal for ships to sail with crew members adrift and as long as Master gives Agent letter of authority for hotel costs and air ticket there are no problems with the Authorities. The nearest British Consul is in Bogota.

Shore Leave: It takes about 20 minutes from Amocar Refinery (At foot of Mamonal jetty) to Cartagena by bus. Rate of exchange: Pesos to Dollar = 200 (1986).

Thieving/Stabbing: All officials and Pilot advised us to make sure we had a very good deck patrol with no ladders overside, thieving at Bay Berths is rife. Also make sure you have some strong weapon with you and you lock yourselves in at night as people have been stabbed in bed when woken by thieves. Lock everything up.

Developments: Considerable developments have taken place in the area in recent years. Cartagena is a big tourist centre from Venezuela and the U.S.

Exports include coffee, fruit, lumber, tobacco, precious metals and petroleum products.

Good road and rail communications exist with Bogota the capita taking about 18 hours.

The Eastern shore of the bay is being developed as an industrial area. The following piers and sea island are in evidence.

ECOPETROL Sea Island (Nestor Pinead Terminal) takes up t 100,000 d.w.t. tankers, 54 ft. at the berth but limited by Boca Chic Channel. Chicksan connections. FW piped to berth, mooring to buoys Used for export of fuel oil and other petroleum products. Situated jus North of Brujas Island.

Cement Jetty	in position:	Lat. 10° 20.4′ N., Long. 75° 30.9′ W.
Soda Pier	in position:	Lat. 10° 19.9′ N., Long. 75° 30.85′ W.
Syncrolift	in position:	Lat. 10° 19.7′ N., Long. 75° 30.8′ W. 15,000 d.w.t.
LPG Barge Pier	in position:	Lat. 10° 19.4′ N., Long. 75° 30.8′ W.
Mamonal Pier	in position:	As charted
Industrial Berth	in position:	Lat. 10° 17.3′ N., Long. 75° 30.4′ W.
Products Pier	in position:	Lat. 10° 18.2′ N., Long. 75° 30.55′ W.
Products Pier	in position:	Lat. 10° 18.2′ N., Long. 75° 30.7′ W.

Considerable barge traffic with big pusher tugs use the River Diqu which comes out in the Southern part of the bay, this joins up with th River Rio Magdalena in the interior and to Barranquilla, etc.

SHIPMASTER'S REPORT: May 1987.

Manomal is the oil port for Cartagena. It consists of an industrial complex with several berths, mainly handling bulk cargoes. The tanker berth is a relatively small sea island about 600 ft. long. This vessel, (Panamax, Summer d.w.t. 61,391 tonnes, L.O.A. 738 ft. Beam 106 ft.) visited Manomal in May 1987.

Approaches: At a distance of 15 miles – 20 miles Isla Tierra Bomba Light is clearly visible. It is now equipped with a Racon (C) which shows clearly on both 3 cm. and 10 cm. radars. Land shows up clearly on radar, and is easily identifiable with topography shown on BA. Chart No. 2434. Light on Boca Chica Sea Buoy also very good and seen at 7.5 miles – 8 miles on this occasion. Vessel had to anchor to await berth, and did so in about 36 fathoms of water, 7 cables S.W. of the Sea Buoy. No difficulties experienced anchoring or weighing anchor. Government Pilot boards vessel in the vicinity of the Sea Buoy and takes vessel as far as the berth where a Mooring Master takes over. The Berth is marked on the Plan on BA. Chart No. 2434 in position Lat. 10° 20.63′ N., Long. 75° 30.93′ W. as a "Platform". Ships always berth starboard side to, the normal mooring pattern being 3 head and stern lines, 2 breast lines and 2 springs, each end. The berth is a fairly recently built Sea Island but is not really large enough for ships over about 500 ft. in length. All our lines with the exception of lines from the main deck mooring winches ended up as springs. The berth is well fendered, so no problems lying alongside. 2 tugs available for berthing, one of about 2,500 h.p. is quite useful, but second one is small, and not much help berthing, although it does help to keep the vessel alongside whilst mooring is in progress. Line boat available and linesmen seem quite competent. No shore Gangway, but vessel was able to use her accommodation ladder amidships with a little difficulty.

Facilities: 3 × 10 in. Chicksan arms available for loading. Informed by shore that berth is served from the shore by 3 × 24 in. lines. (1 for Crude, 1 for Fuel Oil and 1 for deballasting ashore.) Loading Rate (F.O.) is about 15,000 bbls./hr., although vessel told that 10,000 bbls./hr. would be maximum. All shore personnel found to be helpful and cooperative. 4 hours required for cargo documentation after the completion of cargo.

Informed by the shore that there is 55 ft. of water at the berth, but limiting factor is the Boca Chica Channel, where we were limited to 37 ft. 06 in. Outgoing Pilot informed that there is an absolute maximum depth of 39 ft. in this Channel. Range of tide only about 1.5 ft.

Security: KEEP A SHARP LOOKOUT FOR THIEVES. Strict security measures, everything locked up. Vigilant deck watch to be maintained. Very little security seems to be practised by Terminal personnel. Shore Watchmen are available, and should be employed. Also had trouble with a large number of women who tried to board the vessel soon after shore Authorities had cleared ship inwards. Master had to personally refuse access to vessel for these "unauthorised visitors". Suggest deck watch doubled when near the completion of loading when vessel has a small freeboard. This vessel kept a good deck watch at all times, even so, an after store was broken into and a small quantity of paint stolen.

Sailing: No difficulties experienced leaving the berth. Tugs used but not made fast, they just push. Mooring Master unberths ship and turns her round off berth, when Sea Pilot takes over. Under normal circumstances this Pilot leaves the ship when passing between the last channel buoys (outwards) in Boca Chica Channel.

Note: During night approach to the port, the Stranded Wreck in Position Lat. 10° 22.9′ N., Long. 75° 38.7′ W. was showing clearly on the radar, but the light was not seen, and therefore presumed unlit, either temporarily or permanently.

AUTHORITY: *Operator:* Empresa Colombiana de Petroles, "Ecopetrol", Apartados: Aereo 5938-6813, Postal 808, Bogota, Colombia. *Telex:* 44464. *Cables:* Ecopetrol. *Contact:* Jorge Lozano, Depto. Coordinacion de Operaciones.

COVENAS (Gulf of Morresquillo): 09.25 N. 75.42 W. (See Plan)

OFFSHORE PETROLEUM TERMINAL – CRAVO NORTE ASSOCIATION

See "General" before first port.

LOCATION: Situated in the Gulf of Morresquillo approximately 56 miles S.S.W. of Cartagena. "Arrived Ship" position is Lat. 09° 33′ N., Long. 75° 51.5′ W. which is 4.5 nautical miles from the Floating Storage Unit (FSU). (See "Plan"). The Terminal loads one grade of crude oil (API 29.3°. Temperature 88°/90°F).

DOCUMENTS:

Clearance from Last Port.
9 Crew Lists.
9 Personal Effects Lists.
Health Declaration.
Vaccination Certificate.
Derat Certificate.
Certificates – Load Line, Safety Construction,
  Safety Equipment, Safety Radio, Oil Pollution
  Insurance, Cargo Gear.

PILOTAGE: Compulsory except for anchoring. A company Mooring Master will board the incoming tanker approximately 4.5 nautical miles N.W. of the FSU. VHF Radio – Stand-by on Channel 16, shift to Channel 10 for manoeuvring – 24 hours' service, weather permitting.

ANCHORAGE: The recommended anchorage for export tankers and vessels having business with the off-shore terminal is within a radius of 1.5 nautical miles of position: Lat. 09° 33′ N., Long. 75° 51.5′ W.

APPROACHES: Golfo de Morrosquillo is entered between San Bernardo (9° 42′ N., 75° 42′ W.), which is low and sandy, and Punta Mestizo 17 miles S.S.W., its shores are fringed by mangroves and wooded swamps.

The head of the Gulf is backed by a plain, skirted by extensive savannahs, rounded to the East by a mountain range. The highest peaks, standing 12 miles East of the town are Tetas de Tolu, which forms two easily identified hills.

A lighted buoy (flash every 6 secs.), is established on Roca Morrosquillo (9° 35.5′ N., 75° 59.5′ W.) and represents the mid entry point to the Gulf.

RESTRICTED AREA: An area has been nominated as a Restricted Area.

Within this area all activities which could endanger the subsea installations such as anchoring of vessels, dredging, mechanical fishing (trolling and trawling), disposal of refuse, etc. are forbidden.

The area is bounded by lines joining the following reference points:

1.	Punta Bolivar:	Lat. 09° 25′ 20″ N., Long. 75° 43′ 40″ W.
2.	Punta Piedras:	Lat. 09° 25′ 25″ N., Long. 75° 39′ 05″ W.
3.		Lat. 09° 34′ 00″ N., Long. 75° 46′ 25″ W.
4.		Lat. 09° 32′ 25″ N., Long. 75° 48′ 45″ W.

RESTRICTIONS: Berthing night and day, weather permitting, in open water in the Gulf of Morrosquillo.

MAX. SIZE: *FSU:* 180,000 tonnes displacement with LOA 265 m.

Minimum Size: 55,000 tonnes displacement with LOA 220 m. for berthing alongside. Vessel can berth either side.

TLU: For berthing at the Tanker Loading Unit (TLU) 145,000 tonnes displacement with LOA 300 m.

Minimum Size: No minimum size providing vessel can handle the system equipment.

The max. draft at the FSU and TLU is 17.0 m. and the max. beam 40.0 m.

HEALTH: Port Authorities grant Free Pratique on clearing the vessel inwards. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla, HKB.

ETA required 72 hours, 48 hours and 24 hours prior to arrival.

VHF: Initial radio contact with FSU Covenas or with Covenas Control, Terminal Superintendent and Agents on Channel 16. Shift to Channel 10 for Pilot boat, manoeuvring and for cargo operations. When two ships load simultaneously the one at the TLU will be attended on Channel 70.

RADAR: Use of harbour radar, situated on FSU, is available on request. Call on Channel 16 and shift to Channel 10.

TUGS: The use of terminal tugs (2) is at the Mooring Master's and/or Port Authorities' discretion. The mode of operation is made in conjunction with the vessel's Master.

BERTHING: The terminal can load 2 tankers simultaneously, one alongside the FSU and one at the TLU (See "Plan").

The FSU (Position: Lat. 09° 31′ 45″ N., Long. 75° 47′ 11″ W.) is a modified 384,000 tons ULCC, yoke-moored on a custom built catenary anchor leg mooring system with a 6 anchor pile spread. The installation is the principal unit in the terminal complex. The Terminal operations and control centre, communications network and accommodation facilities are housed on board. Water depth is 35 m. at the berth. Tankers can berth either side (preferably port side alongside) with 3×12 in. hard arm loading arms. Maximum loading rate 40,000 bbls.p.h. Max. height of manifold above sea level is 30 m.

The TLU (Position: Lat. 09° 29′ 46″ N., Long. 75° 44′ 15″ W.) is a catenary anchor, 6 legged, SPM functioning as a secondary tanker loading berth. Water depth is 25 m. at the berth. Loading is via 24 in. floating hose string with 2×16 in. connections on tanker port side, lifted by 10 ton S.W.L. ship derrick. Maximum loading rate 29,000 bbls.p.h. Max. height of manifold above sea level is 15.0 m. Max. distance bow to manifold 140 m.

BALLAST: No facilities for accepting dirty ballast or slops.

MEDICAL: Emergency medical services are available if needed but not on a routine basis.

DENSITY: 1015–1025, depending on state of Sinu River which empties into the Gulf.

FRESH WATER: Not available locally but could in an emergency be barged from Cartagena.

FUEL: Not available locally but can be barged from Cartagena.

FIRE PRECAUTIONS: See "Port Regulations" (copy placed on board on arrival).

CONSULS: None at Covenas – the nearest being Cartagena – 3 hours' drive.

REPAIRS: No dry dock facilities – minor repairs can be carried out through Cartagena.

SURVEYORS: ABS, Lloyd's Register and Det Norske Veritas, available from Cartagena with sufficient notice.

Cargo Inspectors: SGS, Saybolt, Caleb Brett.

CARGO GEAR: Port derrick (10 tons S.W.L.) required at TLU.

REPATRIATION: Can be arranged but not encouraged.

AIRPORTS: Cartagena – (3 hours' drive) to U.S.A. and Monteria – (1.5 hours' drive) to Bogota for connections world wide.

TIME: GMT minus 5 hours all year round.

HOLIDAYS: Terminal loads 24 hours per day, 365 days per year.

SHORE LEAVE: Not permitted.

GENERAL: *Prevailing Currents:* Currents off the North coast are set generally E.N.E. to N.E., being a continuation of the Caribbean counter current, and have rates of 0.5 knots – 1.5 knots.

In the entrance to the Gulf, the flow is affected by the coastal counter current, which is E.N.E.-going and attains a rate of nearly 0.75 knots.

Within the Gulf it is affected by tidal streams which are sometimes strong enough to cause a resultant W.S.W.-going flow. This reverse flow seldom exceeds 0.25 knots.

CHARTS: BA. Chart No. 1277. U.S. Chart No. 24512.

SHIPMASTER'S REPORT: June 1986.
Vessel: 36,800 g.r.t.
Operator of Terminal: Occidental de Colombia, Inc.,
Pilotage: Compulsory within terminal area, except when proceeding to anchor.

A Company Mooring Master will board all vessels scheduled to occupy a loading berth at a position nominated by Mooring Master. At present 3 miles North of SPM (approx.). Mooring Masters are fully licensed Colombian Master Pilots. Mooring Masters remain on board throughout loading and require facilities complying with accepted standards.
Anchorage: At present 3.5 miles North of SPM. Actual position will be given by Covenas Control.
Max. Size: Vessels up to 145,000 tonnes displacement and not exceeding 300 m. LOA may be loaded at SPM. Mean sea level at berth is 25 m.
Tugs: 2 multi-service vessels, including tug capability (equipped with fire fighting and anti-pollution equipment). 2 personnel/pilot vessels. 1 fast boom layer. 1 oil-mop vessel/line handler. 1 hose and line handling vessel.
Medical: No facilities except in an emergency.
Shore Leave: Strictly forbidden.
Fuel: Available from Cartagena; 7 days' notice required.
Repairs: No dry dock available. Minor repairs may be carried out by local engineering firm in Cartagena. These services should be arranged through Agents.
Ballast: Discharge of dirty ballast into sea is strictly prohibited. No facilities for accepting dirty ballast or slops. Vessels must arrive with clean ballast. Ballast samples taken by shore Authorities (this vessel has segregated ballast and samples were taken).
Berthing: One SPM (Tanker Loading Unit) in position Lat. 09° 29′ 46″ N., Long. 75° 44′ 15″ W. is a catenary anchor, 6 legged, SPM.

Development – An FSU consisting of a converted 384,000 tons ULCC yoke moored on a custom built catenary anchor leg mooring with a 6 anchor pile spread, mooring in position Lat. 09° 31′ 45″ N., Long. 75° 47′ 11″ W. This installation will be the principal unit in the terminal complex as it is due for operation in August 1986. This unit will house Terminal Operations and Control Centre, communications network and accommodation facilities. The unit (FSU) will be capable of simultaneously receiving stabilised crude oil, and loading 2 export tankers, 1 secured alongside and 1 at the TLU (SPM) at a maximum of 40,000 bbls.p.h. each unit. Mean sea level at this berth is 35 m. At present the TLU (SPM) has a maximum loading rate of 7,000 bbls.p.h. and only 1×16 in. hose is connected; 2 will be available when complete complex in operation. Vessels arriving at TLU (SPM) should have port derrick rigged and a bow chain stopper capable of accepting a 76 mm. diameter chain. The vessel is also required to supply a good mooring rope on the forecastle head to use as a messenger for the buoy mooring. Bow fairlead(s) require an opening of 600 mm. × 450 mm. The complex is a joint venture between Ecopetrol, Occidental and Shell.

SHIPMASTER'S REPORT: September 1986.

The conventional buoy mooring no longer exists, it has been replaced by a Tanker Loading Unit (TLU) in position Lat. 09° 29′ 46″ N., Long. 75° 44′ 15″ W., which is in effect an SBM. There is also a Floating Storage Unit (FSU) in position Lat. 09° 31′ 45″ N., Long. 75° 47′ 11″ W., which is a 390,360 d.w.t. tanker permanently moored.
Documents: All ship's certificates sighted. Authorities mainly interested in vessel's Safety Certificates and Pollution Certificates. Shore personnel board vessel once on the SBM, sometimes at anchor if more than one ship being cleared. It would appear authorities only board vessels during daylight hours but this does not prevent commencement of cargo operations.
Pilotage: Vessel contacts FSU when 30 miles off port, FSU will pass on any information regarding berthing, etc. When due to berth Pilot will contact vessel on VHF Channel 16. Pilot usually boards when vessel passing North of FSU, actual boarding area is 3 miles North of TLU.
Anchorage: Approximately 3 miles West of FSU centred on Lat. 09° 29′ 49″ N., Long. 75° 41′ 44″ W. with a radius 1.5 miles from this position.
Restrictions: None, 24 hour port operations.
Tugs: One small tug assists in berthing, pushing only as required.
Berthing: SBM. One chain through centre panama lead onto vessel's AKD stopper, shore able to provide mooring gear if vessel not fitted with AKD stopper. Pilot on forecastle head when approximately one mile from SBM, he is in radio contact with Master on bridge.
Loading: 2×16 in. hoses connected port side. Shore labour connects hoses. 1 crew member required to drive crane/winch. Loading rate 25,000 bbls.p.h. (4,000 cu.m.p.h.). Vessels can load directly from shore or from the FSU.
Ballast: There are *no shore facilities for dirty ballast so vessels must arrive with clean ballast.*
Points of Interest: Accommodation required for Pilot (who also acts as Loading Master), and 1 Cargo Surveyor. One person (clerk) arrives on board towards end of cargo operations, he completes Bills of Lading on board on completion of loading. Medical facilities are available, the largest town close to Covenas being Tolu.

SHIPMASTER'S REPORT: September 1986.
Documents: The officials (Immigration, Customs, Agent, etc.) board before the approach manoeuvre.
The following documents are required:
- Crew Lists.
- Stores Lists.
- Crew Effects Lists.
- Cargo Lists.

The authorities also checked the following certificates: Classification, Radio, Construction, Safety Equipment, Oil Pollution and Insurance, Cargo Gear Register (at least 10 tonnes SWL), Last Port Clearance, Derat Certificate.
Pilotage: The pilot boarding area is about 1.0 miles – 2.0 miles W.N.W. of the FSU. The Pilot (Loading Master) remains on board during the loading.
Restrictions: Mooring is carried out during daylight only, unmooring possible day and night.
VHF: VHF Channels 16, 10 and 13 used.
Tugs: There are 2 tugs (supply vessels) with sufficient power to moor and unmoor large vessels. Tugs lines are used.
Berthing: The conventional buoy mooring is no longer in operation and has been replaced by two new units:

Floating Storage Unit: Tankers up to 230,000 tonnes' displacement moor alongside on either side of the FSU. The FSU has 3×12 in. loading arms on each side and hydraulic cranes for the transfer of Loading Master, Assistant, etc.

Mooring consists of 4 headlines, 2 breast lines and 2 spring lines forward and aft. If the vessel uses wire moorings, nylon tails are required. The FSU has quick release hooks.

Tankers Loading Unit: This is a Single Point Mooring for tankers up to 145,000 tonnes' displacement and is equipped with two ADK bow stoppers and fairleads of 600 mm.×450 mm. (for 76 mm. chain).

Manifold connections are on the port side (2×16 in.). Ship's derrick/crane required for hoisting hoses.
IGS: Tankers are required to be inerted (less than 8% oxygen) and are checked prior to loading.
AUTHORITY: *Operator:* Ecopetrol, Distrito Cano Limon Covenas, Redoma San Mateo, Autopista Internacional, P.O. Box No. 1107, Cucuta, Norte de Santander, Colombia, South America. *Tel:* (970) 32741, 40268, 42497. *Telex:* 76636. *FAX:* (970) 41804. Contact: Fernando Gutierrez Montes, Cano Limon Covenas - District Manager. Terminal Superintendent (FSU) Covenas. Tel: (947) 880165. Telex: 6300. Fax: (947) 880166.

POZOS COLORADOS TERMINAL: 11.09 N. 74.15 W. (See Plan)

LOCATION: North coast of Colombia, approximately 6 miles S.W. of Santa Marta.
DOCUMENTS:
For the Port Captain:
- 1 Clearance for Last Port.
- 1 Voyage Report.
- 1 Crew List.
- 1 List of Passengers for Santa Marta.
- 1 List of Passengers in Transit.

Vessel Certificates: (These only need to be shown).
- Registration Certificate.
- Load Line Certificate.
- Classification Certificate.
- Safety Equipment Certificate.
- Radiotelegraphy Safety Certificate.
- Construction Certificate.
- Cargo Handling Equipment Safety Certificate.
- Oil Pollution Certificate (Insurance for US$1,000,000).

For Port Health Authority:
- Derat Certificate.
- Maritime Health Declaration.
- Toxic Element Certificate.
- Crew List with dates of vaccination.
- List of Passengers for Santa Marta.
- List of Passengers in Transit.

For Customs:
- 3 Cargo Manifests.
- 3 Crew Lists.
- 3 Lists of Passengers for Santa Marta.
- 3 Lists of Passengers in Transit.
- 3 Lists of Crew Personal Effects.
- 3 Lists of Provisions.
- 3 Mail Lists.

For Agencies:
- 1 Voyage Report (these only need to be shown).
- 2 Crew Lists.
- 2 Lists of Passengers for Santa Marta.
- 2 Lists of Passengers in Transit.
- 2 Crew Personal Effects Lists.
- 2 Lists of Mail for the Port.
- 4 Cargo Manifests.
- 4 Bills of Lading.
- 2 Cargo Stowage Plans.

PILOTAGE: Mooring Master will meet vessels approximately 1 mile seaward of terminal location. He will remain on board throughout the vessel's stay and should be provided with accommodation.
ANCHORAGE: When vessels arrive at night, they anchor 1 mile out to sea from the Terminal.
RESTRICTIONS: Docking only during daylight 0500 hrs. – 1600 hrs. Undocking 0430 hrs. – 1800 hrs.
MAX. SIZE: Berth in approximately 52 ft. of water and can accommodate vessels of up to 69,000 d.w.t., LOA 900 ft., beam 110 ft. with max. draft 45 ft.
HEALTH: Port Authorities board with Mooring Master to enter ship and attend all formalities.

RADIO: *Notice of Arrival:* Agent for the vessel must confirm arrival of vessel at the Port with a minimum advance notice of 24 hours, giving with this information the following information:

Name of the vessel
Name of the Master
Nationality
Last port of call
Destination of the vessel
Overall length
Draft forward and aft
Tonnage to be unloaded
Time at which Pilot is required.

VHF: Permanent communications Vessel-Terminal with VHF Channels 16 and 6. National and International communications through "Empresa Nacional de Telecomunicaciones (Telecom)" 0800 hrs. – 2200 hrs.

BERTHING: The vessel will be berthed in the area surrounded by the 7 mooring buoys, in following order from for'd port side, passing round stern to for'd starboard side: No. 7, 1, 2, 3, 4, 5, 6. Vessels lie in berth on approximate due North heading; vessel's lines run by means of mooring launch to stern, quarter, and breast buoys. Vessels up to 20,000 d.w.t. require at least 5 good manila lines; vessels in excess of 20,000 d.w.t. require at least 12 good manila lines. These lines must be of not less than 120 fathoms in length each. Synthetic lines of equivalent strength may be used. Vessels equipped with wire mooring winches may use wires in lieu of fibre lines. The mooring requires use of both bower anchors, each having at least 150 fathoms of chain and be prepared to handle 5-ton lift on starboard side at ship's manifold. Because of rigidity of submarine hose, a small movement of vessel out of correct position could damage submarine equipment. Extreme caution must be exercised to ensure that vessel is correctly moored. During loading operation slack must be kept out of submarine hose by adjustment of vessel's anchor and lines.

TUGS: Tugs are available if necessary for manouevring when berthing and unberthing.

TERMINAL REPRESENTATIVE: The Terminal has skilled personnel to represent its business on board and they will remain on board during all operations.

HOSES: Submarine hose 16 in. with 16 in. to 12 in. reducer for connection to vessel's 12 in. deck hose. For vessels not equipped with 12 in. deck hose, a 12 in. to 10 in. reducer is available. A 25 ft. length of 10 in. deck hose is also available for vessels not having a deck hose on board. Ship's crew perform all hose connecting, disconnecting, etc.

PUMPING: Average pumping rate 12,000 b.h.p. Max. working pressure 120 p.s.i.

CARGO HANDLING: Terminal is designed for loading and unloading crude oil or products. Currently, it is used to unload white products (motor gasoline and virgin naphtha). The products must be transported and unloaded in segregated form. The total capacity of storage is 750,000 bbls. Distance to tanks 9,997 ft. Diameter of line 20 in.

BALLAST: The utmost care must be exercised by all tankers to avoid any contamination of the terminal bay waters, since the entire area is a developing tourist resort. This means that absolutely no deballasting or disposal of bilge water must take place in the bay. Shore deballasting facilities can handle up to 84,000 bbls. if ship provides advance warning.

FRESH WATER: Not available.

FUEL: No bunkers available at terminal. Acquisition is possible at Cartagena (Colombia). See "General" before first port.

MEDICAL: Doctor and hospital located at Santa Marta, throughout 24 hours.

CONSULS: No consular office in vicinity of terminal.

The following countries have consulates in Santa Marta:

Norway	Calle 11 No. 1C-23 Dpto. 306	33501
Panama	Calle 17 No. 2-56 Of. 416	34253
Peru	Calle 16 No. 1-92	33420

Other Consuls located in Barranquilla, approximately 35 miles distant.

REPAIRS: Limited repair facilities available in Santa Marta, approximately 6 miles from terminal.

SURVEYORS: There are 3 petroleum inspection companies.

SHORE LEAVE: Through the ship's Agent, shore leave can be arranged, but sufficient crew must remain on board to handle emergencies. Most Maritime Agencies own 2 safety launches for vessel-shore-vessel routine.

GENERAL: No ships' stores.

SHIPMASTER'S REPORT: November, 1984.

1. The Terminal is now used exclusively for the import of gasoline.

2. *Mooring:* Forward: 2 anchors and 1 starboard breast line to buoy.
Aft: Lines to 5 buoys, 3 of which require double lines (8 ropes in total aft).

N.B. All ropes require a 'long drift' as buoys are well away from ship. Wire ropes not suitable for this terminal. (Mooring is a long procedure).

3. Pilot and 'Loading Master' joined at anchor – awaiting tide – and stayed on board throughout stay; in addition 10 personnel have to be fed.

4. *Port Papers:* All ship's documents required for sighting and expiry dates (except, in our case, Ship's Register).

Agents advised the following required:

4 Crew Lists (provided 12 copies and all 'required').
3 Personal Effects Lists (provided 9 copies and all 'required').
3 Stores Lists (provided 4 copies and all 'required').
3 Bonded Lists (provided 4 copies and all 'required').
N.B. Federal Police require at least 2 Crew Lists with complete names not just surnames and initials ('difficult' with Indian crew).

5. *Stores:* Fresh provisions.

6. *Shore Leave:* Shore Passes issued, no problems except for distance to shore. Passes to be returned prior to sailing.

7. No repairs possible – no fresh water – no bunkers.

8. *Discharge:* With 1×12 in. line but fitted with 10 in. reducer to 24 in. undersea line to shore, about 2 km.

Can accept 15,000 bbls./p.h. subject to 7 kg./sq.cm. pressure.

9. *Weather:* (November) Very heavy swell running but this was reported as being very unusual for this time of year. Vessel rolled heavily.

SHIPMASTER'S REPORT: March 1988.

Mooring: The following arrangement was used.

Starboard fo'c's'le shoulder	Two ropes of 150 m.
Starboard aft maindeck	One rope of 150 m.
Starboard quarter	One rope of 200 m.
Stern buoy	
Centre lead aft	Two ropes of 200 m.
Port quarter	One rope of 180 m.
Port aft maindeck	One rope of 180 m.
Port fo'c's'le shoulder	One rope of 200 m.
Port anchor	9.5 shackles
Starboard anchor	8.0 shackles

Vessel moored with a North-going current, in a freshening N.N.E. wind, which reached 30 knots by the end of the mooring. The trade wind is augmented by the sea breeze and blows from approximately 1300 hrs. to 0100 hrs., making conditions difficult for the mooring launch, which is underpowered. One 750 h.p. tug was used and proved effective in positioning the vessel by pushing.

Ship's head in berth was 020°, Pilot stated that 025° to 030° would have been preferable, in order to present less angle to the wind. Berth was originally configured for a ship's head of 000°. The buoy pattern has remained the same, but the ship is now aligned to starboard, which accounts for the differing lengths of moorings required. Winter months are stated to be worst weather conditions, especially February and March.

Cargo Discharge: Rate overall was 2,119 cu.m.p.h. and reached a maximum of 2,640 cu.m.p.h.

AUTHORITY: *Operators:* Empresa Colombiana de Petroleos "Ecopetrol", Departamento de Coordinacion de Operaciones, Bogota, Colombia. Telex: 44 787. Tel: 85 67 97.

Estacion Pozos Colorados, Santa Marta, Colombia. Telex: 38 849. Tel: 7499, 7095.

PUERTO BOLIVAR: 12.16 N. 71.57 W. (See Plan)

LOCATION: Puerto Bolivar is at the entrance of Bahia Portete, a natural bay on the North coast of Colombia's Guajira Peninsula, located at Lat. 12° 16′ N., Long. 71° 57′ W. It is on the Caribbean, about 350 km. N.E. of Barranquilla.

DOCUMENTS:

1. According to the rules in force at the time these regulations were approved, the vessel's Master shall show the Authorities and the Port Cargo Inspector the following documents:

Register Certificate.
Classification Certificate. Cargo ships shall show the Certificate of Safety Construction for Cargo Vessels.
Load Line Certificate.
Pollution Certificate that must cover Colombian waters (see 'note').
Certificate of Radiotelegraphy and/or Radiotelephony.
Cargo vessel Safety Equipment Certificate with valid annual inspection carried out by an independent surveyor.
Derat Certificate.
Clearance from the Last Port.

Notwithstanding the above, the Master shall show the Port Authorities whatever other documents they may require.

Note: All vessels and marine craft that arrive in Puerto Bolivar shall comply fully with the International Convention for the Prevention of Pollution by Vessels of 1973 and its 1978 Protocol (Marpol 73/78) including all its amendments in force.

2. According to the rules in force at the time these Regulations were approved, the Master shall hand over the following documents to the Port Authorities:

5 Crew Lists containing the following information: name, capacity in which serving, I.D. Documents – class and number – or licence, nationality, date and place of birth.
4 Stores Lists; narcotics for medical use must be listed in detail as well as tobacco, alcoholic beverages and taxable goods according to the Customs General Directorship.
4 Mail Lists, if any.
3 Crew Curio and Personal Effects Lists.
3 Passenger Lists, if any.
2 Quarantine Declarations.
4 Stowage Plans.

Notwithstanding the above the Master shall hand over to the Port Authorities other documents that they may require.

PILOTAGE: Compulsory. Pilot normally boards 2 miles North West of Buoy No.1 or at anchorage.

Pilot Ladder: Unless otherwise advised, the pilot ladder should be rigged on the starboard side of arriving ships.

The pilot ladder, should be of a SOLAS 1974 approved type. To meet those specifications it must have one-piece non skid steps equally spaced, about 14 in. apart with spreader bars five steps from the bottom and then at 9 ft. intervals.

Ships having a freeboard in excess of 30 ft. must have a suitable accommodation ladder rigged adjacent to the pilot ladder so that the Pilot can transfer to it when boarding. Ships' Masters may know this as "The Rotterdam Rig".

ANCHORAGES: Defined by Colombian Port and Maritime Directorship (DIMAR) as follows:

The anchorage area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographical co-ordinates:

Point A.	Lat. 12° 19′ N.,	Long. 72° 02′ W.
Point B.	Lat. 12° 19′ N.,	Long. 72° 00′ W.
Point C.	Lat. 12° 17′ N.,	Long. 72° 00′ W.
Point D.	Lat. 12° 17′ N.,	Long. 72° 02′ W.

The quarantine area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographical co-ordinates:

Point A.	Lat. 12° 19′ N.,	Long. 72° 04′ 30″ W.
Point B.	Lat. 12° 19′ N.,	Long. 72° 03′ W.
Point C.	Lat. 12° 17′ N.,	Long. 72° 03′ W.
Point D.	Lat. 12° 17′ N.,	Long. 72° 04′ 30″ W.

The anchorage and quarantine areas established in the above articles are experimental and therefore all vessels and marine devices shall manoeuvre with care.

APPROACHES: *Landmarks:* For vessels arriving from the Eastern Caribbean, Punta Gallinas (Lat. 12° 28′ N., Long. 71° 40′ W.) is approximately 20 miles E.N.E. of Puerto Bolivar.

For vessels arriving from the Panama Canal or ports to the West of Puerto Bolivar, Cabo de la Vela (Lat. 12° 13′ N., Long. 72° 10′ W.) is approximately 12 miles W.S.W. of Puerto Bolivar. Both Landmarks have prominent lighthouses which are shown in the appropriate light lists.

In addition there is a rotating beacon on the shiploader at Puerto Bolivar with the following characteristics:

Position: Lat. 12° 15.6′ N., Long. 71° 58.9′ W.

Description: Rotating white beacon.

Period: Flashing white every 2 seconds.

Height: 35 m. (115 ft.).

Visibility: 18.75 miles.

Fairway Buoy: The Port entrance is marked by Channel Buoy No.1 (Racon). Located in position Lat.12° 17′ 30″ N., Long. 71° 58′ 54″ W., flashing green every 2 seconds. Code (M) international code signal.

Aero Beacon: The company airport at Puerto Bolivar has an aero beacon located in position Lat. 12° 13′ N., Long. 71° 58′ W. with the following characteristics/frequencies: 400 kHz – "PTE" – Continuous. Also 415 kHz – "PB".

Channel: Vessels will enter and leave the port by a dredged channel 3.5 km. in length that connects the turning basin with the open sea. The channel's allowable ship's draft is 17 m. (max.). Minimum depth in channel and Berth Reach is 19 m.

Turning Basin: Allowable ballasted draft is 9.0 m. (max.). Vessels scheduled to load enter the circular turning basin, depth 11.5 m., where they are completely stopped, then turned by tugs to berth at the coal pier, port side to.

MAX. SIZE: The Port can accommodate vessels with the following dimensions:

LOA	300 m. (984 ft.).
Beam	45 m. (147 ft.).
Max. Loaded Draft	17 m. (55 ft.).
Max. Ballasted Draft	9 m. (30 ft.).

HEALTH: Radio Pratique is not granted and vessels arriving will have to be granted Pratique upon entering port or at anchorage. The standard World Health Organisation Certificate must be used.

RADIO: Coastal Station HKB may be used for routine messages.

Estimated Time of Arrival Notices: Masters should advise their ETAs upon receipt of orders to proceed to Puerto Bolivar. In addition, 72, 48 and 24 hour ETAs should be transmitted to INTERCOR with a copy to Agent.

ETA Message Text: (To be cabled with the first ETA, at least 72 hours before arrival).

R = Information requested.

NA = Information not requested because not applicable to vessel's type.

NOTES:

* Maximum segregated ballast possible provided maximum draft does not exceed 9.0 m., the propeller is acceptably immersed and the trim does not exceed 6 ft. by the stern. Ballast tanks used to comply with draft requirements must be completely full or empty, so loading can commence as soon as draft readings are completed.

The boarding pilot will usually be accompanied by a draft surveyor. Masters are requested to provide a ship's officer or other qualified representative so that tank soundings, as part of the draft survey, can commence during the vessel's transit to the loading berth.

Lack of compliance with any of the above requirements may result in unnecessary delays in acceptance of the vessel to load. Serious misrepresentations could result in non-acceptance of the vessel.

The Master should be aware of government regulations on port operations (Res. 1429 15 Nov 89-Dimar) before arrival. If not, he should consult with his agent to ensure his vessel's compliance.

VHF: VHF Radio Channels 14 and 16; call "Puerto Bolivar Marine" for anchoring or berthing instructions. Normal marine communications wil be available.

TUGS: 3×4,000 h.p. and 1×3,000 h.p. to be located at the port. The use of tugs both entering and leaving is mandatory. Tugs will be utilised as deemed necessary by the Pilot. Tugs will normally be made fast prio to entering the channel for inbound ships. Tugs will utilise their own lines but ships should have crew standing-by with heaving and messenge lines to be used as directed by the Pilot.

BERTHING: *Cerrejon Coal Terminal:* The single coal berth is i operation 24 hours daily, year round, except December 31st (1200 hrs till January 6th (0600 hrs.). The berth has 3 breasting dolphins and i designed for a maximum ship size of 150,000 d.w.t., 300 m. LOA, 45 m beam, and 17 m. draft.

Oversize vessels will be considered on an individual basic and wi require special approval by Port Authorities and Port Operator prior t acceptance.

Access to the Port is via a dredged lighted buoy channel approximatel 3.5 km. (1.9 miles) long and 225 m. (738 ft.) wide on a 327° – 147° tru heading. The principal coal loading berth is located on the West side o the bay.

An additional pier designed for other commodities may be utilised fo coal loading. Length of pier 280 m. Max. draft permissible 9.8 m. Tanker berth on East side and general cargo vessels on the West side.

After embarking the Pilot, vessel proceeds down the main shi channel past the coal loading pier. During transit and mooring tugs ar used depending on vessels size. Vessel continues into turning basi where she is completely stopped and turned, to berth port side t Smaller ships using the commodities pier may or may not be turne prior to berthing.

Vessels will normally load on a first come, first served basis.

Ships to load must arrive with clean ballast carried in segregate ballast tanks, with holds swept clean and, in the case of ore-oil or OB vessels gas free.

At Pilot's discretion and with approval of Port Operator a vessel ma be requested to ballast a cargo hold for manoeuvring and berthin purposes.

The maximum distance between the bottom of the shiploader spou and MLW is 23 m. The average tide is 0.35 m.

Mooring Line Arrangements: The number of lines or wires will depen on the d.w.t. and/or displacement of the vessel. In general, vessels w utilise head, stern and spring lines. The leads for the head and ster lines are almost perpendicular to the ship's side.

The number of lines and specific mooring arrangement will vary fro ship to ship and will be reviewed by Pilot and Master, prior to moorin

Should a vessel have insufficient or poor quality mooring ropes wires to safely keep her properly berthed, the terminal will provide sam as necessary. This determination will be made by the Pilot prior berthing or by the loading supervisor after the ship is alongside. Charge will be assessed against the vessel for these services.

BULK HANDLING FACILITIES: *Railroad:* The 150 km. mine to p railroad is dedicated to handling Cerrejon coal.

Stockpile: Maximum storage is 1.7 million metric tons (tonnes), li storage is 1 million tonnes.

Weights: Will be determined by draft survey.

Sampling: The Ramsey automatic sampler operates according to AST standards.

Analysis: ASTM standards are applied.

Shiploader: One line loader can handle up to 10,000 tonnes/p.h.

Trimming: Spout trimmed.

Also see "General".

MEDICAL: First aid treatment is available, but not on a routine bas Extreme emergencies must be handled at Barranquilla.

FRESH WATER: Not available.

FUEL: Not available. Nearest bunkering ports are Cartagena, Aru and Curacao.

REPAIRS: No facilities for major repairs. Also see "General".

SURVEYORS: Exclusive surveyors for A.B.S. and Lloyds' are located at principal Colombian ports. These surveyors may or may not also act as non-exclusive surveyors for other classification societies.

Masters should be reminded that sufficient advance notice (at least 72 hours) should be given when requesting classification society services.

OPENING/CLOSING HATCHES: All hatches must be open in order to permit hold inspection before entering Puerto Bolivar Channel.

REPATRIATION: Because of the port's remoteness, it is suggested that seamen neither join or leave at Puerto Bolivar.

AIRPORT: The nearest international airport is at Barranquilla (326 km.).

TIME: Local time is GMT minus 5 hours.

GENERAL: Port charges available upon Master's and/or Agent's request. Charges will be made for pilotage and tug service. Full agency service will be provided through a licensed Colombian Agent of Owner's and/or Charterer's choice.

Publications:

N.O. Chart No. 24460.
B.A. Chart No. 1529, 1966.
Colombian Chart No. 228.
Sailing Direction No. 144 (U.S.) and Coast Pilot No. 7A (British).

Weather: Puerto Bolivar is generally outside the hurricane belt. Prevailing winds are from the North East. In the area of the Port, winds may gust to 35 – 40 knots.

Months of high winds are December to March and July and August. Dry season is from November to May. The wet season is from May to November. This is in general for this area. At Puerto Bolivar, rain is infrequent.

Stores: Very limited amounts of stores of an emergency nature only will be available and can be expected to be expensive due to the remote location. Request must be advised with the first ETA and availability still cannot be guaranteed.

Bonded Stores: No bonded stores are available.

Navigational Publications and Charts: Navigational charts and/or publications are available on a very limited basis with prior radio request through the Agent (see "Publicatons" above).

Mail: Mail may be sent and received through vessel's local Agent. Owners should be advised that as all mail must be channelled through Barranquilla or Cartagena Agents, addresses in those respective cities should be used as no mail is received at Puerto Bolivar at this time.

Laundry: No laundry services are available at this time.

Transportation: As Puerto Bolivar is in a remote location it is suggested that crew members neither join nor be repatriated from Puerto Bolivar. However, should it be deemed necessary that this be done, the Agent can arrange same. As the closest international airport is in Barranquilla, approximately 326 km. away, the cost will be significant. Air transportation out of Barranquilla is not on a daily basis to all world points and costly delays could possibly be encountered.

Gangway: Terminal will normally provide gangway, ship's crew will be responsible for it's mooring and safety. If necessary, vessels will utilise their own gangway or accommodation ladder.

Emergency Towing Wires: Vessels while alongside piers shall have fire wires to enable the vessel to be towed from the pier should it become necessary. These fire wires will consist of at least 2 wires, one forward and one aft, hanging from the vessel on the outboard side. They shall be made fast on deck and small hang approximately 6 ft. from the water's edge when the vessel is in a light condition. They shall consist of wire of a diameter in proportion to the size of the vessel, however, the minimum acceptable fire warp shall be 1 in. wire. Each wire will have an eye at the end hanging over the water.

Notice of Readiness: Notice of Readiness shall be submitted by Master and will be accepted by the Loading Supervisor at such time when vessel has arrived at the loading port, is ready to load, and in Free Pratique whether at berth or not.

Cleanliness of Holds: All holds will be inspected prior to entering Puerto Bolivar Channel, by the Pilot.

Emergency Shutdown: If an emergency should occur making it necessary to immediately stop loading operations, the ship shall sound short blasts in groups of five blasts on the ship's whistle and immediately contact Puerto Bolivar Marine Operations on VHF Channel 14 or 16.

Ballast: The maximum ballasted draft for vessels entering Puerto Bolivar is 9.0 m. All ballast must be clean and carried in segregated ballast tanks. It is prohibited to pump any ballast overboard other than that which has been carried in designated ballast tanks and is clean. Vessels arriving at Puerto Bolivar should have all cargo holds clean and ready to receive cargo. Should ballast have been carried in the holds, it would be necessary for this hold to be cleaned and dried prior to entering port.

Prior to entering port the Pilot will inspect the vessel and may or may not request more segregated ballast to be pumped out or additional ballast be added to certain segregated ballast tanks should the trim of the vessel so require. Vessels down by the head or according to their size, trimmed excessively by the stern thus making their manoeuvrability unacceptable will not be allowed to enter port.

Trim: The terminal shall co-operate in every possible way with the ship to obtain the required trim. Masters are reminded that the responsibility to trim their vessel for sailing draft shall be their responsibility and the terminal shall load the vessel based on information submitted by the ship's Master.

Customs and Immigration: Puerto Bolivar is a Port of Entry and Colombian Government Customs and Immigration officials will board vessel either at anchor or when made fast alongside the pier. All formalities and necessary documents should be made available to them at this time. Masters are advised that they are expected to extend the usual common courtesies to visiting officials. However, gratuities in the form of liquor or cigarettes are neither necessary nor expected.

Swimming and Fishing: Swimming in the harbour is prohibited, either from the ship, pier or shore.

Fishing over the side or from the pier is also prohibited.

Firearms and Ammunition: The display, carrying or discharge of firearms is prohibited on board or within the port area.

Drugs and Alcohol: The purchase or sale of drugs is illegal and is strictly prohibited. Violation of this law may result in fines and/or imprisonment.

The sale of alcohol by ship's crew is also prohibited.

Fire Signal: Fire on board shall be indicated in the same manner as emergency shutdown – short blasts in groups of 5 on the ship's whistle for at least 1 minute or until acknowledged by shore side marine operations. Advice of fire should also be given by VHF on Channel 12 or 16.

Fire Fighting Procedures: Vessels while alongside or at anchor have the responsibility for fire fighting aboard their own vessels. Upon request, the terminal operator may join in fighting a shipboard fire by utilising the tug boat water/foam fire fighting capabilities.

INTERCOR reserves the right to fight fires and take other action as deemed necessary, even if not requested, including removal of the vessel from her berth to anchorage if it appears that the fire is a threat to the terminal.

Loading Supervisor: The Loading Supervisor shall be in charge of all cargo operations and in conjunction with the vessel's Chief Officer shall control the vessel's loading operation. Prior to commencement of loading, planned loading procedure and hatch sequence will be agreed upon between the Loading Supervisor and the Chief Officer. Prior to arrival, the Chief Officer should be requested to have drawn up a proposed loading plan for review.

Loading Rate: Normal loading rate is 10,000 t.p.h. Vessels must be able to discharge all ballast in time so as not to impede loading. Should a cargo loading shutdown be necessary because of vessel's inability to discharge her ballast in time to prevent exceeding her permissible draft, all time lost will be for vessel owner's account.

Overload Drafts: Prior to loading, the full amount of cargo to be loaded should be determined between the Chief Officer and the Loading Supervisor. Masters are advised that they are responsible for obeying all laws pertaining to International Load Lines and shall be held solely responsible for any overloading on their part. When topping off, the terminal shall in every way co-operate with the ship to assist in attaining their legal draft within Puerto Bolivar constraints. Should erroneous information be given to the terminal and should the vessel for some reason be overloaded, the costs of discharging any cargo shall be for the account of the vessel's Owners.

Repairs: Only repairs of a very minor nature can be effected at Puerto Bolivar. These must be proven to be of an emergency nature and necessary for the pursuit of the voyage. While every effort will be given to assist vessels in any way possible, Masters must keep in mind that no shore side facilities are available.

SHIPMASTER'S REPORT: August 1986 (Updated 1990).

Vessel: 107,000 d.w.t.

Location: Puerto Bolivar is situated at the entrance to the Bay of Bahia Portete approximately 350 km. N.E. of Barranquilla. The port is the outlet for coal mined at Cerrejon 150 km. away, the coal is transported from the mine by train.

Organisation: Marketing is handled by either of the two partners, Intercor or Carbocol, on a 7 day on 7 day off basis. The terminal is self sufficient in all services, electricity, fresh water, maintenance, etc.

Product:

Bituminous steam coal from El Cerrejon.
Density +0.8 to 1.0 tonnes/cu.m.
Stowage factor is given as 41/42 cu.ft./ton but as a practical guide we stowed at 41.5 cu.ft./tonne.
All cargo weights used are tonnes.
Particle size loaded: Max. 50 mm.
No methane gas is emitted from coal.
No history of spontaneous combustion. No ventilation is recommended, holds being kept sealed whilst under way.
Moisture content: 11.5%.

Maximum size of vessel: The largest ship to visit the port to date is 150,000 d.w.t. which is the maximum allowed at this time. Max. allowed sailing draft is 17 m., max. LOA 300 m. and max. beam 45 m.

Approach: No Radio Pratique is granted.

Two hours before arrival contact "Puerto Bolivar Marine" on VHF Channel 16 for berthing/anchoring instructions.

All vessels are allowed to berth 24 hours daily.

Channel Buoy No. is fitted with racon (morse 'M'). (Also see "Shipmaster's Report" – September 1986).

Charts: Colombian chart COL. 228 issued by the Colombian Government and the United States Hydrographic Department. This chart is available from the Marine Senior Supervisor at the terminal. There is also a small chartlet issued by Intercor.

Anchorage: The anchorage is very exposed. Recommended anchorage is 3.5 nautical miles N.W. of Buoy No. 2 in 170 ft. of water. The prevailing winds are N.E. 25 to 35 knots. The prevailing current is S.W. going at a rate of 1 knot to 2 knots. We anchored with 8 shackles in the water and yawed between N.N.E. and East.

Pilot: The Pilot Instructor is an American who boarded with 2 local trainee Pilots. The Pilots board from a tug in position 2.5 nautical miles N.W. of Channel Buoy No. 2. The Draft Surveyor also boards with the Pilots.

The pilot ladder was rigged on the starboard side 2.0 m. from the water. The Pilot carries out an inspection of the holds and issues a Hold Inspection Certificate if the holds are found dry and clean without mineral residues. Ballast holds are inspected after the vessel is alongside.

The Pilot will not berth the vessel if the wind exceeds 35 knots.

Draft Surveyor: The Bill of Lading weight is determined by SGS Surveyor not belt scales. The Surveyor determines the net lightweight of the vessel prior to loading then completes his survey on completion.

A Weight Certificate and Survey Report is provided for the ship.

Tugs: All 4 tugs make fast on the starboard side of the vessel using their own lines. 3 tugs make fast before the vessel enters the approach channel.

Channel: Well buoyed. Length of channel 4 km. Width 225 m. and depth 19 m. Maximum draft allowed 17.0 m.

Turning Basin: Width 600 m., depth 11.0 m. Max. allowable draft 9.0 m.

The Pilot likes to ensure that the propeller is 100% immersed due to the 25 to 35 knot prevailing wind blowing onto the berth. We deballasted No. 6 hold and the forepeak prior to berthing.

Vessels are turned to port before berthing port side to the loading berth.

Coal Loading Berth: Maximum air draft allowed 21.0 m.

The Coal Berth operates throughout 24 hours.

The vessel berths against 3 large patent fenders with mooring lines being made fast to quick release bollards using shore capstans to heave the lines.

Springs are made fast first, then breast lines, then head/stern lines.

Ship's gangway cannot be used. Shore gangway must be lifted on board by ship's gear and a safety net provided.

Three stacker/reclaimers now in operation. Exceptional case, loading rate usually between 6,000 t.p.h. - 10,000 t.p.h.

Most of the coal was loaded directly onto the conveyor belt from the train cars giving a maximum load rate of 6,000 tonnes/p.h.

At the present time 3 trains run from the mine every day. Each train lifts 10,000 tonnes of coal. The balance of the coal was loaded from the stock pile.

The stockpile can store a maximum of 1.7 million tonnes.

The loader stops work if wind exceeds 35 knots.

Officials on Arrival: 1 Port Captain, 3 Customs Officers, 1 Port Health Official, 2 Agents.

No Immigration Officials as shore leave is not allowed.

Arrival Forms: 6 Crew Lists, 1 Maritime Health Certificate, 2 Bonded Stores Lists, 2 Ship's Stores Lists, 2 Crew Effects Lists, 2 Vaccination Lists.

Certificates Required by Port Captain Prior to Clearance: Ship's Register, Clearance from Last Port, Derat Certificate, International Oil Pollution Certificate, Load Line Certificate, Safety Radio Certificate, Safety Equipment Certificate.

Shore Leave: Not allowed.

Repatriation: Not recommended due to the remoteness of the port.

Fresh Water: Not available.

Bunkers: Not available.

Ship Repairs: No facilities.

Chandler and Provisions: None available.

Medical: First Aid treatment is available only in emergency. Extreme cases must be flown to Barranquilla.

Time: Local time is GMT minus 5 hours.

Security: Watertight as no unauthorised persons are allowed on board and no shore leave is allowed.

SHIPMASTER'S REPORT: August 1986 (Updated 1990).

Vessel: 72,000 d.w.t. LOA 230 m. Sailing Draft: Forward 12.78 m. Aft 12.80 m.

ETA: Master to give 14, 10, 5, 4, 3, 2 and 1 days ETA to INTERCOR Barranquilla, INTERCOR Puerto Bolivar and ship's Agent.

Arrival: Pilots and tugs meet ships about 2 nautical miles N.W. off Buoy No. 1. Two tugs making fast with tug's ropes assist ship through the dredged channel. Having passed the loading pier, the ship is stopped, and the 2 tugs swing the ship assisted by 1 or 2 more tugs as appropriate. Vessels always berth port side alongside. This vessel (230 m. LOA) used 2 lines, 2 breasts and 2 springs each end.

After Pilot came on board, Master and Pilot exchanged information regarding ship's particulars and berthing procedure, etc.

A Vessel Inspection Report/Pre-Berthing delivered by Pilot and to be filled in before entering port. Puerto Bolivar Safety Regulations and Safety Check List also delivered.

Various regulations received from Agents by telex. The essence of the regulations is that the loading facility is very effective, and ship's officers are not allowed to stop loading for making draft surveys, etc. A stop can only be done *once*, and it should be for trimming purposes. The importance of having calculated a fixed and reliable loading rotation should be emphasised.

Approaches to Puerto Bolivar: At present there is no official chart of Puerto Bolivar and approaches, however I managed to obtain a "working copy" of a chart from the Agent. Even though it is cautioned not to use the chart for navigating purposes I found is extremely useful as an addition to B.A. Chart No. 1529. It should be noted that the Sea Buoy has never been in it's charted position. The Pilot advised that the Sea Buoy would be placed in the position of Buoy No. 1 about September 1st, 1986. (Also see "Shipmaster's Report – September 1986").

Anchorage: The anchorage is about 2 nautical miles N.W. of Outer Channel buoys, holding ground found to be good.

Ballast: It is recommended to have the ship well ballasted when passing through the dredged channel when current and wind are abeam of the ship.

Gangway: It is difficult to rig a good and safe gangway from ship to shore, and on this ship it was only possible to rig a combination pilot ladder/gangway. A gangway is available on shore, but there is no shore crane to lift it to the ship's rail. As only a few big bulk carriers are equipped with cranes/derricks it will often be impossible to lift the gangway on board.

Crew Changes: Crew change is difficult but possible. One crew member joined the ship and one was repatriated. They were transported from and to Barranquilla by car – a journey of about 6 hours.

VHF: Puerto Bolivar Marine (Port Control) and Agents listen on VHF Channel 16 around the clock, working on Channel 14.

Tugs: All 4 tugs are under Colombian flag and owned by the Port Operator.

Survey: A surveyor from SGS Colombia S.A. (Societe Generale de Surveillance S.A.) carries out draft survey on arrival and departure and issued certificates. Bills of Lading are issued on basis of draft survey.

Supplies: No people live in the port and surrounding area. All workers work for 4 days and then go home for 4 days. No shops or markets or ship's chandlers available. All necessary supplies have to come from Barranquilla which is costly and difficult. However, in the port area there is a small supermarket, where shore personnel can buy their daily needs. It may be possible for Agents to supply a very limited amount of fresh fruit and a few kilos of coffee.

Port: Port found to be very safe in spite of the wind constantly blowing against the pier with wind forces up to 40 knots. There was no swell at all, but very choppy sea made it difficult to read ship's draft.

SHIPMASTER'S REPORT: September 1986 (Updated 1990).

Vessel: 117,600 d.w.t.

Navigation: Buoy No. 1 (position Lat. 12° 17′ 31″ N., Long. 71° 58′ 48″ W.) in the Harbour Approach Channel has been fitted with Racon and bell.

No light exists on Point Coco.

Pilot boards about 2 nautical miles W.N.W. of Buoy No. 1.

Tugs: 4 good tugs work in this harbour.

General: Cargo holds are inspected by the Pilot while at anchor, and a Certificate of Cleanliness is issued if the holds are found acceptable.

Used St. Lys Radio (FFL) when in the Atlantic and when in the Carribean used Barranquilla Radio (HKB). All cables received at Agents main office in Bogota without delay.

Messages regarding ETA should also be cabled direct to Port Authorities in Puerto Bolivar, care of "INTERCOR Puerto Bolivar".

Shore Leave: Not permitted.

AUTHORITY: Capitania de Puerto - Puerto Bolivar, A.A.(P.O.Box) 52499, Barranquilla, Colombia. *Tel:* 562131, Extn. 6776. *Telex:* 31354. *FAX:* 562131, Extn. 6401. *Contact:* Steve C. Catton, Port Operations Superintendent, or Juan Alvarez (Marine Operations, Puerto Bolivar).

SANTA MARTA (Including Puerto Prodeco): 11.15 N. 74.14 W. (See Plan)

DOCUMENTS:

For the Port Captain:

1 Clearance from Last Port.
1 Voyage Report.
1 Crew List.
1 List of Passengers for Santa Marta.
1 List of Passengers in transit.
1 List of Provisions.

Vessel Certificates: (these only need to be shown)

Registration Certificate.
Load Line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radiotelegraphy Safety Certificate.
Construction Certificate.
Cargo Handling Equipment Safety Certificate.
Oil Pollution Certificate.

For Port Health Authority:

Derat Certificate.
Maritime Health Declaration.
Crew List with dates of vaccination.
List of Passengers for Santa Marta.
List of Passengers in Transit.

For Customs:
3 Cargo Manifests.
3 Crew Lists.
3 Lists of Passengers for Santa Marta.
3 Lists of Passengers in Transit.
3 Lists of Crew Personal Effects.
3 Lists of Provisions.
3 Mail Lists.

For Agencies:
1 Voyage Report.
6 Crew Lists.
6 Lists of Passengers for Santa Marta.
6 Lists of Passengers in Transit.
6 Crew Personal Effects Lists.
2 Lists of Mail for the port.
4 Cargo Manifests.
4 Bills of Lading.
2 Cargo Stowage Plans.

PILOTAGE: Pilot boarding station: Lat. 11° 14′ 44″ N., Long. 74° 13′ 58″ W. Information regarding ETA should be relayed to Agent, who will advise Port Authority. Pilotage compulsory for all vessels over 200 g.r.t.

ANCHORAGES: When it is not possible to come alongside a berth immediately, the vessel may anchor within the area included within the following coordinates.

Lat. 11° 14′ 45″ N., Long. 74° 13′ 15″ W.
Lat. 11° 14′ 45″ N., Long. 74° 14′ 00″ W.
Lat. 11° 14′ 15″ N., Long. 74° 13′ 25″ W.
Lat. 11° 14′ 15″ N., Long. 74° 14′ 00″ W.

Seabed is rocky and sandy, with depths about 120 ft.

Vessels should anchor in the lee of the Morro Grande and Morro Paqueno (large and small headlands), particularly during the months of December to March, when there is a strong N.E. wind.

RESTRICTIONS: None. Good visibility throughout year. Difference in tides negligible.

MAX. SIZE: 730 ft. length, 40 ft. draft. No limit to beam. Oil carriers: Refer to Pozos Colorados.

PRATIQUE: Pratique granted by Port Captain who visits vessel immediately on arrival. Doctor also attends on this visit.

RADIO: Barranquilla Radio or Cartagena Radio; radio stations messages relayed by telex to Sta. Marta. Ship's Agents use same system. Terminal Office may be contacted on radiotelephone, 2738 kHz.

TUGS: Join vessels just before entrance to inner harbour; they may use own lines or vessels lines.

BERTHING:

Quay	*Length*	*Minimum Depth*
No. 1	175 m.	38 ft.
No. 2	145 m.	33 ft.
No. 3	232 m.	45 ft.
No. 4	153 m.	40 ft.
No. 5	153 m.	60 ft.
No. 6	100 ft.	15 ft.

Facilities exist for container traffic. 30,000 tons silo for grain storage and discharge facilities for up to 5,000 tons per day.

CRANES: 5×10 ton – 30 ton mobile cranes and 2 cranes 90 tons and 100 tons on rails. 1×42 ton Kalmar crane available.

BULK HANDLING FACILITIES: *Puerto Prodeco:*
Location: Lat. 11° 09′ N., Long. 74° 13′ W.
Depth: 18.0 m.
Loading: At anchorage 1 mile – 2 miles offshore.
Working: 24 hours a day, 7 days a week.
Facilities: 4×1,500 d.w.t. barges for carrying coal.

Barges loaded at pier at a rate of 8,000 tonnes per day.

STEVEDORES: ETA to be given 72 and 24 hours before arrival, indicating number of gangs required. Unloading rate of general merchandise 10 t.p.h., and homogeneous cargoes around 15/20 tons. *Working Hours:* First shift: Monday to Saturday and holidays, from 0800 to 1200 hrs. and 1400 to 1800 hrs. Second shift: Monday to Friday, from 1800 to 0200 hrs.

MEDICAL: Advance notice required whenever special medical attention needed on arrival; hospital available.

TANKERS: See "Pozos Colorados".

DENSITY: 1025.

FRESH WATER: Available alongside docks: delivery (approx.) 10 t.p.h.

FUEL: Not available.

CONSULS:
Costa Rica
Ecuador
Finland
France
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Sweden

REPAIRS: Only minor welding.

GANGWAY/DECK WATCHMEN: Deck watchmen supplied by Agent.

OPENING/CLOSING HATCHES: By special gang ordered by Agent.

SHIP CERTIFICATES: Load Line, Cargo Gear, Classification, Lifeboat, Main Engines, Radio Equipment, Fire Fighting Equipment, Ship's Register, Officers' Certificates (licences).

CUSTOMS ALLOWANCES: (Tobacco), 2 cartons of cigarettes per man. All other tobacco will be sealed by Customs. (Wine and/or Spirits), 1 open bottle of liquor permitted per crew member. All other spirits will be sealed by Customs.

REPATRIATION: Facilities available.

AIRPORT: 19 miles from town.

TIME: 75th Meridian time, Eastern standard time. GMT minus 5 hours.

HOLIDAYS: New Year (January 1st); Church Holiday (April 12th); Labour Day (May 1st); Local Holiday (July 29th); Church Holiday (December 24th); Christmas Day (December 25th); Church Holiday (December 31st). No work on New Year's Day, Labour Day, Local Holidays, Christmas Day. Work until 1600 on other holidays.

POLICE/AMBULANCE/FIRE: Police, Tel: 6079; Ambulance, Tel: 3116 – 5555; Fire, Tel: 6091 – 4545 – 6055.

SHORE LEAVE: Granted after quarantine cleared.

IDENTIFICATION CARDS: Given by Port Captain once quarantine is cleared.

DELAYS: Up to 12/14 hours because of shortage of docking space.

AUTHORITY: Captain Jaime Sanchez, General Manager. Captain Jaime Gaviria, Port Captain.

TUMACO: 01.49 N. 78.45 W.

DOCUMENTS:
5 Crew Lists.
5 Stores Lists.
5 Passenger Lists (local, in transit, or negative).
1 Sanitation Declaration.
12 Complete sets Manifests.
3 Mail Certificates (when not included in Manifest).

PILOTAGE: Compulsory. Entrance to the port can only be made during the day by vessels with a max. draft of 19 ft. – 20 ft., due to the bar between Buoy Nos. 2 and 3.

For the Tumaco Terminal vessels are boarded by the Pilot in position Lat. 01° 53′ 00″ N., Long. 78° 48′ 35″ W.

ANCHORAGE: Sufficient area available in depths of 25 ft. to 35 ft.

RESTRICTIONS: Entrance channel depth 20 ft. Height of tide varies from 8 ft. to 12 ft.

HEALTH: On arrival, port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port Doctor visits vessel even if previous port was in Colombia.

RADIO: Ships must communicate with the Texaco Head Office in Bogota, who will then inform the Terminal. The Terminal can be reached using VHF Channel 16 at a range of up to 30 miles.

BERTHING: Wharf is 310 m. long. Depth alongside averages 22 ft. Berthing for two vessels of 4,000 – 5,000 tons. 1×5 ton and 1×10 ton crane available.

STEVEDORES: Stevedores work continuously with breaks at 1200-1400 hrs. and 1800-2000 hrs.

TANKERS: *Empresa Colombiana de Petroleos:* Vessels moor to 7 buoys, using both anchors. Ship's Head 255°T.

Manifold connections are 12 in., although 10 in. and 8 in. reducers are available. Hoses are connected on the starboard side.

The Mooring Master will remain on board throughout, and accommodation must be provided.

Location: Lat. 01° 50′ 25″ N., Long. 78° 49′ 49″ W.

Tidal Conditions: Range of tide: 12 ft. Currents: 2 knots.

Controlled depth in the proximity of the mooring is 110 ft. of MLT.

Maximum Size of Vessels: Deadweight: 80,000 tons. Overall Length: 1,200 ft. Draft 90 ft.

Class of Cargo and Pumping Rate: Crude. Maximum rate of pumping 30,000 bbls.p.h.

Ballast and Bunkering Facilities: There are no ballast facilities. No bunkers or water available.

Additional Information:
1. The discharge of dirty ballast is prohibited in Tumaco.
2. Berthing can only be carried out during daylight hours and on the rising tide.
3. Tankers can sail at night.
4. Customs documents are required for berthing.
5. Medical services available.

FRESH WATER: Available from wharf.

FUEL: Supplied by Esso Colombia, by barge.

CARGO GEAR: Terminal owns 3 cranes of 5 to 15 tons capacity.

AIRPORT: Suitable for DC.4 type aircraft, situated 4 km. from port.

DEVELOPMENTS: Programme for deepening the port to 33 ft. at HW.

AUTHORITY: Empresa Puertos de Colombia, Tumaco, Colombia. *Contact:* Vicente Marines Valencia, Manager.

TURBO: 08.06 N. 76.43 W.

ANCHORAGES: Anchorage 2.5 to 3 miles off mouth of Leon River, used for loading bananas from barges.

CLEARANCE: Vessel must first proceed to Punta las Vacas for official visit of Port Authorities to obtain clearance.

MOORING: With sea and wind from the North, loading operations are not possible unless vessel employs the "Baltic Moor".

On arrival at the Leon River Anchorage, vessels should let go a couple of shackles. After that, a 3 in. to 3.5 in. wire (or mooring line) is passed from the after leads on the poop, along the ship's side, outside and clear of everything. This wire is to be shackled to a number three chain shackle.

By heaving in the wire and slacking the chain as required (about a 60° angle) vessel will give the necessary shelter to banana barges, for normal cargo operations.

SHIPMASTER'S REPORT: 1976. *Chart used No. 24515 (American).*
Vessels ordered to Turbo first proceed for clearance off Turbo town and anchor in position about 1 mile West of Pta. las Vacas Lighthouse (Lat. 08° 04′ N., Long. 76° 45′ W.). The lighthouse, which is situated on the Southern end of Pta. las Vacas is not readily identifiable from the N.W. until within about 2 miles and the light is reported to be poor. The chart in the area of Pta. Turbo, about 4 miles Northward of Pta. las Vacas, does not correspond to the radar picture presented, and therefore a berth of at least 2 miles is recommended.

After clearance by Port Authorities at Turbo vessels should proceed to Pinchindi, about 7 miles W.S.W. of Pta. las Vacas, for loading during the period December to May. It is reported that during the season May to December vessels load off the mouth of the Rio Leon, about 7.5 miles S.S.E. of Pta. las Vacas. Approaches to this berth apparently pose no problems and the loading position is reported to be close to a buoy off the river mouth, the position of which could not be confirmed.

There is no Pilot available at Turbo.

Vessels loading at Pinchindi should steer to pass about 1.5 to 2 miles S.E. of Boca Pinchindi. When the black buoy, Fl. 3 sec. (marked on chart No. 24515) bears about 335°(T), but not less than 315°(T) course should be altered to bring the buoy right ahead and anchorage should be taken up as convenient on this bearing. The black buoy referred to above is very difficult to pick up against the land, and in February 1976 was extinguished. There are two mooring buoys to the Eastward of the black flashing buoy. These are unlighted and not marked on the chart. Positions of these mooring buoys are as follows, bearings and distances from the black Fl. 3 sec. buoy: BWVS 83.5° (T)×380 m. R 99.5° (T)×760 m. These mooring buoys are more readily identifiable from the offing than the Fl. 3 sec. buoy, particularly the red one, which is painted in "International Orange". However it should be borne in mind that this buoy may have just received a new coat of undercoat at the time this report was written. The red buoy may be seen over the land which lies on the Eastern side of the anchorage before course is altered for the final approach. Vessels of draft up to 25 ft. may anchor up to within about 300 m. of the Fl. 3 sec. buoy in about 22 m. of water.

As the wind strengthens during the afternoon to about force 5/6 from between N. and N.E., and due to the proximity of other vessels in the anchorage, it was considered advisable to use two anchors; the vessel in fact used port anchor with 4 shackles on deck and starboard anchor underfoot. This prevented the vessel from yawing more than a maximum of about 15°, while other vessels moored with only one anchor were observed to be yawing considerably more during the afternoon breeze.

Winds, during the period while the vessel was at Turbo (February 2-4) were predominately from North to N.E. and no significant currents were observed in the anchorage described above.

Caution is advised while navigating in this anchorage at night, as vessels loading logs often have large unlighted timber rafts alongside. It should also be borne in mind that tugs, lighters and launches are often unlighted, and radar echoes from these might easily be mistaken for those of the buoys. While the radar echoes of the land in this anchorage are quite clear, they do not in any way correspond with the chart.

No opportunity presented itself for checking soundings, however, on the vessel's track arriving and sailing soundings on the whole agreed with charted depths.

Loading of bananas is carried out in the anchorage using mechanical conveyors from lighters through vessels sideports, and on the whole was found to be quick and efficient.

No fresh water or provisions are available at Turbo. Indeed no facilities whatever are available from ashore. There is no radio station, although banana shippers "Uniban" have VHF 16 in their office during office hours, Spanish language only. Agents for United Brands Company have VHF Channel 16, call sign is "Casanova".

Caution should be exercised when taking any navigational advice from Officials in Turbo as this may at times be misleading and it is questionable whether persons proffering advice regarding best anchorage position etc. are in possession of all facts necessary for safe navigation in the area.

Documents Required for Inward Clearance at Turbo:
1 Clearance from last port.
6 Crew Lists.
5 Passenger Lists (Nil passengers to be declared).
5 Disembarking Passengers.
5 Mail Lists (No mail to be declared).
1 Maritime Declaration of Health.
1 Vaccination List.
6 Manifests.

Ships Certificates for Inspection:
Register.
Safety Equipment Certificate.
Safety Radio Certificate.
Radio Station Certificate.
Cargo Gear Certificate.
Derat Certificate.
Ship's Capacity Plan.

In addition to above list of documents required, the following are also to be presented to Authorities on arrival:
2 Store Lists.
2 Crews Personal Effects.

SHIPMASTER'S REPORT: February 1979.
Pilotage: It is necessary to take a Pilot at Punta las Vacas for entrance to the bay. Thereafter, any movement inside the bay will also require a Pilot.

SHIPMASTER'S REPORT: July 1979.
Vessel arrived Pta. las Vacas Anchorage at 0207 hrs. 30th July. Cleared Port Officials and proceeded to R. Leon Anchorage where vessel anchored at 1010 hrs. to port anchor, 4 shackles in water. Rigging gangs boarded at 1330 hrs. 31st July and completed rigging hatches at 1900 hrs. Loading commenced at 2230 hrs. and completed at 1210 hrs. 2nd August. All gear and labour off vessel at 1220 hrs. At the start there was no co-operation from the stevedores and repeated requests for information regarding which side doors and which hatches and derricks were required to be rigged met with no response until such time as the riggers boarded. It was then expected that the vessel could do everything at one and the same time. To commence only starboard side doors were used but on completion of No. 5 hatch it was decided to work No. 2 hatch both sides, once again no mention of doubling No. 2 hatch was made although the question had been asked repeatedly, the stevedore assured the Chief Officer that the port side doors would not be required. No information regarding quantity of bananas to be loaded or number of Bills of Lading was forthcoming and there was a very definite language barrier until it was made clear that any Bills would be claused "mixed". From this point co-operation improved and the language problem became less difficult. During loading there were numerous delays for weather, machinery breakdowns on the barges and waiting for cargo to arrive alongside. Before cargo operations commenced vessel was requested to "point" the ship using a rope from the port quarter to the port anchor cable and this was attempted with varying amounts of cable paid out, before operation could be completed the wind died down and wind and tide were acting against one another with result that operation was ineffective.

Turbo must now be regarded as being on a par with "ports" regarding theft and all precautions taken, many horrific reports on theft were heard from other vessels; however, if vessel was obviously taking all precautions then generally after being looked over, vessel is left alone. One case concerning a crew member and radio took place but his property was recovered by Cargo Supervisor and Customs Official, although culprit was not apprehended.

SHIPMASTER'S REPORT: August 1981.
Pilots are now compulsory at Turbo and board with the inspection party off Pta. las Vacas. They also board after loading is completed and leave off Pta. Vacas.

The larger United Brands banana vessels now use overhead conveyors for loading instead of the sideports.

AGENT'S REPORT: September 1989.
Anchorage: Vessels should anchor for clearance 1.5 miles to 2.0 miles West of Punta de las Vacas.

For anchorage area or Pilot Station, please see Navigation Chart.

Arrival: Vessels can arrive at Pilot Station at any hour; for the entrance there are aids lights, all of which are marked on the Navigation Chart. It is compulsory to arrive at Pilot station at Punta de las Vacas; no other area of anchorage is permitted within territorial waters.

Ballast: While in Colombian waters vessel should not throw refuse overboard, or contaminate the Gulf with ballast or bilge residues.

Cargo Handling Facilities:
In the Uraba Zone there are 3 shipping enterprises:
C.I. Uniban S.A.
C.I. Proban S.A.
C.I. Banacol S.A.

They all have the necessary infrastructure such as bongos (roofed barges) and zungos (floating docks with conveyor belts and tugs) to bring bananas to ships. Bananas are shipped in boxes or on pallets.
Capacity of each bongo: 8,500 banana boxes.
Capacity of each belt: 1,300 – 1,500 boxes per hour.
Bananas are also exported on pallets.

Warning: During night navigation it should be kept in mind that small craft, barges and long log rafts are often unlit in the anchorage. Also, the National Army Coast Guard may request information.

Communications:

Authority	*Mode*	*Call Sign*
Port Authority	VHF	Capitania
National Army	VHF	Apostadero
Maritime Agents		
Turbaduana	VHF-Telex-Fax	Turbaduana
United Brands Co	VHF-Telex-Fax	Almendros/Casanova
Colsemar	VHF	Colsemar

C.I. Proban S.A.	VHF-Telex-Fax	Casanova
C.I. Banacol S.A.	VHF-Telex-Fax	Banacol
Pilotage		
Copimur	VHF	Estacion Pilotos
Marcom	VHF	Estacion Pilotos

Customs:
Clearance takes place between 0800 hrs. and 1700 hrs. Ships arriving outside these hours may obtain Port Authority's permission to proceed to anchorage/loading place, and the official visit will take place the next morning.

Density: As a result of non-salt waters of Leon and Atrato Rivers that flow into the Uraba Gulf, the density is approximately 0.950. There are no fluctuations in draft caused by density.

Documents:
Clearance from last port.
5 copies Crew List.
5 copies Passenger List.
5 copies Provisions List.
3 copies Personal Effects List.
1 copy Vaccination List.
2 copies of a List of No Passengers, No Arms, No Munitions, No Drugs.
3 copies of Manifest of Cargo in Transit.
6 copies of the Cargo Manifest.

The following valid certificates.
Pollution Policy.
Sanitary Certificate.
Load Line.
Cargo Ship Safety Radio and Radio Telephony Certificates.
Cargo Ship Safety Equipment Certificate.
Cargo Gear Inspection Certificate.

Entrance: The approach is said to offer no difficulty, but as the coastline extends further West than charted, a berth of at least 2 miles is recommended in the vicinity of Point Turbo and Southward.

Please take into account the small ships travelling through the Gulf and also "Punta Yarumal" similar to "Punta de las Vacas" as sometimes Masters have been confused and anchored there. See Navigation Chart.

ETA: Please advise ETA 72, 48, 24 and 12 hours prior to arrival.

Fire Fighting Tugs: At present time there are no facilities.

Harbour: Turbo is a natural port, there are no facilities such as docks or jetties.

Harbour Authorities: Harbour Master (Capitania de Puerto) and National Customs (Aduana Nacional).

Health and Medical: Only general medicine. In an emergency, cases may be sent to Medellin by plane.

Dental services available.

Ice: Not available in Turbo.

Obstructions: No difficulties with draft.

Pilotage: Compulsory for arrival and sailing. See Navigation Chart.

Location:

a. Pilot Station – Punta de las Vacas:	Lat. 08° 04′ N.	Long. 76° 46′ W.
b. Turbo (Village):	Lat. 08° 05′ N.	Long. 76° 44′ W.

Slop Reception: There are no facilities.

Supplies: There are no ship chandlers. The Agent can obtain some fruits, vegetables and some other provisions.

Towage: Only the Shippers have tugs.

Trade and Shipping: The main trade is banana export of about 43,000,000 boxes per year through the 3 enterprises Uniban, Banacol and Proban.

Another secondary activity is the transportation of wood between Turbo and Barranquilla.

Watchmen: On vessel's arrival, 2 Customs Officers come onboard on official duty, to control import and export cargo; they remain on board until the vessel sails. This service is compulsory and the Master is requested to provide meals and accommodation.

In order to prevent robbers, stowaways, foreign people, etc., it is possible to make a contract with a Private Security Firm "Vigilar de Uraba", which costs US $ 2.00 per man/hour. This service is requested by owners or charterers.

Vessels with cargo for USA, normally use 2 men per hatch to be loaded and vessels bound for Europe, normally use 4 men per vessel.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Comoros

PORT DZAOUDZI (Ile Mayotte): 12.50 S. 45.10 E.

SHIPMASTER'S REPORT: August 1982 (updated 1988).

Mayotte Island is situated in position Lat. 12° 46′ S., Long. 45° 13′ E. in the Indian Ocean and known to be one of the Comoro group of Islands, but it is under the administration of French Government. It has no connection with the Comoro Government. Therefore, vessels calling "Zaoudzi" should hoist French National flag. Population is mostly Muslims. The island is surrounded by a barrier reef which is broken by many small passages but the main passage to arrive Ilot Zaoudzi is via Passe Mount Zamboro. This passage is deep but very narrow with a width of 9 cables safe water in between the Eastern extremity of Recif du Nord and the N.W. extremity of Grand Recif du Nord-East. It leads to the anchorage off Ile Pamanazi and the Ile Dzaoudzi, where vessels work cargo on anchor moorings. The maximum draft permissible is 40 ft. The inhabitants of the island speak French, Arabic and a mixture of Somali and other African languages. There is nobody who can speak English, therefore care should be taken while arranging Pilot and entry to the Zaoudzi harbour.

DOCUMENTS: On arrival Harbour Master and Customs Officer boards the vessel.

Customs Officer Requires: 2 copies Cargo Manifest; 2 Crew Lists; Bonded and Provision Stores Declaration Lists. (2 copies).

Harbour Master Requires: 2 Crew Lists; 1 Vaccination List; 1 copy Cargo Manifest.

No other documents are asked for. Agent does not require any documents, not even ship's papers. Agents are only interested in ship's husbandry.

PILOTAGE: Pilotage is compulsory for vessels over 40 m. LOA. Messages to Agent or Pilot Office are to clearly indicate which Pass the vessel will use, ETA at Pilot Station, LOA and max. draft.

Pilot boards vessel about 1.5 miles off M'Zamboro Passage. Only one Pilot available.

Pilot available from sunrise to sunset in M'Zamboro Passage and throughout 24 hours via Baudele Passage for vessels with draft up to 5.0 m.

ANCHORAGES: Vessels should only call or enter the barrier reefs in daytime, that is from sunrise to 1 hour before sunset. Therefore, daytime approaches should be maintained. There are no good anchoring grounds outside or inside Recif du Nord. Vessels arriving after hours have to keep on steaming until day breaks. However in case of emergency a temporary anchorage can be made on Banc de la Prudente, 2 miles N.W. of Ile M'Zamboro. This anchorage should be used with utmost care because of poor holding ground. In case vessels can cross barrier reefs and shallows from the Passe M'zamboro entrance to Bancs Jameaux (position: Lat. 12° 40′ S., Long. 45° 08′ E.), then she can anchor in depths where it is safe and sound, or she can make, if time permits, to arrive straight to Zaoudzi anchorage.

Anchorage Around Dzaoudzi: According to wind season, anchorages are fixed North or South of Dzaoudzi, near Dzaoudzi or Mamoutzou, according to freight destination.

MAX. SIZE: There is no restriction on the size of the vessel, because there are no berths. Every vessel has to anchor and work cargo, however drafts are taken into consideration. Max. draft permitted 40 ft. (12.19 m.). Vessel's engines and steering should be very reliable while navigating through passage to Zaoudzi.

HEALTH: All persons are required to have valid health certificates against Cholera. Yellow fever vaccination not required, but can be arranged if ship requires.

COMMUNICATION/ETA's: It is the vessel's duty to communicate ETA at Pilot Station 24 hours prior to arrival to Pilot Office (Telex No. 915807 MY) or to Agent (Telex No. 915811 MY) and confirm by VHF Channel 16 when 24 miles off.

Satellite Station permits direct contact by telephone or telex worldwide.

On arrival off M'Zamboro passage vessels can call "Zaoudzi Harbour Control" on VHF Channel 16. The range of their VHF is about 25 miles. Therefore vessels can call "Zaoudzi Harbour" when 25 miles off and arrange passage through barrier reefs to Zaoudzi. Pilots are always booked by cable, because it takes a long time for Pilot to arrive outside M'Zamboro Pass from Zaoudzi.

TUGS: One tug of 700 h.p. belonging to the French Navy. A tow boat is available for towing the barges and lighters.

BERTHING: There are no berths, all vessels have to anchor.

MEDICAL: Good hospitals are available in Zaoudzi and Momutzu. All kinds of cases are dealt with.

STEVEDORES/CARGO HANDLING: Agents work as stevedores, they arrange lighters and labour. There is no limit in ordering labour but lighters are limited. Therefore cargo discharging rate is affected.

If continuous flow of lighters is available then bagged cargo could be discharged at the rate of 100–150 tons per hook per day. There is no night work. During Ramadan they work from 0700 hrs. to 1600 hrs. and no work in the night. During normal days they work from 0700 hrs. to 1900 hrs. There is no floating crane. About 6 steel barges and remainder are wooden sail boats which carry 10 to 20 tonnes at a time.

DENSITY: 1025.

FRESH WATER: Abundance of fresh water on the island but no arrangements to supply to the ships. In case of emergency naval barge which has desalting plant can supply small quantity of evaporated water (up to 40 to 50 tonnes) provided it is arranged 7 days in advance. This is very expensive, therefore it should be avoided.

PROVISIONS: Very small quantities of meat, fish, vegetables and fruits are available. Ship's personnel can only go and buy it. There is little variety of vegetables or fruits. Vegetables: Lettuces, local spinach, French beans, local onions and potatoes, etc.

Fruits: Apples from South Africa, bananas, coconuts and when in season pineapples are available but in small quantities.

FUEL: Nothing can be arranged.

CONSULS: No Consulates. Difficulties if any, can be handled by Mayotte Administration.

REPAIRS: No workshop. No repairs possible by shore persons.

GANGWAY WATCHMEN: This is a very peaceful island, no pilferage, therefore watchmen are not kept or arranged.

OPENING/CLOSING HATCHES: It is normally done by ship but in case of frequent rains and with special cargo like rice or wheat, extra labour could be arranged with Agents.

CUSTOMS ALLOWANCES: No restrictions on any type of goods. Bonded stores are not sealed, therefore no limit on allowances.

CARGO GEAR: Only ship's gear is used, however rope slings are arranged by the stevedores.

SHORE LEAVE: No restrictions on shore leave and no passes are issued.

REPATRIATION: There are three flights a week from Ile Pamanzi Airport to Reunion Island only, i.e. on Tuesday, Thursday and Saturday. Repatriation can be arranged on these days.

TIME: GMT plus 3 hours. No variation in the time throughout the year.

HOLIDAYS: French administrative holidays i.e. 1st January, 1st May, and 25th December (Christmas Day), the local people enjoy Muslim rites holidays such as Eid-ul-Fitar, Eid-ul-Azha, 10th of Muharam holidays. The labour works on Saturdays and Sundays.

GENERAL: *Communications: While at Anchor:* Ships are allowed to use their transmitters for sending cables. However, cables can be sent through Agent. Ship to shore communication is by VHF Channel 16 for Port Control and Pilot Office and VHF Channel 12 with Agent's office, during office hours only.

Currency: French franc is the local currency. There are two banks: Banco de Franco, (one on Zaoudzi Island and other on Mamuzu). U.S. dollars can be changed either at the banks or direct at shops. No other currency is accepted in the shops.

SHIPMASTER'S REPORT: February 1989.

VESSEL: 18,700 g.r.t., 12,175 n.r.t., 31,275 d.w.t., 170 m. LOA, 26 m. beam, Summer draft 11 m., arrival draft 11 m.

APPROACHES: The vessel arrived off Ile Mayotte at 0100 hrs. and stopped engines about 10 miles off Recif du Nord and drifted till 0500 hrs. (daybreak), then steamed in towards the entrance and picked up pilot at 0600 hrs., about 2 miles N.E. of M'Zamboro Pass. At the original position of stopping the ship, the current set E.S.E. at about 1 knot. At the pilot boarding grounds the current set in the reverse direction, i.e. Westerly at 1.5 knots. This reversal of current is a regular feature in that area, and has to be kept in mind while approaching the pilot boat.

Charts: B.A. Charts No. 2110, 563 and 2741. Chart No. 2741 is not very accurate, and gives a false impression of the critical area around the Bancs Jumeau. The French Hydrographic Chart No. 6240 (Published May 1959; Edition No. 2 November 1968; large corrections: No. 1 February 1974; small corrections: 1988 - 2229) is a much more accurate and a larger scale chart, and is used by the pilot for reference.

DOCUMENTS: 4 copies Crew List, 1 copy Vaccination List, 1 copy Cargo Manifest, 1 copy Bonded Stores List, 1 copy Personal Effects List.

These were taken ashore by the pilot for the Harbour Master and the Customs.

No Customs, Port Health or Immigration Authorities boarded during vessel's stay of about 30 hours. The bonded stores were not sealed. Agents do not board unless the Master needs some service. They can then be contacted on VHF Channel 12, Call sign "Smart Dzaoudzi".

PILOTAGE: Pilotage is compulsory for vessels exceeding 35 m. in length. There is only one pilot there. He is a very good and experienced ex-Navy pilot, who works for the Harbour Master's office, and not the French Navy. If he is indisposed or away on leave, a French Navy pilot stationed on the island can substitute for him for short periods. For longer periods or whenever necessary, a pilot is flown from France.

Pilotage Movements: (A) Daily from 0600 hrs. to 1800 hrs. by M'Zamboro Pass. Deep drafted vessels are taken in and out at time of high water when passing the 8.8 m. and 10.0 m. patches off the Bancs Jumeau, E.S.E. of Cap Douamougno.

(B) 24 hours for small vessels using Bandele Pass.

The pilot boards from a blue-hulled launch with white superstructure, about 2 miles N.E. of the entrance between the reefs, with the beacon on Cap Douamougno in line with Dziani Bole peak, bearing 202° (T). If the vessel has arrived at night, the pilot boards at the break of dawn, otherwise at the next high water.

Note: The M'Zamboro Pass is well buoyed throughout, and according to the Pilot, not a single buoy has been carried away by rough seas or dragged out of position during the last six years, contrary to information given in the Sailing Directions (South Indian Ocean Pilot – 1971, page 205, lines 41, 42).

It is also not true that the beacon on Cap Douamougno is difficult to see, as reported in Supplement No. 11, 1987, to the above pilot (39S corrected to 21.3.87). All the beacons constituting leading marks are painted white and are placed in prominent positions, and are highly visible, at least in normal weather conditions.

There is no night pilotage as none of the beacons or buoys are lit at present. The local authorities are hoping to get a financial allocation from the government for installing the necessary lights within the next year, but it is unlikely that the work will be completed in less than 3 years.

MAX. SIZE: Max. draft 11.5 m.

RADIO/VHF: Agents: Smart Dzaoudzi. Telex No. 0935-915811. When near the island call on VHF Channel 12.

Pilot/Harbour Master: Telephone by SATCOM via Sans Lys Radio No. 19269 60 19 16. Pilot also on VHF Channels 16 and 14.

TANKERS: Tankers of between 30,000 – 37,000 tonnes d.w.t. have been using the port. After arriving off Ile Pamanzi the vessel is turned around, heading outwards, approximately N.E.'ly and moored with both anchors down (4 shackles on the port anchor and 6 shackles on the starboard anchor in our case), and the stern made fast to 2 mooring buoys, one on each quarter, with 2 stern lines out from each quarter, passed through fairleads with a fore and aft separation of 10 m. to 15 m. between them.

This berth is just off the muddy beach fronting the Army Oil Terminal on the N.W. side of the Ile Pamanzi.

A small Navy tug of about 800 b.h.p. assists in pushing and holding the stern of the vessel in position between the buoys against the tide while a Navy mooring boat with Naval personnel runs out the lines.

The tug is very expensive, and the charge is made by the minute. We used the tug for only 14 minutes, but this depends entirely on the pilot, because he is the person who calls out the tug by VHF at the time he estimates that the ship will be in position for the tug to commence assisting.

DISCHARGING: After mooring is completed, Army personnel from the terminal board the ship to assist in connecting the hose. There is a submerged pipeline to the shore tanks, the outer end of which is kept buoyed near the berth. This is hoisted up on board by ship's derrick or crane (on either side, in our case it was on the port side), and connected to the ship's manifold. The flange size is 6 in. only, and we had to use our bunkering reducers to connect up to the cargo manifold.

The line can take a discharge pressure of max. 8 kg./sq.m. at the manifold. This gave us an average discharge rate of only 130 cu.m.p.h. for 3 grades of products.

An Army Loading Master attends on board during the discharging operation, and an Army soldier sits in the Cargo Control Room, watching the gauges throughout.

For discharging about 3,200 tonnes of products of 3 grades, the vessel stayed in port for about 30 hours.

After completion of discharge, the tanker has to give a water push to the last product to clear the submarine pipeline. This takes about 30 minutes.

MEDICAL: Excellent medical facilities are available if required.

SHORE LEAVE: The Agent has to obtain permission from the Immigration Authorities, and then arrange the necessary boat service.

GENERAL: *Population:* There is a total of about 60,000 inhabitants, mostly of mixed Asian and African origin, and about 5,000 French nationals.

Provisions: There were no ship chandlers in evidence. One has to do one's own shopping. Except for bananas and coconuts, everything else is imported from France, Madagascar, Reunion Island, etc., and therefore expensive, and available in small quantities.

AUTHORITY: Mr. Le Capitaine du Port de Dzaoudzi, Representation du Gouvernement, B.P. 20, 97610 Dzaoudzi, Republic of Comoros. *Tel:* 19 (269) 60.10.33. *Telex:* 915810 MY.

AGENT: There is only one Agent at the moment who is M/S Societe Mohoraise d'Acconage de Representation et de Transit (short form SMART), Dzaoudzi Mayotte. Cable address: SMART Dzaoudzi. They work ship to shore communication via VHF Channel 12 – only during office hours i.e. from 0800 to 1600 hrs. If one wishes to communicate during night hours, one should call VHF Channel 16 and ask Port Control to inform "SMART" to call the ship on VHF Channel 12, then communications can be established.

NOTES

Please also advise Shipping Guides Ltd.

People's Republic of Congo

DJENO TERMINAL: 04.56 S. 11.54 E. (See Plan)

LOCATION: The loading point is located 3,800 m. from the coast in position Lat. 4° 56′ 35″ S., Long. 11° 54′ 15″ E., that is to say 9.5 miles S.S.E. of the main Pointe Noire Lighthouse.

NAVIGATION:

Djeno Lighthouse: Position Lat. 04° 55′ 01″ S., Long. 11° 55′ 45″ E.

The Terminal has a prohibited area which is covered by the red sector of light. No vessel may enter this area between depths of 50 m. and 70 m. as there are offshore production installations, underwater pipelines and the loading point within the red sector from approximately S. 3° W. to S. 73° W. Also vessels may not proceed inside 25 m. depth of the red sector without a Pilot on board.

The lighthouse has the following characteristics:

17 m. metallic tower, aluminium colour;

Light is regular occulting light at 4 second intervals, light 29 m. above MHWS.

Range of white light 18 miles and red light 15 miles.

SBM: Equipped with radar reflector and white light with 60 flashes per minute, range 6 miles. The floating pipe extending over a radius of 245 m. round the buoy is lit by small white intermittent lights.

PILOTAGE: Compulsory. Pilotage is carried out by Pilots from Pointe Noire (See "Shipmaster's Report"). Call signals for the Pilot are those provided for by the International Code. The pilot station keeps a permanent watch on VHF Channel 16. Pilot boarding position: Lat. 4° 47.44′ S., Long. 11° 48.10′ E.

Limits of Pilotage Zone: South, parallel 5° 07′ S.; West, meridian 11° 46′ E.; North, parallel 4° 42′ S.

During the day, when leaving the mooring, request for Pilot is to be made to the Port Commander's Office 3 working hours before the hour of departure. If vessel is ready to leave and the Pilot has not boarded, he may be called by means of the following signal, International flag "G" and at the same time 3 long blasts on the ship's whistle.

If departure should be during the night, request for Pilot should be made to the Port Commander's Office before 1700 hrs., indicating as near as possible the probable time of departure.

Should any changes take place in the time of departure the Port Commander's Office is to be advised at least 1 hour in advance in order that the vessel should not incur any surcharge. During these hours call for the Pilot shall be made at the Port Commander's Office by the ship's Master or his representative.

Sound Signals: The use of ship's whistle is forbidden between 1700 and 0600 hrs.

Should Pilot be required at any time on a Sunday, order should be placed before 1200 hrs. on Saturday. Should a Pilot be required on a public holiday, order should be placed by 1700 hrs. on the day prior to holiday.

ANCHORAGE: Vessels loading at Djeno may anchor in Pointe Noire Roadstead, 1 mile North of the Outer Dyke Light.

MAX. SIZE: Maximum permissible draft 16 m. (52 ft. 6 in.). However, Elf Congo may reduce this draft if weather conditions are unfavourable. Also see "Berthing".

HEALTH: The Pilot may act for the Hygiene Department, Pointe Noire if instructed to do so by Pointe Noire.

RADIO: Call signal "TNA".

Permanent watch on 500 and 2182 khz from 0600 to 1800 hrs.

Transmits on 8,722 kHz	from 0930 to 0945 hrs. (GMT)
	from 1030 to 1045 hrs. "
	from 1330 to 1445 hrs. "
	from 1530 to 1545 hrs. "
	from 1730 to 1800 hrs. "
on 13,101 kHz	from 0630 to 0645 hrs. "
	from 0730 to 0745 hrs. "
	from 0830 to 0900 hrs. "
	from 1700 to 1715 hrs. "

Elf Congo Terminal: Watch VHF Channel 12 – 156.1 MHz whilst tanker at the loading point.

Pointe Noire Office: Call signal: "Echo Lima". Watch radiotelephony – 2182 kHz.

Port of Pointe Noire Management: Permanent watch on VHF Channel 16.

Advice of Arrival: Tankers shall have their arrival at Djeno notified by their consignees 72, 36 and 24 hours in advance.

Thereafter, they shall notify any appreciable change in their ETA.

TUGS: Three tugs available from Pointe Noire. 1,000 h.p., 600 h.p. and 1,800 h.p. Request for tugs should be made at least 3 hours in advance and before 1700 hrs. if required during the night. For berthing, mooring boats will be supplied by Elf Congo.

BERTHING: The loading point of Elf Congo at Djeno is of an SBM type, with single mooring at the bow.

The vessel is moored by the bow to a buoy consisting of a cylindrical frame of diameter 10 m. and 4.35 m. high.

This buoy is moored by chains to 6 drilled piles. Anchor moorings extend over a radius of 300 m. around the buoy.

A 40 in. sea-line connects the tank farm with the loading point; the buoy is connected to the sea-line by 2 lines of flexible hoses 20 in.

The loading point is provided for the mooring and loading of full-loaded tankers of approximately 40,000 d.w.t. – 140,000 d.w.t. and half-loaded tankers of 240,000 d.w.t.

Depth of water at the buoy is 22 m.

The connection between buoy and tanker is by 2 floating flexible hoses, approx. 220 m. long and 20 in. in diameter, each ending in a length of 16 in.×30 m. flexible hose. Connection to the tanker manifold is by 16 in. hose.

Notice of Readiness: Shall be sent to Elf Congo.

MOORING: Mooring ropes supplied by Elf Congo. The vessel shall be ready to take aboard two mooring ropes, one on the starboard bow and the other on the port bow. Each rope consists of 45 m. of nylon of 14 in. circumference and 5 m. of 47 mm. diameter chain. Each rope is equipped with a polypropylene lead of 10 in. circumference, 105 m. long for one and 45 m. for the other.

Leads are passed to the vessel by a motor boat. The vessel shall have two ropes ready at the bow to take them aboard.

Mooring can be carried out by day as well as by night, weather and sea permitting.

The derrick shall be rigged before arrival on the port side with a minimum hook SWL of 10 tons.

The ship's manifold shall be made ready on the port side for connection of the two 16 in. flexible hoses.

Flexible Hoses: Loading of vessels carried out through 2 lines of 220 m. of 20 in. flexible floating hose, terminating in 2×20 m. sections of 16 in. flexible hose. Manifold connections on board shall be 16 in. ASA flanges. Elf Congo can supply 12 in. to 16 in. reducers.

During connection and disconnection of the flexible hoses, assistance by the crew is essential, in particular for the handling of the winches and derricks. During the whole stay of the vessel at the loading point, the Pilot shall maintain safety watch on board and also assume the duties of head of loading in the absence of a representative of Elf Congo.

The Elf Congo service vessel shall remain at the disposal of the Pilot and shall remain alongside the tanker or nearby. A ladder must be kept permanently alongside the vessel so as to permit access by the team in charge of the flexible hoses.

LOADING: Loading may be carried out with a maximum flow of 8,000 cu.m./h. with two pumps or 5,500 cu.m./h. with one pump.

Inspection of tanks after deballasting and after loading shall be undertaken in the presence of the Elf Congo loading representative.

The Terminal shall place on board the vessel sealed samples of the cargo.

20 minutes before the end of loading, the vessel shall warn the Terminal by VHF so that pumping may be stopped accordingly.

The ship's Master shall be fully responsible for the manoeuvring of the valves and safety of the cargo on board.

DEBALLASTING: The Djeno storage installation is not equipped to receive dirty ballast. The vessel shall, therefore, arrive with a clean ballast.

Any vessel arriving with dirty ballast may be forced to leave the loading point and delay arising therefrom shall be fully incumbent on it. Acceptance of Notice of Readiness will be rectified accordingly.

It is forbidden to throw into the sea any cinders, burning materials, objects and waste of any kind.

The ship's Master shall be responsible for any leaks on board. Such leakage shall be stopped immediately.

Scuppers shall be plugged during the whole loading time.

SAFETY: The ship's Master shall be responsible for safety aboard the vessel at all times. Sufficient crew members must be aboard the vessel at all times for handling moorings and fire appliances. The vessels main engines must be kept ready at all times. A watch should be maintained to ensure that no undue stress is placed on the moorings and that the floating pipe-lines do not rub against the vessel. Also the vessel should not be allowed to come into contact with the single buoy mooring which may be caused by changes in current, wind direction or other reasons.

Smoking outside of authorised area, use of naked lights, or tools liable to cause sparks not allowed.

Vessel's anchors should be secured in the hawse pipe. No repairs allowed whilst at the mooring also no stores or equipment may be handled on the deck whilst at the mooring.

Whilst Loading: All hull valves shall be kept closed except those required for water circulation. The scuppers on the main deck shall be blocked. Two fire hoses shall be connected and placed one at each end of the vessel. The fire lines should be under pressure at all times.

If there is a fire aboard a vessel moored at the SBM, the following sound signal shall be given on the vessel's whistle: continuous short blasts. The Master of the vessel shall immediately take charge of fire fighting operations.

MEDICAL: There is one hospital, 2 clinics and several doctors.

FRESH WATER: Drinkable water at quays inside the Port of Pointe Noire or by tanker of 200 tons in roadstead under shelter (minimum delivery 100 tons).

FUEL: Not available at Djeno. Vessels proceed to tanker berth at Pointe Noire.

CONSULS: At Pointe Noire: French Consulate, Tel: 94.00.02. Federal German Consulate, Tel: 94.00.10.

REPAIRS: Workshops at Pointe Noire. Facilities for repairing radar and radios.

WATCHMEN: Compulsory.

TIME: GMT plus 1 hour.

AIRPORT: 6 km. from the Port of Pointe Noire. 1 or 2 flights daily to Brazzaville. 1 or 2 flights daily from Brazzaville to Europe.

GENERAL: *Charts:* French chart No. 3357 and B.A. chart No. 3206.

Stores: A ship chandler at Pointe Noire can supply vessels with any foodstuffs required.

Territorial Waters: The sovereignty of the Republic of the People o Congo extends to 30 nautical miles as from the lowest sea watermark along the coast.

Boat Service: A motor boat can be rented through the consignee. El Congo motor boats must not be used by the tanker crew except for a urgent medical evacuation.

Meteorology: The rainy season extends from November to May with maximum in February and March.

Visibility: Visibility can be reduced to less than 1 mile in June, Jul and August.

Sea: Mean density of the sea at the loading point is 1025. Se temperature varies between 27°C in February (austral Summer) an 22°C in August (austral Winter).

Tide: Tide is of a semi-diurnal type. Mean amplitude of spring tides is 1.60 m.

Wind: S.S.W. generally less than 15 knots.

Swell: Generally S.S.W. less than 2.50 m. with periods of 10 to 12 seconds.

Current: Sector S. to S.S.E. generally less than 1.5 knots on surface. The current can change to the North without any apparent reason for a period rarely greater than 2 days.

SHIPMASTER'S REPORT: September 1984.

Documents: Documents required: 3 each of Crew Lists, Vaccination Lists, Stores & Crew Declaration. 2 each of Passengers (or Nil) List, Birds and Animals, Narcotics, Arms and Ammunition. 1 Notice of Readiness. All paperwork carried out by Loading Master.

On departure, vessel steams slowly back to Pointe Noire while calculations and papers are completed on board.

Pilotage: Pilot and Loading Master boarded from pilot boat which has speed of about 20 knots.

On departure, the Pilot, Loading Master and Cargo Surveyor left using an inflatable dinghy. They prefer the ladder on the starboard side. The tug carries 2 inflatable dinghies.

Anchorages: For tankers waiting to berth at Djeno the indicated anchorage off Pointe Noire was found to be good with thick grey mud. Gear for mooring and hose connecting put on board from tug at anchorage. The tug then goes to Djeno to standby.

Tugs: There is a small buoy N.E. of the SBM and the tug moors there when not working.

Mooring: While mooring, tug is used to keep hoses clear.

Loading: Cargo Surveyor boarded while deballasting. Used combination accommodation ladder/pilot ladder on port side. Pilot, Surveyor and Loading Master stay on board.

OPERATOR: Elf Congo, Terminal de Djeno, B.P. 761, Pointe Noire, Congo. *Tel:* 94.20.41. *Telex:* Elfco 8239 Kg. and 8277 Kg.

POINTE NOIRE: 04.47 S. 11.49 E. (See Plan)

PORT LIMITS: *Pointe Noire Pilotage area limits:*

South:	5° 07′ S.
West:	11° 46′ E.
North:	4° 42′ S.

DOCUMENTS: On arrival, the Master must hand over to:

The Agents:

4 Crew Lists.
4 Lists of Crew Boys.
4 Passenger Lists or negative.
4 Lists of Ports of Call.
2 Lists of Crew Personal Effects.
2 Stores Lists.
5 copies of Cargo Manifest.
1 List of Narcotics.
1 List of Arms.
1 List of Ammunition.
1 List of Animals.
Master's copy of B/L.

Harbour Authorities:

1 Arrival Form issued by Port of Pointe Noire.
1 Departure Form issued by Port of Pointe Noire.

Health Authorities:

1 Vaccination List for crew members.
1 Declaration of Health (form issued by the port of Pointe Noire).
Vaccination cards for the whole crew.

PILOTAGE: Compulsory. Telegraphic address: Harbour Master's Office of the Port of Pointe Noire. Pilot station can be contacted by VHF Channel 16; 24 hour service.

Boarding position: Pilot boards 1 mile North of the green channel light buoy.

Tankers awaiting a Pilot for the SBM at Djeno should wait 2 miles West of the main light at Pointe Noire.

APPROACHES: *Shipmaster's Report:*

The approach to Pointe Noire from the West using Chart 4105 Freetown to Luanda is clear of dangers as far as our experience goes. After crossing the 200 m. (100 fathom) line, the soundings are consistent with a gently shelving coast until there is 30 m. – 40 m., 3 miles West of Pointe Noire breakwater.

Approaching Pointe Noire from the West the radar picture of the coast about 20 miles North of Pointe Noire is very similar to Pointe Noire itself. This could confuse and lead one to think that the ship is further South than she really is, but the cluster of oil rigs should be a good guide.

There is a cluster of oil rigs with flares S.S.W. by 13 miles from Pointe Noire main lighthouse, with another cluster about due South by 17 miles, both good radar targets. Do not go in between these clusters. Watch out for numerous small dugouts, etc. fishing.

Oil rigs with 1 flare in position Lat. 4° 28.8′ S., Long. 11° 15.4′ E.

RESTRICTIONS: Minimum draft allowed for ore-carrying vessels of more than 130 m. drawing alongside at Quay G: 20 ft. aft and 15 ft. forward. Max. draft allowed for all vessels: 31 ft. at any hour. Max. draft allowed for ore carriers leaving Quay G is 34 ft. 4 in. (1 hour before high tide). Tying to mooring buoy can be done only between sunrise and sunset.

Max. draft tankers 33 ft. 6 in. Tankers to enter in same period as departing ore carriers (1 hour before high tide).

HEALTH: Port Health Officer boards immediately on berthing. Compulsory vaccinations: Yellow fever and cholera.

RADIO: Pointe Noire Radio, call sign TNA. Continuous service on 500 and 2182 kHz from 0600 to 1800 hrs. GMT. Transmission on 8722 kHz. TNA from 0930 to 0945, 1030 to 1045, 1330 to 1445, 1530 to 1545, 1730 to 1800 hrs. GMT; on 13101 kHz. TNA from 0630 to 0645, 0730 to 0745, 0830 to 0900, 1700 to 1715 hrs.

Shipmaster's Report: If vessel is coming from the South it is advisable to pass messages through Luanda.

RADAR/VHF: The Harbour Master's Office has a VHF set (call Channel 16) but no radar.

TUGS: 2 tugs 1,800 h.p. and 900 h.p. Tugs normally join the vessel as soon as it crosses the passage. The vessel's own lines are usually used.

BERTHING:

	Length	Draft Permitted
Quay D: Berth 1	720 m.	24 ft.
" 2		26 ft.
" 3		28 ft.
" 4		29 ft.
" 5		29 ft.
Quay G: Ore Berth	530 m.	34 ft. 04 in. (See "Restrictions")
Tanker Berth	—	33 ft. 06 in.
Mole 1: Timber Berths	350 m.	31 ft.
Lighter Berth	—	12 ft.

Potash Berth: 4 miles Southward of Pointe Noire. Max. draft 44 ft.

STEVEDORES: The Agent requires the following information 48 hours in advance, in order to arrange gangs: precise ETA; number of gangs required for unloading/loading; distribution per hold unloading/loading; draft, fore and aft – before 0600 hrs. in the morning on weekdays counting as overtime; before 0600 hrs. Saturday mornings for the weekend or day before holiday also counted as overtime.

MEDICAL: Notice for medical attention not needed. There are 2 private clinics.

TANKERS: Diameter of loading/unloading lines: 6 in.=aircraft fuel. 10 in.="white product". 12 in.=1500 fuel. Hoses=8 in.

Also see "Djeno Terminal".

DENSITY: 1025 on average. Only slight variations according to tides.

FRESH WATER: 2 hoses can be connected at each berth. Rate: 20 t.p.h. per hose.

FUEL: Ordered from suppliers: Hydrocongo. Pipe-line supply to tanker berth and Berths No. 1 and 8.

FIRE PRECAUTIONS: The port must be informed of ETA of tanker 24 hours in advance.

CONSULS: France, Tel: 94.00.02–94.00.03. Germany (F.R.) 94.00.10.

REPAIRS: Most repairs for the deck and engines are possible. Also facilities for electronic repairs.

DRY DOCKS: One slipway for vessels up to 800 tons.

GANGWAY/DECK WATCHMEN: Compulsory for tankers and gas carriers.

OPENING/CLOSING HATCHES: Usually the crew's responsibility. Can be carried out by the stevedore for payment.

CUSTOMS ALLOWANCES: No limit – must be stated on crew declaration, and quantities must be accurately stated.

CARGO GEAR: Derricks to be in good condition. There are 2 cranes at the new jetty.

REPATRIATION: Every facility for crews equipped with a crew card and passport.

AIRPORT: 6 km. from the port. 1 to 2 flights per day to Brazzaville. 1 to 2 flights per day from Brazzaville to Europe.

TIME: Local time is GMT plus 1 hour.

HOLIDAYS: 1st January (1 day's holiday); 1st May (2 days' holiday); 31st July (1 to 2 days' holiday); 15th August (2 to 3 days' holiday); 1st November; 25th December (1 day's holiday).

POLICE/AMBULANCE/FIRE: Police 17; Fire 94.00.49; Ambulance 94.00.49, 94.21.98.

TELEPHONE: Cannot be connected on board ship but there is one in the middle of Quay D for the use of vessels.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Seaman's cards or passport needed.

PORT REGULATIONS: In the event of congestion, vessels are obliged to work at night and on Sundays, and if they refuse to do this, they may be relegated to the roadsteads and thereby lose their turn to draw alongside.

DELAYS: *Shipmaster's Report:* Occasionally tankers are delayed for long periods as the shore tanks may be full.

GENERAL: As the Congolese Customs are very strict, the drawing up of the Store List and Crew Declaration should be carried out very carefully, as the slightest error is penalised and a fine imposed.

Stores are expensive and not easily obtainable. Fish available, also fruit and vegetables but not in the Rainy Season.

SHIPMASTER'S REPORT: Mail takes between 3 days and 7 days from Pointe Noire to Paris, and Pilot assures that it is reliable.

SHIPMASTER'S REPORT: March 1980.

Pilotage: Compulsory. Pilot boards in position 4° 45.5′ S., 11° 45.9′ E. 24 and 12 hours notice required.

Anchorage: Position 4° 47.2′ S., 11° 49.4′ E.

Restrictions: Vessels able to enter and leave at any stage of the tide day or night.

Max. Size: Max. draft 31 ft.

Health: Quarantine Authority require 12 hours notice of arrival.

Tugs: 1 tug available.

Radio: Luanda or Portishead. No replies locally.

VHF: Pilot and Port Authority on Channel 16.

Berthing: Position 4° 46′ S., 11° 50′ E. Distance from entrance to berth less than 1 mile. Nature of bottom sand and mud. Vessel able to dock and undock at any stage of the tide day or night. There are facilities for loading coal in bulk. No quay cranes available, ships gear used. There is no link span for Ro/Ro vessels. Usual precautions taken with regard to security, no losses suffered. There is sufficient equipment for handling palletised cargo. Ship's gear is used for handling containers and the necessary shore equipment is available.

Density: 1025.

Fresh Water: Available.

Fuel: Bunker fuel oil, diesel oil and lubricating oils available.

Medical: Doctor and hospital available.

Provisions: Fresh provisions available but expensive as they are flown in from South Africa. Meats and groceries also available.

Repairs: Small repair facilities and small machine shop available.

Airport: Local airport with flights to Brazzaville.

SHIPMASTER'S REPORT: July 1987.

When approaching the port from the N.W., vessel should steer 105° T directly towards Dique Exterieure Head Lt. When 5 miles off steer 090° T for 2 miles thence about 100° T, shaping towards the anchorage and keeping at least 5 cables off the land. We disregarded the 148° T leading line on BA. Chart No. 3285 due to shoaling taking place to the North and West of West Breakwater. Sight the green conical buoy on the starboard hand and stop the ship some 5 cables off the breakwaters, heading about 170° T, directly towards the entrance. The green buoy will be about 2 cables abeam to starboard at this position. The pilot will then board from a launch on the port side, manropes and bulwark ladder required.

The Petroleum Pier (P.P.) is situated 3 cables directly inside the harbour entrance. 2 tugs, pushing only, and 1 mooring boat, even though 2 mooring boats are normally available. Vessel berthed Port side alongside. No photography allowed.

Moorings: Forward: 4 headlines to shore, 2 forward head springs to dolphin. Aft: 2 aft back springs to dolphin, 2 stern lines to a hook buoy, 2 long stern lines to shore with lashings.

Berthing and sailing at any time during daylight hours on 31 ft. draft, or 3 hours before to 2 hours after HW on 33 ft. 06 in. maximum draft. Density 1025.

1 × 8 in. Chicksan connection, loading rate about 875 cu.m/h., temperature of fuel oil 140° F.

The Officials are French speaking and are courteous and obliging if all in order. The following boarded, 6 Customs Officers, 2 Immigration Officials (shore passes required), 2 Port Health Officers (vaccinations up to date), 1 Agent, 2 Harbour Masters, 1 Port Captain (Safety Check List and dates of SOLAS Certificates inspected), 1 Loading Master and 1 Charterer's Representative.

No port watchmen, firemen, security etc., and no extra meals required. Loading Master advises that mugging, etc. prevalent on the shore.

Weather: Dry season from mid-May to mid-September, when cloudy and cool. The remainder of the year is hot, wet and humid.

AUTHORITY: Direction du Port de Pointe-Noire, P.O.Box 711, Pointe-Noire, People's Republic of Congo. *Tel:* 94.00.52.

AGENT: Ponteco-Socopao, BP 664/714, Pointe Noire, Peoples Republic of Congo. Cable address "Freight Pointe Noire". Tel: 94.11.20, 94.11.21. Telex: 8201, 8300 and 8252. Fax: 94.31.75.

Cook Islands

AVATIU, (Including Avarua) Rarotonga: 21.12 S. 159.47 W. (See Plan)

DOCUMENTS:

Health:	International Maritime Declaration of Health. 1 Passenger List 1 Crew List
Customs:	(Immigration) 2 Manifests of Cargo showing weight or measurement (basis on which freight calculated). 2 Crew Lists. 2 Passenger Lists (landing and transit). Each disembarking passenger to complete a landing card and baggage declaration. Clearance from Last Port.
Agent:	5 Manifests of Cargo. 1 Crew List. 1 Passenger List.

PILOTAGE: Not compulsory at present. However, Pilot available. Arrange through vessel's Agent 24 hours notice of ETA. Pilot boards from 35 ft. steel tug *Avatiu*. Craft painted blue hull, white superstructure. Tug equipped with VHF Channels 6, 12, 14 and 16. Pilot normally boards 0.75 miles off entrance Avatiu on line of leads.

ANCHORAGES: *Avarua:* As shown on Admiralty Chart No. 1264. Prevailing wind is S.E. and the anchorage is safe except in some instances when wind and/or sea are fresh from N.W. through N.E. 4 to 5 shackles of cable in the water has been found the most satisfactory in normal circumstances in 25 fathoms.

RESTRICTIONS: None. Anchorage, in 25 fathoms, is well defined with cross leads.

MAX. SIZE: No restrictions.

HEALTH: Vessel should radio "Porthealth Rarotonga" not less than 24 hours before arrival giving ports of call for preceding 3 weeks, number of crew, number of passengers, state of health and requesting Free Radio Pratique.

RADIO: Call sign ZKR continuous listening watch on 2182, 4125 and 8198 kHz, also Channel 16 on the VHF. Weather forecasts are broadcast daily by R/T on 2207 kHz, and 8291.1 kHz at 0615 hrs. GMT and 1815 hrs. GMT after a preliminary call on 2182 kHz.

VHF: Harbour Master has VHF for communication between vessel and office on Channels 6, 12, 14 and 16. Listening watch on Channel 16 between the hours 0800 – 1200 and 1300 – 1600 (local time) from Monday to Friday. Harbour Master can be contacted after hours by arrangement through vessel's Agent.

TUGS: Small tug available (1.25 ton bollard pull) to assist with mooring.

BERTHING: *Avatiu:* Vessels berth port or starboard side too as may be necessary, berth 328 ft. in length having a maximum depth alongside of 6.2 m. below MSL. Inner Overseas Berth, length 128 m. Outer Overseas berth, length 135 m. Swinging basin for vessels not over 270 ft. in length. Draft 18 ft. aft, 16 ft. forward.

STEVEDORES: Arranged by ship's Agent or Waterfront Commission.

MEDICAL: Medical and hospital facilities available. International vaccinations/inoculations required depending on prior ports of call.

TANKERS: Small tanker from Fiji, using ship's 4 in. hose for discharge. The LPG shore manifold is sited at the Northern corner of No. 1 shed. The oil shore manifold is sited at the Northern corner of No. 3 shed in Avatiu Harbour.

DENSITY: 1025.

FRESH WATER: Available in limited quantities (alongside berth).

FUEL: Available by delivery trucks.

CONSULS: New Zealand and Nauru are represented.

REPAIRS: Only minor repairs possible such as welding and repairs to pumps and other auxiliaries.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: By crew or stevedores to vessel's convenience.

TOBACCO ALLOWANCE: 200 cigarettes, or half pound tobacco or 50 cigars.

WINE AND/OR SPIRIT ALLOWANCE: Allowance is 1 opened bottle of either wine or spirits, or a reasonable quantity of beer per person, for consumption on board. Under no circumstances may any wines, spirits or beer be brought ashore.

CARGO GEAR: Ship's gear for discharging and loading, 2×12 ton heavy lift cranes available.

REPATRIATION: Confined to repatriation of crew landed for hospitalisation.

AIRPORT: Rarotonga International Airport is 2 miles away.

TIME: GMT minus 10 hours. Daylight Saving Time (GMT minus 9.5 hours) from last Sunday in October to first Sunday in March.

HOLIDAYS: Cargo cannot be worked on any Sunday or on Good Friday and Christmas Day. Other Holidays: Boxing Day (26th December); New Year's Day; Easter Monday; ANZAC Day (25th April); Queen's Birthday (1st Monday in June); Constitution Celebrations (4th Monday in August).

POLICE/AMBULANCE/FIRE: Ring exchange operator or dial 999, 998 or 996.

TELEPHONES: No connection available at present. Telephone available at Wharf Gate for emergency services.

IDENTIFICATION CARDS: Not required.

SHIP SUPPLY SERVICE: There are no ship-to-shore services available as a regular daily schedule. However, there are occasions when vessels are anchored off the Avatiu Harbour or in the 'Roads' that requests for boat transport are provided by the small tug of the Department of Trade after application by the Shipping Agent for its services.

The Agent is The General Manager of the Waterfront Commission. Telex: 62002. Rarotonga, Cook Islands.

GENERAL: Bananas available at times. Green vegetables are always difficult to obtain. Oranges, lemons, mandarines available March-August, pineapples November-February.

DEVELOPMENTS: Harbour development at Avatiu although not completed, is currently in use and accommodating vessels of about 2,200 tons and 320 ft. in length.

No. 2 shed to be demolished and a container terminal to be constructed.

On completion of dredging a turning circle of 130 m. will be available.

AUTHORITY: Department of Trade, Labour & Transport, P.O.Box 61, Rarotonga, Cook Islands. *Telex:* Shipping RG 62202. *Cables:* Labcom, Rarotonga. *Contact:* Joseph Caffery, Secretary for Trade, Labour & Transport. Ioane Iro, General Manager, Waterfront Commission. Captain H. M. Besetimela, Harbour Master.

NOTES

Costa Rica

GENERAL:

DOCUMENTS: *Prior to Arrival:* Arrival Notice: In practice, owing to the closeness of other ports of call, the shipping Agent notifies the Port Authority 48 to 72 hours in advance of the vessel's arrival. 24 hours before the vessel's arrival in the Pilot Waiting Zone, the Agency must report in writing to the Port Authority (Dockmaster) the vessel's time of arrival and the company that owns it. 12 hours before arrival, the time of arrival is confirmed, also in writing. One of these two written notices must contain the distribution list of the cargo to be unloaded, although failure to submit this information shall not delay docking. In addition, the number of longshoremen for loading and unloading, and if necessary, the number of launches or feluccas that will be required if the pier is occupied on both sides (Puntarenas) must be reported. Failure to confirm the time of arrival may result in losing the vessel's turn in docking.

Copies of the arrival notice should be sent to the Port Captain's Office, which performs the functions of Migration, Customs Administration, Customs Security, Delegate of the Ministry of Agriculture and Livestock (MAG) and the Veterinary Health Officer. In addition, copies must be submitted to the shipping agent and Customs for them to report to their clients on the arrival of the shipments and to initiate import procedures.

Information on cargo for the port:

It is recommended that the shipping Agency send by airmail 2 Cargo Manifests and 2 copies of the Bills of Lading; 1 copy of each document shall be kept for the Agency's internal use, and the other shall be used to report to the Customs Agents and the cargo consignees.

On Arrival:

Type of Documents	Number and Distribution of Documents					
Basic forms	*Captain of Port*	*Customs*	*Maritime Health*	*MAG*	*Port Authority*	*Total*
General Declaration	1	1	–	1	–	3
Cargo Manifest	12(a)	5	–	–	3	20
Crew List	3(b)	–	1	–	–	4
Passenger List	1	1	1	–	–	3
Ship's Stores List	–	1	1	1(d)	–	3
Crew Effects Declaration	–	–	–	–	–	–
Maritime Health Declaration	–	–	1	–	–	1
Mail Guide	–	–	–	–	–	1(e)
Additional Documents:						
Visaed Clearance Permit	1	–	–	–	–	1
Consular Manifest	–	2	–	–	–	2
Crew List (f)	–	1	–	–	–	1
Passenger List (f) (g)	1	1	–	–	–	2
Maritime Health Declaration (f)	–	1	–	–	–	1
Cargo Tally Books	–	15(h)	–	–	–	15

(a) To be distributed among Customs agents.
(b) A copy remains in the control booth at the exit of the port area.
(c) Sometimes checks vaccination certificates.
(d) Inspects meat in ship's stores (Ministry of Agriculture & Livestock).
(e) If there is a mail bag, the list is submitted to the ship's Agent.
(f) With consular visa.
(g) A visaed "no passengers" declaration is also required, when appropriate.
(h) For use of Customs and the Port Authority.

Other Requirements:

The Agency must provide a card to each crew member and passenger, which is stamped by the Captain of the Port and filled out on board. The card is used when passengers and crewmen go ashore and return on board the ship.

Prior to Departure:

The clearance permit is requested from the Captain of the Port 24 hours in advance of the ship's departure, or immediately upon its arrival, if the ship is to remain less than 24 hours in the port.

The clearance permit requires Customs Clearance (certification that there are no charges pending) and remains in force up to 24 hours after the requested departure time.

HEALTH: Vessels must be in possession of a Maritime Sanitary Declaration signed by the Master. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limits of territorial waters until clearance is given.

RADIO: *Arrival Notice:* Agents must be advised 24 hours and 12 hours prior to ship's arrival indicating amount of cargo to be discharged in metric tons. This information is required by the Port Authority.

Radio Station: Call sign: TEC (Tango Echo Charlie).
Position: 09° 58′ 56″ N., 84° 48′ 36″ W.
1300 GMT-1500 GMT, working 8,472.0 kHz (A1A), listening Channel 5.
1500 GMT-1530 GMT, working 8,291.1 kHz (J3E), listening Simplex.
1530 GMT-1600 GMT, working 12,429.2 kHz (J31), listening Simplex.
1600 GMT-1800 GMT, working 13,058.0 kHz (A1A), listening Channel 7.
1800 GMT-2100 GMT, working 8,472.0 kHz (A1A), listening Channel 5.
2100 GMT-2130 GMT, working 8,291.1 kHz (J3E), listening Simplex.
2130 GMT-2200 GMT, working 12,429.2 kHz (J3E), listening Simplex.
2200 GMT-0000 GMT, working 8,472.0 kHz (A1A), listening Channel 5.
On VHF 24 hours, working Channel 16.

Transmitting traffic list at H-00 each hour, on the frequency and hour indicated above (from 1300 GMT to 0000 GMT).

TUGS: Compulsory for berthing and unberthing. 2 tugs available. 1×1,700 h.p. and 1×1,800 h.p.

BERTHING:

No. of Berth	*Length (m.)*	*Depth (m.)*	*Max. d.w.t.*
1	210	11.0	25,000
2	150	10.0	15,000
3	130	7.5	5,000

For Berth Nos. 4 and 5 – see "Puntarenas".

CARGO HANDLING FACILITIES: The port is equipped to handle general cargo, containers, Roll-on/Roll-off and solid bulk cargoes.

Cranes: Mobile cranes and stacker trucks of varying capacities, also other modern port equipment. See "Port Equipment".

Bulk Cargoes: The Port Authority owns and operates a discharge system with pneumatic suction units and silos for storage.

Port Equipment: In its first stage, operations at Caldera will be supported by the following equipment:
Fork lifts: 28×3 ton, 5×6 ton, 1×10 ton, 1×35 ton.
Flat Beds: 20×8 ton, 5×30 ton.
6 Towing tractors.
4 Mobile cranes from 10 tons to 127 tons.
3 Trucks.

Containers: Container reefer station with capacity to handle 40 TEU's.

STEVEDORES: The Port Authority provides stevedores throughout 24 hours.

Gangs must be ordered at the following times: At 0700 hrs. to commence working at 0900 hrs., 1200 hrs. or 1500 hrs. At 1500 hrs. to commence working at 1800 hrs., 2000 hrs. or 0800 hrs. the following day.

MEDICAL: Medical services can be provided at a clinic in the port or at a hospital in Puntarenas.

TANKERS: *Caldera Bay:* Buoy mooring for tankers about 1,000 ft offshore. Vessels moor using starboard anchor and lines to 3 buoys astern. Hoses connected on port side by ship's crew.

FRESH WATER: Provided by the Port Authority at all berths.

FUEL: Available by road tanker, arranged by Agents.

FIRE PRECAUTIONS: Vessels must comply with all the port requirements regarding fire prevention, contamination and safety to navigation within the port.

GANGWAY/DECK WATCHMEN: At the discretion of the Port Authority. All vessels anchored in the port must be adequately covered by watchmen service.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 100 km. Served by KLM, Eastern, LACSA, COPA and NANICA. Various flights daily.

TIME: Local time is GMT minus 6 hours.

HOLIDAYS: January 1st, March 19th, Holy Thursday and Good Friday, April 11th, May 1st, May 29th, Saint Peter and Paul, July 25th, August 2nd, August 15th, September 15th, October 12th, December 8th and December 25th. The port works throughout 24 hours, except Good Friday.

TELEPHONE: Telephones may be placed onboard on request. International and local telephone and telex services available on shore.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: On landing, crew members and passengers in transit must carry identity documents which are to be submitted to the Port Authority.

REGULATIONS: The vessel, the Owner and his Agent must comply with all the arrangements set out in the Port Services Regulations and the General Tariff. The Port Authority will supply these regulations on request.

GENERAL: The new Port of Caldera commenced operating in 1982. Since commencing operations at Caldera, Puntarenas is considered as an extension of the port of Caldera. Caldera has a marginal wharf of 490 m. long consisting of three berths. The outer berth or Berth No. 4 at Puntarenas and the inner berth or Berth No. 5 are at Puntarenas. Both of these berths are out of service due to their poor condition.

Please note that Puntarenas is now strictly for handling bulk cargoes and Caldera is for break-bulk and container operations.

DEVELOPMENTS: In the medium term, the second stage of the port complex of Caldera will be constructed, with which the current capacity will be doubled to 1,200,000 tons per annum.

CALDERA: 09.54 N. 84.43 W. (See Plan)

LOCATION: The Port of Caldera is located in the Gulf of Nicoya in position Lat. 09° 54′ 44″ N., Long. 84° 43′ 14″ W.

DOCUMENTS:
2 Certified copies of Clearance from Last Port.
2 Certified copies Crew Lists and 6 copies for distribution.
2 Certified copies Passenger Lists and 6 copies for distribution.
2 Certified copies Cargo Manifest and 25 copies for distribution.
2 Certified copies Stores/Provisions List and 6 copies for distribution.
3 Sets of Bills of Lading.
Construction Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
Cargo Gear Book.

PILOTAGE: Pilots are available and compulsory, arranged by Agents.

ANCHORAGE: Anchorages are defined on a chart supplied by the Port Authority (approx. position 09° 55′ N., 84° 45′ W.).

RESTRICTIONS: None. Vessels can enter or depart at any time.

MAX. SIZE: Max. LOA 205 m. Max. draft 10 m.

SHIPMASTER'S REPORT: October 1982

Draft: Forward 5.6 m. Aft 8 m.

Pilot: Pilot boards vessel 2 miles S.W. off end of breakwater.

Tugs: 2 tugs available, one is compulsory for berthing. We employed one pushing and the other as a line boat taking 2 stern lines ashore.

Berthing: Vessel let go port anchor to 2 shackles in water with view to it being used to draw vessel away from quay on leaving.

Line Gangs: Good – 4 men per gang.

Tie-up: 4 headlines and 2 springs each end. This proved sufficient throughout stay, even though moderate surge from swell was experienced.

Gangway: A shoreside gangway was available and used. Gangway/line watchman was provided by Port Authority.

Quay: Modern concrete construction 490 m. in length. 50 tonne bollards and good solid, non spring loaded rubber fenders – both placed every 20 m. along quay.

Electricity, telephone and water all supplied to wharf.

Cargo: Port has good lighting and good sized sheds. Container storage area under construction.

No shore side cranes at present – proposed 40 tonne capacity container gantry.

Fork lifts are plentiful and in good working order.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, Caldera, Costa Rica. *Tel:* 63-41-51. *Telex:* 6045. *Contact:* Winfield Lawrence Tom I., Operations Manager.

Institute Costarricense de Puertos del Pacifico, Apartado 545-1000, San Jose, Costa Rica. *Tel:* 23-71-11. *Telex:* 2793 Pocni.

GOLFITO: 08.37 N. 83.10 W. (See Plan)

DOCUMENTS:

2 certified copies of Clearance from Last Port.
6 certified copies of Crew List and 6 copies for distribution.
6 certified copies of Passenger List and 6 copies for distribution.
2 certified copies of Cargo Manifest and 25 copies for distribution.
4 certified copies of Stores Provisions List and 6 copies for distribution.
3 sets of Bills of Lading.

PILOTAGE: No Pilot in port. Cia. Bananera sends a launch to guide vessel to quay if requested. Arrival has to be notified at least 24 hours in advance.

ANCHORAGES: Anchorage area to S.E., diagonal towards end of quay. Depth: 35 ft. – 50 ft. Area 1,000 m. by 300 m. approx. Quay distance: approx. 500 m. Sufficient space for 4 vessels.

RESTRICTIONS: Vessel allowed to enter at any time, day or night.

MAX. SIZE: Length of quay is 1,040 ft., enough for two vessels to berth, one in banana berth and the other in cargo berth, each one of 450 ft. Depth 35 ft. alongside.

HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.

RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400 – 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

TUGS: No tugs. A launch from the Cia. Bananera takes lines from vessel to quay.

BERTHING: Vessels berth starboard side to. Vessels of Cia. Bananera have preference.

STEVEDORES: Cia. Bananera controls gangs. Advance notice required. Work possible 24 hours a day.

MEDICAL: Cia. Bananera has a hospital for its employees. They can give assistance if a request through the Agency has been made 24 hours in advance. On arrival of vessel a valid vaccination certificate of each member of crew has to be shown.

TANKERS: Can berth in cargo area if length is less than 450 ft., depth is 35 ft. Diameter of pipe-lines 8 in. and 6 in.

FRESH WATER: Cia. Bananera supplies any quantity at a rate of 50 t.p.h. through shore hoses.

FUEL: Diesel and fuel oil available from time to time.

CONSULS: Nicaragua, Honduras and Panama represented locally.

REPAIRS: Cia. Bananera of Costa Rica has a workshop that can do small repairs such as soldering or small winch repairs.

GANGWAY/DECK WATCHMEN: Available but not compulsory. Customs guard on gangway.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: No limit on board but only one packet cigarettes when going ashore. No alcohol may be taken ashore.

IDENTIFICATION CARDS: Required.

REPATRIATION: Can be arranged.

AIRPORT: Airport one mile from port. Serviced by two airlines "Lacsa Airlines" with two daily flights, one at 0700 hrs. and the other at 1030 hrs. "Ave Airlines" offer only one daily flight, Sundays included, at 0700 hrs. "Lacsa" has no Sunday flights.

TIME: GMT minus 6 hours.

HOLIDAYS: 1st January, no work can be arranged; 19th March, work at double time; Easter Thursday, no work can be arranged; Easter Friday, no work can be arranged; 11th April, work at double time; 1st May, no work can be arranged; Corpus Christi, work at double time; 29th June, work at double time; 2nd August, work at double time; 15th August, work at double time; 15th September, no work can be arranged; 12th October, work at double time; 8th December, work at double time; 25th December, no work can be arranged. Stevedores are not obliged to work Sundays and holidays if not voluntary.

POLICE/AMBULANCE/FIRE: It is sufficient to ask operator for connection with the desired department.

TELEPHONES: No facilities on board vessels.

SHORE LEAVE: Crew are allowed on shore.

DELAYS: Only when quay is occupied by vessels of Cia. Bananera de Costa Rica, which have preference.

SHIPMASTER'S REPORT: January 1980.

Documents: As per "Guide to Port Entry". Documents to be certified by Costa Rican Consul at last port.

Pilotage: No Pilot available.

Restrictions: It is advisable to berth and unberth during daylight hours. Vessel can enter and leave at any stage of the tide.

Max. Size: Safe draft in channel 30 ft. Mean tide range 10.5 ft.

Tugs: None available.

VHF: Agent on Channels 16 and 14.

Berthing: Vessel berthed at the Banana Wharf which is 2 miles from the entrance and is 1,000 ft. in length. There is a banana elevator at the N.W. end.

Docking: Starboard side alongside: Approached Golfito as per Pilot Book, steering North until leading marks bear 047° then steer on leading marks at dead slow speed to pass 2 cables S.E. of Beacon 'A'. With ebb tide running vessel sets to the S.E. when approaching Beacon 'B'.

Vessel stopped and way taken off when about 3 cables from wharf, then proceeded to a position between Beacon 'F' and shore to attempt to turn round to port with port anchor on the bottom, however anchor did not hold against engine, so hove up anchor and turned short to starboard. Final approach to wharf made at an angle of about 30°, let go port anchor when approaching close to wharf and canted stern well in to wharf to pass heaving line. No noticeable current when close to wharf. When in position, port anchor had 3 shackles in water.

Unberthing: Left on ebb tide with another vessel moored close astern. Singled up to headline and spring forward, tightened up on anchor cable and hove on headline to cant stern off. Very short ahead movements and full starboard rudder necessary to achieve this, as current had little effect. Anchor did not hold sufficiently to pull head off the wharf, so came astern on engine until sufficiently clear of wharf to make port turn to leave harbour.

Very little wind on docking or undocking.

Facilities: The following are available: Fresh water, fresh provisions, minor repairs, airport, telex, bunker "C", diesel oil, doctor and hospital.

No dry docking facilities, no laundry service and no lubricating oils available.

Consuls: Nicaragua, Honduras and Panama.

General: Cautions: Beacon 'G' destroyed (January 1980). Rear range lights/marks 047° have very little horizontal separation. There is a small buoy in the approximate position of Beacon 'G' but exact position not established.

If vessel is loading on the Banana Berth, the secondary leading marks will probably be obscured by that vessel's superstructure.

Poor holding experienced when anchoring off the berth.

SHIPMASTER'S REPORT: July 1984.

Documents: As per "Guide to Port Entry".

Pilotage: Not available.

Restrictions: Vessels may enter/leave at any stage of the tide day or night as long as the lights are working and they are familar with the port.

Max. Size: Max. LOA 680 ft. Max. draft alongside 30 ft. Tidal range 10.5 ft. Limiting conditions are the swinging room between Beacons "4-G" and "6-F" and the wharf.

Tugs: None available or necessary.

Radio: Limon Radio "TIM" and Slidell Radio "WMU".

VHF: Bananera on Channels 16, 14, 6 and 8.

Berthing: See "Report" below.

Density: 1010.

Equipment: 1 small mobile crane. 4 banana elevators. 2×3 ton fork lift trucks.

Report: Berthing at Golfito:

From a position 2.8 miles due South of Curupacha Point Light the vessel was turned onto the channel leading marks (047°T) and speed reduced to pass Beacon "H-2" at dead slow ahead, a course of 049°T was required to maintain the leads in line with Buoy "4-G". Beacons "4-G" and "6-F" have now been replaced with square white buoys, same light characteristic as the original beacons. S.S.W. of Beacon "B-3" turned onto leads 036°T. Both these leading marks are quite small and the front triangle is not easy to make out against the steel work of the shed.

A very small tidal stream was observed passing Beacon "4-G" setting approximately West.

Rounding Beacon "4-G" the ship was swung to starboard to bring the channel marks 2 points on the port bow then commenced swinging to port using engines and rudder the ship was brought to within heaving line distance and a head line landed, the vessel now lying at approximately 45° to the wharf. Despite several engine movements she would not swing any further to port. The line boat (an old ship's lifeboat) lacked power, and dedication of the crew to pull a rope ashore in an attempt to land a stern line and control the stern while using the engine to back against the tide.The tidal stream was noticibly stronger the closer the ship came to the wharf, running parallel to the wharf in a N.W.'ly direction. After the failure of the boat to land a stern line I decided to berth port side to. By the time the stern line was inboard the vessel was being carried rapidly N.W.'wards and lying bows on at 90° to the wharf. The head line was let go and the vessel backed off to about 300 ft. and commenced swinging to starboard with the engines. Due to the stronger current closer to the wharf the swing to starboard was checked on each astern movement. The starboard anchor was let go to one shackle to control the bows. The use of the anchor proved very effective and the ship was steered alongside dredging the anchor through the mud. Berthing safely port side to at 1310 hrs., nearly 3 hours after HW.

Departure: Sailing time was set for 2 hours after HW with the tide running diagonally out under the wharf. Singled up to after backspring, head line and for'd spring and with all lines slack I expected the ship to be set off the quay by the tide, but she remained alongside.

The after spring was let go and the stern canted off by heaving on the head line, finally the engines were used against the for'd back spring to cant her to approximately 60° to the wharf. Let go for'd and came astern until the poop as in a line between Beacons "7-D" and "5-C" then commenced turning short around to starboard, the tide carried the ship down to line up on the 036°/216° leads nicely and course was set down the channel to sea.

Conclusions: 1. The ebb tide sets N.W. along the wharf and is about 50% stronger than the flood.

2. Berthing starboard side to is preferred as sailing is much easier at any state of the tide, but should not be attempted after HW.

3. Considering the ease with which the ship dredged the anchor I would say that the holding ground is poor and due to the limited swinging room and the necessity to use a short scope cable I would not recommend waiting at anchor within the harbour.

A safe waiting anchorage can be found approximately 6 miles S.W. of the entrance channel in depths of 60 ft., firm mud and shell.

4. No reliance should be placed on the line boat.

5. Use of the anchor should be considered when berthing either side to, even under ideal conditions, as this would greatly reduce the number of engine movements and conserve engine starting air.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 63-40-06 and 63-40-23. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Presidente Ejecutivo.

PUERTO LIMON: 10.00 N. 83.01 W. (See Plan)

PORT LIMITS: Limits considered as arrival are 0.5 – 1.0 mile distance from breakwater, anchorage is required.

DOCUMENTS: Required by Port Authorities at Port Limon:

2 certified copies of Clearance from last port. (Zarpe) (original and dup.)

Crew List, 1 original legalised copy. 5 copies not legalised.

Passenger List, 1 original, 1 copy. 5 additional copies not legalised (if no passengers carried, this must be stated on the same document).

Maritime Health Certificate, 1 original, 1 copy.

Provisions List, not legalised : 7 copies.

Stowage Plan, not legalised : Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (manifiestos de carga): From each calling port. 1 original, 1 copy. 30 additional copies, not legalised.

Bills of Lading: 4 sets.

Local Agents or General Agents require the following documents urgently, by Air Mail (Special Delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifest – copies
2 sets Ship's Declaration
2 sets Bills of Lading.

If there are Ocean Freight rates to be collected at destinations, please send Agent by Air Mail (registered), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards ship with Port Authorities about 1 mile from pier. Also see "Shipmaster's Report".

ANCHORAGES: All anchorages are South-West of "Isla Uvita" in depths between 34 ft. – 36 ft.

MAX. SIZE: See "Berthing".

HEALTH: In the event of contagious disease or fever being suspect on board, agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz – working hours 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, length, draft, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the Pilot office on Channel 16.

TUGS: Two tugs are available, each with a capacity of 850 h.p., these are required for berthing and unberthing.

BERTHING:

Berth No.	Usage	Depth Fore (ft.)	Depth Aft (ft.)	LOA (ft.)
1	Conventional	32	29	600
2	Conventional	25	26	400
3	Conventional	29	30	450
4	For small craft			
5	Conventional	12	16	300
6	Ro/Ro	28	30	300
7	Conventional	29	35	500
8	Conventional	30	30	500
9	Conventional	18	28	200
10	Ro/Ro	32	30	800
11	Containers	33	33	705*
12	Containers	33	33	705

*35 ton container crane available.

Note: Measurements are given in feet. Berths No. 1–2 have a length of 1,020 ft. In order to use Berth No. 2 Agents need to know or check LOA of the vessel at Berth No. 1, if it is less than 520 ft. it is possible to berth a vessel.

CRANES:

1 Portal Crane	10 ton capacity.
1 Grove Crane	30 ton capacity.
1 P & H Crane	50 ton capacity.
1 Liebherr Container Crane	45 tons, under hook, and 35 tons, under spreader.

STEVEDORES: ETA should be sent to Agent in due time. There are 2 stevedoring companies who work throughout 24 hours.

MEDICAL: No advance notice except in case of serious illness to be included in arrival notice, ample hospital facilities available.

TANKERS: See "Puerto Moin".

FRESH WATER: Available and obtained alongside pier delivered by hose, 1.5 to 2 t.p.h. cost $1.56 per ton.

FUEL: Any quantity can be obtained as there is a refinery at Limon.

CONSULS:

Colombia	Tel: 58.02.21	Nicaragua	Tel: 58.04.47
Ecuador		Norway	58.01.83
France	58.02.21	Panama	58.09.65
Honduras	58.03.13		

REPAIRS: Minor repairs only.

SURVEYORS: Lloyd's, ABS and Norske Veritas.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: One packet of cigarettes may be taken ashore. No alcohol may be taken ashore.

REPATRIATION: Facilities available.

AIRPORT: 5 miles from city. 2 daily flights (except Sundays) to San Jose International Airport. Also air taxi service to the whole country.

TIME: Local time minus 6 hours.

HOLIDAYS: Holidays and days on which the port will remain closed:

1st January from 1200 hrs. to 0600 hrs. following day; Holy Thursday and Good Friday from 0001 hrs. on Thursday to 2400 hrs. on Friday, 1st May from 0001 hrs. to 2400 hrs.; 12th October from 0001 hrs. to 2400 hrs.; 24th December 1800 hrs. – 26th December 0001 hrs.

POLICE/AMBULANCE/FIRE: Police Tel: 117; Red Cross Ambulance Tel: 580125; Fire Tel: 118.

SHORE LEAVE: Crew members are allowed to go ashore.

BANKS:

Banco Popular.
Banco Nacional de Costa Rica.
Banco Anglo Costarricense.
Banco de Costa Rica.

STORING: Vessel can be stored by truck, which can proceed alongside the berth, local riggers can be employed.

IDENTIFICATION CARDS: They are needed and supplied by the Agent.

GENERAL: There is a small surge alongside the berths in Port Limon, especially when winds coming from the South East, which occurs occasionally (August and September).

In Port Moin the surge occurs when winds come from the North, which occurs occasionally in the months of December and January.

SHIPMASTER'S REPORT: May 1984.

Before leaving Gulfport I contacted Standard Fruit Company at Boca Raton, Florida. They confirmed that the Pilot boards off Limon breakwater. They also confirmed that there is a heavy surge alongside the berths in Moin Bay due to the prevailing swell and that shore springs are not normally available at the cargo berths although they are supplied to tankers.

This vessel possesses 2×6 in. nylon tails and 2×3.25 in. mooring wires and these were made ready.

A cable was sent to the Agent at Limon requesting information concerning berthing arrangements. A reply was received to the effec that the ship would berth at the "German Wharf". This conveyed nothing to me at the time.

It turned out that the "German Wharf" is, in fact, the new containe berth in Puerto Limon. This berth does not appear on the navigationa chart but is shown in the "plan section" of "Guide to Port Entry".

The old banana berth at Puerto Limon is no longer used and all banan loading takes place at Puerto Moin. The Pilot confirmed that there is heavy surge at Limon/Moin and also that newcomers to the trade ar boarded off Limon whilst regular traders are met by the Pilot off Mo fairway buoy.

The "German Berth" is not supplied with shore springs and there a considerable surge alongside. We secured starboard side to usin 4 lines and 1 spring at each end plus the 2 wires with nylon tails. It considered that the latter are essential in this port as considerab chaffing of the polypropylene lines can be expected.

The berth is provided with very effective sprung fenders but these ensure that the ship is held several feet off the quay. No shore gangway is supplied and access was by way of the accommodation ladder which was landed on the quay at an angle of about 30° to the ship's side. To avoid damage to the ladder due to surge it is essential that particularly secure moorings be used.

A powerful tug is available at Limon and another at Moin.

PUERTO MOIN: 10.00 N. 83.05 W. (See Plan)

PORT LIMITS: See "Puerto Limon".

DOCUMENTS: Required by Port Authorities at Port Moin:

2 Certified copies of Clearance from last port (Zarpe original and dup).

Crew List: 1 original legalised copy, 5 copies not legalised.

Passenger List: 1 original, 1 copy, 5 additional copies; not legalised (if no passengers carried; this must be stated on the same document).

Maritime Health Certificate: 1 original, 1 copy.

Provisions List, not legalised: 7 copies.

Stowage Plan, not legalised: Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (manifiestos de carga): From each calling port 1 original, 1 copy, 30 additional copies, not legalised.

Bills of Lading: 4 sets.

Local Agents or General Agents require the following documents urgently, by air mail (special delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifests – copies.

2 sets Bills of Lading.

2 sets Ship's Declaration.

If there are Ocean Freight rates to be collected at destinations, please send Agent by air mail (registeres), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards off Puerto Limon breakwater if first visit. Regular visitors take Pilot near Puerto Moin fairway buoy.

Also see "Puerto Limon" – Shipmaster's Report.

ANCHORAGES: One mile off piers.

MAX. SIZE: See "Berthing".

HEALTH: In the event of contagious disease or fever being suspected on board, Agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz; working hours: 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the pilot office on Channel 16.

TUGS: Available if required.

BERTHING:

POLICE/AMBULANCE/FIRE: Police tel. 117; Red Cross ambulance tel. 58 – 01 – 25; Fire tel. 118.

SHORE LEAVE: Crew members are allowed to go ashore.

IDENTIFICATION CARDS: They are needed and supplied by the Agent.

GENERAL See "Puerto Limon".

AUTHORITY: See "Puerto Limon".

PUNTARENAS: 09.58 N. 84.49 W. (See Plan)

DOCUMENTS: See "Caldera".

PILOTAGE: Pilots are available and compulsory, arranged by Agent. Signal for Port Captain and other officials is 2 long blasts.

ANCHORAGE: Vessels should keep Eastward of four submarine cables originating at Puntarenas where suitable anchorage may be found in 6 – 7 fathoms depth. Vessels should anchor as near the pier as safety permits to facilitate boarding by port officials.

RESTRICTIONS: Recommended that vessels not equipped with radar enter in daylight only.

HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.

RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400-1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs to work on board. This information is required by Port and Customs Authorities.

TUGS: None available.

BERTHING: Vessels usually moor in daylight only. Unmooring night and day.

Muelle Nuevo: Pierhead runs East/West, connected to shore by 350 ft. gangway. One special heavy mooring line supplied from pier in addition to ship's ropes. Heavy surge experienced at the berth.

Berth No. 4 (outer berth): Length 140 m. Depth alongside 9.0 m. at LW.
Berth No. 5 (inner berth): Length 117 m. Depth alongside 7.5 m. at LW.
Berths No. 4 and 5 are out of service as they are in poor condition.

All cargo operations handled at Caldera.

Also see "Caldera" – General.

There are lighters available for hire for vessels working cargo at the anchorage.

STEVEDORES: Available for work 24 hours a day.

MEDICAL: Facilities available at Puntarenas.

FRESH WATER: Available only from pier at Puntarenas.

FUEL: Not available.

TIME: GMT minus 6 hours.

TELEPHONES: No connection to vessels.

SHORE LEAVE: Allowed at Puntarenas.

IDENTIFICATION CARDS: Required.

SHIPMASTER'S REPORT: 1978.

Anchorage: Vessel originally anchored in the area marked (Pilots) on Chart B.A. 1931, but subsequently moved in to a position with the Light on the Pier bearing 332°(T) – 9 cables and lay to the starboard anchor, 3 shackles, in 6 fathoms of water. Other ships and draft permitting, it is safe to anchor 5 cables off the pier.

This is a quiet, safe anchorage. A Pilot is not used arriving and sailing from the anchorage, but is compulsory if berthing.

Berthing: There are two berths on the pier. As the port was very congested, we remained at anchor.

Communications: With the Charterer's Agents when at anchor, were by VHF, Channel 16. Long-range communication was by radio.

Documents: As per "Guide to Port Entry".

Cargo Work: Due to congestion, we waited 3.5 days to start work, although we only had a small quantity of cargo for discharge. When work did start, discharge was continuous and at a good rate.

I understand that ships loading export cargo receive preference for labour.

Pratique: Granted on arrival.

Provisions: Available, but great care is necessary with regard to price and quality.

Fresh Water: Normally available only when alongside the pier. As we were very short of water by the time we had been in port for a few days, we managed to obtain a minimum supply from a tug. This can only be obtained as an emergency measure.

Shore Leave: A launch service was arranged through the Agents for this purpose.

General: It was noted that the Light on the Pier was flashing letter "P" in the Morse Code and was not Gp. Occ. (4) as shown on the Chart.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 61-06-28. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Executive President. Tom Winfield Lawrence, Operations Manager.

Also see "Caldera".

Cuba

GENERAL:

ARRIVAL ADVICE: ETA messages should be sent to Mambisas Havana when Havana is the first port of call, or to Mambisas (at port of call) and Mambisas Havana simultaneously, when the first port is other than Havana.

Mambisas Agency at the port where vessel was nominated for operation or call will advise Port Authorities and concerned parties, but this in no way relieves Masters from any specific obligation to advise other parties according to Charter Party, or orders received from Owners, Managers, Charterers, etc., to such effect. The following list of Agencies is in geographical order, starting from the Westernmost port Head Agency on the North coast (Mariel) in an Easterly direction, and from East to West on the South coast, ending at the sub-Agency of Nueva Gerona.

Mariel: (including Santa Lucia, Bahia Honda and Cabanas): Mambisas Mariel.
Havana: Mambisas Havana.
Matanzas: Mambisas Matanzas.
Cardenas: Mambisas Cardenas.
Isabela de Sagua: Mambisas Sagua la Grande.
Caibarien: Mambisas Caibarien.
Nuevitas: Mambisas Nuevitas.
Puerto Padre: (including Manati): Mambisas Puerto Padre.
Antilla: (including Banes, Felton, Preston, Nicaro, Tanamo and Vita): Mambisas Antilla.
Moa: (including Punta Gorda): Mambisas Moa.
Guantanamo: Mambisas Caimanera.
Santiago de Cuba: Mambisas Santiago de Cuba.
Manzanillo: (including Pilon, Niquero, Media Luna and Ceiba Hueca): Mambisas Manzanillo.
Guayabal: Mambisas Santa Cruz Del Sur.
Cienfuegos: (including Tunas de Zaza and Casilda): Mambisas Cienfuegos.
Nueva Gerona: Mambisas Nueva Gerona.

PILOTAGE: Pilotage is compulsory for all foreign and Cuban vessels at all Cuban ports.

Comments are made throughout the text by the Master who supplied us with an earlier booklet – such comments are reproduced in italics.

DOCUMENTS: Required on arrival at *every* port:

Sanitary Authorities:
1 Bill of Health.
1 Crew List.
2 Passenger Lists (if any).

Vaccination cards and Derat Certificate will be inspected by Authorities.

Immigration Authorities:
3 Crew Lists.
3 Passenger Lists (if any).

Customs Authorities:
3 Crew Lists.
3 Passenger Lists, including baggage (if any).
3 Crew Personal Effects Lists.
3 Copies Foreign Money List.
2 Provisions Lists.
2 Spares and Stores Lists.
3 Cargo Manifests (if any cargo on board).
3 In-Ballast Manifests (if no cargo on board).
3 Manifests of Cargo in care of the Master (if any).
1 Copy of Clearance from Last Port.

Agents:
4 Crew Lists.
3 Cargo Manifests
2 Copies each Bill of Lading.
3 Manifests of cargo in care of the Master.
6 Hatch Lists.
6 Stowage Plans.

Shipmaster's Comment: One Crew List returned to vessel stamped by Customs/Immigration for next port.

Certificates Required:
Ship's Register.
Safety Equipment.
Load Line.
Safety Radio.
Safety Construction.
Derat.

Instructions for Master of Vessel: How to process Custom's Model Dirad-7, in connection with crew's money control and personal effects.

Custom's inspector when boarding the vessel besides carrying out their usual duties, should deliver to the Master duly legalized, as many of these forms as members of the crew are reported on Crew List.

Legalization of these forms consists of Customs Inspector's signature, Customs stamps and consecutive numbering which indicates quantity of forms delivered to Master.

2. Ship's Master or Officer in charge should fill in only those spaces of the form as: crew member's name, number of passport, as well as ship's name and date of arrival in port, on the first page of the card.

Besides amount of money delivered to the crew member, date of delivery and signature must be shown as evidence that the crew member has been provided with the money, with signature of the Master alongside, all of this information appears on page 2 of the form (card).

In case crew member requires additional amount during vessel's stay in port, notation should be entered following the first, in same way.

3. No crew members, except the Master, are allowed to come in or leave the Custom House premises without presenting this form to the Custom's Inspector at the gate, who will enter therein the pertinent notations.

All these forms legalized by Customs must be carefully kept for subsequent delivery to Customs upon vessel's departure, even those that might become useless.

Should a crew member require more than 1 form because of that previously delivered having been filled up, or become useless, Master will give a new one which the crew member will present, together with the previous one, to Custom's Inspector at the gate. Thereafter, notations should be entered in the new form, the previous one must be returned to Master for subsequent delivery to Customs.

If at any time more forms are required because those previously delivered have become exhausted, they should be requested from Ship Clearance Department of the Custom House, phone 61-8572. After 1800 hrs. these should be requested from Guard Room, phone 6-9698.

4. Upon ship's sailing, Master will gather all the forms from the crew, delivering same to Custom's Inspector who boards the vessel and will perform the following verifications:

(a) To see that none of the legalization forms are missing.
(b) To verify that such forms have no alterations, erasures, etc.
(c) To add up total spent by all crew members and to verify it with amount settled with ship's Agents Consignatarias Mambisas.

5. Non-compliance with above instructions will subject the violator to corresponding penalty.

Director of Customs.

LOCAL TIME: Official local time in all Cuban territory is that for the 75th West Greenwich Meridian and there is a difference of 5 hours compared to GMT, that is, 1200 hrs. GMT is equivalent to 0700 hrs. local time.

From the last Sunday in April to the last Sunday in September, Summer Daylight Saving Time is in effect and the difference then is only of 4 hours, that is, 1200 hrs. GMT is equivalent to 0800 hrs. local time.

HEALTH AND SANITARY REQUIREMENTS: Free Pratique is automatic for vessels coming direct from another Cuban port; from foreign countries, usual procedure of Sanitary Inspection applies. In case of suspected disease or fever on board, Master must radio Mambisas Agency in order to advise the Health Office.

All crew and passengers must have vaccination cards up to date.

Below is copy of warning sent to us by a Ship's Master. The words in italics are the Master's comments.

National Veterinary Medicine Institute
Warning
Master:

You are kindly requested to comply with and acknowledge this warning regarding veterinary sanitary regulations and also to inform your crew members of same.

One Green Vet. Form given to ship to take to next Cuban port, one copy for ship also.

1. Refrigerators of vessels which contain in their victuals meat and meat products originated in countries declared as being affected with foot-and-mouth disease, Rinderpest, Vesicular stomatitis, African swine fever and other diseases non existent in the Republic of Cuba, shall be sealed while remaining in our territorial waters.

Sealed.

2. Milk, butter, cheese, fish and poultry products, as well as canned meat, and meat and meat products from Australia, New Zealand and Canada, are not subject to this procedure for the time being.

All victuals of animal origin must be declared to the Frontier Veterinary Services Officer.

3. Prohibitions:

(a) Arriving in port with live food animals (cattle, swine, poultry, etc.) on board, unless duly authorised by the Animal Health Authorities of the Republic of Cuba;

If pets on board – not allowed ashore.

(b) Unloading or releasing of any species of pet animals. These animals (birds included) are subject to quarantine control on board;

(c) Unloading of victuals of whatsoever origin, including those not subject to sealing procedures;

(d) Arriving in port with compartments or receptacles containing garbage;

Dump rubbish at sea 6 miles out from Cuba.

(e) Scattering of garbage containing food scraps, portions or other wastes of animal origin, or throwing them overboard into the sea or onto shore.

Cover garbage drums.

4. Ratguards must be placed once the vessel has docked.

Fines if not done or if they fall off!

5. Footwear and clothing of the crew members of ship coming from countries known to be affected with diseases dangerous to the fauna of the Republic of Cuba shall be subject to fumigation with formaldehyde gas.

6. Non-compliance of the sanitary regulations, or any action aimed to prejudice or evade them, shall be regarded as an offence liable to a fine of not less than $500.00 (Cuban Official Currency), or to the implementation, at the expense of the transgressor, of appropriate quarantine measures intended to minimise the consequences resulting therefrom.

The following is reproduced from a booklet given to Masters of arriving vessels. The booklet is produced by the Ships' Agent and dated 1983.

PORT REGULATIONS: In order that you may be properly informed, on not only Port and Cuban Government Regulations, but also on various matters related to the loading and/or discharging operations of your vessel, we wish to bring to your attention the following:

1. Crew Regulations (Important Notice to Masters)

(a) The Customs Authorities have put into effect new Regulations which the Masters of all vessels arriving at Cuban ports are under obligation to observe. The regulations in question are as follows

First: The Master must advise vessel's ETA at least 24 hours in advance and is obliged to deliver to the Customs Authorities at the port of arrival the complementary documents to the Cargo and Passenger Manifest, which comprise:

(a) Hatch List, Hazardous Cargo List, Stowage Plan, Provisions, Accessories and Spare Parts List, Narcotics List (crew's usage). Firearms List and Clearance Certificate (from previous Cuban port). Ship's Register must be exhibited.

(b) List of crew belongings including objects, property of each crew member which he maintains on board for his use, such as, for instance, electric shaving machines, watches, radios, soaps, etc. *(4 copies required at every port – Declare everything in personal possession).* See "Shipmaster's Report".

(c) Detailed list of all articles transported by crew members free of charge, including those which are for his use on board, or that may be destined to other persons (men, women or children), such as for instance perfume, umbrellas, dresses, ladies stockings and lingerie, cloth to make dresses, etc. *(4 copies every port – declare everything and place in bond.)*

(d) Foreign currency whether convertible or not, must be declared on a crew list. *(4 copies required every port – placed in ship's safe).*

Narcotics List – 4 copies morphine only. Provisions List – not listed but requested.

(e) Upon vessel's arrival the Master will be provided with money control cards for each crew member which must be carried by them when going ashore and shown to Custom House Inspector whenever requested.

(f) Each crew member must declare the articles referred to in paragraphs (b), (c) and (d) immediately upon vessel's arrival, since Harbour Officers may search the vessel at any time they should deem convenient.

Second: Each crew member may keep in his cabin up to 200 cigarettes and a bottle of spirits.

Third: The importation into, and the exportation from the Republic of Cuba of Cuban currency is forbidden, and no crew member may have in his possession any amount in excess of that delivered to him by Master from the cash advanced by the agency. *(Collected and sealed in safe).*

Fourth: Each crew member is allowed to have in his cabin, only those articles which are for his use on board. Any article in excess (more than 1 radio, 1 shaver, etc.) should be kept in the bond store.

Fifth: Any article not declared, or possessed by the crew member in excess of the amount allowed, also Cuban and foreign currency not properly accounted for, will be confiscated and should circumstances warrant, the courts of law will be informed, the latter having the right to impose penalties, or fines, depending on the value of the objects found in the crew member's possession. Immediately following the arrival of the vessel, the Master is under obligation to make these regulations known to each and every crew member, as the Customs Authorities will consider that the Master and the crew have been put on notice as to what is herein provided at the moment the vessel has been cleared through Customs, insofar as concerns any violation of the above referred to regulations.

Masters are likewise required to provide a place or space sufficiently ample to deposit the articles transported by the crew free of charge or, in other words, those articles referred to in paragraph (c) above.

Sixth:

(a) Crew members are not allowed to buy personal effects on shore, except in the sailors' or tourists' shops and the articles so obtained can not be sold to any other person.

(b) Except for the Pilots and the Public Health Officials, no other person can go on board and no crew member or passenger of vessels arriving at Cuban ports from abroad is allowed to disembark until the vessel has been cleared by the Immigration and Customs Authorities.

(c) Crew members, including Officers and Master, in addition to their standing Passports or Seaman's Books, must be provided with immigration passes (landing cards) to go ashore.

(d) Depending upon the characteristics and circumstances of the different ports there might be certain limitations in the hours the crew may remain ashore. Port Authorities, through the Agent will advise the Master accordingly.

(e) Shore passes are confined to the city limits of the port where the ship is lying and whenever a crew member requires to move away from the said area, the corresponding permit must be obtained from the immigration port authorities through the agent. Each territorial infringement is subject to a fine.

(f) Upon arrival at Cuban port of any vessel proceeding from foreign country, the Immigration Authorities will deliver to Master the Entrance Certificate which is valid for all Cuban ports and will be under custody and preservation of the Master until final sailing.

(g) If a vessel enters into or sails from any Cuban port without having fulfilled all requisites or procedures of clearance and inspection of the Immigration Authorities it will be subject to a fine.

(h) To take away or to violate the seals or straps fixed by the Customs Authorities means vessel will be subject to sanction or fine.

2. Sanitary Regulations

(a) Following docking, crew members are not allowed to go down to the pier to fix the ratguards or the gangway until the Sanitary Inspection (Free Pratique) has been completed and for non fulfilment of this regulation a fine of 2,000 pesos will be imposed on the Master.

(b) Thereafter, ratguards are to be kept in proper place otherwise the Master shall be liable to as many fines as there are ratguards missing.

(c) If any crew member should go down to the pier from a vessel which is under sanitary observation, the vessel will be penalised with a 5,000 pesos fine.

(d) Vessels proceeding from countries affected by animal diseases which do not exist in Cuba, are subject to full disinfection at the time when the sanitary veterinarian authorities of the Republic of Cuba deem it convenient.

Phytosanitary Regulations

(a) The Master has to deliver to the Phytosanitary inspectors the following documents:

- Phytosanitary Certificate of all vegetable origin or regulated cargo carried by the vessel.
- Fumigation Certificate, if said cargo was fumigated before arriving at Cuban port.
- Copy of cargo plan.
- Copy of Provisions List.

(b) It is forbidden to withdraw from the vessel while at Cuban ports, products of vegetable origin (fruits, fresh vegetables, plants, parts of plants and seeds), soil or organic materials, origin, of micro-organisms, insects, acarus and threadworm in any state of their biological cycle.

(c) The waste of vegetable origin must be hermetically packed in plastic bags and treated as instructed for garbage in article 7 here below.

Veterinary Sanitary Control – Complete sealing of ships' refrigerators which contain dangerous victuals.

(a) It is hereby instructed that the refrigerators of Cuban and foreign flag vessels which contain in their victuals meats and cattle products originating in countries affected by bovine pest, vesicular stomatitis, African pork pest and other animal diseases not existent in Cuba, must be completely sealed.

Exempt from the above are cattle products industrially canned, salted butter and cured cheese destined to be consumed only aboard ship.

(b) Only ships' refrigerators which contain victuals of animal origin shall be sealed. Compartments where vegetables and other victuals are kept, will not be sealed.

(c) Ships' refrigerators will be opened under Veterinary supervision. *(US $5.00 each time).*

(d) Meats and other animal products purchased in Cuba must be so placed in the refrigerator that they will not enter into contact with similar products purchased abroad.

(e) Sealing of ships' refrigerators will apply to vessels at berth as well as to vessels at anchorage.

(f) Sealing must be performed in an effective manner. To this end, it is necessary to verify that it was done correctly; a sufficient enough depression of the seal which makes it impossible to withdraw the wire.

(g) It is forbidden to have on board live animals for consumption and to fish using baits of animal origin.

(h) Any pets carried by the ship will be placed in quarantine aboard.

(i) For the breaking of the seal or the violation of any of these dispositions the Master will be brought to Court where according to the Law the corresponding penalty or fine will be imposed.

3. Labour Regulations

In accordance with Resolution of the Cuban Labour Ministry, it is forbidden for vessels' crews, during their stay in port, to do work that should be performed by port labourers, such as loading or discharging, rigging booms, driving winches, opening and closing hatches, (except MacGregor type or any other type of special mechanical system), laying wood or paper dunnage, construction of stalls, etc. Therefore you should apply to us in writing, so that arrangements can be made for the necessary port labour to perform such work.

Please note that if any of the work described were to be done by ship's crew, port labourers must be paid as if they had actually performed the services.

4. Bunkers

Should your vessel be bunkering at this port, it is necessary that we be notified in advance, so that appropriate arrangements can be made not only with the local suppliers, but also to comply with government regulations, which provide that funds to cover the cost of bunkers be received from the Owners *or Charterers* prior to delivery. Since this procedure takes a few days, it is suggested that any request for bunkers be made with due anticipation.

When delivery of bunkers is to be made in the port of Havana, the order or requisition must be sent to the suppliers at least 2 days in advance of the desired date of delivery, and 3 days in advance when delivery is to be made at a port other than Havana.

5. Galley Oil or Coal

The above requirements for bunkers do not, of course, apply to galley oil or coal as this item, if needed, is to be purchased directly by the ship from a shipchandler.

6. Cleaning

In accordance with Port Regulations, this work must be performed by local shore labour. The cleaning work done by shore labour is limited to only the sweeping of cargo compartments.

7. Garbage: *(Vessel needed 10 drums).*

Port and Customs Regulations forbid the throwing of garbage on to the pier or into the sea while the vessel is within the harbour limits.

According to Sanitary Regulations vessels must arrive at each Cuban port of call with the garbage deposits or tanks empty.

Garbage cannot be thrown into the sea inside Cuban territorial waters.

While in port the garbage must be hermetically packed in plastic bags and kept in drums with fitted covers.

Drums, in clean and hygienic condition, are to be placed in a properly selected place in the vessel until the bags are delivered to the garbage collector.

The services of the garbage collector must be requested by the Master, who can apply for it through the Agent.

For the non compliance of this regulation the ship will be subject to a fine.

8. Cash to Master *(Owners must remit cash in advance).*
Cash advances authorised by Owners or Charterers will be supplied to the Master upon request. Such request is to be made during office hours and the money will be delivered at the Agent's place of business.

Upon completion of loading and/or discharging operations, any unused funds of Cuban Currency must be handed over to the Local Agent; in other words, Cuban Currency left over from a cash advance drawn at one port cannot be returned or used at any other port.

However, further cash advances may be requested at the next Cuban port of call.

9. Damage to Cargo
As you undoubtedly realise, it is necessary to establish with the utmost degree of accuracy possible with whom the responsibility for damage to cargo lies, whether for vessel's or stevedores' account.

To ascertain this, the Terminals in Cuba employ Damage Inspectors to take note of all cargo that is found on board in damaged condition prior to its discharge from the ship, and the Master or Chief Officer is asked to sign an acknowledgement. Therefore, we suggest that in order to avoid unnecessary discrepancies between the vessel and the Terminal, and to properly protect the Owners' interests, you please instruct your cargo officer to coordinate his work in this connection with that of the Terminal Damage Inspector. Upon completion of discharge operations, the Terminal will submit to the Master for signature the relevant Survey Report.

Should you Note Protest owing to bad weather on the voyage or any other reason whatsoever, since the note must be presented to Harbour Master within 24 hours after ships' arrival, it must be handed to the Agent with time enough to prepare translation. One copy of the Note of Protest should be delivered to the Agent for record purposes.

10. Stevedore Damage to the Ship *(Stevedores usually repair damage).*
Any damage caused to the vessel during the loading and/or discharging operation, should be reported immediately to the Head Discharging Foreman on the Terminal, followed by a written notice to us in duplicate. Such notice should be made out within 24 hours following the incident, otherwise the Terminal will not accept any claim.

11. Repairs for Vessel's Account
Any repair work to be done for vessel's account must be requested in writing, sufficiently in advance of vessel's estimated departure in order to obtain from the repair shop the budget for the work, in the event of course, that the job can be done locally.

12. Engine Repairs or Engine Overhaul while in port
In the event vessel requires engine repairs or an engine overhaul (usually performed by the ship's crew) even if berthed at a pier or dock in port, it is necessary that the Master so informs his Agents before undertaking such work in order that his Agents may, in turn, notify all parties concerned, and obtain necessary authorisation from Harbour Master.

Read Charter Party/"Baltime" usually 24 hours' notice for engine cleaning.

The reason for this is that it may be necessary to shift the vessel from one berth to another, for any reason whatsoever, and it is necessary to know in advance if the vessel can move with her own engines or whether tugboats will be required for the movement. In the latter case it is of course understood that the cost of tugboats will be for vessel's account.

13. Hull Repairs and Maintenance
It is forbidden to perform any repairs or welding work in the hull, without obtaining, through the Agent, the previous authorisation of the Maritime Safety Office.

14. Redelivery
If your vessel is to be re-delivered at this port, this should be made known to us as soon as possible after arrival here, for although we may be aware of this fact, there is a possibility we might be lacking the necessary details concerning the terms of re-delivery.

15. Lowering Boats *(Apply in writing).*
Port Regulations prohibit the lowering of boats except for fire drill or to do maintenance work of the ship (painting, etc.). For either of these purposes, a permit is required from the Harbour Master, and the crews of such boats are not allowed to land on any pier or board any vessel in the harbour. Please be informed that our Ministry of the Interior has issued the following instructions to be strictly observed by the Masters of all foreign vessels during their stay at Cuban ports:

(a) When a vessel is carrying out paint work or similar tasks while in port, at the end of the day's work the craft or boat used to perform the work should under no circumstances remain in the water, but must be hoisted aboard to be again lowered the following day or whenever the work is resumed.

16. Radio Communications
Vessels within harbour limits are not allowed to transmit messages by radio.

17. Port Expenses
The bills covering port expenses will be submitted for your approval and signature, prior to vessel's departure from this port, regardless of the fact that such expenses might be for Owner's or Charterer's account, as this can subsequently be easily determined by examination of the Charter Party. However, if we are to obtain reimbursement for the amounts expended to cover port expenses, it is necessary that your approval and signature be secured.

Mark Owner's account or Charterers' account.

18. Stowaways

(a) In the event of vessels arriving from foreign countries, carrying stowaways or persons without documents, the Master or the Shipowner must advise the Immigration Control of the port immediately, who in turn, will advise them of the respective regulations in force.

(b) Masters are kindly requested to instruct all ships' officers that every possible precaution should be taken to prevent stowaways.

(c) Whenever the Master of a vessel finds a stowaway on board, either in port or outside the port's limits but within Cuban territorial waters, he is under obligation to deliver same to the Port Unit and Harbour Master's Authorities of the Frontier Guard Troops. If the stowaway is found outside the port, the Master must report this by radio so that the stowaway may be picked up by Port Unit and Harbour Master's Authorities of the Frontier Guard Troops.

(d) At no time are the Masters of vessels allowed to lower rope ladders or ropes on the vessel opposite the dock where the ship is berthed.

19. Paper and Dunnage: (very important).
In the event that your vessel is scheduled to load sugar in bags, citrus fruits, cement, etc., in Cuba and should you require paper and/or wood dunnage, you must make known to us your needs in writing as soon as possible, bearing in mind that the suppliers require at least five (5) days for delivery.

20. Loading Sugar
Whenever your vessel is assigned to load sugar the following precautions are to be taken:

(a) Cleaning and Dunnaging of Hatches: You must be extremely careful to have the vessel's hatches thoroughly dry, clean and without odour, as well as properly dunnaged to the satisfaction of the shippers, before starting loading.

(b) Cleaning Holds: In order to avoid damage to the sugar cargo during the voyage, please make proper arrangements for the closing of holds before starting loading in 'tweendecks.

(c) Tally: With respect to the dispute that occasionally arises between the vessel and the shippers during the course of loading sugar shipments regarding the number of bags delivered on board, we wish to inform you that the only document with official validity is the tally sheet prepared by the shore tallyman assigned to each loading hatch, and that if you wish to verify the accuracy of said tallying you could hire a tallyman's service, through the Agency, in those ports where we have this service available, to count the cargo jointly with the shore tallyman, as this is the only possible way of avoiding discrepancies in the checking of the bags actually delivered on board.

Consequently, we request that you please keep the above in mind, as this will tend to reduce if not completely eliminate, the problems which are now being confronted.

21. Agency Office Hours
We list hereunder our office hours:
From Monday to Friday: 0800 to 1200, 1300 to 1700.
Saturday: 0800 to 1200.

Our representatives will call on the ship as regularly as possible to discuss with the Master any matter or problem he may have in connection with the operations of his vessel and to deliver the crew's mail; however, such calls are contingent upon the volume of work, for which reason we suggest that the Master calls at our office when any matter arises which requires immediate attention.

22. VHF Communication System
The VHF (150 MHz) communication system is officially established between most of our Agencies and ships in port or close to port. Normally, service will be provided during the Agency's regular office hours only, but this work schedule will be expanded in the near future, as is now at our Havana Agency, where service is granted 24 hours a day.

Havana Pilot Channel 16. Agent's Channel 12.

23. Medical and Dental Services
Any man requiring medical or dental attention should be sent to our office whenever possible, with a letter from Master containing full name and rank, at 0800 or 1300 hrs. from Monday to Friday, and we will see to it that he is promptly sent in a car to the hospital and back to the ship afterwards.

In the event of an accident or serious illness, please contact Mambisas Agency on the telephone, and an ambulance will be sent immediately to transport the man to the hospital.

24. Safety Measures

(a) Vessels are obliged to have on-board the manoeuvre and safety elements indicated in the International rules and regulations. Any vessel lacking or having in bad condition any of these elements (defective derricks, lack of electricity, etc.) will not be brought to pier and if berthed will be removed at vessel's expense.

(b) The Master must remove anything protruding from the vessel like boats, anchors, booms, etc., or overhanging, like tackles and riggings whenever they constitute a risk or danger for the workers, port installations, other vessels, etc., or whenever they interfere with the operations.

25. Other Regulations

(a) Any exchange of provisions, films, spare parts or any kind o object, etc., between vessels in any port, requires the previous authorisation of the Customs House. Therefore, in order to apply for this permit, Masters are kindly requested to give a letter t the Agent detailing all articles that are to be transferred.

(b) It is forbidden, unless previously authorised by Customs House
to bring ashore any article or merchandise.
to allow any boat, launch, tugboat or any other type of craft to approach to the vessel at a distance of less than 25 m except for the purpose of transferring passengers or t perform any service duly authorised.
to lower ladders on any side of the vessel.

(c) All provisions, belongings and spare parts not declared in th corresponding documents, or found on board in excess of thos declared, will be confiscated. This is valid also for the commerci stores of passenger vessels.

(d) Any mistake in the manifest must be amended within 48 hou after arrival of the vessel.

(e) All articles carried on board and destined for Cuban territory, mus be declared in the cargo manifest or in the complementa documents.

26. Important Notice

Pollution: Very strict regulations are in force and Port Authorities keep a close watch on this matter. It is absolutely forbidden to pump or throw out of the ship, oil, dirty water, wastes of animal origin, dunnage wood, or any kind of Liquid or substance into the sea, whether inside or outside the ports and any infringement will bring the Master to Court.

SHIPMASTER'S REPORT: April 1989.

1. The radio room is no longer sealed.
2. The restrictions on shore leave no longer exist. Crew may go ashore day and night.
3. Foreign currency still has to be declared but may be spent without restriction.
4. It is not recommended that mail be forwarded to vessels.

Other rules and regulations are still as outlined in "Port Regulations".

FROM INFORMATION BOOKLET COMPILED BY MAMBISAS AGENCIES

USE OF SOUND SIGNALS IN PORT: It is prohibited to use sound signals except those internationally known for safe navigation, fire or emergency.

DRY DOCK: There is a dry dock at the port of Havana with berthing capacity of 440 ft. length and 91 ft. width which can accommodate vessels up to 23 ft. draft.

SURVEYORS: Following surveyors are established in Cuba:

Cuban Maritime Regulation Surveyors, Bureau Veritas, Lloyd's Register, German Lloyd and U.S.S.R. Ship's Register.

Above listed surveyors should be contacted through the Consignataria Mambisas main office.

EIGHT HOURS DAILY WORK: We wish to call attention to the fact that although the working periods observed at the various Cuban Ports vary considerably, as for example, the port of Jucaro where the period is from 0600 – 1000 hrs., 1200 – 1600 hrs.; Caibarien 0700 – 1100 hrs., 1200 – 1600 hrs.; Havana 0700 – 1300 hrs., 1300 – 1900 hrs. etc., and others from 0700 – 1100 hrs., 1300 – 1700 hrs.

Labour Legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

HOLIDAYS:

National Anniversaries	*Holidays*
January 1st.	July 25th.
May 1st.	July 27th.
July 26th.	Sundays
October 10th.	

REPATRIATION: There are good facilities and repatriation can be arranged through Mambisas Agency.

SHIPMASTER'S COMMENTS: Also see "Shipmaster's Report" for Nuevitas dated February 1984.

Fresh Water: Always take full fresh water. Water barges available at Havana and Santiago. No fresh water at Jucaro or Boca Grande.

Documents: Sample Crew Manifest to avoid confiscation: 2 Radios, packet of paints, tape recorder (Akai), gloves, speakers, star plotter, cassette tapes, set of ship plans, earphones, plastic mac, 3 prs. sunglasses, dress uniform, calculator, battle dress uniform, matchstick model ship, brown suit, plastic battleship model, blue coat, bridge coat, 10 packs glue, grey trousers, 1 pk. razor blades, 3 khaki shirts, 1 Fernox medicine, 1 Savlon cream, 3 khaki shorts, 3 balsa cement, 5 uniform shirts, 1 stop watch, 1 briefcase, 2 coloured shirts, 1 tee shirt, 1 knapsack, 6 uniform white shirts, 1 photographic bag, 3 white shorts, assorted films, 4 ties, 2 cravats, 1 brown cardigan, 1 pullover, 1 dressing gown, 1 pair longjohns, 1 pr. sandals, 2 alarm clocks, 1 sextant, 4 watches, 1 boiler suit, 3 plastic trays, 2 beakers, 1 belt, 2 toy engines, cellotape, 14 wagons, gold braid, 8 points, keys, 8 curved rails, tape recorder cords, 4 vests, swimming trunks, 5 pants, 1 blue socks, 5 brown socks, 6 white socks, 1 cap cover, 1 pr. pyjamas, 1 silk scarf, 1 pr. black shoes, 1 pr. brown shoes, toilet articles, 1 copy stand, 1 enlarger, assorted chemicals, powersaw, typewriter, calculator, adding machine, 4 packs tea, 4 cameras, 1 lens, 1 light meter, 3M duplicator, binoculars, Sanyo tape cassette, assorted perfumes and curios. 1 kitbag, 1 flip-flops.

200 cigarettes, 1 spirits, number cans of beer, number of bottles of wine. *If in doubt – put it in a suitcase and lock it in the bonded store!*

SHIPMASTER'S REPORT: December 1983.

All foreign currencies must be declared and may be used freely ashore.

A landing pass and foreign currency pass is issued to each member of the crew and they are to be accompanied by Seaman's ID Card or Discharge Book when going ashore.

A cabin is to be set aside and marked Transit Room. Would advise that anything and everything that is not required during your stay in Cuba be put in a suitcase and lodged in the Transit Room which is sealed on arrival and then left alone. All cameras must be placed under seal on arrival (i.e. in the Transit Room). Permission is granted to use them in Havana but was not allowed in Nuevitas.

A strict Customs search usually follows arrival with every cabin and compartment thoroughly searched. This vessel was not searched by Customs at Havana but was at Nuevitas.

Prior to departure from each Cuban port the vessel is searched by Harbour Master Guards.

On the whole relationship between ship and Authorities was good. The Agents proved very helpful and telex communication was satisfactory.

Only meats of origin U.S.A., Australia and New Zealand are permitted to be used whilst vessel is at a Cuban port.

The Port Authorities are very strict regarding rat guards which must be checked at frequent intervals, also garbage which must be placed in sealed bags ready for collection by shore labour.

ANTILLA: 20.50 N. 75.44 W. (See Plan)
(and sub-ports of Felton, Nicaro and Preston)

LOCATION: The Port of Antilla is located on the North side of Nipe Bay, on the North Coast of Cuba: Lat. 20° 50′ N., Long. 75° 44′ W.

Nipe is the largest bay in Cuba and is considered among the biggest in the world.

Within Nipe Bay there are 3 ports: Felton, Preston and Antilla, Antilla being the head port of a region, and very important because of its natural resources in agriculture, mining, etc., as well as for sugar industries close to the port.

The Antilla Agency attends also at the following ports: Preston, Felton, Nicaro, Banes, Tanamo and, temporarily at Vita.

Nipe Bay is suitable for large vessels of any length and up to 20 m. draft, which can anchor in the vicinity of buoy No. 9, (La Estrella Shoal) inside the triangle formed by Pt. Saetia, Pt. Berraco and La Estrella Shoal.

Antilla is a very efficient port in all respects but as a sugar shipping port ranks among the best in the nation.

ENTRANCE TO PORT: Entrance to Nipe Bay is safe and free of risks. Limitations as to length and draft of vessels are only those imposed by the places of operations or ports.

Entrance channel is ample (0.75 miles wide at its head and 0.33 miles at its narrowest point, located South of Pt. Caimanes), having a minimum depth of 150 ft. up to Saetia Anchorage.

From Saetia up to Antilla piers the distance is 10 miles.

Navigating toward Western Nipe Bay, in the direction of Antilla, after Saetia is past, to the South can be seen: Cayagima Cove, Point Cobos, the mouth of Mayari River and the Port of Preston.

To the North can be seen after departing from Saetia: the town of Ramon, located on high lands at the back of Melilla Cove, Pt. Berraco, Pt. Las Chivas, Honda Cove, Pt. Salinita, Hermenegildo Cove, Pt. Negra, Felipe Cove, Pt. Carbonera and Pt. Salina.

From the latter onward, Antilla's piers channel is navigated, and to the North can be seen Pt. Barrancones, Marbella Cay and finally the town and port of Antilla.

PILOT: *Where Pilot should be taken and distance to place of operation:*

The place where Pilots board the vessels nominated to perform operations at Antilla, Preston, Felton, Banes or Nicaro, is located at 1 mile N.E. of Point Mayari, that is in an East/West line from Pt. Mayari lighthouse on the course of the bearings indicated by the port chart.

The exact position where Pilots board vessels is: Lat. 20° 47′ 46″ N., Long. 75° 32′ 15″ W.

From this point the distances to the ports are:

	Miles to pier	*Miles to anchorage*
Antilla	13	13.5
Preston	6.5	6.5
Felton	5	4
Nicaro	13	12
Banes	17	17
Fondeadero Saetia	2.5	

Point Mayari Lighthouse consists of a conical/cylindrical steel tower, painted aluminium, 40 ft. tall and its light is visible up to 10 miles away.

As the pilot station is located in Antilla, upon receipt of an ETA message from an incoming vessel, Mambisas Agency immediately informs the Pilots who depart accordingly to Saetia to await the vessel.

Once the Pilot is in Saetia it is almost impossible to communicate with him, therefore Masters must exert care in sending ETA messages to Antilla in order to offer the Pilots the closest ETA at Pt. Mayari, thus avoiding unnecessary problems for Pilots or delays to ship.

ANCHORAGES: Anchorages at Nipe Bay are used only when waiting for berth, or at Saetia, to await favourable tide to enter Banes or Nicaro.

No operations are performed at anchorages.

Saetia Anchorage: Located about 1,000 m. West of Pt. Carenero (Saetia).

Limitations: Draft 20 m., Length: No limitations. Swinging area: About 800 m.

3 vessels (557 ft. in length) or one supertanker can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well, ships usually anchor with 4 or 5 shackles of chain.

In front of this anchorage is the small town and beach of Saetia.

Usually this anchorage is used by vessels destined for Felton or to await favourable tide to enter the ports of Banes or Nicaro.

La Chiva Anchorage: Located at about 1.25 miles from Pt. Berraco, to the North on the Melilla Heights, the small town of Ramon can be seen.

Limitations: Draft 20 m., Length: No limitations. Swinging area: About 900 m.

Can accommodate two 557 ft. length vessels or 1 supertanker.

The bottom is hard sandy mud with loose stones and anchor holding is good. It is sheltered from the winds by Melilla Heights.

Ships usually anchor with 3 or 4 shackles of chain.

This anchorage is used for similar reasons as Saetia.

Cajimaya Anchorage: Located just in front of the port of Felton.

Limitations: Draft 32 ft., Length 600 ft. Swinging area: About 400 m.

2 vessels can be accommodated at anchorage.

The bottom is soft mud but anchors hold well.

Sheltered from winds by Saetia mountains, ships usually anchor with 3 or 4 shackles of chain.

This anchorage is used by vessels awaiting berth at Felton.

Pt. Salinas Anchorage: Located about 500 m. S.S.W. of buoy marking Salina Grande Shoal; Antilla Town is about 3 miles to the N.W. and at a similar distance is Preston to the S.S.W.

Limitations: Draft 31 ft., Length: No limitation. Swinging area: About 500 m.

Four or five regular size vessels can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well.

It is not sheltered from winds, being located in a spot where, when there is bad weather, the sea becomes rough.

Usually vessels anchor with 3 shackles of chain.

This anchorage is used by vessels awaiting berth at Antilla.

Preston Anchorage: Located about 1,200 m. N.N.W. of the head of Preston pier; to the South of the small town of Guatemala (formerly Preston) sugar mill can be seen.

Limitations: Draft 30 ft., Length: No limitations. Swinging area: About 1,000 m.

Three or four regular size vessels can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well, anchorage is open to the winds.

Usually vessels anchor with 3 shackles of chain, depending on wind force.

This anchorage is used by vessels awaiting berth at Preston.

Corojal Anchorage: Located about 320 m. N.W. from Antilla pier head, just in front of Antilla town.

Limitations: Draft 18 ft., Length 557 ft. Swinging area: About 180 m.

Anchorage can accommodate 1 vessel only.

Bottom is soft mud but anchors hold well.

Anchorage is open to the winds and vessels anchor with 2 shackles of chain, depending on wind force.

This anchorage is used to wait for Port Doctor visit in cases of incoming vessels from foreign countries and also to await berth at Antilla.

Antilla Anchorage No. 2: Located about 700 m. from Antilla pier head.

Limitations: Draft 23 ft., Length 500 ft. Swinging area: About 300 m.

Anchorage can accommodate 1 vessel only.

Bottom is soft mud but anchors hold well.

It is open to the winds and vessels anchor with 3 or 4 shackles of chain. If strong winds do blow, then vessels drop another anchor to reduce the swinging action.

This anchorage has the same use as Corojal Anchorage.

Saetia, La Chiva and Cajimaya Anchorages have no transportation service; the remaining anchorages have launch service available, if requested by Masters.

MAX. SIZE: Vessels' maximum official draft and length allowed to enter or sail from Antilla are: Length 557 ft., draft 21 ft. fore, 23 ft. aft.

Regarding length of 557 ft., it is the maximum advisable for dry cargo vessels.

Tankers having a length of 610 ft. have called at this port to load molasses.

Entrance to or sailing from Nipe Bay and Antilla can be effected either during day or night-time.

CLEARANCE: All Port Authorities, Port Doctor, Customs, Immigration and Captain of the Port have their offices at Antilla. Vessels may proceed directly to sub-ports without entering Antilla for clearance. Port Authorities clear ships at sub-port when necessary.

Launch service is the preferable means of transportation used by the Port Authorities to the various sub-ports under Antilla jurisdiction.

There are Custom House Delegations at sub-ports of Preston, Nicaro, but no Immigration. The Custom House Delegate at the sub-port of Nicaro also acts as Delegate for the Captain of the Port.

Although there is no Port Doctor Delegate at the sub-ports, the General Hospital Doctors may act as such, if requested, in order to give a quick entry to the ship.

Notwithstanding the above, in those cases when a ship is coming from a Cuban or foreign port, destined to Nicaro, and happens to lose the slack water tide, it will be necessary for the ship to anchor at Saetia (Antilla) and to wait the next tide. In these particular cases the Port Authorities give entry to the ship at Saetia anchorage, and it is not necessary for another Port Authority visit at the sub-port of Nicaro.

RADIO: At Antilla, means of communications are: Telephone, telegraph, radiograms RCA System, telex and Post Office.

The Antilla Agency is connected to the National Telex System, which is the quickest means of communication.

Vessels proceeding to Cuba can communicate with Mambisas Antilla Agency through "CLA" Havana Radio Station which immediately relays the messages to Antilla by radiograms, telegraph or telex.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Antilla and Mambisas Havana.

TUGS: No tug is required for entry to Antilla. There is a tug available 24 hours of the day, but service must be requested at least 24 hours in advance. Name, *Macabi;* length, 81 ft. 1 in.; width, 24 ft. 0 in.; gross tonnage, 183.53; net tonnage, 86.00; motor, one diesel; h.p., 750; speed, 8.5 knots.

BERTHING: The 3 berthing spaces of this port have standard gauge railroad tracks.

Each pier is connected with 1 railway which is independent of the others, but with no car outlet at end of piers, consequently, to perform any movement, it is necessary to take out the remaining cars. For that reason, there is no road connecting the piers, and since piers are not paved, trucking operations cannot be performed.

Pier No. 4

North Side: Length 458 ft., maximum length vessel allowed 557 ft., draft 17 ft. forward and 23 ft. aft.

South Side: Length 458 ft., maximum length vessel allowed 557 ft., draft 21 ft. forward and 23 ft. aft.

The construction of this pier is concrete, that is the platform and the piling. It is protected by hard wood fenders and has a fixed red light at the S.W. end.

Cargo handled: Bagged raw sugar, molasses, general cargo.

Coast Pier: Length 398 ft., draft 20 ft. even keel., maximum advisable vessel length for operation 455 ft.

Construction of this pier is similar to Pier No. 4, concrete piling and platform, and, in fact, is really a continuation of Pier No. 4 South Side and for that reason if a vessel longer than 455 ft. is docked at this pier, it is in detriment to the operations of vessel docked at No. 4 South Side, which will have part of its length outside the pier.

Cargo handled by this pier: Bagged sugar, general cargo, gasoline, kerosene and diesel oil.

Diesel oil, kerosene, gasoline: Connections 1×8 in., 1×6 in. and 1×4 in. diameter.

STEVEDORES: Working periods – loading sugar; Monday to Friday – 0700 – 1100/1300 – 1700 hrs. Saturday – 0700 – 1100/1300 – 1700 hrs. Sunday – no work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Capacity: Three ships can be performing sugar loading operations simultaneously, although the labour force available is for a total of 12 gangs.

1. Raw Sugar: *(a)* Loading rate: 1,330 bags of raw sugar (of the 220-pound type) per 4 hours per gang. *(b)* Bags per sling: 6 bags of raw sugar (of the 220-pound type).

2. Refined Sugar: *(a)* Loading rate: 2,100 bags of refined sugar (of the 100-pound type) per 4 hours per gang. *(b)* Bags per sling: 12 bags of refined sugar (of the 100-pound type).

No shore crane available at this port, but there are 5 machine throwers for bulk sugar operations, grates and canvas funnel, etc. These machines function with diesel motors.

Sugar bags are opened in the square of the hatch.

TANKERS: Molasses pumping rate is at an average of 35,000 gallons per hour. Two connections – 1×8 in., 1×12 in. diameter.

MEDICAL: There is a hospital where crew members may be hospitalised.

WATER: *(Potable or for boilers):*

Small amounts of water (about 30 tons) can be delivered if requested 48 hours in advance.

Water is brought to the port by railroad tank-cars from distant places, and is pumped directly to ships by portable pump.

Water deliveries at Antilla are deficient and not reliable, because on occasions there are no tank-cars available.

Price: $4.83 per ton FOB, delivery rate 15 t.p.h.

Daily delivery rate cannot be determined due to unreliability of transportation.

FUEL: Not available.

PAPER/WOOD DUNNAGE: It is advisable that vessels nominated for operations at Antilla, or any of the ports listed as attended by Antilla Agency, arrive with enough wood dunnage.

Wood dunnage, although not impossible to obtain, sometimes is hard to secure, and to avoid delays it is better to have the vessel supplied at a prior port of call.

Paper is supplied if ordered at least 3 days in advance.

REPAIRS: No repairs can be performed.

DEVELOPMENTS: It is planned to build at this port, among other improvements, a bulk raw sugar shipping plant.

AGENT: Attending the port of Antilla, and the sub-ports of Preston, Nicaro and Felton, also the port of Banes.

Agency Address: Empresa Consignataria Mambisa, Agencia Antilla, Avenida 28 de Enero No. 67, Apartado No. 52, Antilla, Prov. de Oriente. Telephone: 98248 and 98225 (office); 98580 (night). Telex: 21302. Cables: Mambisas Antilla.

Agency VHF works on Channel 16.

Mail and Parcels: Should be sent to the Main Office at Havana from where it will be sent to Antilla by the quickest means possible.

SUB-PORTS:

Distance from Antilla to:

Preston (Guatemala), 7 miles.

Felton, 11 miles.

Nicaro, 14 miles.

To the port of Banes, which is attended by Antilla Agency, 50 km. Highway transportation is used from Antilla to Banes.

Time from Antilla to:

Sub-port	*Launch*	*Highway*
Preston	1 hour	1 hour 45 minutes
Felton	1 hour 30 minutes	2 hours 15 minutes
Nicaro	2 hours	3 hours

There is only a regular launch service from Antilla to Nicaro, leaving daily from coastal pier Antilla at 0900 hrs., arriving Nicaro at 1100 hrs.

(a) SUB-PORT OF PRESTON (GUATEMALA):

LOCATION: This port is located on the North coast of Cuba: La 20° 46′ N., Long. 75° 40′ W.

Preston is one of the 3 ports located within Nipe Bay and is situate on the South coast of said bay, on a peninsula named "Punta Tabaco" S.E. of Antilla.

Traditionally this port has shipped the production of "Guatemala sugar mill (formerly "Preston") which ranks among the biggest in th sugar industry.

Mayari River flows to the East and close to the port, and maintenanc dredging is necessary alongside pier to preserve the depth required.

Dredging is effected at the West side of pier as the East side is no used.

PILOT: From the place where Pilots board the vessels to Preston pie the distance is 6.5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As is describe under Antilla, up to Pt. Carenero (Saetia), the channel is common to th 3 ports located in Nipe Bay.

On reaching Pt. Carenero, vessels take a course Northwestward the direction of the buoy marking "La Estrella" Shoal and then take course W.S.W. up to Preston pier.

On the North side can be seen: Pt. Piedra, Melilla Cove and on th hills the town of Ramon. Pt. Las Chivas and the rest of coast of the ba up to Antilla port and town, which is clearly visible.

On the South side can be seen: The entrance to Cajimaya Cove an Felton town, Pt. Cobos, light buoy No. 5 marking "La Estrella" Shoa the mouth of Mayari River and lastly the town and port of Preston.

There are no limitations as to vessel's length, and max. draft allowed is 25 ft., which is imposed by pier's depth.

Entrance to or sailing from Preston can be effected during day or night-time, generally without tugboat assistance, except when there is flood tide or wind interference, then tugboat assistance is required.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: See "Antilla". Port Doctor, Immigration and Port Captain travel from Antilla to Preston to give ship's entry. Custom Delegation at this sub-port only occasionally, and in order to avoid delay Preston Hospital Doctor clears the ship.

Vessel can proceed directly to this sub-port, since Port Authorities come from Antilla to give ship's entry.

RADIO: See "Antilla".

TUGS: See "Antilla". No tug available, but can be obtained from Antilla.

BERTHING: Preston pier is located at the Northern extremity of Punta Tabaco.

Its construction is entirely of hardwood, including its piling, and at the moment it is not in good condition and requires rebuilding.

Along the pier run double standard railroad tracks but there is no outlet at pier's end.

Guatemala Pier: (Formerly Preston Pier) Overall length: 1,036 ft. – berthing length: 586 ft. Draft: 25 ft. even keel. No limitations as to vessel's length. Water available, but bunkers not available.

No cargo operations are conducted in the bay.

STEVEDORES: Loading sugar – working period (max. 4 gangs). Monday to Friday: 0700 – 1100/1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sunday: No work is performed.

General cargo: No discharging operation is performed at this port.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Raw sugar-loading rate: About 1,330 bags of raw sugar (of the 220-pound type) per 4 hours per gang.

Bags per sling: 6 bags of raw sugar (of the 220-pound type).

Operational capacity: At this sub-port only one vessel at a time can be operated.

Refined sugar: No refined sugar has been shipped by this sub-port.

Equipment: There is one movable shore crane available with lifting capacity of about 60 tons with 75° boom inclination. Boom length 50 ft. Crane is mounted on a railroad flat car which is operated by steam supplied by an adapted boiler. As the greater part of the year this crane remains idle, it is possible that its lifting capacity might have decreased. Five grates, but no thrower machines.

TANKERS: Molasses pumping rate average of 75,000 gallons per hour.

Fuel Oil: 2 connections – 1×8 in., 1×10 in. diameter.

Molasses: 2 connections – 1×8 in., 1×10 in. diameter.

MEDICAL: There is a hospital at Preston which offers very good service to ship's crew. In cases requiring special attention, patients can be taken to Holguin, where there are reliable specialists.

WATER: *(Potable or for Boilers):* Delivered by pipe-line to ships while docked to Preston pier. Delivery rates: During sugar harvesting season, from 5 to 10 tons daily, only during night-time, otherwise from 40 to 50 tons daily, depending upon the pressure on the line.

FUEL: Not available.

REPAIRS: No repairs can be performed at Preston.

TRANSPORTATION: Usually transportation between Preston and Antilla (and other nearby ports) is performed by launch and also by road.

From Preston there are the following distances and travelling time to:

	by launch	*by road*
Antilla	7 miles – 1 hour	1 hour 45 minutes
Nicaro	8 miles – 1 hour	1 hour 15 minutes
Felton	5 miles – 45 minutes	45 minutes

COMMUNICATIONS: Vessels cannot communicate directly with Preston. Means of communications between Felton and Antilla (and other nearby ports) is only by telephone.

Telephone communications are rather irregular and sometimes are the cause of delays in urgent matters.

PORT AUXILIARY EQUIPMENT: This port has no auxiliary equipment.

AGENT: See "Antilla".

(b) SUB-PORT OF NICARO (LENGUA DE PAJARO) LEVISA BAY:

LOCATION: Lat. 20° 43′ N., Long. 75° 33′ W. **(See Plan)**

The port of Nicaro is situated inside Levisa Bay, on a small peninsula named "Lengua de Pajaro", located at the Southwestern part of the bay.

Levisa Bay is landlocked, sheltered and moderately ample. Its shores are rather irregular due to numerous points, creeks, coves and inlets. The centre of the bay is free of cays, but close to the coast and around it, there are several cays.

Ample zones of shoals almost entirely cover its extension, except the channels and the anchorage zones.

Nicaro region is very rich in mineral fields and the port is used principally to export the production of the mining enterprise located there.

At the West side and next to Levisa Bay, Nipe Bay is located, and to the East, having a common entrance, which is divided as a fork by Pt. Dos Bahias, is Cabonico Bay.

PILOT: Distance from the place where Pilots board the vessels to Nicaro anchorage is 12 miles, to Nicaro pier 13 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance channel for the port of Nicaro is difficult for vessels over 350 ft. length, due to its narrowness and because of having sharp turns, some of them forming angles of almost 90°. Also, its bottom and banks are rock and coral. Regarding draft it offers no obstacles as there are about 174 ft. and 47 ft. depths max./min. respectively.

To minimise all risks and perform a fairly safe crossing of the entrance channel, while entering to or sailing from this port, the following measures must be accomplished:

(i) Entrance or sailing to be effected only during daylight hours, at slack water.

(ii) Tugboat assistance is required for vessels exceeding 350 ft. in length.

(iii) Vessel's length should not exceed 500 ft., the extreme max. length allowed, if really necessary, being 513 ft.

(iv) Simultaneous entrance or sailing of 2 or more vessels is not permitted.

Channel is navigable by only one course.

Max. draft allowed to vessels operating at Nicaro Pier is 28 ft. forward and 29 ft. aft. (at low tide).

As vessels larger than 350 ft. length require tugboat and it is obtained from the nearby port of Antilla, it is necessary that vessels assigned to perform operations at Nicaro advise their ETA with sufficient time in advance to vessel's arrival.

The restrictions for vessels to sail or enter this port during night-time are due to the port conditions such as: lack of light buoys in the bay and the channel, as well as the inherent dangers in the channel due to its narrowness and its winding shape.

ANCHORAGES: There are two anchorages at Nicaro:

Anchorage No. 1: Located at about 1,200 m. S.W. of Pt. Gorda and 1,500 m. N.N.E. of Raton Cay.

Limitations: Draft: 30 ft. – Vessel's length: 513 ft.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds. Usually vessels anchor with 2 or 3 shackles of chain.

Anchorage No. 2: Located at about 1,000 m. N.E. of pier's head.

Limitations: Draft: 30 ft. Vessel's length: 513 ft.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds, usually vessels anchor with 2 or 3 shackles of chain.

At both anchorages launch service is available at Master's request.

TIDAL VARIATION: Tidal variation averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Although Nicaro, under Cuban Customs Laws and Regulations, is a sub-port of Antilla, all Authorities are located at Nicaro (delegations).

RADIO: Vessels proceeding to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which promptly relays the message to Antilla.

Vessels cannot communicate directly with the port of Nicaro.

Masters must send their ETA messages simultaneously to Mambisas Antilla and Mambisas Havana.

Means of communications at Nicaro are:

Long distance telephone, RCA System Radiograms and telegraph.

Telephone communications are rather irregular and difficult, therefore any instruction or sudden change in previous instruction to vessels operating at Nicaro may not be delivered in time.

TUGS: Obtained from port of Antilla. Therefore it is recommended that when vessels are assigned to this sub-port, advice of their ETA be given with sufficient time prior to vessels' arrival. Particulars of tugboats are shown under "Antilla" information.

BERTHING: The place of operation of Nicaro is its pier, a large installation built of reinforced concrete, 690 ft. long, of which, counting from the head of pier, 450 ft. corresponds to the berthing area, and the remaining 240 ft. is the narrow part of pier connecting with the shore, not used for operations.

Along both sides of pier run railroad tracks of standard gauge, and also trucks can operate.

At the South side of pier, mounted on rails, there is a gantry crane.

The boom of the crane is about 50 ft. long and although mounted on the South side, can also operate at the North side, which is not often done because it loses much in efficiency and speed.

The crane is electrically powered and its accessories are: A grab 1.5 tons and another 3 tons capacity, steel slings, special slings for loading nickel, etc. It can lift up to 20 tons.

This equipment, excluding ship's tackle, is the only equipment available for loading or discharging at this port.

Both sides of pier have muddy bottom.

Nicaro Pier.

Overall length: 690 ft. Berthing length: 450 ft.

Max. length allowed to vessels: 513 ft.

No bunkers available.

North Side:

Draft: 26 ft. 6 in. forward and 29 ft. aft.

Kind of cargoes handled by this side: Bagged raw sugar, general cargo, fuel oil, diesel oil and liquid ammonia.

Water available by pipe-line.

Tanker Information:

Liquid ammonia: 2×6 in. diameter.

Fuel oil: 2×8 in. diameter.

Diesel oil: 1×6 in. diameter.

South Side:

Draft: 28 ft. forward and 29 ft. aft.

Kind of cargoes handled by this side:

Anthracite coal, nickel oxide, nickel sinter, bagged raw sugar, general cargo.

Water available by pipe-line.

This side of pier was dredged in 1969.

Port can operate 2 vessels at a time: One dry cargo vessel loading or discharging and 1 tanker vessel.

At the present time the port does not have enough personnel to operate 2 dry cargo vessels at a time.

No cargo operations are carried out in the bay.

STEVEDORES: Loading or unloading of general cargo, nickel, mineral coal, etc., is performed by port workmen of sub-port of Nicaro.

Raw sugar-loading rate. At present, average loading rate in a period of 4 hours per gang, is about 1,330 bags.

Bags per sling (Guatemala sugar): 6 bags of raw sugar (of 220 pound type) per sling. Nicaragua sugar: 6 bags of raw sugar (of 220 pound type) per sling. Sugar bags from sugar mills Guatemala and Nicaragua are transported from respective mills to Nicaro in railroad flat cars, already slung.

Refined sugar. No refined sugar is exported.

General cargo discharging rate. General cargo of a fragile nature and careful handling: about 5 tons per gang hour. General cargo of sturdy nature and easy handling about 20 tons per gang hour.

Bagged cargo: about 30 tons per gang hour.

Mineral coal: at present the shore crane is averaging 110 t.p.h.

Nickel: at an average of 800 bags (26 tons) per gang hour.

Bulk sugar: no bulk sugar equipment available. In those cases when bulk sugar operations are performed, the necessary equipment is obtained from sub-port of Preston.

Working Hours: Sugar: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs.

Nickel loading and other cargoes: Monday to Friday: 0800 – 1130 hrs.,1230 – 1700 hrs. Saturday: Same periods.

On Sundays the port does not perform any work, except discharging of tanker vessels.

Labour legislation presently in force provides that the numbers of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

MEDICAL: Hospital at Nicaro offers good service to ships' crew members. In case of special attention, the patient can be taken to Holguin, where there are reliable specialists.

Dental care is available at Levisa, 6 km. distant.

TANKERS: No molasses or alcohol re-loaded. Only fuel oil, liquid ammonia and gas oil are discharged. Average discharging of fuel oil at present is about 400 t.p.h. Liquid ammonia discharge averages about 27 metric t.p.h.

WATER: *(Potable or for boilers):* It is supplied to vessels while docked to Nicaro Pier (both sides). Average delivery rate: 30 t.p.h.

Water is usually delivered by night in order not to disturb the Nickel Plant production, although, occasionally it is delivered during the daytime. Vessels must furnish the hoses.

FUEL: Not available.

REPAIRS: There is no repair shop at this port.

DISTANCES: The nautical distance between Nicaro and Antilla for vessels drawing over 6 ft. draft is 24 miles. For small craft drawing less than 6 ft. the distance is 14 miles. By highway, 130 km. from Nicaro to Antilla.

Sea transportation takes 1 hour 45 minutes, and highway 2 hours 30 minutes. There is a daily launch service between Nicaro and Antilla. Launch leaves Antilla 0930 hrs. arriving at Nicaro at 1130 hrs. and a launch leaves Nicaro at 0930 hrs. arriving at Antilla at 1130 hrs.

AUTHORITY: Sub-port of Nicaro is under Antilla Custom House jurisdiction. There is a Custom House Delegate at this sub-port, who acts as a Delegate of the Captain of the Port.

Vessels at Nicaro are handled by personnel of Antilla offices who visit Nicaro, and are located at Oficina de la Marina, Tel. 216. In case this office is closed, these personnel could also be contacted through Customs House telephone of Nicaro.

AGENT: Antilla Agency personnel attend. Agent has a small office, close to the pier, telephone number 62.

(c) SUB-PORT OF FELTON:

LOCATION: Lat. 20° 44′ 45″ N., Long. 75° 35′ 40″ W. **(See Plan)**

Felton, as are Antilla and Preston, is located in Nipe Bay and is the closest port to the Bay entrance.

It is located 1.75 miles to the S.W. of Saetia, just in Cajimaya Cove and 3 miles East of Preston.

At the present time this port mainly handles the importations of raw materials for the fertiliser plant in the vicinity of the port.

PILOT: From the place where Pilot boards the vessel to Felton Pier there is a distance of 5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As described under Antilla, up to Pt. Carenero (Saetia), the channel is common to the three ports located in Nipe Bay.

On reaching Pt. Carenero, vessels turn course Southward seeking Felton Channel and after four changes in the pilotage route the port is seen.

The most remarkable points of visual orientation after Pt. Carenero is sailed past, are:

On the East side: Saetia Cay, Points Campeador No. 1, 2 and 3; light buoys Nos. 1-A and 3-A (green light) and the unlit buoys indicating the port channel.

On the West side: Pt. Cobos, Pt. Largo, the town of Felton and the unlit buoys marking the channel.

Entrance to the port up to Cajimaya Anchorage can be effected either in day or night-time, but docking or undocking is performed only during daylight hours, if it is not windy.

Limitations as to draft and length of vessels are those imposed by the place of operation or Cajimaya Anchorage. Anchorage for this port is Cajimaya Anchorage, but Saetia Anchorage can also be used.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Vessels can proceed directly to Felton, as Port Authorities from Antilla are taken by launch to visit vessel at Felton Pier, or at sea in Cagimaya Anchorage.

RADIO: Ships can communicate with Felton by wireless via CLA, but i is recommended that ETA messages be given to Mambisas Antilla and Mambisas Havana simultaneously.

The means of communication between Felton and Antilla are telephone and telegraph.

BERTHING: The place of operation of Felton is a solid coastal-pier built of concrete, although vessels are not docked directly at it.

Vessels are berthed to 3 solid steel dolphins, the first and the third being spaced 350 ft. apart.

Dolphins are located at about 50 ft. from the side of the pier and therefore vessels are 50 ft. off the pier.

Pier is located at the East side of that portion of land on Nipe Bay and runs from North to South.

Besides the three solid dolphins, vessels are secured also to two mooring buoys located 250 m. to the West, in front of and parallel to the pier.

There is an electric shore crane mounted on rails that runs along the pier, which is used mainly for the discharge of bulk raw materials for fertilisers, with a 4 ton grab. If the grab is removed the crane is capable of lifting up to 40 tons, and can be used for the discharging of heavy equipment, such as tractors, bulldozers, etc. This crane has a wide field of operation.

Also in operation at this port is a device called "Unicular", a kind of hopper-car, which runs on rails from the hatch of the vessel to the pier, and is loaded by ship's gear to its full capacity of 3 tons.

Taking into consideration the characteristics of pier, the manoeuvring basin and the approach channel to place of operations, the following regulations must be followed:

Vessels up to 500 ft. length:

Can dock without tugboat assistance, during daylight hours, if the wind and sea do not interfere with the manoeuvres.

Same conditions for undocking.

Maximum draft allowed 28 ft.

Vessels longer than 500 ft. and up to a maximum of 557 ft. length:

(a) Assistance of tugboat, of 750 h.p. or more, is required.
(b) Vessels must dock with bow facing North.
(c) Docking must be effected during flood tide.
(d) Condition of sea and wind at the time of docking must be taken into consideration in order to avoid interference of wind and sea with the manoeuvres.
(e) Maximum draft allowed is 26 ft. or 27 ft., depending on the type of vessel, its manoeuvrability, etc.

Tanker Information: Fuel oil: 1×8 in. diameter.

For discharging fertiliser raw materials or fuel oil, 24 hours a day are worked, Saturdays and Sundays included. For general cargo, when occasionally discharged, from 0700 hrs. to 1500 hrs. Monday to Saturday. Berthing space of this port only permits operating 1 vessel at a time.

No cargo operations conducted in bay.

MEDICAL: There is a small hospital at Felton where crew members requiring medical and dental care are attended.

Cases requiring surgical or specialised treatment, are sent either to Mayari Hospital or Lenin Hospital, at Holguin.

FRESH WATER: Temporarily no water available at Felton.

FUEL: Not available.

REPAIRS: Cannot be performed at this port.

TRANSPORTATION: Usual means of transportation between Felton and Antilla, and other nearby ports, is by launch and also by road.

From Felton there are the following distances and travelling time to:

	By launch	By road
Antilla	11 miles – 1 hr. 30 min.	2 hrs. 30 min.
Nicaro	3 miles – 30 min.	50 min.
Preston	4 miles – 40 min.	1 hr.

DEVELOPMENTS: Specialised fertiliser unloading equipment to be introduced at port.

AUTHORITY: The Port Authorities are located at Antilla and visit Felton as necessary.

AGENT: See "Antilla". Mail should be sent through Antilla's main office by registered mail. Spares by railway express to Antilla.

BANES: 20.54 N. 75.41 W.

LOCATION: Banes is located on the North coast of Cuba Lat. 20° 53′ N., Long. 75° 40′ W.

Banes is a sheltered, land-locked port located next and to the West of Nipe Bay.

Traditionally this port used to ship raw sugar and molasses, that is the production of "Nicaragua" sugar mill, formerly "Boston".

Due to limitations imposed by the characteristics of this port to the length of vessels, and the constant increase in size and tonnage of vessels operating currently in Cuba, gradually the port lost its use and importance, and nowadays is only used for coastal trade.

While approaching Banes, the points of visual orientation are:

Banes Bay Light, shown from a red iron skeleton structure, 30 f above sea level, situated about 400 yds. Southward of Pt. Fuerte A small house located on the Southern side of the entrance to bay, and the port entrance itself, cliffs at both sides and forming a remarkable canyon.

Banes port mouth lighthouse is located on the Western extremity of Caracolillo Beach, between Pt. Fuerte and Pt. Penasco.

At the extremity of Pt. Penasco there is a masonry house, visible u to 2 or 3 miles away.

PILOTAGE: Vessels should pick up Pilot at 20° 53′ N., 75° 29′ W., 1 mile N.E. of Banes Canyon Lighthouse. Pilot station located at Embarcadero (Banes). Agent informs Pilot of ship's arrival by means of local telephone. Distance from point where Pilot boards vessel to pier is about 6 miles.

ANCHORAGES: *Macabi Anchorage:* Located S.S.W. of Nicaragua Pier.

Limitations: Max. draft 31 ft., max. length 360 ft. Swinging area: About 620 m.

Anchorage can accommodate 2 or 3 vessels.

Bottom is soft mud but anchors hold well and vessels anchor with 3 or 4 shackles of chain.

RESTRICTIONS: Entrance is through narrow channel with sharp turns where there is a strong current. For this reason vessels can only enter on slack water tide and during daylight. Assistance of tug necessary for entering and sailing. Bottom and banks are rock and coral. Depth about 60 ft.

MAX. SIZE: Max. length due to characteristic of channel is of 360 ft. Due to insufficient water at pier, and in bay, ships are limited to draft 19 ft. forward and 23 ft. aft.

Average of about 2 ft. 4 in. between high and low tides.

RADIO: Ships can communicate with port by wireless via CLA, but recommended that ETA message be sent to Antilla Agency, simultaneously advising Mambisas Havana.

TUGS: At present no tug available, but when needed same is requested from Antilla. Particulars of tug shown under Antilla information.

BERTHING: Nicaragua Pier (formerly Banes Pier): Length 240 ft., max. length allowed to vessels 360 ft., draft 19 ft. forward and 23 ft. aft.

The pier is built entirely of wood and in need of repairs.

Only 1 vessel can be berthed.

At the present time only cargo handled is the discharge of fuel oil (coastal trade).

Tanker Information: Fuel oil: 1×8 in. diameter.

No cargo operations performed at anchorage.

MEDICAL: There is a hospital where sick crew members may be hospitalised. Dental care is also available.

STEVEDORES: *Working Periods:* For discharge of fuel oil: 24 hours a day, 7 days a week.

Dry cargo vessels operate Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sunday: No work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday; and 4 hours on Saturday, for a total of 44 hours weekly.

FRESH WATER: Fresh water supplied, delivered by 3 in. diameter pipeline, with average delivery 4 t.p.h.

FUEL: Not available.

REPAIRS: No repairs can be effected at this port.

TRANSPORTATION: Transportation between Nicaragua Pier and Antilla or Banes is by road. From the pier to Banes there is a distance of 15 km. and to Antilla 50 km.

COMMUNICATIONS: Only means of communications between Antilla and Banes are telephone and telegraph.

PORT AUTHORITIES: All Port Authorities are located at Antilla except Port Captaincy which is located at Banes.

Authorities travel from Antilla to clear vessels at Banes.

AGENT: See "Antilla".

For information regarding ship's operations, Antilla Agency should be contacted. Antilla office personnel travel to Banes to attend vessels operating there. Any mail should be addressed to Antilla Agency. Spare parts by railway express.

BARACOA: 20.21 N. 74.30 W. (See Plan)

(and sub-ports of Moa and Punta Gorda)

LOCATION: This port is located on the North coast of the extreme Eastern portion of Cuba in Oriente Province:

Lat: 20° 21′ N., Long: 74° 30′ W.

Its bay is fan shaped and is almost in its entirety sand and mud bottom, 325 yds. in width at its entrance, and opens out to 1,150 yds. in a N.W. and S.W. direction, and 800 yds. in breadth.

Its shores are bordered by sand banks.

"Buren", an isolated rock visible only at low tide, lies about 30 yds. North-Westward of Pt. Barlovento; the sea always breaks on it; it is steep-to and constitutes the only danger.

S.E. of the town is Miel Bay where excellent anchorage is available.

PILOTAGE: Pilots board vessels 2 miles off port. Pilot station located in Baracoa City. Distance from point where Pilots board vessels to operation place (anchorage) is about 2 miles.

RESTRICTIONS: Vessels can enter port only during daylight.

MAX. SIZE: Entrance channel straight – without turns. Vessels up to 400 ft. length and 28 ft. draft can enter through Channel. 2 ft. to 3 ft. rise of tide.

TUGS: Not available.

RADIO: Vessels navigating to Baracoa can communicate with the Port Agency through "CLA" Havana Radio Station which relays the messages promptly to Baracoa.

Masters must send their ETA messages simultaneously to Simon Baracoa and Mambisas Havana.

STEVEDORES: No pier at this port. Vessels anchor in bay for operations. Several barges, capacity 100 tons.

Only one vessel can be handled at a time.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Discharge rate: about 80 tons daily per gang.

MEDICAL: There is a general hospital for sick crew.

FUEL/FRESH WATER/REPAIRS: Not available.

TRANSPORTATION: Transportation to and from Baracoa is difficult.

There is daily air service and also bus service to Moa and other towns in the province, but best advisable means of travel is by car.

AUTHORITY: Port Authorities located at Baracoa. They have Delegation at Sub-port of Moa.

AGENT: See "Moa".

(a) SUB-PORT OF MOA (Moa Bay): 20.41.15 N. 74.52.30 W. (See Plan)

Vessels can proceed directly to sub-ports of Moa and Punta Gorda where they are visited by Customs Authorities.

LOCATION: The port of Moa is situated in the rear part of Yaguasey Bay, where in an artificial inner harbour lies the pier of Moa, and at the entrance of the inner harbour a small coastal trade pier.

Both the port of Moa and the sub-port of Punta Gorda mainly handle the imports and exports of the huge mining enterprise, Major Pedro Soto Alba.

PILOTAGE: Pilots board vessels at Moa Port mouth which is distant about 2 miles from entrance. Pilot station located at Punta Gorda at distance of about 5 miles from port entrance. Distance from point where Pilot boards vessel to Darsena de Moa (pier) is about 4 miles; to Moa Anchorage about 2 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance channel to Moa is almost straight having two very slight turns, minimum depth on its course is 40 ft. and length and draft limitations to enter to or sail from this port are those imposed by Moa pier and inner harbour:

Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Length: 500 ft.

Channel bottom from its head up to the pier is as follows: From the head to Grande or Del Medio Shoal, coral and rocks; then up to Yaguasey Bay, coral and mud; and on its final stretch to the pier, hard red mud.

Length of channel: 1,560 m.; minimum width 200 m. and maximum 720 m.

For both, Moa and Punta Gorda, entrance to or sailing from, can only be performed during daylight.

As tidal currents average only 1.25 knots, and since the inner harbour is almost devoid of currents, it is not necessary to wait for slack water for entering, sailing or crossing the channels.

Approaching the port of Moa, at both sides of port entrance, strings of breakwaters can be seen.

Behind the Western side breakwater, Moa Grande Cay is conspicuous and a lighthouse rises at about the middle of its North coast.

ANCHORAGES: Moa: *Anchorage No. 1:* Located Northward of Fabrica River and S.E. of Pt. Pajaros: Lat. 20° 40′ 38″ N., Long. 74° 53′ 10″ W.

Minimum depth: 38 ft. Swinging area: 250 m.

Anchorage No. 2: Located Northward of Fabrica River and South of the Eastern extreme of Moa Grande Cay: Lat. 20° 40′ 35″ N., Long. 74° 53′ 28″ W.

Minimum depth: 37 ft. Swinging area: 250 m.

Anchorage No. 3: Located N.W. of Del Medio Shoal: Lat. 20° 40′ 32″ N., Long. 74° 54′ 04″ W.

Minimum depth: 68 ft. Swinging area: 300 m.

Anchorage No. 4: Located Northward of Del Medio Shoal: Lat. 20° 40′ 43″ N., Long. 74° 52′ 30″ W.

Minimum depth: 41 ft. Swinging area: 250 m.

Although above anchorages are listed under the port of Moa, they can be used if necessary, for shipping or unloading cargoes destined to Punta Gorda.

TIDAL VARIATION: Tidal variation at these ports averages 30 in.

RADIO: There is a Government Radio Station at Moa.

Vessels navigating to Cuba can communicate with Mambisas Moa through "CLA" Havana Radio Station and the message will be relayed to Moa by telegraph or telex.

Masters must send their ETA messages to Moa or Punta Gorda, simultaneously to Mambisas Moa and Mambisas Habana.

TUGS: Tug used at Moa for docking. Tug operated by Mining Enterprises.

BERTHING: *(a) Moa Pier* (Also known as Moa Darsena): It is a solid concrete construction in an artificial inner harbour. Berthing length: 308 ft. Max. length permitted to vessels: 500 ft. Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Due to pier dimensions, only 4 hatches can be worked at a time, but despite above limitations, occasionally larger vessels have been operated.

Cargo handled by this pier: Importation: Bulk sulphur, empty ore containers, occasionally general cargo.

Exportation: Nickel and cobalt concentrate in containers and drums.

Coastal trade: Discharge of fuel oil, diesel oil, kerosene, gasoline, sulphuric acid.

Tanker Information: Mining Enterprise: Gasoline/kerosene: one connection 6 in. diameter. Fuel oil: 4 connections 8 in. diameter.

ICP: Gasoline/kerosene/diesel oil: one connection 6 in. diameter.

(b) Coastal Trade Pier: It is a small coastal pier for small vessels, located at the entrance of the inner harbour. Constructed of piles and filled with earth.

Cargo handled by this pier: Coastal trade, general cargo.

No cargo operations in the bay.

STEVEDORES: *Working Hours:* Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs. Saturdays 0700 – 1100 hrs.

EQUIPMENT: 1 shore crane 30 tons with 3 ton grab; 4 contact grabs; 2 trucks 30 tons capacity each; 1 pay loader; 2 fork lift trucks; 1 stationary crane; 1 steel barge 500 tons capacity; 1 tugboat (2 diesel engines 180 h.p. each).

Loading/discharging operations: Raw material for the nickel plant is imported as well as fuel oil. Nickel concentrate is exported.

Loading/discharging rate – Nickel (in containers): loaded at a rate of approximately 30 tons per hour-gang.

MEDICAL: Industrial Hospital where crew members can be hospitalised. General Hospital at Baracoa.

FRESH WATER: Delivery at rate of about 10 t.p.h.

FUEL: Not available.

REPAIRS: There are machine shops at nickel plant where small emergency repairs can be performed.

AUTHORITY: Port Doctor, Customs and Port Captain Delegations at this sub-port. Immigration Delegate is the same one who attends vessels at Baracoa and other sub-ports. Vessels can proceed directly to Moa where they are cleared by Port Authorities. Means of transportation from Baracoa to Moa or other sub-ports are: air, launch and overland (jeep). Customs House inspectors travel from Moa to Baracoa.

Baracoa to Moa about 32 miles distant. Following services used: by plane, 20 minutes; by launch, 6 hours; by jeep, 5 hours. Daily flights and regular bus services.

AGENT: Empresa Consignataria Mambisa, Agencia Moa, Reparto "Rolo Monterrey" No. 163, Moa, Prov. de Oriente. Telephone: 7527 (day) 7105 (night). Telex: 021123. Cable: Mambisas Moa.

(b) SUB-PORT OF PUNTA GORDA: 20.38.30 N. 74.51.15 W.

(See Plan)

LOCATION: Punta Gorda is located at about 3.5 miles East of Moa and consists of an anchorage where loading is effected by means of barges.

APPROACHES: Entrance channel to Punta Gorda is the same as for Moa, and once the first stretch of it up to Del Medio Shoal is sailed past, it turns to the East, following a winding course, having four turns. The turns themselves are difficult but what makes them really dangerous is the lack of proper buoying and navigational signals.

Maximum width of channel is 300 m. and minimum 200 m. Maximum length and draft to enter to or sail from Punta Gorda are as follows: Length: 442 ft.; Draft: 28 ft.

RESTRICTIONS: Vessels can enter only during daylight.

PILOTAGE: Pilots board vessels at Moa port mouth. Pilot station located at Punta Gorda at a distance of about 5 miles from port mouth.

Distance from point where Pilot boards vessels to the anchorage (loading place) is about 4.5 miles.

ANCHORAGES: Located North of Punta Gorda and East of Pt. Yagrumage.

TUGS: One tug which tows 1 or 2 barges as necessary. Work performed day and night.

RADIO: Through Simon – Baracoa by Inalambrica (cable).

LOADING: *Punta Gorda Anchorage:* Located North of Punta Gorda and East of Pt. Yagrumage: Lat. 20° 38′ 55″ N., Long. 74° 51′ 13″ W.

Minimum depth: 31 ft. Max. draft allowed to vessels: 28 ft. Max. length allowed to vessels: 442 ft. Swinging area: 300 m.

Vessels operating at Punta Gorda load their cargo by means of barges.

Only cargo handled at this anchorage is loading of bulk refractory chromium.

STEVEDORES: Chrome, at average loading rate of 1,000 tons (approx.) per day of 24 hours. Loading operations carried out at anchorage. There are 2 wooden barges 130 tons capacity each; 1 tugboat; 2 trucks 10 tons capacity each; 1 pay loader; 1 shore crane.

MEDICAL: No hospital at Punta Gorda. Crew members can be attended to at Moa or Baracoa Hospital.

FUEL/REPAIRS: Not available.

FRESH WATER: No water available at anchorage but can be supplied at Moa Pier (Darsena).

AUTHORITY: Customs Delegation at this sub-port. Vessels can proceed directly to Punta Gorda. Port Authorities from Baracoa travel to Punta Gorda for clearance. Moa Port Doctor clears vessels at Punta Gorda. From Baracoa to Punta Gorda, following ways of transportation used: air, launch and overland, which takes 20 minutes, 5 hours and 4.5 hours respectively. No regular transportation.

AGENT: See "Moa".

CAIBARIEN: 22.32 N. 79.28 W.

LOCATION: This port is located on the North coast of Cuba: Lat. 22° 32′ N., Long. 79° 28′ W.

Port operations are effected at Cay Frances Anchorage, 16 miles from the City of Caibarien.

In rough weather, operations are generally suspended, because it is not possible for the lighters to remain alongside ship.

In spite of the fact that all cargo operations are effected by lighterage, this port is most efficient and very often surpasses the cargo rates of other ports.

PILOTAGE: Pilots board vessels 0.5 mile from Catalina buoy (entrance) of Cay Frances anchorage. Pilot station located at Cay Frances at place known as Punta del Asta. Usual means of communication is radiotelephone, which is available at Port Captain's Office in Cay Frances, close to pilot station. Advice also given by motor-launch.

Distance from point where Pilots board vessels to:

Inner anchorage (La Caldera)	–	2 miles
Outer anchorage (La Poza)	–	0.5 mile
Outer anchorage (Port Buoy)	–	at same place where Pilots board vessels.

ANCHORAGES: Cay Frances anchorage easily accessible, free of shoals and reefs. Bottoms at anchorage "Caldera" and "Poza" are mud and sand. Bottom at third anchorage (port buoy anchorage) is stone, but free of reefs.

Cay Frances Light, group occulting white, visible 8 miles away, stands on an iron skeleton structure 36 ft. high, on the Western end of the Cay.

Vessels can enter or sail Cay Frances anchorage with any length and with max. draft up to 35 ft. When vessels draw less than 20 ft. they proceed to inner anchorage (La Caldera): over 20 ft. and up to 26 ft. to the outer anchorage (La Poza); and those over 26 ft. proceed to third anchorage (port buoy).

Following regulations must be observed during vessels stay at Cay Frances Road:

(1) Vessels arriving with draft of 19 ft. 6 in. or less:

(a) All ships arriving with draft of 19 ft. 6in. or less must proceed to inner anchorage and remain in this anchorage until reaching draft of 20 ft. even keel.

(b) Any Master refusing proceed to inner anchorage with draft of 19 ft. 6 in. or less, incurs penalty of extra charge of about 7 cents on each bag of sugar delivered in port (payable to crew of sugar barges employed in transportation of cargo from shore warehouse to anchorage at Cay Frances).

(2) Shifting or changes of anchorages:

(a) Vessels must remain at place where official Pilot orders anchoring.

(b) Not permitted to shift or change from place indicated by official Pilot of the port without authorisation from Custom House Officer-in-charge on board the vessel. All shifts and changes to be done only under supervision and command of local Pilot.

(c) Master will notify Custom House Officer on board when shiftings or changes of anchorage places required.

In event aforementioned orders not followed or observed by Ship's Master and/or ship's officers, a penalty or fine minimum $500 (five hundred dollars) will be charged to the vessel, and will have to be paid by Master prior to departure from this port. Besides penalty, no cargo will be delivered to ship anchored in any other place, other than indicated by local Pilot.

Tidal variation averages 2 ft.

Vessels can enter during day and night-time.

RADIO: Means of communications between Caibarien and Cay Frances is radiotelephony.

Several tugboats operating at this port are also equipped with radiotelephony; likewise stevedores enterprise, Port Captaincy and the molasses reservoir (Ponton San Pascual).

The official radiotelephony hours of communication are: 0800 – 0900, 1100 – 1400 and 1600 hrs., but after these hours, other communications can be established, upon request.

At Caibarien there are the following means of communication: National wireless telegraphy, telegrams, long distance telephone and Post Office.

Mambisas Caibarien Agency is connected with the National Telex System and this is the best means of communication with this port.

Vessels navigating to Cuba can send their messages to Caibarien through "CLA" Havana Radio Station which relays the messages promptly to Caibarien.

Masters must send their ETA messages simultaneously to Mambisas Caibarien and Mambisas Havana.

Pilot VHF works on Channel 16.

TUGS/BARGES: It is not necessary to use tug for entering/sailing, but following tugboats used for towing barges.

Tug Name	*Length*	*Speed*	*H.P.*
Gonzalez Lines	75 ft.	8/9 knots	250
Cmdte. Fajordo	55 ft.	8/9 knots	300
Jose Marti	60 ft.	8/9 knots	180

BARGES: Following barges available:

Name	*Capacity Bags*	*Capacity Approx. Long Tons*
Transporte No. 1	2,860	328
Transporte No. 4	2,860	328
Transporte No. 3	2,860	328
Transporte No. 8	2,860	328
Transporte No. 10	2,860	328
Transporte No. 11	2,860	328
Patana Punta Alegre No. 1	2,860	328
Patana Cadagua	2,860	328
Patana Victoria	2,860	328
Patana Americana No. 2	3,640	417
Patana Miriam Lourdes	2,080	240
Lanchon Antonio	2,080	240
Lanchon Marcelo	2,080	240
Lanchon Emilio	2,080	240
Lanchon Armando	2,080	240
Lanchon Dolores	1,040	120
Lanchon Juanita	1,040	120
Lanchon Laura	845	97
Lanchon Marianela	845	97
Lanchon Gloria	715	82
Lanchon Elvira	680	78
	45,945	5,163

STEVEDORES: Sugar working periods: Monday to Friday 0700 t 1100 hrs. and 1300 to 1700 hrs. Saturdays 0700 to 1100 hrs. Sunday no work is performed unless urgent.

Although bagged raw sugar is reported as an exportation product o the port, for the last 2 years no sugar has been exported throug Caibarien.

Loading rate: About 1,000 bags of raw sugar per gang-period. Fo each gang, not less than 1,950 bags are placed alongside vessel fo each 8 hours working period.

For vessel able to make faster reception, it is possible some days for about 3,000 bags to be loaded.

Bags per sling: 5 bags per sling loaded.

Work capacity: 2 vessels can be operated simultaneously.

General cargo: Only empty jute bags imported and discharging rate approx. 20 tons per gang hour.

MEDICAL: There is a hospital at Caibarien for sick crew members.

TANKERS: Only blackstrap molasses exported by this port. When tankers arrive drawing less than 20 ft. or in ballast, they dock at Pontoon or Hulk *San Pascual,* proceeding generally to complete at another port.

On other occasions they are shifted from Pontoon (Hulk) *San Pascual,* to outer anchorage "La Poza" where they complete cargo which is delivered by barges.

Average pumping rate 55,000 gallons per hour.

FUEL: No bunkers available.

FRESH WATER: No water available.

DUNNAGE: No wood available, paper available if requested well in advance.

REPAIRS: Minor repairs only. Repair shops at Caibarien, but due to distance from Caibarien to Cay Frances, it is difficult and expensive to perform repairs.

TRANSPORTATION: Transportation means to and from Caibarien are poor, although railroad and bus services are available.

Best means of transportation is by train or bus to Santa Clara and from there transportation is available to any place or city.

AUTHORITY: All port authorities located at Caibarien 16 miles from Cay Frances anchorage, where they travel by launch or motor-boat to clear vessels.

AGENT: Empresa Consignataria Mambisa, Agency Caibarien, Avenida 9 No. 601, Apartado No. 72, Caibarien, Prov. de Las Vilas. Telephone: 3706 (office) 3859 (night). Telex: 041224. Cable: Mambisas Caibarien.

As Caibarien has no air mail or air express service, all mail and parcels should be sent to the Havana main offices from where it will be relayed by the quickest means to Caibarien.

CARDENAS: 23.03 N. 81.12 W. (See Plan)

Cardenas is the Northernmost port of Cuba being in a large bay 9 miles wide N.W. to S.W. and from 6 to 10 miles long from West to East.

It is a shallow bay with muddy bottom.

PILOTAGE: Pilots board vessels in vicinity of Cayo Piedras.

Pilot station at Cardenas. Distance from where Pilot boards to the pier is 16 miles, and to Cayo Diana 6 miles.

APPROACHES: Entrance to port is effected between Mono Cay and Piedras Cay.

The channel head is located at a point almost equidistant to Blanco Cay and the end of Hicacos peninsula, but closer to the latter.

It is an artificial channel but it has no narrowness and no turns.

Its bottom is rock, sandy at the head and for the first mile, and muddy all the rest of its course.

In front of the pier the channel opens in the shape of a funnel forming around it the inner harbour or basin.

Approaching Cardenas, the most conspicuous points of visual orientation are:

Piedras Cay lighthouse which stands 78 ft. above high tide, a stone cylindrical construction on a white building, its white light visible up to a distance of 14 miles.

Southwestward of Piedras Cay the long ribbon of white sands of Varadero Beach can be seen, and in the background the hotels and buildings.

To the S.E. Diana Cay lighthouse, a 38 ft. high metal tower and the string of cays such as: Chalupa, Romero, Blanco, etc.

RESTRICTIONS: Considering that from the place where Pilots board the vessels up to the pier or vice-versa takes about 4 hours, including manoeuvres, vessels must commence manoeuvres to enter or sail from this port at least 3 hours before dusk. Vessels are allowed a maximum length of 560 ft., max. draft of 20 ft. 6 in. at any tide, and 22 ft. at high tide. Tidal variation averages 2 ft.

In case of large vessels, it is necessary to wait for slack water for crossing the channel stretch known as Buba Channel, about 2 miles long, between Buba and Diana Cays.

ANCHORAGES: *Bay Anchorage No. 1:* Located 1.25 miles Northward of pier, about a mile in extension and a draft of 15 ft.

Bay Anchorage No. 2: Located 2 miles Northward of pier, about a mile in extension and a draft of 15 ft.

Poza Diana Cay Anchorage: Located about 7 miles from pier, about 1.25 miles in extension, draft 30 ft.

Los Meritos Anchorage: Located about 12 miles from pier, about 1 mile in extension, draft 23 ft.

Piedras Cay Anchorage: Located 16 miles from pier in the open sea, unlimited swinging area, draft 40 ft.

RADIO: Vessels navigating to Cuba can communicate with Mambisas Cardenas through "CLA" Havana Radio Station which immediately relays the messages to Cardenas.

While navigating in Cuban waters approaching Cardenas, vessels can communicate by radiotelephone with "CLW" Cardenas Radio Station on 2760 kHz.

Masters must send their ETA messages simultaneously to Mambisas Cardenas and Mambisas Havana.

TUGS: Normally tug not required to assist berthing, but when vessels have to berth head to shore, assistance of tug is necessary.

BERTHING: The only place of operation at Cardenas is its pier.

It is of solid reinforced concrete construction having double standard railroad tracks along the length of pier, on each side. It is also well paved and trucking operations can be performed alone or in combination with railroad operation.

Railroad cars do not interfere with cargo operations, as once emptied they can be carried out by shifting them to the second track or by going around the pier by the opposite side.

Tankers discharging fuel can be operated at either side or at the pier head.

There are 3 fresh water intakes on each side and one at the head of the pier.

Pier is capable of operating 5 vessels at a time, that is: 4 regular size vessels, 2 at each side, and a tanker at the head.

Both sides of pier are of equal length and have same facilities, being at the N.W. and the S.W. sides.

Cardenas Pier:

Length 319 m. (1,014 ft.), width 80 m. (262 ft.), draft alongside 24 ft. Max. draft allowed for vessels' operations 20 ft. 6 in. at any tide, 22 ft. at high tide.

The dock has space to dock 4 vessels (2 at each side) and a small size vessel at the head of pier, but personnel available at present time is enough for working only 1 dry cargo vessel and a tanker vessel discharging fuel oil. Dredging of the port has recently been completed and there is a plan to increase port personnel

No operations at bay or anchorage performed at this port.

STEVEDORES: Export of refined sugar and alcohol. Port has the following auxiliary equipment: 1 shore crane, 3 fork lift trucks, 4 conventional tractors, 3 rail tractors.

Working periods: loading sugar from Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.; Sunday: no work performed.

When vessel does not achieve daily rate during regular hours, work is carried out from 1900 to 2300 hrs.

Raw sugar loading rate: about 1,138 bags (of the 220-pound type) loaded per 4 hours per gang. This is not a fixed rate but when exceeded stevedores to be paid extra. Bags per sling: 4 bags of raw sugar (of the 220-pound type) loaded per sling.

Refined sugar: about 2,500 bags (of the 100-pound type) or 2,272 bags of 50 kilos, loaded per 4 hours per gang period. This is not a fixed rate, but when it is exceeded an additional payment must be made. Bags per sling: 12 bags (of the 50-kilo type and 100–pound type) loaded per sling.

Bulk: Only grates are available for loading bulk sugar.

MEDICAL: Cardenas General Hospital and a clinic.

TANKERS: Discharge of fuel oil: There are 4 intakes at the pier:

Two at North side, 1 at the head and 1 at South side.

Pipe-lines 8 in. and all connections 6 in. in diameter.

FRESH WATER: Pier has 7 water intakes connected to a water reservoir which is supplied by tank-trucks and/or railroad tank-cars.

Delivery rate: 20 t.p.h.

Daily delivery rate dependent upon transportation available.

FUEL: Not available.

REPAIRS: No repair shop at this port.

DUNNAGE: No wood available. Paper available if requested well in advance.

TRANSPORTATION: Transportation to and from Cardenas is good.

To Havana there are scheduled bus departures about every 2 hours, to Varadero every 30 minutes, and also several departures to Sagua la Grande, Isabela and other nearby cities.

AUTHORITY: All port authorities located at Custom House building.

AGENT: Consignataria Mambisa, Agencia Cardenas, Calle 2 entre Cespedes y Ave. 2da., Apartado No. 2847, Cardenas, Prov. de Matanzas. Telephone: 306 (office); 4264 (night). Telex: 052168. Cables: Mambisas Cardenas.

All urgent mail and parcels should be sent to our main offices at Havana from where it will be relayed to Cardenas by the quickest means possible to ensure prompt delivery.

Ordinary and non-urgent mail or parcels can be sent directly to Mambisa's Cardenas Office.

CIENFUEGOS: 22.09 N. 80.27 W. (See Plan) (including sub-ports of Casilda (Port Trinidad) and Tunas de Zaza)

LOCATION: Cienfuegos Bay, by its natural characteristics, offers ample protection for vessels within port premises. It is about 10 miles long, from North to South and 3 miles wide, from East to West, surrounded by high ground and mountains.

The Coastal outline is rugged inside the bay, due to numerous points and creeks and at the widest part of the bay, to the N.W., is the city of Cienfuegos and some of the port's installations, and further, to the North of the city, the remainder and most modern of the port installations.

PILOTAGE: The Pilot boards the vessel at 0.5 miles S.W. of Los Colorados lighthouse at the following geographical position:

Lat. 22° 01′ 33″ N., Long. 80° 26′ 53″ W.

From this place to the different places of operation of the port there is a distance of 7 to 8 miles.

Pilot station is located at Jagua Castle, on the West coast of the bay, just in front of and to the West of Pasa Caballos Point.

Pilot service is available 24 hours daily and they have a 24 hours watch, and advice of arriving or sailing ships is announced by a semaphore station.

ENTRANCE TO PORT/CONDITIONS: Entrance to port is performed by a channel which begins between the points of Los Colorados and Sabanilla and runs for 3 miles up to La Milpa Point. From La Milpa the channel continues toward the interior of the bay firstly by the South and afterwards by the West of Carenas Cay up to the General Anchorage.

From the General Anchorage vessels can proceed either to the piers at the South of the port or to the North anchorage and the installations of the North Zone.

The bottom of the channel is muddy and its various depths are as follows: From the head of the channel up to Las Milpas max. depth is 214 ft. at lighted buoy No. 3 and minimum of 68 ft. at the West of Pasa Caballos Point.

From La Milpa up to General Anchorage minimum is 48 ft. and from then on up to the North Anchorage minimum of 40 ft.

The channel has 2 sharp turns only, but adequate precautions must be taken when entering Cienfuegos harbour, always with Pilot on board, which is compulsory at all ports. The first turn of 68° is at Pasa Caballos Point and because this is the narrowest part of the channel where Tidal currents flow strongly, it is here where precautions should be exerted.

The second turn of 98° is at West of Carenas Cay, but due to the width of the channel at this point and the fact that tidal currents have no great effect, manoeuvres are easier at this turn.

No tugboat required for entering or sailing from this port and vessels with a length of 207 m. have entered without tugboat assistance but vessels from 207 m. up to a max. of 225 m. entering or sailing from Cienfuegos should take the following measures:

Only during daylight hours, during slack water and the assistance of 2 suitable tugboats. Vessels of 4,000 g.r.t. or larger can sail from the port only at slack water to avoid the risks of tidal currents at Pasa Caballos turn, but this measure does not apply to incoming vessels which can enter at any time.

The port of Cienfuegos can be entered at day or night time.

At the entrance to the port, at Los Colorados Point, there is a lighthouse also named Los Colorados which rises 83.1 ft. above high tide, located at Lat. 22° 02′ 04″ N., Long. 80° 26′ 29″ W.

The lighthouse is painted in a white-yellowish shade and flashes white light every 5 seconds visible 21.8 miles away.

ANCHORAGES: The Bay of Cienfuegos has ample anchorage zones.

The most important are: General anchorage at about the middle of the bay and North anchorage, at the North part of the bay.

Regarding the capacity and conditions of Cienfuegos anchorages it can be said that they meet the requirements of the largest vessel which presently or in future could enter this port.

North Anchorage: Located on the North part of the bay, at the Zone N.W. of the city and South of Tricontinental Pier and Ramirez Cove.

This zone is located between: Lat. 22° 09′ and 22° 09′ 30″ N. and Long. 80° 28′ and 80° 28′ 30″ West.

Although the bottom is soft mud the anchors hold perfectly well and securely.

Minimum depth of anchorage is 40 ft. and it can accommodate several large vessels with sufficient swinging area. Vessels anchor with 3 shackles of chain.

At this place vessels await berth, bunker or water, etc. and also can discharge or load by means of barges.

General Anchorage: Located in the middle of the bay and covers a square space limited by Pt. Gorda and Jaragua Cove at the South and Pt. Majagua and Pt. Salinas at the North:

(Lat. 22° 07′ – 22° 08′ 15″ N., Long. 80° 27′ 15″ – 80° 28′ W.).

Minimum depth is 48 ft. Bottom is soft mud but in spite of this anchors hold well and securely. Usually vessels anchor with 3 shackles of chain.

At this anchorage vessels await berth, bunker, water, provisions, etc. and also can discharge or load by means of barges.

Quarantine and Explosives Anchorage: Located at 0.5 mile off Pt. Barril.

As indicated by its name, this anchorage is used in case of quarantine to vessel or when carrying explosive cargo. The bottom is soft mud having a depth of 50 ft. Vessels anchor at this anchorage with 3 shackles of chain.

ICP Submarine Pipe-line Anchorage (Formerly Standard Anchorage): Located on the West side of Pt. Majagua.

The submarine pipe-line is 2,900 ft. long from the intake up to the deposit tanks, 12 in. in diameter. The connection is 8 in. in diameter.

Vessels berth to 3 mooring buoys aft, using both anchors. Minimum depth at this place is 58 ft.

The only product handled is fuel oil, which averages a rate of discharge of 420 metric t.p.h.

Berthing operation performed only during daylight hours.

Fertilisers Plant Submarine Pipe-line Anchorage: Located at the South of Ramirez Cove.

A fuel oil pipe-line 2,310 m. long, 16 in. in diameter with a 10 in. connection. The naphtha pipe-line is 10 in. in diameter with a 10 in. connection.

Vessels berth to 3 mooring buoys aft and use starboard anchor of the ship. The official draft is 31 ft. even keel. The bottom is soft mud.

Vessels discharging naphtha must pump, after discharging same, about 200 tons of fresh water. Water must be taken at prior ports of call as delay may result to vessel if Cienfuegos water barge is not able to supply the water.

Average rates of discharge are:
Naphtha: 400 t.p.h.
Fuel oil: 450 t.p.h.

Berthing operation to this place performed only during daylight.

Thermoelectric Plant Submarine Pipe-line Anchorage: Located on the North side of the North Anchorage.

Pipe-line is 14 in. in diameter and 6 in. connection.

Vessels berth to 3 mooring buoys aft and to another mooring buoy at the port side forward and use the starboard side anchor. Minimum depth is 38 ft.

Only product handled is fuel oil which can be discharged at an average rate of 500 t.p.h.

Berthing operation can be performed only during daylight hours.

MAX. SIZE: Max. length with which vessels can enter port is 700 ft. with draft up to 37 ft. making use of the best conditions, such as slack water, and daylight. Tidal variation about 1 ft. 6 in.

RADIO: Vessels navigating toward Cuba can communicate with Mambisas Cienfuegos Agency through "CLA" Havana radio station which relays the message to Cienfuegos immediately.

When navigating in Cuban waters and nearing Cienfuegos, vessels can communicate directly through "CLC" Cienfuegos radio station which immediately informs Mambisas Cienfuegos Agency of any message received and the Agency can answer through "CLC", which also have radiotelephony system.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Cienfuegos and Mambisas Havana.

There is complete telephone service: Local, long distance and International.

RCA System radiograms have national and international service.

There are also the Wireless Service, Government Public Telegraph Service and Post Office.

Our Agency can communicate with Havana and the rest of the parts by telex, this service being the most reliable and quickest of the means of communication.

Cienfuegos telex number is 042118, 042109.

BERTHING:

	Draft in ft.	
	Fore	*Aft*
Tricontinental Pier: East Side (Bulk Sugar)	32	33
West Side (General Cargo)	26	28
Pablo E. Guzman Pier: West Side (Discharge of clean petroleum products)	27	30
East Side: Out of use		
Molasses Terminal: Loading of molasses	33	33
ICP Submarine Pipe-line: Discharge of Fuel Oil	58	58
Olimpia Medina Pier: General Cargo	24.5	25.5
Fertilisers Plant Submarine Pipe-lines: Discharge of Naphtha & Fuel Oil	31	31
Thermoelectric Plant Submarine Pipe-line: Discharge of Fuel Oil	38	38
North Anchorage: Discharge/Loading of General Cargo	40	40
General Anchorage: Discharge/Loading of General Cargo	48	48
Quarantine and Explosives Anchorage:	50	50

Tricontinental Pier: Located on the North coast of the bay, at the Wes of Manaca Cove, in front of the city of Cienfuegos.

It is a solid construction of reinforced concrete, 206 m. (676 ft.) lon and 43 m. (141 ft.) wide. The East side of the pier is specially conditione for loading bulk raw sugar and has 2 cranes, mounted on rails, that ru along the length of pier, each capable of loading 600 tonnes/p.h.

Although the length of the pier is 206 m., at the East side the berthin length is only 165 m., because at the shore end there are 2 restin bases for the cranes, where they remain when idle.

In direct line with the pier is the parabolical warehouse, which capable of holding 90,000 tonnes of bulk raw sugar. Next to it is th receiving station of the plant, where a continuous flow of railroad hopp cars discharge the sugar coming from many sugar mills in Las Villa and Matanzas provinces.

The West side of the pier is being used as a general cargo dischargin berth, but the future planning for this side is for discharge of bulk whea to supply the flour mill, now under construction.

Tricontinental Pier

East Side:
Berthing length: 542 ft., overall length: 666 ft.
Max. length of vessel to dock and operate: 615 ft.
Drafts: 32 ft. fore, 33 ft. aft.
Cargo handled this side: Loading of bulk raw sugar.
Fresh water available by pipe-line.

West Side:
Overall and berthing length: 666 ft.
Draft: 26 ft. fore, 28 ft. aft.
Cargo handled this side: Discharge and loading of general cargo.
Fresh water available by pipe-line.
Docking to this pier can be effected either in day or night-tin because it is well lit.

All operations, except loading bulk raw sugar, must be effected means of trucks because although railroad tracks reach the shore e of pier, there are no tracks alongside.

Vessels nominated to load bulk raw sugar at Cienfuegos, must arri at Tricontinental Pier clean and ready to load and any undesirab dunnage material must be discharged at other ports or piers, due to t fact that it has only sufficient personnel to attend the mechanical loadi and there are no stevedores available.

Pablo E. Guzman Pier (Formerly Ferrocarril Pier): Located on the N. side of the city, between Pt. Arenas and Pt. Verde.

It is only used to discharge clean petroleum products and for supplyi diesel oil bunker to vessels.

It is of steel and concrete construction with rubber and wood fende

Fixed light at pier permits night docking.

The bottom at both sides of pier is soft mud.

West Side:
Length: 300 ft.
Vessel's max. length for docking: 610 ft.
Width: 73 ft.
Draft: 27 ft. fore, 30 ft. aft.
Cargo handled by this side: Discharge of diesel oil, kerosene a gasoline*. Connection diameter: 8 in.
Discharging rate: About 400 t.p.h.

*Although three different products are discharged, only one can discharged at a time, as there is only one pipe-line to shore tanks.

East Side: Out of use.

Olimpia Medina Pier (Formerly Cacicedo Pier): Located on the South side of the city at Marsillan Cove.

Only one vessel can be worked, being of concrete construction with wooden/rubber fenders. The fenders are going to be replaced as at the present they are not suitable.

It has a fixed bearing light in order to dock vessels at night.

Cargoes can be handled either by trucks or railroad as the place is paved and has railroad tracks alongside.

Length: 383 ft. Width: 45 ft.

Draft: 24 ft. 6 in. fore, 25 ft. 6 in. aft.

The bottom alongside pier is soft mud.

Operations performed at this pier are usually loading or discharging of general cargo. Also see "Anchorages".

STEVEDORES: Mondays to Fridays: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturdays: 0700 – 1100 hrs.

Although the above are the official working hours of the port of Cienfuegos, frequently 3 shifts of 8 hours each are worked, commencing at 0640 hrs. Also on Sundays a shift is worked from 0640 to 1100 hrs. This is done whenever all conditions, including personnel and weather, are favourable.

The port can operate 9 ships simultaneously as follows:

1 Loading bulk raw sugar.
2 Loading or discharging general cargo (docked).
1 Loading or discharging general cargo (on anchorage).
1 Loading molasses.
4 Tanker vessels discharging petroleum products.

Through this port all kinds of cargoes are imported with the exception of bulk wheat and bulk fertilisers.

Exports: Bulk raw sugar, molasses and occasionally general cargo.

Coastal trade consists mainly of discharge of petroleum products, and other kinds of coastal trade cargoes are seldom handled by this port.

The following equipment is owned and operated by the port:

4 Tugboats: 2×150 h.p., 1×168 h.p., 1×120 h.p.
8 Cargo Barges: 3×100 tons, 3×130 tons, 1×150 tons, 1×180 tons.
1 Fuel Oil Barge: 240 tons.
1 Water Barge: 200 tons.
1 Floating Crane: 35 tons.

All bulk raw sugar is shipped by the Bulk Raw Sugar Shipping Plant by means of modern mechanical equipment and bulk raw sugar ex-bags is not shipped through this port.

MEDICAL: Two hospitals, General Hospital and Mutualist Clinic (formerly Sanatorio de la Colonia Espanola), where sick crew members can be hospitalised.

TANKERS: Molasses Terminal Berth *(Formerly Naticorp Pier):* Located on the West coast of Pt. Majagua, this installation consists of a wooden narrow passage 1,804 ft. long ending at a steel platform along which runs the pipe-lines, one 16 in. and other 12 in., and a catwalk.

Loading of molasses is performed through three connections, diameter 8 in. each, but in the near future they are going to be replaced by 10 in. diameter connections.

Docking can be effected only during daylight hours.

Vessels berth to 4 solid dolphins, 2 mooring buoys aft, and 2 fore, across the head of the installation.

Draft: 33 ft. even keel (not official)(†).

Max. length: 610 ft., Loading rate: 350 t.p.h.

(†)This place has been dredged recently (Former draft 30 ft. – 30 ft. 6 in.) but new official draft has not been released at the moment of publication, and mentioned draft is only the result shown by previous experience. Also see "Anchorages".

FRESH WATER: *(Potable or for Boilers):* Delivered by means of barge, capacity 200 tons, which at the present time is in bad condition, having frequent breakdowns and is often out of operation. It is going to be replaced, but until such time water delivery by barge must be considered as only a possibility, not to be depended upon, so it is unreliable.

Water can be obtained at either side of Tricontinental Pier at an average rate of 10 t.p.h.

FUEL: Regular bunkers can be obtained at this port (whatever type of diesel oil or fuel oil may be stored in the shore tanks at the time of delivery).

Fuel oil is supplied to vessels by means of barge, capacity 240 tons which is towed to the place where ship is operating or berthed.

Diesel oil is supplied by docking at pier, by pipe-line.

If any tanker vessel is operating at "Pablo E. Guzman" pier, delivery must wait until tanker finishes operations and leaves pier.

Mixtures of fuel and diesel oil, IFO, (Intermediate fuel oil), cannot be obtained at this port.

DUNNAGE: This port has conditions and facilities to supply dunnage materials, but specially in the case of wood dunnage, requisition must be placed at least 5 days before delivery date.

REPAIRS: Repair shop available, but can only carry out winch repairs and other light work.

SHIPMASTER'S REPORT: May 1979.

Documents:

1 Copy Maritime Declaration of Health.
1 Copy Clearance from Previous Port.
Derat Certificate or Exemption.
1 Copy Cargo or Ballast Manifest.
10 Copies Crew Lists.
5 Copies Personal Effects (including new clothing). All individual Crew Lists must have Christian names as well as Surnames – initials not sufficient.
3 Copies Provisions Lists. Meats and weights to be separated by countries i.e. Beef (Argentina) 200 lbs., Beef (U.K.) 400 lbs., etc.
4 Copies Stores Lists.
1 Copy Vaccination List. Apparently no vaccination necessary for Cuba.
4 Copies Currency Lists. All currency placed in Master's safe together with jewellery, valuables etc., and sealed.

N.B. Crew only allowed: 1 watch, 1 radio, 1 tape-recorder and 6 cassettes, remainder to be bonded.

Officials: On arrival ship is boarded by Doctor who gives pratique, after which ship is boarded and sealed by Customs and Immigration. After this the Customs Control Board, and the ship is searched from stem to stern.

There is also a search when the ship sails although the search is not so thorough and they only seem to be looking for stowaways.

Meat and fish room are sealed throughout stay but sanitary inspectors board every day (and charge 5 pesos per visit) to take out sufficient selected stores for the day.

Pilotage: Compulsory.

Anchorage: Safe anchorage inside the bay only. Outside the entrance the water is too deep. There is sufficient room for anchorage of 15 vessels. Depth 8 fathoms. The bottom is soft mud which gives very good holding ground.

Restrictions: There is a whirlpool in the entrance at "Pasa Caballos Turn" at various states of the tide when navigation is not possible during a rising tide. Sailing is only possible between HW and LW when the tide is ebbing.

Max. Size: Max. permissible draft 38 ft., tidal range about 1.5 ft., max. LOA 207 m.

Radio: The radio room is sealed throughout the stay.

VHF: VHF Radio in Pilots and Agents office. The Pilots all seem to speak English. There is no VHF on pilot launches, they were expecting new sets.

Tugs: One tug available, 1,200 h.p.

Berthing: Tricontinental East Pier: Max. draft 31 ft. forward, 33 ft. aft. However the berth is being dredged to 38 ft. Max. LOA 200 m. Length of pier 555 ft. Tidal range approximately 1.5 ft. Density 1022.

Vessel loaded bulk sugar and with full ballast (except No. 3 deep tank) vessel had 5 ft. clearance at the ship's side rail.

Bulk sugar loaded from conveyor belt on the shore which is said to have a very accurate weightometer incorporated.

Loading rate with one loader 400 tonnes p.h. and with two loaders 1,000 tonnes p.h.

The warehouse on the quay is said to hold 30,000 tonnes.

Work carried out throughout 24 hours.

The stowage factor of the bulk raw sugar was 43.8 cu. ft./metric tonne.

The berth is very well fendered, however the after mooring points were poor.

Fuel: Available. Grade not known.

Fresh Water: Available. Rate 10 t.p.h. Also available by water barge.

Medical: Two hospitals and doctor available. Vaccinations by the port doctor were said to be free but ship was charged by the Agents.

Repairs: Engine work can be done with permission for immobilisation.

Repatriation: Possible.

Shore Leave: Shore pass not to be in any way defaced or shore leave for that person will be stopped. Ship's pass and Seaman's Discharge Book is handed to guard at bottom of gangway who issues another pass. This has to be exchanged for another pass further up the dock where all money is counted, all valuables are written on pass, time ashore is entered on pass and then one is free to proceed to the town by bus. There is no seaman's mission or any places of recreation, etc.

The same procedure has to be gone through on the return to the vessel.

General: The spare propeller must be sighted before loading can commence.

Flags: Courtesy flag must be higher than house flag.

Lifeboat: Lifeboats can be swung out.

Painting: Punt can be used for shipside painting.

Stores: Fruit and eggs very cheap and plentiful and of good quality.

Refuse: Garbage must be in covered containers which are sprayed together with the ship's fridges, storerooms, galley and pantries on vessel's arrival.

Ratguards: Ratguards must be on all ropes throughout vessel's stay and must not be allowed to fall or blow off or vessel is fined. Many rats were seen in the dock area.

AUTHORITIES: All port authorities are located at port of Cienfuegos.

From Cienfuegos to Casilda and Tunas de Zaza, following transportation can be used: railroad, trucks, barges.

It takes from 2 to 5 hours, according to transport conditions, to travel from Cienfuegos to Casilda or Tunas de Zaza.

Distance, by sea, from Cienfuegos to Casilda 45 miles; to Tunas de Zaza 80 miles. Suggested that railroad or highway be used to travel from Cienfuegos to Casilda or Tunas de Zaza. There is daily omnibus and auto service from Cienfuegos to Casilda and Tunas de Zaza.

There is a daily flight Havana – Cienfuegos which arrives at Cienfuegos around 1130 hrs. and departs for Havana at about 1200 hrs.

Also a daily departure of passenger railroad service Cienfuegos – Havana.

Bus line Cienfuegos – Havana has scheduled departures every 2 hours.

Other bus lines have excellent service to Camaguey, Santa Clara and other cities.

Taxi service is available to any point within city limits or to any place or city and should be requested to our Cienfuegos Agency.

AGENT: Empresa Consignatarias Mambisas, Agencia Cienfuegos, Avenida 50 No. 2712, POB 420. *Tel.* 5718 – 6422 (Night: 6715). *Telex:* 042118, 042109. *Cables:* "Mambisas Cienfuegos".

Recommended that all correspondence or instructions be sent through Havana main office. Cienfuegos Agency attends ships that operate at Casilda and Tunas de Zaza. For any information concerning vessels operating at these sub-ports, Cienfuegos Agency should be contacted.

Mail should be sent by airmail, parcels and spare parts by air express.

Any mail or parcels received at Havana by our Main Office, destination Cienfuegos, are sent daily by air express to Cienfuegos Agency, which use the same method from Cienfuegos to Havana.

(a) SUB-PORT OF CASILDA: 21.45 N. 79.59 W. **(See Plan)**
LOCATION: The Port of Casilda is located on the South coast of Cuba. Lat. 21° 45′ N., Long. 79° 59′ W.

This is the shipping port for Trinidad, distance 3 miles from Casilda. The town of Casilda and the port are situated on the North shore of a safe, landlocked small bay, shoal over its greater part.

PILOTAGE: Vessels should pick up Pilots at Cayo Blanco. Distance from point where Pilot boards vessels to pier is 9 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Jobabo channel is the main entrance to this port and runs East of Blanco Cay.

Channel bottom is soft mud and on its course has a difficult "S" shape turn where precautions should be taken, nevertheless tugboat is not required for entering or sailing manoeuvres.

Entrance to port can be effected only during daylight hours and Masters must take notice that if vessel arrives before daybreak and Pilot is required in order to anchor and wait for daylight, an extra charge will be incurred.

In the same manner, if vessel arrives at dusk, it is probable that she cannot enter port, because docking must take place during daylight hours.

ANCHORAGES: The port has several anchorages, such as: "La Poza", located at bay, 17 ft. draft; "Bajo del Medio", an area 2.5 square miles, draft 25 ft.; "Jobabo" 26 ft. draft.

Also N.E. of Blanco Cay there are anchorage areas, having 40 ft. draft, and more.

MAX. SIZE: Vessels can enter and sail with max. draft of 25 ft. and length up to 565 ft. Tidal variation about 2 ft.

RADIO: Vessels navigating to Cuba can send their messages via "CLA" Havana Radio Station, which immediately relays the message to our Cienfuegos Agency.

While navigating in Cuban waters, Masters can contact "CLC" Cienfuegos Radio Coastal Network, which also relays the messages promptly to Cienfuegos Agency, and can answer them by the same system.

Station "CLC" also has radiotelephony.

Masters must send their ETA messages simultaneously to Mambisas Cienfuegos and Mambisas Havana.

TUGS: None.

BERTHING: Casilda Pier is built in the shape of an "L" the upright part of the "L" being the West side and the inferior part the South side.

Vessels docked at pier can be supplied limited quantities of fresh water and also, if necessary, electric power 110/220/440 volts.

Pier has railroad tracks along its length and at the paved West side trucking operations can be effected.

South side is not paved and is mostly used for operating tankers.

Coastal Pier No. 1: (East Side):
Length: 520 ft. Max. length permitted: 565 ft. Draft: 25 ft.
Cargoes handled on this side:
Importation: General cargo, wood pulp, lumber, caustic soda, etc.
Exportation: Bagged refined and raw sugar.
Coastal Trade: Occasionally general cargo.
Docking only during daylight hours.

Coastal Pier No. 2: (South Side):
Length: 390 ft. Max. length permitted: 565 ft. Draft. 25 ft.
Cargoes handled by this side:
Importation: Fuel oil and crude oil, and occasionally diesel oil.
Exportation: Alcohol.
Coastal Trade: Fuel oil and crude oil, and occasionally diesel oil.

Two vessels can operate simultaneously at Casilda:

One at the West side of pier loading sugar or discharging dry cargo, and another at the South side discharging petroleum products or loading alcohol.

During dry spells it is possible to operate 2 dry cargo vessels, one on each side of pier, but this is not advisable as both vessels will be worked at half capacity because of limit of labour.

No operations at bay or anchorage performed at Casilda.

STEVEDORES: Working periods:
Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1000 hrs., 1200-1600 hrs.; Sunday when necessary, same periods.

Raw sugar loading rate: 1,200 sugar bags, loaded per gang per day. Bags per sling: 6 sugar bags per sling. Operation capacity: only one vessel can operate.

Refined sugar loading rate: 1,500 bags per gang per day. Bags per sling: 12 bags loaded per sling.

Shore crane: No shore crane available.

Bulk sugar equipment: no bulk sugar equipment available.

Warehouses: 2 warehouses with capacity for storage of 70,000 bags of sugar. No. 1 (at the pier) 40,000 bags (250 lb.). No. 2 (at the Real Street) 30,000 bags.

TANKERS: Fuel/Crude Oil: 1×8 in. diameter.
Diesel Oil: 1×6 in. diameter.
Alcohol: 1×5 in. diameter.
Also see "Berthing".

MEDICAL: Sick crew members can be sent to General Hospital.

FUEL/REPAIRS: Not available.

FRESH WATER: Vessels can be supplied with fresh water, delivered by means of electric turbine at the pier. Delivered at average of 30 t.p.h.

DUNNAGE: Wood dunnage is not available at Casilda. Paper dunnage is available if requested well in advance as there is a small stock in the port, and if vessel's requisition exceeds port's stock, difference can be brought from the paper mill nearby.

TRANSPORTATION: Transportation to or from Casilda is difficult.

Railroad system connects Casilda with Trinidad continuing to Cumbre, where it joins the Central railroad system, or to the city of Placetas, located on the Central highway system. From Cumbre railroad travel is available to any place in Cuba, likewise at Placetas by road.

There are also roads to Cienfuegos and Sancti Spiritus.

AUTHORITIES: Port Captain, Custom Authorities and Port Doctor travel from Trinidad to Casilda.

AGENT: If any information required regarding ships operating at Casilda, Cienfuegos Agency should be contacted. Agent in the port available, but difficult to contact. Telephone number 2077.

Crew mail or any other mail should be sent to Havana main office, from where it is sent to Cienfuegos.

(b) SUB-PORT OF TUNAS DE ZAZA: 21.37 N. 79.32 W. **(See Plan)**
LOCATION: Seaport of Sancti Spiritus. Port lies about 1.25 miles North of Point Ladrillo.

PILOTAGE: Pilot may board vessels either at Breton Channel or Tunas Channel.

Distance from point where Pilot boards vessel entering through Breton Channel to Tunas de Zaza anchorage is 8 miles. From place where Pilot boards vessel entering through Tunas Channel is 1.5 miles. Pilot station for Tunas Channel, located at Cayo Zaza de Fuera. For Breton Channel, entrance of Breton, that is, 8 miles from anchorage.

MAX. SIZE: Two channel entrances for this port; one through Breton Channel, which is with turns, but not dangerous. Vessels can enter or sail through this channel drawing up to 29 ft. The other one through Tunas Channel, has no turns. Vessels can enter and sail through this channel, drawing up to 22 ft. No length restrictions.

Tidal variation 1 ft. 6 in. Vessels can enter day and night.

RADIO: Via Radio Havana, for relay through Cienfuegos Agency.

TUGS: 3 tugs: *Arturo, Don Juan,* and *Tuinicu*, which tow up to 6 barges.

BERTHING: All operations are effected at anchorages.
Inner Anchorage: Located about 1.25 miles South-Westward of the town. Draft: From 24 ft. to 27 ft. Soft mud bottom.
Outer Anchorage: Located South of Pt. Ladrillos. Draft: 30 ft. (load only up to 29 ft.). Soft mud bottom.

Only one vessel at a time can be handled.

There are 9 barges available for loading sugar with total loading capacity of 7,500 bags. Sugar loading rate: 1,500 bags per gang daily. Bags per sling: 6 sugar bags loaded per sling.

Bulk sugar equipment: None.

STEVEDORES: Working periods – loading sugar: Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1100 hrs., 1200-1600 hrs.; Sunday: when necessary.

MEDICAL: For sick crew members, there is a general hospital at Sancti Spiritus.

FUEL/REPAIRS: None.

FRESH WATER: No water available.

DUNNAGE: None.

TRANSPORTATION: There are two daily car services, and also road transportation is possible by bus but car service is preferable.

AUTHORITIES: There are Custom House and Captain of the Port Delegations at this sub-port. Customs also acts for Immigration. Port Doctor located at Zaza del Medio.

Vessels can proceed directly to this sub-port where they are visited by port authorities. Means of transportation used by port authorities to give entry is by launch service.

At this sub-port Custom House and Captain of the Port have delegations, but not port Doctor.

AGENT: Vessels operating at this sub-port are attended by personnel from Cienfuegos Agency.

Mail should be sent to Havana for forwarding to Tunas de Zaza.

GUANTANAMO: 19.59 N. 75.10 W. (See Plan)

LOCATION: Guantanamo is an ample, sheltered, landlocked bay of an approximate extension of 11 miles.

The mouth of the port is formed by 2 points: Point Leeward on the West side and Point Windward on the East side. Point Windward is round shaped, drab olive coloured and with arid cliffs, where, on a grey painted building is located a lighthouse, the white light of which flashes twice every 20 seconds and is visible up to a distance of 26 miles. Point Leeward is low, having a landing field.

For description purposes, Guantanamo Bay may be divided into what could be considered outer harbour and inner harbour. The outer harbour is rugged having a number of creeks with several cays, mostly in the centre. This outer harbour is almost entirely occupied by the United States of America Naval Base and it is convenient to make clear that the merchant vessels nominated for operations at Boqueron, located in the inner harbour, do not need any permit or authorisation of said Naval Base.

The inner harbour is most ample, practically free of cays and widening out forms 2 bays, separated by Point Manati. The bay located at the N.E. is known as Joa Bay.

Guantanamo City is located at a distance of 23 km. inland, in the most important coffee-growing district of Cuba.

Guaso River flows into the Northwestern extreme of Guantanamo Bay and Guantanamo River at St. Nicolas Point.

PILOTAGE: Pilots board vessels at distance of 1 mile from Buoy No. 1 at port entrance.

Distance from where Pilots board vessels to: General anchorage 7.5 miles. "Boqueron" Pier: 7 miles.

APPROACHES: Wide entrance channel with mud bottom and free from navigational hazards.

ANCHORAGES: Max. draft 25 ft. to 27 ft. Swinging area 400 m.

MAX. SIZE: Vessels can enter with max. draft up to 19 ft. and length 610 ft. (tankers), 500 ft. (cargo vessels). Tidal variation is from 1.5 ft. t 2.5 ft. depending on season.

RADIO: Vessels navigating toward Cuba can communicate with Mambisas Caimanera Agency through "CLA" Station at Havana and the message will be relayed to Caimanera by telegraph service.

Masters must send their ETA messages simultaneously to Mambisas Caimanera and Mambisas Havana.

At Caimanera there are the following services:

Telephone, local and long distance, telegraph and Post Office.

There is no telephone communication between Caimanera and Boqueron.

VHF: Caimanera Terminals on Channels 16, 12 and 71.

TUGS: Not available.

BERTHING: The pier is a solid concrete construction 504 ft. long and 60 ft. wide.

Along the pier run 4 railway tracks of standard gauge.

Molasses is loaded at the North side only, but sugar can be loaded at both sides of the pier.

Although the draft at either side of pier is 22 ft., vessels load only up to 19 ft., owing to the draft of the port channel.

Boqueron Pier:

(a) North Side:

Length: 504 ft. Draft: 22 ft.

Cargo handled: Molasses and bagged raw sugar.

(b) South Side:

Length: 504 ft. Draft 22 ft.

Cargo handled: Bulk raw sugar.

Two vessels can operate simultaneously:

A tanker loading molasses at the North side of the pier, and another vessel loading sugar at the South side.

STEVEDORES: Sugar and molasses loading operations are carried out at this port.

Working periods loading raw sugar: From Monday to Friday 0700-1100 hrs., 1300-1700 hrs.; at night time whenever necessary. Saturday 0700-1100 hrs.; at night time whenever necessary. Sunday: abovementioned periods, whenever necessary.

Bagged sugar loading: 780 bags loaded per gang-period. Sugar bags per sling: 4 sugar bags per sling.

Capacity: Two vessels can load simultaneously at Boqueron Pier.

Raw sugar in bulk: Four complete sets of machines and 10 grates.

MEDICAL: At Caimanera there is a modern hospital equipped for both medical and dental services, where crew members are attended when required.

In serious cases or when highly specialised medical care is required, the patients are sent by ambulance to Guantanamo Regional Hospital.

TANKERS: Molasses pumping rate average of about 35,000 gallons per hour.

FRESH WATER: Can only be supplied by Boqueron Pier through 2.5 in. pipe-line. Delivery rate is 10 t.p.h. Vessel must furnish hoses.

FUEL/REPAIRS: Not available.

TRANSPORTATION: Transportation between Caimanera and Boqueron is effected only by means of launches.

Distance between Caimanera and Boqueron is 1.5 miles.

From Caimanera to Guantanamo, travelling could be effected either by railroad or paved highway and for both routes the distance is 23 km. There are 3 daily scheduled trains and 14 modern bus departures, travelling time being approximately 40 minutes.

From Guantanamo to Havana there is a scheduled bus service with several departures daily. Travelling time from Guantanamo to Havana by bus is 16 hours. Also there is a daily departure at 1230 hrs. of an airway service Guatanamo/Santiago/Havana.

There is a very efficient service of minibuses for the transportation of travellers to and from the airport.

From Guantanamo to Santiago de Cuba there is also bus service with several departures daily, travelling time being 2 hours.

DUNNAGE: Although dunnage materials can be obtained at Guantanamo, if possible, it is preferable that vessel arrives supplied with same, because sometimes the requisition of the vessel may be higher than the port stock, and that could mean delays.

Whenever necessary to request dunnage materials at this port, the requisition should be made not less than 5 days in advance of vessel's arrival.

AUTHORITY: All Port Authorities are located at Caimanera where Mambisas Agency Office also is located. Caimanera lies across the bay, just in front of Boqueron Pier, at a distance of 1.5 miles.

AGENT: Empresa Consignataria Mambisa, Linea No. 9 entre Marina y Correos, Apartado No. 5, Caimanera, Guantanamo, Prov. de Oriente. Telephone: 9186, 99135 (Night). Telex: 062138. Cable: Mambisas Caimanera.

Agency VHF works on Channel 16.

Mail and Parcels: Must be sent to the Main Office at Havana, because vessels loading sugar at Guantanamo usually load their cargo in a very short time and all mail and parcels received would be sent to Guantanamo or a second loading port, whichever is deemed to ensure delivery.

HAVANA: 23.09 N. 82.21 W. (See Plan)

Havana is a natural, landlocked, well sheltered harbour and the most important port of the country owing to its port facilities and for being the capital.

PILOTAGE: Compulsory. For requesting Pilot, in daytime or at night, ships shall use signals established in International Signal Code, also they can direct light signal to Morro semaphore and make sound signals at intervals.

Pilot service is compulsory for all foreign ships more than 40 gross tons.

Master must inform Pilot: Port of origin, illness of any person on board, or if ship is carrying explosive or easily inflammable materials, in which case the ship shall be anchored in special berths and shall be under control of port authorities.

Any ship in port requiring immediate Pilot services should either call telephone numbers: 62–3602 or 62–2896; or hoist "G" Flag, sound 2 prolonged blasts.

Pilots board vessels approximately 1 mile from port mouth, although in some cases, especially at night-time, they will go out about 3 miles to meet incoming vessels.

Pilot station located at San Pedro St. No. 2. Telephones: 62–3602 and 62–2896.

Distance from where Pilots board vessels up to port anchorage or wharves is about 1 mile.

APPROACHES: The port is entered through a straight channel with Morro Castle to the East, La Punta Castle to the West.

The bottom is muddy, with no narrowness, but at the entrance there is a strong current which is to be taken into consideration in the entry manoeuvres of any vessel.

Port can be entered to or sailed from, either in day or night time and it is not necessary to wait for slack or favourable tide, except tankers drawing 37 ft. which can enter only at high tide.

While approaching Havana the most remarkable points of visual orientation are its tall buildings and Morro Castle, located on the East side of the entrance.

ANCHORAGES: There is an ample anchorage zone area where loading and discharging operations are performed.

MAX. SIZE: Max. draft in channel at low tide is 12.8 m. Max. draft in main anchorage is 10.06 m., minimum depth throughout the bay (except the refinery) is 10.06 m. Tankers can enter drawing up to 11.28 m., as they take special course once they are inside bay. Tidal variation about 45 cm.

RADIO: Vessels navigating to Cuba can communicate with Mambisas Havana through "CLA" Havana Radiotelegraphy Station which relays messages immediately by telex.

While approaching Havana vessels can communicate by VHF radiotelephony with:

Mambisas Agency: Channel 12.
Pilots: Channel 16.

Both, Agency and Pilots, are on the air 24 hours of the day.

Masters must send their ETA messages to Mambisas Havana.

The following means of communication are available at Havana:

Cable: C.L.A. International, R.C.A., Western Union.
Telephone: Local, long distance and international.
Telex: Local, National telex system and international.
Airmail and Air Express: National and international.

At the main office in Havana there are two telex machines, which is the quickest means of communication available.

TUGS: Supplied by Port Authority.

BERTHING: The port is divided into numerous docks, which are detailed below.

Andres Gonzalez Lines Dock: This dock is used for the discharge of fertilisers in bulk and coal. It is 332.2 m. long with drafts that vary from 5.18 m. to 9.14 m. There are railway connections and an overhead discharge crane.

Sierra Maestra Terminal:

Pier	*Length of Pier* (m.)	*Max. draft with which vessels may perform operations* (m.)
Pier No. 1 (North Side)	201.8	9.14 – 10.06
Pier No. 1 (South Side)	201.8	9.14 – 10.06
Pier No. 2 (North Side)	201.8	9.14 – 10.06
Pier No. 2 (South Side)	183.5	9.14 – 10.06
Pier No. 3 (North Side)	190.5	9.14 – 10.06
Pier No. 3 (South Side)	171.3	9.14 – 10.06

There is one warehouse at each of these piers and all have rail connections. The terminal is used for loading and discharging general cargo.

Margarito Iglesias Terminal:

Pier	*Length of Pier* (m.)	*Max. draft with which vessels may perform operations* (m.)
Pier No. 1 (North Side)	135	6.10
Pier No. 1 (South Side)	135	6.10
Pier No. 2 (North Side)	135	6.10
Pier No. 2 (South Side)	135	6.10
Pier No. 3 (North Side)	135	5.49
Pier No. 3 (South Side)	135	5.49

Both these general cargo piers have a warehouse, each with a capacity of 22,304 cu.m.

All piers have rail connections. The terminal is used for loading and discharging of general cargo.

Havana Central Pier: This pier, which is used for discharging and loading general cargo, is on the North side. Length 132.3 m., width 60.95 m. Depth alongside 9.45 m. at Bay end or East side, 8.84 m. at centre and 7.92 m. at its West shore end. On South side, length 146.3 m., width 60.95 m. Depth alongside 9.75 m. at the Bay end or East side of the pier, 7.92 m. at the centre and 5.79 m. at its West or shore end. Pier has a sheltered warehouse capacity of 21,285 cu.m. and a railroad siding connected with main track.

Aracelio Iglesias Terminal: This terminal used in the discharge and loading of general cargo, consists of a dock and a pier. The dock is 174.6 m. long and 13.41 m. wide and depth alongside ranges from 6.10 m. to 7.92 m. Dock has one sheltered warehouse with capacity of 110,463 cu.m. Pier (North side), length 157.8 m., width 31.70 m., depth 11.28 m. at the East or Bay end, 9.14 m. at centre and 7.31 m. at shore or West end.

Pier (South side), length 152.1 m., width 31.70 m. with depth alongside of 10.36 m. at East or Bay end, 10.36 m. at the centre and 8.23 m. at the West or shore end.

Pier has a sheltered warehouse with a capacity of 30,880 cu.m.

Both dock and pier have railroad siding connecting with the main track.

Juan Manuel Diaz Terminal: The terminal used in discharge and loading of general cargo consists of two docks and one pier. Dock No. 3: Length 158.8 m., width 17.07 m. with depth alongside of 6.40 m. at the N.E. end, 6.70 m. at the centre and 7.92 m. at S.W. end. Dock has a sheltered warehouse with a capacity of 50,230 cu.m. Pier (North side) length 152.4 m., width 38.10 m., depth alongside 10.67 m. at the Bay end or East side, 9.14 m. at centre and 6.10 m. at the West or shore end. Pier (South side), length 161.5 m., width 38.10 m. with depth alongside of 10.36 m. at Bay end or East side, 9.14 m. at centre and 7.31 m. at the shore or West end. Dock No. 2: Length 146.6 m., width 9.45 m. and depth alongside 6.40 m. at N.E. end, 6.70 m. at centre and 7.92 m. at S.W. end. Pier has sheltered warehouse with capacity of 39,821 cu.m. while Dock No. 2 has a sheltered warehouse with capacity of 112,471 cu.m. Both docks and pier have railroad sidings connecting with main track.

La Coubre Dock: No longer in operation.

Tallapiedra Dock: This dock used in discharge of lighters, has a length of 138.1 m., depth alongside 4.27 m. at N.E. end, 5.73 m. at centre and 4.57 m. at the S.W. end.

Antonio Guiterras Dock: This dock, used in the discharge of lighters of heavy lifts, from vessels performing operations in Bay, is 258.1 m. long, depths alongside (from Tallapiedra Pier No. 2) 7.92 m., 6.40 m., 5.49 m. and 3.35 m. If no lighter is used, vessels drawing up to 7.01 m. only can berth at this dock.

Osvaldo Sanchez Docks: These docks used chiefly in discharge of lumber. Dock No. 1 (formerly Atares), is 130.5 m. in length, 9.14 m. wide with depth alongside 6.70 m. at N.E., 7.01 m. in centre and 7.31 m. at the S.W. end. Dock No. 2 (formerly Vaccaro) is 155.7 m. long, 9.14 m. wide with depths alongside of 7.92 m., 6.40 m., 3.66 m. and 5.18 m. These docks have sheltered warehouses. There are no sidings.

Melones Dock: This dock has installation for discharge of fuel oil as well as an overhead crane for discharge of fertilisers and coal. Dock length 218.8 m., width 10.67 m. Depth alongside 5.49 m. at the N.E. end, 3.96 m. in centre, 3.05 m. at the S.E. end. Not in operation at present due to shallow draft. No sidings. Storage in open.

Puerto Pesquero de la Habana: Consists of Pote Dock, Hacendados Pier and Dock which have the following facilities.

Dock	*Length* (m.)
No. 1	259.9
No. 2	153.9
No. 3	224.9
No. 4	157.5
No. 5	157.5

Drafts: Minimum 7.31 m. Maximum 7.92 m.

Haiphong Terminal: (Formerly Maritima). This dock is used for the discharge and loading of general cargo. Length of dock 532.5 m., width 21.94 m. and depth alongside 9.75 m. to 10.67 m., along entire length of dock. This dock has 2 large warehouses and sidings, although at present only trucking operations are performed. It has 12 gantry cranes with a maximum lifting capacity of about 12 tons and berthing space for 3 average sized vessels, but in the near future will have two additional berths.

Manuel Porto Pena Terminal: Terminal consists of the following docks:

Manuel Porto Pena (formerly Burrus): Dock used for discharge of bulk shipments of grain. Equipped with elevator and silos having storage capacity of approximately 20,000 tons. Permitted discharge rate of approximately 1,200 tons per day. Length of dock, 167.6 m., width 7.92 m. and depths alongside 7.92 m. and 9.29 m.

Manuel Porto Pena No. 1: This dock used in discharge and loading of general cargo and sugar is 96 m. in length and 10.67 m. wide with depths alongside from 7.01 m. to 8.23 m. Dock has one sheltered warehouse and railroad sidings.

Manuel Porto Pena No. 2: This dock is used for loading and discharging sugar and general cargo. Length 136.2 m., width 10.88 m. with depth alongside of 7.92 m. at S.E. end, 7.62 m. at centre and 8.23 m. at the N.W. end. No warehouse, but is equipped with railroad sidings and has installations for discharge of fuel oil.

Manuel Porto Pena No. 3: This dock used for discharge and loading of general cargo is 201 m. in length and 9.14 m. wide, with depth alongside 9.75 m.

Turcios Lima (Grain Silo Dock). Installation for discharge of bulk shipments of grain. There are 36 grain silos and 18 part silos with a total capacity of 30,000 tons. Unloading rate 100 t.p.h. This dock has 1 sheltered warehouse and railroad sidings, and installations for the discharge of fuel oil and gasoline.

Manuel Porto Pena Berth No. 17: Length 170 m., depth 10 m.

Extractora de Aceite Berth: This dock is not in use at present.

Quinto de Regla Pier: This pier used mainly for loading of sugar. Pier (South side) 189.6 m. long, 10.36 m. wide with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 5.18 m. at the S.E. end. Pier (North side), length 104.5 m. width 16.46 m., depth alongside 8.53 m. at N.W. or Bay end, 7.92 m. at centre and 6.70 m. at the N.E. end. Pier has railroad sidings.

Fresser Pier: This pier has installations for loading molasses. Pier (South side), 141.7 m. in length, 9.14 m. in width with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 7.01 m. at S.E. end. Pier (North side), 124.1 m. in length, 9.14 m. in width with depths alongside of 6.70 m. at N.W. or Bay end, 7.92 m. at the centre and 7.62 m. at West end. This side of pier used only for docking purposes.

Edificios No. 1 and No. 2: These docks used in discharge of fertilisers also have installations for loading/unloading molasses.

Edificio No. 1 Dock: Length of dock 157.2 m., width 7.62 m. with depths alongside 6.40 m. – 6.70 m. of water throughout whole dock.

Edificio No. 2 Dock: Length 115.8 m., with 32.91 m. with depth alongside 5.79 m. at N.E. end, 4.27 m. at the centre and 4.27 m. at S.W. end. No operations are performed at this dock due to its shallow draft. Sheltered warehouses with a total capacity of 64,645 cu.m.

Fertiliser processing plant.

Facilidades Maritimas Dock: This dock used chiefly for loading of molasses and discharge of tallow and chemical products, has length of 248 m., width 7.92 m. and depth alongside 7.62 m. at N.E. or Bay end, 7.92 m. at centre and 7.01 m. at S.E. end. Dock has railroad sidings and is suitable for docking.

Nico Lopez Pier Nos. 1 and 2: (Minimum depth at LW 11.12 m.). These piers are used exclusively in discharging fuel oil, gasoline, etc., and are operated by oil refineries. Pier No. 1 (North side), length 313 m., depth alongside 10.97 m. at Eastern or shore end, 10.67 m. at centre and 10.36 m. at West or Bay end. Pier No. 2 (South side), length 313 m., depth alongside 10.97 m. at East or shore end, 10.67 m. at centre and 10.36 m. at West or Bay end. Pier No. 2 (North side), length 301.7 m. with depth alongside of 10.67 m. at East or shore end, 10.97 m. at the centre and 11.58 m. at the West or Bay end.

CONTAINER/RO-RO FACILITIES: Available.

EQUIPMENT: As the Port of Havana owns and operates a large number of auxiliary equipment, only the most important of those are listed here:

Four floating cranes: (1×100 tons) (3×35 tons) lifting capacity.

40 shore cranes: Ranging from 30 tons to 5 tons lifting capacity.

Six cargo barges: 125/150 tons cargo capacity.

Nine tugboats: (1×1,200 h.p.) (1×860 h.p.) (1×540 h.p.) and remaining 6 are from 325 to 165 h.p.

STEVEDORES: Monday to Friday: working periods 0700 – 1300 hrs. and 1300 – 1900 hrs., although if necessary, 2 additional periods of 6 hours each may be worked. Saturday: Same as above. Sundays: No work performed.

Raw Sugar: Approximately 1,400 bags of raw sugar loaded per gang period. Six raw sugar bags loaded per sling. Loading raw sugar on 3 vessels simultaneously.

Refined Sugar: Approximately 3,800 bags of refined sugar (of 50 kg.) loaded per gang period. 12–15 bags loaded per sling.

General cargo: Approximate average discharging rate per gang hour

General cargo about		10.0 tons
Bagged merchandise	up to 51 kg.	16.0 tons
Bagged merchandise	up to 92 kg.	17.0 tons
Bagged merchandise	more than 92 kg.	19.0 tons
Wood		8.4 tons

Fertilisers:

Superphosphate	9.9 tons
Simple Superphosphate	8.1 tons
Ammonium	9.0 tons
Potash	9.9 tons
Muriate (Chloride)	10.5 tons
Sulphur	10.3 tons
Phosphoric Rock	11.9 tons
Triple Phosphate	8.0 tons
Sodium Silicate	9.0 tons
Ferromanganese	9.0 tons

Floating Cranes:

Pablo Sandoval	100 tons – boom 51 m.
Frank Pais	25 tons – boom 10 m.
Matilde	6 tons– boom 9 m.

MEDICAL: Crew members requiring medical attention are treated a "Commander Fajardo" Hospital where they can be hospitalised i necessary.

Those cases requiring dental care are treated at "10 de Octubre" Dental Clinic.

TANKERS: Average pumping rate of molasses is about 60,000 gallons per hour. Average pumping rate of fuel variable, from 3,000 up to 15,000 b.p.h. Also see "Berthing".

TELEPHONES: May be installed on board at Master's request.

FRESH WATER: Vessels can be supplied with fresh water by barge i the bay. Six barges available with capacities of 350, 200, 320, 350, and 60 tons. Average rate of delivery about 100 t.p.h.

FUEL: Vessels can be supplied with bunkers at Havana, and followin types are available:

Regular diesel oil, regular fuel oil, I.F.O. mixtures (intermediate fue oil).

Diesel oil is supplied by a 350 ton capacity barge, and fuel oil by a 1,500 ton capacity vessel which is towed to piers or anchorage in orde to fulfill deliveries. This vessel also delivers the I.F.O. mixtures and is named 'Playa Colorada'.

I.F.O. mixtures are prepared at the following viscosity degrees: 50 - 200 – 400 – 600 – 800 – 1,000 and 1,500 maximum. (Redwoo International Scale, at 100°F).

I.F.O. mixtures are only available at the Port of Havana.

Note to Chief Engineers: It is advisable when ordering I.F.O. mixtures to specify always maximum and minimum allowable viscosity of th product.

REPAIRS: Reliable repair shop (Tel: 62.0009).

DRY DOCK: Dry dock operated by Empresa de Talleres Maritimos, a operating unit of Empresa de Navegacion Mambisa. Berthing capaci 134 m. in length and 27.73 m. width, and can handle vessels up t 7.01 m. draft.

East Lateral: Length 194.4 m., width 11.58 m., depth alongsid 10.06 m. at Bay end, 8.84 m. at centre and 5.49 m. at shore end.

West Lateral: Length 225.5 m., width 11.58 m., draft 7.01 m. at Ba end, 7.62 m. at centre and 6.10 m. at shore end.

DUNNAGE: Dunnage materials are available at this port but must be requested 3 days in advance of intended delivery.

FIRE PRECAUTIONS: Port of Havana has a fire extinguishing ship, kept on permanent watch duty by Safety Corp. who can be reached through telephone number 6–0777.

AIRPORT: Jose Marti International Airport is 15 km. from the port.

HOLIDAYS: Liberation Day (January 1st), Labour Day (May 1st), Day of National Rebellion (July 26th), Commemoration of Wars of Independence (October 10th). July 25th and 27th are also holidays.

DEVELOPMENTS: There is a plan to build a new terminal for discharge of bulk cargoes such as fertilisers, coal, etc. between the area comprised by the piers Quinto de Regla and Facilida des Maritimas (Aguilera).

Under this plan, Quinto pier and Chemical dock will cease to operate, and Facilidades Maritimas (Aguilera) dock will be shortened in its actual length (814 ft.).

Construction of container terminal to be completed.

GENERAL: (1) The Port of Havana is approachable 24 hours a day, and dock Pilots keep permanent watch duty on their stations located in surroundings of harbour channel, very close to beacon marker of Pila de Neptuno.

(2) Any ship approaching port in daytime shall hoist national flag, merchant flag, and quarantine flag, not lowering the latter until granted "pratique" by doctors in charge of sanitary inspection. At night she shall show only quarantine lights as prescribed by International Sanitary Regulation.

(3) In case of emergency, ships at anchor shall immediately contact land through Official Radiophone Station CLT, available 24 hours a day, through 2260 kHz. In very urgent cases, CLT can be contacted through 2182 kHz CLT services are free of charge.

(4) Ships moored to piers standing off pier heads at night must keep visible red light at the ship's extremity facing the sea.

(5) Every moored ship must strengthen its lines on first warning from Port Authorities when deemed necessary due to bad weather.

(6) Small boats belonging to ships are not authorised to be used for crew or passengers' service within port limits unless otherwise duly authorised by Harbour Master.

(7) When berthing, ratguards must be placed on all mooring ropes.

(8) Port provides boats to dispose of ship's wastes. Services provided free of charge and can be requested through ship's Agent.

SHIPMASTER'S REPORT: November 1978.

Pilotage: Compulsory. Advise Agent of vessel's ETA. Pilot boards 1 to 0.5 miles N.W. of Pta. Barloventa.

Restrictions: Vessel is able to enter and leave during hours of darkness and at any stage of the tide.

Max. Size: Max. draft for cargo vessel 33 ft. and for tankers 37 ft.

Tugs: There are 3 large tugs and 7 small tugs available (145–860 h.p.). Vessel is able to dock and undock without the assistance of tugs.

Radio: Havana Radio "CLA".

VHF: Port Authority and Pilot operate on Channel 13. Agent on Channel 12.

Fresh Water: Available.

Fuel: Bunker fuel oil and diesel oil available.

Repairs: Facilities available.

Medical: Doctor and hospital available.

Facilities: Laundry services available, telex available but unreliable. Groceries and meat available but in limited quantity.

Berthing: Terminal Sierra Naestra Berth No. 3 South:

Position of berth: Lat. 23° 08′ 25″ N., Long. 82° 20′ 42″ W. Distance from entrance 1 mile. Max. size of vessel that can berth LOA 520 ft., beam no restriction. Max. draft 29 ft. Least depth of water in channel from sea to berth 40 ft. Range of tide 1.5 ft. Vessel is able to dock and undock at any stage of the tide day or night.

Bulk Handling Facilities: Two grain silos available.

Cranes: 1 quay equipped with 12 cranes, capacity unknown. 4 floating cranes available, 1×100 tons, 3×75 tons capacity.

Special Cargo Handling Facilities: Ro/Ro facilities available. There are facilities for handling palletised cargo and containers, also there is a reasonable amount of storage space for containers.

Stevedores: Stevedores are allocated by Port Authority and the vessel has no say in the number of gangs supplied. There are a limited amount of steel barges.

Density: 1014.

General: On arrival, vessel waited 2 hours outside for a Pilot then entered harbour where we waited another two and a half hours for a ship to sail, no ship sailed and no other reason given for delay.

Docked starboard side to Sierra Maestra No. 3 South, depth 24 ft. forward, 37 ft. aft, 1 tug pushing. Pilots good.

Officials boarded shortly after arrival, following documents required:

Port Health:	1 Health declaration. 3 Crew lists. 1 Vaccination list. All vaccination books.
Immigration:	All discharge books. (To be inspected) 5 Crew lists.
Customs:	3 Personal declarations. (In detail) Cargo plan. 5 Crew lists. Cargo Manifests. Pornography in bond.
Agriculture:	2 Crew lists. 1 Provisions list. (Comprehensive) Cargo plan.

Personal declaration must include watches, cameras, radios, tape recorders, presents, new clothes and money all of which must be placed under seal. One watch and 1 radio allowed to be retained by each Crew member and 1 camera by Master. Advisable to have all above collected prior to arrival.

Vessels normally searched by police and anything found, i.e., watch, radio, money, new clothes and cameras, etc., confiscated whether declared or not. To the surprise of officials this vessel was not searched.

All crew are issued with a shore pass with the exception of the Master. Shore leave extends from 0800 hrs. to 2400 hrs., extension may be obtained but only on special request to the Agent. Shore passes must show the money issued and must be signed by the Master.

On going ashore money and other articles are checked together with watches, jewellery and lighters, etc., and entered on the pass. Should any shortage or excess be found on return a fine will be imposed. On return money remaining is entered on the pass and anyone taking ashore more than the amount shown on the pass will have it confiscated (this actually happened in Isobela).

Communications outside Cuba are difficult, telexes are accepted by Agents but certainly not always sent the day handed in.

Incoming telexes can be delayed up to 6 days. Telephone calls may be made but usually take 3 to 5 hours by which time offices in Europe are closed. In an emergency British Embassy will transmit urgent messages via direct radio link. Embassy most pleasant and helpful. As will be seen by foregoing, it is essential that schedule made with Portishead and Charterers informed to send all messages via this station.

Stevedores very co-operative but due to uncertainty of transport and information on number of gangs, time of completion was uncertain until last day. All discharge was direct to trucks.

Agriculture Department demand that all garbage be placed in plastic bags with neck tied (they supply bags if none on board and charge vessel). Bags collected twice weekly and shore labour do all handling. All meats except New Zealand and Australian sealed. Daily issue of New Zealand and Australian meats given and fridges resealed, any other meats required must be purchased ashore.

Fuel oil, diesel oil and fresh water available by barge but time of delivery uncertain therefore water must be ordered well in advance of requirement. Agents advised fuel would arrive Thursday morning, eventually arrived Monday night. Diesel oil had arrived prior to the fuel with no advice given to the vessel that vessel was bunkering at all.

Fresh vegetables in very limited supply, though Chandler seemed keen to sell meats.

Repair firm and dock exist but after being promised labour for 3 days and none arriving repairs cancelled.

SHIPMASTER'S REPORT: April 1979.

Documents:

12 Crew Lists
3 Store Lists
3 Declarations
3 Currency Declarations
3 Vaccination Lists

Points of note:

(a) Anchorage is very close to coast and in cable area, recommend drifting about 5 miles from coast.
(b) Contact made via Morro Signal Station, VHF Channel 16.
(c) Pilot boards about 1 mile from entrance and they do not appear to work at night.
(d) The port is heavily polluted.
(e) When we sailed we had to wait for 5 hours till a tug was available.
(f) The vessel may lower its gangway for the Pilot to leave but it then must be raised until Port Officials arrive.
(g) All crew must be sighted by Immigration and are handed their discharge books.
(h) All cameras, gifts, items purchased during voyage and not in use, extra radios, watches, etc., and "magazines" must be placed in bond. All except the "magazines" should be declared.
(i) All currency must be declared and placed in safe and sealed. If cash purchases made from Chandler, e.g. Cigars, they must be paid for with Canadian or U.S. dollars. The Customs attend with Chandler and open safe for correct amount to be removed.
(j) Cuban pesos issued by Agent and any not used must be returned. Each person is issued with a card and the amount drawn is entered, then each time they return from shore the Immigration guard enters the amount remaining.
(k) Immigration guard issues passes. He is always on duty, crew member hands his Discharge Book to him and he gives him a pass. This pass has the time that he must be back onboard by, normally 2400 hrs., extensions may be obtained by advising Agent 24 hours in advance. Fines may be imposed for returning late. On return the guard takes the pass and Discharge Book is returned.
(l) Port Health insist that all rubbish be put in polythene bags and these bags put in bins with lids. The port maintains a garbage disposal service which attends on request.
(m) All meat, if not of New Zealand, Australian, Canadian or American origin must be placed under seal.
(n) The Agent can be contacted by VHF. Call "Mambisa" on Channel 12, office hours only.
(o) Postal service not recommended as very slow.
(p) Berthed at Turcios Lima. 33 ft. alongside. The discharger has two heads and moves the length of the berth. Wheat was discharged at an average of 60 tonnes per hour. Work was on a 24 hour basis.
(q) All hatches were inspected even though only one was to be discharged.
(r) The vessel was not searched but we were told that it could happen at anytime during our stay.
(s) The Officials who attended this vessel were all very friendly and helpful.

SHIPMASTER'S REPORT: December 1983.
Documents:
10 copies Crew List.
3 copies Stores List.
2 copies Deck and Engine Stores.
Personal Declaration Forms (1 copy plus 1 per individual crew member.)
Currency Declaration List.
Drugs List.

Accommodation ladder required for boarding officials.

Pilotage: Compulsory. ETAs should be sent via Agent 72, 48 and 24 hours prior to arrival. Pilot boards at entrance to harbour.

Anchorages: Only available inside harbour.

Vessels await entrance instructions 5 miles North of Morro Light.

Restrictions: Vessels may dock/undock day or night, at any stage of tide.

Max. Size: Max. length 280 m., draft 32 ft.

Radio: Havana Radio.

VHF: Havana Radio – Channels 16, 13 and 11. Pilots – Channels 16 and 11. Port Authority – Channel 16. Agents – Channel 16 and 10.

Tugs: 7 tugs of various sizes available.

Berthing: Vessel loading potatoes; berth 2.1 miles from Harbour entrance. Max. LOA 575 ft., max. beam 80 ft. Max. draft – for'd 22 ft., aft 32 ft. Nature of bottom at berth was mud. Depth in channel 33 ft.

There are no fenders on the quays at Havana. Ensure that there are ample fenders on board.

Cranes: No cranes at cargo quay. 1 floating crane available, capacity 175 tons.

Bulk Cargo Facilities: Silos available for grain. Grabs available for handling coal/coke.

Specialised Cargo Handling Facilities: Facilities available for Ro/Ro vessels.

Equipment to handle palletised/break bulk/20 ft. – 40 ft.containers available. Ample storage areas for containers, etc.

Steel lighters available for work at anchorage.

Stevedores: Satisfactory work carried out by stevedores.

Medical: Doctor and hospital facilities available.

Fresh Water: Available.

Fuel: Bunker fuel oil, diesel and lubricating oils are available.

Consuls: Majority of nations are represented.

Repairs: Can be undertaken.

Surveyors: Lloyds' and Salvage Surveyors available.

Services: Laundry service, telex, limited supply of fresh provisions, groceries and meats available.

All international telephone calls had to be made through the Merchant Seaman's Club.

SHIPMASTER'S REPORT: October 1987.

Vessel (34,000 d.w.t. bulk carrier) called at Havana and Santiago de Cuba to discharge 28,000 tons of wheat. Arrival draft Havana 32 ft. salt water even keel.

Havana was our first discharge port and one day prior to arrival at Havana, vessel was instructed by Agents to anchor at Caibarien Anchorage (BA. Chart No. 425; Lat. 22° 39′ N., Long. 79° 14′ W.) and await our turn to discharge in Havana.

This anchorage, so I understand, is increasingly used as a waiting anchorage for vessels bound to Havana. We anchored without a Pilot with Cayo Frances Lt. 140° at a distance of 0.9 miles from the same light and depth of water was 67 ft. – 75 ft. good holding ground, mud. Total distance Havana to Caibarien 190 miles. Due to drafts available, this anchorage can only accommodate very few deep drafted vessels.

Consuls: Greek Embassy resides at the "Commodoro Hotel" in Havana. Tel. 225551 (room 422).

Customs Formalities; On arrival at Havana, Customs handed to us Customs Forms to be filled in by each crew member in duplicate. Original was kept by them and the second copy was handed back to us on sailing, in order to be given to the Customs at second port (Santiago de Cuba). Apparently no extra copy was required in Santiago de Cuba.

SHIPMASTER'S REPORT: March 1989.

Documents: As per "Guide to Port Entry".

Port Health officials were the first of the authorities to come on board and once the Quarantine Clearance was given, the Agent and the other officials came aboard.

The Veterinary inspection was thorough.

A timely warning was given by one of the officials and most of the crew valuables were locked in the "transit room" before the rummage gang boarded.

Although fully itemised Personal Effects Lists had been prepared prior to arrival, these were not accepted as they were not on official forms, so the Radio Officer spent all night typing the crew's effects on to proper forms.

When the rummage gang came on board an officer was required to accompany them to all cabins, where the Currency List and Crew Effects Declaration was consulted and items checked. Any discrepancies led to confiscation on the spot.

The Bond Locker was checked. Transit room was not checked.

A handler and his dog came aboard.

It took about 6 hours to clear the ship, during which time the whole crew were prevented from going about their normal business.

Regarding personal effects – EVERYTHING must be itemised on the proper form. To save loss, everything except the bare essential requirements should be put in a suitcase and locked in the transit room. This includes currency.

Charts: BA. Chart No. 414, Puerto de Habana, and BA. Chart No. 3867, Cuba – Western Sheet.

American charts give better coverage of the whole of Cuba – especially useful if contemplating passage through Old Bahama Channel.

Sailing Directions: NP. 70, West Indies Pilot Volume 1, page 182.

Approaches: The coast gives good radar echoes. There are plenty of visual marks to identify. The latest Cuban Radio Navigation Warnings are useful to plot naval exercises and firing areas. Normal approach from Florida Straits passes through one of these areas just to the East of Havana.

There were no problems in the approach. Pilots or Port Control were contacted at a range of about 35 miles. There was some confusion as to whether we were talking to Pilots, Port Control or Agents, and this was never really clarified. The Pilot boarded 1 mile North of the entrance from a large launch with orange hull and white superstructure.

Berthing: Passage through the harbour was taken very very slowly and berthing was assisted by 3 tugs which were poorly handled.

The berth is very poorly fendered and it would be advisable to put vessel's fenders out.

The harbour is extremely heavily polluted. The fuel oil floating around is only just visible against the water.

Berth: The berth is poorly maintained and with evidence of spills and burst joints. The berth appears to be set up to handle gasoline, gas oil and fuel oil. We took 200 tonnes of heavy oil which was blended to our requirement according to our company bunker specification. We await analysis to see if this was the case.

Berth Information:
Berth: Oil Berth No. 2 North.
Operator: State Oil Company.
Density: Salt.
Distance from Pilot to Berth: 3 miles.
Bridges: None.
Max. draft: Approaches 38 ft.
Berth 38 ft.
Restrictions: Berthing day and night.
Fresh Water: Available, rate not known.
Fuel: Available by pipeline and barge, also see "Berth" above.
Hoses: 1 × 8 in. for gas oil, pressure 8 kg./sq.m.

Surveyors: They accept the Mate's figures without question.

Departure: Two tugs used. Tugs accompany vessel out to sea.

AUTHORITIES: Ministry of Transport.

All port authorities located at Custom House building. Means of transportation used by authorities to clear vessel is launch. Each authority has its own launch for these services.

AGENT: Empresa Consignataria Mambisa, Agencia Havana, Lamparilla No. 2, P.O. Box No. 1785, Havana, Cuba. Telephone: 61 – 1159 (day and night), 61 – 6706 – Agency Export Dept., 61 – 9068 – Agency Clearance Dept. Cable: Mambisas Habana. Telex: 511576.

Agency VHF works on Channel 12.

ISABELA DE SAGUA: 22.52 N. 80.00 W. (See Plan)

Although the Port of Isabela is not located in a bay and lies on a small peninsula oriented S.W./N.E., it is a fairly protected harbour because a barrier of cays, lined from N.W. to S.E., forms a protective levee against the roughness of the sea and the force of the winds.

Behind the port and town of Isabela, to the S.E., and as if splitting the small peninsula in two, Sagua La Grande river flows into the sea.

Isabela is mostly a sugar shipping port but also handles a rather important amount of import cargoes.

In the vicinity of Isabela, besides several sugar mills, there are an Electro-Chemical Industry and a very important foundry.

PILOTAGE: Pilots board vessels about 1 or 2 miles out from Nos. 1 and 2 Buoys. Pilot station located at Custom House building, Isabela de Sagua. Distance from place where Pilots board vessels to anchorage is 7 miles.

From seaward by stages, the bottom is sandy, coral reef and hard rock, mud and rock under mud, mud and clay.

Turns in channel are not dangerous but there are narrows with dangerous currents.

ANCHORAGES: *Inner Anchorage No. 1:* This anchorage is located about 300 m. N.W. from the piers and can be considered part of the manoeuvring basin.

Bottom is soft mud but anchors hold well with 3 shackles of chain.
Draft allowed: 24 ft. or 25 ft. depending upon vessel's length.
Swinging area: About 250 m.
Vessels load or discharge at this anchorage by means of barges.

Inner Anchorage No. 2: This anchorage is located close to and South of Palomo Cay.

Bottom is soft and mud but anchors hold well with 3 shackles of chain.
Draft allowed: 4.4 m.
Swinging area: Unlimited.
Several vessels can be accommodated.

Vessels load or discharge at this anchorage by means of barges but it is chiefly used for vessels awaiting berth.

Outer Anchorage: Located East of Del Cristo Cay and about 8 miles from the port of Isabela, and also known as Ingles Anchorage.

Bottom is mud and coral reefs but anchors hold well with 3 or 4 shackles of chain.

This anchorage is marked with a well lighted buoy.
Vessels can load safely up to 32 ft. 8 in. draft.
Loading or discharging is effected by means of barges.

Operations can be performed at this anchorage when there are good weather conditions.

RESTRICTIONS: Entry and sailing only during daylight due to lack of lights in channel.

MAX. SIZE: Max. draft 23 ft. Max. length 500 ft. Tidal variation about 2.5 ft.

PORT EQUIPMENT: 3 Tugboats (250 h.p. each). 1 Water launch (30 tons capacity). 6 Barges (200 tons cargo capacity each). 1 Transportation Launch.

BERTHING: Isabela operation places (piers) are located on the North coast of the peninsula previously mentioned.

Formerly 4 piers were operated by the port but due to shallowness alongside Beguerístain Pier, nowadays the latter is used only for small craft and barges drawing 10 ft. maximum. Another berth, Garcia Pier, is out of service undergoing repairs, the date of completion of which has not yet been determined.

Amezaga Pier: This consists of a solid concrete well paved construction. As double standard gauge railroad tracks run along the length of pier, operations can be performed either by railroad or trucks, or a combination of both.

Although it has 2 sides, only the Eastern is used for vessel operations, because at the West side the depth alongside is 9 ft. only.

East Side: Length 324 ft., draft allowed 24 ft. 0 in. (7.32 m.), width 35 ft.

Cargo handled by this pier: General cargo, bagged cargoes, bagged raw and refined sugar, etc.

Alfert Pier: Draft allowed 21 ft. (6.4 m.) Ship's max. length 557 ft. (170 m.).

This pier consists of an all-hardwood construction not in good condition, needing repairs, which are taking place.

It has standard gauge railroad tracks connecting with the main tracks and is not suitable for trucking operations.

East Side: Length 450 ft., Width 30 ft., draft allowed 21 ft. 6 in. (6.40 m.).

Tanker information: Molasses: 2 × 8 in. diameter connections.

Loading rate: 200 t.p.h.

Cargoes handled by this side: General cargo, molassses, bagged sugar.

West Side: Length 450 ft., width 30 ft., draft 21 ft. 6 in. (6.40 m.).

No operations performed at this side due to shallowness alongside.

Beguiristain Pier: Max. vessel's length 525 ft. (160 m.), Draft. (West side) 18 ft. (5.40 m.).

Length 540 ft., width 30 ft.

East side of this pier is out of service due to shallowness alongside.

STEVEDORES: Raw Sugar loading rate: 1,300 bags of raw sugar (of 250-lb. type) loaded per 4 hour-gang period, or 1,490 (of 220-lb. type). From 4 to 5 bags loaded per sling. From lighters, 5 bags.

Refined Sugar: 2,360 bags of refined sugar (50 kg.) are loaded per 4 hour-gang period. 12 bags loaded per sling.

Operational capacity: Three vessels can be operated simultaneously.

Equipment for bulk sugar: Twelve grates available but trimming performed with shovellers.

Loading Raw Sugar – Working periods: From Monday to Friday 0700–1100 hrs., 1300–1700 hrs. Saturday 0700–1100 hrs.

General cargo operations occasionally performed at this port, for which above periods apply.

MEDICAL: Crew members requiring medical or dental care are treated at Sagua La Grande Hospital, where they can be hospitalised if necessary. At Isabela there is only a Polyclinic.

TANKERS: Molasses average pumping rate 40,000 g.p.h.; alcohol average pumping rate 70-77,000 g.p.h. No fuel oil or ammonium discharging operations performed.

FRESH WATER: Fresh water supplied by barge water-tug up to max. 40–60 tons daily depending on efficiency of aqueduct. Capacity of barge 30 tons. Delivery rate 60 tons per day. Water can be supplied at any pier or inner anchorage.

FUEL: Not available.

REPAIRS: Minor repairs can be effected at Isabela de Sagua, larger repairs to be effected at Sagua la Grande, where two repair shops available: Fundicion Marfarlane Nacionalizada and Talleres Esponda Nacionalizado.

DUNNAGE: Dunnage material, specially wood dunnage, is difficult to obtain at Isabela.

Paper dunnage can be obtained if ordered well in advance.

TRANSPORTATION: Means of transportation to and from Isabela are: train, bus or car.

From Isabela to Sagua La Grande is a distance of about 17 km. by road or train.

From Sagua La Grande to Santa Clara is a distance of about 50 km. by road.

From Santa Clara there are numerous means of communications to any place or city in Cuba.

There are bus lines Sagua/Cardenas, Sagua/Havana, Sagua/Santa Clara, Sagua/Isabela.

SHIPMASTER'S REPORT: November, 1978.

Pilotage: Pilot boards 1.5 miles N.E. Cayo Cristo lighthouse in position Lat. 23° 02′ N., Long. 79° 59.4′ W. Pilotage is compulsory. ETA should be sent to vessel's Agent.

Max. Size: Max. LOA 606 ft. Max. beam 75 ft. Max. draft 23 ft. I would suggest the max. size as being 520 ft. LOA, 70 ft. beam and 22 ft. max. draft. Tidal range 2 ft.

Tugs: 3 tugs available each approx. 140 h.p.

Radio: Havana Radio "CLA".

VHF: Not available.

Documents: 8 Crew Lists. 1 Vaccination List, Health Declaration, 4 Currency Lists (crew and ships). (Also see "General").

Consuls: Nearest are in Havana.

Medical: Doctor and hospital available in Sagua La Grande at a distance of 10 miles from the port.

Berthing: Espg. De Amezuga Berth: Position Lat. 22° 56′ 54″ N., Long. 80° 00′ 40″ W. Distance from berth to entrance 7 miles. Max. size of vessel that can be safely berthed, LOA 520 ft., beam 70 ft. and deepest draft 22 ft. Least depth of water in channel from sea to berth 25 ft. Vessel able to dock and undock at any stage of the tide also vessel able to dock and undock during hours of darkness at times. Special bulk facilities handled at the port include Molasses. There are no quay cranes, Ro/Ro facilities or floating cranes.

Stevedores: Believe there are a total of 8 gangs available for working of general cargo. There are steel and wooden dumb barges available (length 75 ft., beam 30 ft.).

Density: 1004.

General: Documents required: 3 Manifests (Crew Declarations); 8 Crew Lists; 4 Bonded Stores Lists; 4 Provision and Meats Lists; 4 Currency Lists (Crew and Ship's); Certificate of Sanitary/Veterinary Inspection (from last Cuban port); 1 Stowage Plan; Cargo Manifest.

Seals may be opened coastwise but advise not to, with exception of meats.

All conditions as Havana except shore leave only 1800 – 2200 hrs., except Master, extension granted for officers to 2400 hrs. if requested via Agent.

Only chandler 70 miles away.

Fresh water available at 8 t.p.h. (amount may be limited) but must be ordered immediately on arrival if required. We did not order until the last day as we believed we were bound for a U.S.A. Gulf Port, it took 8 hours to hook up and a lot of pressure on Agent.

Berth unsuitable for this size of vessel though using mooring buoys vessel lay securely moored. Concrete pier with wooden fendering slightly dilapidated in places but quite adequate. Pier 320 ft. long and 4 ft. high. Stern secured to 2 mooring buoys, one each quarter, distance approx. 200 ft., but buoy moorings are believed to be suspect. No cargo can be worked at No. 5 except by lighters. Harbour Master states largest vessel suitable for this berth 120 m. LOA. Depth alongside by soundings 22 ft. Forward, 26 ft. aft. Pilots good.

Gangway must be used, as companion ladder will not reach quay.

Channel requires local knowledge but it is well buoyed.

Cargo discharge depends on supply of trucks. Can only work one truck at each hatch therefore to speed up discharge last day two gangs No. 4 discharged into lighter offshore.

AUTHORITY: All port authorities located at port of Isabela de Sagua.

When vessels at anchorage awaiting berthing, authorities transported by tug-boat for clearing purposes.

AGENT: Empresa Consignataria Mambisa, Agencia Isabela de Sagua, P.O.Box 18, Isabela de Sagua, Prov. de Las Villas. Tel: 698122 (office) 698130 (night). Telex: 041222. Cable: Mambisas Sagua La Grande.

Pilot VHF works on Channel 16.

Cables, messages should be addressed "Mambisas Sagua la Grande", but recommended be sent through main office "Mambisas Havana". ETAs should be sent simultaneously to both.

JUCARO: 21.37 N. 78.51 W. (including the sub-ports of Boca Grande, Palo Alto and Santa Maria)

APPROACHES: Vessels proceeding to Jucaro sub-ports must call first at Jucaro for Port Authority's clearance.

Tidal variation 1 ft. 6 in. It is not necessary to await slack water before entering. Recommended that *(a)* vessels arriving from Cuban ports situated to the East of Jucaro, such as Caibarien, Puerto Padre, Manati, Vita, Banes, Antilla, Sagua de Tanamo, Moa, Baracoa, etc., or from foreign ports, should enter Jucaro Port through Breton Channel, and *(b)* all vessels not exceeding 22 ft. draft proceeding from those Cuban ports situated to the West of Jucaro, such as Havana, Mariel, Matanzas, Cardenas, Isabela de Sagua and Cienfuegos, should enter Jucaro port through Tunas Channel.

DOCUMENTS:

10 Crew Lists.
10 Passenger Lists (if passengers on board only).
10 Manifests of Cargo (or ballast).
4 Customs Crew Declaration (including currency).
4 Ship's Provision Stores, including bonded and narcotics.
1 Health Declaration.
1 Vaccination List.
Clearance from Last Port.
Derat Certificate.

PILOTAGE: Pilots board vessels which enter through Breton Channel at Buoy No. 2, which is situated to East of channel entrance, 21° 08′ 18″ N. 79° 30′ 24″ W. with water depth 33 ft. Through this channel vessels can enter drawing up to 29 ft. with max. length 800 ft. Bottom is coral reef. There are dangerous turns at "pasa" of Baandra until Ana Maria Cays have been passed.

For vessels which enter through Tunas Channel, Pilots board at No. 2 Buoy which is situated to East of Channel entrance, Lat. 21° 31′ N., Long. 79° 41′ 21″ W. Through this channel vessels can enter drawing up to 22 ft.

No pilot station. Pilots are to be notified of vessel's arrival 24 hours in advance. Distance from place where Pilots board vessels to Jucaro anchorage is 50 miles.

From Jucaro Anchorage to:

Boca Grande Sub-port	– 14 miles
Palo Alto Sub-port	– 5 miles
Santa Maria Sub-port	– 24 miles

ANCHORAGES: Loading places, ex-lighters. Three anchorages (very good holding ground), namely, No. 1 Anchorage – 6 miles from the port at South of Obispo Cay, depth 24 ft. No. 2 Anchorage – 7 miles from the port at S.E. of Obsipo Cay, depth 27 ft. No. 3 Anchorage: Anchorage 8 miles from the port and 1 mile to Eastward of No. 2 anchorage, depth 30 ft.

RESTRICTIONS: Vessels can enter and sail through both channels day and night.

RADIO: Call "Jucaro Radio" on 2182 kHz, will answer on 2760 kHz.

VHF: Pilot boat, Port Captain and Agency equipped with VHF and work on Channel 16.

LOADING: This port only exports bagged refined sugar in 100 kilos jute bags or 50 kilos cotton bags, molasses and fresh fruits.

Fuel oil is discharged either imported or by coastal trade.

Working periods: Monday to Friday 0600 – 1000 hrs., 1200 – 1600 hrs.; Saturday 0600 – 1000 hrs., 1200 – 1600 hrs. It is possible to work overtime, also possible to work Sundays and holidays, if required.

Work carried out on a piece-work basis, and at an average of 2,000 bags per gang-period. 6 sugar bags loaded per sling.

Refined sugar: Work is carried out on a piece-work basis and loading rate averaged about 4,000 bags of the 50 kilo type and 2,000 of the 100 kilo type per gang-period.

Sugar in bulk: Venezuela and Ecuador sugar mills have 5 thrower machines each for distributing sugar in vessels' hatches. Loading carried out by cutting sugar bags through grates placed on vessels' hatches.

Shore cranes: None.

MEDICAL: There are two hospitals at Ciego de Avila where sick crew members can receive attention. Distance between Jucaro and Ciego de Avila is 27 km.

TANKERS: Average pumping rate of molasses 20,000 g.p.h.

FRESH WATER: No water available.

FUEL/REPAIRS: Not available.

OPENING/CLOSING HATCHES: By crew.

PROVISIONS: Available, but expensive.

TRANSPORTATION: Distance between Jucaro Port and its sub-ports:
To Santa Maria – 31 miles
To Boca Grande – 15 miles
To Palo Alto – 9 miles

Motor launches are used between port and sub-ports, and take 4.5 hours, 2.5 hours and 1.25 hours between Jucaro and Santa Maria, Boca Grande, and Palo Alto respectively.

By automobile, 3.5 hours to Santa Maria and 2 hours to Boca Grande. No highway from Jucaro to Palo Alto.

SHIPMASTER'S REPORT: 1977.

Lines to the barges to be provided with rat-guards.

Very strict regulations concerning crew declaration of effects, currency and pornography.

All personal effects of crew members will be sealed by Customs, even their used clothes, allowing them out only a couple of clothes changes, one carton of cigarettes and one bottle of spirits.

Advisable to instruct crew members to declare all currency and not to try to take any money ashore. They could not use or change it and could run into a great deal of trouble.

Vessel's deck, engine and accommodation will be searched by Port Authority party.

Cholera vaccination available on request.

Shore leave for crew allowed only from 1800 to 2200 hrs.

No kind of restrictions for the Master, whose shore leave is unlimited. Strict Customs regulations do not affect him.

No amenities available ashore.

Loading of oranges fast if available. About 200 tons per gang shift.

Pre-cooling of cargo chambers is not required. Oranges stowed in two tiers of four cartons with battens in between. Maximum height of eight cartons. Stowage factor about 95.

AUTHORITY: Custom House, Captain of the Port and Immigration, located at Jucaro. Port doctor located at Ciego de Avila.

AGENT: Empresa Consignataria Mambisa,
Agencia Nuevitas,
P.O. Box No. 350,
Puerto Tarafa, Nuevitas,
Prov. de Camaguey.
Telephone: 2779, 2107 (office),
3190 (night).
Telex: 3190.
Cable: Mambisas Nuevitas.

Mambisas Nuevitas Agency also attends at the port of Nuevitas.

Jucaro and Boca Grande are attended by Nuevitas Agency personnel.

Any information about vessels operating at Jucaro or Boca Grande should be requested from our main offices at Havana or to Nuevitas Agency because it is extremely difficult to communicate directly with the Agent attending the vessel. Agents at Jucaro and Boca Grande communicate periodically with Nuevitas Agency which relays the information to our main office.

SUB-PORT OF BOCA GRANDE:

SHIPMASTER'S REPORT: Port will not be operational after 1977.

LOCATION: About 15 miles East of Jucaro.

APPROACHES: See "Jucaro".

PILOTAGE: See "Jucaro". Distance from place where Pilots board vessels to Boca Grande is 64 miles. Entrance channel: same as for Jucaro. Tidal variation 1 ft. 6 in.

ANCHORAGES: Anchorage No. 1: Located 3 miles off Boca Grande Firth. Depth 24 ft. Anchorage No. 2: Located 5 miles off Boca Grande Firth. Depth 30 ft. Both these anchorages have soft mud bottom.

Kind of cargoes handled. Importation, fuel oil. Exportation, bagged refined sugar, molasses. Coastal trade, discharge of fuel oil.

LOADING: At present only refined sugar is exported. All sugar-loading operations are carried out at anchorage by means of lighters. Following lighters available:

Barges	*Capacity* (50 kg. bags)	*Capacity* (100 kg. bags)
Ana	4,900	2,500
Loretto	4,400	2,100
Mascot	4,400	2,100
F 55	4,400	2,100
Trusco 89	5,100	2,980
Angel	3,440	1,700

Working Periods: Monday to Friday 0600/1000 hrs., 1200/1600 hrs.; Saturday 0600/1000 hrs., 1200/1600 hrs. When working is performed on Sundays, same periods apply.

Work is performed on a piece-work basis, and average loading rate is about 2,000 bags, basis 6 bags per sling, and 100 kilo bags. Only one vessel can be worked at a time.

TUGS: Three tugs available.

TANKERS: Discharging operations at No. 1 or No. 2 anchorages. Discharging rate approximately 20,000 g.p.h.

There are also steel barges for transportation of molasses and/or sugar:

Guanales: 100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.

Loreto: 100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.

Each of these barges has 4 tanks measuring 15 ft.×36 ft.×7 ft. Capacity: 3,780 cu.ft. or 28,274 gallons each tank. Total capacity: 113,100 gallons. Each barge can load a max. of 400 tons of molasses and each is equipped with steam pump.

COMMUNICATIONS: Launch transportation. It takes 2.5 hours for travelling from Boca Grande to Jucaro or Santa Maria. Captain of the Port's radio-telephone is used as means of communication.

All communication and instructions for vessels operating at this sub-port must be given to Nuevitas Agency.

MANZANILLO: 20.20 N. 77.12 W. (See Plan) (and sub-ports of Ceiba Hueca, Media Luna, Niquero and Pilon (Ensenada de Mora).)

PILOTAGE: Pilots board vessels at Cabo Cruz. Pilot station located at Cabo Cruz and Pilots communicate with Manzanillo by means of radio-telephone. Distance from place where Pilots board vessels up to Manzanillo through Madrona Channel is 68 miles. Through Palomino Channel (Coloradas de Fuera) is 55 miles.

APPROACHES: *(a)* Madrona Channel: This channel has sharp and narrow turns. Bottom is of soft mud. Max. draft with which vessels can enter through this channel is 33 ft. Channel has depth not less than 35 ft. Vessels must wait for slack or favourable tide to proceed through this channel. No tug is necessary.

(b) Palomino Channel: This channel has turns, but they are less sharp and less narrow than those of Madrona Channel. Bottom is of soft mud. Max. draft with which vessels can enter through this channel is 20 ft. No tug is necessary.

The average tidal variation is 1 ft. 6 in.

ANCHORAGES: Inside harbour: No. 1, draft 24 ft. Distance from shore 1 mile. Use: sugar/general cargo.

Outside harbour: No. 2, draft 29 ft. – 30 ft. No. 3, draft 33 ft. Distance from shore 1.5 miles to 2 miles. Use: sugar/general cargo. Although about 40 ft. depth at this anchorage, it is limited to 33 ft. which is official draft of the entrance channel. Vessels have been loaded at this anchorage up to 33 ft. 6 in. draft.

ICP Submarine Pipe-Line Anchorage: The submarine pipe-line anchorage is located as follows:

Lat.: 20° 21′ 12″ N., Long. 77° 10′ 21″ W.

There is no limitation to the length of vessels operating at this place and maximum official draft is 28 ft.

Distance from shore is about 2 miles and the means of transportation are the tugboats of the stevedore enterprise Terminales Mambisas.

The vessel is secured to 4 buoys and the mooring is performed by Terminales Mambisas tugboats and personnel.

The pipe-line is 8 in. (203 mm.) in diameter and connection is 6 in. (152 mm.).

The cargo handled is: Discharge of kerosene, gasoline and diesel oil.

The prevailing winds are those of the first quadrant.

RESTRICTIONS: Due to present conditions of channel lights and distance, it is suggested that vessels enter and sail only during daylight.

EQUIPMENT: The port has 6 barges of 200 tons cargo capacity, 2 o 140 tons and 1 of 100 tons, this last one having a derrick capable o lifting up to 2 tons.

There are 3 tugboats servicing the port:

"Punta Morrillo" the biggest and most powerful, capable of towing 5 barges, "Aracelio Iglesias" and "Cdte. Turcios Lima" which can tow 3 barges each.

These tugboats are also used to transport shore/vessel personnel from shore to anchorage or vice versa.

There are no cranes or pay loaders in the port.

LOADING: Sugar-loading operations performed at anchorage by lighters.

At sugar mill "La Demajagua", town of Calicito, at a distance of 2 km from the sugar mill, there is a small pier with a draft of 10 ft. where th barges are loaded with bagged raw sugar for vessels operating a Manzanillo.

At sugar mill "Francisco Castro Ceruto", town of Campechuela, a 500 m. from the sugar mill there is a pier with a draft of 12 ft. where barges are loaded with bagged raw sugar for vessels operating a Manzanillo or Ceiba Hueca.

For the discharge of barges with import cargoes the coastal pier o Manzanillo Fishing Port is used, about 3 km. distance from the city.

Bulk cargoes are not handled by this port except the discharge o petroleum products.

Docks are suitable for reception and handling of import and expo cargo (bulk cargo excepted). They have railroad tracks of non-standa gauge, which connect with warehouses.

Sugar and general cargo: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 raw-sugar bags loaded per gang per day of 8 hours.

DISCHARGING: Rates:

Bagged cargo (of 100 lb.)	approx. 25 t.p.h.
Bagged cargo (of 200 lb.)	approx. 35 t.p.h.
Iron	approx. 7 t.p.h.
Wood	approx. 8 t.p.h.
Jute bags	approx. 15 t.p.h.

FUEL/FRESH WATER: Not available.

REPAIRS: Mechanic and foundry shop under control of Industry Ministry, where light repairs of machine parts can be performed.

TRANSPORTATION: Distance from Manzanillo to:

Ceiba Hueca:	15 miles by sea, 32 km. by highway
Media Luna:	23 miles by sea, 45 km. by highway
Niquero:	45 miles by sea, 79 km. by highway
Pilon:	90 miles by sea, 130 km. by paved highway, which reaches up to 15 km. from Niquero whereafter a dirt road must be used to reach Pilon. Dirt road distance of 40 km. During rain season a jeep is used to travel by this road.

Car is used to travel from Manzanillo to above sub-ports, and takes: to Ceiba Hueca 1 hour; to Media Luna 1 hour; to Niquero 2 hours and to Pilon 3 hours (in rainy season about 5 hours).

Daily car services from Manzanillo to Niquero; to Pilon there are trucks specially prepared for this service.

COMMUNICATIONS: There is direct communication between Manzanillo and its sub-ports by telephone or telegraph.

In Manzanillo there is a long distance telephone service, radiograms, telegrams and Post Office.

Ocean-going vessels navigating to Cuba can communicate by radiotelegraphy, contacting "CLA Havana" station, which relays the messages to Manzanillo by telex.

Vessels navigating in Cuban waters can communicate any message by means of radiotelephony, contacting "CLM Coastal Network", Manzanillo. CLM station relays the messages to Manzanillo Agency by direct telephone call.

The Manzanillo Agency is connected to the National Telex System and the Manzanillo number is 02321. This is the quickest method of communication with Manzanillo Agency.

ETA messages should be given simultaneously to "Mambisas Manzanillo" and "Mambisas Havana".

MEDICAL: There is a hospital at Manzanillo where sick crew members can receive attention.

DUNNAGE: Vessels nominated for loading sugar in Manzanillo or any of its sub-ports must arrive supplied with wood dunnage because in the Manzanillo Jurisdiction it is extremely difficult to obtain wood dunnage.

Dunnage paper can be supplied if requested in advance.

AUTHORITIES: All Port Authorities, Custom House, Immigration Port Doctor, Port Captain are located at Manzanillo.

Vessels can proceed directly to any of the sub-ports, where Manzanillo Port Authorities travel to give clearance, but advance information must be given to these Authorities for the corresponding permit, as Manzanillo regulations provide that vessels must enter Manzanillo as Custom Official Port.

AGENT: Empresa Consignataria Mambisa, Calle Bateria No. 2, Manzanillo, Prov. de Oriente. Cable Address: Mambisas Manzanillo. Telex: 063121 – Tel: 2533, 2535 (Office); 2535 (Night).

(a) SUB-PORT OF CEIBA HUECA: (See Plan)

Vessels may proceed direct to sub-ports (see Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels up to Ceiba Hueca pier is about 42 miles.

APPROACHES: See Manzanillo information. For operations at Ceiba Hueca it should be noted that the pier has a depth of only 19 ft. towards the sea end for loading. Tidal variation about 1 ft. 6 in.

BERTHING: A motor-boat is required to assist in handling lines to pier and buoys. Boat is brought from Manzanillo.

LOADING: As Ceiba Hueca Pier is in bad condition, it is only used currently to dock small tankers (325 ft. length) to discharge fuel oil, or to load molasses (max. 500 ft. length) across the head of the pier, securing ship to 2 mooring buoys port side and 2 starboard side.

(a) *Indio Diaz Machado Pier* (Formerly Ceiba Hueca Pier):
  Length 130 m. (426 ft.), draft 19 ft.
  Discharge of fuel oil: Connection 8 in. diameter.
  Loading of molasses: Pipe-line 16 in., 2 connections 8 in. each.

(b) *Ceiba Hueca Anchorage:* Located at 1 mile N.W. of pier.
  Max. draft allowed is 33 ft.
  The bottom at anchorage is soft mud.

Two vessels can be operated simultaneously: One loading sugar and another discharging fuel or loading molasses at the pier.

There is railroad of non-standard gauge from the sugar mill warehouse to the dock platforms.

Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

2,000 bags are loaded per gang-period. 6 bags per sling.

MEDICAL: Crew members requiring medical attention are treated at the Polyclinic of the nearby town of Campechuela.

When hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

TANKERS: Vessels are loaded with molasses at Ceiba Hueca Pier and average pumping rate is 25,000/30,000 g.p.h. Tankers with fuel oil are also operated.

FRESH WATER: Vessels can be supplied. Delivery made through pipe-line alongside vessel. Average delivery rate is about 1 t.p.h. (due to low pressure).

FUEL/REPAIRS: Not available.

COMMUNICATIONS: Government telegraph communication between Manzanillo and Ceiba Hueca up to 1800 hrs. however, there is a telephone line which communicates by means of relay with "La Demajagua" sugar mill, which has direct telephone communication with Manzanillo. This communication is only during sugar-mill office hours, and it is very poor due to above relay.

SHIPMASTER'S REPORT: October, 1984. (See Plan).

Vessel loaded sugar in Bulk.

A new berth (constructed 1981) consisting of the following:

1. A long passage way from land to seaward having a length of about 500 m. containing the belt which carries the sugar.
2. Seven square dolphins 5 m.×5 m. constructed of cement with rubber fenders and 1 bollard on each. Distance between the first and seventh dolphins is about 250 m.
3. One semi-circle cement construction about 40 m. length containing the movable conveyor.

The conveyor has a capacity of about 500 tonnes p.h. – 600 tonnes p.h. Loading operations can be done only into 3 cargo holds and then vessel has to shift by means of warping. No tug available or shore mooring men. It is best to leave a seaman ashore for any rope moving.

The berth is affected by strong Northeasterly – Southeasterly winds and precautions must be taken during vessel's shifting.

Max. sailing draft allowed 32 ft. The channel is marked with 3 pairs of buoys. No night mooring or unmooring. All other details as per "Guide to Port Entry".

AGENT: Vessels operating at this sub-port attended by Manzanillo Agency Personnel.

(b) SUB-PORT OF MEDIA LUNA: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels to Media Luna is about 38 miles.

APPROACHES: See "Manzanillo".

MAX. SIZE: Max. draft for vessels to enter and carry out loading operations at this sub-port is 33 ft. Tidal variation 1 ft. 6 in.

LOADING: Loading operations are carried out at anchorage where vessels can load up to 33 ft. Barges and tug-boats are used from Manzanillo.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags are loaded per gang-period. Vessels can only work with 3 or 4 gangs. Only one vessel can work at a time.

MEDICAL: There is a hospital and also a polyclinic at Media Luna where sick crew members receive medical or dental care.

Whenever hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

TANKERS: No facilities.

FUEL/FRESH WATER/REPAIRS: Not available.

COMMUNICATIONS: There is direct telephone service with Manzanillo, also telegraph and post office.

AUTHORITIES: See "Manzanillo".

(c) SUB-PORT OF NIQUERO: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels to Niquero Pier is 15 miles. Tidal variation 1 ft. 6 in.

LOADING: Pier length 400 ft. – 450 ft., depth up to 23 ft. (North and South sides). There are railroad tracks of different gauges and sidings for shifting of flat cars.

Working periods: Monday to Friday 0700 – 1100 hrs.,1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags loaded per gang-period. 6 bags loaded per sling.

Although Niquero pier has two sides for docking, sugar mill can only supply sugar for working 1 vessel at a time unless overtime be worked at both sugar mill, warehouse and pier.

FRESH WATER: Can be delivered at pier by means of tank cars, capacity 8 tons. About 5 – 6 tank cars can be delivered daily but operation has to be performed outside loading hours.

FUEL/REPAIRS: Not available.

TANKERS: No facilities.

MEDICAL: All crew members requiring medical or dental attention are treated at Niquero Hospital, where they can be hospitalised if necessary.

COMMUNICATIONS: Long-distance telephone communication between Manzanillo and Niquero sugar-mill office. Distance from sugar-mill office to pier is about 5 km.

AGENT/AUTHORITIES: See "Manzanillo".

(d) SUB-PORT OF PILON (ENSENADA DE MORA): (See Plan)

Vessels may proceed direct to sub-ports (see Manzanillo under "Authorities").

PILOTAGE: Pilot boards vessel at Cabo Cruz.

APPROACHES: From Cabo Cruz to Pilon mouth entrance is open sea. From Pilon mouth to the pier is through channel, with rocky bottom and turns.

ANCHORAGES: Permitted draft up to 23 ft.

MAX. SIZE: Max. draft permitted for vessels entering and sailing harbour is 20 ft. Tidal variation 1 ft. 6 in. Cargo vessel 450 ft. – 470 ft. length, tankers 500 ft. length.

LOADING: Berth length 150 m., depth 20 ft. (presently in bad condition). Sugar and molasses loading are performed at this berth. There is a railroad track of non-standard gauge between the sugar mill and the berth.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags of sugar loaded per gang per day of 8 hours. 6 bags loaded per sling. In cases when winches are slow, the number of bags per sling is increased. Only one vessel can operate at this berth at a time.

MEDICAL: Medical attention and dental care rendered at Pilon Hospital.

TANKERS: Molasses average pumping rate is 25,000 – 30,000 g.p.h. One connection 8 in. diameter, 12 in. pipe-line.

FRESH WATER: Can be delivered at berth by pipe-line. Average delivery rate about 1 t.p.h.

FUEL: Not available.

COMMUNICATIONS: Government telegraph at Pilon. Also local telephone between sugar-mill office and Niquero, where there is Inalambrica system.

AGENT/AUTHORITY: See "Manzanillo".

MARIEL: 23.01 N. 82.46 W. (See Plan)
(and sub-ports of Cabanas, Bahia Honda and Santa Lucia)

PILOTAGE: Pilots board vessels about 1 mile from entrance of port. Vessels proceeding to sub-ports of Cabanas and Bahia Honda must pick up Pilot at same place. Pilot station located at 84 street, 5/a and 7/a, Barrio Boca. No telephone communication.

Distance from position where Pilots board vessels to:

Pier of Unit No. 1	– 1.25 miles
Anchorage	– 2.50 miles
Pier of Unit No. 2	– 2.75 miles

Pilot Works VHF on Channel 16.

APPROACHES: Entrance channel where buoy No. 1 is situated is over a sand bank with 50–55–60 ft. depth. No. 3 buoy situated in 32 ft. of water on rocky bottom, but having close by a depth of 95 ft. No. 5 buoy situated in 30 ft. of water on sand having close by a depth of 33 ft. max. This channel is 328 ft. wide (approx.).

ANCHORAGES: General anchorage – swing area 450 m., depth 29 ft. Punta Gorda anchorage – swing area 340 m., depth 36 ft.

Cargo operations do not take place at anchorages.

RESTRICTIONS: Vessels can enter and sail during day and night hours, but this should be checked in each case prior to vessel's arrival as on occasions the buoys are missing.

MAX. SIZE: Max. draft with which vessels can enter and sail through channel is 30 ft. and max. length of 610 ft. Tidal variation 16 in. Also see "Berthing".

BERTHING: All places of operation at this port are located on the East coast of the bay: Unit No. 1 close to the port entrance; Cement Plant pier located just in front of Pt. Gorda and Unit No. 2 located at the North of the town of Mariel.

All operations at Mariel piers are effected by means of trucks.

(a) Unit No. 1, Berth No. 2 (N.W.): Length 134 ft., max. draft allowed 22 ft. Used mostly for general cargo and bulk fertiliser.

(b) Cement Plant Pier: Length: 544 ft. Draft: Vessels with a length under 500 ft. can dock with a draft of 29 ft. even keel.

This pier is used only to discharge fuel oil destined either for the Cement or the Thermoelectric Plants.

Vessels over 500 ft. and up to 610 ft. can enter with a draft of 27 ft. fore and 29 ft. aft. Assistance of a large tugboat (850 h.p.) or 2 smaller ones is necessary for vessels exceeding 532 ft. and up to 610 ft. length. Tanker information: Fuel Oil: 1×8 in. diameter.

(c) Unit No. 2: This installation is located at the North side of the town of Mariel.

It consists of 3 berthing spaces, that is, a pier 607 ft. long by 267 ft. wide, built of concrete, but earth filled and not properly paved.

Berth No. 5 (N.E.): Draft: 21 ft. fore and 23 ft. aft. Length: 607 ft.
Berth No. 6 (N.W.): Draft: 25 ft. fore and 27 ft. aft. Length 267 ft.
Berth No. 7 (S.E.): Draft 29 ft. even keel – Length: 607 ft.

Cargo handled by this unit: Bulk fertilisers, general cargo and lumber. Water available by tank-truck.

(d) A new plant for shipping bulk raw sugar is operating at new pier, draft 30 ft.

STEVEDORES: Working periods: Monday to Saturday 0700 – 1300 hrs., 1300 – 1900 hrs., 1900 – 0100 hrs.

Raw sugar: 845 bags loaded per gang-period. 9 bags per sling. Only one sugar vessel can operate at a time.

General cargo: discharging rate: from 6 to 9 tons per gang hour.
Bagged merchandise: about 13 tons (100 lb. bag type).
Iron: about 18 tons (fluctuates according to type of iron).
Wood: 12 tons (approx.).
Fertilisers: Muriate of potash: 10 to 13 tons.
Sulphate of ammonia: 8 to 10 tons.
Superphosphate simple: 15 to 18 tons.

Shore cranes: There is one caterpillar (PH movable crane with boom of 80 ft. length, and which can lift 12 tons).

FRESH WATER: Can be supplied at Unit No. 2 berth by means of tank-truck with capacity of 5 tons. In dry season supplied only during night time.

FUEL/REPAIRS: Not available.

MEDICAL: No hospital. Crew members requiring medical attention are sent to Havana.

TRANSPORTATION: Distance from Mariel to:

Cabanas (anchorage):	25 km.	45 minutes by car.
Cabanas (pier):	57 km.	1 hour 47 minutes by car.
Bahia Honda:	73 km.	2 hours by car.
Santa Lucia:	250 km.	4 hours by car.

Car is hired for transportation to above sub-ports. There is daily transportation only between Mariel and Cabanas anchorage.

AUTHORITIES: Located at Mariel as follows:

Customs House and Immigration: Ave. 65. 126 Street and 128 Street.
Captain of the Port: Playa "La Boca" at the entrance of the port.
Port Doctor: 128 Street. Ave. 67. and Litoral.

AGENT: Consignataria, Mambisa, Agencia Mariel, Ave. 65 No. 12411 entre 124 y 126, Apartado No. 5, Mariel. *Tel:* 92305, 92183 (office), 922326 (night). *Telex:* 05740. *Cable:* "Mambisas Mariel".

Mariel Agency also attends the ports of Bahia Honda, Cabanas and Santa Lucia.

(a) SUB-PORT OF CABANAS: (See Plan)

Vessels assigned to Cabanas do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

PILOTAGE: See "Mariel".

Distance from position where Pilots board vessels to Cabanas is 12 miles.

APPROACHES: Entrance channel has sandy bottom on Eastern side, and rocky bottom on Western. It is about 70 m. wide.

ANCHORAGES: Excellent anchorage is available about 620 m. S.E. of Pt. Mangle, with draft well above port's operations draft.

This is a very desirable anchorage as it offers protection in all weathers.

There is another anchorage about 4.5 miles distant from Gloria Rock.

RESTRICTIONS: Vessels should enter and sail only during daylight.

MAX. SIZE: Max. draft permitted for entry and sailing is 19 ft., and max. length 574 ft. Tidal variation 1 ft. 4 in.

BERTHING: Present name: ECA "Pablo de la Torriente Brau". Former name: "Almacenes de Cabanas". Length 360 ft. (max. length permitted 450 ft.), depth 20 ft.

This dock is commonly known as "Orozo Dock", which is used in shipments of raw sugar. There are railroad tracks of standard gauge.

If for any reason a tugboat is required, tugboat 'Caharata' is available, if requested in advance.

LOADING: Working periods: raw sugar: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags are loaded per gang-period. 6 bags loaded per sling.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: Crew members requiring medical care are attended at Cabanas Polyclinic. In those cases requiring hospitalisation or specialised medical treatment, they are sent to Havana.

AGENT/AUTHORITIES: See "Mariel". There is a Port Captain and Immigration at Cabanas.

(b) SUB-PORT OF BAHIA HONDA: (See Plan)

Vessels assigned to load at Bahia Honda do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

PILOTAGE: See "Mariel". Distance from position where Pilots board vessels to Bahia Honda is 21 miles.

APPROACHES: The entrance channel has sandy bottom on Eastern side, and rocky bottom on Western and is approximately 150 m. wide up to Corojal Anchorage.

RESTRICTIONS: Entry and sailing only during daylight and necessary to await favourable tide.

ANCHORAGES: Draft 28 ft. Swing area 300 m. Max. length permitted 623 ft. Anchorage used for completion of sugar loading by means of barges that are brought from Havana.

MAX. SIZE: Length 450 ft. and max. ship draft for proceeding up to Corojal anchorage is 28 ft. Tidal variation 1 ft. 4 in.

BERTHING: Dock: "Central Harlem" (formerly "Bahia Honda"):

Length 260 ft., draft 19 ft. Dock is commonly known as Sugar Dock of Harlem Sugar Mill. It has railroad track of standard gauge.

LOADING: Sugar working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags of raw sugar are loaded per gang-period as minimum (more than the above stipulated amount is always loaded). Only one vessel can load at a time.

BUNKERS/WATER/DUNNAGE/REPAIRS: No facilities.

MEDICAL: Crew members requiring medical care are attended at Bahia Honda Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Havana.

AGENT/AUTHORITY: See "Mariel".

(c) SUB-PORT OF SANTA LUCIA: 22° 44′ N. 83° 59′ W.

Vessels assigned to Santa Lucia do not have to enter Mariel for clearance, nor to pick up Pilot.

PILOTAGE: Pilots board vessels at Pasa Honda, 2 miles off the phosphorescent buoy. No pilot station. Advice of ships' arrival is given to Custom House Delegation by cable. Distance from place where Pilots board vessels up to first anchorage is 4 miles.

APPROACHES: Channel approximately 200 m. width, rocky bottom. It has two turns with dangerous narrows. Tidal variation averages 18 in.

LOADING: There are the following anchorages:

1st Anchorage: Has depth of 30 ft., but vessels are limited for sailing to max. draft of 15 ft., and length 500 ft.

2nd Anchorage: Has depth of 20 ft., but vessels are limited for sailing to max. draft of 18 ft.

3rd Anchorage: Open sea without draft limitation.

Working periods: Work is performed all day (during daylight) including Saturday and Sunday.

Average loading rate is about 900 tons daily, but rate might be improved in the following cases:

1. Vessels with more than 3 hatches available.
2. Vessels with booms (not of the crane type) since loading is performed by grabs which are to be rigged in order to perform quick loading.
3. Provided only one vessel performs operations (2 vessels may be loaded simultaneously but above rate cannot be complied with).

Loading at this sub-port is by means of grabs rigged to vessel's boom. In cases where vessel has no booms, but cranes, the loading is carried out very slowly as buckets are used in such cases, and having to shovel mineral into buckets delays loading operations.

There are 6 barges for loading mineral with a capacity of 150 tons each.

TUGS: 2 tugs, *Adis* and *Julita* which can tow 2 barges each.

MEDICAL: Crew members requiring medical care are attended at Santa Lucia Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Pinar del Rio Hospital, distance 80 km. from Santa Lucia.

FUEL/FRESH WATER/REPAIRS: Not available.

AGENT/AUTHORITIES: See "Mariel".

Port Authorities use launches for clearing vessels. Agents use a car to travel from Mariel to Santa Lucia which takes 4 hours.

There are Custom House and Port Captain Delegations at the sub-port of Santa Lucia.

MATANZAS: 23.03 N. 81.34 W. (See Plan)

Matanzas Bay is open and most ample, being about 5 miles long and 2.75 miles wide.

Its waters are deep and only start losing depth at about 150 yds. from shore; for this reason it is most suitable to accommodate large vessels, regardless of length or draft.

Occasionally the prevailing winds affect and interfere with docking and undocking manoeuvres.

Within bay limits, 3 rivers flow:

San Juan and Yumuri Rivers, which empty into the South-Western extreme of the bay, after crossing the city of Matanzas; and Canimar which drains into the S.E. of the bay.

PILOTAGE: Pilots board vessels about 3 miles after passing the port entrance, in front of Electrical Plant and close to Empresa Consolidada del Petroleo Pier (Texas). Pilot station located at Reynold Garcia Pier (Terminal Maritima). Tel. number 2688.

Pilots board tankers in position Lat. 23° 05.6′ N., Long. 81° 30.2′ W.

ANCHORAGES:

Indio Anchorage: depth 17 ft.; swing area 120 m.
South Anchorage: depth 30 ft.; swing area 230 m.
Del Medio Anchorage: depth 27 ft.; swing area 200 m.
West Anchorage: depth 21 ft.; swing area 150 m.
North Anchorage: depth 25 ft.; swing area 150 m.
Casacajales Anchorage: depth over 30 ft.

APPROACHES: There are three entrance channels:

(i) North Channel: 50 ft. minimum depth with muddy bottom.
(ii) South Channel: 80 ft. minimum depth with rocky bottom.
(iii) Middle Channel: 22 ft. maximum draft. Because of the limited draft of this channel, it is seldom used.

The most remarkable points of visual orientation while approaching Matanzas are:

Point Maya Lighthouse, which rises 58 ft. above high tide, flashing white light visible up to 13 miles away, located on the East side of the port mouth.

To the West the Pan de Matanzas mountain and to the East the mountain range known as Tetas de Camarioca, 7 miles inland, with three distinct summits.

While entering the port at night-time, on the West side of the entrance, there is a huge brightly illuminated building of a tannery which can be used as a landmark to determine where to pick up Pilot, as the location is 700 m. after sailing past the building.

Tidal variation at this port averages 1 ft. 6 in.

RESTRICTIONS: Vessels can enter or sail at night but Port Authorities should be advised in advance.

BERTHING: At Matanzas Port there are 5 separate berthing installations of which Jesus Menendez Pier, formerly known as Texas Pier, has been out of use for some time.

All port installations are located on the N.W. shore of the bay.

Jose Luis Dubrocq Pier was enlarged and rebuilt in 1970 and all piers and the bay have been recently dredged, these works having been completed at the beginning of 1973.

Jesus Menendez Pier (formerly Texas Pier): Length 794 ft., draft 28 ft. Used to discharge fuel oil.

Presently no operations are performed at this pier due to the bad condition of its solid dolphins. Pier itself is in good condition and may be used as soon as solid dolphins are replaced.

Frank Pais Pier (formerly Armour Pier): It is a solid construction of concrete and stones.

Although it has two sides, only the West side is used, the East side being out of use. Length 350 ft., draft 22 ft.

Cargo handled by this pier: Only coastal trade discharge of: Fuel oil, diesel oil, gasoline, kerosene and occasionally cement or general cargo.

Reynold Garcia Pier (formerly Terminal Maritima Pier): The pier is of solid concrete construction at the entrance of which the pilot station and the stevedores' office are located.

North Side: Length 450 ft., draft 32 ft. Cargo handled by this side: Exportation: Bagged refined sugar, dextrana, rayon, liqueurs, etc. Import: Occasionally dry cargo (general cargo), liquid ammonia.

South Side: At this side of pier are the mechanical installations of the bulk raw sugar shipping plant. Length 529 ft., draft 32 ft.

Cargo handled by this side: Exportation: Bulk raw sugar, occasionally bagged refined sugar, dextrana, rayon, liqueurs, etc. Importation: Can be used if no sugar is scheduled to be shipped.

Morales Bayona Pier (formerly Cubadist Pier): It is a steel and concrete construction, consisting of a long narrow passage along which run the molasses and water pipe-lines, and a catwalk.

At this installation tankers berth to 2 solid dolphins and 2 mooring buoys fore and aft. Max. length permitted to vessels 615 ft., draft 32 ft.

Cargo handled by this pier: Exportation of molasses and alcohol.

Jose Luis Dubrocq Pier (formerly Fomento Maritimo Pier):

Section No. 1: Recently enlarged and rebuilt; at this time 2 heavy overhead cranes are being installed for discharging of bulk fertilisers. This installation is a coastal pier. Length 600 ft., draft 32 ft.

Cargo handled by this Section: Import: General cargo, bulk fertilisers, bagged cargoes, lumber, etc. Export: General cargo.

Section No. 2: Length 532 ft., draft 27 ft.

Cargo handled by this Section: Similar to Section No. 1.

Trucking operations are usual at this pier.

STEVEDORES: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sundays: No work performed unless in special cases.

Raw sugar: 855 raw-sugar bags loaded per gang-period. 5 bags loaded per sling.

Refined sugar: 2,004 refined-sugar bags (50 kg. type) are loaded per gang-period (797 of 100 kg. type).

12 bags of 50 kg. type per sling; 6 bags of 100 kg. type.

General cargo: average rate of discharge of other kinds of cargo varies depending on the type.

Average rate of fertiliser discharge about 11 tons per gang-hour.

Crane: one steam crane with a boom of 60 ft. which can lift about 40 tons. Crane is mounted on railroad tracks and is used only at Jose Luis Dubrocq Pier.

Bulk sugar: The installation of bulk sugar throwers operated by Empresa Consolidada del Azucar, at Reynold Garcia Pier, is by system of conveyor and distribution crane which runs from Parabolicos warehouses up to the end of the pier. A special structure protects the conveyor.

The crane runs on special rail throughout the pier (fore and aft) stopping at each vessel's hold. In cases where the vessel has projecting superstructure, she has to be separated from the pier.

Average loading rate is about 350 t.p.h., depending on the type of vessel. On vessels without tweendecks, an average of 43 t.p.h. has been attained.

Weights of shipment estimated on draft and information provided by Master. Notations are entered in Bill of Lading declaring quantity as subject to amount discharged at destination, which is supervised by Cuban Producers' Representative.

MEDICAL: Following hospitals where sick crew members can receive attention: Civil Hospital, Army Hospital, Clinica Moderna, Clinica Villar, Clinica Matanzas.

TANKERS: Discharge of fuel oil: 1 connection 6 in. diameter.

Discharge of gasoline/kerosene/diesel oil: 1 connection 6 in. diameter.

Alcohol: Pipe-lines 10 in. diameter, 2 connections 8 in. diameter.

Molasses: Pipe-lines 12 in. diameter, 4 connections 8 in. in diameter.

FRESH WATER: Water available by pipe-line only while docked to the underlisted piers:

Reynold Garcia: Delivery rate: From 7 to 10 t.p.h.
Morales Bayona: Delivery rate: From 10 to 12 t.p.h.
Jose Luis Dubrocq: Delivery rate: From 5 to 7 t.p.h.

FUEL: No bunkers available.

REPAIRS: Can be performed by Cearra y Trabazo.

COMMUNICATIONS: Long-distance telephone, Corporacion Inalambrica Cubana, Press wireless, Government telegraph, postal communication, railroad and buses.

Vessels can communicate through CLA via Cardenas and/or Havana.

DEVELOPMENTS: Specialised fertiliser unloading equipment to be introduced at the port.

AUTHORITIES: Located as follows:

Port Doctor:	Milanes St. No. 2. Tel. 2672 (home tel. 2338).
Immigration:	Santa Teresa St. No. 19. Tel. 2695.
Port Captain:	Muelle del Real. Tel. 2469.
Custom House:	Versalles St. e/Navia and Riech St. Tel. 2269 (home tel. 2339). (Chief of Custom House watching services.)

AGENT: Empresa Consignataria Mambisa, Agencia Matanzas, Milanes No. 28002, Apartado No. 245, Matanzas. Telephone: 2519 and 3079 (office), 3081 (night). Telex: 52132. Cable: Mambisas Matanzas.

Ocean going vessels navigating to Cuba can communicate with the Matanzas Agency by radiotelegraphy, contacting "CLA" Havana Station, which relays the messages immediately to Matanzas.

The Matanzas Agency is connected to the National Telex System and its number is 05232. This is the quickest method of communication with Matanzas Agency.

Masters must send their ETA messages simultaneously to Mambisas Matanzas and Mambisas Havana.

Matanzas Agency VHF works on Channel 16 during office hours.

NUEVA GERONA (Isla de Pinos): 21.58 N. 82.56 W. (See Plan)

Isla de Pinos is the largest island of Los Canarreos Archipelago, located on the South coast of Cuba, just in front of Batabano Gulf and the boundary between Pinar del Rio and Havana provinces.

Isla de Pinos is 54 km. long from North to South and 58 km. from East to West. (2,200 sq. km.). The North coast is 229 km. long and the South coast 98 km.

Nueva Gerona Anchorage lies in front of the mouth of Las Casas River.

PILOTAGE: Pilots board vessels at Punta Frances. Distance from place where Pilots board vessels to loading berth is about 34 miles. No pilot station. Chief Pilot is located at No. 3 St. Mo. 612 e/ 6 and 8 Streets, Nueva Gerona, Isla de Pinos.

APPROACHES: Entrance channel or passage from the Gulf to the bank is about 2 miles wide. Bottom throughout the 34 miles is mud (from entrance to anchorage in front of Las Casa River). No dangerous turns or narrows.

ANCHORAGES: Gerona Anchorage: Located just in front and close to the mouth of Las Casas river. Draft 19 ft. No limitations regarding length. Swing area is 600 ft.

Loading of fruits at anchorage is performed only when shipment is effected in vessels whose draft does not permit them to enter through the river.

Auxiliary equipment for exportation of fruits: 2 barges, 1 tugboat.

Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

Whenever sufficient cargo is supplied by the packing plant, the loading rates should be about 120 tons per gang in 8 hours.

RESTRICTIONS: Entry and sailing only during daylight.

MAX. SIZE: Max. draft up to which vessels can load out of the river is 19 ft. Tidal variation 1 ft.

BERTHING: Nueva Gerona Pier: Located about 2 miles up river. Length 200 ft. Max. length allowed to vessels, 90 m. (295 ft.). Draft 14 ft. 6 in.

FRESH WATER: Available only at berth.

FUEL/REPAIRS: Not available.

MEDICAL: General hospital "Heroes de Baire", where sick crew members can receive attention.

COMMUNICATIONS: There are telephone, telegraph and cable (Inalambrica) communications, also air postal service.

AUTHORITIES: Port Authorities are located at Nueva Gerona.

It is strongly recommended that when vessels are assigned to this port, all measures be taken for perfect co-ordination between Agents, Pilots and Port Authorities, and Masters should give ETAs in advance.

SUB-AGENT: Empresas Nacional de Cabotaje, Calle 31 y 22 (Terminal Maritime), Nueva Gerona, Isla de Pinos. Tel.: 2467, 3300. Telex: 054118. Cable: Mambisas – Nueva Gerona.

NUEVITAS: 21.33 N. 77.16 W. (including sub-ports of Pastelillo, Puerto Tarafa, and Bufadero): (See Plan)

The port lies on a peninsula orientated from West to East, and all port installations are located on the North of said peninsula: Tarafa on the Western extreme, Bufadero and Cement Pier at about 0.5 miles East of Tarafa, and Pastelillo at the Eastern extreme.

The city of Nuevitas is located about 4.5 km. to the S.W. of Tarafa.

The city spreads widely from the shores of Guincho Bay.

Neuvitas Bay has an extension of 57 square miles, but despite its extension, owing to its geographical configuration, is fairly well sheltered and can accommodate vessels of large tonnage. Bottom of the bay is mostly hard mud, but there are areas of sand and others where it is sandy/muddy.

(a) SUB-PORT OF PASTELILLO: (See Plan)

PILOTAGE: Pilots board vessels at Punta Practicos, 1 mile from Buoy No. 1.

The following are the distances from the place where Pilot boards the vessel up to: Pastelillo: 8 miles; Bufadero: 10 miles; Tarafa: 10.75 miles.

Pilot Station is located at Nuevitas and usual means of communications with it are telephone or car.

APPROACHES: Entrance to or sailing from this port is only effected at slack water in order to avoid tidal currents.

Usually entrance or sailing from port is performed during daylight hours but incoming vessels, which have advised their ETA well in advance and draw 30 ft. or less can enter during night-time at slack water, if all the navigational signals and marks are in good order. If any lighted buoy is out of service, night entrance or sailing are not performed.

Channel bottom is rocky/sandy along most of its entire course but if crossing the channel with official draft allowed to vessels, there are no difficulties regarding draft as there is ample depth.

Limitations as to draft and length to enter to or sail from Nuevitas are as follows: Draft 33 ft., length 650 ft.

Limitations as to draft for crossing the bay interior channels are:

Entrance channel up to Botijuela Anchorage:	35 ft.
La Estrella Channel up to Pastelillo:	33 ft.
Channel between Pastelillo and Tarafa:	26 ft. 6 in.

ANCHORAGES: *La Poza Anchorage:* Located near Pt. Practicos. Geographical position: Lat. 21° 36′ 46″ N., Long. 77° 05′ 11″ W. Limitations: Draft 38 ft., length none. Swinging area: Unlimited. Can accommodate one vessel. Distance from shore: 400 m.

Botijuela Anchorage: Located S.E. of Ballenato Grande Cay. Geographical position: Lat. 21° 31′ 34″ N., Long. 77° 10′ 39″ W. Limitations: Draft 35 ft., length 650 ft. Swinging area: 400 m. Can accommodate 15 average type vessels. Distance from shore: 2 miles.

Pastelillo Anchorage: Located East of Pastelillo. Geographical Position: Lat. 21° 32′ 34″ N., Long. 77° 12′ 38″ W. Limitations: Draft 20 ft., length 500 ft. Swinging area: 200 m. Can accommodate 2 vessels. Distance from shore: 0.25 miles.

Guincho Anchorage: Located East of Pt. Guincho. Geographical Position: Lat. 21° 31′ 57″ N., Long. 77° 14′ 00″ W. Limitations: Draft 16 ft., length 250 ft. Swinging area: 100 m. Can accommodate 1 small vessel. Distance from shore: 1.25 miles.

Tarafa Anchorage: Located to the N.W. of "D" Pier. Geographical position: Lat. 21° 34′ 30″ N. Long. 77° 14′ 45″ W. Limitations: Draft 22 ft., length 525 ft. Can accommodate 1 vessel. Distance from shore: 400 m.

MAX. SIZE: Up to 575 ft. length – 33 ft. draft. Up to 610 ft. length – 31 ft. draft. Tidal variation 1 ft. 6 in.

BERTHING: *Pastelillo Pier:* North Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 31 – 35 – 37 – 37 – 37 – 36 – 37 ft.

Cargo handled by this side: General cargo, equipment, machinery, bagged raw and refined sugar, molasses, etc.

South Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 24 – 33 – 34 – 33 – 36 ft.

It is well cared for and recently underwent complete repairs, being the topping-off berth for sugar and molasses loading of the port, as well as the deep draft berth for vessels with import cargoes.

Petroleum products (fuel oil, diesel oil, gasoline and kerosene) for the use of the whole Camaguey Province, are discharged at this pier.

The pier has railroad sidings connecting with the main tracks but is not suitable for trucking operations.

STEVEDORES: Working periods: Monday to Friday, 0700–1300 hrs., 1300–1900 hrs.; Saturday, 0700–1300 hrs., 1300–1900 hrs.; Sunday, no work is performed.

Raw Sugar: loading rate: max. 1,800 bags per gang in 6 hours. Minimum fixed rate 975 bags in 4 hours or equivalent in 6 hours. 6 bags loaded per sling.

Loading Capacity: 2 sugar vessels can perform sugar loading operations simultaneously.

Refined Sugar: this type of shipment is not regularly performed.

Loading rate: 3,300 bags of 100 lb. each are loaded per gang in a 6 hour period.

General Cargo: discharging rate is about 11 to 12 t.p.h.

EQUIPMENT: The port owns and operates the following equipment: 6 fork lift trucks; 7 tractors; 3 trailers; 6 tow motors; 5 shore cranes (from 5 to 20 tons lifting capacity); 2×300 ton capacity cargo barges; 1 (1,200 h.p.) tugboat.

MEDICAL: There is a municipal hospital where sick crew members can receive attention.

TANKERS: Molasses pumping rate about 85,000 g.p.h.

FUEL: Currently the only bunkers available at Nuevitas are Regular Fuel Oil, which is the type of fuel oil stored at shore tanks.

Deliveries are effected only at Pastelillo Pier by pipe-line gravity from the deposit tanks and due to the method used, are slow.

Bunkers must be requested well in advance.

FRESH WATER: Can be supplied at No. 4 pier. Delivered by means of railroad tank cars, each with capacity of approximately 34 tons. Delivery rate about 20 t.p.h.

REPAIRS: Repair Shop "Boga" incorporated in the Industry Ministry.

COMMUNICATIONS: Vessels navigating to Cuba can communicate with Mambisas Nuevitas Agency through "CLA" Havana Radio Station which relays the message promptly to Nuevitas.

When navigating in Cuban Waters nearing Nuevitas, vessels can communicate directly with "CLK" Coastal Radio Network Nuevitas by radiotelegraphy at 500 kHz, general call, 446 kHz, for working Radiotelephony frequency 2760 or 2182 kHz.

This Coastal Network Station rapidly relays any message to Mambisas Nuevitas Agency.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Nuevitas and Mambisas Havana.

SHIPMASTER'S REPORT: August 1985.

See "Sub-port of Tarafa".

SHIPMASTER'S REPORT: March 1989.

Charts: BA. Chart No. 3197, Bahia Nuevitas. BA. Chart No. 3865, Cuba – Eastern Sheet.

Sailing Directions: NP. 70, West Indies Pilot, Volume 1.

Officials: This was second port in Cuba, so no difficulties were expected however after the Agent and Veterinary Inspector had boarded and sealed the meat room a squad of 14 customs officials arrived and searched the accommodation and store rooms. Bond had been sealed in Havana but was opened just in case and then resealed.

If the officials asked to see something on the Crew Effects Declaration they seemed satisfied if told that it had been put in the "transit room" so that it would appear that the safest course is to pack everything except the essentials into a suitcase and place it in the transit room.

When alongside, Customs officials carry out an inspection and requir a signature on their check sheet every day.

As noted in "Guide to Port Entry", the meat room is sealed, but they seem to be fairly pragmatic about this and allow reasonable stocks t be removed each day.

Approaches: From the West, Pta. Maternillos Lt. is easily visible and there are no difficulties. Pilot was contacted at about 35 miles on VHF Channel 16 and gave clear instructions. Passage through the narrow winding channel into the bay has to be done at slack HW, although there was still some flood running as we entered. Larger heavier ships ar taken through in daylight and have a tug escort (this vessel 171 m. LO with 27 ft. draft.)

Pilot: The Pilot boards from a launch (black hull, white superstructure), 1 mile North of Buoy No. 1.

Anchorage: In a quiet area S.S.W. of Cayo Ballenato Grande, inside the bay, holding ground is good.

Tugs: There are 4 tugs available and the port regulations require 2 tugs for berthing. One seems to be on permanent water barge duties, one in dry dock in Havana, one was away on salvage duty and the remaining tug assisted with berthing and was well handled.

The tugs are registered in Malta and are on long term charter.

The regulations also require large deep draft vessels to be escorted in and out of the entrance. This can interfere with berthing schedules.

Berth: The oil berth is fairly new and is close to the old molasses berth at Puerto Pastelillo. It is well fendered and sheltered. It has lines for gasoline, gas oil, kerosene and fuel oil. A new loading arm and line for LPG is being fitted to serve 2 tanks about 2.5 km. away on the North shore of Peninsula del Guincho.

Gas oil and kerosene tanks are 50 m. above sea level and are about 1.5 km. away.

Berth Information:

Berth Operator: State Oil Company.

Density: Salt.

Distance from Pilot to Berth: 11 miles.

Bridges: None.

Restrictions: Night time berthing/unberthing permissible but passage to sea is dependent upon length of vessel and draft.

Fresh water: Available by barge.

Hoses: 4 × 8 in., also see "Berth" above. Max. pressure 8 kg/sq.cm.

Slop facilities: None.

Repair facilities: None.

Surveyors: None.

Shore Leave: Passports, shore passes and currency reports were needed. Launch took crew to Puerto Tarafa. No taxis or buses available at Nuevitas. Small Seamen's Club available.

Telephones: Telephone calls to Norway at 2000 hrs. GMT on a weekday took about an hour to arrange. The delay appears to be due to lack of lines between Nuevitas and Havana.

AUTHORITIES: Located at Nuevitas.

Authorities travel from Nuevitas to clear the vessels for whichever of the 3 berths they may have been assigned, i.e. Pastelillo, Tarafa or Bufadero.

Means of transportation for port authorities from Nuevitas to the loading/discharging berths is automobile or launches.

AGENT: Empresa Consignataria Mambisa, Agency Nuevitas, P.O.Box No. 350, Puerto Tarafa, Nuevitas, Prov. de Camaguey. Telephone: 2779, 2107 (office), 3109 (night). Telex: 031151. Cable: Mambisas Nuevitas.

Mambisas Nuevitas Agency also attends the port of Jucaro and sub-port of Boca Grande.

(b) SUB-PORT OF TARAFA: **(See Plan)**

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Tarafa is about 10.75 miles.

APPROACHES: See "Pastelillo".

RESTRICTIONS: Vessels can enter or sail only during daylight and should wait for slack water.

BERTHING: *Tarafa Terminal:* This terminal consists of 3 solid concrete piers, each with railroad sidings connecting with the main tracks and also suitable for trucking operations.

It is capable of operating 7 vessels simultaneously: 6 average size vessels and 1 medium or small.

Cargo handled at Tarafa Terminal: General cargo, equipment, machinery, bagged cargoes, fresh and canned fruits, sugar, etc.

Tarafa Pier "B": North Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 19 – 23 – 25 – 25 – 25 – 28 ft.

South Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 14 – 21 – 20 – 22 – 22 – 24 – 25 ft.

Tarafa Pier "C": North Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 26 – 25 – 26 – 29 – 31 ft.

South Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 23 – 23 – 25 – 25 – 25 – 26 – 27 ft.

Tarafa Pier "D": North Side: Length 768 ft., width 65 ft., max. draft 27 ft.

Depths alongside from shore end to pier head: 28 – 29 – 31 – 32 – 33 – 34 – 33 – 34 ft.

South Side: Length 477 ft., width 65 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 19 – 27 – 29 – 29 – 30 – 30 – 29 – 28 ft.

STEVEDORES: Working periods – raw sugar, loading rate, refined sugar, general cargo, etc., same as for Pastelillo. 6 sugar vessels can operate simultaneously. No crane available.

FRESH WATER: Can be supplied at Pier "B", "C", and "D".

FUEL: No bunkers usually supplied at this terminal, but in special cases bunkers have been supplied at Pier "B".

SHIPMASTER'S REPORT: March 1980.

General Cargo: There are 3 piers for handling general cargo, all in the same place at Tarafa. All about the same length, and ships can moor both sides.

Fresh Water: Fresh water can be supplied at anchorage and at all piers by barges (about 200 tons).

Agent: The Agent "Mambisas" has an office just outside the gate (large green house) and listens on VHF Channel 12 from 0900 – 1100 hrs. and 1500 – 1700 hrs.

SHIPMASTER'S REPORT: November 1981.

Pilotage: Compulsory. 12 hours' notice required.

Restrictions: Vessel can enter and leave port during hours of darkness. Vessel can only enter and leave at slack water due to narrow entrance.

Max. Size: Length 511 ft., beam 70 ft., max. draft 24 ft.

Tugs: Available and should be used.

Radio: CLK.

VHF: Pilot on Channels 16 and 13. Port Authority on Channel 13. Agent on Channel 12.

Berthing: Location: Lat. 21° 34′ N., Long. 76° 14.5′ W.

Vessel berthed at Berth B. Distance from entrance to berth 12 miles. Least depth of water in channel from sea to berth 8.0 m. Max. tidal range at berth 1 m. Nature of bottom mud. Density 1025.

Facilities Available: Limited bulk handling facilities, no Ro-Ro, no floating cranes. Equipment available for handling palletised cargoes. No facilities for handling containers.

Anchorage: The anchorage is 6 miles from the berth. Vessels with draft of over 20 ft. have to anchor in channel.

Barges: Fresh water barge available.

Tankers: Tanker terminal available.

Consuls: None.

Services: The following services are available: Fresh water, fresh provisions in small quantities, laundry service, telex, bunker fuel oil, diesel oil, lubricating oil, doctor and hospital.

Agents: Nearest Agent in Havana.

SHIPMASTER'S REPORT: December 1983.

Documents: See Havana "Shipmaster's Report: December 1983".

Pilotage: Compulsory. 24 hours' notice should be given via Agent. Pilot boards at No. 1 Buoy (entrance to bay).

Distance from entrance to berth is 12 miles through a very narrow channel with sharp bends. This channel may only be transited at slack water during daylight.

Charted depth in channel was 4 fathoms but we found at least 30 ft. Tidal range 0.5 m. Currents of 2 – 4 knots are experienced 2 hours after HW or LW.

Anchorages: Available in centre of bay at Lat. 21° 31′ N. Long. 77° 11.5′ W.

Restrictions: See "Pilotage".

Max. Size: Max. LOA 650 ft., max. draft in channel 33 ft.

Radio: Neuvitas.

VHF: Pilot and Port Authority use Channel 16.

Tugs: At least 3 tugs available.

Berthing: Vessel berthed at Tarafa "B" Pier (Lat. 21° 34.2′ N., Long. 77° 14.7′ W.). This vessel (length 575 ft.) was very much the maximum size for this pier. Max. draft at East end – 19 ft. Mean tidal range at berth was 18 in.

Nuevitas has 3 piers for receiving and exporting general cargoes. The 3 piers are "B", "C", "D", with berths on North and South sides of each. Lengths of piers are said to be "B" 480 ft., "C" 437 ft. and "D" 766 ft. The South side of "B" Pier is silted up limiting the draft to about 17 ft.

We were offered "C" Berth 437 ft. which I rejected as being unsafe for this size of vessel. The Pilot and Port Officials agreed with me.

The vessel berthed North side of "B" Pier. Only 470 ft. of pier was usable as heavy boulders and mud extended from the East end of the berth consequently 110 ft. of the vessel overlapped the jetty into the stream where a current of from 1 to 2 knots can be experienced. Every use was made of bollards and horn cleats on the quay, some of which were very dubiously secured to the wharf. All available leads on the vessel were used, even so there are no means or facilities for breasting the stern in. During a heavy squall the ship was about 12 ft. off the jetty.

"D" Berth is the only suitable berth for this size of vessel. Unfortunately it is used only for receiving bulk fertiliser.

Other berths off the Port are only used for the export of sugar and cargoes moved by rail trucks.

Vessel must depart berth 2 hours prior to slack water in order to transit channel at slack water.

Bulk Cargo Facilities: "D" Pier is for discharge of bulk fertiliser; ship's gear used.

Stevedores: Available and satisfactory.

Medical: Doctor and hospital facilities available.

Fresh Water: Available.

Fuel: Limited quantities of bunker fuel, diesel and lubricating oils available.

Consuls: Nearest at Havana.

Surveyors: Salvage Surveyor available.

Airport: Local airport.

Services: Telex facilities. Limited supplies of fresh provisions, groceries and meats.

SHIPMASTER'S REPORT: February 1984.

We recently loaded a cargo of bagged sugar in Nuevitas, Cuba. Thanks to your publication, all crew had made out complete Personal Effects lists, and most of their valuables had been placed in cases and placed in the bond.

On berthing, I was presented with a set of Customs Regulations which stated what had to be placed in bond during the ship's stay in Cuba. This says (in English) Quote: "On arrival Cuban port all Masters of any ships must put under transit room that not be of personal use such as toys, guns, ammunitions, spirits, cigarettes, narcotics and kinds of pornographic pictures". No mention is made of cameras.

The day after berthing, the ship was searched by the Port Captain, who confiscated two cameras belonging to crew members, even though these had been declared. According to the Agent in Cuba, these people had no right to take these articles, and he was certain he would get them back. However, despite numerous requests and letters, they were not returned on sailing.

The above may prove of assistance to other ships.

See "Shipmaster's Comments" in "General" before first port.

SHIPMASTER'S REPORT: August 1985.

Notices: The required notices and ETA messages were sent to "Mambisas – Havana" and once the loading port was declared contact was established with "Mambisas – Nuevitas" – the local Agents, all messages were then directed through them.

Response of Havana Radio (CLA) on HF was poor, all messages had to be sent through U.S. coast stations, however, once the vessel was in MF range all traffic was directed through Havana Radio and the local station Nuevitas Radio (CLK).

Approaches: 2 hours prior to time of arrival the vessel was informed by the Pilots (on VHF) that the Pilot would board at 1130 hrs. which meant a delay of 2 hours. We went up close to the Pilot Boarding Ground to register and report the time of arrival and then went out to drift. We then sent message to Agents to tender Notice of Readiness on Master's behalf with time to be stated as 0930 hrs. (it was a Saturday).

All entrances to the bay are made when tide is slack at No. 1 Buoy, ETA to be timed accordingly. Pilots prefer to enter between Slack Water and Flood Tide. All sailings are timed for 1 hour before Slack Water, the idea is to be at No. 1 Buoy at Slack Water.

Limitations: If draft less than 30 ft. then vessel can enter and leave the port by day or night provided the above conditions are met. If draft is more than 30 ft. then the vessel can enter and leave the port at HW – Slack Tide by day only. Max. draft 33 ft. There is a strong currrent in the channel and at the neck of the bay of up to 4 – 5 knots.

Anchorages: No safe anchorage with good holding ground is available outside the bay near the entrance, so it is advisable to drift. Vessel must be well out as there is a strong set. Pilots advise that if it is necessary to anchor then the vessel can anchor in a position bearing 000° (T) × 4 cables from Pta-de-Cos Practicos, but for an hour or so only.

We understand that if a vessel has to anchor for longer periods then one can anchor on the Great Bahama Bank as shown (see "Plan"). Vessels have been known to anchor here for hatch cleaning, etc. I personally feel it is not a very good proposition. Inside the bay there are good and safe anchorages available. There is no safe anchorage off Pastelillo Pier. Off Tarafa there is an anchorage to the N.W., max. draft 22 ft., it is used only as a temporary holding ground during manoeuvres.

Pilotage: Pilots board 1 mile North of No. 1 Buoy. Pilots and tugs communicate – using walkie-talkie. If wind is more than Force 4, the Master has to issue a letter before Pilots undertake any docking/undocking operations, especially if in light draft and with high windage area.

Tugs: This port has experienced many tug breakdowns and delays. We were given to understand that on one occasion (March 1985) all docking and undocking operations were delayed for 6 days, all for the want of one tug. At some berths Pilots require 2 tugs.

For our departure from Pastelillo Pier, we were also delayed due to tug breakdown. Master had to request the Port Officials for special permission and only after overnight consultation and delay did they permit undocking with one tug, provided the Master issued a written request. This was done and the vessel undocked.

Density: We observed a dock water density of 1027 at both Tarafa and Pastelillo. This high figure is due to the fact that the area had experienced an unusually long dry season. As per the Surveyors average figure is 1023 – 1024.

Berths at sub-port of Tarafa: There are 3 piers 'B', 'C' and 'D' with berths on each side designated North and South berths.

Pier 'B' is generally used for reefer and smaller general cargo vessels.

Pier 'C' is used for sugar and general cargo.

Pier 'D' is used for fertiliser and other bulk cargoes.

Official drafts and depths are not to be relied upon as there is heavy silting at all berths mainly attributed to the bulk operations.

We berthed at Pier 'C' – South berth, starboard side to, head in, with the stern protruding well out beyond the pier. This is due to the progressive silting at the forward end. Depths at this pier were sounded and are as per plan (see "Plan"). Max. draft at Pier 'C' – South berth as per the Pilots is 24 ft. forward and 26 ft. aft. Vessel can load up to 25 ft. 03 in. max. (aft) and sail at any state of tide. If over this draft vessel must sail at HW only.

If draft exceeds 25 ft. 03 in. when transiting the Tarafa-Pastelillo Channel one tug is required to assist the vessel to round the bend at No. 41 Buoy.

Max. draft allowed in the Tarafa-Pastelillo Channel is 27 ft. at HW. For docking/undocking Pilots require 2 tugs but use only one. This is mainly due to the lack of manoeuvring space when there is a vessel at the adjacent berth.

Berths at sub-port of Pastelillo: The berths at this pier are considered the topping-up berths. Generally vessels load part cargo at Tarafa and then shift to Pastelillo.

There are 2 berths at this pier designated North and South. The North Berth is for tankers and the South Berth is for sugar loaders. Cargo to this berth is fed by rail road.

The knuckle on the Southern side has been badly damaged and has some irregular blocks of concrete and steel jutting out, necessitating extreme caution during the approach and positioning of the vessel.

We berthed at Pastelillo – South Berth, starboard side to, head in. The berthing operation can be a little tricky, especially if there is a slight wind, this is made more so by the channel which turns sharply at the head of the pier.

The official maximum draft allowed at this berth is 33 ft. Hand lead soundings showed depths in excess of 36 ft., on the off-shore side and 33 ft. on the in-shore side.

With a draft of 30 ft. a vessel can undock at any state of tide, by day or night. However, with a draft in excess of 30 ft. undocking is during the day only, with the max. draft of 33 ft. only during the daytime and at high tide.

Tidal restrictions for departure from the bay still apply, so the vessel may be required to anchor in the bay to await tidal conditions. Pilots and Port Officials require 2 tugs for all docking/undocking operations at Pastelillo.

Documents:

Crew List	9 copies	Any format.
List of Ports of Call	4 copies	Any format.
Declaration of Health	1 copy	Special format.
Vaccination List	4 copies	Any format.
Foreign Currency Declaration	4 copies	Any format.
Narcotics List	4 copies	Any format.
Firearms & Weapons List	4 copies	Any format.
Cargo/Ballast Manifest	4 copies	Any format.
Stores List, Deck, Eng., Radio, Catering	5 copies	Any format.
Provisions List	6 copies	Any format.
Bonded Stores List	6 copies	Any format.
Personal Property Declaration	2 copies	Special format.
Currency Card	1 copy	Special format.
Shore Pass	2 copies	Special format.

Vessel should make a fairly detailed declaration of ship stores with special attention to electrical, electronic equipment and new (unused) items.

Crew Personal Property Declaration has to be *very detailed* with all items listed. All new items and those not in use should be packed up in a bag and put away in a spare cabin. This spare cabin is sealed by the Customs.

Each crew member is allowed: 1 bottle of alcohol, 1 carton of cigarettes, 1 watch, 1 radio. Beer is not considered a bonded item. No cameras allowed for the crew.

The Master is permitted to keep: 5 bottles of alcohol, 5 cartons of cigarettes and 1 camera. (We had kept the Polaroid camera out of bond to use during cargo operations).

The Customs seal can be opened upon request every 5 days for a fresh issue to the crew.

Inspections: Pratique, Veterinary, Agriculture, Sanitary, Harbour Master (Ministry of Interior – Guards), Customs:

Pratique: Doctor and assistant board the vessel with the Pilot when inward bound. They clear the vessel and issue the Free Pratique chit.

Veterinary: A veterinarian from the Institute of Veterinary Medicine will inspect the holds and dunnage wood and see if spaces are fit to load sugar. Also if the wood is free of termites. He will then issue a "Fit to Load Sugar" Certificate. The Veterinary Inspector will also check the meat room to see if all the meat onboard is clean and fit for consumption. He will be looking out for the stamp of approval. Chinese sausages are not permitted. If any non-approved items are found then the meat room will be sealed and they will board every day to enable removal of rations for 24 hours. The charge for this service is CPeso 5/– per visit.

Agriculture: An Inspector from the Department of Agriculture will board the vessel to check the dry provisions and the vegetable room. They will take samples of fruit, garlic, some vegetables away for testing and they may recommend some items to be sealed up in plastic bags. It is advisable to keep dry-fish 'ikkan billis' and preserved Chinese vegetables well out of sight.

Sanitary: Inspector from the Department of Public Hygiene will check the galley, all cabin stores in the accommodation and on deck, also check the garbage drums, etc. They are mainly looking out for mosquitoes, as there was a very severe epidemic of malaria resulting in a large number of deaths. The Sanitary Inspector will board every 5 days.

Harbour Master (Ministry of Interior Guards): They can search the vessel at any time, for any reason, any number of times. They searched our vessel twice on arrival and prior to departure. The shore passes are issued by them. Everyone is expected to stand-by their cabins during the initial and final search. They appeared to be looking out for 'literature', objectionable to the government, and stowaways. This Department will issue a "Permission to Sail" Certificate.

Customs: The Customs Officials are mainly looking for U.S.$ and Cuban Pesos in excess of the declared amount. Any *news items* or any item they *feel* is in excess of personal requirement will be confiscated whether declared or not, if found in the cabin. All crew should be advised to keep only the bare minimum and all other items should be put away to be sealed. Currency Declaration cards for all crew are given by them. Customs will, prior to departure, issue a "Clearance".

Agents: Empresa Cosignataria Mambisa – Nuevitas are the local Agents with the main office in Havana. The Agents board the vessel on arrival and thereafter every day. They can be contacted on VHF (call – Mambisa) Channel 12 and 16 between 0800–1130 hrs. and 1400–2100 hrs. The office is located very close to the main gate at Tarafa. Working hours are up to 1700 hrs. However, there is an Agent on duty until 2100 hrs. All telex messages are sent through Havana. International telephone calls can be made from the Agent's office. Even with 24 hours prior notice there are delays. Agents are attentive and helpful.

Shipchandler: There is one company, arranged through the Agents. The chandler supplies fresh and dry provisions and dunnage material. The chandler claimed to have fresh vegetables, fresh fruit, meats, etc. Prices of seasonal local fruits and vegetables are very reasonable. When the order was placed they were able to supply only one or two items as all fresh vegetables and fruits were out of stock.

Medical: Arranged through the Agent. The Protocol Officer will take the crew member to the local hospital, for medical attention. Cost Cuban Pesos 20/– per consultation, transport and medication extra.

Fresh Water: Available by barge. We did not take water at this port.

Shore Leave: The crew is permitted to go ashore any time. There is n curfew in force. While at Tarafa the most convenient mode o transportation to and from town is by bus. Taxis are available but difficu to come by. From Pastelillo the crew is not allowed to go ashore, b road transport. Boat service has to be arranged. Pastelillo-Tarafa is 40 minute ride one way, cost per round trip is C. Peso 46/–. However if anyone is to go to the doctor then the Agent will arrange a car and boat service is not required.

General: The crew should be warned against Black Market transactions in U.S. Dollars as there are plain clothes policemen on the look-out. Crew are permitted to take U.S.$ ashore but they must be changed at a bank. Apparently the incidence of STD (sexually transmitted diseases) is quite high and the crew should be warned accordingly. There were some indications that drugs are quite freely available and in use, so one must be more vigilant as some of the crew may be tempted or misled. At the time when the vessel called the exchange rate was U.S.$ 1.00 = 0.96 Cuban Peso.

Stevedores: The regular working periods at this port are:

Monday to Friday	0630 hrs. to 1350 hrs.	1st shift.
	1420 hrs. to 2140 hrs.	2nd shift.
Saturday	0630 hrs. to 1350 hrs.	1st shift only.
Sunday and Holidays	No work.	

The above are the times of regular work. However, cargo can be worked on Saturday 2nd shift and Sunday if required. Stevedore Supervisor will enquire, as to the number of gangs vessel requires to work. Vessel must ensure that at no time to commit less than 4 workable hooks as per Charter Party. Sometimes they bring less gangs to suit the availability of cargo. Ship's crew are to rig derricks but stevedores will assist. Opening and closing hatches by ship's crew. Stevedores are fast and efficient, did not experience any problems.

The 2 areas to be wary are:

(a) Stacking of bags when the head room decreases, in the under coaming spaces.

(b) Covering up all the steel work, and the top tier with kraft paper.

At Tarafa sugar in bags is fed to the wharf by covered wagons and also on trucks.

The average weight of cargo per wagon is 57 tonnes. Usually there are 12 bags per sling and 1 sling per lift. If there is sufficient supply of cargo and wagons, one gang can average 2,400 – 3,000 bags per shift. Provided the rate is maintained, on a 4 gang/2 shift basis the total lifting per day can be in the region of 19,000 – 24,000 bags which is 1,880 tonnes – 2,300 tonnes per day.

At Pastelillo the sugar is fed to the wharf by rail wagons only. Here the normal system is 6 bags per sling and 2 slings per lift. Due to the height of the wharf and the positioning of the rail tracks the production at this pier is much greater than at Tarafa.

The above figures are on the basis of regular supply of sugar and wagons. During our stay there were times when cargo had to be stopped or slowed down and the number of gangs reduced due to non-availability of cargo. The production figures for our port stay are as follows:

	Tarafa	*Pastelillo*
Time alongside	4 days 22 hrs. 18 min.	5 days 20 hrs. 36 m.
Time workable as per port working hours after berthing (Sundays & Holidays inc. if worked)	3 days 23 hrs. 50 min. (10 shifts)	3 days 13 hrs. 14 min. (12 shifts)
Deductions from workable time		
– Rain	00 hrs. 35 min.	—
– Preparing for loading	01 hr. 30 min.	—
– Waiting for cargo	—	11 hrs. 50 min.
– Waiting for shifting/sailing	—	16 hrs. 00 min.
Time actually worked	2 days 21 hrs. 45 min.	2 days 09 hrs. 24 min.
Total cargo lifted	81,530 bags	60,167 bags
Total gangs worked	35	24
Cargo/gang/shift	2,329 bags	2,507 bags
Average cargo/day of 24 hours (basic time alongside)	1,620 tonnes/day	1,006 tonnes/day

Tally: Tally by shore personnel quite accurate and in addition independent tally by ship's staff (used deck cadets, and crew when more than 4 working gangs). Did not experience any serious discrepancy.

Vessel must instruct ship's tally cadet and shore tally clerk to compare figures at the end of each wagon or truck, and note any discrepancy before commencing the next wagon or truck. This way there is no squabbling at the end of the day when the figures are presented to the Chief Officer and there appears some large and mysterious discrepancy. Due to the presence of the ship's staff the shore tally personnel are more attentive.

Cargo Condition: The general cargo condition was satisfactory as could be judged from the appearance of the bags and by feel. Some of the bags were wet and or stained. There were also some bags which were hard when touched. All wet, stained, torn, seeping and hard bags were rejected. The rejected bags were re-loaded onto the wagons. Ship's staff on tally duty checked and rejected the bags. There is an organisation called Empressa Cubana de Control short 'Cubacontrol'. Surveyors/checkers from Cubacontrol check the cargo quantity and quality. They have one representative per gang and in addition there is one person who collects samples at random. From experience gained on the voyage, we noted that this cargo is prone to heavy sweating. There is considerable amount of inherent moisture and heat in the sugar crystals/granules.

Cargo Weight: The cargo of granulated raw brown sugar in bags is fed to this port from 5 factories. In spite of standardisation there is a difference in bag weight and condition. The rail wagons are weighed, at random, before and after handling to obtain the cargo weight and thus the average bag weight. This average is used to compute the cargo quantity being loaded. The averages range from as low as 94.1 kg./bag to 101.9 kg./bag. For our shipment the general average bag weight worked out at 98.993 kg./bag. The shippers Cubazucar (local representative Marcos Allen) advised that from past experience *all* sugar ships to China have experienced a shortfall per the receivers. To safeguard their interest the shippers request a Draft Survey on Shipper's Account. The Draft Survey was carried out by Cubacontrol.

By shore tally cargo quantity worked out to 14,020.072 tonnes gross, 13,879.755 tonnes net.

By draft survey cargo quantity worked out to be 13,903.395 tonnes gross.

B/L was signed on basis of shore tally weight, gross and net. Freight basis net weight. Master had requisitioned/nominated for 14,020 tonnes of cargo. Issued Letter of Protest and Right to Claim Deadfreight.

Dunnaging Material: Laying of dunnage done by stevedore gangs, separate dunnage men employed per working hatch.

Flat dunnage wood is very difficult to obtain and when available, is very expensive. It is customary to use cardboard cartons and kraft paper. Transportation charges are unreasonably high so it is advisable to order your requirement in large amounts. However, returning is not permitted.

Flat dunnage wood at CPeso 110.2/cu.m. + 18% and transport
– None ordered

Cardboard cartons 122 cm.×61 cm.×0.35 cm. at CPeso 350 per bundle of 100 pieces
– Total used 12 bundles

Kraft paper 122 cm. wide ×100 m. per roll at CPeso 16 per roll
– Total used 107 rolls

We had 12 cu.m. of flat dunnage left over from the previous voyage, this was used in the lower holds – double dunnage, i.e. fore and aft and athwartships, this was then covered with kraft paper. Where no wooden dunnage was used cartons were placed which were then covered with kraft paper before cargo was loaded. All steel surfaces were covered with kraft paper to prevent contact with the bags. The top tier was covered with kraft paper. In the square of the hatch the top tier was covered with kraft paper and then with cardboard cartons.

Stowage Factor: The smaller holds (1 & 3) gave a stowage factor of 48 – 48.5 cu.ft./long ton whereas the larger holds had a stowage factor of 46.7 – 47.7 cu.ft./long ton. The average stowage factor for the full laod worked out to be 47.5 cu.ft./long ton.

No. 3 Hold – Tween deck had some empty space – 13,457 cu.ft. (i.e. additional 284 tonnes).

No. 4 Hold – Tween deck had empty space – 3,200 cu.ft. (i.e. additional 68 tonnes) which with the stowage factor obtained gives a possible full load of 14,372 tonnes after making due allowances for bunkers, etc.

Sealing of Hatches: On completion of loading each hatch was sealed in the presence of the Ministry of Interior Guards and Customs. The sealing was carried out by Cubacontrol the locally based recognised company, in the absence of a P&I correspondent. The services of Cubacontrol for the sealing were ordered through the Agents on Owner's Account.

All hatch covers, hatchways and ventilators were closed and sealed using copper wire and snap-on seals. In all 24 seals were used. The Surveyors issued a Certificate and Plan on completion of sealing with all the seal locations and numbers.

AUTHORITIES: See "Pastelillo".

(c) SUB-PORT OF BUFADERO:

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Bufadero is 10 miles.

APPROACHES: See "Pastelillo".

RESTRICTIONS: Vessels drawing over 25 ft. 3 in. should await high tide for shifting to anchorage.

For entering/sailing, vessels should wait for slack water and only during daylight.

MAX. SIZE: Max. draft with which vessels can enter/sail to/from Bufadero is officially up to 25 ft. 3 in. but actually up to 25 ft. 6 in. Length 600 ft. Tidal variation 1 ft. 6 in.

BERTHING: Pier, length 557 ft.; draft, North side, 25 ft.; draft, South side, 25 ft.

This pier is only used for molasses and fuel oil. Average pumping rate of molasses is 70,000 g.p.h. Only South side is in operation.

Cement Dock: This is a concrete coastal dock where bulk cement is shipped by means of silo-trucks. It is located West and close to Bufadero Pier. Length 275 ft., width 31 ft. Depths alongside from East to West: 14 – 16 – 18 – 16 – 16 ft.

FUEL/FRESH WATER/REPAIRS: Not available.

AUTHORITIES: See "Pastelillo".

PUERTO PADRE-Cayo Juan Claro: 21.17 N. 76.32 W. (and sub-port of Manati) **(See Plan)**

It is a safe, sheltered and ample port, situated at one of the richest and important sugar cane zones of the nation.

In the neighbourhood of the port there are 2 sugar producing colossus: Antonio Guiteras sugar mill, 8 km. away and Jesus Menendez sugar mill, distance 18 km. Both of these mills are among the biggest and most modern in Cuba.

The port itself is located on the West coast of Cayo Juan Claro and is named Puerto Carupano.

Cayo Juan Claro is connected with the mainland at its extreme Southern tip by a narrow gauge railroad and parallel to the tracks runs a road recently built.

Both the railroad and the road communicates with the city of Puerto Padre, sugar mills of Antonio Guiteras and Jesus Menendez.

Cayo Juan Claro and Cayo Puerco, divide the bay into two parts. The part located at the West is Puerto Padre bay and that at the East is known as Chaparra Bay.

PILOTAGE: Pilots board vessels at entrance, not less than 1 mile from mouth of port. Distance from place where Pilots board vessels to pier is about 2.5 miles.

APPROACHES: Funnel-shaped at entry. 2 turns, but the one to take into consideration when manoeuvring vessels over 525 ft. is "Careneoro" turn. Vessels with a length of 565 ft. have entered this port. Bottom is rocky in entrance channel and muddy in bay.

RESTRICTIONS: Vessels can enter only during daylight and must wait for slack water for entering/sailing due to current in the channel.

ANCHORAGES: *Official Anchorage:* Located at Puerto Padre Bay at following position: Lat. 21° 14′ 46″ N., Long. 76° 33′ 34″ W.

Max. length permitted 170 m.

Vessels usually anchor by 3 or 4 shackles of chain but there is enough swinging area for 8 or 9 shackles.

Draft allowed to vessels 25 ft. Anchorage bottom is mud and shells.

Quarantine Anchorage: Located East of Cayo Juan Claro at Chaparra Bay, about 2 miles from the piers.

Max. length permitted is 170 m. and depth is over the port official draft.

Vessels usually anchor by 3 or 4 shackles of chain, but there is enough swinging area for 10 shackles. Anchorage bottom is mud and shells.

MAX. SIZE: Vessels can sail with max. draft of 25 ft. up to length of 500 ft. Over 500 ft. length with draft up to 24 ft. Max. length permitted 557 ft. Tidal variation 2 ft. 3 in.

BERTHING: Pier Nos. 1 and 2 are located on the West side of Cayo Juan Claro.

Salt Mill Pier is located on the East coast of the entrance channel, just in front of Pt. Gracia, and about 1.75 miles from Pier Nos. 1 and 2.

(a) Pier No. 1 (Formerly known as Sugar Pier): It is a coastal pier built entirely of hard wood.

Two narrow gauge railroad tracks run along the length of the pier.

Loaded cars enter by the North end of pier and after discharging are taken out by the South end.

Trucks can operate at this pier, but are not used for sugar cargoes.

Length 523 ft., max. length permitted to vessels 557 ft. Width 32 ft.

Draft 27 ft. – 28 ft.

Cargo handled by this pier:

Importation: Occasionally general cargo or jute bales.

Coastal trade: Occasionally general cargo.

Water available by railroad tank-cars.

Berthing operation performed only during daylight hours.

(b) Pier No. 2 (Formerly known as Molasses and Oil Pier): It is a steel and hard wood construction 271 ft. long, of which 235 ft. corresponds to a passage 7 ft. wide along which run the pipe-lines and a catwalk, ending in a platform 36 ft.×36 ft.

Vessels operating at this pier, berth across it, forming a "T" shape.

Length 271 ft., max. length permitted 557 ft. Draft 26 ft. – 28 ft. Width 7 ft.

Platform 36 ft.×36 ft.

Cargo handled by this pier:

Export: Molasses.

Coastal trade: Discharge of fuel oil.

Berthing operation performed only during daylight hours.

(c) La Salina Pier: Located at the entrance channel East coast, just in front of Pt. Gracia.

It is a small coastal pier built to ship coastal trade cargo of salt.

Berthing length 44 ft. Width 22 ft. Max. length allowed 192 ft.-200 ft. Draft 12 ft.

STEVEDORES: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Raw sugar: loading rate max. 1,430 raw sugar bags loaded per gang period. Minimum is 650 bags. 5 bags loaded per sling. Only one vessel can operate at a time. Empty jute bags have been discharged and average discharge rate is about 45 metric tons per gang period. No crane available.

Sugar in bulk: 5 thrower machines for loading sugar in bulk.

MEDICAL: General Hospital at Puerto Padre where sick crew members can receive attention.

TANKERS: Molasses average pumping rate 50,000 g.p.h. Fuel oil, discharging rate 45,000 g.p.h. Gas oil discharging rate 35,000 g.p.h.

Puerto Padre Pier No. 2: Fuel Oil: One connection 8 in. diameter. Diesel Oil: One connection 8 in. diameter. Molasses: Two connections 8 in. diameter.

FRESH WATER: Can be supplied at No. 1 pier by pipe-line. Delivery rate 17 t.p.h.

FUEL: Not available.

REPAIRS: Port has no repair shop, but in event winch damage or any other light repairs, this work can be carried out at the Sugar Mill "Central Antonio Guiteras" Repair Shop.

IMPROVEMENT OF PORT FACILITIES: At the present time new deposit tanks for petroleum products are being built to increase greatly the port storage.

Also a water reservoir and an above ground tank will be built, and in the future it will be possible to supply water by pipe-line to vessels docked at Pier No. 2.

TRANSPORTATION: Distance from Cayo Juan Claro where all cargo operations are performed to Puerto Padre is 3 miles. Means of transportation between Puerto Padre and Cayo Juan Claro: motor-boat, railroad, and automobile.

From Puerto Padre to Cayo Juan Claro it takes: by motor boat 30 minutes; by automobile 5 minutes; railroad 20 minutes.

COMMUNICATIONS: Means of communications available at Puerto Padre: telephone, cable (Inalambrica), telegraph and postal service. Vessels can communicate with Puerto Padre via CLA Havana.

AUTHORITIES: Port Doctor and Custom House are located at Puerto Padre. Immigration at Chaparra. Port Captain at Cayo Juan Claro.

AGENT: Office Address: Calle 3 No. 12, Cayo Juan Claro, P.O.Box 38, Central "Antonio Guteras, Tel.: 52565 (Puerto Padre), 210-2 (office), 108-2 (night). Cable: Mambisas Puerto Padre. Telex: 024118.

Agency works VHF on Channel 16.

Postal Address: Empresa Consignataria Mambisa, Agencia Puerto Padre, Apartado No. 38, Central Antonio Guiteras, Delicias, Prov. de Oriente.

Puerto Padre Agency personnel also attends the Port of Manati.

SUB-PORT OF MANATI: 21.24 N. 76.48 W. **(See Plan)**

The Port of Manati lies on an arm in the sea, through the centre of which runs a narrow and deep channel, leading to the shallow bay of Sabanalamar or Manati.

This arm in the sea is about 3 miles long and 800 m. wide at the entrance mouth, between Pt. Roma and Pt. Jesus, and 700 m. at its end, when it reaches Sabanalamar Bay.

Manati is located on the West coast of the arm in the sea, at about 2.5 miles from Pt. Roma and 0.5 miles from the end of it.

The Port of Manati exports the production of sugar mill Argelia Libre formerly known as Manati.

PILOTAGE: Pilots board vessels about 1 mile from entrance. No pilot station. Pilots located at Manati and ETA notice to be given to them well in advance. Distance from place where Pilots board vessels to pier is about 3 miles.

APPROACHES: Narrow channel, very deep (minimum depth 38 ft.) Bottom is irregular, parts where it is sandy and others rocky.

RESTRICTIONS: Not necessary to await slack water for entry/sailing; but considering large tonnage of vessels presently entering port for topping-off, if there is a strong current Pilots wait until current loses strength in order to avoid accidents. Vessels can enter and sail only during daylight.

ANCHORAGES: Swing area 600 ft. (approx.). Owing to reduced space, this anchorage is not safe for anchoring vessels drawing over 26 ft.

MAX. SIZE: Incoming vessels draft limitations:

	Vessel length	*Max. draft*
Vessels up to	500 ft.	26 ft.
Vessels up to	525 ft.	20 ft.
Vessels up to	560 ft.	17 ft.

In some exceptional cases 560 ft. length vessels have entered this port but it is advisable to nominate this type of vessel to operate at any other suitable port because at Manati the max. advisable length allowed to vessels is 525 ft.

Tidal variation, 2 ft. 6 in.

BERTHING: Manati Pier has the shape of an "L" and projects from the West coast of the arm of sea toward the centre of it seeking the border of the deep channel.

It goes straight out and then turns Northward in a 90° angle.

The 90° angle constitutes its South end, and from there to the head of pier, or North end, it is 465 ft. long, having at this end a fixed red light.

As is clear by the above description, pier has an East and a West side, but only the East side is used because the West side does not have enough water to operate vessels.

It is a hard wood construction supported by concrete piles. Bottom alongside pier is soft (mud and sand) along three-quarters of its length from North to South except at the South end where it becomes shallow, hard and rocky, which renders worthless about 70 ft. of docking space.

Pier has double standard railroad tracks and a single narrow gauge track. It is not possible to operate trucks at this pier.

Manati Pier (Also known as La Gloria Pier): Length 465 ft. Max. length allowed 525 ft. Max. draft 30 ft. 6 in.

Tanker Information: Molasses: 2 connections 8 in. in diameter. Fuel Oil: 1 connection 8 in. in diameter.

STEVEDORES: Loading sugar: working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs., 1300–1700 hrs. When necessary, work is performed at night. Sunday is also worked when required. 1,040 sugar bags loaded per gang period; 6 sugar bags loaded per sling. Only one vessel can operate at a time. No refined sugar operations performed. No shore crane available. Sugar mill has 5 grates and 3 machines for spreading sugar in hatches.

MEDICAL: Crew members requiring medical attention are treated at Manati Polyclinic, but the majority of cases are treated at Argelia Libre Hospital, where there is also a Dental Clinic.

Cases requiring surgical or specialised treatments are sent to Lenin Hospital at Holguin.

TANKERS: Molasses pumping rate 25-30,000 g.p.h. Fuel oil pumping rate at average of 1,700 b.p.h.

FRESH WATER: Supplied by pipe-line at pier. Pipe-line 2 in. in diameter and delivery at an average rate of 15 – 16 t.p.h. Amount that can be delivered depends on supply at sugar mill. Supply not to be depended upon.

FUEL: Not available.

REPAIRS: Sugar mill repair shop for minor repairs. Welder available.

COMMUNICATIONS: Long-distance telephone communication between Manati and Puerto Padre; although difficult owing to fact that there are only two lines from Manati and they are almost always congested. There are some occasions when an entire day is spent trying to obtain communication without result. Victoria de las Tunas telephone operator serves on occasions as "relay".

Vessels cannot communicate by radio with this port.

AUTHORITIES: Under Cuban Custom laws and regulations, Manati is a sub-port of Puerto Padre, therefore all Authorities are located at Puerto Padre, nevertheless vessels nominated for operations at Manati can proceed directly to the port, where authorities clear the vessels.

AGENT: Manati is attended by Mambisas Puerto Padre Agency personnel and there is no office at Manati, however, the Agent attending a vessel at Manati can be reached at Minaz office, tel. 146. At night and for urgent matters he can be reached at Manati Chief Pilot tel. 144-15

SANTA CRUZ DEL SUR: 20.42 N. 77.59 W. (and sub-ports of Manopla and Guayabal): (See Plan)

PILOTAGE: Pilots board vessels close to buoy indicating entrance channel (Cuatro Reales) between "La Ceiba" bank and Carapacho Cay Lighthouse. Distance from place where Pilots board vessels (Cuatro Reales Channel) to Santa Cruz anchorage is 11 miles.

APPROACHES: Entrance channel has depth of 45 ft. Bottom is mud, gravel and loose sand. In the narrowest part of channel is a turn of about 20 degrees.

ANCHORAGES: No. 1, 24 ft.; No. 2, 26 ft.; No. 3, 36 ft.; No. 4, 40 ft. Sugar-loading operations were performed at anchorages. There were 10 barges available which are presently operating at the sub-port of Santa Maria (Jucaro). Similarly, the tugs which were used at this port are at present operating at Jucaro.

RESTRICTIONS: Vessels cannot enter/sail at night. Not necessary to wait for slack water for entering/sailing.

MAX. SIZE: Vessels can enter/sail through channel with any draft and length subject official draft of the port which is 35 ft. Tidal variation 1 ft. 5 in.

LOADING: Raw sugar: working hours: Monday to Friday 0600–0800, 0830–1100, 1200–1530; Saturday 0600–0800, 0830–1030; Sunday: when it has been necessary, work has been performed.

Loading rate: 1,950 bags loaded per gang period. 6 bags loaded per sling. Only 1 vessel can operate at a time. No crane available.

Refined sugar – no operations performed.

Raw sugar in bulk – no sugar in bulk is shipped by this port. Bulk sugar is shipped by the sub-port of Guayabal.

MEDICAL: No hospital. The nearest hospital where sick crew members can be attended to is located at Camaguey, 80 km. from Santa Cruz.

TANKERS: No tankers operate at Santa Cruz del Sur proper.

COMMUNICATIONS: Long-distance telephone communication with Guayabal can be established through San Francisco Sugar Mill. Telegraph can also be used. There is no telephone or telegraph communication beteen Santa Cruz and Manopla.

At Santa Cruz del Sur there are long-distance telephone, Government telegraph and postal service. Vessels can communicate with Santa Cruz by telegraph via Radio Havana.

FUEL/WATER/REPAIRS: Not available.

TRANSPORTATION: Distance from Santa Cruz del Sur to Manopla: 14 miles; Guayabal: 14 miles. From Santa Cruz to Manopla by sea 1.5 hours; by road 1 hour. To Guayabal by sea 3 hours; by road 2.5 hours.

No daily transportation between Santa Cruz and its sub-ports. Launch or automobile are to be hired for this purpose.

AUTHORITIES: Port Authorities are located at this port. Launch services are used by Port Authorities to clear vessels.

AGENT: Empresa Consignatarias Mambisas, Calle Carretera No. 255, P.O.Box 49, Santa Cruz del Sur, Camaguey. Tel. 2547 (night 2141). Telex 031285 Cables: "Mambisas Santa Cruz del Sur".

(a) SUB-PORT OF MANOPLA:

PILOTAGE: After Pilot boards vessel at Cuatro Reales Channel, vessel proceeds to Santa Cruz for clearance, thence takes another Pilot and proceeds to sub-port of Manopla, 14 miles distant from Santa Cruz.

APPROACHES: See Santa Cruz. Entrance channel to sub-port of Manopla – Canal de Media Luna, Canal de los Bayameses, where vessels anchor, is a mile wide, bottom soft mud. No dangerous turns. Vessels of any length can enter and the anchorage depth is 24–40 ft. Official permitted draft 35 ft. Vessels can enter/sail only during daylight. Not necessary to wait for slack water for entering/sailing. Tidal variation 1 ft. 6 in.

LOADING: Anchorage No. 1: 26 ft.; No. 2: 40 ft. Loading sugar operations were performed at above anchorages by means of barges. The following barges and tugboats were available:

Macareno No. 1	– capacity: 329 metric tons, 2,870 bags of raw sugar or 75,000 gallons of molasses.
Macareno No. 2	– capacity: 329 metric tons, 2,870 bags of raw sugar or 75,000 gallons of molasses.
Eulalia	– capacity: 269 metric tons, 2,350 bags of raw sugar. Has no tanks.
Miguelito	– capacity: 269 metric tons, 2,340 bags of raw sugar. Has no tanks.
Josefa	– capacity: 269 metric tons, 2,340 bags of raw sugar or 48,000 gallons of molasses.

Tug: *Fox* – length 66 ft., breadth 14 ft., 165 h.p. Tows the fleet of barges utilised at Manopla.

TANKERS: Average pumping rate of molasses 20,000 g.p.h.

COMMUNICATIONS: No long-distance telephone communication. There is telegraph service which works up to 1800 hrs.

FUEL/WATER/REPAIRS: Not available.

AUTHORITIES: See "Santa Cruz".

(b) SUB-PORT OF GUAYABAL: (See Plan)

PILOTAGE: After Pilots board vessels at Cuatro Reales Channel, they proceed directly to sub-port of Guayabal (a distance of 27 miles), where Customs clearance takes place. Also see "Shipmaster's Report".

APPROACHES: Dredged channel 2,474 m. in length, 60 m. in width with average depth of 30 ft.

ANCHORAGES: Suitable for vessels with draft up to 40 ft.

MAX. SIZE: Official draft for the port is 35 ft., but Pilots advise max. draft with which vessels may sail from the berth is 32 ft. 6 in. at HW, with max. length 510 ft.

BERTHING: The West side of the pier is specially designed for loading bulk raw sugar mechanically and is the deepest side where vessels can be loaded up to 32 ft. 6 in. for sailing at high tide or up to 30 ft. 6 in. to sail at any time.

It must be understood that such draft of 32 ft. 6 in. is given only for sailing loaded, but does not indicate that an arriving vessel with 32 ft. 6 in. draft can dock, even at high tide.

This situation is originated by the dimensions of the manoeuvring area around the pier.

Max. draft allowable for vessels arriving to complete cargo at Guayabal (molasses, alcohol, or sugar) at the West side of pier is 27 ft.

A tanker nominated for discharging fuel oil at Guayabal must arrive with a max. draft of 30 ft. 6 in. to be docked at the West side, bow facing shore, and must discharge until a draft of 27 ft. or less is attained, in order to turn around and sail out.

At the East side of the pier vessels can dock bow facing shore, with max. draft of 24 ft. fore and 27 ft. aft.

Vessels nominated to load bulk raw sugar at Guayabal must arrive clean and ready to load.

Any undesirable material or any remaining dunnage materials, must be discharged at a previous port, because at Guayabal the only available personnel are those operating the equipment of the Bulk Raw Sugar Terminal and no stevedores are available.

When jute bales or any other cargo is discharged at Guayabal, stevedores from other ports are used.

The pier is a solid and well maintained construction of concrete.

Guayabal Pier:

(a) West. Length 508 ft., max. draft allowed 32 ft. 6 in. (for sailing high tide), 30 ft. 6 in. (for sailing any tide), max length of vessel 200 m.

On this side is where the equipment for loading bulk sugar operates. The boom of the equipment can reach out up to 10.36 m. (34 ft.), from the outer edge of the pier.

Vessels loading bulk raw sugar can be supplied with water at a rate of 5 t.p.h. as long as the loading equipment is working and 10 t.p.h. when it is not working.

Cargoes handled by this side: Bulk raw sugar, molasses and alcohol. Occasionally: Fuel oil, jute bales and spare parts for sugar mills.

(b) East. Length 508 ft., max draft allowed 24 ft. fore and 27 ft. aft (bow facing shore), max. length 200 m.

STEVEDORES: Sugar loading in bulk. Loading of molasses and alcohol takes place frequently. Fuel oil and general cargo discharge.

Working Hours: Monday to Friday: 0600–0800 hrs., 0830–1100 hrs., 1200–1530 hrs.

Saturday: 0600–0800 hrs., 0830–1030 hrs.

Sunday: When it has been necessary, work has been performed.

Sugar in bulk – at pier there is an installation operated by electric motor control which moves a convex-shaped conveyor and transports the bulk sugar from warehouse to the vessel. 2 thrower machines, 600 and 400 t.p.h. respectively. Average loading rate about 250 t.p.h. although occasionally average of 400 tons has been obtained. There is some time lost on account of shifting the crane. Occasionally shovellers are required, and work continues 24 hours a day.

General cargo – it is not customary to receive general cargo at this sub-port, although on occasion bales of empty jute bags have been received, destined to neighbouring sugar mills. At present there are no facilities for discharge of general cargo, and no shore cranes available.

TANKERS: Shipment of molasses and alcohol is quite frequent. Vessels discharging fuel oil may berth with max. draft of 27 ft. without touching bottom, which is of soft mud.

COMMUNICATIONS: Communications between Guayabal and Santa Cruz del Sur are rather poor.

By means of relays Guayabal/Amancio Rodriguez/Camaguey, telephone communication may be obtained with Havana and other Cuban ports, but owing to the relay system necessary to obtain communication, it is of dubious value in urgent matters.

Radiograms (RCA) can be sent/received by means of telephone call Guayabal – Camaguey.

In the Bulk Sugar Terminal there is telex, but due to limitations of lines it is frequent to encounter difficulties to obtain communication.

ETA messages from Masters should be sent Mambisas Santa Cruz del Sur and Mambisas Habana, simultaneously.

FUEL/REPAIRS: Not available.

FRESH WATER: Supplied at pier by pipe-line at average rate of delivery 10 t.p.h.

SHIPMASTER'S REPORT: 1978.

Pilotage: Pilots are arranged by the Agent at Santa Cruz del Sur, (Mambisas). The boarding station shown on charts and mentioned in Pilot Books is now non-existent. Instead the Pilot comes direct from Santa Cruz when a ship is expected and boards the vessel between No. 2 Buoy and No. 4 Buoy South of the entrance to Cuatro Reales Channel. Vessel then proceeds to Guayabal, where it is necessary to anchor off the port for clearance.

Approaches: The navigable width of the approach channel, is at present 50 m., the buoys being moved accordingly, with an average depth of 32 ft. The centre alignment of the approach channel is 011.5° T. This is indicated by two fixed leading marks. The forward one, a metal pole with a yellow triangle mark, apex up, at night a fixed red light. The rear mark is a yellow triangle apex up, attached to the top of a water tank (on a framework tower) at night a fixed green light. This leading line leads "down" the Eastern side of the one and only jetty, along the top of the elevated (roofed-over) conveyor belt.

Documents/Customs:

Crew Declaration (Manifest)	6 copies
Steward's Store List	6 copies
Deck/Engine Store List	6 copies
Maritime Declaration of Health	3 copies
Dangerous Drugs List	6 copies
Slop chest/Bonded stores	6 copies
Explosives List (Distress Rockets, etc.)	6 copies
List of foreign currency	5 copies
List of ship's equipment, i.e. films, binoculars, T.V.s, sextant, etc.	4 copies

All foreign currency, cameras, dangerous drugs, and crew presents to take home were all sealed up in the bond locker along with its contents. Meat room sealed up. Although all our meat is of Australian or New Zealand origin, some of the lamb had a USA wrapper on it which made it American meat and this is not acceptable in Cuba. As far as I can understand the meat from Australia, New Zealand, Japan, USSR, only is acceptable in Cuba.

SHIPMASTER'S REPORT: April 1984.
Vessel loaded raw sugar in bulk:
Documents:
9 copies Crew List.*
3 copies Animal List.
2 copies List of Ports.
4 copies Narcotics.
4 copies Arms and Ammunition.
5 copies Provisions.
3 copies Store List.
3 copies Bonded List.
1 copy Vaccination.
4 copies Crew Currency.†
4 copies Total Currency.‡
2 copies Crew's Effects .§
Notes:
*On sailing they requested another 6 Crew Lists.
†Crew Currency List – With all paper money that every crew has in his possession also the coins.
‡Total Currency List – With the total amounts of foreign currency held by crew and vessel. i.e. US Dollar 4,525.00; German Mark 150.00; Greek Drachmas 25,500; Japanese Yen 15,000, etc., including total coins.
§Crew's Effects – Vessel is provided with special forms. Each form in duplicate is to be filled for each crew member.

Pilots: Pilot comes aboard at Canal de Cuatro Reales. Same Pilot berths the vessel and remains on board until loading completed to unberth and sail the ship.

Approaches: Dredged channel. Vessels can sail at high water with draft up to 32 ft. No night sailing, berthing or unberthing.

Max. Size: Vessels of about 210 m. length are handled.

Berth: Works in progress to lengthen the berth by about 40 m. Up until now the first 20 m. are in preparation.

Max. draft alongside West side of Pier, 35 ft. aft and 33 ft. for'd.

Equipment: 1 convex-shaped conveyor with trimmer machine. Average loading rate 600/650 tonnes/p.h. 24 hours continuous working. The boom extends about 35 ft. and is about 30 ft. – 32 ft. above sea level.

Sugar in bulk loading at about 300,000 tonnes per month. No sugar loaded in bags.

Fresh Water: Available ex-wharf, rate about 3 t.p.h. at a cost of about US$2.70 per ton.

Doctor: Crew must go to another town, but usually no transportation, except emergencies.

Repatriation: Possible. Crew will travel by boat to Santa Cruz del Sur (about 3 hours), and then by car to Havana (about 12 hours), where the International Airport is located.

Ship Chandler: Comes from another port, charging about U.S.$100.00 for transportation.

Population: Population of this port about 1,500.

AUTHORITIES: Port Captain and Immigration's Delegations at Guayabal. Customs delegate travels from Santa Cruz to Guayabal to conduct clearance. Distance 24 miles (by sea) from Guayabal to Santa Cruz. By road 60 km. Time 3 hours by sea and 2 hours by road.

AGENT: Postal Address; Empresa Consignataria Mambisa, Agencia Guayabal, Apartado No. 49, Santa Cruz del Sur, Prov. de Camaguey.

Office Address: Guayabal Bulk Sugar Terminal, 3rd Floor, Tel: No. 2547, 2141 (night). Telex: 031285. Cables: Mambisas Santa Cruz del Sur.

SANTIAGO DE CUBA: 19.50 N. 75.52 W. (See Plan)

PILOTAGE: Pilots board vessels 1 mile from mouth of port. Pilot station located in small Cay at entrance of bay known as Gramma Cay (formerly Smith Cay). Launch service is only means of communication available between Santiago de Cuba and Gramma Cay. Pilots also have office located at Custom House building with telephone communication. Distance from place where Pilots board vessels to: Piers 5 miles; Anchorage 4.5 miles; Refinery Pier 2.5 miles.

APPROACHES: The entrance, up to a distance of 0.5 mile, has a rock bottom. Thereafter, for a distance of 1 mile muddy bottom, and remaining 2.5 miles is soft mud. There are some turns, and the channel and entrance to the port are narrow.

RESTRICTIONS: Vessels can enter and sail only during daylight from 0600 to 1800 hrs.

ANCHORAGES: *Inner Anchorage:* Located from the North of Ratones Cay up to the West of Buoy No. 20. Can accommodate several vessels.

Limitations to vessels: Draft 30 ft., length 702 ft.

Outer Anchorage: Located West of Pt. Gorda and just in front of refinery piers. Can accommodate 1 or 2 vessels and is used mainly by tankers. Max. draft: 36 ft. Max. length allowed 702 ft.

Also see "Shipmasters' Reports".

MAX. SIZE: Vessels with a length of 702 ft. and a draft of 36 ft. can enter up to the refinery, provided they arrive during early morning hours. Tidal variation 1 ft. 3 in.

VHF: Santiago Servicios Maritimos, Channels 16, 11 and 71.
Santiago Consignataria Mambisa (Agent), Channels 16 and 12.
Santiago Terminales Mambisa, Channels 16 and 71.

BERTHING:
Luis F. Mena Gil Dock (Formerly Malecon): This installation comprises the whole zone known as Malecon del Puerto and consists, mainly, of a docking area 1,345 ft. long, which, being able to operate three vessels, are regarded as West, Centre, and East berths, but there is no mark or boundary between any of the berths.

West of the Western berth is under construction, but already in operation, a new berth, temporarily known as Western extreme berth and, East of the Eastern berth is a berthing space for barges.

This dock is built of concrete, and was rebuilt and paved recently. As standard gauge railroad tracks run along the length of dock, operations can be performed either by railroad or trucks, or a combination of both.

The particulars of each berth are:
Western Extreme Berth: (New Berth): (Known as Malecon Extremo Oeste):
Max. length allowed: 100 m. Draft: 18 ft.
Cargo handled at this berth: General cargo, cement, etc.
Western Berth: (Known as Malecon Oeste):
Draft allowed: 24 ft. fore, 25 ft. aft.
Cargo handled at this berth: Bagged raw sugar, general cargo and occasionally lubricating oil.
Centre Berth: (Known as Malecon Centro):
Draft allowed: For Loading: 28 ft., leaving pier at high tide. Under these conditions, vessels rest in 1 ft. of almost liquid mud but this does not interfere with sailing manoeuvres.
For Docking Loaded: 27 ft. even keel. Cargo handled at this berth: bagged raw sugar, general and heavy cargoes.
Eastern Berth: (Known as Malecon Este):
Draft allowed: 23 ft. fore, 26 ft. aft.
Cargo handled at this berth: light general cargo, molasses and petroleum products.

Ferrocarril Pier: This pier out of use since 1972 but rebuilt recently. It is a concrete construction ending in a small platform but vessels do not moor directly to the dock but to 4 solid dolphins; first and last dolphins being 400 ft. apart. Vessels are also secured to belaying cleats situated on shore.

This installation is used for shipping molasses but there is a possibility that pipe-lines for petroleum by-products will be installed, although this has not been confirmed.

Length: 240 ft. Draft allowed: 26 ft.

Rolando Roca Pacheco Pier (Formerly La Maritima): This pier is a complete concrete construction, (both platform and pilings) rebuilding of which was finished in 1973; the installation is in very good condition in all respects, permitting truck and trailer operations alongside vessel, as well as railroad operations, because tracks cross just in front of the pier shore entrance.
North Side: Length: 650 ft. Max. length allowed: 600 ft.
Draft allowed: 25 ft. fore, 26 ft. aft.
Cargo handled at this side: General cargo.
South Side: Length: 650 ft. Max. length allowed: 600 ft.
Draft allowed: 26 ft. fore, 27 ft. aft.
Cargo handled at this side: General cargo.

Romero Pier: This pier is a concrete construction, and although in rather fair condition, needs repairs.

All cargo handled at this pier is on the basis of a trucking operation only.

It is used chiefly for coastal trade vessels but also by medium size vessels, such as refrigerated ships.
East Side: Length: 492 ft. Max. length allowed: 400 ft.
Draft allowed: 14 ft. fore, 19 ft aft.
Cargo handled at this side: general cargo, bagged cement, etc.
West Side: Length 492 ft. Max. length allowed: 400 ft.
Draft allowed: 20 ft. fore, 23 ft. aft.
Cargo handled at this side: General cargo, bagged cement, refrigerated cargo such as lard, butter, frozen fish, etc.

Frank Pais Pier (Formerly La Molinera): This installation consists of a long narrow passage, at the end of which the vessel is berthed across the installation to 4 solid dolphins. It is used for the discharge of bulk grain (wheat and maize) by mechanical means through conveyors and pipe-lines.

There is no limitation as to length of vessels. Draft allowed: 30 ft.

Cement Plant Pier (Known as Muelle del Cemento): This berth is a coastal pier that can accommodate one vessel.

It is used only for loading cement, either by silos/truck depending upon whether bulk or bagged cement is involved. This installation is well paved and all operations are performed by means of trucks.

As the pier is not long enough, there are solid dolphins at each end of pier, in order to berth securely vessels up to 460 ft. long.
Length: 290 ft. Max. length allowed: 460 ft.
Draft allowed: 22 ft. fore, 23 aft.

Refinery Pier: This pier is located at a small peninsula on the West coast of the bay, its orientation being from North to South and therefore its sides are West and East.

It is a solid, well cared for, concrete construction, having similar facilities at both sides.
Length: 789 ft. Max. length allowed: 702 ft.
Depth: 40 ft. Max. draft allowed: 36 ft.

STEVEDORES: Working periods: Monday to Friday 0700–1300 hrs. 1300–1900 hrs.; Saturday the same; Sunday worked only if vesse completing cargo.

Raw Sugar: Loading rate about 1,200 bags loaded per gang period 6 bags loaded per sling. 2 vessels can load sugar simultaneously.

General Cargo – approximate discharging rates:

General cargo	7–8 tons per gang hour
Bagged cargo	15 tons per gang hour
Iron	7 tons per gang hour
Wood	3 standards
Fertilisers	15 tons per gang hour

Shore Crane – there is movable crane with boom of 75 ft. length and lifting capacity about 19 tons.

Bulk sugar – 5 thrower machines available.

EQUIPMENT: One floating crane: 35 tons lifting capacity; 10 shore cranes: ranging from 16 to 5 tons lifting capacity; 40 tractors; 21 fork lift trucks: 70 h.p.; 13 trucks.

Besides, there are several tugs ranging from 1,200 to 150 h.p., also several cargo barges and other minor port auxiliary equipment not listed.

MEDICAL: Sick crew members can be attended at Santiago Provincial Hospital.

TANKERS: Average pumping rate: Molasses 30,000 g.p.h. Fuel oil 13,000 b.p.h.

COMMUNICATIONS: Radio telegrams, radiotelephony, telegraph and telephones. R.C.A., Inalambrica. All-American, Prewi, radio and Government telegraph. Also air, railroad and bus services.

Vessels can communicate with Santiago de Cuba through CLM and RCA.

FRESH WATER: Can be supplied docked/anchored.

FUEL: Fuel oil and diesel oil available. Delivery rate about 7,000 b.p.h.

REPAIRS: Following repair shops: Joaquin Lamas, Giron.

DEVELOPMENTS: Since 1973 all port facilities admitting repair or rebuilding are included in a plan in order to improve port facilities.

Through this plan several installations have already been rebuilt and others are undergoing repairs.

This plan also includes the installation of water pipe-lines to all piers where possible, in order to supply the vessels while operating.

Luis F. Mena Gil Wharf will be the first to have water installation to supply vessels.

There is a plan for the dredging of the port in the very near future.

SHIPMASTER'S REPORT: April 1979.

Also see "Shipmaster's Report" from Havana dated April 1979.

Documents:

12 Crew Lists.
5 Store Lists.
5 Declarations.
5 Currency Declarations.
5 Vaccination Lists.

These were all required even though the vessel had only come from Havana. Also a large number of transit documents were issued in Havana for entry here. Bond and safe seals may be opened whilst vessel at sea.

Points of Note:

a. No anchorage, recommend drifting about 5 miles from coast.
b. See Havana Report.
c. See Havana Report.
d. Port reasonably free of pollution, but large amount of construction in progress in harbour area.
e. No tugs appeared when we berthed.
f. At grain elevator shore gangway used.
g. No crew inspection.
h. See Havana Report.
i. See Havana Report.
j. See Havana Report.
k. Same system as Havana but shore leave from 1800 to 2200 hrs. and travel to town by launch. Also only allowed in area shown on pass. In this port fines are imposed for being late back or going outside area of pass. First time 25 peso, second time 50 peso and third time pass revoked. Only ten persons allowed ashore at any one time and a list of those going ashore must be presented to the Immigration guard before 1000 hrs. that day.

On Saturday and Sunday 16 persons are allowed ashore till 2400 hrs. and 2300 hrs. respectively.

l. See Havana Report.
m. See Havana Report.
n. As Havana, except Channel 16.
o. See Havana Report.
p. Berthed at grain elevator. 30 ft. alongside. The discharger has 2 heads and is fixed, the ship has to be warped up and down the quay. Wheat discharged at average 50 tonnes p.h. Work on a 24 hour basis.
q. All hatches again inspected.
r. As Havana, vessel was searched here 4 days after arrival. The search was carried out by the police and was very thorough. It included checks on money and goods declared and under seal. The radio room was sealed at the time.
s. See Havana Report.
t. Customs issue may be obtained every 3 days if required. I believe this applies in Havana as well.
u. In light of this vessel's experience I would advise any vessel proceeding to Cuba to carry at least one month's reserve provisions.

SHIPMASTER'S REPORT: April 1981.

VHF: Santiago Pilots and the Agents "Mambisas Santiago" are both available on VHF Channel 16 at all hours.

Restrictions: There are no restrictions as to the times for entry and departure of vessels. Pilots are available 24 hours and I believe it has been so for the last two years.

Awaiting Pilot: Owing to the large depths, bad holding ground (rocky bottom) and frequent fresh winds, it is not advisable to anchor outside the harbour entrance. This was my opinion which the local Pilots have confirmed and have definitely advised against anchoring. If there is any delay in embarking the Pilot, the vessel should keep steaming.

SHIPMASTER'S REPORT: October 1987.

Vessel called at Santiago de Cuba after call at Havana (see "Havana – Shipmaster's Report" dated October 1987).

Vessel berthed alongside "Frank Pais" Silo. Crew can only go ashore by either motor launch or bus. Both services have to be arranged by Agent. No walking in the premises of the silo is allowed which is guarded by army units. There are no restrictions regarding the times crew can go ashore.

Fire/Boat Drills: Port Authorities did not allow us to carry out routine drills.

Berth "under construction" at Pta. Duany: This berth is now fully operational for refrigerated cargoes. No drafts were available, however I understand extensive dredging was done on both sides of the pier for berthing/turning.

Presently there is a shortage of water both at Havana and Santiago due to very prolonged dry years (last 5 years). No fresh provisions were available at both ports except limited amounts of pineapples.

AUTHORITIES: Located at Custom House building.

AGENT: Empresa Consignataria Mambisa, Agencia Santiago de Cuba, Avenida Jesus Menendez No. 658, Apartado No. 522, Santiago de Cuba, Prov. de Oriente. Tel: 22834 – Night: 4524. Telex: 061120, 061238. Cable: Mambisas Santiago de Cuba.

Agency VHF works on Channel 16.

TANAMO: 20.44 N. 75.20 W. (See Plan)

LOCATION: Tanamo Bay is moderately ample, landlocked, having numerous bays dispersed within. High ground surrounds the bay, except by the East and S.E. It is 3.5 miles long by 1.25 miles wide.

Tanamo is mainly a sugar shipping port, but also exports molasses and receives coastal trade shipments of fuel oil.

Tanamo exports the production of Frank Pais sugar mill, formerly Tanamo. At about 12 km. from the port are the town of Cayo Mambi and Frank Pais sugar mill.

PILOTAGE: Pilot boards about 1 mile from entrance. Pilot station located at entrance of port mouth. Usual means of communication is by launch. Distance from place where Pilots board vessels to: Punta Gorda Dock: 5 miles; Cayo Mambi Dock: 7 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance to port is effected through a channel in the form of an "S" with turns up to 90°.

The bottom is rock and sand, its maximum width being 175 m., located between the shoals at both sides of the entrance, and its minimum width 160 m., located in the vicinity of Pt. Gitana.

Channel tends to narrow in the middle of its course and it is here where precautions should be exerted, because it is considered dangerous. In its deepest part the channel is 162 ft. deep, and its minimum depth is 66 ft.

Limitations as to length and draft of vessels to enter to or sail from this port are those imposed by the place of operation, Punta Gorda Pier: Draft 19 ft. fore, 22 ft. aft, length 535 ft.

Due to the strong tidal currents it is necessary to wait for slack water, to enter to or sail from this port, which can be effected only in daylight.

Vessels up to 500 ft. length do not require tugboat assistance, but from 500 ft. up to 535 ft. tugboat assistance is required.

Due to pier's length, vessels nominated to load sugar should not exceed a length of 450 ft.

ANCHORAGES: Del Medio Cay Anchorage:

Located at about 500 m. West of Bruja Cay.
Draft 28 ft., max. length allowed 535 ft.
Swinging area: About 350 m.
Soft mud bottom but anchors hold well.
It is sheltered from the winds, except those from the S.E.
In the rainy season, when rivers overflow, currents can be felt.

BERTHING: The place of operation at Tanamo is the pier, located on the West coast of the bay at a small town named Punta Gorda. Pier is built of concrete but is not well cared for and is in need of repairs. Some wooden aggregate at South side of pier crumbled away and interferes with loading No. 1 hatch of vessels. Stern hatches are loaded first, and afterwards the vessel is run astern in order to load No. 1 hatch.

Pier has double narrow gauge railroad tracks at each side.

Sides of the pier are North and South.

Punta Gorda Pier: Length 357 ft., max. length allowed 450 ft.

Drafts: South Side: 19 ft. fore, 22 ft. aft.
North Side: 14 ft. fore, 19 ft. aft.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.; Sunday no work performed.

Raw sugar: 975 sugar bags loaded per gang period. 6 sugar bags loaded per sling.

Refined sugar: 1,875 bags of 100 lb., loaded per gang period. 12 bags of 100-lb. type loaded per sling.

General Cargo: Working periods same as for sugar.

There is berthing space for 2 vessels, but due to lack of port personnel, it is advisable to operate only 1 vessel at a time.

MEDICAL: There is no hospital at Tanamo. Crew members requiring medical care are treated at Cayo Mambi. If specialised treatment or hospitalisation is required, patients are sent to Mayari Hospital or Lenin Hospital at Holguin.

TANKERS: Molasses average pumping rate: 20,000 g.p.h. Fuel oil average pumping rate: 11,750 b.p.h.

Tanker vessels up to 535 ft. can enter and operate at pier.
Fuel oil: 1 connection 12 in. in diameter.
Molasses: 1 connection 8 in. in diameter.

COMMUNICATIONS: Only means of communication at Tanamo is telephone service. However this service is not to be depended upon and it is advisable to notify Antilla Agency well in advance of any instructions or changes pertaining to vessel's operations.

TRANSPORTATION: Transportation means to and from Tanamo are rather poor. Transportation between Tanamo and Antilla (and other nearby ports) is performed by car.

Last 4 km. of road to reach Tanamo are embankment roads in very bad condition which can be transited only by jeep or truck.

There is a rail car service up to Cayo Mambi.

Best advisable means of travelling is to travel to Nicaro by road and from there fly to Santiago or Havana.

FRESH WATER: Can be supplied at Punta Gorda, delivery by pipe-line at rate of 5 t.p.h.

FUEL/REPAIRS: Not available.

AUTHORITIES: Under Cuban Customs laws and regulations, Tanamo is a sub-port of Antilla. Some of the Authorities have delegations at Cayo Mambi, others are located outside of Tanamo, but if ETA message is given sufficiently in advance, all Authorities travel to Tanamo, where they wait to clear the vessel.

AGENT: Tanamo is attended by Antilla Agency personnel.

VITA (sub-port of Gibara – Oriente Province): 21.05 N. 75.57 W. (See Plan)

LOCATION: Vita is a small, sheltered, landlocked bay on the North coast of Oriente province.

Vessels within its premises are well protected against all kinds of weather.

This port handles the export of the production of Rafael Freyre sugar mill, formerly Santa Lucia. As it is close to the town of Santa Lucia and due to the former name of the sugar mill, this port is also known as Santa Lucia Oriente.

PILOTAGE: Pilots board vessels 3 miles from entrance channel. Pilot station located at Vita. Interior telephone communication. Distance from place where Pilots board vessels to dock: 5 miles.

APPROACHES: Owing to narrowness of channel, turns may be considered as dangerous for vessels over 450 ft. length.

While approaching Vita, on the East side of port entrance, Pt. Barlovento lighthouse can be seen, located: Lat. 21° 06′ 01.1″ N., Long. 75° 57′ 39.4″ W., 45 ft. high, above high tide, white light of which flashes twice every 6 secs., visible up to 10 miles away.

ANCHORAGES: Vita anchorage is located at about 190 m. from the pier, but as there is insufficient swinging area, it is only recommended as suitable for medium sized vessels.

RESTRICTIONS: Entry and sailing only during daylight.

MAX. SIZE: Max. draft with which vessels can enter/sail is 27 ft. at high tide and 26 ft. at low tide. Tidal variation averages 2.9 ft. Max. length 500 ft. (although vessels with length of 550 ft. have entered this port).

BERTHING: The pier is located at a village named Vita on a peninsula which projects from the South shore of Vita bay.

The pier lies across the end of the mentioned peninsula, orientated from East to West; the berthing space is the North side since the South side is partially attached to shore.

Along the length of the pier and connected to Rafael Freyre sugar mill, runs single narrow gauge railroad tracks.

Vita Pier: Length 300 ft. Max. length allowed: 500 ft. Draft allowed: 26 ft.

Importation: Jute bales, bagged fertilisers.

Exportation: Bagged raw sugar, molasses.

Coastal Trade: Discharge of fuel oil.

Only 1 vessel can be operated.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

800–1,100 sugar bags loaded per gang period. Four sugar bags are loaded per sling.

MEDICAL: Crew members requiring medical attention are treated at Santa Lucia Hospital.

In cases where surgical or specialised medical treatment is required patients are sent to Gibara Hospital or Lenin Hospital at Holguin.

TANKERS: Average pumping rate (molasses) 25,000 g.p.h.

COMMUNICATIONS: Means of communication of Vita are telephone and telegraph.

Telegraph service is slow for urgent matters. Telephone service at Vita is irregular due to bad lines and, sometimes, it is very difficult to establish communication.

These facts must be taken into consideration when a vessel is operating at Vita, because orders to Vita or information from the port almost always takes 2 or 3 days to reach destination.

Vessels navigating to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which relays the message promptly to Antilla.

Vessels cannot communicate directly with Vita.

Masters must send their ETA messages simultaneously to Mambisas Antilla and Mambisas Habana.

FUEL/REPAIRS/DUNNAGE: Not available.

FRESH WATER: Can only be supplied in exceptional cases. Delivery by 2-in. diameter pipe, by gravity. Delivery average 3 t.p.h. Recommended that Masters always check availability in advance.

TRANSPORTATION: Transportation to and from Vita is difficult and best advisable means is by car or to travel to the city of Holguin, from where transportation is available to any place or city of Cuba by bus, train or airway.

AUTHORITIES: All Port Authorities are located at nearby towns, but travel to Vita in order to clear vessels.

Under Cuban Custom laws and regulations, Vita is a sub-port of Gibara.

AGENT: The port of Vita is temporarily attended by Mambisas Antilla Agency personnel.

NOTES

Cyprus

DHEKELIA "B": 34.58 N. 33.45 E. (See Plan)

Sovereign Base Area

DOCUMENTS:
- 3 Crew Lists.
- 4 Passenger Lists.
- 1 Arrival Declaration.
- 1 Crew Declaration.
- 1 Store List (for cigarettes, spirits, etc.).
- 2 Manifests (Customs forms).

PILOTAGE: Compulsory for berthing. The tanker berth is situated in open roadstead. Pilot available through Harbour Master at Larnaca (5 miles).

RESTRICTIONS: Vessels may dock in daylight only.

MAX. SIZE: Tankers up to 735 ft. length with max. draft 41 ft.

HEALTH: Pratique granted by Health Authorities after boarding on arrival. No Pratique necessary when vessel arrives from another port in Cyprus.

RADIO: Walkie-talkie.

TUGS: Available and necessary for docking. Not required for undocking.

BERTHING: Three conventional buoy moorings for tanker discharging fuel oil to Dhekelia "B" Power Station. Connection made amidships on the port side. No slop facilities available. Terminal crew connect and disconnect hoses. Ship's gangway required. Diameter of line 12 in. Distance to tanks 2,136 ft. Max. pressure 140-145 p.s.i. Depth of water 15.85 m.

MEDICAL: Necessary for Agent to receive advance notice of medical attention required. Hospital facilities available.

DENSITY: 1025.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Light machine shop.

CUSTOMS ALLOWANCES: See "Limassol".

TIME: GMT plus 2 hours. GMT plus 3 hours from last Sunday in March until last Sunday in September.

IDENTIFICATION CARDS: When on shore leave, Seamen's Books required.

AUTHORITY: Electricity Authority of Cyprus, 15 Photis Pittas Street, P.O. Box 4506, Nicosia. *Tel:* (02) 462001. *Telex:* 2432 Grid Cy. *Cables:* Grid, Nicosia. *FAX:* (02) 457658. *Contact:* The General Manager.

FAMAGUSTA: 35.07 N. 33.57 E. (See Plan)

DOCUMENTS:
- 1 Arrival Declaration Form.
- 1 Maritime Declaration of Health.
- 4 Crew Lists.
- 4 Passenger Lists.
- 1 List of Ship's Stores.
- 1 Personal Declaration of Crew (wines, spirits, tobacco, cigarettes, cigars, jewellery, cameras, watches, arms and ammunition, etc.)
- 1 Appointment of Agent Form.
- 1 Cargo Manifest (If not forwarded by airmail).
- 1 Dangerous Cargo List.

PILOTAGE: Masters to cable ETA 24 hours before arrival to Agents so as to enable them to arrange berthing and pilotage. Pilotage is compulsory for ships in excess of 300 g.r.t.

In normal weather conditions Pilot boards vessel at Turning Buoy or at anchorage. In rough weather conditions, Pilot may advise Master to proceed to entrance of Outer Harbour, where Pilot will board the vessel. Communications between pilot stations and vessels approaching port and/or anchored at roadstead by VHF Channel 16.

Pilot Boat: Open motor launches, light grey colour, flying Pilot's flag, light and sound signals for Pilot.

Requirements: International signals apply.

ANCHORAGES: Vessels not berthing on arrival, to anchor at roadstead; East of flashing buoy (Lat. 35° 08′ 55″ N., Long. 33° 56′ 06″ E.) which marks the entrance to the channel.

Exposed to: N.E., E. and S.E. winds. In case of very bad weather, a safe anchorage to be sought further North, near Boghaz area.

Small vessels may anchor within the breakwater in depth of 5.5 m. to 7.3 m.

RESTRICTIONS: Passenger vessels (Vessels built to carry more than 12 passengers) allowed to enter port up to 2300 hrs., provided such vessels will be at Turning Buoy by that time and also if berth space is available.

Cargo vessels allowed to berth until sunset provided berth space is available.

No tide restrictions, but for vessels entering Inner Basin max. draft 22 ft. and for Outer Basin max. draft 30 ft.

MAX. SIZE:

Inner Harbour: Max. permissible draft 6.7 m. (22 ft.)
Max. permissible LOA 131 m. (430 ft.)
Outer Harbour: Max. permissible draft 9.15 m. (30 ft.)
Max. permissible LOA 220 m. (722 ft.)

Height of quay above sea level is 1.8 m.

The approach channel to the Outer Harbour is 10.30 m. deep and mean width of entrance 183 m. Range of tide: 0.45 m.

HEALTH: Pratique is required only at first port of call in Northern Cyprus. Pratique is granted either before or after berthing as appropriate.

RADIO/VHF: "Northern Cyprus Radio" R/T 2182, VHF Channel 16. Famagusta Pilots equipped with VHF radio-telephone operating on Channel 16 and 14 during office hours.

TUGS: 3 tugs, 150 h.p., 650 h.p. and 1,300 h.p. available. Tugs join vessel at entrance of Outer Basin and ship's lines are used. Use of tugs is at the discretion of Pilot. No charges made for the use of first tug. If more than one tug is required they may be hired on hourly basis.

BERTHING: According to rotation of ships with exception of passenger and citrus ships. Vessels may berth alongside between 0600 hrs. and sunset, unberthing of ships between 0600 hrs. and midnight including weekends and official holidays.

Inner Harbour Quay: Length: 540 m.
Outer Harbour Quay: Length: 655 m.

Ro-Ro vessels may berth either bows on or stern to the quay.

CRANES: A floating crane lifting 60 tons at 20 m. 1 Tower crane 36 tons. 21 mobile cranes of different lifting capacities.

BULK CARGO FACILITIES: Vessels up to 3,000 d.w.t. discharged with mobile grab cranes.

Average discharge rate for ore and bulk cargoes is 450 tonnes per day.

Two pneumatic conveyors of 60 t.p.h. capacity also available.

STEVEDORES: Gangs to be ordered by 1500 hrs. previous day. For Saturday and Sunday work, gangs to be ordered by 1500 hrs. Friday. It is also possible to apply for gangs during the weekdays a.m. and/or p.m. subject to gangs available.

Average rate of discharge: General cargo, 10 – 15 tons, bagged cargo, 15 – 20 t.p.h. per gang.

Working hours weekdays 0800 – 1200 hrs., 1300 – 1700 hrs., overtime work until 2300 hrs. is possible, but with extra charge.

MEDICAL: Advisable for Masters to include in ETA message to Agents if any medical attention required; hospital and private clinic facilities available. Inoculations or vaccinations according to prevailing circumstances.

DENSITY/TIDE: Mediterranean salt sea water. Difference of 1 ft. – 2 ft. between low and high water.

FRESH WATER: Water hydrants installed alongside quay, both at Inner and Outer Basins and delivery through hoses; rate of delivery 10 tonnes – 15 tonnes per hydrant per hour.

Note: Certain limitations to quantities deliverable can be possible during Summer months (June-September) owing to general shortage of water.

FUEL: No bunkering facilities alongside quay. Limited fuel deliveries to vessels alongside quay can be made by lorry tankers of 8 – 10 tons each.

GANGWAY/DECK WATCHMEN: Not obligatory, but may be used if Master requires.

OPENING/CLOSING HATCHES: Carried out by ship's crew; stevedores on board are sometimes willing to assist but they are not obliged to do so.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams tobacco, and 0.75 cl. spirits, 0.75 cl. wine per man per week.

For reasons of administrative convenience, issues of high duty goods for use by crew on board is being made every week.

The Master, Chief Officer and the Chief Steward of ocean going vessels may be granted more quantities of the above high duty goods as may be considered reasonable by Customs Authorities, on request.

The above allowances are in force in all Northern Cyprus ports.

CARGO GEAR: Mostly supplied by shore stevedores or other contractors against payment. Any gear supplied by the vessel should be certified to the effect that it is tested and found to be suitable for the purpose used.

REPAIRS: Minor repairs for deck and engine can be carried out at local workshop. Cement boxes and plating both above and underwater can be carried out.

DRY DOCKS: No dry docks. 2 slipways operate at South end of port and can take vessels up to 500 tons burden.

SURVEYORS:
(1) Cargo surveyors available.
(2) Refet L. Egemen & Co., Nicosia. Sub-Agent of Catoni Agents, Mersin, Turkey, who are the representative of Lloyd's in Mersin, Turkey (for insurance purposes but not for classification).

AIRPORT: Ercan Airport, 30 miles from Famagusta. Connections to U.K. and Middle East countries via Turkish airports.

TIME: GMT plus 2 hours.

HOLIDAYS: Recurrent official port and Customs holidays:

First weekday of January, 23rd April, 1st May, 19th May, 20th July, 1st August, 30th August, 29th October, 15th November, Ramazan Bairam (1st, 2nd and 3rd days), Kourban Bairam (1st, 2nd, 3rd and 4th days), Birthday of Prophet.

All ports closed for work with the exception of shipping traffic on New Year's Day and on 1st May.

POLICE/AMBULANCE/FIRE: Police Headquarters Tel: 036-65310, 036-65321. Ambulance Tel: 036-65328, 036-62876. Fire Brigade Tel: 036-65389.

EMERGENCY CO-ORDINATION CENTRE: Not specially available, but Famagusta pilot station Tel: 036-65388, 036-64790 and/or Port Headquarters Tel: 036-62626, 036-62627, 036-62951 may be of assistance.

TELEPHONES: Public telephone boxes available on the quayside.

SERVICES: Compass adjusting; radar repairs; scraping and painting ship's sides.

BANKS: Messrs., Midland Bank (Overseas Branch) Ltd., in the U.K. is the official correspondent of the following local Banks:

Name	*Address*	*Telex:*
Turkish Bank Ltd.	Famagusta	57138 Trba Tk 57103 Otaf Tk
Is Bank (A.S.)	Famagusta	57179 Isbm Tk
Credit Bank Ltd.	Famagusta	57246 Kklb Tk

IDENTIFICATION CARDS: Passports and/or Seaman's Books are accepted by the Police and Immigration Authorities.

On ship's arrival, Passports and/or Seaman's Books are retained by the Immigration Authorities against the issue of Landing Cards which are used until the ship's departure when the passports and/or Seaman's Books are returned to the Master.

STORING: See "Prelims".
1. Vessel can be stored by barge or truck.
2. No regulations concerning barge storing. Customs Stores Regulations applicable.
3. Trucks can proceed alongside at the berth from a close distance of 2 ft. from the edge of the quay walls.
4. Fork lift trucks can be used on the jetty to handle storing.
5. Customs storage charges in force.
6. Local Riggers can be employed to assist with storing.

SHORE LEAVE: All crew members allowed ashore after Free Pratique granted. Each crew member to carry Landing Card.

REGULATIONS: Authority is required from Harbour Master: for immobilising engine for cleaning or repairs whilst vessel alongside quay; for lowering lifeboats; for using ship's radio; for sailing (Port and Customs Clearances are required).

Ships berth by rotation according to time of arrival. However, passenger and cruising vessels as well as ferryboats can berth (maximum 2 berths) on priority.

DELAYS: Delays in berthing are very seldom. Slight congestion of 1 or 2 days during citrus export season.

GENERAL: Flag of Northern Cyprus to be hoisted on mast from 0800 hrs. to Sunset.

Landing of dogs or other animals not allowed. Disposal of garbage and waste strictly prohibited both in port and territorial waters. Garbage and waste are collected by the municipality against a nominal fee, through Agents.

Charts: Relevant Admiralty Publications: B.A. Chart 847, 851, List of Lights Vol. E., Mediterranean Pilot Vol. V., Tide Tables Vol. I. (European Waters).

Free Port: Part of the Outer Harbour is being used as a Free Port, adjacent to which is the Industrial Free Zone with a maximum development area of 554,964 sq.m.

The Free Port and Zone is managed by the Free Port Manager who is responsible to the Board of Directors and function under the auspices of the Ministry of Trade and Industry.

Directorate: Tel: 036-66164, 036-64775. Telex: 57140 Mslb Tk.

AUTHORITY: Ministry of Communications & Works, Department of Ports, Famagusta, Northern Cyprus.

Postal Address: The Director of the Department of Ports, Famagusta (Gazi Magosa) via Mersin 10, Turkey. *Tel:* 036-62626, 036-62627, 036-62951. *Contact:* Ergun Demirciler, Director of Ports.

Harbour Master's Office: *Tel:* 036-65388, 036-64790.

Also see "General".

GEMIKONAGI (Morphu Bay): 35.08 N. 32.50 E. (See Plan)

DOCUMENTS: See "Famagusta".

PILOTAGE: Government pilot available from Kyrenia Tourism Harbour.

ANCHORAGES: Anchorage point Lat. 35° 09.2′ N., Long. 32° 49.8′ E. Anchorage exposed to W. and N.W. winds.

RESTRICTIONS: Karavostassi Jetty established for loading minerals, discharging operations not available.

HEALTH: Pratique is required only at first port of call in Northern Cyprus. Pratique is granted either before or after berthing as appropriate.

RADIO/VHF: "Northern Cyprus Radio" R/T 2182 kHz. and VHF Channels 16, 26 and 27.

Kyrenia Tourism Harbour Pilots maintain VHF watch on Channel 16, during working hours.

BERTHING:

Karavostassi: One jetty berth with depth alongside 18 m. for loading minerals by conveyor belt. Average capacity 1,000 t.p.h. Vessels moor to buoys.

Xeros Pier: 132 m. long with depth of 4.3 m. at outer end. Pier only used by small coasters, weather permitting, as it is exposed to North winds. One crane of 5 tons capacity is available.

MEDICAL: Government hospital in Lefka area.

DENSITY: 1027.

FRESH WATER: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: See "Famagusta".

REPAIRS: Minor repairs for deck and engine can be carried out at local workshop.

AIRPORT: 70 km. to Ercan Airport.

TIME: GMT plus 2 hours in Winter. GMT plus 3 hours in Summer.

SHORE LEAVE: All crew members allowed ashore after Free Pratique granted. Each crew member to carry a Landing Card.

GENERAL: *Tides:* Max. tide 0.45 m.

Stores: Available.

AUTHORITY: Ministry of Communications & Works, Department of Ports, Famagusta.

Postal Address: The Director of the Department of Ports, Famagusta, via Mersin 10. *Tel:* (036) 62626, (036) 62627, (036) 62951. *FAX:* (90-536) 67840. *Contact:* Ergun Demirciler, Director of Ports.

Official at Gemikonagi: Officer in charge of Customs: Tel. 32008.

KALECIK (Gastria Bay): 35.19 N. 33.59 E. (See Plan)

DOCUMENTS: See "Famagusta".

PILOTAGE: Not compulsory. If required, supplied from Famagusta.

ANCHORAGES: Anywhere within the limits of Gastria Bay. Occasional storms mainly from North, N.E. and N.W. directions. No hazards or sandbars exist. Vessels can approach from any direction as there is no approach channel.

NAVIGATION AIDS:

Name: Cape Elia Lighthouse.
Place: 10 nautical miles N.E. of Famagusta.
Position: Lat. 35° 19.5′ N., Long. 34° 02.8′ E.
Characteristics of Light: Fl. 10 secs.
Range of Light: 15 nautical miles.
Period and Phase: Fl. 1 sec., ev. 9 secs.
Arc of Visibility: 360°.
Colour and Peculiarity of Lighthouse: Concrete tower with horizontal black and white stripes.
Height in metres of building from base to vane: 11 m.
Height in metres of centre of lantern above MHWS: 31 m.

RESTRICTIONS: None, but advance notice should be given by cable.

HEALTH: See "Famagusta".

RADIO/VHF: No radio or VHF facilities at this port. Ships calling at Kalecik should communicate with Northern Cyprus Radio or Famagusta Pilot Station.

TUGS: Not required. Private mooring boats available to assist in the mooring operations.

BERTHING: Concrete pier with a conveyor belt and crane operated by Boghaz Industry & Mining Co. Ltd. and solely used for exportation of cement, etc. Lat. 35° 19′ N., Long. 34° 00.1′ E.

Length of the pier 42 m. At a distance of 44 m. from the far end of the pier there is a dolphin used for mooring purposes. Ships of 100 m. LOA may have a safe berth alongside. Depth of the water alongside the pier is 6.0 m. Installation suitable for unloading and/or loading of bulk and bagged cargoes with a maximum hourly rate of 250 tons.

STEVEDORES: Privately arranged by the Shippers.

MEDICAL: See "Famagusta".

TANKERS: Tanker terminal with underwater pipe-lines extending 410 m. into the sea. Operated by Cyprus Turkish Petroleum Products Co. Ltd. Lat. 35° 19.1′ N., Long. 33° 59.4′ E.

Ships moored between two buoys which have a distance of 160 m. from one to the other, also using anchors. Max. depth 9.0 m.

DENSITY: 1025.

FRESH WATER: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: See "Famagusta".

CARGO GEAR: Ship's gear.

REPAIRS: Minor deck and engine repairs may be carried out by local workshops.

DRY DOCKS: No dry docks.

AIRPORT: Ercan Airport 50 miles from port.

TIME: GMT plus 2 hours.

HOLIDAYS: See "Famagusta".

POLICE/AMBULANCE/FIRE: See "Famagusta".

TELEPHONES: Available at the nearby installations.

SHORE LEAVE: All crew members allowed ashore after Free Pratique granted.

IDENTIFICATION CARDS: See "Famagusta."

REGULATIONS: Authority is required from the Harbour Master Famagusta for using ship's radio. For sailing, Port and Customs Clearances are required.

DELAYS: No delays.

GENERAL: Flag of Northern Cyprus to be hoisted on mast from 0800 hrs. to sunset.

SERVICES: See "Famagusta".

AUTHORITY: Harbour Master and Senior Pilot – Famagusta. *Tel:* 036-65388, 036-64790.

KYRENIA: 35.20 N. 33.19 E. (See Plan)

LOCATION:

Kyrenia Tourism Harbour: 35° 20.5′ N., 33° 19.8′ E.
Kyrenia Yacht Harbour: 35° 20′ N., 33° 19′ E.

DOCUMENTS: See "Famagusta".

PILOTAGE: Pilotage is compulsory for vessels over 300 g.r.t. Harbour Pilot maintains VHF watch on Channel 16, during working hours.

Pilot Boat: Open motor launch, light grey colour, flying Pilot's flag, light and sound signals for Pilot.

Requirements: International signals apply.

ANCHORAGE: 0.8 miles N.W. of Yacht Harbour Entrance light, in depths 22 m. to 24 m.

APPROACHES: Sea approach is unobstructed with deep water and Tourism Harbour entrance has a 180.0 m. width.

RESTRICTIONS/MAX. SIZE:

(a) Kyrenia Tourism Harbour: This harbour used only by passenger vessels (passenger ferries, hydrofoils, etc.).
Max. LOA: 150 m.
Max. draft: 8.0 m.

(b) Kyrenia Yacht Harbour: This harbour used only by pleasure craft and yachts.
Max. LOA: 30 m.
Max. draft: 2.6 m.

HEALTH: Pratique is required only at first port of call in Northern Cyprus. Pratique is granted either before or after berthing as appropriate.

RADIO/VHF: Northern Cyprus Radio. Radio Telephone 2182 kHz. VHF Channels 16, 26 and 27.

TUGS: 1 × 150 h.p. and 1 × 350 h.p.

BERTHING: Berthing and unberthing of vessels carried out between 0600 hrs. and midnight, including weekends and official holidays.

Kyrenia Tourism Harbour: 6 quays with depths of 4.0 m. – 8.0 m. and various quay levels above LWOST from 1.25 m. – 1.75 m.

Kyrenia Yacht Harbour: Depth in basin 3.2 m. Depth alongside 3.0 m.

MEDICAL: State hospitals and private clinics available.

DENSITY: Mediterranean salt sea water (1027).

FRESH WATER: Available. U.S.$ 5.0 per tonne.

FUEL: No bunkering facilities alongside quay. Limited fuel deliveries to vessels alongside quay can be made by lorry tankers of 8–10 tons each.

REPAIRS: Minor repairs for deck and engine can be carried out at local workshop.

CUSTOM ALLOWANCES: Same as Famagusta.

AIRPORT: 40 km. to Ercan Airport from Kyrenia.

TIME: GMT plus 2 hours in Winter. GMT plus 3 hours in Summer (May–September).

HOLIDAYS: Same as Famagusta.

POLICE/AMBULANCE/FIRE:

Police Tel.: (081) 52014 – 52125.
Ambulance Tel.: (081) 52266 – 52254.
Fire Tel.: (081) 199.

LARNACA: 34.55 N. 33.39 E. (See Plan)

PORT LIMITS: The port limits are: That part of the coastline and the territorial waters of Cyprus contained within a line drawn 089° to the high seas from Livadhia Church Belfry and a line drawn 089° from Mosque (Hala Sultan Tekke) on Admiralty Chart No. 851 of 8th August, 1941.

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.
4 Transit Passenger Lists for passenger ships only.
1 Arrival Declaration.
1 Crew Declaration for dutiable goods.
3 Stores List (cigarettes, spirits, etc.).
2 Manifests (Customs Forms).
1 Customs General Declaration.
1 Firearms Declaration.
1 Health Declaration.
1 Cargo Gear Declaration.

PILOTAGE: Ships are not allowed to enter the port or berth at the mooring buoys outside the breakwater port without Pilot, unless permission is granted by the Port Authority. Pilot boards vessel at roadstead. Master must give 24 hours notice of ETA to vessel's Agents to enable them inform the Port Manager in time. Pilot boats are off-white in colour with words "Larnaca Pilots" written on the sides in blue letters. Pilot may be contacted on VHF Channels 16/14 during office hours 0730 – 1330 hrs. and Channel 14 at any other time during port operations. Pilot's telegraphic address is "Port Manager, Larnaca Cyprus". Tel: 041-53563.

ANCHORAGES: Open roadstead.

Prohibited Anchorage:

Positions of Prohibited Anchorage:

1. Lat. 34° 54′ 39″ N., Long. 33° 38′ E.
2. Lat. 34° 54′ 16.8″ N., Long. 33° 41′ E.
3. Lat. 34° 52′ 48″ N., Long. 33° 38′ E.
4. Lat. 34° 52′ 48″ N., Long. 33° 41′ E.

Positions of Prohibited Anchorage obstruction of the Port Entrance:

1. Lat. 34° 55′ 21″ N., Long. 33° 37′ 49″ E.
2. Lat. 34° 55′ 21″ N., Long. 33° 40′ 18″ E.
3. Lat. 34° 55′ 55″ N., Long. 33° 39′ 03″ E.
4. Lat. 34° 55′ 55″ N., Long. 33° 40′ 37″ E.

RESTRICTIONS: See "Max. Size" and "Berthing".

Rise of tide up to 1.5 ft.

MAX. SIZE: For berthing in the port, vessels must not exceed 700 ft. LOA. However, vessels of few feet in excess may receive berthing permission if vessel's manoeuvrability and prevailing weather conditions permit.

The port is being dredged to 12.0 m. Max. draft allowed 11.4 m. (as from December 1990). The height of the quay above sea level is 2.30 m.

Tankers discharge outside port at mooring buoys. Draft up to 32 ft. Max. LOA 600 ft.

HEALTH: Pratique is required at Cyprus first port of call only. Pratique is granted either before or after berthing as appropriate.

RADIO: Cables sent through "Cyprus Radio", call sign: 5BA.

RADAR/VHF: Port Manager Larnaca and Pilot service on VHF Channel 16.

TUGS: Port Authority tugs join vessels outside breakwater using ship's lines. 3 tugs available.

BERTHING: Vessels may berth inside port between 0600 hrs. and midnight, but may unberth and sail until midnight. Cargo vessels are allowed to berth during night-time provided berth space is available and vessel will immediately operate with at least 1 gang.

Quay length: (a) Main quay 666 m. and (b) Floating pontoon quay 200 m.

Ro-Ro ramp available in Northwestern basin of the port.

Warehouse Space: 18,000 sq.m.

Container and General Cargo paved Stacking Areas: 150,000 sq.m.

Equipment: 1×45 tonne heavy duty crane on rails with articulated jib, especially designed and equipped to handle containers. 1×40 tonne container gantry crane will be delivered mid-1991. 1×35 ton level luffing crane. 1×36 ton heavy harbour mobile crane for containers. 8×5 – 16 ton mobile cranes. 4×15 – 40 ton fork-lift trucks for container handling. 17×2 – 8 ton fork lift trucks. 36×10 – 40 ton trailers and 5 tractors.

BRIDGES: None.

STEVEDORES: 24 hours notice of ETA to Agent is required to enable him arrange gangs.

MEDICAL: It is necessary for Agents to receive advance notice of at least 2 – 3 hours before vessel's arrival. Hospital facilities constantly available. Inoculations or vaccinations are required according to prevailing circumstances.

TANKERS: Diameter of discharge lines up to 12 in. Max. draft 32 ft. Discharging takes place at mooring buoys outside port. Position of buoys Lat. 34° 54.75′ N., Long. 33° 39′ E. No slop discharge facilities.

Buoy berths outside port:

Oil Tankers Berths:

Cyprus Petroleum Refinery: Berth: LOA 214 m. Max. draft 11.6 m. Depth of water 13.7 m.

Petrolina: Stern discharge facilities only. LOA 214 m. Max. draft 11 m. Depth of water 13 m. Slop tank 2,000 tonnes.

Gas Tankers Berths:

Mobil: Pipe diameters: 3 in. for liquid, 2 in. for vapour. Depth of water 13 m. LOA 110 m.

Cinergas: Pipe diameters: 4 in. for liquid, 2 in. for vapour. LOA 110 m. Depth of water 9 m. Draft 8.5 m.

Central Gas: Pipe diameters: 3 in. for liquid, 2 in. for vapour. LOA 110 m. Depth of water 6.5 m. Draft 6 m.

DENSITY: 1025.

FRESH WATER: Facilities available on quay. Delivery by hoses at about 50 t.p.h.

FUEL: All types provided by special bunkering vessels at berths and roadstead and by tanker lorries at the quay.

FIRE PRECAUTIONS: No tankers are allowed in the port. Vessels and operators must comply with internationally applicable regulations concerning explosives and dangerous goods.

CONSULS: Italy, Sweden, Denmark, Portugal, Finland.

REPAIRS: Minor repairs and overhauls may be carried out.

DRY DOCKS: Not available.

SURVEYORS: Lloyd's, Bureau Veritas, Registro Italiano Navale, Germanischer Lloyd.

GANGWAY/DECK WATCHMEN: Not necessary but available.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: 50 grams tobacco or 40 cigarettes, and 0.25 litres spirits, 0.25 litres wines, per man per day.

For reasons of administrative convenience, issues of high duty goods for use by Crew on board will be made every 3 days, beginning with the first day of the ship's arrival in Cyprus waters. For each member of the Crew (other than the Master, the Chief Officer and the Chief Steward) each issue will consist of, 120 cigarettes or an equivalent quantity of other tobacco goods. 1 bottle of spirits, and 3 bottles of wine.

Each issue for the Master, the Chief Officer and the Chief Steward of ocean-going vessels will consist of: 200 cigarettes, 2 bottles of spirits and reasonable quantity of wine they may request.

Concessions to Crew landing from ship. On coming ashore, for a short period, 50 grams of tobacco, or 40 cigarettes per day or part thereof.

The above allowances are in force for all Cyprus ports.

CARGO GEAR: Load or discharge may be effected either by ship's or shore gear. 35 ton heavy lift crane available.

REPATRIATION: Facilities are available.

AIRPORT: Larnaca International Airport 3 miles from Larnaca Port. Daily flights to Europe and Middle East.

TIME: GMT plus 2 hours. Summertime – GMT plus 3 hours (last Sunday in March to last Sunday in September).

HOLIDAYS: Every Sunday; 1st January; 6th January; 25th March; 1st May; 28th October; 29th October; Good Friday; Saturday following Good Friday; Easter Monday; First Day of Kurban Bairam; Birthday of Prophet; First Day of Ramazan Bairam; Christmas Day; Boxing Day.

Work can be arranged on any holiday other than New Year's Day, Christmas Day, and Easter Sunday.

POLICE/AMBULANCE/FIRE: Dial 199.

EMERGENCY CO-ORDINATION CENTRE: Port Manager Tel: 53563. Res. Tel: 52171/55542/57043. Marine Police Tel: 52001.

TELEPHONES: Line available for placing telephone on board.

SERVICES: Compass adjusting; Radar; Radio telephones; Gyro compass repairs; hull scraping and engine repairs.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Shore leave passes are issued. Seaman's Book or Passport required whilst ashore.
REGULATIONS: Port Manager's permission is required for: immobilising engine, cleaning or repairs whilst vessel alongside quay, lowering lifeboats and use of ship's radio. Port and Customs clearance required before departure. Cyprus flag to be hoisted on mast from 0800 hrs. to sunset. Landing of dogs or other animals not allowed; also discharging of fruits, vegetables and eggs unless authorised by Produce Inspection Office. Disposal of garbage and waste strictly prohibited both in port and Cyprus waters.
DELAYS: According to prevailing circumstances but normally no delays.
GENERAL: Weather conditions permit entrance and working of ships all the year round.

Garbage collection and disposal service available to vessels.

AUTHORITY: Cyprus Ports Authority, 23 Crete Street, P.O. Box 2007, Nicosia, Cyprus. *Tel:* (02) 450100. *Telex:* 2833 CYPA CY. *FAX:* (02) 365420. *Cables:* Cyports. *Contact:* The General Manager.

AGENT: Gulf Agency Co. (Cyprus) Ltd., P.O.Box 546, Larnaca, Cyprus. Tel: (357-41) 631005/6/7. Telex: 3967 Gaship Cy. Cables: Gacship, Larnaca.

LATCHI: 35.03 N. 32.27 E.

DOCUMENTS: See "Limassol".
ANCHORAGE: 0.5 miles North of Mavroli Pier, depth 10 fathoms.
MAX. SIZE: No restrictions on size.
HEALTH: All necessary action to obtain Pratique made by Agent in the event of any suspected disease on board, necessary action and precautions taken by Health Authorities.
RADIO: Cyprus Radio – call sign 5BA on 500 or radio telephone 2182.
TUGS: None available.
BERTHING: Mavroli Pier in Khrysokhou Bay, in position 35° 03′ 15″ N. 32° 27′ 10″ E. bearing 072° approximately 3.2 miles from Latchi. Necessary to have Cyprus flag, and to have gangway and not a rope ladder for Authorities and stevedores to board.
STEVEDORES: ETA advice required order arrange gangs at least 24 hours. Loading rate 2,000 tons per day. Loading from 6 barges, average capacity 45 tons each.
MEDICAL: Agent to receive 24 hours notice. Hospital facilities available at Ktima, 24 miles from Terminal at Limni. Each member of crew to possess valid vaccination certificate.
DENSITY: 1025.
FRESH WATER: None available.
FUEL: Not available.
CONSULS: None.
REPAIRS: No repairs can be carried out.
GANGWAY/DECK WATCHMEN: Unnecessary.
OPENING/CLOSING HATCHES: Done by the crew.
CUSTOMS ALLOWANCES: See "Limassol".
REPATRIATION: Can be arranged through Larnaca International Airport.
AIRPORT: Larnaca Airport 70 miles away, served by regular airlines.
TIME: GMT plus 2 hours. Permanent.
HOLIDAYS: See "Limassol".
POLICE/AMBULANCE/FIRE: Such services arranged through Agent.
TELEPHONES: No arrangements exist for placing on board.
SHORE LEAVE: Landing permits obtainable from local Police Authorities by lodging passports or Seamen's Books.
IDENTIFICATION CARDS: Required.
AUTHORITY: Cyprus Ports Authority, P.O. Box 2007, Nicosia, Cyprus. *Tel:* (02) 450100. *Telex:* 2833 CYPA CY. *FAX:* (02) 365420. *Contact:* The General Manager.

LIMASSOL: 34.40 N. 33.03 E.

DOCUMENTS:

1 Arrival Declaration.
4 Crew Lists.
4 Passenger Lists (the latter in case of passenger vessels).
4 Transit Passenger Lists.
1 Fire Arms Declaration.
1 Stores Declaration.
1 Declaration signed by each member of Crew stating dutiable goods in their possession.
1 Form of appointment of Agent.
1 Maritime Declaration of Health.

Shipmaster's Report: October 1988.
Customs: 2 copies Entry Outward and Clearance.
2 copies Ship's Stores Declaration.
1 copy Crew Personal Effects Declaration.
Police: 1 copy Port and Marine Police Form.
Quarantine: 1 Maritime Declaration of Health.
Port Authority: 1 copy Arrival Declaration.
5 copies Crew List.
Agent: 1 copy Crew List.
1 copy Mail List.

Also see "Radio Officer's Report" dated September 1990.

PILOTAGE: Ships are not allowed to enter the port or to berth at the mooring buoys outside the breakwater port without Pilot, unless permission is granted by the Port Authority. Pilot boards vessel at roadstead. Master must give 24 hour's notice of ETA to vessel's Agents to enable them inform the Port Manager in time. Pilot's Telegraphic Address is Port Manager, Limassol, Cyprus. Tel: 5-36246. Fax: 5-365597.
ANCHORAGE: No specific boundary but ships usually anchor about 0.5 mile S.E. of lighter basin entrance where depth is 8 fathoms or S.S.E. of the entrance to the new breakwater port.
RESTRICTIONS: See "Max. Size" and "Berthing". Rise of tide up to 1.8 ft.
MAX. SIZE: *New Breakwater Port:* Depth alongside 11 m. Max. draft 10.5 m. No LOA limit on ships entering and berthing. The height of quay above sea level is 2.30 m.
HEALTH: Pratique is required at first Cyprus port of call only. Pratique is granted either before or after berthing as appropriate.
RADIO: Cables sent through "Cyprus Radio", call sign: 5BA.
RADAR/VHF: No port radar service. Port Manager and Pilots equipped with VHF radiotelephone operating on Channels 16 and 10 during office hours only.
TUGS: Port Authority tugs join vessels outside breakwater using ships' lines. 2 tugs, 1,320 h.p. and 750 h.p.
BERTHING: Vessels may berth inside port between 0600 hrs. and sunset, but may unberth and sail until midnight. Cargo vessels are allowed to berth during night-time provided berth space is available and vessels will immediately operate with at least 1 gang.
Quay Length: 1,280 m. Ro-Ro vessels can discharge/load on the quays.
Warehousing Space: 40,700 sq.m.
Paved Yard for Containers (full and empty): 300,000 sq.m.
Paved Stacking Area for General Cargo: 111,000 sq.m.
Grain Silo: Modern, (recently built) with a 30,000 tonnes storage capacity, connected with the quay via an overhead conveyor belt.
Equipment: 60 ton floating crane. 35 ton level luffing crane. Twenty 3-16 ton and four 45-60 ton mobile cranes. Four 7-15 ton fork lifts and seven 32 ton van carriers for container handling. Eighty-eight 3-60 ton fork lifts for general cargo handling. One hundred and fourteen 3-25 ton trailers, fifteen tractors and other auxiliary equipment.

2×40 ton gantry cranes for container handling at the East Quay. An additional 2 cranes will be delivered mid-1991.

STEVEDORES: 24 hours notice of ETA to Agent is required to enable him arrange gangs.
MEDICAL: It is necessary for Agent to receive advance notice of at least 2–3 hours before vessel's arrival. Hospital facilities constantly available. Inoculations or vaccinations are required according to prevailing circumstances.
TANKERS: Not allowed to berth in the port. No slop discharge facilities.
FRESH WATER: Facilities available on quay.
FUEL: All types provided by special bunkering vessels at berths and roadstead and by tanker lorries at the quay.
FIRE PRECAUTIONS: No tankers are allowed in the port. Vessels and operations must comply with internationally applicable regulations concerning explosives and dangerous goods.
CONSULS: Belgium, Netherlands, Italy and France.
REPAIRS: A floating dock 66 m. long and 18 m. wide capable of lifting a 1,200 tons light ship is in operation.
SURVEYORS: Lloyd's, Bureau Veritas, Registro Italiano Navale, Germanischer Lloyd.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: By crew or stevedores.
CUSTOMS ALLOWANCES: 50 grams tobacco or 40 cigarettes, and 0.25 litres spirits, 0.25 litres wines, per man per day.

For reasons of administrative convenience, issues of high duty goods for use by crew on board will be made every 3 days, beginning with the first day of the ship's arrival in Cyprus waters. For each member of the crew (other than the Master, the chief officer and the chief steward) each issue will consist of, 120 cigarettes or an equivalent quantity of other tobacco goods, 1 bottle of spirits and 3 bottles of wine. Each issue for the Master, the chief officer and the chief steward of ocean-going vessels will consist of: 200 cigarettes, 2 bottles of spirits and reasonable quantity of wine they may request. Concessions to crew landing from ship. On coming ashore, for a short period, 50 grams of tobacco, or 40 cigarettes per day or part thereof.

CARGO GEAR: Load or discharge may be effected either by ship or shore gear. 35 tons heavy lift crane, 36 ton mobile container crane on pneumatic tyres and 60 tons floating crane available.
REPATRIATION: Facilities available for effecting crew changes and arranging any necessary repatriations. Usually arranged with Agent.
AIRPORT: Larnaca International Airport served by regular lines, situated 43 miles from Limassol.
TIME: GMT plus 2 hours. Summertime GMT plus 3 hours in force from last Sunday in March to last Sunday in September.
HOLIDAYS: Every Sunday; 1st January; 6th January; 25th March; 1st May; 28th October; 29th October; Good Friday; Easter Monday; First Day of Kurban Bairam; Birthday of Prophet; First Day of Ramazan Bairam; Christmas Day; Boxing Day. Work can be arranged on any holiday other than New Year's Day, Christmas Day, and Easter Sunday.
POLICE/AMBULANCE/FIRE: Tel: Police 75611; Ambulance 63111, Fire Brigade 52191 or 999.
TELEPHONES: Available on request, for placing on board.
SERVICES: Compass adjusting, servicing of radar, R/T, echo sounders.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore leave passes are issued. Seaman's Book or Passport required whilst ashore.
SHIP SUPPLY SERVICES:

1. Brasal Off-Shore Services Limited, P.O.Box 1518, Limassol.
2. Vasos Aivaliotis Limited, 4 Ermou Street, P.O.Box 110, Limassol.
3. Messrs. Thesseas Savva, 118 Franklin Roosevelt Avenue, P.O.Box 114, Limassol.
4. Mercury Divers Company Limited, P.O.Box 114, Limassol.

REGULATIONS: Port Manager's permission is required for: immobilising engine, cleaning or repairs whilst vessel alongside quay, lowering lifeboats and use of ship's radio. Port and Customs clearance required before departure. Cyprus flag to be hoisted on mast from 0800 hrs. to sunset. Landing of dogs or other animals not allowed; also discharging of fruits, vegetables and eggs unless authorised by Produce Inspection Office. Disposal of garbage and waste strictly prohibited both in port and Cyprus waters.
DELAYS: According to prevailing circumstances but normally no delays.
GENERAL: Weather conditions permit entrance and working of ships all the year round.
DEVELOPMENTS: Over the period 1991-95 the container handling capacity of the port will more than double and new container berths, 14.0 m. deep, will become available. Investment expenditure earmarked for the next 5 years provides, in addition to new deeper berths, for more container yards and a substantial number of additional container handling equipment both for quay side operations and stacking procedures.

RADIO OFFICER'S REPORT: September 1990.
Documents:
Customs:
3 copies Entry Outwards and Clearance for Vessels (only fill in upper half).
3 copies Ships Stores Declaration.
1 copy Crew Personal Declaration ("Magazines" should be placed under seal).
Quarantine:
1 copy Maritime Declaration of Health.
Port Authority:
1 copy Arrival Declaration.
5 copies Crew List.
Agent:
1 copy Arrival Condition.
1 copy Crew List.
1 copy Mail List.
1 copy Port and Marine Police Form.
Immigration: Shore passes only needed when staying overnight, otherwise passport is sufficient.
Customs Allowances: 120 cigarettes or 150 gr. of tobacco, 1 bottle of spirits and 3 bottles of wine.

AUTHORITY: Cyprus Ports Authority, Headquarters, 23 Crete Street, P.O.Box 2007, Nicosia, Cyprus. *Tel:* (02) 450100. *Telex:* 2833 CYPA CY. *FAX:* (02) 365420. *Cables:* Cyports. *Contact:* The General Manager.

DOCUMENTS:
3 Crew Lists.
4 Passenger Lists.
1 Arrival Declaration.
1 Crew Declaration.
1 Store List (for cigarettes, spirits, etc).
2 Manifests.(Custom forms).
PILOTAGE: Compulsory for berthing. The tanker berth is situated in open roadstead. Pilot available through Harbour Master at Limassol (8.5 miles).
RESTRICTIONS: Docking in daylight only. Sailing possible at any time.
MAX. SIZE: Tankers up to 700 ft. length with max. draft 40 ft.
HEALTH: Pratique granted by Health Authorities after boarding on arrival. No Pratique necessary when vessel arrives from another port in Cyprus.
RADIO: Communication by Walkie-talkie
TUGS: None available or required.
BERTHING: Electricity Authority of Cyprus. Three conventional buoy mooring for tanker discharging fuel oil to Moni Power Station. Depth of water 18.20 m. – 30.48 m.
MEDICAL: Necessary for agent to receive advance notice of medical attention required. Hospital facilities available.
TANKERS: Flange at end of flexible line is ASA 300 – 15 in. OD. (12×1 in. holes. 13 in. P.C.D.). Hose connection made on port side. No slop facilities available. Terminal crew connect and disconnect hoses. Ship's gangway required. Distance to shore tanks 3,950 ft. Max. pressure 135 p.s.i. Minimum receiving rate 500 tonnes per hour, 1500 sec. Redwood No. 1.
Loading signals – 1 blast, stop pumping. 2 blasts, start pumping.
DENSITY: 1025
FRESH WATER: Not available.
FUEL: Not available.
REPAIRS: Light machine shop.
CUSTOMS ALLOWANCES: See "Limassol".
TIME: GMT plus 2 hours. GMT plus 3 hours from last Sunday in March until last Sunday in September.

SHIP SUPPLY SERVICES:

VASSILIKO BAY: 34.43 N. 33.19 E.

LOCATION: 13.5 miles due East of Limassol and 1.5 miles West of Zyghi (Lat. 34° 42′ 46″ N., Long. 33° 18′ 37″ E.)
PILOTAGE: Pilots available for berthing and shifting operations. Can be contacted on VHF Channel 16, working frequency 12. Owners or Master of vessel must give by cable/radio ("Helco Nicosia" or "Vascem Nicosia" 48) notice of vessel's ETA 24 hours in advance. Message of ETA must also include:
(a) Name/call sign of vessel.
(b) Nationality.
(c) Length, draft, gross and n.r.t.
MAX. SIZE: Vessel's LOA, 150 m.; Breadth, no restriction; Draft 8.40 m.
HEALTH: For Pratique, vessel must cable name and nationality, last port of call, number of crew and passengers, and condition of health on board. For vessels calling first at another port in Cyprus, Pratique is automatic.
RADIO: "Cyprus Radio".
TUGS: Tugs available from Larnaca port. 12 hours' notice in advance is required.
BERTHING: Length of quay, 540 m. Depth at LW, 9 m.
LOAD/DISCHARGE: Can be effected by shore equipment and/or ship's own gear.
Bulk cargoes (i.e. Pyrites, Cement, Copper, Chrome, Ore, Gypsum Rock, Phosphate Rocks, Coal, etc.) and liquid chemical cargoes (i.e. Liquid Ammonia, Sulphuric Acid).
CRANES: 3 mobile cranes of 30 tonnes SWL capacity each are constantly available. Services of an 80 tonne mobile crane can be also secured on request.
SPECIALISED CARGO-HANDLING FACILITIES: Facilities for Roll-on/Roll-off traffic and for handling liquid chemicals are available.
TANKERS: One pipe-line to buoy berth, depth of water, 12.19 m. Position of buoys, Lat. 34° 42′ 42″ N., Long. 33° 18′ 42″ E.
FRESH WATER: Available.
FUEL: Full bunkering facilities available, provided by tank tankers or a small tanker.
OPENING/CLOSING HATCHES: Ship's crew.
REPATRIATION: Crew changes and repatriation facilities available.
AIRPORT: Distance 35 miles; served by regular operators.
TIME: GMT plus 2 hours.
HOLIDAYS: 1st January, 6th January, 25th February, 25th March, 1st April, 12th April, 13th April, 15th April, 1st May, 3rd June, 15th August, 1st October, 28th October, 24th December, 25th December, 26th December.
Port workers will abstain from work on 1st January, 13th April, 14th April, 15th April, 1st May, 15th August and 25th December, but they may normally work on overtime basis during the rest of the holidays.
AUTHORITY: Vassiliko Cement Works Ltd., Headquarters, P.O.Box 2281, Nicosia, Cyprus. *Tel:* 42005-10 (Nicosia). *Telex:* 2039 Vascem Cy. *Cables:* Vascem, Nicosia.

Denmark

GENERAL (See Plan)

CUSTOMS ALLOWANCES: For use on board during the stay in Denmark a total of 40 cigarettes or 40 grammes of tobacco, 0.25 litres of alcoholic liquors and 0.25 litres of wine can be released per member of the crew a day.

Tobacco may be released for 5 days' consumption at a time, i.e. 200 cigarettes, alcoholic liquors and wine may be released for 3 or 4 days' consumption, i.e. 1 bottle containing 0.25 or 1.0 litres.

ROUTEING: A routeing system has been established, so ships with a draft up to 17 m. (55.77 ft.) can pass the Great Belt. Ships bound for the Baltic are restricted to a draft of 15 m. (49.21 ft.) owing to shallow waters N.E. of Gedser.

For the passage through Danish waters by ships with a d.w.t. of more than 40,000 tons or with a draft of 13 m. or more, we would like to draw your attention to the "IMO–recommendation of Nov. '75 on navigation through the entrances to the Baltic Sea", and to the radio reporting system established by the Danish Ministry of Commerce.

ROUTE "T" (17 metres Transitroute) – THE SOUND – RADIO REPORTING SERVICE (Shippos): With the object of ensuring the safety of navigation of large ships passing through Danish waters and also of reducing the risk of oil pollution resulting from the grounding and collision of tankers, the Danish Government has established a transitroute between Skagen and the area N.E. of Gedser with a minimum depth of water of 17 m. The route is named "Route T".

The route is marked by lightbuoys and lights, the Decca coverage is good and Danish Pilot assistance is available. Portable Decca equipment can be hired for use during the passage through Danish waters and can be taken on board at the pilot stations Skagen or Allinge (Bornholm). Under ice conditions Danish icebreakers, as far as possible, render free assistance to shipping.

In spite of the good buoyage, navigation through Danish waters presents, however, in certain areas difficulties to large ships on account of narrow waters, sharp bends, strong currents and shallow depths. Furthermore there is an intensive East and Westbound ferry traffic in Store Baelt, particularly in the area immediately South of Sprogo.

Therefore a radio reporting service (SHIPPOS) has been established the rules of which are given in the following.

The International Maritime Organisation (IMO) has adopted a recommendation on navigation through the entrances to the Baltic Sea according to which ships with a deadweight-tonnage of over 40,000 tons or with a draft of 13 m. or more shall fulfil certain conditions about equipment, navigation, etc.

IMO has furthermore adopted a recommendation (which see) according to which certain ships shall use a Pilot when navigating in the Sound.

The Commission of the European Communities has adopted a directive which makes it compulsory for tankers of 1,600 gross tonnage and more en route to a community port to transmit a Sailing Plan and to complete a "Tanker Check List". The directive has been put into force by Order No. 306 of 4th June 1981 concerning minimum requirements for certain tankers entering or leaving a Danish port.

Rules concerning radio reporting service in Danish waters – SHIPPOS:

1. With the objects of ensuring the safety of navigation and of reducing the risk of pollution of Danish coasts and waters as may result from grounding or collision of oil tankers, gas carriers and chemical tankers, a reporting service has been established for the purposes mentioned below:
    a. To inform shipping about large ships' movements, so that smaller ships can take into account the limited manoeuvrability of those and in order to avoid the risk of large ships meeting one another in areas difficult to pass.
    b. To inform ships about navigational hazards en route and deviations from normal conditions of current, water level, and wave height.
    c. To notify the ferry traffic South of Sprogo about the passage of large ships.
    d. To facilitate the authorities early and effective pollution combatting action in case of an accident.
    e. To notify the authorities immediately about any deficiency which could affect safe navigation and the marine and coastal environment, and about ships' observation of considerable pollution.

2. The reporting service applies to:
    a. all ships of 20,000 tons gross tonnage and above,
    b. all ships with a draft of 13 m. and more,
    c. all loaded oil-, gas- and chemical tankers of 1,600 tons gross tonnage and above, and
    d. all ships carrying radio active cargoes.

3. Messages to the reporting service shall be sent over a Danish coast radio station as telegrams addressed to "SHIPPOS Aarhus".

The transmission of reports from ships is free of charge.

Information about position of large ships, mentioned under 2, a. or b., participating in the radio reporting service will be broadcast over VHF as "SHIPPOS INFORMATION" by the coast radio stations Lyngby Radio and Skagen Radio.

The broadcast will include information about actual water levels and serial numbers of Navigational Warnings in force for the SHIPPOS – area.

The broadcast will be preceded by an announcement over Channel 16, informing about the Channel used for the broadcast.

The information will be broadcast every third hour according to the table below, preferably by using the mentioned Channels. Other Channels might be used, which – if occasion should arise – will appear from the preceding announcement on Channel 16.

Position of VHF-station	*VHF-Channel*	*Time UTC*	*Serviced by*
Skagen	4	0220, 0520, 0820, etc.	Skagen Radio
Laeso	64		
Arnholt	7	0220, 0520, 0820, etc.	Lyngby Radio
Fornaes	5		
Rosnaes	2		
Karleby	63		
Mon	2		

4. In the SHIPPOS-system the following reporting lines are established (See "Plans"):
    a. Skaw.
    b. Hatter.
    c. Baltic W
    d. Sound N.
    e. Sound S.
    f. Moen.

5. Ships which are **inward bound** en route to a Danish port or to the Baltic Sea shall when passing the reporting line SKAW send a *Sailing Plan* (SP) (See "Drafting of Messages") to "SHIPPOS Aarhus".

During their voyage ships shall send *Position Reports* (PR) (See "Drafting of Messages") when passing the reporting lines SOUND N. or HATTER and BALTIC W.

Ships **outward bound** (from the Baltic) shall when passing the reporting line MOEN or SOUND S. send a *Sailing Plan* and during their voyage send *Position Reports* when passing the reporting lines BALTIC W. and HATTER or SOUND N..

6. Ships which en route to or through Danish waters do not pass the reporting line SKAW, MOEN or SOUND S. shall in sufficient time before passing first reporting line during the voyage send a *Sailing Plan* to "SHIPPOS Aarhus".

7. About 2 hours before **departure** from a Danish port, ships shall send a *Sailing Plan* to "SHIPPOS Aarhus".

8. Upon **arrival** at a Danish port, when passing the reporting line SKAW outward bound or when passing the reporting lines MOEN or SOUND S. inward bound a *Final Report* (FR) (see "Drafting of Messages") shall be sent to "SHIPPOS Aarhus".

9. If destination is changed, or if after transmission of a report **changes** occur which result in a time difference of more than 30 minutes from the estimated time of passing the next reporting line, or – for ships en route to a Danish port – the estimated time of arrival, the ship shall as soon as possible send a *Deviation Report* (DR) (see "Drafting of Messages") to "SHIPPOS Aarhus".

10. If during the voyage through Danish waters deficiencies occur, which might reduce the normal and safe manoeuvring capabilities of the ship, or a situation arises, which can endanger the marine environment and the adjacent areas, ships shall as soon as possible send an *Incident Report* (IR) (see "Drafting of Messages") to "SHIPPOS Aarhus". An Incident Report shall also be sent when observing an oil pollution or a pollution by any other substance, which is considered to be harmful to the marine and coastal environment.

11. Due to the intense East- and Westbound ferry traffic in Store-Baelt South of Sprogo the following special rules apply for ships of 20,000 tons gross tonnage and above and for ships with a draft of 13 m. and more when navigating in this area:

About one hour before passing the ferry route the ferries shall i possible be informed thereof on VHF, using the call sign "Ferry Leader". The call shall be made on Channel 16 and the information should be sent on Channel 10 or another available Channel (see "Drafting of Messages").

Ships which cannot operate VHF are requested to inform "SHIPPOS Aarhus" 2 hours before passing the ferry route about the estimated time of the passing.

Upon receipt of such information the ferries will endeavour to navigate so that risk of collision does not arise. If, nevertheless, risk of collision does arise, the International Regulations for Preventing Collisions at Sea must always be applied.

This special rule can also apply for ships with a draft of 10 m. and more regardless of tonnage.

Drafting of messages:

1. Messages transmitted in accordance with the Rules concerning radio reporting service in Danish waters shall be sent over a Danish coast radio station as telegrams addressed to "SHIPPOS Aarhus".

To ensure brevity of messages and to reduce the possibilities of mistakes the following designations shall be used for reporting lines (see "Plans"):

Latitude 57° 45′ N.: SKAW
Latitude 56° 00′ N.: HATTER
Latitude 54° 40′ N.: BALTIC W.
The line Nakkehoved – Kullen: SOUND N.
The line Stevns – Falsterb: SOUND S.
Position of Mon SE. Lightvessel: MOEN

Positions, other than the above mentioned, shall be given in latitude and longitude or by stating name of port.

2. All messages shall begin with the word SHIPPOS as the first word in the text.

The messages shall be drafted according to the following format:

Designator	Function	Information Required
	System identifier	"SHIPPOS"
	Type of report	One of the following 2-letters identifier. "SP" (Sailing Plan) "RP" (Position Report) "FR" (Final Report) "DR" (Deviation Report) "IR" (Incident Report)
A	Ship	Name and call sign
B	Date and time of event	A 6 digit group giving date of month (first two digits), hours and minutes (last four digits). The digit group to be followed by the letter "Z" indicating time in UTC. (e.g. 041330Z).
C	Position	Geographical position by two 4 digit groups giving latitude in degrees and minutes suffixed with N (North) and longitutde in degrees and minutes suffixed with E (East). (e.g. 5610N 1230E).
D	Position	Reporting line, port of departure or port of arrival
E	True Course	A 3 digit group
F	Speed in knots	A 2 digit group
G	Port of departure	Name of last port of call
I	Destination and expected time of arrival	Name of port and date time group expressed as in B
J	Pilot	State whether a pilot is on board (e.g. PILOT EMBARKED)
L	Route information	Intended route (e.g. 1. Route T – The Sound) (e.g. 2. Route T – Great Belt)
N	Expected time of passing next reporting line and its identification	Date time group as in B and reporting line (e.g. 071500Z HATTER)
O	Maximum present draft in metres	A 4 digit group giving metres and centimetres
P	Cargo	Type and amount of cargo including whether cargo included in the International Maritime Dangerous Goods Code is carried
Q	Defects/Damage/ Deficiencies/other limitations	Brief details of defects, damage, deficiencies or other limitations
R	Description of pollution incident or observation	Brief details including type of pollution (oil, chemical, etc.)
U	Ship size and type	Gross registered tonnage and type
X	Miscellaneous	Any other information – give brief details

3. The different types of reports shall contain information according to the following table:

Designator	Type of Report				
	SP	PR	FR	DR	IR
A	M	M	M	M	M
B	M	M	M	M	M
C/D	M	M	M	M	M
E	O	M	–	O	–
F	O	M	–	O	–
G	O	–	–	–	–
I	M	–	–	O	–
J	O	O	O	O	O
L	M	–	–	O	–
N	M	M	–	O	–
O	M	–	–	–	–
P	M	–	–	–	O
Q	O	O	O	–	O
R	O	O	O	–	O
U	M	–	–	–	–
X	O	O	O	O	O

M = "Mandatory" (always to be included).
O = "Optional" (to be included if appropriate).

4. *Sailing Plan* ("SP") shall be sent
(a) when passing reporting line SKAW inward bound,
(b) when passing reporting line MOEN outward bound,
(c) when passing reporting line SOUND S. outward bound,
(d) in sufficient time before passing the first reporting line during the voyage if passage has not taken place as mentioned under (a),(b), or (c),and
(e) about 2 hours before departure from a Danish port.

Specimen Message 8:
FERRYLEADER THIS IS NONSUCH = EXPECT TO PASS SPROGO AT 1300 =

Pilotage within Route T: Pilotage through Route T from Skagen to Bornholm can be ordered from "SKAWPILOT", Skagen, via a coast radio station.

Pilotage through Route T from Bornholm to Skagen can be ordered from "SOUNDPILOT", Copenhagen, via a coast radio station.

When ordering a pilot the following information is required:
1. Name and call sign.
2. Estimated time of arrival (ETA) at the position from where pilotage is required.
3. Gross tonnage and draft.
4. Sea speed.
5. To where pilotage is required.

The order should be given at least 12 hours before ETA and should be confirmed or corrrected 3 hours before ETA. The pilot stations at Skagen and at Bornholm keep a continuous watch on VHF Channel 16.

Anchorages: If anchoring is considered necessary the following anchorages are recommended:
- (a) Off Skagen.
- (b) Off Sjaellands Rev.
- (c) N.W. of Rosnaes.
- (d) Off Romso.
- (e) Off Keldsnor.

Furthermore anchoring is possible in most places along the route depending on the draft of the ship.

It must be emphasized, that for ships with a draft of 13 m. or more anchoring may be necessary owing to the weather and sea conditions in relation to the size and draft of the ship and to the sea level.

Electronic position-fixing equipment: IMO recommends that ships with a draft of 13 m. (42 ft. 7 in.) or more when navigating through the entrances to the Baltic Sea should have on board suitable electronic position-fixing equipment.

With proper notice (a minimum of 24 hours) ships not fitted with such equipment can rent a portable Decca receiver on application to Racal-Decca Navigator Aktieselskab, Kalvebod Brygge 20, 1560 Kobenhavn V., Denmark. Tel: (01) 12 83 10. Telegram: DECCAMAR.

The Decca receiver can be installed when passing Skagen or Bornholm.

The installation time is about 1 hour and the receiver can be installed by day and night.

The pilot station will assist with the arrangement and will also on request give information about fees for hire.

The Decca receiver can be delivered fitted for one of the following voltages:

DC: 24 v./32 v., 110 v. and 220 v.; AC: 85-260 v., 40-440 Hz.

It is quite important when requesting rent of Decca receiver to state the voltage available on board.

The receiver can remain on board until the ship again leaves Danish waters at Skagen, or it can be dismounted in a port in Denmark, Sweden, Finland or the Federal Republic of Germany.

Payment for rent and installation is to be settled through Racal-Decca Navigator Aktieselskab.

Order on the Calling of a Pilot:
(Royal Danish Administration of Navigation and Hydrography, Order No. 29 of 30th January 1985 as amended by Order No. 795 of 11th November 1986).

Pursuant to section 7(4) of the Danish Pilotage Act and under the authority of the Minister of Defence it is hereby laid down:

1. (i) Ordering of a pilot from Danish pilot stations shall be made to the pilot station in question subject to the notices stipulated in section 2 hereof. The order shall contain information as to:
   1) Name and call sign of the ship,
   2) estimated time of arrival at the place from which pilotage is requested,
   3) gross registered tonnage and draft of the ship,
   4) speed of the ship, and
   5) place to which pilotage is requested.

   (ii) In connection with arrival of the ship at the place from which pilotage is requested, the international signal "G" should be used and be displayed by flag or flashlight.
2. (i) With respect to ships coming from the sea the order shall be given at least 6 hours before estimated arrival at the place from which pilotage is requested, and this shall be confirmed or corrected 1 hour before the estimated time of arrival, see also subsection 2 of this section.

   (ii) Where transit pilotage takes place via Route "T" from the waters off Skagen to the waters around Bornholm, or conversely, the order must, however, be given at least 12 hours before estimated time of arrival and shall be confirmed or corrected 3 hours before estimated time of arrival.

   (iii) With respect to ships requesting pilotage from harbour, anchorage or the like the order shall be given at least 4 hours before the pilotage is requested to commence. Confirmation and possible changes shall be given at least 1 hour before estimated time of departure.
3. (i) The ship's Master shall manoeuvre the ship in such a way that the pilot can embark or disembark the ship in the safest and fastest manner.

   (ii) If due to special circumstances the Pilot is prevented from boarding the ship, pilotage can take place from the pilot boat or from shore.
4. Unless prevented by special circumstances, the Master of the ship shall during pilotage be obliged to take the pilot boat in tow upon the Pilot's request.
5. During pilotage the Master of the ship furthermore has a duty to provide the Pilot with all information of importance to the pilotage.
6. Apart from the lights prescribed in accordance with the International Regulations for Preventing Collisions at Sea, a vessel performing pilotage duty shall fly a flag the upper half of which is white and the lower red. In addition the vessel shall fly the national flag.
7. Any contravention of sections 3-6 shall in pursuance of section 23(2) of the Pilotage Act be punished by a fine.
8. (i) This Executive Order shall come into force on the 15th February I985.

   (ii) With effect as from same date Executive Order No. 120 of 21st March 1979, of the Royal Danish Administration of Navigation and Hydrography as amended by Executive Order No. 643 of 16th December 1983, on the Calling of a Pilot, etc. shall be repealed.

Notice about Passage to the Harbour of Enstedvaerket, the Harbours of Stigsnaesvaerket and Gulfhavn, Stigsnaes, of Ships with a Draft of 13 metres or more: (Ministry of Industry, Notice of 7th January I987).

1. The maximum draft for entering the harbour of Enstedvaerket and the harbours of Stigsnaesvaerket is 17.0 m. and for Gulfhavn, Stigsnaes, 15.5 m.
2. With reference to IMO Resolution A. 339 about navigation through the entrances to the Baltic Sea it is recommended that ships with a draft of 13 m. or more comply with the following:
   - a. A pilot shall be used during the entire passage within the Skaw.
   - b. The ship shall be equipped with a VHF fitted with appropriate frequencies.
   - c. The ship shall have on board suitable electronic position-fixing equipment to make use of hyperbolic systems which will provide sufficient fixing accuracy for navigating in this area.
   - d. The ship shall be equipped with a 3 cm. and a 10 cm. radar both able to function.
   - e. The ship shall participate in the ship reporting system operated by the Government of Denmark (SHIPPOS).
   - f. When constrained by its draft the ship shall show the signal prescribed in Rule 28 in the International Regulations for Preventing Collisions at Sea.
   - g. The Master must be aware that temporary anchoring may be necessary owing to the weather and sea conditions in relation to the size and draft of the ship and to the sea level.
3. Attention is drawn to the fact that under ice conditions, when the buoyage cannot be expected to be in position and in order, there exists a greater risk of grounding than under normal conditions.
   - 3.1. If the passage takes place under ice conditions, when the buoyage cannot be expected to be in position and in order, it is recommended that ships furthermore comply with the following:
     When navigating South of the latitude 56° North (Sjaellands Odde) ships shall use 2 tugs, which both are equipped with Decca and with a pilot on board, and the navigation should, when considered necessary, take place in daylight and in good visibility.
   - 3.2. For ships equipped with operational Channel Navigation System the use of the tugs mentioned in 3.1. can be limited for the passage between Keldsnor and Enstedvaerket.
4. Pilot stations and "SHIPPOS Aarhus", when being aware of the fact that ships with destination to one of the harbours concerned does not comply with the recommendation herein, are requested to report such to the Ministry of Industry.

PILOTAGE:

The Baltic Pilotage Authorities Commission Recommendation:

The Baltic Pilotage Authorities Commission, recognising that Deep-Sea Pilotage helps to enhance safety of navigation and prevention of pollution of the marine environment, in particular to reduce the risks resulting from the high density of ships carrying dangerous or noxious cargoes and that the presence of a Deep-Sea Pilot on board would strengthen a vessel's navigational team and improve emergency measures in case of incidents and having considered the necessity to establish a certain order in Deep-Sea Pilotage in the Baltic Sea, recommends

A. Masters of ships which are constrained by their draft and

B. Masters of ships other than registered in one of the Baltic states, infrequently sailing in the respective area

coming from or being bound for ports in the Baltic Sea to avail themselves of Deep-Sea Pilots, certified by a competent authority of a Baltic coastal state.

Also see "Baltic Deep-Sea Pilotage" — Page 174.

AABENRAA: 55.02 N. 09.26 E. (See Plan)

LOCATION: Aabenraa is situated on the East Coast of Jylland (Jutland) in the Aabenraa Fjord.

DOCUMENTS: Crew List, Passenger List, Tobacco List, Stores List, Load Line Certificate (all vessels above 150 g.r.t.), Safety Equipment (all cargo vessels of 500 g.r.t. and over), Derat, Tonnage and Nationality, Clearance from last port of call, cargo documents.

PILOTAGE: Telegraphic address: "Pilot – Aabenraa". Short notice about 2–4 hours – VHF Channel 16. Small red motor-boat flying international pilot flag. Normally located middle of Aabenraa Fjord.

Larger ships usually take Pilot by Skaw L/V or at Kiel. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance when passage via the Skaw. Skawpilot listening on VHF Channel 16.

ANCHORAGES: Aabenraa Fjord or Road. Depths: about 75 ft. – 80 ft.

RESTRICTIONS: See "General" before first port.

MAX. SIZE: Depth of water in the Channel, at the Sonderjyllandskajen and at Oil Jetty I is 11.0 m. and at Oil Jetty II is 7.0 m. Max. length at the Oil Jetty I is 200 m. and Oil Jetty II is 100 m. No restriction on beam. Max. length at Sonderjyllandskajen 250 m. No breadth restriction.

Depth of water in dry cargo basins from 4.0 m. to 8.5 m. Max. length 200 m. No breadth restrictions. No tide – occasionally low water of 3 ft. – 5 ft. in heavy gales from West. Entry day or night.

HEALTH: In event of disease or fever on board, vessel's Agent to be informed before arrival.

RADIO: Blavand Radio or Lyngby Radio.

VHF: The port is equipped with Channels 12, 13 and 16.

TUGS: There are no tugs stationed in the port, however, tugs of 1,400 h.p. – 3,600 h.p. available at 24 hours notice.

BERTHING: There are 3 basins, a dry cargo pier and 2 tanker berths.

Sydhavn: 340 m. quay, depth 4.0 m.

Gammelhavn: 680 m. quay, depth 7.5 m.

Nyhavn: 600 m. quay, depth: First 160 m., 8.5 m. Next 140 m., 7.5 m. Remaining 300 m., 6.5 m. – 6.75 m.

Sonderjyllandskajen: 250 m. quay, depth 11 m.

Oil Jetty I: "T"-head with breasting dolphins, depth 11 m.

Oil Jetty II: "T"-head with dolphins, depth 7.0 m.

For the port the mean water-level is 0.0. Extreme high water level is plus 1.5 m. and extreme low water is minus 1.4 m. due to strong North/Easterly gales and strong South/Westerly gales. There are no currents except in connection with the mentioned high and low water. The port can be entered day and night, and is generally open for navigation throughout the year and in case of ice-difficulties during Winter, state-owned icebreakers will keep the port open for navigation.

DENSITY: Average water density in port area 1015.

CRANES: 1 mobile crane – lifting capacity 36 tons.
1 mobile crane – lifting capacity 30 tons.
2 mobile cranes – lifting capacity 23 tons.
1 mobile crane – lifting capacity 11 tons.
1 front loader.
1 fork lift – 4 tons capacity.
Tractors and similar modern machinery also available.

STEVEDORES: Stevedores arranged by Agent.

MEDICAL: 12 hours notice required to arrange for doctor to come on board. Hospital in Aabenraa.

TANKERS: Load/discharge connection 6 in. or 8 in. Also see "Berthing". Facilities for dirty ballast available.

FRESH WATER: Day and night from shore line, 25 t.p.h. – 30 t.p.h.

FUEL: All grades available by barge or truck. Minimum 24 hours notice.

CONSULS: German (F.R.); Finnish; Norwegian; Swedish; British.

REPAIRS: All types of deck and engine repair are possible.

DRY DOCK: Shipyard with floating dock of 600 tons lifting capacity. Max LOA 53 m.

SURVEYORS: Lloyd's and N.V. available.

GANGWAY/DECK WATCHMAN: Can be arranged.

OPENING/CLOSING HATCHES: By crew.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: Facilities exist for effecting crew changes.

AIRPORT: Skrydstrup. Distance from airport is 25 km. Airport is served by regular airlines.

TIME: Local time is GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: Dial "000".

TELEPHONES: Available for placing on board at the Sonderjyllandskajen.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Not needed.

DELAYS: Normally no delay except during severe Winters due to ice between mid December and end March.

AUTHORITY: Aabenraa Port Authority, Havnekontoret, 25 Mellemvej, 6200 Aabenraa. *Tel:* (National) 74 622514, (International) 454 622514. *FAX:* (National) 74 623143, (International) 454 623143. *Contact:* N. K. Kristiansen, Harbour Master.

AALBORG: 57.03 N. 09.55 E. (See Plan)

DOCUMENTS:
Ship's Register.
Load-line Certificate. (All vessels over 150 g.r.t.)
Road Safety Certificate.
Safety Equipment Certificate.
Derat Certificate or Exemption.
1 Crew List.
Stores List.
Crew Personal Effects List.
Cargo Manifest or Bills of Lading.
Oil Liability Insurance Certificate.

PILOTAGE: Pilotage is compulsory for the following:

(a) All tankers of 1,500 d.w.t. or more.

(b) Tankers of less than 1,500 d.w.t. which carry or having uncleaned tanks last containing ammonia or other hazardous liquid chemicals as listed in the Ministry of Commerce Notice No. 195 of 12th May 1970 on sea-borne hazardous cargoes.

(c) All LNG and LPG carriers.

(d) Vessels drawing 5.0 m. or more which pass through the dredged channel over Hals Bar.

Pilot may board at Hals Bar Roads in one of 4 different positions. Pilot station and Pilot boat equipped with VHF Channel 16.

The Western entrance at Logstor is only navigable in daylight for vessels under 4 m. draft.

ANCHORAGE: Anchoring inside the port area can only take place when permission has been granted by the Port Authorities. Permission can be requested on VHF Channel 16 or on Telephone No. (98) 122777.

RESTRICTIONS: The port is situated in the Limfjorden, 10 – 16 miles from entrance at Hals. Controlling factor is depth at Hals Bar of 10.4 m. at MLW.

MAX. SIZE: Max. draft for crossing Hals Bar 9.3 m.

HEALTH: Pratique granted by Customs Officers who bring Health Declaration for Masters to complete. In event of suspected disease or fever on board radio details to Agent before arrival.

RADIO: Radio stations to be used: Skagen and Lyngby, Port Authority, Pilot Station. Tugs and Bridges can be contacted on VHF Channel 16.

TUGS: Eight tugs available from 250 h.p. to 2,000 h.p. Not compulsory except through bridges for vessels over 1,500 d.w.t.

BERTHING: Aalborg on North and South sides of Limfjord. Total quayage 11.5 km., whereof public quays 10.1 km. All main quays suitable for vessels able to cross Hals Bar. Depths alongside 7.5 m. to 10.0 m.

Rordal Cement factory wharf, depth 7.5 m. – 9.3 m.

Nefo Coal Pier, depth 10.0 m. owned by Nordjylands Electric Co. and managed by Elsam. Max. LOA 260 m., max. draft 9.5 m. 2×12 ton cranes. Discharge rate for coal 10,000 tonnes per day.

BRIDGES: Two bascule bridges cross Western end of Aalborg harbour. Horizontal opening 30 m. Only vessels bound for Lindholm Pier are affected.

Close South East of the power station is an overhead power cable (vertical clearance 50 m.) which spans the fjord. Pilotage is compulsory for vessels over 800 g.r.t.

MEDICAL: Doctors, hospital facilities available.

FRESH WATER: Available at all berths.

FUEL: All grades available.

CONSULS:

REPAIRS: Machinery repairs can be effected.

DRY DOCKS: None.

DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally by crew with assistance of stevedores.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: Aalborg Soefarts Service (Seamen's Service) Tel: (08) 17 12 12.

AIRPORT: Situated 3 miles from town centre.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours (April – September).

HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day; Boxing Day. Half-holidays; May 1st, June 5th and December 24th.

POLICE/AMBULANCE/FIRE: Tel: 000

TELEPHONES: Installed by request at certain quays.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS: Aalborg has considerable areas under development for industry. In connection with this, preparations are being made for the building of new public harbour facilities. On the South bank of the fjord the Port Authority has available a 3.2 km stretch of coast with an area of approx. 206 hectares. This area is in connection with a new industrial and residential district of approx. 400 hectares. According to present plans approx. 7,000 m. of new quayage can be built here. Investments are estimated at 350 mill. Kr. Factories within the electronic and textile sectors are already established here and a continuous expansion goes on. On the site a special harbour with a quayage of 660 m. and depth 8.5 m. with facilities for unit load ships as well as conventional cargo ships, with warehouses and administration blocks etc. was constructed during 1972 as base port for the Royal Greenland Trade Department's routes calling at all ports in Greenland. Enterprises undertaking construction, repairs and maintenance of oil rigs etc., for offshore activities have also settled on this site. (See "Plan" – East Harbour).
AUTHORITY: Port of Aalborg Authority, 104 Vesterbro, DK-9000 Aalborg, Denmark. *Tel:* (98) 122777. *FAX:* 98-129388. *Contact:* J.E. Kruhoffer, General Manager. F. Lydolff, Harbour Master.

AARHUS: 56.09 N. 10.13 E. (See Plan)

DOCUMENTS:
Ship's Register.
Derat Certificate.
Load Line Certificate (all vessels above 150 g.r.t.).
Radio and Equipment Safety Certificates.
Customs Clearance from last port.
Spirits and Tobacco List for ship and crew.

PILOTAGE: Harbour Pilotage only compulsory for:
(a) Tankers of 1,500 d.w.t. or above.
(b) Tankers loaded with inflammable liquids with flash point below 23°C.
(c) Tankers loaded with, or have unclean tanks which have recently contained, dangerous liquid chemicals listed in IMO's "Code for the construction and equipment of ships carrying dangerous chemicals in bulk", and
(d) Non gasfree gas tankers.

Exceptions for frequent callers.

Harbour Pilot boards 1-2 miles outside port.

Larger vessels usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

Vessels leaving harbour or changing berth should report at least 15 minutes in advance, to the pilot station on Channel 16. If the movement is delayed, a further report should be sent 10 minutes in advance.

ANCHORAGE: Anchorage in roads – good holding ground. Nature of bottom: clay.
RESTRICTIONS: No restrictions. Night entry permitted. Also see "General" before first port.
MAX. SIZE: *Draft:* Oil port 10.5 m. General cargo port up to 9.5 m. Container terminal up to 10.5 m. Eastern Division 11.5 m. Coal terminal 13.0 m. No tide.
HEALTH: Necessary formalities carried out by Customs on arrival.
RADIO: Radio stations to be used: Skagen and Lyngby. Pilot station and tugs can be contacted on VHF Channel 16.
TUGS: 2 Tugs stationed at the port. Additional tugs available from outside.
CARGO HANDLING FACILITIES: 5 cranes for coal, fertilisers, sulphur, ore, etc.; max. capacity per crane, 300 t.p.h. 5 cargo handling cranes up to 2.5 tons and 9 cranes up to 5 tons. Mobile cranes up to 4 tons.
Container Terminal: Max. depth of water 11 m. Total quay length 816 m. 4 gantry container cranes up to 40 tons. Fork lifts up to 40 tons.
Multi-Terminal: Quay length 450 m., depth 12 m. Facilities for bulk, break bulk, container and Ro/Ro cargoes. 1×50 tonne crane. 2 multi-purpose cranes (25 tonnes on hook and 12 tonnes on grab).
Roll-on/Roll-off: 1 movable and 4 solid Roll-on/Roll-off berths. Fork lifts up to 40 tons. Several berths for liquid chemicals and LPG carriers.
Private Cranes: Coal terminal: Length 450 m., depth 13.5 m. 2 gantry cranes, combined capacity 1,000 t.p.h. 4 travelling cranes on carriage bridges for handling of coal, coke, fertiliser, and broken stone, etc., capacities 5 – 7.5 tons. 1 travelling crane on fixed bridge for handling of sand, stone and gravel, etc., capacity 90 t.p.h. 2 travelling cranes on carriage bridges for handling of general cargo, capacity 1.5 tons. One floating crane up to 20 tons.
Private Suction Plants, etc.: 4 grain suction plants, capacities of 60 – 100 t.p.h. 1 grain elevator, capacity of 35 t.p.h. 4 grain loading pipes. 6 cup elevators for copra and soya beans (80 t.p.h. each). 4 suction elevators for copra and soya beans (125 t.p.h. each). 1 loading pipe for copra and soya beans.
STEVEDORES:
Aarhus Stevedore Company: Stevedoring is carried out by cooperation between the individual brokers/agents and Aarhus Stevedore Company.

Round-the-clock service is available every day including Saturdays, Sundays and most holidays.

Standard hours:	
Mondays	0700 - 1630
Tuesdays-Fridays	0700 - 1600
Container Terminal:	
Mondays-Fridays	0700 - 1730

Work outside standard hours may be carried out against overtime pay. (The basis of the above information is a 38-hour standard working week.)

Aarhus Stevedore Company has all kinds of modern equipment at its disposal, including:
17 front loaders, } All equipped with automatic spreaders for
2 container stackers. } full and empty containers.
21 tugmasters with 11 goose-necks.
56 terminal vans, 9×20 ft. and 47×40 ft.
22 fork lift trucks, capacity from 2.5 tons to 30 tons.
7 loaders.

Special gear for handling different kinds of cargo, e.g. bulk cargo, paper, timber, project cargo and cars, etc. also available.
Thor Jorgensen A/S: Situated at Pier No. 4, Quay 85.

There is a 5,000 sq.m. warehouse/CFS in the area, also 96 reefer sockets and cleaning facilities, etc., are available and a total loading/discharging service is offered in connection with containers and break-bulk cargo. Terminal chassis, tugmasters, contchamps, forklifts available for handling cargo, etc.

The terminal is owned by Thor Jorgensen A/S, a company owned by the A.P.Moller Group.
MEDICAL: All medical services possible. Call Pilots if medical attendance required on board.
TANKERS: Discharge lines: 4 in., 6 in., 8 in., 10 in. and 12 in. Quay 201 – 203, max. oil discharging 1,200 cu.m./hr. Quay 202 and 124, 1,000 cu.m./hr., and Quay 120, 800 cu.m./hr. Berth 313 depth 12.0 m.
FRESH WATER: Shore installations at most berths.
FUEL: All grades available.
FIRE PRECAUTIONS: Tankers discharging: Fire watch. Special harbour fire fighting on tugs.
CONSULS:

Belgium	Tel: 86.14.71.00	Japan	Tel: 86.12.58.55

REPAIRS: Most repairs and overhauls possible.
DRY DOCKS: Aarhus Dry Dock. The shipyard possesses a large repair section and specialises, among other things, in extending ships and in undertaking comprehensive re-building. But all kinds of ships' repairs and overhauls of machinery are performed in its modern workshops. It employs a staff of 500–600, and it has recently invested in new cranes, floating docks, and workshops.

Dock No. 1 has a lifting capacity of 19,000 tons. Dock size – 190 m.× 25 m.

Dock No. 2 has a lifting capacity of 4,000 tons. Dock size - 110 m.×22.8 m.

There is also one minor slipway in the Port of Aarhus, and the city has numerous service workshops.
DECK WATCHMEN: Available, but not compulsory.
OPENING/CLOSING HATCHES: Normally by crew with assistance of stevedores.
REPATRIATION: Aarhus Sofarts Service. Tel: 86.19.13.33.
AIRPORT: 32 km. from port.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summertime (April to October).
HOLIDAYS: New Year's Day, Maundy Thursday, Good Friday, Easter Monday, Prayer Day (fourth Friday after Easter), Ascencion Day, Whit Monday, Constitution Day, Christmas Day, Boxing Day.
POLICE/AMBULANCE/FIRE: Tel: "000".
TELEPHONES: At several piers.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Port of Aarhus Authority, P.O.Box 130, Europaplads 2, DK-8100, Aarhus C, Denmark. *Tel:* 86.13.32.66. International + 45.86.13.32.66. *FAX:* 45.86.12.76.62. *Contact:* K. Schmidt, Port Director. Captain Kjeld Bruun, Harbour Master.

AEROSKOBING: 54.54 N. 10.25 E. (See Plan)

DOCUMENTS: See "Copenhagen".
PILOTAGE: Contact using VHF Channel 16, Tel: (62) 521253.
MAX. SIZE: Length 80 m., beam 17 m., draft 4.5 m.
HEALTH: See "Copenhagen".
RADIO: Lyngby Radio OXZ.
VHF: Harbour Master/Pilot on Channels 16 and 12.
TUGS: Not compulsory, pilot boat assists if necessary. Larger tugs can be ordered on request.
BERTHING: 3 berths available.
CRANES: 1 mobile crane available.
STEVEDORES: Ordered by Agents.
MEDICAL: Doctors and hospital facilities available.
FRESH WATER: Available.
FUEL: Available.
FIRE PRECAUTIONS: Normal fire precautions.
CONSULS: None.
REPAIRS: All repairs possible.
DRY DOCKS: None, however there is one slipway for vessels up to 50 m. × 10 m.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Opening/closing carried out by crew.
AIRPORT: Local airport 9 km. away, with private connections to Copenhagen. Nearest commercial airport at Odense.
TIME: GMT plus 1 hour; Summertime (March – September) GMT plus 2 hours.
HOLIDAYS: Normal Danish holidays.

POLICE/AMBULANCE/FIRE: Dial 000.
BANKS: Den Danske Bank.
STORING: By truck alongside.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Not required.
AUTHORITY: L. Andersen, Harbour Master. *Tel:* 45-62-521253.

AGENT: W. Nielsen & Co., P.O.Box 20, DK 5970, Aeroskobing. Tel: 45-62-521150. Telex: 50583. Fax: 45-62-521120. Cables: Williamco.

ASNAES (Asnaes Power Station, Kalundborg): 55.40 N. 11.05 E. (See Plan)

PORT LIMITS: When boarded by Harbour Pilot at the Firth of Kalundborg; or when at anchorage at the Firth waiting for berth.
DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat or Exemption Certificate.
Construction Certificate.
Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage.
2 Crew Lists.
Tobacco and Spirit List covering all goods on board belonging to crew, officers, Master, ship's bar or passengers.
Cargo Manifest or Bill of Lading.
PILOTAGE: Pilotage not compulsory. Harbour Pilot boards at entrance of Kalundborg Firth; bigger ships usually take Pilot by Skaw light vessel about 130 miles from Kalundborg. Skaw as well as Harbour Pilots listening on VHF Channel 16.
Pilots to be ordered by ETA–telegram to Agents at least 24 hours in advance.
ANCHORAGE: Large vessels anchor in 16 m. of water outside between Roesnaes and Asnaes; S.W. to N.W. winds cause swell, but holding ground is good.
RESTRICTIONS: No entry restrictions; arrival day and night and no tide with normal winds. Also see "General" before first port.
MAX. SIZE: Oil Berth: Depth alongside: 11 m.
Old Coal Berth: Depth alongside: 11 m. Length of quay: 285 m.
New Coal Berth: Depth alongside: 13 m. Length of quay: 216 m. However, vessels with length of 290 m. acceptable as there are dolphins between the Oil Berth and the New Coal Berth.
Ash Berth: Depth alongside: 8.0 m.
HEALTH: No special restrictions as to Free Pratique, which will be granted by authorities on arrival.
RADIO: Lyngby Radio.
VHF: Channel 16 to pilot station (also Skaw Pilot).
RADAR: No radar installations.
TUGS: At Firth of Kalundborg – 2/3 miles from port – ships' lines to be used.
BERTHING: One oil berth: Length 200 m. (a further length of ships at about 100 m. acceptable for berthing alongside the dolphins). Max. safe arrival draft: 36 ft. (10.97 m.).
Old Coal Berth: Length 285 m. Max. safe arrival draft: 35 ft. (10.67 m.). 2 cranes available.
New Coal Berth: Length of quay: 216 m. (See "Max. Size"). Max. safe arrival draft: 12.67 m. 2 cranes available.
Ash Berth: Safe draft 25 ft. (7.65 m.). Loading only, by pipe-line from 6,000 cu.m. silo.
STEVEDORES: Private stevedores to be ordered through receivers – coal discharge rate: about 700 t.p.h.
New Coal Berth: Discharge rate about 850 t.p.h.
MEDICAL: All medical and hospital facilities available. No advance notice necessary.
TANKERS: 2 discharge hoses (a possibility of 3) of 8 in. each. Average discharge rate 3,000 t.p.h., max. back pressure 14 kg. Also see "Berthing".
DENSITY: Brackish – about 1011.
FRESH WATER: Available by pipe-line at the berth. Rate 10 t.p.h.
FUEL: Available by barge or truck.
CONSULS: Swedish and Norwegian at Kalundborg. Others at Copenhagen.
REPAIRS: All types of smaller repairs can be carried out.
DRY DOCKS: No dry dock available.
SURVEYORS: Messrs. Caleb Brett has a local office in Kalundborg. SGS Inspection (Danmark) A/S has office in Copenhagen.
GANGWAY/DECK WATCHMEN: Not recommended.
HATCHES: Opening/closing hatches to be carried out by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
REPATRIATION: All repatriation can be arranged normally via Copenhagen 100 km. from Kalundborg.
AIRPORT: Nearest at Copenhagen (100 Km.).
TIME: GMT plus 1 hour (from Late September – Late March). GMT plus 2 hours (from Late March–Late September).
HOLIDAYS: Saturday/Sunday normally no work, also no work on holidays declared as official Danish holidays.
POLICE/AMBULANCE/FIRE: 0–0–0 all alarms.
EMERGENCY CO-ORDINATION CENTRE: *Radio:* VHF Channel 16 Lyngby Radio – will contact the Authorities involved.
TELEPHONES: No telephone connection on board.
SERVICES: No tank-cleaning facilities; all other services to ships can be arranged through specialists from Copenhagen.
BANKS: Kjoebenhavns Handelsbank A/S, Holmens Kanal 12, 1091 Copenhagen K. Telex: 12186 HACO DK.
A/S Den Danske Bank, Holmens Kanal 12, 1092 Copenhagen K. Telex: 15880 DDBFX DK.
Privatbanken A/S, Boersgade 4, 1215 Copenhagen K. Telex: 27196 PRIVCO DK.
STORING: See "Prelims".
1. Vessel can be stored from barge and truck.
2. No restrictions – can be stored during discharging.
3. Trucks can proceed alongside.
4. Fork lift trucks can be used on the Jetty.
5. No special customs' regulations except: spirits and tobacco, and other goods under bond to be declared to Customs before unloading/loading.
6. Local riggers can be employed.
SHORE LEAVE: No restrictions for shore leave.
IDENTIFICATION CARDS: Shore passes necessary.
AUTHORITY: *Owners of the Port:* IFV – Energi i/s, Strandvejen 102, DK-2900 Hellerup. *Tel:* 31-624141. *Telex:* 37500. *FAX:* 31-612888. *Local Office:* Asnaes Power Station, Asnaesvej, 4400 Kalundborg. *Tel:* 53-511500. *FAX:* 53-515004.

ASSENS: 55.15 N. 09.53 E. (See Plan)

LOCATION: On West side of Funen in Little Belt. Open all year except in severe weather when Little Belt may be frozen.
DOCUMENTS:
Customs Declaration for Ships, Form G25.
Maritime Declaration of Health, Z2 Ln 00-146.
Master's Declaration, Arrival, P650-010 (3/79).
Ice-Breaker Dues, Form G92 (only from 15th December – 31st March).
Crew List.
All Forms can be obtained from the Agent.
PILOTAGE: Not compulsory. Pilot requires 4 hours' notice. Pilot boarding points are 1 – 2 miles North or South of Assens. If necessary, Pilot can board in Little Belt.
ANCHORAGES: In the Roads North of Assens and S.W. of Assens.
MAX. SIZE: Vessels up to 130 m. LOA, max. draft 7 m. and max. beam 20 m. No tides.
RADIO: Lyngby Radio (OXZ).
VHF: There is a VHF station at the pilot station, Channel 16.
RADAR: There is radar in the tug used by the Pilot.
TUGS: There is a small tug, for larger tugs 6 hours' notice to be given. Ship's lines are used.
BERTHING: Loading/discharging normally takes place in the Northern Basin, depth 7 m., which is served by railway. The total length of quays is 400 m., made up of 100 m. on the North side, 170 m. on the East side and 130 m. on the South Side.
CRANES: 2 mobile cranes 32 tons, 1 mobile crane 24 tons and 1 mobile crane 8 tons capacity.
STEVEDORES: Working hours 0700 – 1600, Monday to Friday. Overtime by arrangement.
MEDICAL: Full hospital facilities available without prior notice.
FRESH WATER: Good quality potable water available in unlimited quantities.
FUEL: Can be delivered, if sufficient notice given.
REPAIRS: Most types of repairs can be undertaken at the shipyard.
DRY DOCKS: One floating dock for ships up to 1,350 tons, max. length 80 m. and 15 m. beam. and 1 dock for ships up to 1,200 tons, max. length 80 m. and 15 m. beam.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Opening/closing done by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
AIRPORT: Odense, 50 km. away. Daily connections to Copenhagen.
TIME: GMT plus 1 hour; Summertime GMT plus 2 hours from March to September.
HOLIDAYS: Usual Danish holidays.
POLICE/AMBULANCE/FIRE: Dial 000.
TELEPHONES: Available aboard vessels.
STORING: See "Prelims".
1. Vessels can be stored by truck.
3. Yes.
4. Yes.
SHORE LEAVE: Permitted.
DELAYS: Normally no delays.
AUTHORITY: Assens Havn, Harbour Office, Ndr. Havnevej 3, DK-5610 Assens. *Tel:* (64) 713165-713580. *Contact:* N. Hald-Andersen, Harbour Master.

AGENT: A. Fage-Pedersen A/S, Strandgade 19, DK5610, Assens. Tel: 64-711200. Telex: 50301 (Fage DK). Cables: Shipping. Fax: (45) 64-711255.

BANDHOLM: 54.50 N. 11.30 E. (See Plan)

DOCUMENTS:
1 Crew List.
1 Passenger List.
1 Stores List.
1 Manifest or Bill of Lading.
PILOTAGE: Not compulsory. Pilot boards vessel at Sea Buoy off Vejroe from pilot vessel, hull painted green and "Pilot" on each side of the hull. Pilot ordered through Agent, telephone 03–88 80 11 four hours prior arrival at Sea Buoy. VHF Channel 16. Telephone number of Pilot Station 03-89 49 75/03-89 41 52 day/night.

ANCHORAGE: Near Sea Buoy off Vejroe.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Length 100 m.(approx), draft 5.10 m.
HEALTH: Normal quarantine rules.
RADIO: Lyngby Radio or Kiel Radio.
TUGS: None.
BERTHING: Sheltered harbour with 366 m. of stone quays available and easily accessible. Depth of water at entrance 5.10 m. Depth at West quays, 4.4 m. At East quay 244 m. there is 5.8 m. average depth. Electric coal crane to discharge 60 t.p.h with grab. Average daily rates: Coal and coke 500 – 1,000 tons. Grain elevator at East quay, loading capacity 110 t.p.h. storage capacity 25,000 tons. Grain elevator at East quay, loading capacity approximately 90 t.p.h. Storage capacity 12,000 tons.
STEVEDORES: Ordered by Agent. Working hours Monday to Friday from 0700 hrs. daily to 1600 hrs. on Monday and Tuesday, to 1530 hrs. on Wednesday and Thursday and to 1500 hrs. on Friday. Saturday no work.
MEDICAL: Doctors, hospital facilities available.
FRESH WATER: Supplied from quay installations.
FUEL: Available.
REPAIRS: Small deck and engine repairs possible.
OPENING/CLOSING HATCHES: Carried out by crew.
GANGWAY/DECK WATCHMEN: Not necessary.
CUSTOMS ALLOWANCES: See "General" before first port.
AIRPORT: Maribo Airport, 15 km. away. Kastrup Airport (Copenhagen) 150 km. away.
TIME: GMT plus 1 hour.
HOLIDAYS: See "Copenhagen".
POLICE/AMBULANCE/FIRE: Dial 0-0-0 and ask for Police, Ambulance or Fire Brigade.
TELEPHONE: Not available on board vessels.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
GENERAL: Tide normally 1 ft.
AUTHORITY: Knuthenborg Godskontor, Birketvej 1, Bandholm, DK-4930 Maribo, Denmark. *Tel:* (45) 53 88 80 88. *Telex:* 40256 hoban dk. *FAX:* (45) 53 88 84 58.
AGENT: Alfr. Hovmand, Shipbroker, Havnepladsen 6, Bandholm, DK-4930 Maribo. Tel: 53-88 80 11. Telex: 40256 Hoban Dk. Fax: 53-88 83 50. Cables: "Hovmandship, Maribo".

COPENHAGEN: 55.42 N. 12.37 E. (See Plan)

DOCUMENTS:
1 Crew List.
2 Passenger Lists.
1 List giving stock of stores and provisions.

Customs Officers bring form to be signed by Master indicating that no epidemic diseases are on board. Formal Bill of Health signed by Danish Consul in port of departure is not necessary.
ARRIVAL: Before a vessel enters the port, its national flag shall be hoisted and the anchors shall be ready to drop. If the vessel is to pass any of the bridges or the lock, outboard davits, etc. shall be taken in.

All vessels shall notify their entry, departure or shifting (of berth) in advance and in ample time to the Port of Copenhagen's Traffic Control Centre by telephone 45 33 14 43 40 or by calling via VHF Channels 12 or 16. When making such notification, the vessel's name, port of registration and the location from which it is to come or to which it is to sail shall be declared.

Passage through the Port of Copenhagen is forbidden, under the penalty of a fine – cf. Section 70 of these Regulations – to vessels which are not to discharge and load in the port, unless the vessels can pass under both Knippelsbro and Langebro without opening (i.e. raising) of these bridges.
PILOTAGE: Telegr. address: Soundpilot-Copenhagen. Tel. 31 38 67 00. Pilotage not compulsory. ETA minimum 1 hour. VHF Channel 16. Pilot boats painted red. "Pilot" painted in white on side. Pilot flag "G" (white light) – VHF. Pilot comes on board at Middelgrund Fort (Pilot for Drogden at the same place). Pilot boards by ship's ladder.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA–telegrams to Skawpilot Skagen, at least 12 hours in advance. Skawpilot listening on VHF Channel 16.
ANCHORAGE: Depth 11 m., 1 mile North of Middelgrund Fort.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Limited by draft only. Depths in the port, 10 m.; in the Oil Harbour, 10.5 m.; at the Oil Pier (Berths No.842, 843 and 844), 12.0 m.
HEALTH: See "Documents". If fear of suspected disease or fever: yellow flag – VHF.
RADIO: Lyngby Radio: OXZ. VHF Channel 16 to all installations. ETA cables to Agents and receivers, preferably by Lyngby Radio.
RADAR/VHF: No port radar. VHF Channel 16.
TUGS: Towage not compulsory. Tugs join ships at entrance to port. Ship's hawsers only.
BERTHING:

CONTAINER TERMINAL: At the Levant Quay in the free port. Quay length 665 m., depth alongside 10 m. 2 Container cranes capacity 32 tons, also two luffing cranes of 50 tons and 5 tons capacity for general cargo. Horizontal handling by two straddle carriers and a number of front loaders.

STEVEDORES: ETA earliest possible by VHF and not later than noon on the day before loading or discharging is intended to be commenced.
MEDICAL: No advance notice necessary. Hospitals available.
TANKERS: 10/12 berths according to size.
Provestens Oil Harbour:
Depth at Quay 1: 10.5 m.
Quay 2: 9.1 – 10.5 m.
Quay 3: 6.0 – 9.1 m.
Quay 4: 9.1 – 10.5 m.
Quay 5: 10.5 m.
Oil Pier North: 6.0 m.
Oil Pier East: 12.0 m.

Length and beam unimportant. Slop barge available.

FRESH WATER: From quay or water boat.
FUEL: All grades available. At bunker station, no notice required, delivery 24 hours a day. By lighter in port or in roads; 10 hours notice preferred.
FIRE PRECAUTIONS: Ready hawsers fore and aft. No engine repairs.
GANGWAY/DECK WATCHMEN: Deemed unnecessary.
OPENING/CLOSING HATCHES: To be opened by ship's crew.

CERTIFICATES: To be on board:
Ship's Register.
Radio Safety Certificate.
Safety Equipment Certificate.
International Load Line Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: See "General" before first port.

IDENTIFICATION CARDS: Not necessary except in Oil Harbour, where the Port Authority deliver the cards.

CONSULS: The following countries are represented.

Argentina

REPAIRS: All types of repairs possible.

REPATRIATION: Facilities exist for changing crew and arranging any necessary repatriation.

AIRPORT: 6 miles from centre. Direct lines for all parts of the world.

TIME: GMT plus 1 hour.

HOLIDAYS: New Year's Day (January 1st); Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day (December 25th); Boxing Day (December 26th).

Half Holidays: Labour Day (May 1st); Constitution Day (June 5th); Christmas Eve (December 24th).

Working Hours: 0700 – 1630 with 2 half-hour meal breaks.

Overtime work on Saturday and Sunday should be ordered by 1130 hrs. on Friday.

The working hours vary slightly from port to port as some start at 0730 and others at 0800 hrs., but a 42.5 hour week is common to all.

POLICE/AMBULANCE/FIRE: Call "000".

TELEPHONES: In many berths telephones can be placed on board ships.

GENERAL: Customs Authorities supervision of ship's provisions and bonded stores is carried out in the Free Port in the same way as in Customs Port. In this connection the Free Port is not a Free Port.

SERVICES: All services available (tank cleaning, discharge of tank washings, compass adjusting etc.).

SHORE LEAVE: No restrictions.

AUTHORITY: Port of Copenhagen Authority, P.O.Box 2083, Nordre Toldbod 7, DK-1013 Copenhagen K. *Tel:* 45 33 14 43 40. *Telex:* 15439. *FAX:* 45 33 93 23 40. *Cables:* "Copenport". *Contact:* Harbour Master.

ENSTED: 55.01 N. 09.26 E. (See Plan)

Also refer to "Aabenraa".

DOCUMENTS: See "Aabenraa".

PILOTAGE: See "Aabenraa".

ANCHORAGES: See "Aabenraa".

HEALTH: In event of disease or fever on board, vessel's Agent to be informed before arrival.

RADIO: Blaavand or Lyngby Radio.

TUGS: Large vessels may require towage assistance on entering and leaving Ensted Harbour. 24 hours notice is required to call a Svitzer tug.

VHF: Pilot on Channels 12 and 16.

BERTHING:

Oil Terminal: Largest vessels which can be accommodated at the Oil Pier: (Berth No. 1).

Length overall	350 m.
Beam	No limits
Water depth	18 m.
Bow/centre	165 m.
Max. height water-level/manifold	26.5 m.

Coal Terminal: Largest vessels which can be accommodated at the Deep Sea Coal Berth:

Max. Length Overall	350 m.
Max. Beam	No restriction.
Water Depth	18 m.
Discharging facilities for coal	1×40 ton unloading crane and 1× continuous unloader (1,550 cu.m./hour)
Total outturn/24 hours	40,000 tonnes
Height from water level to hatchcoaming	20 m.
Outlay of cranes from quay side to centre grab	38 m.
Max. distance between centre of cranes (grabs)	285 m.

STEVEDORES: To be informed by Agent.

DENSITY: 1015.

MEDICAL: A few hours notice required to arrange for doctor to come on board. Hospital in Aabenraa.

TIDE: No tide – arriving and sailing day and night.

FRESH WATER: Fresh water from shore line 5 t.p.h.

FUEL: Available by barge or truck.

CONSULS: Norway, Germany F.R., Finland, Sweden and United Kingdom.

REPAIRS: All types of deck and engine repairs are possible.

OPENING/CLOSING HATCHES: By crew.

REPATRIATION: Facilities exist for effecting crew changes.

AIRPORT: Skrydstrup. The distance from airport is 25 km. Airport is served by regular airlines via Copenhagen.

POLICE/AMBULANCE/FIRE: Telephone number 000.

SHORE LEAVE: Crew members are allowed ashore.

TELEPHONES: Available for placing on board.

ESBJERG: 55.28 N. 08.26 E. (See Plan)

DOCUMENTS:
Tonnage Certificate.
Derat or Exemption Certificate.
1 Crew List.
1 Crew Personal Effects List.
1 Master's Declaration.
1 Stores List.
Cargo Manifest or Bill of Lading.
Dangerous Cargo List.

PILOTAGE: Advance notice of 12 hours prior to ETA pilot station at "Graadyb Barre" is required. This ETA to be confirmed/altered 3 hours prior to actual time of arrival.

Message can be given via coast radio station "Blaavand Radio" (OXB) or via Port Authority's VHF – watch is kept on Channel 16. (Tel: (05) 129200).

Cable address: "Pilotstation Esbjerg".
Telephone: 05-121065.

Two pilot vessels, painted orange, with "Pilot" painted in white on sides stationed in the Port of Esbjerg. One is a 78 g.r.t. vessel and one is a fast launch.

Both vessels equipped with VHF Channel 16 and carrying signals as prescribed. Pilot boards outside Graadyb Barre, at Buoy No. 2. Vessels awaiting Pilot or high tide should anchor approximately 1 mile West of buoy No. 2. Large vessels wait 2 miles from buoy No. 2.

Pilot is not compulsory except for tankers over 500 d.w.t. and when tugs are assisting in berthing.

ANCHORAGES: There are anchorage areas West of Buoy No. 2 (depth 35 ft. at MLWST).

RESTRICTIONS: No ice to impede navigation. No ice dues charged. Also see "General" before first port.

MAX. SIZE: Pilot Restrictions: Max. draft accepted: 31 ft. 02 in.

Entry to port is through a dredged channel over Graadyb Barre, width 200 m., depth 9.3 m. at MLWST.

Tide: Difference between normal high water and normal low water is 4 ft. (approx.). Max. current 2.5 knots – 3 knots.

RADIO: Blaavand Radio, call sign OXB. In position Lat: 55° 33′ N., Long: 08° 06′ E.

TUGS: Tugs join vessel at Esbjerg Roads. Ship's own hawsers must always be used. 3 tugs available of 800 h.p., 2,500 h.p. and 4,000 h.p.

BERTHING:

	Approach at MLWST	*Berth at MLWST*
Trafikhavn	31 ft.	22 ft. – 35 ft.
Foergehavn	28 ft.	15 ft.
Outer Foergehavn for Roll-on/Roll-off vessels	31 ft.	22 ft. – 28 ft.
Dokhavn	22 ft.	22 ft.
Englandskaj	31 ft.	25 ft.
Osterhavn	31 ft.	22 ft. – 35 ft.
Osterhavn – New Berth (when entering max. draft 31 ft., LOA 705 ft.)	31 ft.	35 ft.
Sonderhavn	31 ft.	35 ft.
Tauruskaj	17 ft.	20.6 ft.
Fishery Harbour – Consumption	15 ft.	15 ft. – 17 ft.
Fishery Harbour – Industrial Fish	22 ft.	17 ft. – 22 ft.

For berthing in Trafikhavn with vessels of (approx.) 5,000 g.r.t. or more and for berthing in Sonderhavn with vessels of 10,000 g.r.t. or more. The Pilots require "Slack Water" – i.e. high or low water.

Max. draft for berthing on high water: 31 ft. 02 in.

Max. draft for berthing on low water: 26 ft. 00 in.

CARGO HANDLING: The Port of Esbjerg has no specially equipped berths besides the tanker berths, and container terminals for lift-on/lift-off equipped with one travelling gantry crane 32 tons, but private companies own suction plants for discharge/loading of feeding stuffs. Furthermore, mobile cranes also with grabs and stationary coal cranes are available. Container terminals for Roll-on/Roll-off. Vessels with own gear can however be handled successfully, at different berths. 22 mobile cranes, capacity between 5 tons and 180 tons, 86 trucks, capacity between 1.5 tons and 42 tons, 4 bobcats, 1,200 trailers 20 ft. and 40 ft., and 30 tugmasters.

STEVEDORES: Gangs are mustered daily at 0700, and 1000 hrs. ETA should be given to above hours to ensure that gang(s) are available on arrival. Working hours are from 0700 to 1630 and meal hours are 0830–0900 and 1200–1300. No work on Saturdays. Overtime can be arranged.

MEDICAL: Medical attention can be arranged at any time. Modern hospital facilities available.

TANKERS:

Trafikhavn: Depth in approaches to oil berths in Trafikhavn MLWST 31 ft. (MHWST 36 ft.)

New Oil Berth No. 101: Depth alongside old oil berth No. 101 MLWST 35 ft. (MHWST 40 ft.)

Old Oil Berth No. 102: Depth alongside new oil berth No. 102 MLWST 25 ft. (MHWST 30 ft.)

The length between the outer point of Berth No. 101 and the opposite outer point of Berth No. 102 is 1,200 ft.

Osterhavn: Depth in approaches to oil berth in Osterhavn MLWST 31 ft. (MHWST 36 ft.). Max. draft 31 ft. 2 in.

Powerstation Vestkraft No. 506: Depth alongside MLWST 35 ft. (MHWST 40 ft.).

Under normal weather conditions Pilot states to be able to berth tankers with a LOA of max. 735 ft.

FRESH WATER: Can be delivered at all berths. Rate 20 t.p.h.

FUEL: All viscosities available by road tanker. Marine Gas Oil also by tanker vessel. 4 hours should be given, always during office hours.

FIRE PRECAUTIONS: A fire watch is necessary when loading/discharging oil and petrol, if flash point is under 50°C.

CONSULS:

REPAIRS: All types of deck and engine repairs can be effected.

DRY DOCKS: No dry docks, but slipways: Slipway No. 1 for trawlers, with weight max. 125 tons; Slipway No. 2 for vessels, with weight max. 250 tons; No. 3 – 500 tons; No. 4 – 750 tons.

GANGWAY/DECK WATCHMEN: Watchman is not essential, but advisable.

OPENING/CLOSING HATCHES: This can be done by members of ship's crew, or by stevedores at an additional charge of 8%.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: Ample facilities for effecting crew changes and arranging repatriations.

AIRPORT: 8 km. from centre of town. Daily flights to Copenhagen Stavanger and Humberside.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (6th April – 28th September).

HOLIDAYS: New Year's Day (Jan. 1); Maundy Thursday; Good Friday; Easter Day; Day after Easter Day; the 4th Friday after Easter; Ascension Day; Whit Sunday and Whit Monday; Christmas Day and Boxing Day. Permission to load/discharge on these days obtainable.

POLICE/AMBULANCE/FIRE: In case of emergency, dial "000" and ask for: Brand (fire), Politi (police), or Ambulance. Regular Tel. numbers are: Police 12 46 66; Ambulance and Fire Dept. (Falck/Zonen) 12 82 99.

TELEPHONES: Possible to have telephones installed on board.

SERVICES: No tank-cleaning equipment available. For discharge of tank washings apply to Port Master's Office Tel. 12 92 00. Compass adjusting can be effected.

SHORE LEAVE: Normally granted.

IDENTIFICATION CARDS: Not necessary.

DEVELOPMENTS Extension of the Harbour towards the East, and modernisation of Trafikhavn, Sonderhavn and Fishery Harbour. Extension of Lo-Lo Terminal.

AUTHORITY: Port of Esbjerg Authority, Hulvejen, P.O. Box 2, DK–6701 Esbjerg, Denmark. *Tel:* (05) 12 41 44. *FAX:* (05) 133167 (Harbour Master's Office). *Contact:* B. O. Juhl, Deputy Manager. I. M. Nielsen, Port Captain. V. V. Leisner, General Manager.

FREDERICIA: 55.33 N. 09.45 E. (See Plan)

DOCUMENTS:

1 copy Bill of Lading for all cargo (manifests are not required).
1 copy Manifests for Dangerous Cargo.
2 copies Crew List.
2 copies List of Dutiable Goods.
2 copies Stores Lists.

PILOTAGE: Four Pilots available for docking purposes and for through traffic to any place in Denmark or the Baltic. Pilots have a 24-hour watch and are located on the top floor of the KFK Grain Silo in the West Harbour. Can be contacted day or night over VHF radio Channel 16, working 12, 13 and 71, or Tel. 75-920959. Pilotage is compulsory for tankers carrying chemicals or LPG and for all other tankers above 2,500 d.w.t.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

Shipmaster's Report: June 1985.

Pilot may be taken onboard near buoy in position Lat. 55° 34.8' N., Long. 9° 50.8' E.

ANCHORAGE: To avoid hindrances to docking or undocking ships, ships of over or about 4,000 d.w.t. are requested to anchor off Trellenes. Smaller ships will find good anchoring conditions in Strib Bugt.

RESTRICTIONS: Day and night entry possible, least depth in the approach channel is 15.0 m. Also see "General" before first port.

MAX. SIZE:

	Max. draft acceptable
Kastels Harbour	11.70 m.
Old Harbour	5.3 m. to 7.20 m.
Shipyard Harbour	2.80 m.
Dock Entrance	4.60 m.
West Harbour	6.70 m. to 8.70 m.
Mollebugt Harbour	8.70 m. to 11.70 m.
Centre Harbour	14.70 m.

Also see "Tankers".

HEALTH: See "Copenhagen".

VHF: Radio communication for ship movements through "Fredericia Harbour", Channels 16, 13, 12 and 71.

Agents, receivers, etc., can be called through usual coastal radio stations.

TUGS: Tugboats from Svitzer's Salvage Enterprise is stationed in Fredericia, but any amount of tugs are available, when ordered previously.

BERTHING:

Mollebugt Harbour: Quays Nos. 24, 25, 26 and 27. Length 610 m., depth 9 m. – 12 m.

Facilities for container traffic and Ro/Ro traffic. 40 ton gantry crane and 3×25 ton gantry crane with hook and grab, max. capacity 300 t.p.h. and grain conveyor with max.capacity 600 t.p.h. 2 mobile cranes, capacity 6 to 36 tons. Rail tracks. Facilities for temporary storage of goods. Modern quayside warehouses.

Centre Harbour: Quay No. 21-22, length 175 m. + 250 m., depth 15 m., 3 × 25 ton gantry cranes with hook and grab. Max.capacity 450 t.p.h.

Facilities for temporary storage. Quayside warehouses.

Gas, Oil & Chemicals Harbour: Quays Nos. 18, 19, 20, 41 and 42 for tankers. Quays Nos. 18 & 19, length 90 m., 7 m. depth in berth. Equipped for loading and discharging gas tankers.

Quay No. 20 – 15 m. depth in berth. Hydraulically operated hose handling gear for discharging petrol and oil products. 10 in. and 12 in. ASA. Connection range between + 0.4 and 18.5 m. above MWL.

Quay No. 23 – 7.5 m. depth in berth. Equipped for discharging oil products, liquid chemical products in 4 in. DIN hoses, liquid carbon dioxide.

Quay No. 41 – 10 m. depth in berth. Equipped for loading and discharging petrol and oil products.

Quay No. 42 – 15 m. depth in berth. Equipped for loading and discharging petrol, oil products and crude oil.

West Harbour: Quays Nos. 13 to 17. Length 670 m., 7 m. – 9 m. depth in berth.

Facilities for container traffic, Ro/Ro traffic. 25-ton gantry crane with hook and grab, max. capacity: 300 t.p.h. 6-ton gantry crane with hook and grab, max. capacity: 150 t.p.h. 2 mobile cranes, capacity 6 to 36 tons. 2 gantry cranes* 5-tons. Suction plant* available for discharging feedstuffs – max. capacity: 80 t.p.h. Rail tracks. Facilities for temporary storage of goods. Bulk terminal for loading feedstuff max. capacity 300 t.p.h.

Modern quayside freezing and storage facilities.

Shipyard Harbour: Quays Nos. 8 to 12. Length 500 m., 5.0 m. – 6.5 m. depth in berth. Modern repair and equipment piers with workshops. Slipways available for 75-ton and 1,000 ton light displacement. Floating dock 80 m. × 14.5 m. max. capacity: 1,200 ton light displacement. Floating dock 150 m. × 23.05 m. max. capacity: 8,000 tons light displacement. Dry dock facilities 110 m. × 22 m., 5.1 m. access depth. Average docking/sailing time: 45 mins.

Old Harbour: Quays Nos. 6 & 7. Length 200 m., 5.6 m. – 7.5 m. depth in berth. Mobile cranes, capacity: 6 to 36 tons. Suction plant* available for discharging grain – max. capacity 60 t.p.h. Facilities for discharging liquid chemical products. Rail tracks. Facilities for temporary storage of goods.

Kastels Harbour: Quays Nos. 1 & 2. Length 450 m., 12 m. depth in berth. Mobile cranes, capacity: 6 to 36 tons. Loading facilities for bulk fertiliser* – max. capacity: 400 t.p.h. Grab crane* – max. capacity: 300 t.p.h. Siwertell worm conveyor – max. capacity: 600 t.p.h. Facilities for loading and discharging liquid chemical products and ammonia. Rail tracks. Facilities for temporary storage of goods. Preference for vessels destined for the Superfos Company.

* Private.

CARGO HANDLING FACILITIES: The Port possesses all types of modern facilities for loading and discharging. Crane facilities include a 40 ton gantry crane, 7 grab cranes with a max. capacity of 300 – 450 t.p.h. and a number of grab and hook cranes and mobile cranes with capacities ranging from 6 to 36 tons. There are ample facilities for container and Ro/Ro traffic. The suction plant* is capable of handling up to 80 t.p.h. and the Siwertell worm conveyor equipment* has a max. capacity of 400 t.p.h. In addition, there are modern facilities for handling liquid chemicals, gas, petrol and oil products and bitumen. There are also facilities for handling fertiliser* – max. 400 t.p.h. The Port has a rail network freeze/cold stores*, approximately 6,000 sq.m. modern warehouse space and ample facilities for temporary quayside storage.

* Private.

STEVEDORES: Ordinary working hours Monday to Friday: 0700 – 0830 hrs., 0900 – 1200 hrs., 1230 – 1600 hrs. Night gangs on week days must be ordered no later than 1230 hrs. the same day. Working overtime weekends is possible, but gangs must be ordered no later than Friday 1230 hrs. Average output per 8-hour day, loading or unloading general cargo, is 200 tons per gang.

MEDICAL: Hospitals available.

TANKERS:

	Berth 18 (liquid gas)	*Berth 20*	*Berth 23 (Chemicals)*

Jetty I/Berth 41 – Chicksan arms – for vessels discharging bitumen and other special products, and for loading fuel-oil, gas-oil, gasoline, diesel fuel, and LPG.

Jetty II/Berth 42 – Curacao hosehandling gear – for vessels discharging and loading crude, fuel-oil-handling subject to size of vessel.

Pilotage: Pilotage is compulsory for tankers carrying chemicals or LPG, and for all other tankers above 2,500 d.w.t.

Dirty Ballast Reception: Oily ballast reception facilities available – maximum quantity 5,500 cu.m.

Restrictions: Height from normal water level to hose connections must not exceed 15.90 m. during discharging and ballasting.

Communication: The port is equipped with VHF station – Channels 16, 12 and 13.

FRESH WATER: Available ex wharf. Rate 10–50 t.p.h.

FUEL: Available.

CONSULS: Finland, France, Iceland, Netherlands, Norway and Sweden.

REPAIRS: All repairs undertaken with modern equipment. Also see "Berthing – Shipyard Harbour".

DRY DOCKS: Length 354 ft., breadth 72 ft. Max. depth at Dock gate 16 ft. 06 in. Slipway available for ships up to 1,000 tons, light displacement (divers available). Also see "Berthing – Shipyard Harbour".

GANGWAY/DECK WATCHMEN: Available upon request.

OPENING/CLOSING HATCHES: Stevedores or crew.

CERTIFICATES:

Ship's Register.
Load Line Certificate.
Radio Safety Certificate.
International Safety Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: See "General" before first port.

AIRPORT: At Billund and Beldringe 35 miles from Fredericia.

REPATRIATION: All facilities exist.

TIME: GMT plus 1 hour in Winter and GMT plus 2 hours in Summer (late March – late September).

HOLIDAYS: See "Copenhagen".

POLICE/FIRE/AMBULANCE: Police 75912300; Ambulance 75932222; Fire 75921166; Emergency 000.

TELEPHONES: Both oil piers have telephones in the watchmen's room but for local calls only.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

AUTHORITY: Port of Fredericia, Vesthavnsvej 33, Post Box 242, 7000 Fredericia. *Tel:* 75-920255/75-927900. *FAX:* 75-925104. *Contact:* P. E. Skoett, Port Director. P. Tophoj, Harbour Master.

FREDERIKSHAVN: 57.28 N. 10.33 E. (See Plan)

DOCUMENTS: Ship's papers, 2 Crew Lists, 1 Passenger List, 2 Bills of Lading, 1 Manifest, 1 Customs Declaration of tobacco and spirits for Officers and crew, 1 Customs Declaration (TOLDPAS) if arrived from port in EEC or Scandinavia.

PILOTAGE: Call the Pilot either over the coast radio station "Skagen Radio", call sign "OXP", telephone 08 445566. Pilot outside the harbour boards at the buoy 1.7 miles S.E. of the harbour entrance. ETA required as soon as possible.

ANCHORAGE: In the roads South of the red leading lights in 10 m. water depth. Good holding ground. At the entrance to the fishing harbour between the pierheads for a width of 50 m. on each side of the heads, anchoring is prohibited (submarine cable).

RESTRICTIONS: Vessels coming from or entering the naval base and the fishing harbour must wait for ships entering or leaving the commercial harbour. Maximum speed Frederikshavn L/B – to harbour 12 knots, in outer basin – 7 knots, Harbour – 3 knots. Entering the Naval Base without special permission prohibited. Ships entering the harbour must if necessary wait outside for ships leaving the harbour. Also see "General" before first port.

MAX. SIZE: Max. length about 200 m., depth in harbour 8 m. Tide about 0.3 m.

HEALTH: Use international quarantine signals. If suspected disease or fever on board cable the Agent to arrange everything to obtain pratique as soon as possible.

RADIO: Nearest coast radio station "Skagen Radio", call sign "OXP".

VHF: The harbour office is fitted with VHF Channels 16, 12 and 13. Watch kept day and night. Vessels must call the Harbour Office before entry and leaving.

TUGS: Tugs join vessel outside the harbour between the buoy and the harbour entrance. Only the ship's line to be used.

BERTHING: No special requirement for berthing in the harbour, but several big ferries are running in and out during day and night and sailing after a time schedule. Vessels must call the harbour office, VHF Channel 16, for permission to enter and before leaving the berth.

BULK HANDLING FACILITIES: One grain berth, with 8 m. depth alongside, equipped with suction pipe capacity 60 t.p.h. approx.

Ferry berths in Harbour, depth 6.4 m. to 8 m., equipped for handling containers and Roll-on/Roll-off traffic.

STEVEDORES: ETA advices are required before 0900 hrs. in order to arrange gangs for discharge/loading the same day.

MEDICAL: No special requirement is necessary for medical attention. The town has all ordinary medical and hospital facilities.

TANKERS: Oil quay max. depth 8 m., Hoses 8 in. diameter. Reducing pieces may be necessary. Slop water discharging and cleaning can be done by oil-separator. Tankers max. draft 8 m.

DENSITY: 1,020 (approx.).

FRESH WATER: Supplied by water hydrants on all quays.

FUEL: All kinds of fuel are available and no advance notice is necessary.

FIRE PRECAUTIONS: No smoking and no open fire if discharging oil. Fire watchman from the Harbour Authority required if discharging gas, dangerous chemicals and ammunitions, etc. Besides the watchman, the Harbour Authority will require restricted access to vessel.

CONSULS:

Finland	Tel. 98 421466	Norway	Tel. 98 422299
France	" 98 422155	Sweden	" 98 422922
Germany F.R.	" 98 420011	Iceland	" 98 425333

REPAIRS: Three steel shipyards and one wood shipyard doing all types of repairs.

SURVEYORS: Cargo Inspector – B. K. Mortensen, Ahaven 17. Tel: 98-425064.

DRY DOCKS: Four dry docks, two floating docks and two small slips. Dimensions of largest dry dock: length 212 m., breadth 32.2 m. and depth 7 m. Largest floating dock: length 129 m., breadth 28 m., depth 6.5 m., capacity 7,500 tons.

GANGWAY/DECK WATCHMEN: Not compulsory but available if required.

OPENING/CLOSING HATCHES: Ship's crew open and close the hatches. If necessary the longshoremen can do it for extra pay.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: Agent will arrange repatriation. All facilities for changing crew.

AIRPORT: Aalborg Airport, 60 km. from port, several daily flights to Copenhagen.

TIME: Local time GMT plus 1 hour.

HOLIDAYS: Weekends, Easter, Whitsun, Christmas, New Year and two Danish holidays in the Spring.

POLICE/AMBULANCE/FIRE: Police, Tel. 98-421444; Ambulance, Tel. 98-422222; Fire, Tel. 98-420801; in emergency dial 000.

SERVICES: Separating of slop water, compass adjusting, oil bunkering, repairing all kinds of navigation instruments and provisions.

STORING: (See "Prelims"). All stores available. Fork lift trucks can assist. Trucks can proceed alongside at berth. Local riggers can be employed. No difficulties with paperwork (Customs).

BANKS: National and local.

SHORE LEAVE: After clearing inwards, crew members are allowed ashore without special permission.

AUTHORITY: Havnekontoret, Oliepieren 7, Postbox 129, DK-9900 Frederikshavn. *Tel:* 98-421740, 98-420298. *FAX:* 98-438338. *Contact:* Captain B. K. Mortensen, Port Captain.

GEDSER: 54.34 N. 11.56 E. (See Plan)

LOCATION: Gedser is situated on the Southern extremity of the island of Falster.

PORT LIMITS: A line drawn between the two outer pier heads defines the limit of the harbour.

DOCUMENTS: Customs Declaration, Crew Lists, Passenger Lists, Ship's Log and Safety Certificates.

APPROACHES: Three entrance channels lead to the harbour, the main channel (Rodsand Rende) has a width of 150 m. and a depth of 6.2 m. (20.3 ft.). The harbour can be entered by day and night.

PILOTAGE: It is recommended that all vessels over 500 tons use a Pilot. Requests for a Pilot must be made at least 6 hours before arrival to Guldborgsund Pilot Office in Nykobing (Falster) over Lyngby Radio or VHF Channel 16.

RADIO: Lyngby Radio.

BERTHING: Gedser Harbour is considered a ferry harbour where De Danske Statsbaner (Danish State Railways), Deutsche Bundesbahn (West German Railways) and Deutsche Reichsbahn (East German Railways), have first priority to the harbour and Rodsand Rende.

MEDICAL: Full hospital facilities in Nykobing (Falster). Doctor in Gedser. Tel: (38) 53879440.

DENSITY: 1010 – 1014.

FRESH WATER: Available.

CUSTOMS ALLOWANCES: EEC Rules apply.

REPATRIATION: Hourly bus connections to Nykobing (Falster) with daily train connections from Nykobing (Falster) to Copenhagen.

AIRPORT: Kastrup Airport at Copenhagen.

TIME: GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: Police in Gedser. Tel: (46) 53879021. Ambulance and Fire Brigade in Nykobing (Falster). Tel: (47) 54851744.

TELEPHONES: There are no arrangements for placing telephones on board.There is a post and telegraph office close by the harbour.

SHORE LEAVE: Possible for crew members with valid passport or visa. There is no need for identity cards.

GENERAL: *Tides and Currents:* Tidal range 0.3 m. Winds from N.E. can raise water level by 1.8 m.; winds from S.W. can lower water level by 1.5 m.

Lifeboat Station: A lifeboat is stationed by the harbour.

AUTHORITY: Havnekontoret Gedser, Postbox 16, 4874 Gedser, Denmark. *Contact:* B. Kristensen, Harbour Master. *Tel:* Gedser (57) 53879145, ext. 30 or (58) 54855619.

GRENAA: 56.25 N. 10.56 E. (See Plan)

PORT LIMITS: A Line drawn between the outer breakwater heads.

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
1 Crew Personal Effects List.
1 Ship's Bonded Stores List.
1 Stores List.
1 Animal/Pets List.
1 Health Certificate.
Ship's Log.
Last Port Clearance.
1 Bill of Lading.
1 Cargo Manifest.

Safety Certificates: Construction, Equipment, Load Line, Radio and Oil Pollution Prevention.

PILOTAGE: Pilotage is not compulsory except for laden tankers with hazardous liquid chemicals or tankers with uncleaned tanks which have carried hazardous liquid chemicals.

The pilotage regulations do not apply to Masters who have been to Grenaa Harbour at least 5 times in the last 6 months.

Ships approaching Grenaa Harbour should be aware of the "Kalkgrunden", a limestone reef just outside the harbour entrance, stretching Easterly for approximately 7 cables and with 1 m. depth.

Notice of ETA and request for Pilot must be made to the Agent and/or to the pilot station with 24 hours and 12 hours notice.

There are telex facilities. VHF Channel 16 is continuously watched and ETA may be confirmed or adjusted on this frequency.

Pilot boat is 8 m. LOA, orange upperwork and orange hull with the word "Pilot" on each side.

The usual international signals may be displayed by vessels requiring a Pilot.

The usual pilot boarding point is 1.5 miles E.S.E. of harbour entrance.

BUOYAGE: IALA "System A".

ANCHORAGE: Anchorage is best North of the harbour with depth of 7 m. to 9 m. The holding ground is fine hard sand.

RESTRICTIONS: No restrictions, except that larger vessels should not approach the Easterly breakwater head closer than 80 m. in the area East and Southeast of this.

Also be aware of the "Kalkgrunden" (see "Pilotage").

MAX. SIZE: Vessels up to 140 m. LOA, 14 m. breadth and draft 6.2 m.

HEALTH: Normally Free Radio Pratique will be granted.

RADIO: Lyngby Radio (OXZ) is the long range area station.

VHF: At the harbour office, open for communications on Channel 16 each week-day between 0800 hrs. and 1600 hrs.

A continuous watch is maintained at the pilot station on Channel 16.

RADAR: There is no Port Control Radar but the pilot boats are radar equipped.

TUGS: One tug available.

BERTHING: There are 6 general cargo berths.

Nos. 31, 32 and 33: Length 210 m., depth 6.5 m.
No. 34: Length 110 m., depth 6.5 m.
No. 41: Length 80 m., depth 7.2 m.
No. 42, 43 and 44: Length 308 m., depth 7.2 m.
Sydhamn: Length 176 m., depth 4.5 m.

Bulk and general cargo is handled at Nos. 31, 32, 33, 41, 42, 43 and 44, whereas container and Ro-Ro handled at No. 34 Berth.

CRANES: There are 2 mobile cranes of 32 tonnes and 63 tonnes respectively and 2 container forklifts of 25 tonnes and 42 tonnes.

BRIDGES: There are no bridges or other restrictions to prevent access to the port.

STEVEDORES: Working hours from 0700 – 1600 hrs., Monday to Friday. Evening and night shift as well as week-end labour can be arranged.

MEDICAL: Full hospital facilities available without prior notice.

TANKERS: *Oil Pier:*

North Side: Length 140 m., depth 6.50 m.
South Side: Length 140 m., depth 6.50 m.

Slop discharge facilities in accordance with the Helsinki Convention.

DENSITY: 1018 (average).

FRESH WATER: Good potable water available in unlimited quantities at a rate of 10 t.p.h.

FUEL: All kinds of fuel can be delivered by road. Longest possible notice is desirable.

CONSULS: Vice-Consulates for Norway and Sweden.

REPAIRS: There are 2 shipyards as well as an engine building factory with repair facilities.

DRY DOCKS: No dry docks, but 5 slipways, where up to 300 tonnes deadweight is available.

SURVEYORS: Lloyd's sub-agent. Agents from other Classification Societies and Surveyors can be brought from Aarhus at short notice.

GANGWAY/DECK WATCHMEN: Gangway and deck watchmen not necessary, but can be arranged.

OPENING/CLOSING HATCHES: Normally handled by ship's crew.

CUSTOMS ALLOWANCES: See "General" before first port.

CARGO GEAR: Ship's gear or mobile cranes/conveyors from shore.

REPATRIATION: 25 km. to Tirstrup Airport with international flights to London, Malmo (Sweden) and Stavanger (Norway) and domestic scheduled flights to Copenhagen with international connections.

Railway connection to Aarhus.

Ferry connection to Zealand (Hundested) and Sweden (Varberg and Halmstad).

All facilities exist for changing of crew and repatriation of seamen.

Repatriation and change of crew can be arranged on the Roads for ships passing Grenaa en route to and from the Baltic. See "Ship Supply Service".

TIME: Local time is European Standard Time, GMT plus 1 hour. Summertime is used.

HOLIDAYS: *Official Holidays:* New Year's Eve (half day), New Year's Day, Maundy Day, Good Friday, Easter, Whitsun, Labour Day (half day), Ascension Day, Constitution Day (5th June, half day), Christmas Eve (half day) Christmas Day.

Work can be arranged except Christmas Day and Good Friday.

POLICE/AMBULANCE/FIRE: Emergency 000; Police 86-321011; Ambulance 86-322222; Fire 86-320812.

TELEPHONES: There are no arrangements for placing telephones on board.

SERVICES: A Compass Adjuster resides at the Port. Decca and Radio repairs possible.

Facilities for reception of Oil, oily mixtures, sewage, garbage, etc. exist in accordance with the Helsinki Convention.

SHORE LEAVE: No restrictions.

EMERGENCY CO-ORDINATION CENTRE: Danish Coast Guard S.O.K. Kystvaernsvej, Aarhus. *Tel:* 86-131822. Outside office hours - 123099.

BANKS: All major Danish banks are present in Grenaa.

STORING: Vessel can be stored by truck alongside. Local Riggers can be employed to assist with storing.

SHIP SUPPLY SERVICES: Storing possible on Roads at Buoy No. 4 in position: Lat. 56° 25′ N., Long. 11° 06′ E. Contact: Shipbroker G. Ostergaard I/S. Telex: 63489 Broker Dk. Tel: (86) 32.02.44. *FAX:* (86 324565.

IDENTIFICATION CARDS: No identification cards required.

REGULATIONS: No unusual regulations for the port.

DELAYS: No delays can normally be expected.

AUTHORITY: Harbour Master, Grenaa Harbour, Nordhavnsvej 1, DK-8500 Grenaa, Denmark. *Tel:* 86-321204. *Cables:* Harbourmaster Grenaa. *Contact:* J. A. Ovesen, Harbour Master or E. Stein Laursen Assistant Harbour Master.

GULFHAVN: 55.12 N. 11.16 E. (See Plan

DOCUMENTS:

Ship's Register.
Load Line Certificate.
Safety Radio-telephone Certificate.
Derat Certificate or Exemption Certificate.
Exact list of tobacco, cigarettes and spirits showing the vessel's and the crew's supply on arrival.
Bill of Lading (if vessel is carrying cargo).
Copy of the Crew List is required by Kuwait Petroleum Refinin (Denmark) A/S.

PILOTAGE: 3 Pilots and pilot vessel available. Pilot acts as Berthing Master. May be requested to board vessels at any place in the proximity of Gulfhavn.

Pilot vessel equipped with VHF Channels 6, 10, 12, 16 of which Channel No. 6 used for ship-to-ship communication. Pilot station also equipped with VHF Channels 12, 13 and 16. Pilot can be contacted at the station on Channel 16.

A vessel's ETA should be communicated by Master to Agent, 48 and 24 hours prior to arrival. Agent will keep Refinery advised and make necessary arrangement with Pilot.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

ANCHORAGES: Korsor: Roads: Depth 20 m. (65.6 ft.). Bottom sand, good holding ground. Width of area about 2 square nautical miles. Gulfhavn Roads: Depth 30 m. (98.4 ft.). Bottom clay. Good holding ground. Width 0.5 nautical miles. Length 1.5 nautical miles.

Power cables running between Zealand and Agersoe Island (marked on charts) must be avoided.

RESTRICTIONS: See "General" before first port.

MAX. SIZE: Max. draft at normal tide is 15.5 m.

VHF: Call sign "Gulfhavn" Channels 12, 14 and 16, on 16, 24 hours a day.

TUGS: None available locally. If required 12 hours' notice must be given. Pilot will advise if weather conditions demand use of tugs (in good time).

BERTHING: Oil pier is a T-shaped structure on which 4 berths provide – 1 berth for 120,000 d.w.t. tankers, 1 for 30,000 d.w.t. tankers, 1 for 7,000 d.w.t. tankers and 1 for smaller vessels up to 700 d.w.t.

Depths alongside:		
	Berth 1	16.0 m. (52.5 ft.)
	Berth 2	12.0 m. (39.4 ft.)
	Berth 3	7.5 m. (24.6 ft.)
	Berth 4	4.5 m. (14.8 ft.)

Adequate lifting facilities to assist in hose connecting and handling of necessary hose equipment should be ready on arrival. Refinery representative will board on arrival and discuss discharging/loading operation.

Berth No. 1

Berth No. 1 is equipped with mechanically operated Woodfield hose-handling structure. The booms are 12.2 m. (40 ft.) long. Berth is primarily equipped for handling incoming crude, but can be used for other purposes (gasoils, intermediate and heavy fuels) when not being occupied by crude vessels.

The booms are arranged in the following sequence of product handling:

Boom No.	*Size of booms and contents*
1	10 in. Mogas Blendstock/Jet Fuel
2	12 in. Crude/Gasoil Blendstock
3	12 in. Mogas Blendstock/Jet Fuel
4	12 in. Crude/Gasoil Blendstock Crude
5	8 in. Heavy fuel oil

The sequence is from South to North or from right to left as you face the shore.

The distance from Danish Mean Sea Level to the highest position of centre line of manifold is 17.0 m. (55.8 ft.).

In addition to the oil products handled on Berth No. 1 there are the following other connections on the pier:

Size of connection	*Contents*
6 in.	Ballast water
6 in.	Gas oil
6 in.	Intermediate and heavy fuel
4 in.	Tetra methyl lead

A hydraulic gangway is installed at No. 1 Berth.

Berth No. 2

Berth No. 2 is equipped with mechanically operated hose-handling structure (Woodfield). The booms are 9.1 m. (30 ft.) long.

The booms are arranged in the following sequence of product handling:

Boom No.	*Size of booms and contents*
1	10 in. Ballast water and crude oil
2	10 in. Intermediate and heavy fuel
3	12 in. Intermediate and heavy fuel
4	10 in. Diesel Fuel/Jet Fuel
5	10 in. Diesel Fuel
6	10 in. Gasoline
7	10 in. Gasoline

The sequence is similar to Berth No. 1, i.e., South to North.

The distance from Danish Mean Sea Level to the highest position of centre line of manifold is 15 m. (49.2 ft.).

In addition to the oil products handled on Berth No. 2, there are the following other connections on the pier:

Size of connection	*Contents*
6 in.	Intermediate and heavy fuel
6 in.	Gas oil
6 in.	Ballast water
6 in.	Kero and Jet fuel
6 in.	Naphtha
6 in.	Light virgin naphtha
6 in.	Gasoline
6 in.	Gasoline – MTBE

In addition to the oil products handled on Berth No. 2 and No. 3, Berth Nos. 3 and 4 can also handle L.P.G. (liquid petroleum gas). All connections on Berth Nos. 3 and 4 are 6 in.

Mooring: If wires are used for mooring, polypropylene tails are required.

MEDICAL: Hospital at Slagelse. Tel: Slagelse (03) 52 19 00.

DENSITY: Ranges between 1023 and 1007, dependent on season and weather conditions.

FRESH WATER: Available at all 4 berths. Limited to 160 tons. Supplied with a pumping rate of 15 t.p.h.

FUEL: Bunker fuel available at all 4 berths. 24 hours' notice required.

FIRE PRECAUTIONS: The harbour is not equipped with fire-fighting vessel. Fire-fighting equipment is stationed on quay.

CONSULS:

Finnish Consulate: (Mr. Sv. Mogensen) 10 Oernumvej, DK-4220 Korsoer, Tel. (53) 57 00 13.

Norwegian Consulate: (Mr. Sulow Rasmussen) Caspar Brandsplads 9, DK-4220 Korsoer, Tel. (53) 57 15 15.

German (F.R.) Consulate: (Mrs. K. Poulsen) Batterivej 7, Korsoer, DK-4220. Tel. (53) 57 05 86.

All other consulates are situated in the Copenhagen area.

REPAIRS: Small deck and engine repairs can be carried out on request with permission.

GANGWAY/DECK WATCHMEN: Available if required.

REPATRIATION: Facilities exist via Agent.

AIRPORT: Copenhagen 120 km. away.

TIME: GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: Police Skelskor (03) 59 61 00; Ambulance Skelskor (03) 59 47 07; Fire Refinery 222.

TELEPHONES: A public telephone box situated at the foot of the jetty.

SHORE LEAVE: Allowed, but personnel not allowed to walk in refinery area. Transport will be arranged from ship to refinery entrance upon request.

IDENTIFICATION CARDS: Required by crew.

AUTHORITY: Korsoer Toldkontrol.

Kuwait Petroleum Refining (Danmark) A/S, Gulfhavn, Post Box 49, 4230 Skaelskor, Denmark. *Tel:* (53) 59 49 00. *Telex:* 40033. *FAX:* (53) 59 09 59. *Cables:* Kupdanref. *Contact:* P.A.Winchester, Refinery Manager.

HADERSLEV: 55.15 N. 09.29 E.

DOCUMENTS: See "Copenhagen".

PILOTAGE: Aarosund Pilot station.

ANCHORAGES: Aarosund.

RESTRICTIONS: Impossible to enter Haderslev by night since there are no lights in the fjord. Also see "General" before first port.

MAX. SIZE: Length 110 m.; width 17 m.; depth 4.9 m.

HEALTH: See "Copenhagen".

RADIO: Lyngby Radio.

TUGS: None available.

MEDICAL: Advance notice required if hospital facilities are required.

FRESH WATER: Fresh water from quay.

FUEL: Available by truck.

CONSULS: Swedish, French, Belgian.

REPAIRS: Small repairs available.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Carried out by the crew.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: No facilities.

AIRPORT: 15 km. from Haderslev.

TIME: GMT plus 1 hour.

HOLIDAYS: Discharging can be arranged on holidays.

POLICE/AMBULANCE/FIRE: Police, 245 2 2525; Ambulance, 000; Fire, 000.

TELEPHONES: No facilities.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not needed.

AUTHORITY: J. C. Hansen, Honnorkajen 3, Box 11, 6100 Haderslev, Denmark. *Tel:* (74) 522404/522405. *Telex:* 51-596. *Cables:* Maltsand. *FAX:* (74) 525639. *Contact:* F. Guldbrandt.

HELSINGOR (Elsinore): 56.02 N. 12.37 E. (See Plan)

DOCUMENTS:

1 Cargo Manifest.
2 Crew and Passenger Lists.
2 Tobacco Lists.
2 Stores Lists.
Measurement Certificate or Registry Certificate.

PILOTAGE: Cable address: "Soundpilot". Telex: 27515 Sundet Dk. Tel: 31-386700. VHF: Channels 16, 13 and 12. Address: The Sound Pilot Station, Marmorvej 1, Frihavnen, DK-2100 Copenhagen, Denmark.

For vessels entering The Sound from Kattegat, Pilots can be ordered from "Soundpilot" via coast radio.

The following details are to be given:

1. Name and call sign.
2. ETA position from where pilotage is required.
3. Gross tonnage and draft.
4. Sea speed.
5. Pilotage requirements.

Pilots perform pilotage duties to all ports in The Sound, through The Sound and to any Baltic port. There are some exceptions to ports of Soviet Union.

Pilots should be ordered 6 hours prior to ETA Buoy "M1" and the message should be confirmed or corrected 1 hour prior to ETA "M1".

Pilot cutter, orange hull and superstructure, "Pilot" painted on superstructure.

Boarding by Buoy "M1".

ANCHORAGE: South of the port, in the roads of Helsingor, depths from 19 m. to 25 m. with sand or loose clay bottom.

RESTRICTIONS: The Port Authority must be informed 15 minutes before arrival/departure/shifting on VHF Channel 16. Ship departing waits for ship entering. When a vessel gives signal to enter (1 long whistle or blast) it is regarded as an entering vessel.
MAX. SIZE: Up to 21 ft. 06 in. draft. Also see "General" before first port.
RADIO: Harbour Office of Helsingor call VHF Channel 16, shift to Channels 12 or 13 for working.
TUGS: Tugs come from Copenhagen at 2–3 hours notice.
BERTHING: Vessels berthed in order of arrival.
MEDICAL: Hospital and medical facilities available.
FRESH WATER: Approx. 15 tons of fresh water per hour delivered through 1.5 in. hoses at the berths.
FUEL: Not available.
WATCHMEN: Not required.
CUSTOMS ALLOWANCES: See "General" before first port.
DRY DOCKS: Dock No. 1: 155 m. long, 21.5 m. wide, 6.4 m. depth. Dock No. 2: 116 m. long, 16.5 m. wide, 5.5 m. depth.
AIRPORT: 1 hour by car to Copenhagen International Airport.
TIME: GMT plus 1 hour.
HOLIDAYS: Work can be performed all the year round.
POLICE/FIRE/AMBULANCE: Police Tel. 02.211448; Ambulance/Fire Tel. 000.
TELEPHONES: Telephones are only available on board in particular circumstances.
SHORE LEAVE: Crew are free to go ashore.
IDENTIFICATION CARDS: Crew need passports.
AUTHORITY: Helsingor Havnekontor, Sophie Brahesgade 1, 3000 Helsingor. *Tel:* 49-210515. *FAX:* 49-217299. *Contact:* John Christensen, Harbour Master.

HOLBAEK: 55.43 N., 11.43 E. (See Plan)

PILOTAGE: Hundested Pilotage Authority.
MAX. SIZE: Max. draft at present when passing Hundested 6.30 m. Port dredged to 6.60 m.
VHF: Channel 16.
TUGS: Available.
STEVEDORES: Working hours: 0700 – 1530 Monday to Friday. Overtime possible if required.
MEDICAL: Services available.
FRESH WATER: Available.
FUEL: Available.
CONSULS: At Copenhagen.
REPAIRS: Possible.
DRY DOCKS: No facilities.
CUSTOMS ALLOWANCES: Kalundborg Custom House is the authority.
REPATRIATION: Facilities available.
AIRPORT: Nearest airport at Copenhagen (Kastrup) – 70 km.
AUTHORITY: Holbaek Port Authority, P.O. Box 120, 4300 Holbaek, Denmark. *Tel:* 53-43 01 61. *Contact:* Lenarht Andersson, Harbour Master.

HORSENS: 55.52 N. 09.52 E. (See Plan)

DOCUMENTS:
Crew List
List of Tobacco.
Manifest (for Agents and Stevedores).
Bills of Lading (for Agent's use).
Ship's papers:
International Load Line Certificate.
Certificate of Register (international letter of measurement).
Derat Certificate.
Radio Safety Certificate.

PILOTAGE: Pilot station is situated at Juelsminde. Normally pilot boat will be located South of Lillegrund.
VHF: Channels 6, 12 and 16. Advance notice of 2 hours required.
ANCHORAGE: No special anchorages at the firth; vessels may anchor where safe navigation permits – attention is called to cable area at Hjarno Sound.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Max. length, approx. 500 ft.; max. breadth, approx. 70 ft.; max. draft, approx. 22 ft. A dredged channel 32 m. wide and 6.9 m. deep leads to the harbour.
HEALTH: Inform Agent or Port Authorities in advance in event of any suspected disease or fever on board. Normally no necessary procedure to obtain pratique. Pratique is automatic after calling at another Danish port.
RADIO: VHF at Harbour office, Channels 9, 12, 13 and 16.
TUGS: Tug "Vitus", 1,000 h.p., stationed in the harbour.
STEVEDORES: For working Monday morning ETA must be given Friday during office hours. Otherwise ETA must be given the day before work to commence. One suction apparatus for discharging grain. Normally the cargo is handled by shore cranes. There are 6 piece-goods cranes available.
MEDICAL: No advance notice required. Hospital facilities available.
TANKERS: Discharge lines diameter: 6 in. and 8 in. Four berths for tankers, 1 at Gropa with 5.6 m. of water alongside, 1 at DAK with 6.9 m. of water, 1 at KH with 6.9 m. of water and 1 at Nynas Johnson.
FRESH WATER: Delivered alongside from shore connections.
FUEL: All types of light fuel available.
CONSULS: Finland, 75-623433; Norway, 75-624666; Iceland 75-624811.
REPAIRS: No shipyard – only small repairs can be carried out.
GANGWAY/DECK WATCHMEN: No service of watchmen necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew, but can be done by stevedores.
CUSTOMS ALLOWANCES: See "General" before first port.
REPATRIATION: No special facilities for effecting crew changes exist.
AIRPORT: Distance from airport about 50 km., with regular airlines.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summertime from last Sunday in March to last Sunday in September.
POLICE/AMBULANCE/FIRE: Dial 000. Fire alarms placed around the port.
TELEPHONES: Not available on board vessels.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
DELAYS: No delays can normally be expected. Larger ships with big draft may expect delay during nights with poor visibility. They have to wait for daylight in order to enter port through dredged channel.
AUTHORITY: Havnemesteren, Havnen 5, 8700 Horsens. *Tel:* 75-621014, 75-621433. *Contact:* Jorgen M. Olsen, Harbour Master.

KALUNDBORG: 55.41 N. 11.06 E. (See Plan)

Also see Port of Asnaes.

(A) KALUNDBORG HARBOUR.
(B) STATOIL A/S OIL TERMINAL.

(A) KALUNDBORG HARBOUR.

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate or exemption.
Bill of Lading (if cargo).
Crew List.

Customs need a Tobacco and Spirit List, showing the vessel's and the crew's supply by arrival.
PILOTAGE: Not compulsory. Pilot station situated at Kalundborg, telegram: Kalundborg Pilot, Tel: Kalundborg 03.51.20.42. Green vessel carrying international signal flag or lights for Pilot. Contact by VHF Channels 16, 12 and 6. Pilot is taken on board at the entrance o Kalundborg Fjord.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.
ANCHORAGE: Large vessels anchor in 42 ft. of water outside between Rosnaes and Asnaes; S.W. to N.W. winds cause swell but holding ground is good. Small vessels anchor between Gisselore Point and Harbour, from where channel leads to harbour.
Tankers: The anchorage is approximately 4 – 5 miles W.N.W. of the Oi Pier. Particulars regarding the anchorage will be given by the Pilot.
RESTRICTIONS: *Tankers:* Depth in channel and at entrance 39 ft. 4 in. entrance width 131 ft. Also see "General" before first port and "Section B".
Kalundborg Harbour: Depth of Entrance Canal: 10.0 m. Bottom width of Entrance Canal: 100 m.
MAX. SIZE: See "Berthing" and "Section B".
HEALTH: Pratique granted by Customs Officers who bring Health Declaration for Masters to complete. In event of suspected disease o fever on board radio details to Agent before arrival.
RADIO: *Arrival Message:* The Masters of deep-sea vessels are requested to advise their Agents of their ETA 72 hours in advance, and again 24 hours before ETA. For other vessels operating in Scandinavian waters, a 24 hours ETA notice will be required. For coastal traffic i Danish waters, ETA is required when departing for Kalundborg. If there should be any significant change in the ETA over 2 hours, additional advice is required.
VHF: Harbour office on Channel 16 (0700 – 1600 hrs.).
TUGS: Available, normally join vessel off harbour, often using vessel's lines. If tug's lines are used, an extra charge will be made.
Tankers: See "Section B".
BERTHING:
Kalundborg Harbour:
West Harbour: Length 400 m., width 60 m., depth 6 m. Quay I: Leng 250 m., depth 6.0 m. Quay II: Length 125 m., depth 6.0 m. Quay I Length 80 m., depth 6.0 m.
East Harbour: Length 260 m., width 130 m., depth 7 m. – 8 m. Qua VI: Length 240 m., depth 8.0 m. Quay VII: Length 170 m., depth 7.0 Quay VIII: Length 70 m., depth 7.0 m. Quay IX: Length 280 m., dep 7.0 m. Quay X: Length 245 m., depth 8.0 m.
South Harbour: Oil Quay: Length 170 m., depth 9.5 m. Quay XII: and General Cargo, length 350 m., depth 10 m.

Quay Nos. II-X and XII equipped with ramps.

Railway on quays in the East and the South Harbour.
STEVEDORES: Available, ordered by Agent, no ETA to stevedor necessary.

CRANES: The following cranes are available from the Port Authorities:

1. One mobile crane (lattice crane).

Capacity: Radius 11 m. – 30 tons – lift height 25 m.
Radius 29 m. – 12 tons – lift height 25 m.

The crane can be mounted with a 5,500 litre prehensile scoop to unload grain, gravel, fertiliser, etc.

2. One 10-ton 12/25-ton gantry rocker crane.

Lift height above rails 22 m. in hook operation.
Carrying capacity with 20 m. jib (13.5 m. from quayside): 12 tons.
Carrying capacity with 13 m. jib (6.5 m. from quayside): 25 tons.
Mounted with 5,000 litre prehensile scoop: 6 tons excluding weight of scoop with 20 m. jib.

3. One P.P.M. 23.09 mobile crane (telescope).

Carrying capacity with 4 m. jib: 15.2 tons. Lift height 14.5 m.
Carrying capacity with 6 m. jib: 8.7 tons. Lift height 20.0 m.
Carrying capacity with 15 m. jib: 2.3 tons. Lift height 21.5 m.

4. One 12-ton 14/25 tons gantry rocker crane.

Lift height above trails 25 m. in hook operation.
Carrying capacity with 28 m. jib (18.5 m. from quayside): 14 tons.
Carrying capacity with 18 m. jib (14.5 m. from quayside): 25 tons.
Mounted with 6,000 litre prehensile scoop: 7 tons excluding weight of scoop with 28 m. jib (18.5 m. from quayside).

Also see "Berthing".

TANKERS: See "Section B".

MEDICAL: Hospital and doctors available.

DENSITY: 1011.

FRESH WATER: Available, supplied from shore by hose, about 15 t.p.h. 25 t.p.h. in Oil Harbour.

FUEL: All grades available, 24 hours ETA required by truck or barge (Statoil, BP).

FIRE PRECAUTIONS: No smoking allowed.

CONSULS: Norway: Mr. Jorgen Moller, Consul. Tel: (53) 51.19.01.

Sweden: Mr. H. Meredin Petersen, Vice-Consul. Tel: (53) 51.00.51.

REPAIRS: All types of repairs available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Carried out by crew.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: All facilities exist.

AIRPORT: Nearest at Copenhagen about 80 miles from Kalundborg. Served by regular airlines.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Easter Thursday; Good Friday; Easter Monday; Ascension Day; 1st May; Whit Monday; Prayer Day; 5th June; Christmas Day; 2nd Christmas Day. No work can be carried out.

POLICE/AMBULANCE/FIRE: Police (53) 51.14.48. Hospital: (53) 51.10.01.

BANK: Den Danske Bank, Kordilgade 18, DK – 4400 Kalundborg. Tel: (53) 51.08.00. Open 9.30 a.m. – 4.00 p.m. (closed Saturday and Sunday).

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

SHIP SUPPLY SERVICES: Schierbeck's Supply Service, Njalsgade 21, 2300 Copenhagen S. Tel: 31-57 00 66 (day and night). Cables: Schierbeck Copenhagen. Telex: 31143. Maximum cargo 8 and 40 tons. Maximum 12 passengers.

Kalundborg Supply Service, Ulshojvej 25, 4400 Kalundborg. Tel: 53-51 20 42 and 51 69 17. Maximum cargo 10 tons. Maximum 12 passengers.

Service: 24 hours.

Rendezvous position for deep draft vessels:
Lat. 55° 43.5′ N. Long. 10° 47.8′ E.

Notice: 6 hours' notice required through Agent.

Supply vessel: "Kalundborg Supply" is an ultra modern supply boat equipped to the standards approved by the Danish Government Inspection of Ships.

She was built and delivered in 1982 and has 2×150 h.p. engines with twin screw which delivers a service speed of 16.5 knots. Her loading capacity is 10 tons with a deck space of 5 m.× 3 m.

Wulff's Eftf. I/S Skibshandel, 8 Skibbrogade, DK-4400 Kalundborg. *Tel:* (53) 510345. After office hours (53) 513706 and (53) 508720. *Telex:* 44359. *Cable Address:* Wulffsef Kalundborg Territory: Kalundborg, Kalundborg Roads, Great Belt and Stigsnaes. Can also deliver provision, bonded stores, deck and engine stores.

DELAYS: Due to ice between 15th December and 31st March.

AUTHORITY: Kalundborg Port Authority, P.O. Box 50, Radhuset, DK – 4400 Kalundborg, Denmark. *Tel:* Harbour Board (53) 51.33.11. Harbour Master (53) 51.01.88. *FAX:* (53) 510615.

(B) STATOIL A/S OIL TERMINAL:

LOCATION: Statoil A/S's refinery is situated at the bottom of Kalundborg Fjord in the island of Zealand, at Lat. 55° 40.6′ N., Long. 11° 5.5′ E. Largest chart of Kalundborg Fjord: B.A. No. 2596/D.A. No. 145.

DOCUMENTS: The following documents are required on arrival and for clearance:

Ship's Registration.
Load-line Certificate.
Safety, Radio and Telephony Certificates.
Safety Equipment Certificate.
Derat Certificate.
Crew List.
Construction Certificate.
Tobacco and Spirits List.
Oil Pollution Certificate.
B/L (if carrying cargo).
Certificate of Origin (T2L.EUR1).

In addition, a list of tobacco and spirits must be presented to the Customs service, showing the ship's and crew's supply on arrival.

PILOTAGE: For vessels over 5,000 d.w.t., a Harbour Pilot must always be used. In case of special reasons, an exemption from this rule can be granted by the Pier Master.

A Harbour Pilot must be used for vessels under 5,000 d.w.t. in those cases where the Master of the vessel in question calls at the pier for the first time as Master of the ship.

ANCHORAGE: The anchorage is 4 – 5 nautical miles W.N.W. of the Oil Pier. Closer information concerning the anchorage will be given by the Pilot.

RESTRICTIONS: The pier is open to navigation day and night, apart from restrictions under special weather conditions.

Navigation Restrictions: The harbour is closed to traffic when the wind force is over 23 m./sec. (Force 9), or when the visibility is less than one ship's length.

Pier A and B: If the wind direction is between S.W. and N.N.W., and the wind force is between 15 m./sec. (Force 7) and 23 m./sec. (force 9), Pilot and tug must be used. An exemption from this rule can be given only in special cases.

Pier C: If the wind direction is between S.W. and North, and the speed is between 15 m./sec. (Force 7) and 23 m./sec. (Force 9), then Pilot and tug must be used. Only in special cases can there be granted exemptions from this rule.

MAX. SIZE: See "Berthing".

HEALTH: See "Section A".

TUGS: Tugs are to be ordered through the Agent according to the scheme below. The minimum requirements for tug assistance under normal weather conditions (wind force below 10 m./sec.) are as follows:

	Vessel's Size (k.d.w.t.)	*Number of Tugs*	*Total Min. h.p.*	*Min. Bollard Pull* (tonnes)
Pier A	10-16	1	2,000	18
Arrival	16-26	2	3,500	36
	26-56	3	5,000	75
	56-70	3	7,500	85
	70-90	4	9,500	120
	90-120	4	11,000	130
Pier A	10-16	1	1,800	17
Departure	16-56	2	3,500	36
	56-120	2	5,000	60
Pier B	10-16	1	2,000	18
Arr./Dep.	16-	2	3,500	36

For vessels over 16 k.d.w.t. equipped with bow thruster the number of tugs is reduced by 1, however, by not more than 1,500 h.p.

If the wind force exceeds 10 m./sec. then with due regard to the expected weather situation for the area, the Shipmaster, the Pilot of the watch and the Refinery must come to an agreement on whether the vessel shall wait for a weather improvement, or whether the tugboat capacity shall be increased.

Mooring Boats: Mooring boats and men must be used, and are available from Kalundborg Boat Service.

Speed: Ships, which call at the pier without tugboat assistance, must reduce their speed to an absolute minimum before passing the outer dolphins. Prior to this, a realistic astern movement must have been made in order to ensure that the reversing functions satisfactorily.

BERTHING:

PIER A:

Max.vessel size 120,000 d.w.t.
Max.vessel LOA – 262 m. (860 ft.).
Max.freeboard 46 ft.

Max.draft for vessels up to 70,000 d.w.t. 12.50 m. (41 ft.) in brackish water at normal water level.

Max. draft for vessels over 70,000 d.w.t. 12.19 m. (40 ft.) in brackish water at normal water level.

Discharge of crude oil takes place via 2×12 in. cargo hoses fitted with 12 in. ASA flanges for a 30 in. pipe-line to the Refinery. The 30 in. crude oil line to the Refinery is about 2 km. long. Discharge rate for crude oil is about 5,500 cu.m.p.h. at maximum pressure. Max. loading/discharge pressure on the product and crude oil line is 7 bar.

During discharging through the crude oil line, the line pressure will be monitored at the Pier Office.

The following products are available at Pier A:

JP1, JP8	loading/discharge	6 in. ASA flange
Naphtha	loading/discharge	6 in. ASA flange
Regular gasoline	loading	6 in. ASA flange
Premium gasoline	loading	6 in. ASA flange
Autodiesel	loading/discharge	6 in. ASA flange
Gas oil	loading/discharge	6 in. ASA flange
Marine gas oil/motor gas oil	bunkering	
Various fuel oil grades	loading/discharge	2×6 in. ASA flange

PIER B:

Max.vessel size 16,000 d.w.t.
Max.vessel LOA 171 m. (560 ft.).
Max.draft 10.06 m. (33 ft.) in brackish water at normal water level.
Max.loading/discharge pressure on crude oil and product lines is 7 bar.

The following products are available at Pier B:

JP1, JP8	loading/discharge	6 in. ASA flange
Naphtha	loading/discharge	6 in. ASA flange
Regular gasoline	loading	6 in. ASA flange
Premium gasoline	loading	6 in. ASA flange
Autodiesel	loading/discharge	6 in. ASA flange
Gas oil	loading/discharge	6 in. ASA flange
Marine diesel/motor diesel	bunkering	
Marine gas oil/motor gas oil	bunkering	
Various fuel grades	loading/discharge	6 in. ASA flange
Crude oil	discharge	6 in. ASA flange

PIER C:
Max.vessel size 5,000 d.w.t.
Max.vessel LOA 110 m. (360 ft.).
Max.draft 6.4 m. (21 ft.) in brackish water at normal water level.
Max.loading/discharge pressure on the product line is 7 bar, however, max. pressure on the LPG system is 19 bar.

The following products are available at Pier C:

Regular gasoline	loading	6 in. ASA flange
Premium gasoline	loading	6 in. ASA flange
Autodiesel	loading/discharge	6 in. ASA flange
Gas oil	loading/discharge	6 in. ASA flange
Marine diesel	bunkering	
Marine gas oil/motor gas oil	bunkering	
HFO	loading	6 in. ASA flange
Asphalt	loading	6 in. ASA flange
LPG	loading/discharge	4 in. ASA flange
Crude oil	discharge	6 in. ASA flange

RADIO: *Arrival Advice:* For crude and ocean-going vessels the Master is requested, through the ship's Agent, to inform the Refinery of the ETA 72 hours before arrival, and again 24 hours before arrival.

For vessels which operate in Northern waters, ETA is to be given 24 hours before arrival. For local traffic, ETA is to be given on departure for Kalundborg. If there should be changes in ETA, in excess of 2 hours, this has to be reported to the Refinery via the Agent or over VHF.

VHF: Calls to the pier are made on VHF Channel 16. The working frequencies of the pier are Channels 9 and 12.

About 5 nautical miles before arrival, the pier is called on VHF, and the vessel informs the Pier Foreman of the precise time of arrival.

CARGO HANDLING: On any receipt of cargo, a representative of Statoil A/S will come on board on arrival of the ship, and together with the ship's Chief Officer make a complete cargo calculation, and also take out an average sample of all the ship's tanks intended for Statoil A/S.

Measurement of ullage will be made to the nearest 0.125 in. or 1 mm.

Temperature measurement will be made electronically to the nearest 0.25°C of an average measurement of top, middle and bottom of all cargo tanks' content designated for Statoil A/S.

Any measurement of free water on arrival, and also Remaining On Board (ROB) after discharging, will be corrected for possible trim.

If the quantity of ROB is more than 0.1% of the B/L, samples will be taken of the ship's tanks that contain relatively large ROB, for later reference, but in this connection it is important to point out that Statoil expect that the ship does its utmost to drain both ship's tanks and pipe systems satisfactorily.

If the ship is not furnished with a satisfactory "Vessel Experience Factor", then this is calculated in concert with a Representative of Statoil A/S, and this factor is used for cargo calculation. About 1 hour after finishing the discharge, a Representative of Statoil A/S will come on board and present a preliminary statement of the discharged quantity, as compared with B/L and sea transport.

The following shipping documents are to be handed over to Statoil A/S:
Tank Condition Certificate – Prior Loading.
Bill of Lading.
Quantity Certificate (Intake Certificate/Shoreside Measurement).
Quality Certificate (Laboratory Report of Tests).
Copy of any Protest issued to Loading Terminal.
Vessel Ullage Report – Loading/Discharging.
Dry Certificate or Post Discharge Vessel Ullage Report
2 Sealed Samples from Loading Port.

Static Electricity: Some of the oil products, which are shipped through the terminal, have poor conductivity, and therefore accumulate static electricity under certain conditions.

The electrostatic generation arises especially during flow in the pipe system at start of loading, as water and rust particles in pipes and tank bottom are stirred up. Turbulence and "splashing" are also a contributing cause. It is therefore necessary to observe special measures and precautions.

Handling of Statically Accumulating Products:

The following statically accumulating products are shipped at the pier:
Regular gasoline. Naphtha. Gas oil.
Premium gasoline. Jet fuel. Diesel oil.

Loading speed: If the ship is gas-free on arrival, the loading speed will normally be about 500 cu.m.p.h. It is a condition that the product to be loaded can meet the requirements of the scheme (see "Rules").

If the ship's tanks are kept inerted during loading, then static precautions are not necessary.

The following table can be used for calculating the flow velocity with different pipe-line dimensions:

Pipe Diameter	*Flow Velocity*
80 mm./ 2 in.	16 cu.m.p.h./m. per sec.
100 mm./ 4 in.	29 cu.m.p.h./m. per sec.
150 mm./ 6 in.	65 cu.m.p.h./m. per sec.
200 mm./ 8 in.	116 cu.m.p.h./m. per sec.
250 mm./10 in.	182 cu.m.p.h./m. per sec.
305 mm./12 in.	262 cu.m.p.h./m. per sec.

During loading and within 30 minutes after finishing loading, no conductive objects, such as thermometers, sounding tapes, etc., must be lowered into the tank, or be contained in the tanks.

It shall be noted that liners for thermometers and samplers shall be of a natural product; synthetic fibres must not be used.

After a period of 30 minutes, metallic equipment may be used for sounding, dipping, etc., but it is important that the equipment is grounded to the ship before it is lowered into the tanks, and that it remains grounded until it is removed from the tank hatch.

Firmly installed ullage measuring devices do not represent a static danger, provided that the float has conductive connection to the ship's deck, and metal guide wires are intact. Measurements and sampling with non-conducting equipment without metal parts are possible at any time. Measurements in sounding pipes are possible at any time, provided that the sounding pipe is below the liquid surface.

Rules for Handling Static Products: (With ullage measuring, sampling, temperature measuring, loading and discharge).

		Are static measures necessary?		
Product	Remarks	Tanks Inerted	Gas-free	Not Gas-free
Gas oil	Temperature lower than 45°C	No	No	Yes
Gas oil	Temperature higher than 45°C	No	Yes	Yes
Gasoline, Naphtha, Jet Fuel, Kero	Flashpoint below 60°C	No	Yes	Yes

LPG:

Propane (C_3H_8):	Colourless gas or liquid, almost odourless. Flash point: Less than –18°C. Explosive limit: 2% – 10% Health limit: 1,000 p.p.m.
Butane (C_4H_{10}):	Colourless liquid or white crystal-like dry matter. Flash point: Less than 0°C. Explosive limit: 1.5% – 9% Health limit: Not accessible

If this happens	*Do this*
Fire	Shut off the gas inlet, and use powder, CO_2 or other chemical extinguishing medium. Cool the tanks with sprinkler equipment or water fog.
Liquid in the eyes	Rinse the eyes carefully with clean water for at least 15 minutes. Go to see a doctor as soon as possible.
Liquid on the skin	Treat the exposed area with hot water until it is thawed. Go to see a doctor as soon as possible.
Inhaled vapour	Go out into the fresh air at once. If necessary, start resuscitation by "mouth-to-mouth" or "mouth-to-nose" method.
Spillage	Avoid contact with the liquid which will quickly evaporate. Avoid ignition. Contact the pier immediately if larger spillage should arise.

Working Procedure for LPG-Arm:

1. On arrival, attempts are to be made to position the ship in such a way that the Loading Arm gets the greatest possible freedom of motion when mounted on the manifold.
2. During cargo handling, the ship shall always lie within the operating range of the Loading Arm.
3. If one of the Loading Arm's limits is reached, an alarm consisting of a yellow quick flash signal, on a mast behind the Loading Arm will be activated. At the same time, an alarm will be activated at the pier office.
4. When the loading/discharging operation is complete, and the Loading Arm is drained empty, this is purged with nitrogen from ashore.
5. In case of a critical situation, the shore valve is closed by using the yellow actuator box placed onboard.

There is no danger connected with the closing of this valve, as there are expansion systems at the pier.

IMPORTANT: The Loading Arm must only be operated when it is empty of liquid, as otherwise it will be out of balance.

Maximum operating pressure of the LPG-plant is 19 bar. If the maximum operating pressure is exceeded, an alarm bell will be activated at Pier C.

BALLAST: Ballast shall be discharged to a ballast tank ashore, with the exception of pure ballast water from clean permanent ballast tanks.

The ballast tank ashore can hold 4,500 cu.m.; there is usually about 2,000 cu.m. available.

It is important that all ships, which are to pump ballast water, as early as possible inform the Pier Foreman over VHF about the quantity of ballast water to be pumped ashore. Tankers of 7,000 d.w.t. and more that wish to use the ballast facilities, shall as early as possible advise the pier via the ship's Agent of the quantity of ballast/purified water which can be expected on arrival, as well as of the last cargo type.

The Refinery will only accept ballast water from ship's tanks, which on the previous voyage have contained mineral oil products. Ballast water, containing any kind of chemicals, cannot be accepted. While the ship is alongside the pier, all sea and overboard discharge valves in connection with the cargo system, must be kept closed and sealed. The sealing must only be broken in concert with the Pier Foreman.

On taking in ballast alongside the pier, sea valves must not be opened until the pump is working, and the other valves are open. Ballast tanks must not be filled higher than ullage 7 ft.

It is important in this connection to emphasise the danger of ballasting in tanks not free from gas. Watch out for gas concentrations both on the ship and at the pier, and reduce the ballast intake, if necessary.

Tank Inspection: Prior to loading, the tanks are to be inspected for water impurities, and foreign matter by the pier personnel.

During the inspection, the loading valves must remain open so that there is no liquid in the pipes.

The inspection is to be done from the deck through the hatches or sounding holes by using torches or mirror.

The pier personnel are not allowed to enter ship's tanks without special permission.

Before entering a ship's tank, a permit must be obtained from the Pier Master or the Shift Supervisor, and only after having made sure personally and in concert with the Ship's Officer on duty that the situation is such that entering the tank is justifiable.

Inert Gas System and Tank Cleaning with Crude Oil: The Refinery does not make additional demands on Inert Gas Systems and tank cleaning with crude oil than those described in international regulations (IMO and VIM 020-040-005.

It is the Master's direct responsibility to ensure that the inert gas plant is operated according to instructions, and that tank cleaning with crude oil is carried out safely and efficiently, and that loading officers, who are responsible for the cargo handling, are familiar with all rules and procedures for controlling the system.

The Refinery will normally require a 100% COW of all cargo tanks designated for discharging in Kalundborg, in order to maximise the receiving quantity.

On arrival of the ship, a Pollution/Performance Inspector will go on board, and remain on board throughout the ship's stay.

The Inspector's task will be to assist the ship in all aspects, which can contribute to a safe and good operation alongside the pier, and to supervise that the stay proceeds within the existing safety/pollution limits, including a thorough check-up on tank cleaning with crude oil and the inert gas plant, and he will especially watch closely the percentage of oxygen in the ship's tanks, which at no time must exceed 8%, and that the inert gas plant always maintains a positive pressure in the cargo tanks during discharging.

If the ship is unable to maintain a positive pressure in the cargo tanks, or cannot maintain less than 8% oxygen in the tank atmosphere, the Shipmaster will be requested to shift to anchor until the inert gas plant is operative again, allowing for the risk of self-ignitable iron sulphides.

Prior to cargo handling, the responsible officer will be requested in concert with the Pollution/Performance Inspector, or the Pier Foreman, to fill in Safety Check Lists and a Check List for COW so that the ship as well as the Refinery may be sure that cargo handling can be commenced within the existing minimum safety regulations for the operation.

MEDICAL: Medical and dental treatment are arranged by the ship's Agent.

FRESH WATER: The ship can be provided with fresh water at a delivery rate of approximately 25 t.p.h.

FUEL: Bunkers and lubricating oils can be supplied through the Agent. Orders should be given in good time through the Agent before arrival.

TELEPHONE: A pay phone for international calls is installed in the Pier Office building. Furthermore, a mobile telephone plant is set up with the Master. This gives access to the Refinery and the Danish authorities in case of an emergency. The telephone also gives access to international calls.

SAFETY: *Mooring:* The ship shall be moored satisfactorily, and the ropes held taut during the entire stay at the pier. Steel wires must not be used for mooring unless they have rope tails and these are fastened on quick-release hooks. Wires and fibre ropes shall not be used together in the same direction.

Anchors not being used shall be secured.

Fire Wires: Fire wires shall be placed correctly fore and aft. Wire eyes shall be placed directly below the waterline, and adjusted regularly during cargo handling. The ends shall be properly secured to the ship's bollards, and have sufficient slack on deck. The slack of these wires shall be so secured that it can easily be broken by tugboats.

Access between Ship and Pier: Immediately after completing mooring, the ship shall land a gangway ashore. The landing may consist of an adequately mounted gangway or accommodation ladder.

At Pier A, larger ships have a gangway from the shore. Special consideration has to be given to the difference in height between ship and pier which may grow large.

Emergency escape: In connection with the normal gangway/accommodation ladder described above, a safe and fast emergency escape possibility shall be readily accessible on both ship and pier.

On the ship, this can consist of a lifeboat ready for immediate use, placed aft.

GENERAL: *Duc d'Alba:* Ships must only moor at the pier, and not at the duc d'Alba.

Traffic at the pier: There is lively ferry traffic in the harbour. About 15 times in 24 hours, a ferry passes by the pier at a distance of 100 m. – 300 m. from the pier head.

Dry cargo ships up to 10,000 d.w.t. call at Kalundborg Harbour at a distance of approximately 500 m. from the pier head. Sailing is done at reduced speed. Tankers and bulk carriers call at Asnaesvaerket in varying sizes up to about 160,000 d.w.t.

Sailing: As soon as loading/discharge is finished, all ships have to leave the pier on request.

Lightening: According to Order No. 472 of 21st September, 1978, by the Ministry of Commerce, lightening of tankers must only take place in position 55° 42.0′ N., 10° 59.8′ E., and within a radius of 0.3 nautical miles. When tankers lighten in Kalundborg Fjord, other vessels must pass the area with caution and at slow speed.

Lay-time: To expedite the turn-round of vessels, the Master is requested to co-operate with the personnel ashore in order to minimise the lay-time. Any delay arising, and which can be expected to drag on, must be reported to the Pier Office so that it can contribute to solving possible problems.

Portable Receiver: On arrival of the ship, the Officer on duty is handed a portable receiver. This radio must be turned on, and be carried during the entire stay at the pier. The radio is to be tested at regular intervals.

Lighters and Boats with Supplies: Lighters and boats with supplies are not allowed to lie alongside the quay or ship's side, unless they are properly equipped to work in a possible oil-containing atmosphere, and have permission respectively from the ship's Master and the Pier Master or his deputy.

Tide and Current: The difference between the average high tide and average low tide is about 0.3 m. A gale from N.W. can give a rise of 1.3 m. above the daily level, while a gale from S.E. can give a fall of 0.9 m. below the daily level. There is almost no current at the pier.

Winds: The predominant wind direction is West, but most of the gales come from N.W. Wind velocities which exceed 15 m./sec. (force 7) usually occur for about 20 hours a year from S.W., about 15 hours from West, 40 hours from N.W. and 25 hours from North.

Storage Supplies: For quantities exceeding 5 tons, supplies shall be arranged by sea via a special lighter (this rule does not apply to luboil supplies).

Repair of Nautical Equipment and Instruments: Repairs can be arranged through the Agent. It is recommended that the Agent receives such requests in good time.

Sanitary Measures: Standard regulations for Danish harbours regarding sanitary conditions apply at the Oil Pier. Waste must not be thrown overboard. Special waste containers are placed at the pier. Special consideration to avoid pollution of the pier from flushing of toilet, bathroom, etc., must be taken. If the ship wishes to pump sewage ashore, facilities are available at the pier, but a minimum notice of 6 hours is required. This is given via the Agent.

Mail: The Agent delivers and receives mail from the ship.

Visitors to the Ships: Only persons doing business may come to the pier. Visitors, such as guests of the Master, can get permission to come on board, on condition that the Master has made a request to the Pier Office. Further details on permission for visitors are available on application to the Pier Office.

On arrival of the ship, magnetic cards are handed out which give access to the gate into the pier area. It is the Master's responsibility together with the ship's Agent to ensure that cards are handed out to relevant members of the crew.

Oil Spillage: Attention is drawn to the fact that there have been bad experiences with regard to oil spillage, caused by opening sea valves before having started the ballast pumps, and by tanks overflowing during loading. Very small quantities of oil that get into the water have to be removed and this can become rather costly.

In order to spare the shipping company unnecessary expenses, the responsible persons are enjoined to have their attention directed to all conditions that can cause even small oil spillages. Oil spillage comes under the authorities' sphere, and that matters of dispute as to guilt can be referred to the police.

Air Pollution: The Master must take precautions against emitting large quantities of smoke from the funnel. Use of soot blowers whilst the ship is in port is not allowed.

Inspection: The Pier Master or his deputy must at any time be admitted to all ships to see that all directions are complied with.

Agent: Immediately after arrival of the ship, the ship's Agent goes on board so that the Master can inform him of the ship's necessities. Ships which are requested to anchor outside the harbour to wait for mooring space can possibly get an Agent on board at the anchorage. When the ship lies at the pier, telegrams and radiograms are to be delivered ashore. Contact the Agent for further information, and the Agent's representative for further dispatch via the facilities.

OPERATOR: Statoil A/S, Refinery, DK-4400 Kalundborg, Denmark. *Tel:* (53) 511900. *Telex:* 44343. *Cables:* Stara. *FAX:* (53) 516298, 517081. *Contact:* M. H. Thyssen, Pier Master.

KOGE: 55.27 N. 12.12 E. (See Plan)

DOCUMENTS: For Customs, vessels require:

Vessels of 150 ton and upwards, Load Line Cert.

Vessels of 300 ton and upwards, Load Line Cert., Radio Safety Cert.

Vessels of 500 ton and upwards, Load Line Cert., Radio Safety Cert., Equipment Safety Cert.

For all passenger vessels also Safety Cert.

For stevedores vessel shall have Bills of Lading, Manifests and Loading plans.

PILOTAGE: Pilotage compulsory for all tankers and vessels over 300 g.r.t. or 750 d.w.t. Vessel to call Pilot 2 hours before arrival. VHF on pilot station and pilot boat. Watch on Channel 16. Normal international light and sound signals used. Pilot boat located about 2 nautical miles East of port. No difference in bad weather.

ANCHORAGES: 1–2 nautical miles East of port with good bottom conditions.

RESTRICTIONS: See "General" before first port.

MAX. SIZE: Max.permissible length 160 m.; max.permissible draft 7 m.

HEALTH: Normal quarantine rules.

RADIO: Lyngby Radio or any other radio station in Denmark.

TUGS: 1 tug of 300 h.p. and 1 tug of 600 h.p. available. Additional tugs can be obtained from Copenhagen.

CRANES: *Port Authority:* 1 × 25 ton and 1 × 36 ton mobile cranes with hook, grab and container equipment.

Private: 1 × 12 ton mobile crane and 2 coal cranes.

STEVEDORES: Normal ETA and description of vessel required.

MEDICAL: Doctor and hospital assistance available; other facilities to be obtained from Copenhagen.

TANKERS: Only 1 tanker berth, no specific requirements. LPG also handled.

FRESH WATER: Water from wharf.

FUEL: Products are delivered in Koge, others from Copenhagen.

FIRE PRECAUTIONS: Normal fire precautions. Tankers cannot request to go to berth before loading/discharging. 2 fire watchmen from the fire department.

CONSULS: Nearest at Copenhagen.

REPAIRS: Small repairs.

DRY DOCKS: 2 small slipways for vessels up to 200 tons.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: See "General" before first port.

REPATRIATION: No facilities exist.

AIRPORT: Nearest in Kastrup Lufthavn; Copenhagen about 40 km. away.

TIME: GMT plus 1 hour.

HOLIDAYS: Normal Danish holidays, change from year to year. Normally work can be arranged.

POLICE/AMBULANCE/FIRE: Ambulance and Fire (53) 653300; Police 651448 or use alarm 000.
TELEPHONE: No arrangements exist for placing on board.
WIND: Wind between N.E. and S.E. can give up to 1.6 m. HW and West wind up to 0.9 m. LW.
SERVICES: Pilot makes compass adjustments.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
GENERAL: The North Port of Koge, "Nordhavn", Lat. 55° 27′ 4″ N., Long. 12° 11′ 7″ E. Length of quayage 300 m. Depth 5.5 m.
AUTHORITY: Koge Havnekontor, Havnen 39, 4600 Koege. *Tel:* 53-650113. *Contact:* Harbour Master.

KOLDING: 55.29 N. 09.30 E. (See Plan)

DOCUMENTS:
3 copies Crew List.
3 copies Crew Declaration (Tobacco, Spirits, etc.).
1 copy Tobacco List.
1 copy Stores List.
PILOTAGE: Pilot station in Skaerbaek at mouth of Kolding Fjord. Tel. (75) 564425. VHF Channel 16 (Working on Channels 12 and 13) when vessels are expected.

Harbour Office to be advised of ETA/ETD one hour in advance during office hours.

Pilot also available at Assens Pilot Station (55° 16′ N., 09° 45′ E.). 2 hours notice required. VHF Channel 16 or Tel. (75) 564425.
ANCHORAGES: At Skaerbaek.
RESTRICTIONS: See "General" before first port. Max. speed in port is 4 knots.
MAX. SIZE: Maximum permissible length 200 m. Max. beam 25 m. Max. draft 7.0 m.
RADIO: Lyngby Radio.
VHF: During office hours the Harbour Office is on Channel 16, working on Channels 12 and 13.
TUGS: Available.

REPAIRS: Only small repairs can be carried out.
GANGWAY/DECK WATCHMEN: Gangway watchman required.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
AIRPORT: Distance from Billund Airport 40 km. Billund Airport is served by regular airlines.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (March – September).
HOLIDAYS: See "Copenhagen".
POLICE/AMBULANCE/FIRE: Police, Tel. (75) 522800; Ambulance, Tel. (75) 522222; Fire, Tel. (75) 522222, Help, Tel. 000.
TELEPHONES: Telephones obtainable on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
GENERAL: *Charts:* Danish Charts No. 156 and 158. British Admiralty Chart No. 3465.
Garbage: All waste to be placed in containers on the quay.
Cleaning: The washing of decks and cleaning of holds and tanks is forbidden.
AUTHORITY: Havnemesterens Kontor, Jens Holmsvej 1, 6000 Kolding. *Tel:* (75)-520594 (24 hour relay). *Contact:* Per Bendix Jensen, Harbour Master.

KORSOR: 55.20 N. 11.08 E. (See Plan)

DOCUMENTS: See "Copenhagen".
PILOTAGE: Not compulsory. ETA and request for Pilot must be made to Belt Pilot 4 hours before arrival via VHF Channel 16.
ANCHORAGES: 0.5 miles S.W. of buoy "Nygrund". It is prohibited to anchor inside the outer pier.
MAX. SIZE: LOA 225 m. and 7.5 m. draft. Tidal variation 0.3 m.
RADIO: Lyngby Radio OXZ.
VHF: Korsor Harbour on Channels 16, 13 and 12. Tugs are worked on Channel 12.
RADAR: Pilot boats are radar equipped. There is no Port Control Radar.
TUGS: Available. 24 hours notice to Agents, via Lyngby Radio, must be given.
CRANES: 1 mobile crane of 24 tons, 4 cranes with grabs. Further equipment may be obtained at short notice.
BULK CARGO FACILITIES: Grain elevator with three pneumatic dischargers.
SPECIALISED CARGO-HANDLING FACILITIES: At present, 2 berths for Ro/Ro traffic.
BRIDGES: There are bridges between Gl.Havn and Inderhavn. Max. LOA 100 m., beam 25 m., draft 5.7 m., allowed to pass under these bridges.
STEVEDORES: Working hours 0700 – 1600 hrs. (1 shift), Monday to Friday. Night shifts by arrangement.
MEDICAL: Hospital at Slagelse, 15 km. away.
FRESH WATER: Available.
FUEL: Available by tank truck, if sufficient notice given.
CONSULS: Norwegian, German (F.R.), Swedish and Finnish.
DRY DOCKS: None. One slipway of 600 tons displacement.
SERVICES: Compass adjuster available.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Opening/closing normally done by ship's crew.
AIRPORT: Nearest at Copenhagen, 1 hour 10 minutes by rail.
TIME: GMT plus 1 hour. Summertime GMT plus 2 hours from March to September.
HOLIDAYS: Usual Danish holidays.
GENERAL:
Chart: Danish Chart No. 143, Storebaelt between Langeland - Sprogoe, covers this port, which lies 3 miles East of Route T.
Ferry Traffic: Attention is drawn to the intense ferry traffic between Korsor and Nyborg.
AUTHORITY: Korsor Port Authority, Amerikakajen 2, DK4220, Korsor. *Tel:* 03-570085. *Contact:* A. Skjold Hansen, Harbour Master.

KYNDBY (Kyndby Power Station): 55.49 N. 11.53 E. (See Plan)

PORT LIMITS: Vessel is considered to be an "arrived ship" when alongside the quay or at anchorage waiting for berth.
DOCUMENTS:
Ship's Register.
Load Line Certificate.
Radio Safety Certificate.
Safety Equipment Certificate.
Derat Certificate or exemption.
2 Crew Lists.
Cargo Manifest or Bills of Lading.
Construction Certificate.
Certificate of Insurance or other financial security in respect of civil liabilities for oil pollution damage.
Tobacco and Spirit List, covering all goods on board belonging to crew, officers, Master, ship's bar or passengers.
PILOTAGE: Pilotage not compulsory. Pilot boards at the entrance of Isefjord and takes the vessel to the port and berths her. Pilots listening on VHF Channel 16.

Pilots to be ordered by ETA telegram to Agent at least 24 hours in advance.
ANCHORAGES: Larger vessels anchor in 15 m. – 20 m. of water either in the Isefjord or outside the entrance to the Isefjord. Holding ground good.
RESTRICTIONS: Arrival only by daylight. No tide under normal conditions. Vessel's draft entering Isefjord not to exceed 22 ft.

Also see "General" before first port.
HEALTH: No special restrictions as to Free Pratique, which will be granted by authorities on arrival. Suspected disease or fever must be telegraphed to Agents before arrival.
RADIO: Lyngby Radio.
VHF: Channel 16 to pilot station (also Skaw Pilot).

RADAR: No installation.
TUGS: Available. Join at Isefjord, outside the entrance to the Port of Kyndby, ship's lines to be used.
BERTHING: One Oil berth: Length 570 ft., draft 21 ft. 6 in.
One Coal berth: 530 ft. long, draft 22 ft. Water brackish.
CRANES: As berth private, only handling own coal cargoes – 3 cranes available.
STEVEDORES: Private stevedores to be ordered through receivers – coal discharge – rate per crane per hour: about 200 tons.
MEDICAL: All medical and hospital facilities available, no advance notice necessary.
TANKERS: 2 discharge hoses, one of 12 in. and one of 16 in.
No slop facilities.
One tanker berth, safe arrival draft: 21 ft. 6 in. Average discharge rate: 1,000 t.p.h.
DENSITY: Brackish.
FRESH WATER: By hose from quay – 10 t.p.h., D. Kr. 2.50 per ton.
FUEL: Available from all bigger companies by trucks or barge from Copenhagen – about 40 miles from Kyndby.
FIRE PRECAUTIONS: No specific precautions.
CONSULS: Nearest Copenhagen about 40 miles from Kyndby.
REPAIRS: All types of smaller repairs can be carried out.
DRY DOCKS: No dry dock available.
SURVEYORS: All large Classification Societies represented in Copenhagen about 40 miles from Kyndby.
GANGWAY/DECK WATCHMEN: Watchmen not necessary but available.
OPENING/CLOSING HATCHES: To be carried out by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
CARGO GEAR: Shore coal cranes.
REPATRIATION: Can be arranged normally via Copenhagen about 40 miles from Kyndby.
AIRPORT: About 40 miles to Airport in Copenhagen.
TIME: GMT plus 1 hour (from late September – late March). GMT plus 2 hours (from late March – late September).
HOLIDAYS: Saturday/Sunday normally no work, and further no work on holidays declared as official Danish holidays.
POLICE/AMBULANCE/FIRE: 0–0–0 all alarms.
TELEPHONES: No telephone connection on board.
SERVICES: No tank-cleaning facilities; all other services to ships can be arranged through specialists from Copenhagen.
SHORE LEAVE: No restrictions.
IDENTIFICATION: No shore passes necessary.
REGULATIONS: None.
DELAYS: None.
DEVELOPMENTS: None at the present time.
AUTHORITY: Private port owned by: IFV – Energi i/s, Strandvejen 102, DK–2900 Hellerup. *Tel:* 31-624141. *Telex:* 37500. *FAX:* 31-612888.
Local office: Kyndby Power Station, DK-3630 Jaegerspris, Denmark. *Tel:* 42-321101. *FAX:* 42-321166.

MASNEDOEVAERKET: 55.00 N. 11.53 E.

LOCATION: Masnedoevaerket is situated on the island of Masnedoe, which is connected to Sjaelland by a bridge 150 m. East of the harbour.
DOCUMENTS:

Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate or Exemption.
Bill of Lading.
Crew List.

Customs need a Tobacco and Spirit List, showing the vessel's and the crew's supply on arrival. Nearest Customs at Naestved.
PILOTAGE: Pilot boarding ground off Masnedo N.W. flak. Sea Pilots available from Spodsbjerg, Korsor or Gronsund.
APPROACHES: From West via Smalandsfarvandet depth of water 24 ft. From South East via Gronsund, max. draft permitted 16 ft. 6 in. From Pilot boarding ground, there is a buoyed channel, dredged to 7 m., with leading lights.
ANCHORAGES: Off the entrance channel.
MAX. SIZE: LOA 120 m., beam 25 m. and draft 6.8 m.
TUGS: Available on request, not normally used by vessels less than 4,500 d.w.t.
BERTHING: Power Station Quay 270 m. long, depth alongside 7 m.
CRANES: There are 2×7.5 ton travelling cranes and 1×100 ton crane. There will be no cranes available after January 1990.
BRIDGES: Storstromsbroen has a vertical clearance of 26 m. A new bridge was opened in 1985 across the Storstrom with a vertical clearance of 21 m. Power lines with 36 m. vertical clearance lie to the West of the harbour.
FRESH WATER: Available from hose on the quay.
FUEL: Available by tank truck.
REPAIRS: Minor repairs can be carried out at nearby machine shops.
AIRPORT: Copenhagen, 60 miles distant.
AUTHORITY: SEAS A/S., Tingvej 7, 4690, Haslev, Denmark. *Tel:* 45-56312700. *Telex:* 40234. *FAX:* 45-56315042. *Cables:* Seas. *Contact:* Peter Ramussen.
Masnedoevaerket, 4760 Vordingborg, Denmark. *Tel:* 45-53770777. *FAX:* 45-53777474. *Contact:* Leif Holst Hansen.

MIDDELFART: 55.30 N. 09.44 E. (See Plan)

DOCUMENTS: See "Copenhagen".
PILOTAGE: Not compulsory. Middelfart Pilot Station operates on Channel 16.
MAX. SIZE: 5,000 d.w.t. – 6,000 d.w.t., 6.5 m. draft.
TUGS: Available at short notice.
BERTHING: New Harbour: 2 quays, one of 190 m. length, depth 6.5 m., the other of 100 m. length, depth 5.7 m.
Old Harbour: 2 quays, one of 100 m. length, the other of 80 m. length, depth 6.5 m. at both quays. Ro-Ro ramp.
Private Wharves: A. C. Hansens Quay, length 90 m. max., draft 4.6 m. Open to public traffic.
Nordiske Kabel & Trpdfabrikkers Quay, max. length 100 m., depth 7 m.
CRANES: One 15 tonne mobile crane. One 3 tonne crane at A. C. Hansens Quay. Mobile cranes of all sizes available at short notice.
BULK CARGO FACILITIES: Cranes and forklifts of 2 – 15 tonnes. Crane at A. C. Hansens Quay for bulk stores.
STEVEDORES: Working hours: 0700 – 1600 (overtime possible).
Rates of Work: Bulk Cargo: 200 t.p.h. Iron, etc.: 180 t.ph.
MEDICAL: Local hospital available.
FRESH WATER: Available.
FUEL: All grades of fuels and lubricants available at short notice.
DRY DOCKS: One slip for vessels up to 100 tonnes.
CUSTOMS REGULATIONS: See "General" before first port.
AIRPORT: At Billund and Beldringe, both 30 km. away.
TELEPHONES: This service is available aboard ships at all berths by prior arrangement through the Agent. Standard rates apply.
AUTHORITY: Middelfart Havnekontor, Havnegade 79, DK-5550 Middelfart, Denmark. *Tel:* 09-410253. *Contact:* Mogens Jensen, Harbour Master. Office hours 1100 – 1200 hrs.
AGENT: Middelfart Shipping, Havnegade 18, DK-5500 Middelfart. Tel: 09-410072. Telex: 58240 "Miship DK". Cable: Midship.

NAESTVED: 55.14 N. 11.45 E. (See Plan)

DOCUMENTS: See "Kalundborg".
PILOTAGE: Compulsory between the entrance to Karrebaeksminde and Naestved for all ships over 150 g.r.t. VHF Channel 16. Tel. 53 – 727366 and 53 – 742397.
ANCHORAGES: 1 – 2 miles S.W. of head light in Karrebaeksminde in 10 m. – 12 m. depth.
RESTRICTIONS: Only navigable from half hour before sunrise to half hour after sunset, and according to tides. Also see "General" before first port.
Use of tug compulsory through bridge for vessels over 1,800 d.w.t.
MAX. SIZE: Max. length 100 m. Max. draft 5.60 m. with breadth 12.20 m. Max. breadth 14.40 m. with draft 4.80 m.
HEALTH: See "Kalundborg".
RADIO: Lyngby Radio. VHF Channel 16.
TUGS: M/S "Eno" 360 h.p. VHF. Ship's lines. Also see "Restrictions".
BERTHING: No berthing in Karrebaeksminde.
Naestved: 3 quays with lengths 365 m., 270 m. and 170 m., all with depth 6 m. New quay at Naestved has length 200 m. and depth 6.0 m.
BRIDGES: One in Karrebaeksminde, total width 22.0 m. with open bridge, free side height is 20.0 m. Also see "Restrictions".
MEDICAL: Hospital available.
FRESH WATER: Available from quay, 10 t.p.h.
FUEL: All grades. Deliveries by lorry only.
AIRPORT: Kastrup Airport, Copenhagen 90 km. away.
TIME: GMT plus 1 hour.
SHORE LEAVE: No restrictions.
AUTHORITY: Naestved Havnekontor, Toldbodgade 4, 4700 Naestved. *Tel:* 53 – 720056. *Contact:* E. Andersen, Harbour Master.

NAKSKOV: 54.50 N. 11.08 E. (See Plan)

DOCUMENTS:

Tonnage Certificate.
Load Line Certificate.
Valid Derat Certificate (renewal at Nakskov possible).
Crew Declaration.
3 Crew Lists.

PILOTAGE: At Albuen at the entrance of the firth. The pilot station named "Belt Pilot". VHF Channel 16. Notice of ETA to be given as early as possible and not later than 4 hours before arrival.
ANCHORAGES: Safe anchorage in port area for smaller vessels or outside on the Roads in Langelandsbaelt. The pilot station will advise best position depending on wind and current.
RESTRICTIONS: Sailing to and in the harbour at night-time with help of projector and with good visibility only. Also see "General" before first port.
MAX. SIZE: D.w.t.: Approx. 2,000 tons. Draft: 19 ft. Length: 660 ft. Breadth: 70 ft. Height: None – no bridges to pass.
RADIO: Lyngby Radio.
VHF: Operated by Harbour Office during daytime only on Channel 16.
Also communication via the pilot station on VHF Channel 16.
All movements to be reported to the Agent only.
TUGS: Tug available with 24 hours notice.

BERTHING: Protected from all winds. Depth up to 20 ft. 6 in. (6.3 m.) 7,500 ft. of quay. In the fairway leading up to the harbour there is a depth of 20 ft. 6 in. (6.3 m.), distance about 6 miles. Max. draft in Fairway 19 ft.

CARGO HANDLING FACILITIES: Tracks along the quays in connection with the railway station and all Danish Railways. Also good road connections.

3 grain silos: 4,000, 12,000 and 15,000 tons. 3 grain elevators loading rate 120 t.p.h., 80 t.p.h. and 50 t.p.h. respectively. 1 grain elevator discharging rate 40 t.p.h.

4 mobile belt conveyors loading up to 110 t.p.h.

2 mobile cranes (22 and 32 tons capacity) – also grab and polygrab.

3 forklifts 2.0 – 3.5 tons available. Up to 4.5 tons on request.

3 mini-loaders (Bobcats) for discharging of bulk cargoes.

BRIDGES: No bridges to pass. Airdraft unlimited.

STEVEDORES: Arranging gangs for work after noon, notice to be given to the stevedores latest 0900 hrs. For work in the morning, notice to be given to the stevedores the day before latest noon.

MEDICAL: Treatment all kinds possible, including hospital. Medical attention at dentist, eye and ear specialist normally requires 24 hours notice if possible.

DENSITY: Fresh water.

FRESH WATER: Available from quay or by truck.

FUEL: Available.

CONSULS: Dutch, Finnish, French, Norwegian and Swedish.

REPAIRS: Blacksmith and electrical workshops available to carry out some repairs on deck and engine.

DRY DOCKS: Shipyard provided with 2 dry docks up to 32,000 d.w.t., building slips up to 35,000 d.w.t. Cranes to lift up to 100 tons.

SURVEYORS: At present no surveyors at Nakskov. Must be ordered from Copenhagen.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Always carried out by crew.

CUSTOMS ALLOWANCES: 40 cigarettes or 40 grams tobacco, 0.25 litre spirits and 0.25 litre wine per man per day.

CARGO GEAR: Loading/discharging always effected by shore gear, unless otherwise agreed in C/P.

REPATRIATION: Facilities available.

AIRPORT: Small airport for taxi flights close to the port. About 160 km. to the nearest airport served by regular world-wide airlines.

TIME: GMT plus 1 hour. March-September, Summertime GMT plus 2 hours.

POLICE/AMBULANCE/FIRE: Police Tel: 921448. Ambulance Tel: 921744. Fire Tel: 923041. Emergency Tel: 000.

EMERGENCY CO-ORDINATION CENTRE: Soevaernets Operative Kommando (SOK), Aarhus. Call via Radio Stations Lyngby, Roenne, Skaw or Blaavand.

BANKS:

Lollands Bank A/S, DK-4900 Nakskov. Telex: 47542.
Den Danske Bank A/S, DK-4900 Nakskov. No telex.
Handelsbanken A/S, DK-4900 Nakskov. No telex.

STORING: See "Prelims".

1. Vessel can be stored by truck.
2. Trucks can proceed alongside ship.
3. Fork lift can be used.
4. Customs documents from supplier to be shown at the Customs House before loading the stores. In case of bonded stores the loading will be supervised by Customs Officer.

SHORE LEAVE: The crew are allowed ashore, but depending of nationality not allowed to leave the town without permission.

IDENTIFICATION CARDS: Seaman's Book is sufficient.

GENERAL: Provisions to be supplied from a supermarket. If bonded stores are required this has to be delivered by a ship Chandler at another port – transportation fee then to be paid – usually about DKR 300 – depending on distance and order given.

DELAYS: Normally no berthing delays.
DEVELOPMENTS: None.
AUTHORITY: Morsoe Kommune, Jernbanevej 7, 7900 Nykobing Mors. Tel: 07-721488. *Contact:* B. F. Nielsen, Harbour Master, Havnekontoret, 7900 Nykobing Mors. Tel: 07-720049.

ODENSE: 55.25 N. 10.23 E. (See Plan)

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Radio Safety Certificate.
Safety Equipment Certificate.
Derat Certificate or Exemption.
1 Crew List.
1 Passenger List.
1 Stowaway List.
1 Arms and Ammunition List.
1 Stores List.
1 Crew Personal Effects List.
1 Cargo Manifest or Bills of Lading.

PILOTAGE: Compulsory for merchant vessels as follows:
1. Vessels of and over 1,500 d.w.t.
2. All tankers carrying oil, petrol, LPG or dangerous liquid chemicals or with uncleaned tanks, which have last carried such cargoes.
3. Vessels of and over 100 d.w.t. which are not equipped with VHF.

Odense Pilot boards just North of light-buoy 2A outside of Gabet. In bad weather the Pilot will board inside of Gabet between light-buoys No. 2 and No. 4.
ETA: Send ETA message to Agent earliest possible and request for Pilot at least 6 hours in advance. Confirm ETA at the Fairway Buoy 1 hour prior to arrival.
ANCHORAGE: Vessels with a draft of 6.0 m. or more should anchor about 3 miles North of Gabet in depths of 10 m. – 14 m. (6 – 8 fathoms). The holding ground is good. Sheltered anchorage obtainable inside Gabet in depths of 4.0 m. – 7.5 m. (2 – 4 fathoms).
RESTRICTIONS: A 12 mile long entrance channel, maintained at a depth of 7.5 m. (24 ft. 06 in.) MSL over a bottom width of minimum 35 m. and marked by light buoys, spar-buoys, and light-beacons, leads through the shallow Odense Fjord. The lower part consists of a winding, narrow, natural channel and the upper part passes through the 4 mile long Odense Canal.
Maximum speed in Odense Canal is 6 knots.
Regulations for narrow channels in Danish water are enforced, both in the channel through the fjord and in Odense Canal with the addition that any ship of and over 100 d.w.t. intending to transit the channel, should contact the Pilot Station at Gabet from a position 5 miles North of Odense Fjord light and whistle buoy or, if outward bound, 30 minutes before departure.
Ice: Under normal conditions the port is open all the year round. During the period January – March, ice may occur in the fjord, but an ice-breaking tug and transitting ships will maintain an open ice-channel.
Obstructions: Odense Canal is spanned by overhead power cables with vertical clearances of minimum 45 m. (147 ft.).
Tides and Currents: The tidal range is 0.4 m. (15 ft.). Gales from between East and S.W. may lower the water level by up to 1.5 m. (5 ft.), and those from between West and N.E. may raise it by up to 1.8 m. (6 ft.).
MAX. SIZE: 6,000 d.w.t. Max. draft 7.0 m. fresh water, max. length 160 m., controlled by swinging basin and draft. Permissible draft for vessels over 100 m. in length to be obtained from Agent.
HEALTH: Pratique granted by Customs Officers who bring Health Declaration for Masters to complete. In event of suspected disease or fever on board radio details to Agent before arrival.
RADIO: Lyngby Radio. Also see "Pilotage".
VHF: Port Authority and tug communicate on Channel 12. Odense Pilot on Channels 16 and 12.
Reporting system compulsory. All ships have to call the Pilot Station 30 minutes before entry or departure and comply with instructions from the Pilot Station to ensure safe navigation.
TUGS: Tug is available (600 h.p.). Not compulsory but necessary for large vessels. Tug normally joins vessels in port. Large vessels at Gabet. Ship's line.
BERTHING: Three harbour basins including 4,200 m. of quays with depth of 7.5 m. alongside. Coal quays at Fynsvaerket, depth 7.5 m. alongside.
CARGO HANDLING FACILITIES: All principal wharves are rail served and have road access. There are 34,000 sq.m. of open asphalted storage areas, warehouses of 70,000 sq.m. floor space, cold storage of 55,000 cu.m. and a tank storage capacity of 67,000 cu.m. Three grain suction units with capacities of 50 t.p.h. – 120 t.p.h.
The port operates 5 electric cranes of 3.5 tons to 34 tons with hooks and 3.5 tons to 12 tons with grabs. The port operates a grain loading terminal with a capacity up to 320 cu.m./hr. There are 2 private grab cranes and a number of fork-lift trucks up to 16 ton lifting capacity.
Fyensvaerket Power Station has a continuous unloader and 2 cranes.
Cargo Handling Capacity:
Bulk cargo 120 t.p.h. – 270 t.p.h.
General cargo 100 t.p.h. – 230 t.p.h.
Trade and Shipping: Export of agricultural produce, general cargo, machinery, meal and flour.
Imports include cereals, coal, feeding stuffs, fertilisers, general cargo, gravel, iron, kaolin, LPG, paper reels, petroleum products, salt and timber.
SPECIAL CARGO FACILITIES: Berths available for handling of containers and Ro/Ro traffic. 1 × 16 ton truck.
BRIDGES: See "Restrictions" – "Obstructions".
STEVEDORES: To be arranged through Agent.
MEDICAL: Doctors and hospital facilities anytime. Arrange through Agent.
TANKERS: One berth length 160 m., depth 7.5 m. also one jetty, depth 6 m.
DENSITY: 1010.
FRESH WATER: Available by pipeline at all berths. Rate: 10 cu.m./hr. – 15 cu.m./hr.
FUEL: All grades available by road transport.
CONSULS: All European countries represented.
REPAIRS: Local workshops can undertake various kinds of repairs to boilers, machinery and electrical installations. The shipyard at Lindoe has three building docks, of which the largest is suitable for vessels up to 500,000 d.w.t.
DRY DOCKS: One 500,000 d.w.t. and two 100,000 d.w.t. dry docks in Lindoe Shipyard. Vessels up to 400 m. × 70 m. × 6.5 m. draft can be accommodated.
FIRE PRECAUTIONS: In addition to the usual precautions a firefighter is posted at the vessel while in the port when the cargo is petrol, kerosene, etc.
AIRPORT: Beldringe Domestic Airport, 9 km. to the North, has scheduled daily flights to and from Copenhagen International Airport.
POLICE/FIRE/AMBULANCE: Dial 000 and ask for service required.
CUSTOMS ALLOWANCES: See "General" before first port.

TIME: GMT plus 1 hour. Summertime GMT plus 2 hours.
HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day; Boxing Day.

Half-holidays: May 1st, June 5th and December 24th. Work can be arranged.
SURVEYORS: N.V. and Lloyd's.
HATCHES: Normally opened by ship's crew.
REPATRIATION: Can be arranged.
TELEPHONES: No telephones on board.
SERVICES: Compass adjustment can be arranged.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not necessary.
REGULATIONS: Nothing unusual.
DELAYS: None.
DEVELOPMENTS: A quay, 200 m. long with depth of 7.5 m., which will be ready for use in 1991, is under construction just North of Lindoe Shipyard. The quay will be equipped with 2 cranes of 12 tons lifting capacity with grab, 1 crane of 34 tons lifting capacity with hook. In 1992 the depth will be increased to 9.5 m.
AUTHORITY: Odense Port Authority, Londongade 1, DK-5000 Odense C, Denmark. *Tel:* 66-120792. *FAX:* 65-914774. *Contact:* Finn Vinther, Harbour Master. Tel: 66-120025. Fax: 65-914774.

OREHOVED: 54.57 N. 11.51 E. (See Plan)

PILOTAGE: Pilots may be ordered through Masnedo Pilot on VHF Channel 16 or through the Harbour Authorities.
MAX. SIZE: Max. LOA 150 m., Max. draft 6.5 m.
VHF: Harbour Office on Channel 16 during office hours and when vessel expected. Working on Channels 13 and 12.
TUGS: To be ordered 12 hours in advance.
BERTHING: Length of quay 165 m. Depth alongside 5.0 m. – 7.0 m. Depth in basin 7.0 m.
CRANES: 1×20 ton travelling crane.
FRESH WATER: Available
AUTHORITY: Orehoved Shipping and Stevedoring Aps., Orehoved Havn, DK-4840, Nr. Alslev. *Tel:* (53) 84 61 58. After Hours: (53) 84 63 61, (53) 83 47 42. *Telex:* 40104. *FAX:* (53) 846447. *Cables:* Shipohoj. *Contact:* J. Toft, Harbour Master/General Manager.

RANDERS: 56.29 N. 10.04 E. (See Plan)

DOCUMENTS:
2 Crew Lists.
2 Lists with statement of each crew member's cigarettes, tobacco and spirits.
PILOTAGE: Apply for Pilot 6 hours before arrival. VHF Channel 16, one hour before. Pilot station, Tel: 06-485024.
ANCHORAGE: Outside Entrance buoy in 8 m.
RESTRICTIONS: Only vessels less than 1,000 d.w.t. may enter at night. Also see "General" before first port.

POLICE/AMBULANCE/FIRE: In emergency cases dial 000 or call by Ronne Radio.

In ordinary cases: Police 03951448. Ambulance 03951808. Fire 03951247.

EMERGENCY CO-ORDINATION CENTRE: Emergency operations in Danish waters are co-ordinated by the Royal Danish Navy. Emergency operations in the area around Bornholm are co-ordinated and guided by the Royal Danish Navy Surface Rescue Centre. Tel: (03) 95 20 11. No telex number is available, but on request by telephone the rescue centre can answer by telex.
SERVICES: Supply of charts, nautical publications, sounding paper, etc. Radio and Radar repairs carried out. Compass adjustment is carried out by means of transportable Gyro compass.
BANKS: No American or European banks in this area, most Danish banks have connections with the major international banks.

Kobenhavns Handelsbank, Ronne Branch. Tel: (03) 95 22 11, Telex: 48155 Roco Dk.

Bornholmerbanken, Ronne. Tel: (03) 95 00 61, Telex: 48117 Bornbk Dk. Connected to Den Danske Provinsbank, Copenhagen, American Express International Banking Corp., London and Midland Bank Ltd., London.

Andelsbanken, Ronne. Tel: (03) 95 20 01. This bank is a branch of Andelsbanken, Copenhagen, which has Telex: 27086 Dk. Connected to London & Continental Bankers Ltd., London, Internationale Genossenschaftsbank, Basel Switzerland and Europaischer Genossenschaftsbank, Zurich, Switzerland.

STORING: See "Prelims".

1. Vessels can be stored both by truck and by barge, but as all loading and discharging is taking place alongside piers, barges are never used for storing ships. Furthermore, no special barges are available for that purpose.
2. There are no special regulations concerning the storing of ships. Normally ships do not take large quantities of stores at Ronne.
3. Trucks can proceed alongside ships on all piers except on Pier 12 (oil pier), where the truck must remain about 80 yards from the ship.
4. Likewise fork lifts can be used on all piers except Pier 12.
5. Customs regulations regarding bonded stores only.
6. Normally only the ship's crew employed.

SHIP SUPPLY SERVICE: None. Pilot boat is normally used for transferring stores, crew and sick personnel. Ships are normally served in the roadstead outside the harbour.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
DELAYS: None.
DEVELOPMENTS: New outer breakwaters are under construction. Leading lights temporarily extinguished as new leading line is under construction. Fog signal is now situated on South outer breakwater head.
AUTHORITY: Ronne Havnevaesen, Havnekontoret, Finlandsvej 3, 3700 Ronne, Denmark. *Tel:* 03-950678. *Contact:* John Lou, Harbour Master.
Harbour Board (Municipal): Ronne Kommunes Havneudvalg, Landemaerket 26, 3700 Ronne, Denmark.

SKAELSKOR: 55.15 N. 11.18 E. (See Plan)

Admiralty Charts 2597 and 2118 cover the approaches to and the port of Skaelskor. Depth at the entrance to port is 4.5 m.
DOCUMENTS: See "Copenhagen".
PILOTAGE: Not compulsory. Pilot to be ordered via Agents with minimum 6 hrs. notice. Pilot vessel is equipped with VHF; Channels 16, 12, 10 and 6.
ANCHORAGES: Available outside Skaelskor Fjord.
RESTRICTIONS: Entering the port at night is permitted only by vessels equipped with a searchlight.
MAX. SIZE: Max. draft 4.2 m., max. length 60 m., max. beam 10 m.
HEALTH: Usual Danish regulations apply.
RADIO: Lyngby Radio.
VHF: See "Pilotage".
TUGS: None.
BERTHING: Outer harbour: Depth 4.5 m., 200 m. quayage. Inner Harbour: Depth 3.8 m., 120 m. quayage.
CRANES: 1 mobile crane with 7 tons lifting capacity.
BULK CARGO FACILITIES: 1 belt conveyor available for loading grain.
MEDICAL: Facilities available.
TANKERS: No dirty ballast facilities available.
DENSITY: Varies from 1007 to 1023.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Can be undertaken.
DRY DOCKS: None.
SURVEYORS: Available.
REPATRIATION: Can be arranged.
AIRPORT: Nearest at Copenhagen.
TIME: GMT plus 1 hour; Summertime (March – September) GMT plus 2 hours.
TELEPHONES: No facilities for placing telephones on board vessels exist.
AUTHORITY: Skaelskor Havnekontoret, Naestvedvej 15, DK-4230, Skaelskor. *Tel:* (53) 594204, (53) 594327. *FAX:* (53) 594582. *Contact:* F. Christensen.

AGENT: Aage C. Frederiksen I/S, P.O.Box 4, DK. 4230 Skaelskor. Tel: 453 594002. Cables: "Shipbroker". Telex: 40222 (ACF DK). Fax: 453-590544.

SKAERBAEK: 55.31 N. 09.37 E. (See Plan)

DOCUMENTS:

Ship's Register.
Load Line Certificate.
Radio Safety Certificate.
Safety Equipment Certificate.
Derat Certificate or Exemption.
1 Crew List.
Stores List.
Crew Personal Effects List.
Cargo Manifest or Bills of Lading.

PILOTAGE: Not compulsory. Pilot joins at mouth of Kolding Fjord. Can be contacted by VHF Channel 16.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to Skawpilot Skagen, at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

ANCHORAGE: Off Skaerbaek in depths of 39 ft.

A dredged channel, 200 m. long, 49 m. (160 ft.) wide and 7.0 m. (23 ft.) deep leads to the Coal Harbour. Another channel, 500 m. long, 80 m. (262 ft.) wide and 11.9 m. (39 ft.) deep leads to the Oil Berth.

RESTRICTIONS: See "Tankers" and "General" before first port.
MAX. SIZE: LOA 250 m. Max. draft 38 ft.
RADIO: Lyngby Radio.
TUGS: Tugs of 1,400 h.p. – 4,500 h.p. available at short notice.
BERTHING: Power Station Wharf: 253 m. length; depth 7.0 m. Oil Jetty: Depth 39 ft.
CRANES: 2×12 ton coal cranes.
BRIDGES: 2 road bridges span the North Lillebaelt. Vertical clearance 33 m. (108 ft.).
STEVEDORES: Working hours: Monday to Friday 0700 – 1530 hrs.
MEDICAL: Medical attention available, nearest hospitals at Kolding and Fredericia.
TANKERS: One berth, depth 39 ft. (11.9 m.). Max. length between bow/stern and manifold 127 m. (417 ft.). 3×12 in. discharge arms, rate 4,000 t.p.h.
DENSITY: 1017 (approx.).
CONSULS: Nearest at Kolding. Distance 15 km.
REPAIRS: Local machine shops can manage small repair jobs.
DRY DOCKS: None.
FRESH WATER: Obtainable from quay.
FUEL: Available by barge from Fredericia.
REPATRIATION: Possible.
CUSTOMS ALLOWANCES: See "General" before first port.
AIRPORT: Billund or Odense, both approximately 50 km. distant, and with daily flights to Copenhagen.
TIME: GMT plus 1 hour.
HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day; Boxing Day. Half holidays: May 1st, June 5th and December 24th.
AIRPORT: Billund Airport, 40 km. distant.
AUTHORITY: I/S Den Sydostjydske Faellescentral Skaerbaekvaerket, DK 7000 – Fredericia. *Tel:* 75562466 or 75924805. *Telex:* 51116. *Cables:* Mortensen Fredericia. *FAX:* 75924272.

SKAGEN: 57.43 N. 10.36 E. (See Plan)

DOCUMENTS: Crew List, Tobacco List, Stores List, Derat Certificate, Health, Tonnage, Nationality and Cargo documents.
PILOTAGE: Local Harbour Pilot available on request to the Harbour Office. Sea Pilot may take vessels to all harbours on the East coast of Jutland, to the Sound, and through the Great Belt to the Baltic Sea. Tel: 08445566 or VHF Channel 16.
ANCHORAGES: Off the harbour entrance.
APPROACHES: The entrance between the outer moleheads is 75 m. wide and facing S.E. Approaching vessels should – when 400 m. from the entrance – keep the leading lights in line bearing 334°. Entering vessels have right of way over departing vessels. Maximum speed inside the outer harbour is 3 knots.
Tides and Current: Tidal range 0.3 m. Gale from W. may raise the sea level by 1.4 m. and from E. lower it by 0.9 m. Winds from S.S.W. – W. cause N.E. going current and those from N. – E. – S.E. cause S.W. going current. The prevailing current runs N.E., up to 2 knots.

MAX. SIZE: Largest vessels which can enter Skagen Harbour: Length 125 m., beam 18 m., draft 6.7 m.
VHF: Day and night watch on Channel 16 by Port Captain's Office.
BERTHING: The harbour consists of 6 basins. Depths: Outer Harbour 7.0 m.; East Basins I & II 6.5 m. – 7.0 m.; Auction Basin 5.0 m. – 7.0 m.; Middle Basin 5.0 m.; West Basin 5.0 m.; Pound Net Basin 3.5 m.
FRESH WATER: Available.
FUEL: Available by barge.
DRY DOCKS: Yards with slips for vessels up to 50 m. length and 600 tonnes displacement.
GENERAL: Imports: Oil. Exports: Fishmeal and other fish products.
AUTHORITY: Skagen Havn, Havnekontoret, P.O.Box 140, Havnevagtsvej 30, DK 9990 Skagen, Denmark. *Tel:* No. 98–441060, 98–441346. *FAX:* 98-450338. *Contact:* Bruno Thaibert, Harbour Master.

SONDERBORG: 54.55 N. 09.47 E. (See Plan)

DOCUMENTS:
Ship's Register.
Crew List.
Radio Safety Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Customs Declaration.

PILOTAGE: Vessels exceeding 6.5 m. in draft or 4,000 gross tonnage use Northern entrance where Pilot boards vessels North of Snogbaek Hage, or further North if required.

Vessels coming from South, Pilot boards off the Middelgrund.

RESTRICTIONS: No restrictions on night entry. No tide. Current mostly North-going with a maximum speed of 3 knots. N.E. to Easterly winds raise water level up to 1 m. West to North-Westerly winds lower the water level by the same amount.
MAX. SIZE: From South passing through the harbour bridge, 4,000 g.r.t., draft 6.5 m.

From North 30,000 g.r.t., draft 9.5 m., air draft 33 m., LOA 200 m.

VHF: Radio on pilot station, Channel 16, 12 and 13. For Pilot and Harbour Master tel: 74-422765.
TUGS: Small harbour tug available; larger tugs available at 6 hours' notice.
BERTHING: *South Harbour:* Mainly used by passenger vessels and fishing boats. Concrete quay about 500 m. long, max. depth alongside 8.0 m.
North Harbour: Concrete quay about 800 m. long, depth alongside 7.5 m. Plywood factory, dolphin moorings with depth of 9.0 m.

Mooring facilities at heavy dolphins over 650 m., 25 m. from shore and along paved road, water depth 9.0 m. Generally used for laying up.

CARGO GEAR: Discharging and loading by ship's own gear or by mobile cranes of which the harbour have three, with a max. lifting capacity of 30 tons (60 ton crane).
BRIDGES: King Chr. X's Bridge divides Sonderborg port into South Harbour and North Harbour. The bridge is a double wing bascule bridge with an opening width of 30 m. For passage call "Sonderborg Bridge" on VHF Channel 16 regarding opening times.

North of the harbour, the Alssundbridge crosses the sound. The bridge has a horizontal clearance of 150 m., and a vertical clearance of 33 m.

MEDICAL: Full hospital facilities available without prior notice.
FRESH WATER: Supplied by pipe-line to berths.
FUEL: Available day and night.
CONSULS: Finland, Netherlands and Norway.
REPAIRS: Routine maintenance and smaller engine repairs can be carried out.
AIRPORT: In Sonderborg, with regular flights to Copenhagen.
TIME: GMT plus 1 hour.
STORING: Vessel may be stored by truck or barge. Trucks may proceed alongside, fork lift trucks and riggers may be used.
AUTHORITY: Sonderborg Havnekontor, Norrebro 1, 6400 – Sonderborg, Denmark. *Tel:* 74-422765. *FAX:* 74-433019. *Contact:* Lass Andersen, Harbour Master and Pilot.

STEGE: 54.59 N. 12.17 E. (See Plan)

LOCATION: Stege is situated in a sheltered bay on the N.W. coast of Moen.
DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate or Exemption.
Bill of Lading (if cargo).
Crew List.

Customs need a Tobacco and Spirit List, showing the vessel's and the crew's supply on arrival. Customs clearance effected at Naestved.

APPROACHES: From the West, Stege is approached via Masnedsund. From the Baltic via Bogestrom Channel (2.1 m. depth). There is an entrance channel, 5 miles long and dredged to 4.1 m., leading to the port.
PILOTAGE: Local Pilots from Masnedoe, meet the vessel off the entrance channel. Sea Pilots can be taken from Spodsbjerg, Korsor or Gronsund.
ANCHORAGES: In Ulvsund, off the entrance channel.
RESTRICTIONS: Daylight navigation only. During winter, harbour ma close due to ice.
MAX. SIZE: LOA 80 m. and 3.8 m. draft. Tidal range 0.3m.
VHF: Pilots can be contacted by VHF.
BERTHING: 800 m. of quayage in a series of basins.
Depths: (i) N. Harbour 3.7 m. – 4.2 m.
(ii) Outer Harbour up to 4.3 m.
(iii) Sugar Factory Harbour 4.0 m.
(iv) Inner Harbour 3.7 m.

CRANES: 1 × 3.5 tons, at Sugar Factory Harbour. 1 × 5.0 ton stationar crane at the Outer Harbour.
BRIDGES: Storstromsbroen has a vertical clearance of 26 m. A new bridge has been constructed across the Storstrom with a vertica clearance of 21 m. Power lines with 36 m. vertical clearance lie to the West of Masnedoevaerket. To the East of Masnedoevaerket, there is a bascule bridge with 25 m. horizontal clearance. Dronning Alexandrines Bridge has a vertical clearance of 26 m. across Ulvsund.
STEVEDORES: Working hours: 0700 – 1600.
MEDICAL: Local hospital available.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Machine shop available.
DRY DOCKS: None. 1 slip for vessels up to 150 tons.
AIRPORT: Copenhagen, 110 km. distant.
AUTHORITY: Mon Kommune, Ved Stranden 4, DK-4780 Stege, Denmark. *Tel:* 55-815525. *Contact:* Gunner Andersen, Harbour Master.
AGENT: Ole H. Jorgensen, Box 7, DK-4780, Stege. Tel: 55-814018. Telex: 40301 (Ohjstg Dk).

STIGNAESVAERKETS: 55.12 N. 11.15 E. (See Plan

DOCUMENTS:
3 Crew Lists.
2 Crew Declarations.
2 Ship's Stores Lists.
Usual Ship's Documents.

PILOTAGE: Vessels to apply for a Pilot through their Agent. ETA to b given 48, 24 and 12 hours prior to arrival.

Pilot boat equipped with VHF Channels 16, 13 and 12. It is painte orange on hull and wheelhouse and is stationed at Agersoe.

For vessels coming from the North, Pilots board at Korsoer. Fo vessels coming from the South, Pilots board at Egholm Flak.

ANCHORAGES: Korsoer Roads, depth 20 m., bottom sand, goo holding ground. With area of about 2 nautical square miles.

Gulfhavn Roads, depth 30 m., bottom clay, good holding ground. Area – 1.5 nautical miles long and 0.5 nautical miles wide.

RESTRICTIONS: None.
MAX. SIZE: Coal Berth: Length 300 m. Max. beam 43 m. Max. draft 17 m
Oil Pier: Draft 15 m.
Ash Berth: Max. draft 7.5 m.

HEALTH: Usual regulations.
RADIO: Skagen Radio or Lyngby Radio.
VHF: Stigsnaesvaerkets Havn, Channels 16, 14 and 12.
RADAR: None.
TUGS: No tugs stationed at Stigsnaes, ship's lines to be used. Minimu of 12 hours to arrange tugs.
BERTHING: Coal Berth: Length 300 m., depth 18 m., max. draft 17 m – discharging by shore equipment.

Oil Pier: Length no restrictions, depth 16 m., max. draft 15 m discharge by shore equipment.

Ash Berth: Depth 8.0 m.

CRANES: 2×20 tonne cranes at coal berth, travel 245 m., height fro water 22 m. Outlay 31.5 m. Designed average discharging abou 850 tonnes/p.h.
BULK CARGO FACILITIES: See "Berthing" and "Cranes".
SPECIALISED CARGO/HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: None.
MEDICAL: If not urgent, no notice required. Doctor, dentist and hospit available.
TANKERS: 1 Berth, depth 16 m., max. draft 15 m. Average discharg 60,000 tonnes/24 hour.

1×12 in. and 2×16 in. booms. The 12 in. boom can hydraulical connect to 8 in., 10 in. and 12 in. flanges, all standards. The 16 in. boo can hydraulically connect 12 in., 14 in. and 16 in. flanges, all standard

DENSITY: 1007 – 1023.
FRESH WATER: By hose, 15 tonnes/p.h. 10 dkr/tonne.
FUEL: Not available.
FIRE PRECAUTIONS: No special precautions.
CONSULS: Norwegian and Finnish Consuls nearby, others Copenhagen (120 km.).
REPAIRS: Small repairs can be carried out.
DRY DOCK: None.
SURVEYORS: 1. Caleb Brett and S.G.S. have local representatives

2. Lloyd's Register, American Bureau and Bureau Veritas must requested from Copenhagen (120 km.).

GANGWAY/DECK WATCHMAN: None.
OPENING/CLOSING HATCHES: By crew.
CUSTOMS ALLOWANCES: 1 bottle of spirits, 1 bottle of wine, 200 g tobacco or 200 cigarettes.
CARGO GEAR: Coal Berth, Oil Pier and Ash Berth, all by shore ge
REPATRIATION: Possible.
AIRPORT: Distance to Copenhagen airport 120 km. Served regula by all international airlines.

TIME: GMT plus 1 hour. Summertime (from end March to end September) GMT plus 2 hours.
HOLIDAYS: Depending on situation.
POLICE/AMBULANCE/FIRE: Tel: 000.
EMERGENCY CO-ORDINATION CENTRE: None.
TELEPHONES: None.
SERVICES: Most services can be ordered through Agent.
BANKS: Skaelskoer Bank a/s. Tel: (03) 596070. Telex: 40139.
STORING: See "Prelims".

1. By truck.
2. Yes.
3. Yes.
4. Yes.
5. None.
6. Yes.

SHIP SUPPLY SERVICE: See "Kalundborg".
SHORE LEAVE: Crew can always leave vessel and go ashore.
IDENTIFICATION CARDS: Seaman's Book sufficient.
REGULATIONS: None.
DELAYS: None.
AUTHORITY: S.E.A.S., Stigsnaesvaerket, DK-4230 Skaelskoer. *Tel:* (03) 596011.

STUDSTRUP: 56.15 N. 10.21 E. (See Plan)

LOCATION: The harbour is located in Aarhus Bay in Kalo Inlet.

The harbour of Studstrupvaerket is a private harbour owned by I/S Midtkraft, Aarhus, and is run by Studstrupvaerket.

PILOTAGE: Pilot assistance is imperative for navigation through the prohibited zone on entering Kalo Vig (inlet).

Pilot station: State pilot station, Udbyhoj. Tel: 86 48 50 24.

ANCHORAGE: Ships can anchor in the inlet outside the channel.

APPROACHES:
Leading Marks: On the harbour territory: 2 red fixed lights on bearing 304° 45′ 40″ (T). lead into the harbour.
Rear Light: On boilerhouse: Red triangle with down-turned apex.
Front Light: On the berth: Trellis mast with triangle with upturned apex.

RESTRICTIONS: The harbour is not accessible without special permission from the works management, and it must only be used for purposes concerning operation of the power stations under I/S Midtkraft, and, for the delivery and shipping of fuel to or from the power stations of the companies within Elsam, co-operating with I/S Midtkraft.

The harbour is navigable day and night. The anchor can be used on arrival as well as on departure.

Depth of Water: On entering: 11.3 m. (37 ft.). At the Eastern 405 m. of the quay: 11.3 m. (37 ft.). At the innermost 90 m. of the quay: 7.7 m. (25 ft.).

Water Level: The difference between MHW and MLW is 0.15 m.

Western and Northwestern wind may give HW up to 1.25 m.

Eastern and Southeastern wind may give LW up to 0.9 m.

MAX. SIZE: *Largest Vessels:* Coal: LOA 245 m., beam 33 m. and draft 36 ft. Tankers: LOA 245 m., beam 33 m. and draft 33 ft.

TUGS: Tugs not available locally. An agreement on tug assistance has been made with Svitzer to whom applications can be made. Cable address: Svitzersalvage. Tel: 33-155195. Telex: 15983.

Tug assistance is normally not required for vessels up to 16,000 d.w.t. capacity.

The harbour supplies a mooring boat for assistance on entering.

BERTHING: Length of quay 495 m. Depth alongside 7.7 m. – 11.3 m.

CRANES: *Discharging of Coal:* 3 travelling cranes with a capacity of 12 tons.

MEDICAL: First-Aid Station: Falck, Hornslet.

Nearest Hospital: Aarhus K/H (Municipal Hospital).

Nearest Doctor: Laegehuset, Skoodstrup.

TANKERS: 1×12 in. discharge line for oil. Capacity 1,500 t.p.h. (approx.).

Connections available for 8 in., 10 in. and 12 in. hoses.

FRESH WATER: Available. Rate 14 cu.m.p.h.

FUEL: The port has no stock of bunker oil. If ordered through a broker, bunker oil may be loaded from a tank truck alongside the quay.

REPAIRS: No facilities, however, assistance can be ordered from the repair shop of the power station.

TELEPHONES: See "General".

IDENTIFICATION CARDS: For passing through the main gate a harbour pass is required.

Blank harbour passes for filling in by the ship's personel will be handed over by plant representative upon arrival.

GENERAL: *Clearance:* Nearest Custom House at Aarhus.

Supplies: The nearest towns are Skoodstrup (3 km.) and Logten (4 km.).

Telephone: Telephone calls can be made from the main gate. Payment will be collected by the gatekeeper.

The telephone on quay is for plant purposes and emergency calls only.

Special Regulations: Traffic to and from the port takes place through the gate of the main driveway of the plant by using the direct route from the quay.

Traffic is not permitted to stay or drive in the port.

Instructions from the gatekeeper or from factory employees must be obeyed.

Relatives of ship's crew are permitted to visit the ship provided that the above regulations are observed.

Dealing in commodities of any kind is prohibited in the area of the power station.

Safety Precautions: The port has no special personnel or equipment for fire fighting or life-saving. There is, however, a plant protection unit who handle limited fire fighting and life-saving equipment. There are a number of men trained in first-aid.

In Case of Fire or Accidents: Use the quay telephone. Dial extension 52 (Control Room of the station) and make your report. The Control Room is the alarm centre of the station, and can send for fire fighting assistance, ambulances, and medical attention along with first-aid.

AUTHORITY: I/S Midtkraft – Studstrupvaerket, DK-8541 Skoodstrup, Denmark. *Tel:* 86 991700. *FAX:* 86-993720. *Contact:* J. Schibler.

SVENDBORG: 55.03 N. 10.38 E. (See Plan)

DOCUMENTS:
Certificate of Registry.
Freeboard Certificate.
Radio Safety Certificate.
Derat Certificate.
Crew List.

PILOTAGE: Telegraphic address, "Pilotstation, Svendborg". For contacting pilot boat on VHF, use Channel 16. International signals for Pilot. In Eastern entrance Pilot boards at Thuro Rev. In Western entrance Pilot boards at Lehnskov, or if ordered at, Skrams Flak.
ANCHORAGES: At Lunkebugt (Eastern entrance) and by Lehnskov (Western entrance).
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Longest ship ever docked was 541 ft. long, 67 ft. breadth, draft 21 ft. 06 in. Shorter ships may enter with deeper draft.
HEALTH: Pratique automatic.
RADIO: All Danish coast stations can be used. (See "Horsens".)
TUGS: Normally tugs stationed in Svendborg, ships wanting tugs order through Agent before arrival.
BRIDGES: 1 mile West of harbour a bridge crosses the sound. Free height 33 m.
STEVEDORES: Ordered by Agent.
MEDICAL: Doctors and hospital service always available.
DENSITY: Approx. 1024.
FRESH WATER: Available at all piers. 20 t.p.h.
FUEL: No bunker lines. Diesel can be delivered by tank lorries.
CONSULS: Vice-Consulates: Norway, Tel: 09 21 31 17; Sweden, 09 21 14 10; Finland, 09 21 22 21; W. Germany, 09 21 15 39; Iceland, Tel. 09 21 18 83.
REPAIRS: All repairs to deck and machinery carried out by shipyard.
DRY DOCKS: Floating docks for ships up to 10,000 tons weight.
GANGWAY/DECK WATCHMEN: Available, but not compulsory.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
REPATRIATION: Facilities exist.
TIME: GMT plus 1 hour.
HOLIDAYS: New Year's Day; the day before Good Friday; Good Friday; Easter Monday; May 1st; Ascension Day; May 5th; Prayer Day; Whit Monday; June 5th; 25th and 26th of December.
FIRE/AMBULANCE/POLICE: Call 000.
TELEPHONE: No telephone for ships.
SERVICES: Compass adjusting.
IDENTIFICATION CARDS: Not needed.
SHORE LEAVE: No restrictions concerning shore leave for crew. Dogs not allowed to go ashore.
AUTHORITY: Port Authority of Svendborg, Jessens Mole 9, 5700 Svendborg, Denmark. *Tel:* 09-210657. *Contact:* Kurt Hansen, Harbour Master.

TUBORG HAVN: 55.44 N. 12.35 E. (See Plan)

DOCUMENTS: Same as Copenhagen.
PILOTAGE: Not compulsory except for tankers loading with petrol. For Pilot call Copenhagen Pilot (see Pilot Information for Copenhagen).
ANCHORAGES: See "Copenhagen".
MAX. SIZE: Max. draft 6.0 m., 4,000 d.w.t.
HEALTH: See "Copenhagen".
RADIO: Lyngby Radio: OXZ. VHF Channel 16 to all installations. ETA cables to Agents and receivers preferably by Lyngby Radio.
TUGS: Can be obtained from Copenhagen.
CRANES: Mobile cranes up to 110 tons can be obtained from Copenhagen.
SPECIALISED CARGO-HANDLING FACILITIES: Shore ramp for Ro/Ro traffic. Modern container-handling equipment available.
MEDICAL: No advance notice necessary. Hospitals available.
FRESH WATER: From water boat.
FUEL: All grades available by lighter. 10 hours notice preferred.
CONSULS: See "Copenhagen".
REPAIRS: All forms of deck and engine repairs can be effected.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Opening and closing carried out by ship's crew.
CUSTOMS ALLOWANCES: 200 cigarettes. 1 bottle wine, 1 bottle spirits.
REPATRIATION: See "Copenhagen".
AIRPORT: Copenhagen airport 14 miles (23 km.) from Tuborg port. Connections to all parts of the world.
TIME: GMT plus 1 hour. Summertime is kept.
HOLIDAYS: See "Copenhagen".

POLICE/AMBULANCE/FIRE: Dial 000.
TELEPHONES: Not available on board.
SERVICES: Services available for compass adjusting, radio and radar repairs.
SHORE LEAVE: No restrictions.
AUTHORITY: Tuborg Harbour, Tuborg Havnevej 11, DK-2900 Hellerup, Denmark. *Tel:* (1) 29 59 25. *Telex:* 16347 Tuborg DK. *Cables:* Tuborg Copenhagen. *Contact:* K. Guldberg Mikkelsen, Harbour Master – Tuborg Havn.

VEJLE: 55.42 N. 09.33 E. (See Plan)

DOCUMENTS: Required on arrival:

- 2 Crew Lists.
- 2 Passenger Lists.
- 1 Tobacco List.
- 1 National Reg. Certificate.
- 1 Load Line Certificate.
- 1 Tonnage Certificate.
- 1 Manifest.
- 1 Bill of Lading.
- 1 Derat Certificate.
- 1 Radio Safety Certificate.
- 1 Clearance inward and outward.
- 1 Safety Certificate.

PILOTAGE: Pilot station now at Juelsminde, radio Pilot Vejle VHF Channel 16 – 3 hours notice of ETA. The Pilot will embark and disembark at Rosenvold Hage on the N-side of the fjord.
ANCHORAGES: (1) At Rosenvold Hage, (2) at Traeskohage.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Max. length 550 ft., max. draft 23 ft.
HEALTH: Pratique procedure is carried out by Customs dept.
RADIO: Lyngby Radio, OXZ, Blaavand Radio OXB.
TUGS: Available inside port, ship's lines.
BERTHING: 18 berths. Total quayside in excess of 1,600 m. Depth 5.0 m. – 7.0 m.

Facilities include grain silos and a grain elevator, oil storage and 5 quay cranes.

BRIDGES: A highway-bridge has been built over the fjord over the entrance-channel about 1 mile outside the harbour entrance.

Max. height over the channel is 40 m.

STEVEDORES: Available. 0700 hrs. start must be informed 24 hours in advance.
MEDICAL: Hospital facilities available day and night with doctors available 24 hours per day.
TANKERS: 2 tanker berths, max. draft 23 ft. No slop tank available. Diameter of discharge lines 8 in. and 6 in.
DENSITY: Average density 1020.
FRESH WATER: Delivered from lines on piers. Rate 14 t.p.h. Cost 16.00 Kr./ton.
FUEL: All grades available. No advance notice required.
CONSULS: Vice-Consuls: Greece, 821929; Norway, 829122; Spain, 820233; Germany F.R., 820011.
REPAIRS: Deck and engine repairs can be undertaken.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
REPATRIATION: No facilities.
AIRPORT: Billund 32 km., 3 flights per day.
TIME: GMT plus 1 hour.
HOLIDAYS: New Year's Day; Easter; 1st May, Whit Sunday, Christmas holidays. Cargo work can be done on overtime except 1st May (Labour Day).
POLICE/AMBULANCE/FIRE: Police, tel. 821744; Ambulance, 822244; Fire, 822244.
TELEPHONES: No arrangements exist for placing on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
AUTHORITY: Vejle Havn, Havnepladsen 5, 7100 Vejle, Denmark. *Tel:* 75-820217. *FAX:* 75-838754. *Contact:* Juul Jensen, Harbour Master.

VORDINGBORG (South Harbour – formerly Masnedsund): 54.59 N. 11.54 E. (See Plan)

DOCUMENTS: See "Copenhagen".
PILOTAGE: Available from Masnedoe Pilot Station, Tel: 03-772170.
ANCHORAGE: Vordingborg Roads.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Draft 19 ft. max., breadth 25 m. (depending on vessel's height) owing to passage of bridge before entering harbour. Width of bridge opening 25 m. At a height of 25 m., width of opening 22 m. due to angle of raised bridge.
RADIO: Lyngby Radio.
TUGS: Available from Nakskov, Korsoer, Copenhagen. Notice for towage about 6 – 8 hours.
BERTHING: Berths equipped for handling grain, ore, coal and LPG carriers.
Masnedoe Power Station: See "Port of Masnedoevaerket."
BRIDGES: Passage of bridge 25 m. wide, opening day and night. Bridge normally in radio contact with pilot station. Fully lighted. Approach to power station from the West – pier situated just to the West of opening bridge, and therefore no passage.

In the approach to Vordingborg and power station passage are overhead power cables, max. air draft 36 m.

STEVEDORES: Local stevedores ordered by Agent.
MEDICAL: Hospital available.
FRESH WATER: Supplied by pipe-line to berths.
FUEL: All common fuels available.
CONSULS: At Copenhagen.
REPAIRS: Most repairs, engine and equipment available. Electronic service only available from Copenhagen.
DRY DOCK: No local dry dock. Nakskov/Copenhagen nearest.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Crew allowed to open and close, otherwise as per C/P.
CERTIFICATES:

- Registered Certificate of Tonnage.
- Derat Certificate.
- Construction Certificate.
- Load Line, and Equipment Certificate on first call.

CUSTOMS ALLOWANCES: See "General" before first port.
CARGO GEAR: One mobile crane, one grain-sucker and elevator.
HOLIDAYS: See "Copenhagen".
POLICE/AMBULANCE/FIRE: Police 03-771448; Ambulance, Fire Brigade 0-0-0.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Vordingborg Kommunes, Havnevaesen, 4760 Vordingborg.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Djibouti

DJIBOUTI: 11.36 N. 43.08 E. (See Plan)

PORT LIMITS: *Maritime Limits:* The reference data for the delimitation of the maritime zone coming under the Port of Djibouti are as follows:

Point I:	The pyramid situated on the right bank of the mouth of the Oued Ambouli.
Point II:	Lat. 11° 36′ N., Long. 43° 08′ E.
Point III:	Lat. 11° 39′ N., Long. 43° 06′ E.
Point IV:	Lat. 11° 39′ N., Long. 43° 10′ E.
Point V:	Lat. 11° 37′ N., Long. 43° 08′ E.

DOCUMENTS: Crew List for ship's Agent. Crew Manifests and Manifests of Passengers in Transit or for disembarkation, for whom disembarkation cards are to be completed. Presentation of Health Declaration and verification of compulsory immunisations by the health representative.

The following documents are required, preferably prior to the arrival of the vessel.

	Cargo Manifest	*Freight Manifest*	*Dangerous Cargo List*	*Stowage Plan*	*Hatch List*
For Djibouti Port Authorities	6	—	2	—	1
For Stevedores	3	—	—	1	1
For Agent	1	2	—	—	—
If transhipment, additional	2	—	—	—	—
To be despatched by airmail or airfreight in due time, prior ship's arrival at Djibouti	3	1	1	1	1
On board vessel and if impossible by airmail or airfreight	7	1	1	—	—

Derat Certificate: At the present time Derat cannot be carried out at Djibouti, but the Port Health Authority, after inspection, are empowered to extend expired certificates by one month.

PILOTAGE: Pilotage is compulsory for all vessels with a nett tonnage in excess of 300 tons and is available 24 hours a day, throughout the year.

Pilots board inward bound vessels between No. 1 Buoy and No. 2 Buoy. Outward bound vessels normally disembark their Pilot between No. 2 Buoy and No. 4 Buoy. Pilot boats are painted white and carry the flag "H" by day and the usual lights by night.

An internationally approved pilot ladder on the lee side with man-ropes, and suitably illuminated at night time, must be available.

Vessels calling for Pilots at departure if unable to contact the pilot station on VHF should sound 3 long blasts on whistle or siren half an hour prior to sailing, this signal also calls the tug and mooring gang.

ANCHORAGE: Anchorage zone is within following limits:

1. Eastern limit: a line parallel to and 0.25 miles West of the North passage.
2. Southern limit: Latitude 11° 37′ N.
3. Western limit: a bearing with the Western extremities of Penguin and Ambouli Banks in alignment.

It is forbidden to anchor 1.5 cables on each side of the alignment of Ambouli and d'Ayabele Lights.

Average depth is of 15 m. to 20 m. Anchor holding is excellent, even with a strong S.W. monsoon when there is often a heavy swell.

It should be noted that anchorages within a quarter of a mile of either side of the entry transit line is strictly prohibited.

APPROACHES: Djibouti Bay can be reached from 2 channels – North and East. Only the Northern one is marked.

The Traditional Channel – The "North" Pass: The port, which has easy access by day or night, is normally entered by the North Channel, vessel after rounding Ras Bir, passing to the Northwards of Musha and Maskali Islands until the transit towers situated to the Westward of the town are sighted. The two transit towers, when in line, bear 184° (T) from seaward. Both towers exhibit quick flashing lights which at night time may be easily seen at a distance of 9 miles. In daytime the two towers may be located by first sighting Mount Direction, a distinctive conical hill to the Southward. The nearest transit tower is a white rectangular building with a single wide vertical black stripe while the further tower is a white rectangular building with two broad horizontal stripes.

When on the leading line proceed to Buoy No. 2 on the Heron Bank, where the Pilot will board; the Master is advised to await the Pilot slightly North of Buoy No. 2.

The "South" or "East" Channel: The Southern or Eastern approach for vessels entering passes South of Musha and the Maskali Islands after clearing the Arab Bank. Vessels using this approach must keep at least 1 mile North of the Heron Bank until they reach the transit line described above. The Pinqouin Bank Buoy situated West of the transit line makes a good check point.

The Northern channel is usually used for vessels proceeding in a N.N.E. direction.

The Eastern channel is not marked, and is not recommended for vessels approaching the port. Approaching from the East of the island of Musha by day can be dangerous if visibility is poor.

RESTRICTIONS: Entry during the day or night. Highest tide 2.90 m. Mean tide is approximately 1.60 m., and lowest are 0.20 m. Tidal currents are very weak in bay and rarely exceed 1 knot.

MAX. SIZE: Entrance to inner roads dredged to 11 m. depth.

Max. Draft: Cargo vessels 32 ft. Vessels bunkering 36 ft. Tankers (white products) 32 ft. Tankers (black products) 36 ft.

HEALTH: Generally Free Pratique by radio can be granted to all ships applying through Coast Station Djibouti Radio. Ships must radio in plain or international code, a maximum of 12 hours and a minimum of 4 hours prior to arrival in port. In all cases, when Pilot boards vessel he gives Master a copy of Maritime Health Declaration which must be filled in by Master and countersigned by ship's doctor, if the crew includes one. An examining official comes on board when vessel arrives to receive the Maritime Health Declaration. Cholera and Yellow Fever Certificates required from all travellers coming from an infected area, excepting children of under 6 months of age.

RADIO: *Via the Harbour Master's Office:* For short distance communications, ships can link up with the Harbour Master's Office, by VHF radio-phone: the Harbour Master's traffic unit is equipped with a VHF station for broadcasting and receiving on Channel 12 (156.6 MHz) and Channel 16 (156.8 MHz). These links are solely for the exchange of nautical information between the Harbour Master's Office and vessels (confirmation of ETA; ship's draft; and orders concerning the boarding time of the Pilot and dropping the anchor to wait for Pilot.)

Via Djibouti Coastal Station: For medium or long distance communications, ships can link up with the shore through the coast station at Djibouti, by radio telephone or telegraph. This station can meet all requirements from ships using the port of Djibouti. It handles official and private communications and is permanently on watch.

Call sign J2A maintains a continuous 24 hours listening watch on 500 kHz and replies on 464 kHz.

For long distance communication using the call sign "J2A8", the station maintains listening watches between 0400 hrs. and 1000 hrs. GMT and 1200 hrs. to 1715 hrs. GMT on 8682 kHz. Traffic lists are transmitted at 0400 hrs., 0600 hrs., 0800 hrs., 1200 hrs., 1400 hrs. and 1600 hrs. GMT.

In the 12 megacycle band using the call sign "J2A9", the station works on the frequency 12,782 kHz between 1000 hrs. and 1200 hrs. GMT. Traffic lists are transmitted at 1000 hrs. and 1100 hrs. GMT.

Radio-telephony: Djibouti Radio (J2A) service covers the following:

(a) The station can cover medium distances through radio-telephone, from 1605 kHz to 2850 kHz.

Call sign: Djibouti Radio/J2A.
Call frequency: 2182 kHz.
Working frequency: 2586 kHz.
Power: 1 Kw.
It is open for the international calls (2182 kHz) at the following times:
From 0500 – 0900 hrs., and from 1300 – 1500 hrs. GMT.

(b) VHF
Listening Channel 16 (156.8 MHz).
Working Channel 20 and 24 (24 hours).

Vessels can link up with subscribers of the automatic telephone system in Djibouti.

Radio telegrams sent to ships at sea must be delivered to the telegraphic section at the post office, Ave. de la Republique, during office hours.

TUGS: In Winter (slight Easterly monsoon), a single tug is generally sufficient for manoeuvring. In Summer during the Khamsin period, berthing or sailing often requires 2 tugs. There is a 1,500 h.p. diesel tug *Aboubaker Pacha;* a 1,800 h.p. tug, *A. Rimbaud;* a 1,400 h.p. diesel tug *Henri Lambert;* a 2,200 h.p. tug *Bab-El-Mandeb* and 1 auxiliary 600 h.p. tug. All tugs equipped with fire fighting equipment.

BERTHING:

Quay	*Length* (m.)	*Depth* (m.)	*Usage**
No. 1	180	9.5	L, D, B, Containers
No. 2	220	12.0	L, D, Containers, Ro-Ro
No. 5	210	9.0	L, D
No. 6	180	9.0	
No. 7	250	10.0	L, D, Ro-Ro
No. 8	200	10.0	L, D, B
No. 9 (dolphins)	200	9.0	L, D, B, Refrig.
No. 10 (dolphins)	220	11.5	B, Lay-by Berth
No. 11 (dolphins)	180	11.0	B, Discharge Black Oils
No. 12 (dolphins)	250	12.0	B
No. 13	210	10.8	B, Discharging Black and White Products L, D, B, Discharge of Liquid Gas and Loading of Molasses in bulk

*KEY = L = Loading.
D = Discharging.
B = Bunkering.

CRANES: There are no cranes on quays, but the port has 2 mobile cranes of 25 tons and 40 tons capacity plus a floating crane for the handling of heavy-lifts of 80 tons capacity.

BULK CARGO FACILITIES: Molasses can be handled. Flour storage facilities (Private) with capacity of 4,000 tons.

SPECIALISED CARGO HANDLING FACILITIES: Open ground and shedded areas for containers, Roll-on/Roll-off traffic and Quay for the traffic of lighters.

Container Terminal: 2×35 ton Paceco gantry cranes, 4×40 ton Hyster lift trucks, 2×12 ton Hyster lift trucks, 8 Mafi tractors and 12 Gaussin low trailers.

BRIDGES: None.

STEVEDORES: Four companies available, office hours from 0700 to 1730 hrs. Stevedoring 24 hours.

Working Hours: Normal working hours are 0700 – 1200 hrs. and 1300 – 1800 hrs. Overtime can be worked between 1900 – 2400 hrs., and if necessary to finish a vessel, between 0100 – 0600 hrs. It should be noted that Friday is the normal day of rest and all work on this day is at overtime rates.

MEDICAL: Port Medical Service directed by medical practitioner specialised in industrial medicine is situated in a building neighbouring the port offices. It operates a dispensary. Passengers and sailors in transit are treated by private doctors from town who may visit the ships. Serious cases can be hospitalised in Djibouti's civil or military hospitals.

TANKERS: Reception lines: Berth Nos. 12 to 13 specially equipped for reception of bunkering products are linked with installations of the petroleum companies by a 16 in. dock-line and 12 in. (FO) and another of 12 in. (DO). Pier No. 10 is connected to the installation with a dock-line of 12 in. Rate of discharging can reach between 2,000 and 2,500 t.p.h. Reception of white products is assured from Quay No. 13 by an 8 in. line; for gas there is a 4 in. line.

Shipmaster's Report: July 1982.
Pilot advises max. draft for loaded tankers is 14.0 m.

FRESH WATER: Each quay provided with 3 – 5 (200 mm.) water-hydrants. Delivery of 40 cu.m. of water per hour. Regardless of the season, there is never any shortage of fresh water.

FUEL: Available at oil berths and commercial berths. A complete range of different viscosities and products is available. Meets all the usual requirement of bunkering vessels. Ample supplies of fuel and diesel oil are always available. Normal rate 200 – 300 t.p.h.

Suppliers: Mobil, Shell and Total.

CONSULS:

Salvage Association (Gellatly Hankey), BP 81. Tel: 35 56 68.

Groupement Francaise d'Assurances (MARILL), BP 57, Djibouti. Tel: 35 16 50.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

REPATRIATION: Good facilities exist.

AIRPORT: International airport at Ambouli (7 km.), with international and regional flights every day of the week.

TIME: GMT plus 3 hours.

HOLIDAYS: New Year's Day (1st January); Aid Seghir (El Fithir) and the following day; Labour Day (1st May); Aid El Kebir and the following day; Muslim New Year (1st Mouharam); National Holiday (27th June); Mouloud El Nabi; Al yarah wal Mirage.

Dates referring to religious holidays vary every year, particularly where Muslim holidays are concerned. Loading and discharging operations as well as bunkering can be carried out during all of above holidays when other services are also available.

POLICE/AMBULANCE/FIRE: In emergency Tel: 17 and 18. A detachment of the fire brigade is on permanent duty in the port area.

Fire Brigade – 35 05 22, Police 37 07 80.

EMERGENCY CO-ORDINATION CENTRE: Being formed.

TELEPHONES: Available on every berth, international calls on request.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

BANKS: Indo Suez Mer Rouge, Banque de l'Indochine et de Suez – Mer Rouge. Registered Office: 10 Place Lagarde – Djibouti B.P.88. Tel: 35 30 16. Telex: 6829 DJ. Telegrams: "Indomer Djibouti".

Banque de Djibouti et du Moyen-Orient S.A., Head Office, 6 rue de Marseille, Djibouti B.P.1471, Rep. of Djibouti. Tel: 351178, 351190. Telex: 5943 Banco Djib. Branch of the Middle East Bank Ltd., Dubai, U.A.E.

Commercial Bank of Ethiopia, Head Office, Addis Ababa (Ethiopia), Djibouti Branch: rue de Marseille, Djibouti B.P.187. Tel: 352101, 352102. Telex: Ethio Bank 5835 DJ.

Commercial and Savings Bank of Somalia, Head Office, B.P.203 Mogadisho. Branch of the Commercial and Savings Bank of Somalia. Office: Place Lagarde, Tel: 353666, 351282. Telex: Savcom 5879 DJ.

STORING: In the Port of Djibouti, vessels are bunkered at all the quays, and are supplied with fresh water (without limitation as to the amount requested), whilst they are carrying out their commercial operations of loading or discharge of cargo).

GENERAL:

Tides: The highest tides reach 2.9 m., the average tide is around 1.6 m., and the lowest drop to 0.20 m.

Tidal currents are very weak in the bay, only rarely exceeding one knot. They usually move Eastwards during the ebb tide, and Westwards during the flood tide.

Winds: From October to the beginning of May moderate Easterly winds dominate. During the S.W. monsoon, from the middle of June to early September, there are frequent gales from the West (Khamsin), when the sea becomes rough or very rough. There is little or no wind in May and September.

Swell: The sea is usually very calm in the outside roadstead, in the anchoring zone protected in the East by the Heron Bank. In normal weather the swell does not exceed 1 m. During the Khamsin period, it can reach 2.0 m. – 2.5 m. However, there is no undertow inside the port.

DEVELOPMENTS: The Port of Djibouti will undertake a 2nd development project.

1. Storage shed No. 1 and 2 to be dismantled.
2. Construction of maintenance facilities in the vicinity of the C.F.S.
3. Container yard modifications and extension of the Free Trade Area.
4. Extension of the container terminal area.
5. Rehabilitation of Berth No. 10.

SHIPMASTER'S REPORT: September, 1979.

Approaches: After passing Muskali Beacon on approaching, the leading lights, during daytime (183.5° True) are often not visible due to the sun's glare. At night these make an excellent approach.

Pilotage: Do not proceed beyond No. 2 Heron Bank Buoy. Pilot boat 12 m., blue hull, white top and displaying Pilot signals.

Radar/VHF: Channel 12 for calling and operations. No Port radar.

Hatches: Opening/Closing normally carried out by ship's crew.

General: Provisions both fresh and dry available, but expensive.

AUTHORITY: Port Autonome International de Djibouti, P.O.Box 2107, Djibouti, Republique de Djibouti. *Tel:* 35 23 31, 35 10 31; 35 32 66 (Container terminal). *Telex:* 5836 DJ; 5853 DJ (Container terminal). *Cables:* Dirport Djibouti and Comport Djibouti. *Contact:* Aden Ahmed Douale, Port Director. Captain Huchet, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Dominica

PORTSMOUTH: 15.32 N. 61.29 W. (See Plan)

Portsmouth is an anchorage port principally engaged in the export, by lighter, of bananas and the export of agricultural produce by small inter-island vessels.

Documentation required is as for "Roseau". Safe anchorage is available anywhere within the port with distance off dependent on the size of vessel. Pilotage is not compulsory and if required must be obtained at the Roseau Pilot Station.

No alongside facilities (except those for lighters) exist and no cargo handling equipment is maintained.

A steel piled/concrete decked "L" shaped pier 225 ft. long, 40 ft. wide with 12 ft. of water at the head provides lighterage berthing and accommodates inter-island sloops, schooners and motor vessels. Final planning of upland and equipment is yet to be undertaken.

All enquiries in the respect of the use of the port of Portsmouth should be addressed to the Port Authority, Roseau.

MEDICAL: A cottage hospital is available.

SURVEYORS: See "Roseau".

POLICE/AMBULANCE/FIRE: Police Tel. 5222. Ambulance Tel. 5237 (Hospital). Fire Tel. 5215. Custom House Tel. 5255.

EMERGENCY CO-ORDINATION CENTRE: See "Roseau".

BANKS: See "Roseau".

STORING: See "Roseau".

DEVELOPMENTS: A 300 ft. cruise ship berth will be constructed. Fresh water will be available alongside the new facility.

The project will be completed before 1992.

SHIPMASTER'S REPORT: January, 1979.

Pilotage: Not compulsory or required.

Restrictions: Vessels may enter or leave at any stage of the tide during day or night.

Tugs: None available.

VHF: Not available.

Anchorage: Vessel anchored with the lighter jetty bearing 100°, distance 4 cables. Depth of water 70 ft. Cargo is delivered to the vessel by small lighters which are towed from a timber and steel jetty owned by Geest Line. Loading of bananas is carried out through side doors only. The quality of work was good.

Services Available: Doctor and airport (fresh water, fuel and other services are not available).

AUTHORITY: Dominica Port Authority, P.O.Box 243, Roseau, Commonwealth of Dominica. *Tel:* (809-44) 84431/2/3. *Cables:* Domport. *Telex:* 8632 Domport Do. *FAX:* (809-44) 86131. *Contact:* O.M. Norris, General Manager (Home *Tel:* 84375).

ROSEAU: 15.17 N. 61.24 W. (See Plan)

PORT LIMITS:

Lat. 15° 19′ 00″ N., Long. 61° 24′ 29″ W.;
Lat. 15° 21′ 00″ N., Long. 61° 24′ 29″ W.;
Lat. 15° 21′ 00″ N., Long. 61° 23′ 09″ W.

DOCUMENTS: Port Authority requires before commencement of discharge, 2 copies of the vessel's manifest, and 1 stowage plan or hatch block sheet. Masters are advised that these should be airmailed ahead of the arrival. On arrival, documents required are:

Port Authority:

Ship's Register to sight.
International Health Declaration.
1 Crew List.
1 Passenger List.
1 Hazardous Cargo List.

Customs:

Clearance from last port.
1 Stores List.
2 Personal Effects Declaration.
1 Manifest.
1 Crew List.
1 Passenger List.

Immigration:

1 Crew List.
1 PassengerList.

PILOTAGE: Pilotage is compulsory for berthing all vessels in excess of 100 g.r.t. Pilotage is available for anchorage on request. Pilots will board in approx. position Lat. 15° 17′ 54″ N., Long. 61° 24′ 50″ W. The pilot boat will display International code "H" by day and a white light over red light by night. Requests for Pilots should be made 24 hours in advance either through the vessel's Agent or by cable to "Domport". Vessels may contact the Port Authority through Dominica Port Radio on VHF Channel 16 from 0800 – 1600 hrs., and for 2 hours in advance of the vessel's ETA.

ANCHORAGES: A restricted area exists in Woodbridge Bay between:

Lat. 15° 19′ 00″ N., Long. 61° 24′ 15″ W.,
Lat. 15° 18′ 00″ N., Long. 61° 24′ 15″ W.,
Lat. 15° 18′ 00″ N., Long. 61° 24′ 00″ W.

and vessels may not anchor therein, except under General Manager's instructions. Anchorage may be taken South of this area and in Roseau Roadstead 1.5 – 2 cables offshore in 15 – 30 fathoms depending on the vessel's size. All anchorages are steep-to and care should be exercised so as not to drag off the bank when anchoring.

MAX. SIZE: See "Berthing".

HEALTH: International Declaration of Health. In addition any death, fever or suspected contagious disease should be notified in advance to Agents or Port Authority by cable or radio.

RADIO: HF/SSB. 8281.2 – Monday – Friday 1200 – 2000 hrs. Also see "Pilotage".

TUGS: None.

BERTHING: Woodbridge Bay Ocean Berth Length 500 ft., min. depth 36 ft. MLWOST.

Schooner berth 120 ft. with a depth alongside of 9 ft. (inshore) to 36 ft.

Roseau Jetty, Length 93 ft. min. depth 18 ft. (Out of commission due to hurricane damage).

CARGO HANDLING FACILITIES:

Mechanised Cargo Handling: Breakbulk cargo is handled palletised on ships/shippers/port pallets. Adequate forklift trucks, trailers, and tractors are available to work all berths, Small inter-island vessels can be discharged by 15 ton Lorain crane. Containers up to 20 d.w.t. can be handled ashore if placed on port trailers by ship's gear. Ro-Ro barges capable of trimming to ramp height of +10 ft. are accommodated on the South end of Woodbridge Bay Pier.

STEVEDORES: Stevedores and longshoremen arranged by Dominica Stevedores Ltd.

MEDICAL: One Government general hospital, one private group medical clinic and one private dental clinic are available.

On board visits by a doctor can be arranged.

Where possible advance notice should be given.

TANKERS: Petroleum products are presently handled at 5 different anchorages on the West coast.

L.P.G.: Woodbridge Bay (2) max. draft 12 ft. floating hose from vessel.

Mogas – Gasoil (Dieselene), Kerosene, Spray oils: Rockaway (2), 1 mile North of Woodbridge Bay, draft 18 ft., 800/900 ft. floating hose from ship.

Boiler Fuel (Bunker C): Belfast, 2 miles North of Rockaway, max. draft. 18 ft. (up to 25 ft., if vessel equipped for stern discharge) 4 in. submarine line.

Bulk Edible Oils and Soap Chemicals: Belfast, max. draft 14 ft., 4 in. floating hose (200 ft.) from shore.

The above are single anchor, stern-to berths with stern lines to shore posts. Vessels should have at least 4 ropes available aft and provision to bend 2 lines together.

The above are private facilities but pilotage is available. In the case of Woodbridge Bay (L.P.G.) pilotage is compulsory. Tankers in their ETA advice should include their cargo by products and their draft.

DENSITY: Approx. 1025.

FRESH WATER: Available alongside all berths at a cost of EC $20.00 for 1,000 gals.

FUEL: Dieselene (Gas oil) available in limited quantities ex-tank wagon at all berths. Other grades not available.

GANGWAY/DECKWATCHMEN: Available if required.

OPENING/CLOSING HATCHES: Beam and board hatches, crew or stevedores; Ship's option. Patent Hatches; ship's crew.

CERTIFICATES: Previous Port Clearance; Ship's Register, to sight.

CUSTOMS ALLOWANCES: 200 cigarettes, or 0.5 lb. tobacco or 25 cigars, 26 ounces of spirits per crew member.

CONSULS: (Or Consular Agents).

		Business	*Residence*
France	C. A. Butler	Tel. 2033	Tel. 1146
Netherlands	W. A. Astaphan	3221	2524
Belgium	Achille L. Pinard	2781	2756

REPAIRS: Minor and emergency repairs can be arranged. Engines and deck gear cannot be put out of service without permission of the Port Manager.

SURVEYORS: Lloyd's Agent available for cargo survey. A non-assigned Hull Surveyor is available.

REPATRIATION: Limited inter-island flight capacity to nearest international airports – Guadeloupe, Martinique, Antigua, Barbados.

AIRPORT: Melville Hall 37 miles. Inter-island services only. Canefield Airstrip 2 miles – Charter aircraft and Air Guadaloupe.

TIME: GMT minus 4 hours.

HOLIDAYS: New Year's Day, Carnival (Mardi Gras) 2 days. Good Friday, Easter Monday, Labour Day, Whit Monday, August Monday, National Day (Nov. 3rd – 4th), Union Conference Day (A Sunday in November), Christmas Day, Boxing Day.

Minimum working: Can be arranged on these days, but it is not advised over the Carnival or National Day Holidays.

POLICE/AMBULANCE/FIRE: Police Tel. 2222 or call on 2182 kHz., Fire Tel. 2888, Ambulance Tel. 2321.

At anchor or away from a telephone, blow 3 short and 1 prolonged blast at frequent intervals until acknowledged on VHF Channel 16 or by lamp.

EMERGENCY CO-ORDINATION CENTRE: Port Authority connected with other Regional Port Authorities and U.S.C.G. VHF Channel 16, HF, S.S.B. Standby 2182 and 8281.2. Working 4136.3, 4139.5, 8284.4, 12421.0, 12424.5, 16565.0 and 16568.5.

TELEPHONES: On board service can be provided at the Ocean Wharf, Woodbridge Bay (discontinued at present due to hurricane damage).

SERVICES: Assistance can be given for emergency repairs to electronic equipment, compass adjusting and D/F calibration subject to advance notice. Provisions can be obtained, but advance notice should be given especially for fruit and vegetables of high quality.

BANKS: Barclays Bank International Ltd., Royal Bank of Canada, Bancque Antilles Francais. The National Commercial & Development Bank of Dominica has international correspondents.

STORING: Vessel can store by truck. No facilities to store by barge. Trucks may proceed alongside for direct delivery/discharge, subject to Port Authority agreement. Fork lift trucks may be used. Vessels must be cleared outward for duty free concessions. Riggers available to assist with storing.

IDENTIFICATION CARDS: Dock passes for crew members will be issued through the vessel's Agents.

SHORE LEAVE: After Inward Clearance, there are no restrictions on shore leave. Masters are advised to note that immigration law holds the vessel/owner/agent, financially reponsible for any crew member or intransit passenger left behind (for whatever cause). Vessel's having no accredited Agent will be required to satisfy Immigration Authorities before outward clearance is granted.

DEVELOPMENTS: The main wharf will be extended Northward by 300 ft. to a total length of 800 ft. The extension will be 60 ft. wide.

Also an area of 2.5 acres will be reclaimed from the sea and a container park constructed on the reclaimed land North of the Port Compound.

The projects will be completed before 1992.

SHIPMASTER'S REPORT: 1979.

Pilotage: Compulsory. Pilot boards 0.5 miles off the quay and requires two hours notice of vessel's arrival.

Restrictions: Vessel is able to enter or leave at any stage of the tide day or night.

Max. Size: M.V. "Oriana". LOA – 804 ft., draft 30 ft.

VHF: Channel 16.

Tugs: Not available. Vessels able to dock and undock without the aid of tugs.

Berthing: One berth only available with wooden fenders. A heavy swell may be experienced whilst alongside berth as it is very exposed. Loading rate for bananas is 16 t.p.h. per gang. There is ample mechanised equipment for loading palletised cargoes. There is also storage space for breakbulk and palletised cargoes. The quality of the labour was good. There is no equipment for handling containers and there is no storage space for containers (containers can be handled ex- ship's gear at about 10 units per hour). Accommodation ladder required.

Services Available: Fresh water, fresh provisions, airport, hospital and doctor (no fuel, repair facilities or other services available).

SHIPMASTER'S REPORT: November 1989.

Chart: BA. Charts No. 728 and 697.

Berth: Woodbridge Bay/Fond Cole.

Location: Lat. 15° 18.6′ N., Long. 61° 23.95′ W.

Documents:

1 copy Dominica General Declaration (hand to pilot).
3 copies Crew List.
2 copies Crew Manifest.
1 copy Ship's Bonded Stores List.
1 copy Unmanifested Cargo.
2 copies Customs Boarding Form.

The Agent and a Customs Officer board on arrival. The bond was not sealed.

Clearance on departure is given by Shell.

Pilotage: Pilotage is not compulsory but it is usual to take a Pilot inwards. Pilot not normally taken outward. Pilot is arranged by the Agent and the first contact made was through the Coast Guard Radio Station on VHF Channels 16 and 6.

The Pilot boards from the blue hulled launch with "Pilot" on the side in white letters or from a fast semi-inflatable owned by the Coast Guard. The Pilot boards just South of the General Cargo Wharf.

It is possible to sail at night without a Pilot.

Approaches: The berth at Woodbridge Bay is 8 cables North of the town of Roseau.

From the South, pass abeam of the town and make for the General Cargo Wharf.

When approaching from the North, the berth is about 1.5 miles South of the silo, which is conspicuous and is 2 miles South of the airfield.

The Island of Dominica is very conspicuous by its mountains.

Anchorage: The best anchorage can be found N.W. of the town in a depth of 60 fathoms with the General Cargo Wharf bearing 030° at a distance of 0.6 miles. Occasionally, there is a swell at the anchorage, but it is generally sheltered. When approaching the anchorage keep a careful lookout for fishermen's pots.

Berthing: The Shell Berth is 100 m. North of the General Cargo Wharf. The vessel approaches from the South West, passing very close to the wharf, before turning to port and mooring to one head buoy with 2 lines through the centre fairlead and one line from each quarter to bollards on the shore. The port quarter bollard is painted silver and the starboard quarter bollard is painted yellow. When in the correctly moored position the vessel is 70 m. from the shore line. The distance from the stern to the bollards, when in the moored position, is approximately 120 m., so 2 lines will have to be joined together for each quarter rope. Also when in the moored position the vessel must be close to the head buoy, otherwise there will be very little water under the stern. Our vessel went astern a few metres when moored and only had 0.5 m. under the rudder. The nature of the bottom is soft shingle.

The mooring/hose boat is in constant attendance and runs personnel ashore from the stern when required.

Cargo Operations: The connection on the shore can be seen between black and yellow railings beside the main road. The ship's floating hose of approximately 100 m. length is run to the shore and connected with a quick release coupling.

A Surveyor attends at the commencement and completion of operations and accepts the ship's figures. The shore facility provides the vessel with a Motorola radio.

On previous occasions the pumping rate to the shore was 160 bbls. per hour with a back pressure of 13 Bar. On this visit the shore tanks were nearly empty and we discharged an LPG mix at 300 bbls. per hour. The total storage capacity ashore is 100 tonnes (2 cylinders of 50 tonnes each). The hoses can be rigged on either side of the vessel. We rigged our hoses on the starboard side. Night pumping is not permitted at the berth. On completion, the usual vapour plug is required.

General: Fresh water is available from the General Cargo Wharf, which also handles cruise vessels.

A catamaran ferry also uses the wharf and provides a service to Martinique and Guadeloupe.

The islanders are very pleasant people and there is very little crime.

The island airport is situated at the South end of Rockaway Bay, in position Lat. 15° 20′ N., Long. 61° 19.3′ W., and is served by LIAT with an Islander sized aircraft. An international airport is planned.

A new oil terminal is under construction at Belfast, which is just North of Rockaway Bay. It will be operated by Trinidad National Petroleum and will have a mooring buoy for tankers mooring stern to the shore with floating hoses.

Dominican Republic

GENERAL

DOCUMENTS:

Vessels calling at Dominican ports require a complete Dominican consular despatch from every loading port as well as from the last foreign port of call. Should there be no Dominican Consulate at the respective loading port, the Agents should prepare 3 copies of the manifest to be delivered to Customs. If no Dominican Consulate at the last foreign port of call, the Agent will attend to all the formalities required by the local port authorities.

Derat Exemption Certificate will be required by the Port Doctor.

Additional papers, besides consular despatch, required by authorities are as follows:

Port Doctor:
1 copy Health Declaration.
1 copy Crew List.
1 copy Landing/Transit Passenger List.

Harbour Master/Port Authority:
Port clearance from last port of call.
4 copies Crew List.
4 copies Landing/Transit Passenger List.
4 copies Negative Passenger List (if none landing).
4 copies Arms List.
5 copies Cargo Manifest.
5 copies Bills of Lading.
2 copies Stowage Plan.

Customs:
2 copies Crew List.
2 copies Arms List.
2 copies Landing/Transit Passenger List.
2 copies Negative Passenger List (if none landing).
2 copies Stores List.
1 copy tallybook.

Immigration:
2 copies Crew List.
2 copies Landing/Transit Passenger List.

Police:
1 copy Crew List.
1 copy Landing/Transit Passenger List.

Department of Agriculture:
1 copy Stores List.
1 copy tallybook.

Agency:
1 copy Crew List.
1 copy Landing/Transit Passenger List.
4 copies Manifest (if not airmailed previously).
2 copies each B/L (if not airmailed previously).
7 copies tallybook.

Additional lists, etc., required are:
10 Crew Lists.
10 Landing/Transit Passenger Lists.
5 Negative Passenger Lists (if none landing).
5 Arms Lists.
3 Stores Lists.
9 tallybooks.
4 copies Cargo Manifest (if not previously airmailed).
2 copies B/L (if not previously airmailed).

HOLIDAYS: New Year's Day (January 1st); Our Lady of High Grace (January 21st); Duarte's Day (January 26th); Independence Day (February 27th); Good Friday (Variable); Labour Day (May 1st); Corpus Christi (Variable); Restoration of Independence (August 16th); Our Lady of Mercy (September 25th); Christmas Day (December 25th).

Regular working hours of stevedores: 0800–1200 hrs., 1400–1800 hrs., Mondays to Fridays and 0800–1200 hrs. Saturdays.

Regular working hours of the Port Authority are from 0800–1600 hrs. Mondays to Fridays and 0800–1200 hrs. on Saturdays.

Saturday: Overtime is payable to labour for work performed after 1200 hrs. Pilots and government officials are paid overtime rates all day, but Customs personnel are only paid overtime rates after 1200 hrs.

The above holidays are legal in the Dominican Republic and for the diplomatic and consular representations abroad.

Work can be performed on all Sundays and holidays against payment of overtime to labour, Pilots, Customs and government officials.

TIME: GMT minus 4 hours all year round.

SPARES: Same can be withdrawn same day of arrival via air express. No Customs duties assessed as brought under Customs custody on board vessel. Airwaybill should be addressed to Agent, with clear indication that it covers spares for such and such a vessel.

SECURITY: Stevedores board vessel with special passes issued for vessel in question. Any other visitors must obtain pass from Harbour Master's Office. Nevertheless it is definitely recommended that all cabins be kept locked. This also applies to hatches that are not being worked.

POLLUTION: No garbage, refuse, etc., can be thrown overboard. Vessels liable to heavy fines for oil pollution, etc.

PLAGUE CONTROL: All lines leading to shore must be protected by ratguards. Non-compliance subject to Customs fines.

AGENCY: Agencias Navieras B & R, Torre Panamericana, Av. Abraham Lincoln 504, Apartado 1221, Santo Domingo, Dominican Republic. Tel: (809) 544-2200, 562-1661. Telex: 3460034, 3460103, 3460364, 3264178. Fax: (809) 562-3383.

AZUA (Puerto Viejo): 18.30 N. 70.40 W.

See "General" before first port.

PILOTAGE: Ordered by Agent; vessel should wait for Pilot at a distance of 0.5 miles from the port.

ANCHORAGES: In the approaches, depth is 28 ft.

RESTRICTIONS: Berthing during daylight only.

HEALTH: Pratique is obtained by Agent. In case of infectious illness the whole crew is put in quarantine.

TUGS: Not available.

BERTHING: Finger pier, length 650 ft., width 120 ft. Dredged to 35 ft.

MEDICAL: Necessary for Agent to receive advance notice of required medical attention. Doctor available.

FRESH WATER: Available by truck, but very expensive.

FUEL: Not available.

CONSULS: None.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Required.

OPENING/CLOSING HATCHES: Carried out by crew.

CUSTOMS ALLOWANCES: Bonded stores are sealed.

REPATRIATION: Facilities available.

AIRPORT: Situated 170 miles from port.

POLICE/AMBULANCE/FIRE: Tel: 175.

TELEPHONES: None available on board.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Comandancia de Puerto de Azua.

AGENT: See "General" before first port.

BARAHONA: 18.10 N. 71.10 W.

See "General" before first port.

PILOTAGE: Pilot arranged by Agent on basis of Master's advance notice of ETA. Pilot boards approximately 1.5 miles outside the port. Pilot on VHF Channel 16.

ANCHORAGES: Deep water anchorage available outside port. Pilot will advise best location.

RESTRICTIONS: No entry or departure at night.

MAX. SIZE: 575 ft. length; 29 ft. draft.

HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.

RADIO: When within range, Santo Domingo Radio may be contacted on VHF Channel 16.

TUGS: One small tug available, ship's lines used.

BERTHING: Sugar Molasses Wharf, depth 28 ft. General Gypsum Wharf, depth 30 ft.

STEVEDORES: ETA's required 24 and 12 hours before arrival to arrange gangs.

MEDICAL: Medical attention can be arranged after vessel is cleared, preferably ashore. Minor cases are dealt with locally, more serious cases are transported to Santo Domingo.

TANKERS: Discharge at Molasses Wharf.

DENSITY: Salt water inside harbour.

FRESH WATER: Pipe-line at wharves, ship's hoses used.

FUEL: Small quantities of diesel available by truck from Santo Domingo.

CONSULS: All Consuls at Santo Domingo.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Compulsory gangway watch kept by Customs guards.

OPENING/CLOSING HATCHES: Can be performed by crew or stevedores.

CUSTOMS ALLOWANCES: Bond is sealed, but can be opened at Master's request.

REPATRIATION: Can be arranged.

AIRPORT: Distance to airport 230 km.

POLICE/FIRE/AMBULANCE: Police, Tel: 417; Ambulance, Tel: 441; Fire, Tel: 348 or 398.

TELEPHONES: Shore telephone alongside ship connected to Sugar Mill.

SHORE LEAVE: Allowed.

GENERAL: No boats to be lowered without official permission.

IDENTIFICATION CARDS: Shore passes are provided by Immigration Authorities.

AUTHORITY: Comandante de Puerto.

AGENT: See "General" before first port.

BOCA CHICA: 18.27 N. 69.35 W.

See "General" before first port.

PILOTAGE: Pilot arranged by Agent on basis of Master's advance notice of ETA. Pilot on VHF Channel 16. Pilot boards 1 mile outside the harbour.

ANCHORAGES: Deep water anchorage available outside port. Pilot will advise best location.

RESTRICTIONS: No entry or departure at night.

MAX. SIZE: 400 ft. length; 25 ft. draft.

HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.
RADIO: When within range, Santo Domingo Radio can be contacted on VHF Channel 16.
TUGS: Not available locally. Can be arranged from Santo Domingo.
BERTHING: Depth alongside 24 ft.
STEVEDORES: ETA's required 24 and 12 hours before arrival to arrange gangs.
MEDICAL: Medical attention can be arranged after vessel is cleared, preferably ashore. Minor cases are dealt with locally, more serious cases are transported to Santo Domingo.
TANKERS: Only small propane gas tankers can be accommodated.
DENSITY: Salt water inside harbour.
FRESH WATER: Pipe-line connection at dock, low pressure, ship's hoses used.
FUEL: Only available by truck from Santo Domingo.
CONSULS: All Consuls at Santo Domingo.
REPAIRS: Minor repairs only.
GANGWAY/DECK WATCHMEN: Compulsory gangway watch kept by Customs guards.
OPENING/CLOSING HATCHES: Can be performed by crew or stevedores.
CUSTOMS ALLOWANCES: Bond is sealed, but can be opened at Master's request.
REPATRIATION: Can be arranged.
AIRPORT: 6 km. to airport, served by regular airlines with numerous flights daily.
POLICE/FIRE/AMBULANCE: At Santo Domingo.
TELEPHONES: No connection to vessels.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes are provided by Immigration Authorities.
AUTHORITY: Comandante de Puerto.

AGENT: See "General" before first port.

CABO ROJO: 17.55 N. 71.39 W.

See "General" before first port.
PILOTAGE: Pilot arranged by Agent on basis of Master's advance notice of ETA. Pilot and Agents can be contacted on VHF Channel 16. Pilot boards 2 miles off the port.
ANCHORAGES: Deep water anchorage available outside port. Pilot will advise best location.
RESTRICTIONS: Entry and departure permitted daylight only.
MAX. SIZE: 600 ft. length; 40 ft. draft.
HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.
RADIO: When within range, Santo Domingo Radio can be contacted on VHF Channel 16.
TUGS: No tugs available.
BERTHING: Alcoa Private Wharf, bauxite only. Mechanical loading, no stevedores.
MEDICAL: Medical attention can be arranged by Alcoa after vessel is cleared, preferably ashore. Minor cases are dealt with locally, more serious cases are transported to Santo Domingo.
TANKERS: One tanker at a time could be accommodated.
DENSITY: Salt water inside harbour.
FRESH WATER: Sometimes available.
FUEL: Not available.
CONSULS: All Consuls at Santo Domingo.
REPAIRS: Not possible.
GANGWAY/DECK WATCHMEN: Compulsory gangway watch kept by Customs guards.
OPENING/CLOSING HATCHES: Performed by crew.
CUSTOMS ALLOWANCES: Bond is sealed, but can be opened at Master's request.
REPATRIATION: Can be arranged.
AIRPORT: Distance to airport 360 km.
POLICE/FIRE/AMBULANCE: Contact Port Authority.
TELEPHONES: Telephone on dock connected to Alcoa office.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes are provided by Immigration Authorities.
GENERAL: No boats to be lowered without official permission.
AUTHORITY: Comandante de Puerto.

AGENT: See "General" before first port.

LA ROMANA: 18.27 N. 69.01 W. (See Plan)

See "General" before first port.
PILOTAGE: Compulsory. Ordered by Agents on receipt of vessel's ETA, 72, 48 and 24 hours before arrival. Pilot launch painted white with grey cabin and with letters "LP-24" painted on sides. Pilot boards 1.5 miles from port entrance (N.E. of Catalina Island). Contact Pilot on VHF Channel 16.
ANCHORAGES: West of Isla Catalina in depths of 15 to 18 fathoms.
RESTRICTIONS: No entry or sailing in hours of darkness.
MAX. SIZE: Length: 580 ft. Draft: arrival 25 ft., sailing 28 ft.
HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.
RADIO: Santo Domingo Radio, HIX2, frequency 2738 kHz. Near the port, use Centromana Radio on same frequency.
TUGS: One tug of 620 h.p. available. Extra charge for use of tugs line
BERTHING: One concrete pier 720 ft. long. Depth 28 ft.
STEVEDORES: To be ordered 4 hours before commencing work.
MEDICAL: Doctors and hospital facilities available. Medical attention can be arranged after vessel is cleared, preferably ashore. Minor cases are dealt with locally, more serious cases are transported to Santo Domingo.
TANKERS: Berth for 1 tanker at the pier. Discharge lines 10 in., 8 in., and 4 in.
DENSITY: 1025.
FRESH WATER: Available from 2 in. pipe-line on pier. Very low rate of supply.
FUEL: Available by truck from Santo Domingo.
REPAIRS: Only minor repairs can be effected.
WATCHMEN: To be provided by vessel. Compulsory gangway watch kept by Customs Guards.
OPENING/CLOSING HATCHES: Generally by ship's crew.
CUSTOMS ALLOWANCES: Seamen may take ashore only 2 packets of cigarettes and no alcohol.
REPATRIATION: Arranged via Santo Domingo.
AIRPORT: Distance 70 km.
POLICE/FIRE/AMBULANCE: Police, 235; Ambulance, 455; Fire, 455.
TELEPHONES: In dock office, ask Sugar Mill for number required.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes issued by Immigration Officer.

SHIPMASTER'S REPORT: March 1989.
Chart: BA. Chart No. 467 – Bayajibe to Haina and La Romana – Plan.
Sailing Directions: No. 70. West Indies Pilot, Volume 1, page 120.
Approaches: No difficulties. La Romana is easily identified by large quantities of black and white smoke issuing from the Central Romana Corporation plant close to the West of the dock.

No berthing or unberthing is attempted at night and no response is received to calls on the VHF until about 0630 hrs. As Santo Domingo, Haina and La Romana start at that time and all use Channel 16 exclusively, it is a little noisy for a while.

Agent and Pilot were contacted on VHF Channel 16 and instructions given.

Berthing: Pilot boarded less than 1 mile off from a 15 ft. boat with a small outboard. Ship is best stopped altogether.

As a shoal patch extends Eastwards from the West side of Rio Romana there is a dog-leg in the short channel immediately before the entrance, and as the port is little more than a 100 m. wide slot in the coast, there is no room for mistakes or uncertain engine starts.

Ship is swung to starboard as the entrance is passed and then the starboard anchor is let go and held at 1 shackle just off the berth. Judged correctly, vessel can be stopped just off the berth and pushed alongside by the tug.

On departure, the tug is made fast on a bridle aft and the ship is towed out stern-first, using engines for steering.

There is deep water within 2 cables of the shore so ship can be swung very soon after leaving the channel.

Two buoys mark the channel, both are still to be changed to the IALA system.

Berth: (See "Plan"). Wharf is solid and well fendered. Length of wharf is 720 ft., with 3 sugar loading arms at the North end and several liquid cargo loading points set into the dock for molasses (blackstrap and edible) and furfural. Wharf is kept tidy and clean.

Loading: 4,200 tonnes of furfural loaded in 19 hours (221 tonnes/hr.) through a 6 in. hose. Hose was connected to a 4 in. line on dock so this was a respectable rate.

On completion of loading, shore labour disconnected the hose after a sloppy line blow. They did not bother putting a blank on the hose so furfural was spilled all over the deck; after which they tossed the hose over the side where it drained down the ship's side and into the dock.

Port/Berth Information:
Density: Salt water.
Distance from Pilot to berth: 1 mile.
Bridges: None.
Controlling depth in approaches: 33 ft.
Max. draft in approaches and alongside: 28 ft.
Max. LOA: Vessels with greater length than this vessel (LOA 170 m.) would have difficulty entering.
Fresh water: Available.
Fuel: Not available.
Tugs: One tug available and should be used.
Anchorage: None.
Loading/discharge hoses: 1 × 6 in. furfural.
1× 10 in. molasses.
Other points available.

Slop facilities: None.
Repair facilities: None.

Officials: Cabins searched on arrival and before departure. Berth was well guarded, so ship was free of unwelcome visitors.
Agent/Berth Operator: Central Romana Corporation. Office on the wharf. Helpful and efficient. Telephone communication with outside world easy and quick.
General: Many tourists in evidence. Passenger ships moored further upriver and charter boats entering and leaving throughout the day.

AUTHORITY: Comandante de Puerto.
AGENT: See "General" before first port.

MANZANILLO: 19.43 N. 71.45 W.

See "General" before first port.

PILOTAGE: Compulsory. Pilot comes from Puerto Plata. Boards incoming vessels about 1 mile from the dock. (The Pilot's working hours from 0800 to 1200 hrs., 1400 to 1700 hrs.; a fee charged after working hours. A fee is also charged for movements in harbour.) Ships will be received Saturdays and Sundays and at night for the same rate for the Pilot. Contact Pilot on VHF Channel 16.

ANCHORAGES: Vessels that cannot be docked on arrival will find safe anchorage to the East of the dock where there is plenty of swinging room, in about 20 fathoms of water, with good holding ground of mud and sand.

APPROACHES: Coast Guard Service recommend that a ship, entering Manzanillo Bay from the East, should stay well out until it has rounded shoals surrounding Seven Brothers Islands. At approximately Lat. 19° 58′ N. a course of 127° will bring it into the bay near the wharf. A ship arriving from the West should stay about 6 miles off Cape Haitian Light. When abreast the light a course of 111° will lead into the Bay a short distance North of the pier.

RESTRICTIONS: Entry and departure day and night.

RADIO: Radio Station HIL31.

Vessels bound for Manzanillo, should radio their ETA to Santo Domingo Pilot Station and Agent daily, from 0600 hrs. to 1800 hrs.

Vessels having single sideband equipment may also contact Radio Instituto Agriario Dominicano at Manzanillo, at wavelength 2670 and 2638 kHz from 0700 to 1200 hrs. and 1400 to 1700 hrs. EST.

TUGS: No tugs available but there is a launch for the handling of ship lines. Tug available from Puerto Plata if required due to size of vessel.

BERTHING: Prevailing winds are Easterly and sometimes interfere with docking or undocking. On the East side vessels should dock bow in, since there is not enough room to swing vessels safely around for a port docking. On the West side vessels can dock either side to the pier, depending on the direction and force of the wind. In general banana vessels will be docked on West side of the pier and cargo vessels on the East side. Pier has a concrete deck 744 ft. long, 72 ft. wide. Both sides of the pier are protected with a pine fender system. The water depth at land end of pier is 10 ft. and at the seaward end 40 ft.

NOTE: The dock is in very poor condition and a small vessel has sunk alongside the Western side of the pier.

MEDICAL: Small dispensary in Manzanillo. Hospital facilities in Monte Cristi, 30 km. away.

STEVEDORES: Available.

REPAIRS: Small repairs carried out only.

FRESH WATER: Available for ships calling at this port only.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Carried out by crew.

OPENING/CLOSING HATCHES: Crew or stevedores.

CUSTOMS ALLOWANCES: Each crew member will be allowed to take ashore one only opened package of cigarettes.

REPATRIATION: Facilities available.

SHORE LEAVE: Members of crew are allowed to go ashore at this port, but Masters should caution them not to take on their persons any dutiable articles, as the Customs will search such men upon landing and should any such articles be found on their persons, this will be treated as an attempt to smuggle; severely punishable offence.

CREW IDENTIFICATION CARDS: Required.

AUTHORITY: Comandante de Puerto.

AGENT: See "General" before first port.

PALENQUE: 18.12 N. 70.11 W.

SHIPMASTER'S REPORT (1976). Updated 1988.

The vessel called at Punta Palenque to discharge a cargo of feedstock from Venezuela. The SBM is located in position 18° 12.2′ N. 70° 11.3′ W. and operated by Refineria Dominicana de Petroleo, S.A.

DOCUMENTS:

7 Crew Lists.
2 Store Lists.
1 Crew Effects List.
2 Passenger Lists.
2 Lists of Arms & Ammunition.
2 Lists of Narcotics.
1 Health Declaration.
Clearance last Port.

PILOTAGE: Pilotage is compulsory. Mooring and unmooring 24 hours a day. Pilot boards about 1 mile Southwest of SBM.

Pilot boat, a small tug with black hull and white superstructure, is equipped with VHF Channels 16 & 14, call sign Punta Palenque Pilot. Pilot moors the vessel with the assistance of the Loading Master who gives directions on the focs'le. The tug delivers the mooring gear consisting of 2 nylon tails put on vessel's bits and shackles. The nylon tail will be shackled to SBM mooring lines. These mooring lines consist of about 100 ft. nylon rope and 10 ft. chain. The chain is heaved inboards by means of 1 wire and 1 nylon or polyprop messenger and connected to nylon tails on vessel's bits.

MAX. SIZE: Vessels up to 260 m. in length with max. draft of 14.6 m. A circle of 2,000 ft. around the buoy with a min. depth of 50 ft.

HEALTH: Radio Pratique not available.

RADIO: Crude predominantly supplied from Pemex (Pajaritos,Mexico) and Maraven (Cardon/Miranda,Venezuela). Masters to send ETA Punta Palenque before sailing from loading ports, handing the message to local agents.

Messages should include draft on arrival, number of crew, whether any sickness on board. Messages to be sent to Refidomsa, Santo Domingo and copy to Agent (B & R, S.A., see "General" – "Agency").

TUGS: Not available for mooring. Messengers to and from SBM are handled by a small work boat.

BERTHING: Single Buoy Mooring, property of Refineria Dominicana S.A. (Telegraphic Address: Refidomsa), located about 2,500 m. offshore, or 2.5 miles S.W. of Punta Palenque light. Nature of bottom: sand over coral. Buoy fitted with Radar Reflector and flashing red light.

Loading Master plus 3 men remain on board.

Connection amidships, port side.

LOADING: Shore Line System: From shore to ship:

1×28 in. line from tank farm to shore 750 m.
1×28 in. submarine line 2,550 m.
2×16 in. underwater hose systems from seabed to buoy.
2×16 in. floating hoses, about 165 m. long.
2×12 in. hoses to ship's manifold 27.5 m. long.
Maximum rate of discharge: 4,800 cu.m./hr.
Maximum back pressure: 150 p.s.i.
Product: Crude oil discharge.
Storage: 525,000 barrels.

REPAIRS: None available.

GENERAL: No navigational hazards approaching Punta Palenque from the South. SBM shows on radar at a distance of about 11 miles.

Reference: B.A. charts 3689, 471; West Indies Pilot Volume 1, Supplement No. 3 1975.

Weather: Wind: N.E. Trades

Current: Predominating from East to West but sometimes shifting to opposite direction for short periods. Velocity about 1.5 knots.

Services: Fresh water, provisions, fuel oil and diesel oil not available. No medical assistance. Shore leave not permitted, repatriation not possible.

Master's Remarks: When approaching from the South, the coast of Dominican Republic gives a good radar target. SBM could be picked up at about 11 miles distance. Punta Palenque Pilot could be contacted at a distance of 30 miles.

Authorities: After vessel is moored Pilot acts as Agent together with a senior Custom Officer who came on board with the Pilot. Two junior Custom Officers will stay on board during the stay in port, also Loading Master and/or his assistant. Pilot delivers Outward Clearance.

SHIPMASTER'S REPORT: (1977). Updated 1988

DOCUMENTS: Last Port Clearance.

8 Crew Lists.
6 Passenger Lists (nil).
3 Stores Lists.
5 Firearms Declarations.
1 Vaccination List.

To be legitimised by Dominican Consulate if possible, otherwise notarised by the Chamber of Commerce at sailing port or pay local requirements fee.

PILOTAGE: Pilotage compulsory. Pilot boards 1 mile S.W. of S.B.M. which is the waiting area. ETA required by Pilot at least 6 hours before arrival. The vessel cannot under any circumstances dock without the Pilot as the Loading Master is stationed on the forecastle head and advises Pilot of helm and engine requirements when approaching S.B.M.

ANCHORAGES: Temporary anchorage on the coastal bank to the West of S.B.M. to suit vessel's draft.

RESTRICTIONS: A vessel may enter and leave the port during hours of darkness and at any stage of the tide.

MAX. SIZE: Max. length 854 ft. Max. draft 48 ft.

TUGS: No tug assistance required. Mooring launch attends on arrival and departure bringing to and removing from the vessel all the gear required for mooring (Snotters, Strops, etc.). At night the launch also illuminates the hose string.

RADAR: The radar reflector on the S.B.M. is excellent and gives out a good echo at 10 miles.

BERTHING: Position of S.B.M. 18° 12′ N., 70° 11.4′ W.

Terminal Operator: Refineria Dominicana De Petroleo S.A. (Refidom SA).

At the time of berthing depth of water under the keel by echo sounder was 45 ft., the nature of the bottom at the berth was sand and coral.

As stated above the vessel is able to dock and un-dock at any stage of the tide day or night.

When 1 mile from the S.B.M. (waiting area) vessel approaches the buoy on a N.E. heading parallel to the hose strings and then turns the vessel to stem the current flow.

Moorings: Plaited ropes with cable chafing lengths shackled between the two plaited ropes. Snotters to the bitts from the central Panama lead.

The port derrick to be rigged in advance to accept mooring gear from the tug and lift hoses (2×12 in. string).

Hoses: S.B.M. hoses connected to the ship's manifold (2×12 in.). Distance from the S.B.M. to the shore tanks is 1.5 miles. Shore booster pump not available, steam jacket or similar facilities not available. Max. pressure on line 125 p.s.i., max. weight to be lifted 5 tons. Product Handled: Crude Oil. Ship's accommodation ladder not required.

DENSITY: 1025.

SERVICES: None of the following are available; fresh water, provisions, repairs, airport, fuel oil, doctor, hospital, laundry.

All cargo handling surveyed by independent inspector nominated by Refidomsa. Slop discharge possible upon request and after agreement. Under no condition is pure water to be discharged via the hoses.

TIME: Pilot advises time is GMT minus 4 hours (throughout the year).

GENERAL: Vessel's ETA by telex to be given to Santo Domingo from the last port of call, any changes should be passed to the Agent through 'Curacao Radio' as at no time whilst on passage from Punta Cardon could traffic be passed through 'Santo Domingo Radio'. The Pilot acts for Agent. Customs and Immigration are in attendance, leaving with papers, cables and telex, consignees documents etc., after the vessel is all fast. The ship's official documents were not examined. 2 Customs guards and the Loading Master remain on board and should be provided with cabins and meals.

Cargo surveying is carried out by an independent surveyor, he also maintains VHF contact with the Agent in Santo Domingo through the refinery.

The Loading Master, Berthing Master and Sailing Pilot all speak English. VHF contact made with the refinery when 45 miles from the S.B.M. who then passed our amended ETA to the Pilot.

SHORE LEAVE: Not possible.

AUTHORITY: Refineria Dominicana de Petroleo, S.A., Apartado 1439, Santo Domingo, Republica Dominicana. *Tel:* 533-3161. *Telex:* 3460342 (ITT), 3264320 (RCA). *Cables:* Refidom. *Contact:* Ronald Storrer, Superintendent.

PUERTO DUARTE (El Botado): 19.12 N. 69.26 W.

See "General" before first port.

PILOTAGE: Pilot will board vessels between No. 2 Buoy and No. 4 Buoy.

TUGS: Not available.

BERTHING: Finger pier, length 230 m. Depth alongside 30 ft.

FUEL: Available by truck.

REPAIRS: Not possible.

GENERAL: *Chart:* No. 917.

AUTHORITY: Captain of the Port.

PUERTO PLATA: 19.49 N. 70.41 W.

See "General" before first port.

PILOTAGE: Pilot arranged by Agent on basis of Master's advance notice of ETA. Pilot and Agents can be contacted by radio telephone, frequency 2738 and 2638. Pilot boards 0.5 miles from port entrance. Pilot also on VHF Channel 16.

ANCHORAGE: Deep water anchorage available outside port. Pilot will advise best location.

RESTRICTIONS: Night entry not recommended.

Depth at entrance 42 ft., depth on bar 37 ft. HW and 34 ft. LW, depth in harbour 30 ft.

HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.

RADIO: When within range, Santo Domingo Radio.

TUGS: Tugs not available.

BERTHING: One wharf 30 ft. alongside. Pier 496 ft. long, 135 ft. wide. Facilities include water, electricity, warehouses. New pier recently constructed is 934 ft. long, with depth alongside 35 ft., also 144 ft. wide.

CRANES: Not available.

STEVEDORES: ETAs required 24 hours and 12 hours before arrival to arrange gangs.

MEDICAL: Medical attention can be arranged after vessel is cleared preferably ashore. Minor cases are dealt with locally, more serious cases are transported to Santo Domingo.

TANKERS: Berth at molasses/petroleum berth.

DENSITY: Salt water inside harbour.

FRESH WATER: Pipe-line at wharves. Ship's hoses used.

FUEL: Diesel and fuel oil available by truck from Santo Domingo.

CONSULS: Germany F.R. – Mr. E. T. Heinsen.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Compulsory gangway watch kept by Customs guards.

OPENING/CLOSING HATCHES: Can be performed by crew or stevedores.

CUSTOMS ALLOWANCES: Bond is sealed, but can be opened at Master's request.

REPATRIATION: Can be arranged.

AIRPORT: Distance 250 km.

POLICE/FIRE/AMBULANCE: At Santo Domingo.

TELEPHONES: Nearest in Customs House alongside wharves.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Shore passes are provided by Immigration Authorities.

GENERAL: No boats to be lowered without official permission.

SHIPMASTER'S REPORT: March 1989.

Approaches: BA. Chart 463.

Owen Rock and the wreck, partly above water, are conspicuous, also the chimney S.E. of Punta Fortaleza which has a conspicuous plume of smoke giving a good indication of wind direction and strength.

The light S.E. of Pta. Fortaleza is sometimes working but is very weak.

The leading lights are fixed red and are conspicuous on the leading line and appear to be in the charted positions. They are displayed from white square towers with red tops.

These lights are unreliable and although usually on throughout the day are often out at night.

The buoys are not as charted, Buoy No. 1 and Buoy No. 6 are missing, Buoy No. 3 is close to its charted position, Buoy No. 2 has been moved closer in shore and Buoy No. 4 into the harbour.

Approximate positions of the buoys obtained by radar (bearings and distances from Pta. Fortaleza light):

No. 2	352°	0.465 miles
No. 3	334°	0.265 miles.
No. 4	328°	0.355 miles.

None of the buoys are lit and all are of the same rust colour.

The chart shows the shelf off Pta. Fortaleza extending into the buoyed channel but with the movement of the buoys this is no longer the case.

The leading lights give a line slightly to the East of the centre of the buoyed channel.

Pilots: The ETA will be passed to the Pilots by the Agents.

There is VHF communication with the pilot office but once he leaves the office to come to the vessel there is no further communication.

Channel 16 is used exclusively for communications.

There have been a number of changes recently in the pilots and in March 1989 Pilot Domingo proved competent both entering and leaving.

The Pilot boards from a small fibreglass boat as close to the buoys as the vessel is willing to come.

Wait until the boat is seen crossing the harbour before approaching too close as it can take a long time from the Pilot advising that he is on his way until the boat reaches the channel buoys.

Tugs: There is no tug available at this port.

Current: There is usually a strong set to the West when approaching on to the wreck and Owen Rock but on occasions this can be reversed and an Easterly or Southerly set experienced.

Entry and Departure at Night: Not recommended, none of the lights are reliable and the buoys are often not clear on radar due to clutter.

There are no lights on the old pier and vessels berthed there are usually in darkness.

The lights on the new pier are confined to the walls of the cargo shed which is at the landward end of the pier.

There were 2 floodlight towers on the new pier, both are damaged and not working, the closest one to the end has now been demolished.

The Pilot advised that entry and departure is in daylight only.

Berths: The Eastern, "Old Pier", is in poor condition with the end corner bollards either missing or damaged.

The length of this pier is approximately 115 m.

The Eastern side of this pier has a line of steel pilings approximately 2 m. from the side of the pier, these pilings are in very poor condition due to corrosion and damage. An attempt has been made to fender the tops of the pilings with tyres but most have slipped and afford little protection.

The chart shows some 5.1 m. alongside this pier but the Pilot has advised that there is 29 ft. (8.8 m.) there, and no problems were experienced berthing there with a draft of 7.75 m. on one occasion.

The Western, "New Pier", is in fairly good condition with fendering on the East and West sides.

The usual grain and feed berth is the outer end of the East side of this pier, but on Mondays this is reserved for the passenger vessel 'Caribe' which arrives at about 0800 hrs. and sails around 1700 hrs. Any vessels on this berth are moved off either to another berth if available or out to sea.

There is about 31 ft. 6 in. of water alongside at this berth (9.6 m.) as a vessel of this draft was seen struggling to get alongside and eventually managed.

The alternative berth is the West side of the New Pier, and the Pilot reports that there is 23 ft. of water alongside (7.01 m.), this was the berth used on this occasion and no problems were experienced berthing with drafts of 5.01 m. forward and 6.12 m. aft, the echo sounder showing clearance under the keel.

There is much less water at the landward end of this pier.

The outer 30 m. of this berth is used by small container vessels and there is timber strengthening for their mobile crane over this area making it useless for any other discharging operations.

Depths: The depths are not as charted and the water gets shallow to the West of the leading line. The bottom is soft mud and the harbour appears to be silting up from the Rio San Marcos. Depths, particularly to the West side of the harbour, are doubtful.

General Weather: Early morning it is usually calm with the wind increasing from the East throughout the morning becoming strongest in the late afternoon.

There is sometimes a swell in the port, but this usually doesn't affect vessels berthed alongside.

Expect rain at all seasons, usually in very heavy downpours.

Fresh Water: This is available from the dock, although sometimes difficult to get, especially at weekends, even though the hydrants on the dock are continuously running and stevedores open up the hydrants to wash

Provisions: Available and of reasonable quality and price.

General chandlery and working stores are almost impossible to obtain.

Courtesy Flag: This must be the plain flag, not defaced with the Coat of Arms.

Load Line Zone: Puerto Plata is just inside the Tropical Zone but from 16th July to 31st October the Summer Zone is entered after 16 miles (Northbound).

Port Authorities: The authorities will board on arrival with the Agent usually 7 to 10 people. A search of the vessel and accommodation is carried out for contraband and stowaways before the vessel is cleared inwards.

A further search is carried out before departure and before the clearance is issued. These searches are usually only formalities at the port.

Documents: Ship's standard forms are accepted.

1 copy Maritime Declaration of Health.
8 copies Crew List.
8 copies Passenger List (Nil declaration required).
8 copies Arms and Ammunition List (Nil declaration required).
5 copies Stores List.
5 copies Crew Effects List.
8 copies of a Stowaway List are required if vessel has any on board.

Stowaways: Stowaways are a problem in spite of the patrolling guards. The port security fence has been removed over a distance of a few hundred metres, although the gate is always closed and guarded, potential stowaways will swim out to ships from the beaches.

Communications: All arrival messages are sent to Santo Domingo office and relayed whether by telephone or public telex to Puerto Plata.

The telex and telephone system in the Dominican Republic is often out of order.

Casual Labour: Available at negotiable rates, about U.S.$12.00 per day, but before any work is started permission must be obtained from the Comandante del Puerto. The request for permission must contain the names of the prospective employees and is stamped by the Official and issued to the dock guard.

Syndicate employees are charged at about U.S.$25.00 per day.

Search the vessel well after they finish work and before sailing as casual workers could be potential stowaways.

Cargo Work: Discharging of ground nut pellets is by grabs on ship's cranes into hoppers on the dock and taken away by lorries.

The holdups are all due to lorries and although it is possible to work around the clock there are usually no lorries available and work ceases about 2100 hrs. each night, starting again at around 0800 hrs.

The tonnage discharged is checked by truck weights.

Total discharged 3,300 tonnes.

Gross gang hours	155.75	Gross rate	21.19 t.p.h.
Net gang hours	66.6	Net rate	49.55 t.p.h.
Time lost: Lack of trucks	49.5 hours		
Rain	37.8 hours		
Breakdown	1.8 hours		

The trucks used are small general purpose vehicles carrying about 15 – 20 tonnes each and on some occasions only one truck was available to serve the two gangs working. The Agents are the stevedores but they do not supply the trucks.

Shore Passes: Shore passes are issued by Immigration on arrival and should be carried, but generally they are not asked for by the gate guards.

Repatriation: There is an international airport close to Puerto Plata used mainly to fly tourists into the hotel complex some 20 km. out of town.

Baggage and personal effects are cleared by Customs at the dock and it can take up to 8 hours to complete formalities.

Local agents have difficulty in obtaining flights, and on one occasion a Chief Engineer after waiting for 5 days caught the next managed vessel back to the U.S.A. for repatriation. On another occasion, a crane engineer discharged here was lost to his Company for two days.

AUTHORITY: Comandante del Puerto.

AGENT: See "General" before first port.

RIO HAINA: 18.25 N. 70.01 W. (See Plan)

See "General" before first port.

PILOTAGE: Pilot boards from small boat flying a flag with a white "P" on a black background, about 1.0 mile from harbour entrance. Contact Pilot on 2738 or 2638 and Channel 16 VHF.

RESTRICTIONS: It is recommended to sail during daylight only.

MAX. SIZE: Max. draft 30 ft. 6 in.

TUGS: 2 tugs, 1,200 h.p. and 850 h.p.

BERTHING: 12 berths available. Vessels going to load sugar swing inside the harbour with the aid of a tug, and berth starboard side to the quay. Ship's gangway is recommended. There is sometimes quite a swell running inside the harbour. The port anchor is used for berthing and unberthing.

LOADING: Sugar is loaded by 3 mechanical loaders which are fixed so that large vessels are required to shift along the quay to load in end hatches. Loading rate is quoted as being 350 t.p.h. Cargo quantities are given in short tons.

At least one beam has to be removed from each hatchway to allow loader to enter.

Possible to load 8,500 ton vessel within 24 hours.

SPECIALISED CARGO HANDLING FACILITIES: Roll-on/Roll-off facilities on East bank of river. Container gantry crane available. Mobile cranes available for container and bulk cargo discharge, maximum capacity 80 tons.

TANKERS: CBM operated by Refineria Dominicana de Petroleo, S.A.

FRESH WATER: *Shipmaster's Report:* October 1982. Fresh water can be supplied alongside fertiliser plant and container quay only, ship's hoses used. Fresh water also available by truck.

FUEL: Fuel oil, diesel and intermediate fuels available by truck.

REPAIRS: Minor repairs in Santo Domingo.

DEVELOPMENTS: Berth under construction. On completion there will be 750 m. of berthing space for 3 Ro/Ro vessels.

Container berth under construction, length 520 m.

SHIPMASTER'S REPORT: March 1984.

Four Buoys have been installed in front of the entrance to the port and are not in line with the leading lights when entering. On the starboard side there are 2 red buoys (Fl. red) and on the port side 2 black buoys (Fl. green).

SHIPMASTER'S REPORT: March 1989.

Approaches: BA. Chart No. 471.

The approaches are as shown on the chart and in the sailing directions.

Both breakwaters are in ruins.

The buoys are unlit white drums, 3 to the East side of the channel and 3 and one half to the West side (the inner buoy on the West side has been partly destroyed), the buoy positions are not as charted.

Vessel approaches from the South on a course of 349°, with a group of 4 chimneys just to the port side of the mast. With the wind in the right direction, the smoke from these chimneys will hide the buoys until quite close.

The leading lights are in position but are difficult to see, especially the rear one, it is just as well not to use these as the leading line they give goes over the end of the Easterly breakwater.

When the buoys can be clearly seen, adjust course to line them up on each bow.

Pilots: Pilot boards from a large launch as close to the buoys as vessel is willing to come. They have VHF with working on Channel 12 and will advise when to approach. The pilots employed on this occasion were efficient.

Night Navigation: The port is closed from 1900 hrs. to 0700 hrs. as most of the lights are not working, also the buoys are unlit and are very poor radar targets.

Delays: Movements start at 0700 hrs., and depending on the number of vessels arriving and sailing, delays of 3 to 4 hours can be experienced awaiting turn for pilot.

The Agent seemed either unable or unwilling to say how vessels are given priority for movements.

Tugs: There are good tugs available in the port and the Pilot will advise on their use.

Berth: The berth used on this occasion was just inside the breakwaters on the East side and consists of 2 piers and 3 dolphins, overall length approximately 160 m. There is good fendering on all except one of the dolphins (See "Plan").

Vessel berthed starboard side to and worked Hatch No. 1 first, so it was necessary to run lines from the stern to a bollard on the breakwater.

The breakwater is in poor condition along its inside face and the bollard is hidden behind a jumble of boulders but on inspection appears to be well secured although displaced.

Long lines are needed to reach this bollard and it is possible that 2 lines may have to be joined, although they can remain in place when working Hatch No. 3 it is better to move them up to the Southern dolphin.

A dredger is working in the harbour with a floating pipeline going ashore just to the North of the Northern dolphin (See "Plan"), this pipeline and dredger seem to be a permanent fixture and to work Hatch No. 4 starboard side to, the pipeline would have to be moved.

Working Hatches No. 1, 2 and 3 starboard side to, causes no problems if the headlines are taken to the bollard ashore when working No. 3, but working Hatch No. 4 would require good weather conditions as all head lines would be leading astern.

Port side to working Hatches No. 3 and 4 would not be difficult but to work Hatches No. 1 and 2 the pipeline would have to be removed for safety of the rudder.

Preferable if using this berth to use Hatches No. 1, 2 and 3 only, although No. 4 can be worked with the vessel starboard side to.

When working Hatch No. 3 starboard side to, have fenders rigged for the fenderless dolphin.

The crane works from the dolphin at the end of the curved pier but is left in the charted position when not working.

Crane S.W.L. is 6.3 tons at 25 m. radius.

Vessel is positioned alongside with the Southern edge of the crane dolphin about 2 m. forward of the aft hatch coaming. Instructions from the dock are only that the vessel is required ahead or astern, no estimate of distance is ever given. Work is in progress on the corner of the dock, breaking down the face to insert new piles and reface the dock, if the dockside bollard is removed only Hatches No. 1 and 2 could be worked starboard side to and the vessel turned round for Hatches No. 3 and 4.

Cargo Working: The shore crane discharges using clamshell grabs into a hopper situated on the other pier. This is a three section hopper, two sections for trucks and one direct to a conveyor belt to the grain silo.

Discharging rate is good, provided trucks are available and a net rate of 177.42 t.p.h. was achieved for 3,300 tonnes of ground nut pellets discharged from 2 hatches.

Fresh Water: Available. Delivered alongside in tank trucks.

Port Officials: See "Puerto Plata".

The bond locker is not sealed.

On the first evening after berthing, a gentleman appeared requesting the Vaccination List, as one hadn't been prepared he was asked to return next day. The lists were prepared but he never returned.

Departure Clearance: A search of the vessel, including accommodation and engine room is made by 6 port guards, each of which requires a crewman to accompany him.

This search is thorough and worthwhile as stowaways can easily get on board from the beach without having to enter the docks through the gate.

When the search is complete, clearance is issued.

AUTHORITY: Autoridad Portuaria Dominicana, Margen Oriental, Puerto de Haina. *Tel:* (809) 535-7940. *FAX:* (809) 535-8926.

AGENT: See "General" before first port.

SAN PEDRO DE MACORIS: 18.30 N. 69.12 W.

See "General" before first port.
PILOTAGE: ETA required 24 hours before arrival. Pilot meets vessels 0.5 miles from buoy. Pilot Radio Station frequency is 2738 and 2638 also VHF Channel 16. In the event of bad weather vessel should remain 3 miles South of the buoy. Pilot boards from small unmarked motor boat.
ANCHORAGES: One mile South of the lighthouse; depth 60 ft.
RESTRICTIONS: Channel depth 28 ft. Up to 480 ft. length, no restrictions. Arrival is preferable during daylight hours. Departure daylight hours only.
MAX. SIZE: Vessels of 600 ft. length have berthed alongside. Draft up to 27 ft. maximum.

Larger vessels leaving port after loading may require to use port anchor to manoeuvre around sharp bend in buoyed channels just inside harbour entrance.
HEALTH: In case of illness or death on board, send a cable before arrival; doctors available.
RADIO: Radio Station, frequency 2738, call Radio Pilot de San Pedro de Macoris.
TUGS: Compulsory. Tug joins vessel inside the port – 150 ft. from the quay. One tug 500 hp.
BERTHING: Quay No. 1, 900 ft. long, 25 ft. depth; Quay No. 2, 600 ft. long, 25 ft. depth; Quay No. 3, 600 ft. long 24 ft. depth.

Large vessels arriving to load swing inside the harbour using starboard anchor and berth port side to quay. At a later date barges are placed between the ship and quay, to permit greater draft, and Pilot receives extra payment for doing so. Use of gangway is recommended.
LOADING: Vessels loading sugar use ship's gear and ship has to supply rope slings. The chains on the centre sections of MacGregor hatches are broken, and a gap of about 2 ft. made, through which the bags of sugar are bled into the holds at the rate of about 220 tons per gang per day. Only 6 bags per sling are lifted at a time. Stevedores cover hatch openings with tarpaulins when loading is completed for the day. They will make up any extra slings that are required if ship supplies rope.
TANKERS: Oil line diameter 8 in. Max. pressure 60 p.s.i.
FRESH WATER: Available.
FUEL: Supplied by truck.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Crew.
CUSTOMS ALLOWANCES: Only sufficient for port consumption. Allowed take only 2 open packets cigarettes ashore.
CONSULS: Great Britain Vice-Consul only. Others at Santo Domingo.
REPAIRS: Minor repairs only.
AIRPORT: Airport is located at 40 km. distance.
TELEPHONES: No telephones on board.
REGULATIONS: Rat guards to be fitted on all ropes. No boats to be lowered without official permission.
REPATRIATION: Can be arranged.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
AUTHORITY: Comandante de Puerto.
AGENT: See "General" before first port.

SANTO DOMINGO: 18.28 N. 69.53 W. (See Plan)

See "General" before first port.
PILOTAGE: Pilot arranged by Agent on basis of Master's advance notice of ETA. Pilot and Agents can be contacted by radio telephone, frequency 2738, 2182, and 2638 kHz. Pilot boards 1.5 miles off breakwaters. Pilot also on VHF Channels 12 and 16.
ANCHORAGES: Deep water anchorage available outside port. Pilot will advise best location.
RESTRICTIONS: If draft over 24 ft., Master should advise Agent before arrival. Berthing after dark not advisable for petroleum and grain berths.
MAX. SIZE: Length over 650 ft. inadvisable. Max. draft 30 ft. 06 in. at grain berth, 29 ft. for tankers at 28 ft. at general cargo berth.
HEALTH: Pratique granted after Health Authorities have boarded and cleared vessel. In case of disease aboard notify Agents before arrival. Pratique is automatic when proceeding from another port in the same country.
RADIO: When within range, Santo Domingo Radio.
TUGS: Join vessel inside port. Ship's lines used. 2 tugs available, 1,200 h.p. and 800 h.p.
BERTHING: 7 berths for vessels up to 600 ft. length. Depths 18 ft. – 28 ft.

Daylight berthing only for vessels proceeding to private Tallow/Soda terminal and Cement Wharf. Mobile cranes up to 80 tons capacity available.
BRIDGES: Vessels proceeding up river, height limited to 95 ft. above waterline.
STEVEDORES: ETA's required 24 and 12 hours before arrival to arrange gangs.
MEDICAL: Medical attention can be arranged after vessel is cleared, preferably ashore.
TANKERS: One berth, draft 29 ft., at Sans Souci. LPG facilities under construction.
DENSITY: Brackish inside harbour. Effect of tide negligible.
FRESH WATER: Pipe-line alongside berths. Ship's hoses used.
FUEL: Fuel oil, intermediate fuel and diesel available ex-tanker berth. At other berths by truck, but very expensive.
CONSULS: All Consuls at Santo Domingo.
REPAIRS: Minor repairs only.
DRY DOCK: Can accept vessels up to 320 ft. long, 50 ft. beam and 17 ft. draft.
GANGWAY/DECK WATCHMEN: Compulsory gangway watch kept by Customs guards.
OPENING/CLOSING HATCHES: Performed by crew or stevedores.
CUSTOMS ALLOWANCES: Bond stores are sealed.
REPATRIATION: Can be arranged.
AIRPORT: Distance, 26 km.; served by regular airlines with numerous flights daily.
POLICE/FIRE/AMBULANCE: Police, San Domingo 682-3000; Ambulance, San Domingo 682-4288; Fire, San Domingo 682-2000.
TELEPHONES: No connection to vessels.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes are provided by Immigration Authorities.
GENERAL: No boats to be lowered without official permission.
DEVELOPMENTS: Santo Domingo's Sans Souci Tourism Wharf, phase 1, is now under construction on the Eastern side of Santo Domingo harbour.

Phase 1 of the project comprises the construction of a dock with a platform measuring 250 m. in length by 31.40 m. in width. Totally made out of precast prestressed concrete members, it is designed to accommodate simultaneously two 20,000 metric ton displacement passenger ships or one of 50,000 metric tons. Besides the dock itself, there is a 20,000 sq. ft. passenger terminal building to be built which will be equipped with all the services and facilities necessary to allow cruises to originate in the new port.

Also under construction is a 1,000 metric ton potable water reservoir with a 50,000 g.p.h. pumping station.

The site selected, the Eastern shore of Ozama River, is 15 minutes by car from Santo Domingo's Las Americas International Airport.

The entire harbour will be dredged to a minimum depth of 35 ft. below mean sea level.

The Sans Souci Tourism Wharf completed. Depth 28 ft.

Phase 2 and Phase 3 consist of berthing facilities for one 20,000 metric ton displacement passenger ship each; construction of these additional berths has not yet been ordered by the Government.
AUTHORITY: Comandante de Puerto.
AGENT: See "General" before first port.

NOTES

Ecuador

GENERAL

REPORTING:

Shipmaster's Report: January 1989.

The following telex was received whilst on passage to Ecuador.

REPORTING SYSTEM IN ECUADORIAN WATERS

Re: Resolution 088-87 – Comando de Guardacostas (COGUAR).

As per 1st July 1987, all vessels have to comply with Resolution 088-87, published Registro Oficial 8/6, i.e.:

- to report to Coast Guard (COGUAR) via coastal station "Guayaquil Radio" (HCG) on international frequencies MF and HF:

Arrival (FR), Position (PR), Sailing (SP), Passing (Paso Inocente) (WP) with following formats:

ARRIVAL:

Shiprep

(a) FR (for arrival).
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Last port.
(e) ——
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Next port. (Ecuador)
(i) ETA Ecuadorian Port. (Day/Hour/Min. – 6 figures)

SAILING:

Shiprep

(a) SP. (for sailing)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Next port.
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Last port.
(i) ETA next port.

POSITION:

Shiprep

(a) PR. (for position)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour (6 figures)
(d) ——
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. 2 figures)
(h) ——
(i)

PASO INOCENTE:

Shiprep

(a) WP. (for paso inocente)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Last port.
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Next port.
(i) ETA next port.

The timing for the messages has to be done as follows:

FR – Entering the national waters, latest 12 hours before arrival at the port.
SP – Immediately after sailing.
PR – Twice daily, at 0800 hrs. and 2000 hrs.
WP – 3 hours before entering and 3 hours before leaving Ecuadorian waters.

Scope/area involved according Resolution 088-87:

Entering the 200 miles of territorial seas and the waters between the mainland and the Galapagos Islands.

NON-COMPLIANCE WILL PROVOKE FINES

DOCUMENTS:

Consular Documents:

In the port of origin of the voyage to Ecuador or in the last foreign port where there is a Consulate before the vessel's arrival in the country, the following documents are to be submitted to the Consul for approval on model forms DIMERC 100 to 107, in 5 copies:

(a) Cargo Manifest.
(b) Crew List.
(c) Passenger List or "no passenger" declaration.
(d) In-transit Passenger List or "no in-transit passenger" declaration.
(e) Ship's Stores List.
(f) Crew's Effects Declaration.
(g) Maritime Health Declaration.
(h) Mail List.

The original set of these documents remains on board the vessel, the duplicate and triplicate are submitted to the Customs Administration, if they refer to cargo, and to the Captain of the Port, if they refer to the crew or passengers. The quadruplicate is sent to the Ministry of Foreign Affairs, and the quintuplicate remains in the Consul's files.

Prior to Arrival:

Arrival Notice: 72 hours before the vessel's arrival in the pilot waiting area, the shipping agency shall submit to the Port Authority the arrival notice form, on a special port format or its own format, containing basic data on the vessel and the request for services (pilotage, towage, berthing, etc.).

The vessel's arrival time should be communicated to the following authorities 24 hours in advance: Captain of the Port, Customs, Customs Police, Migration and Maritime Health.

Information on cargo for the port: The agency shall submit to the Port Authority the following documents by the deadlines indicated:

(a) General Import Cargo Manifest, in triplicate	24 hours before start of operations
(b) Import Bill of Lading, complete set	At the time operations start
(c) Cargo Stowage Plan by hatch	24 hours before start of operations
(d) Cargo List (breakdown of cargo)	24 hours before start of operations
(e) Container Contents List	24 hours before start of operations
(f) Dangerous Cargo List	48 hours before vessel's arrival in the pilot waiting area
(g) Tally books, 15 copies (must be true copy of Bills of Lading and have an alphabetical index)	6 hours before start of operations.

On Arrival:

On entrance of the vessel, the following documents should be submitted on DIMERC forms 100 to 107, which, although they follow LAFTA/OAS forms 1 to 6, differ from them in that they bear the seal of Ecuador and must satisfy the following requirements:

Type of Documents	*Number and Distribution of Documents*					
Basic Forms:	*Captain of Port*	*Customs Police*	*DIMERC*	*Migration*	*Maritime Health*	*Total*
1. General Declaration	1	1	–	–	–	2
2. Cargo Manifest	1	2	1	–	–	4
3. Crew Roll	1	2	–	1	1	5
4. Passenger List (a)	1	2	–	1	1	5
5. Ship's Stores (b)	1	2	–	–	–	3
6. Crew's Effects Declaration (c)	–	2	–	–	–	2
7. Maritime Health Declaration (e)	–	–	–	–	1	1
8. Mail List	–	2(d)	–	–	–	2
Additional Documents:						
9. Clearance Permit from Last Port	1	–	–	–	–	1
10. In-transit Cargo Manifest	1	1	1	–	–	3
11. "No Passenger" Declaration	1	2	–	1	1	5
12. "No Passenger" Declaration or In-transit Passenger List	1	2	–	1	1	5
13. Cargo Manifest (e)	–	2	–	–	–	2
14. Crew List (e)	2	–	–	–	–	2
15. Passenger List (e)	2	–	–	–	–	2
16. Ship's Stores (b)	–	2	–	–	–	2
17. Crew's Effects Declaration (c)	–	2	–	–	–	2
18. Maritime Health Declaration	–	2	–	–	–	2
19. Mail List (e)	–	2	–	–	–	2
20. Cargo Bill of Lading	–	–	1 set	–	–	1 set
21. Passengers' Baggage List	1	2	–	–	–	3
22. List of Unaccompanied Baggage or "no baggage list"	1	2	–	–	–	3

(a) Does not indicate sex.
(b) Has additional column for storage place.
(c) Omit crew signature column.
(d) One copy for the Postal Service.
(e) With Consular visa.

Prior to Departure:

Before departure, a complete set of the general export cargo manifests and a complete set of the export loading bills of lading are submitted to the Port Authority.

Clearance of vessel shall be requested from the Captain of the Port on a special form, which is submitted in 2 copies, each of which is to be accompanied by the following documents:

General Declaration	1
Crew List	1
List of Passengers or "No Passenger" Declaration	1
Stores List	1

The Captain of the Port returns to the ship the original clearance permit, duly certified, and retains one copy for his file.

In addition, 2 hours before departure, a clearance form must be submitted to the Customs Police, and a list of embarked passengers or a "no passenger" declaration and a list of crew changes is to be submitted to Migration.

PRATIQUE: Radio Pratique is not normally granted. Notice of arrival should be given at least 24 hours prior to arrival to Radio Naval Guayaquil, call sign HCG. Listens on 500 kHz, 8,385 kHz and 8,320 kHz. Answers back on 8,472 kHz and 8,475 kHz.

The message should read as follows:
CAPUERTO
MEDICO SANIDAD
ADMINISTRADOR ADUANA followed by name of port
IMMIGRATION
"vapor . . . 1 . . . . 2 . . . procedente . . . 3 . . . no enfermos abordo, no explosivos, no pasajeros para . . . 4 . . . pasajeros en transito . . . 5 . . . tons carga para descargar . . . 6 . . . sacos correo para descargar eta boya . . . 7 . . . agencia . . . 8 . . . 9 . . . Capitan. or in translation (original must be sent in Spanish).
SS . . . . 1 . . . 2 . . . from . . . 3 . . . no sick on board, no explosives, no passengers for Guayaquil (or name of port) . . . 4 . . . passengers in transit . . . 5 . . . tons cargo to discharge . . . 6 . . . bags of mail to unload ETA Sea Buoy . . . 7 . . . Agency . . . 8 . . . 9 . . . Captain.

1. Name of the vessel.
2. Nationality of the vessel.
3. Last port and port of call.
4. Number of passengers in transit (logically, if there are passengers for the port call, instead of saying (no pasajeros para . . . the correct number would be indicated).
5. Number of weight tons of cargo for the port.
6. Number of bags of mail.
7. Estimated hour of arrival at Sea Buoy, or Buoy No. 1 off Data.
8. Agent's name.
9. Master's name.

The same message should be sent to the ship's Agent.

When quoting arrival times use GMT or Ecuadorian Time (GMT minus 5 hours). Summer time is not kept.

The boarding party usually arrives on berthing.

The Vaccination Certificates should be ready in the same order as the Crew Lists.

FLAG: The national flag has yellow, blue and red horizontal stripes. The yellow is twice the width of the others. Government vessels show the National Arms in the centre of the flag.

All foreign vessels will fly the flag from the highest mast.

PILOTAGE: Pilotage is compulsory for all vessels over 500 tons gross. Vessels should await the Pilot off the Sea Buoy at all ports unless instructed to the contrary. The Pilot must be requested by the Agent at least 12 hours in advance. They are available 24 hours a day, every day of the year.

STEVEDORES: The stevedores are drawn from the 4 respective unions in rota. The foremen are generally selected by the Agent. The same gang will work the ship until completion, working around the clock if necessary. Gangs will start work at virtually any hour.

Opening and closing of ship's hatches is undertaken by the stevedores and also the rigging of gear. Even though the stevedores receive payment for rigging anyway, it is advisable to use the ship's crew.

Cold fresh water and lavatories must be made available to the stevedores.

Tally clerks are selected in a similiar way to the stevedores.

WATCHMEN: 1 or 2 Customs guards will remain on duty, nevertheless the use of watchmen is advised.

GARBAGE: Before docking all vessels should cover all discharge points to prevent material or water being deposited on the quayside. The dumping of any waste is strictly forbidden except in an emergency. No oil may be dumped within 50 miles of the coast, and Ecuador strictly enforces the Anti-Pollution laws.

RAT GUARDS: These must be placed on all mooring lines while the vessel is in port. This rule is strictly enforced.

FIRE DRILL: Periodical fire drills are held. The signal is 6 short blasts. Smoking on dock is prohibited, and cigarettes must not be thrown through port holes.

CREW: Shore leave is permitted except at the tanker berths. Each man must carry an identity card. It is difficult to sign on a foreign crew member in Ecuador, unless he has been left behind by another company vessel. A visa is not required for replacements arriving from abroad, but the crew member must have a Passport or Seaman's Book, together with a letter from the ship operator stating name of vessel to be joined.

In declaring personal effects, all new purchases must be listed, as well as electrical devices, typewriters, sextants, etc.

The Master has the right to issue or annul boarding passes if he has the approval of the Port Authority.

As a rule visitors are not allowed entry to the Port Area, although special permits are given to certain vendors. They may come on board solely at the discretion of the Master.

PIRACY: Acts of piracy have taken place on vessels alongside in the Port of Quayaquil.

BALAO TERMINAL (Esmeraldas): 01.02 N. 79.44 W.

(See Plan)

LOCATION: The Terminal Petrolero de Balao is comprised of the area between the following geographical co-ordinates:

Lat. 00° 55′ 00″ N, Long. 79° 40′ 00″ W.
Lat. 01° 04′ 00″ N, Long. 79° 40′ 00″ W.
Lat. 00° 55′ 00″ N, Long. 79° 46′ 00″ W.
Lat. 01° 04′ 00″ N, Long. 79° 46′ 00″ W.

The Terminal Petrolero de Balao consists of 2 mooring areas: The SBM area for loading crude oil; and the TEPRE area for loading refined products.

The terminal has a storage area for crude oil situated on a hill 180 m. above sea level made up of 9 storage tanks that constitute the final leg of the Trans-Ecuadorian Oil pipe-line.

Each of the tanks has a 332,000 barrel capacity (or 13,524,000 gallons, 42 gallons per barrel). The tanks are 18 m. high and 60 m. in diameter.

Manifolded to each tank are 2 pipes that gravity feed the SBM's. One is 42 in. in diameter and the other 36 in.

The Offshore Terminal at Balao is made up of 2 SBMs nominated "X" and "Y" Buoys and a terminal for refined products (TEPRE).

Relative Location: "X" Buoy (SBM – West) designed for ships up to 100,000 d.w.t., is located 4.5 miles N.W. of the mouth of the Esmeraldas River (Rio Esmeraldas). "Y" Buoy (SBM – East), designed for ships up to 100,000 d.w.t., is situated 3.3 miles from the coast at its closest point and 1 mile on True bearing 081° from "X" Buoy. Both are at a minimum depth of 120 ft. LWS.

Tankers with a maximum of 1,000 ft. between perpendiculars, a maximum beam of 135 ft., and a maximum draft of 52 ft., can moor at the buoys. There should be between 400 ft. and 525 ft. between the bow of the tanker and the underwater manifold.

The TEPRE area is composed of a Conventional Buoy Mooring System (CBM), and forms a parallelogram with an East-West axis.

The mooring facility can receive ships between 6,000 d.w.t. and 20,000 d.w.t. A tolerance of 10% less for ships in the lower range is provided for. The minimum depth of available water is 14 m. DLWS and the greatest admissible draft that will not cause damage to the underwater installations is 10 m.

Geographical Location:
SBMs:
Buoy "X" (SBM – West) Lat. 01° 02′ 03″ N., Long. 79° 42′ 57″ W.
Buoy "Y" (SBM – East) Lat. 01° 02′ 12″ N., Long. 79° 41′ 52″ W.
Terminal for Refined Products (CBM):
Buoy A – Lat. 01° 01′ 3″ N., Long. 79° 40′ 7″ W.
Buoy B – Lat. 01° 01′ 3″ N., Long. 79° 40′ 5″ W.
Buoy C – Lat. 01° 01′ 1″ N., Long. 79° 40′ 5″ W.
Buoy D – Lat. 01° 01′ 1″ N., Long. 79° 40′ 7″ W.

DOCUMENTS: For the official reception of the vessel, the Port Authorities, presided over by the Superintendent and Shipping Agent will come aboard immediately upon arrival of the ship. In order to be declared in Free Pratique, the tanker must have the following documents ready:

Sailing documents from the last port of call.
Crew List (4 copies).
Declaration of Stores.
Declaration of Personal Effects of Crew Members (2 copies).
List of Passengers (6 copies).
Cargo Manifest (4 copies).
Bill of Lading (2 copies).
General Declaration (5 copies).
Ship's Register.
TOVALOP or P&I Insurance.

PILOTAGE: Pilotage is compulsory. The ship will approach to a distance of 1.5 miles North of Buoy "X".

According to Ecuadorian law pilotage is mandatory and Masters must obey all Statutory Laws and Regulations such as: The Code of Maritime Police; the Pilotage Regulations; and the Operations Regulations for O Terminals.

The following dispositions must also be followed:

(a) The officer responsible for boarding and putting ashore the Pilo is the officer on duty.
(b) The vessel must have an accommodation ladder and/or a pilo ladder.
(c) The length of the ladder must not exceed 30 ft. If the distance between the water level and the access point to the main dec is greater than 30 ft., a combination of one section of pilot ladde and another of accommodation ladder must be used.
(d) The pilot ladder must be properly secured and placed on bot sides of the vessel.
(e) At night the pilot ladder and its immediate vicinity must b adequately illuminated.
(f) The top of the ladder must be so arranged that the Pilot ca safely pass on to the deck of the vessel.
(g) The ladder must be maintained in good condition and its rung must remain horizontal upon boarding and going ashore. Th surface of the rungs must be rough.
(h) The ladder must be stable in such a way that each step rests o the side of the vessel and with spacers placed at least every 10 f in order to prevent the ladder from turning.
(i) Nylon ladders must not be used.

Pilotage Area: This area is within the following co-ordinates:
(a) Lat. 01° 00′ 00″ N., Long. 79° 40′ 00″ W.
(b) Lat. 01° 00′ 00″ N., Long. 79° 46′ 00″ W.
(c) Lat. 01° 04′ 00″ N., Long. 79° 40′ 00″ W.
(d) Lat. 01° 04′ 00″ N., Long. 79° 46′ 00″ W.

The waiting area, the anchorage area and the berthing area ar included in this zone.

The Waiting Area: The area to wait for the Pilot is 1 mile North o Buoy "X".

The Anchorage Area: The vessels that must anchor upon arrival w proceed to the waiting area 1.5 miles North of Buoy "X" (SBM – Wes and with the Pilot on board will navigate to the anchorage area between:
(a) Lat. 01° 00′ 30″ N., Long. 79° 44′ 00″ W.
(b) Lat. 01° 00′ 30″ N., Long. 79° 46′ 00″ W.
(c) Lat. 01° 02′ 00″ N., Long. 79° 44′ 00″ W.
(d) Lat. 01° 02′ 00″ N., Long. 79° 46′ 00″ W.

Operation Area for Tankers: This area, where mooring Buoys "X" an "Y" are found, is located between:
(a) Lat. 01° 00′ 00″ N., Long. 79° 40′ 00″ W.
(b) Lat. 01° 00′ 00″ N., Long. 79° 44′ 00″ W.
(c) Lat. 01° 03′ 00″ N., Long. 79° 40′ 00″ W.
(d) Lat. 01° 03′ 00″ N., Long. 79° 44′ 00″ W.

LIGHTS: *SBM Lights:*

Characteristics:

Buoy "X" (SBM – West)		Buoy "Y" (SBM – East)	
Light	Amber	Light	Amber
Flash	1.2 secs.	Flash	0.7 secs.
Dark	6.8 secs.	Dark	0.3 secs.
Period	8.0 secs.	Period	1.0 sec.
Range	5.3 miles	Range	5.3 miles

Lights at the terminal for refined products:

Light	Yellow
Flash	1 sec.
Dark	3 secs.
Period	4 secs.
Range	5 miles

APPROACHING: The most outstanding sights approaching Balao are: The Coquito Lighthouse, located 2 miles West of Punta Este (entrance of Rio Esmeraldas); the crude storage tanks in Balao on a hill (186 m. above sea level) visible from approximately 20 miles; and Punta Gorda, a craggy rise situated approximately 4.4 miles S.W. of Punta Coquito. The prominent points are easily detected by radar.

From Punta Las Palmas to Punta Gorda the coast consists of cliffs and small valleys for about 5 miles in a West by S.W. direction.

Punta Gorda, a craggy rise with nearby cliffs, has a reef that extends half a mile offshore North of the point. From Punta Gorda to Punta Sua, about 9.5 miles East by S.E., the coastline is low except for the cliffs close to Punta Gorda.

ANCHORAGE: While awaiting berthing at the offshore terminal ships can anchor in the following area:

(1) Lat. 1° 00′ 30″ N., Long. 79° 44′ 00″ W.
(2) Lat. 1° 00′ 30″ N., Long. 79° 46′ 00″ W.
(3) Lat. 1° 02′ 00″ N., Long. 79° 44′ 00″ W.
(4) Lat. 1° 02′ 00″ N., Long. 79° 46′ 00″ W.

MAX. SIZE: Maximum 100,000 d.w.t., max. load 100,000 tons/730,000 bbls., max. LOA 274.3 m., max. beam 39.6 m., max. draft 15.2 m., and max. distance aft/manifold 137.1 m.

Therefore tankers up to a maximum of 100,000 d.w.t. will be moored. Acceptance of tankers' dimensions and d.w.t. must be obtained in advance.

RADIO/VHF: Vessels bound for Balao must advise their ETA to the Superintendencia and their Agents, 72 hours and 24 hours before arrival. The message must contain vessel's name, ETA, Master's name.

The Pilots listen on Channel 16 (VHF) then change to Channel 14 once contact has been established.

The Terminal maintains a 24 hour watch on VHF-FM frequency 156.800 MHz, Channel 16, with an approximate range of 40 – 60 miles, and HF radio from 0800 hrs. – 1200 hrs. on 8,291.1 kHz and from 1200 hrs. – 1800 hrs. on 12,432.1 kHz. Once contact has been made with the tanker, either Channel 14 or any other channel designated by the radio operator will be used.

TUGS: 5 tugs available, all radio equipped.

MOORINGS: *(SBM's):* The SBMs "X" and "Y" have rotating tables on which the oil handling and mooring devices are mounted. These can turn in the direction of the tanker.

The mooring ropes: Each buoy has 2 mooring ropes for securing to the bow and these are permanently attached to the buoy. Each rope is 185 ft. long and 15 in. thick and is connected to 30 ft. of 2 in. chain that is secured to the bitts of the ship with cable grommets and mooring shackles provided by the Terminal.

TEPRE CBM: The underwater manifold is located 2.1 miles from shore at the end of the product pipe-line. Its function is to distribute the products from the dispatch lines to the tanker or to the product re-cycling lines, whatever the case may be. The underwater manifold also houses the deballasting line.

The tankers are loaded by underwater hoses connected to the product loading outlets on the underwater manifold. The hoses are hoisted onboard the tanker once it is properly moored to the buoy field.

How the buoy field is secured: Stud Link grade U2 0.5 in. chain.
Rupture Tension 223 tons.
Working Tension 159 tons.

Anchors: Conventional, according to design specifications recommended by R.I.N.A. (Italian National Register).

Each buoy is secured by a chain to the anchor in order to avoid displacement by wind, current, or the tension of the ship. They are anchored with enough weight to avoid drifting.

BERTHING: Mooring operations will take place during daylight hours under normal weather conditions.

The unmooring operations will take place 24 hours a day.

Mooring Turn (Arrival): Priority for tying up is determined by the ship's time of arrival in port. In any case, those that arrive first have priority if and when they have received authorisation from the Direccion General de la Marina Mercante y del Litoral to operate freely.

The port derrick must be rigged and ready for use on arrival and vessels should be warned that the weight of each hose is at least of 5 tons under favourable conditions. This will be used to lift the floating deballasting/loading hoses as well as crates of materials that will be delivered by a terminal tugboat at the anchorage before the mooring operations begin.

For the mooring operations the ship must provide the following personnel and materials, which must be ready on the foredeck:

Personnel:

First Officer on deck	2 winch operators
Boatswain	2 seamen to handle the ropes.

Materials:

2 winches that work
2 mooring lines 2.5 in. in diameter; 600 ft. long
2 nylon mooring lines 1 in. × 10 ft.
2 manila heaving lines 0.25 in. diameter × 30 ft.
1 nylon or polypropylene mooring line 2.5 in. in diameter and 300 ft. long centre astern.

Mooring: The approach and mooring of the tanker will take place with the aid of the Pilot from Balao and the Loading/Mooring Master from the CEPE-TEXACO Consortium in accordance with the Operation and Tariff Regulations for Oil Terminals.

When the vessel is at a reasonable distance from the berth, the mooring tugboat will take 2 of the ship's warping lines. Tie these to the mooring lines which are attached to the buoy and bring them on board. As the buoy ropes come clear of the water, it will be noted that chains are attached to them. These chains are to be secured to the bitts in such a manner that the nylon is outside of the external length of the ship so the chains absorb any chafing if the buoy lines cross the bow. There are 2 buoy lines. Power must be available at all times on all deck winches and windlass while the vessel is at the berth.

A mooring line must be available aft, secured to the bitt and of sufficient length to enable a tug boat to pick up the eye and tow it off to re-position the vessel if necessary.

Mean Time For Operations At The Terminal: Subject to the differences of each ship, the following times can serve as a guide:

1. Approach to the buoy from anchorage	50 minutes
2. Approach from waiting area	30 minutes
3. Loading the equipment used for mooring and connecting the hoses	20 minutes
4. Mooring	30 minutes
5. Lifting and connecting the hoses	80 minutes
6. Disconnecting the hoses	40 minutes
7. Casting off from buoys	10 minutes
8. Unloading personnel and equipment	25 minutes

HOSES: *Buoys "X" and "Y":* Lifting, connecting, disconnecting, lowering and other operations will be performed by a special team from shore under the Loading/Mooring Master's orders with assistance of the ship's deck officer. Port derrick must be rigged and ready for use before mooring operation begins.

Members of the ship's crew will be required to operate the winch or winches. Particular care should be taken during the hose handling operation in order to avoid serious damage to the hoses, the plastic floats and buoys on the plate edges, rails, etc.

BALLAST: *Deballasting:* The Terminal is not able to receive slops on shore, therefore its discharge is prohibited. The deballasting line for clean ballast has been damaged.

Vessels are to be equipped with clean segregated systems which are reserved for ballast only. Vessels so equipped will be permitted to pump segregated ballast overboard after being accepted and approved by shore inspectors.

After the tanks have been inspected and approved by the Terminal, deballasting will commence under the supervision of the Loading/Mooring Master. Upon completion the tanks will be inspected again and if ready for loading, a certificate will be signed by a representative of the consortium.

For the water processing of ballasted tankers, the Balao Terminal has an adequate system that starts in the hoses of the buoys and passes through a submarine pipe going to a pre-separator, where it hits and separates: first the water of the hydrocarbons, then goes to a decantation pool, where it stays 48 hours and after goes to a final separator in which are collected the last traces of hydrocarbons and finally the clean water is drained to the sea.

LOADING: Loading is through SBM's which are 49.5 ft. in diameter and held, each one in position by fixed chains secured to piles sunk into the sea bed.

Buoy "X" is equipped with a 750 ft. length and 20 in. self float loading hose which is manifolded to two 105 ft. length and 12 in. tail hoses. Buoy "Y" is equipped with a 20 in. hose and is manifolded in the same fashion as Buoy "X".

1. Loading ratio. Not withstanding greater capacity, currently the loading rate has been reduced to 32,000 bbls.p.h. at both buoys with a minimum of 10,000 bbls.p.h. and maximum pressure of 100 p.s.i. on land.

2. Under no circumstances will the vessel be loaded at a rate greater than that requested by the Master. It is the Terminal's responsibility to maintain the requested loading rate.

3. The load on top system is accepted at this terminal and vessels are requested to arrive with slop tanks "settled out".

UNMOORING: The Loading Master will advise to Texaco Control the estimated time for the completion of loading and will ask for Official Pilot. Then, hose disconnecting operation is undertaken aboard ship. After the unmooring takes place, the tug boat comes alongside the ship to transfer all materials and personnel that have been used during the operation. Then the vessel will proceed to the anchorage area where anchored it will await loading and sailing documents.

TEPRE OPERATIONS: *Mooring and Unmooring at the Terminal for Refined Products:* The Pilot on duty will be in charge of mooring and this will take place according to the wind and current conditions.

Loading: Once the vessel is secured, loading will be directed by the State Petroleum Corporation of Ecuador (CEPE). For this, 3 divers, 4 hosemen and 1 loading supervisor will come to the vessel and together with the ship's crew, connect the hoses.

Description of the Operation: Once the tanker's derrick is ready, a diver will dive to the ocean floor with a hook that will be attached to the hose of the product to be loaded. Once on deck, the hose will be connected to the ship's manifold.

Loading rates:

Product	*Designed Rate* cu.m.p.h.	*Admissable Rate* cu.m.p.h.
Gasoline	636	700
Kerosene/Diesel	477	650
Fuel Oil	800	1,100

Product	*Designed Rate* cu.m.p.h.	*Admissable Rate* cu.m.p.h.
Deballasting	(d.w.t.)	
Tanker	6,000	300
Tanker	12,000	400
Tanker	20,000	600
Diameter of Flexible Product Hoses	(in.)	
Fuel Oil	10	
Gasoline	10	
Kerex/Diesel	10	

Deballasting: The same system used for loading will be employed for deballasting differing only in that the ship will pump to shore.

Products: The products that are currently being loaded at the TEPRE terminal are: Gasoline, diesel, kerex and bunker.

MEDICAL: The city has two hospitals: Hospital Delfina Torres de Concha and Hospital Franlin Tello Mercado.

FRESH WATER: Available in limited quantities. If more than 200 tons are needed, this must be requested 72 hours in advance.

FUEL: Limited availability and only in emergencies.

CONSULS: Colombia: Calle Sucre s/n entre Piedrahita y Manuela Canizarez. Tel: 713-661.

Chile: Calle Colon y 10 de Agosto. Tel: 710-045.
France: Av. Eloy Alfaro y Salinas.
Panama: Av. Kennedy 1100, Las Palmas. Tel: 710-370 and 711-180.

REPAIRS: Only minor repairs can be carried out and this is with the exclusive authorisation of the Superintendencia. These must not jeopardise the safety of the vessel or the installations.

REPATRIATION: Only if the person has all the necessary documents (passport, certificates, etc.).

TIME: GMT minus 5 hours.

SERVICES: Yagua General Services Ltd. and Semarf Agents Cia. Ltda. can offer the following services:

Launch services.	Shipchandler.
Water supply.	Crewmember exchange, etc.
Hospital medical attention.	

They could also be appointed as protecting Agent of any particular vessel.

SHORE LEAVE: Considering local operating conditions, permission to come ashore is subject to the approval of Migracion y Extranjeria (Immigration) and must be requested by the vessel's Agent. Transportation must be provided by the Agent and subject to the rates established by the respective authorities.

GENERAL: *Flags:* The quarantine flag must be flown by the vessel when approaching the Balao Terminal. It must be lowered once the ship has been declared in Free Pratique.

The National Flag of Ecuador will be permanently flown while the ship is at the Terminal.

Contraband: Ecuadorian law is rigorous in reference to contraband. The Master must instruct his subordinates to avoid taking cigarettes, cigars, tobacco, alcoholic beverages, drugs, etc. to the shore.

These articles must be reported before arriving at the Terminal and with their respective lists put under the Master's custody during the ship's stay.

In no way will commercial transactions between crew members and Terminal employees or third parties be tolerated.

Visitors: With the exception of Terminal personnel and other employees whose duties require them to board (Port Authorities, Ministry of Natural Resources Inspectors etc.), all visitors are strictly forbidden. Exceptions to this rule will require the authorisation of the Superintendencia.

Watches: Permanent watches must be maintained on board; on deck as well as in the engine room. These watches must have sufficient crew members to move the ship in case of emergency.

Charts: National charts: I.O.A. 1002 Port of Esmeraldas. Ed. December 20, 1982. Foreign charts: N. 021033 (HO-1176).

Wind and Currents: The predominant wind and marine currents throughout the year are S.W. During the rainy season (December – May), however, the wind and current suffer a slight change and at times come from the N.E. and North.

In the berthing area the currents often vary and will oppose the direction of the wind and cause the ship to yaw strongly.

Tide: The tide in syzygy comes up 13 ft., in quadrature 11.5 ft. The tidal currents have been reported (1956) at a rate of 1.5 knots, a little stronger during low tide.

REGULATIONS: (Not all Regulations printed). Due to the fact that Balao is very close to Las Palmas, Atacames, Sua, etc., any pollution will cause serious damage to the beaches and fishing grounds. Therefore, ships are obliged to avoid any possible pollution of local waters that would be caused by pumping crude oil, diesel, or other fuels or oily mixtures from the engine room bilges.

In the piloting area the traffic of small craft such as fishing vessels, coasting vessels engaged in cabotage is absolutely prohibited with the sole exception of small craft used in the reception and mooring of tankers and these must be authorised by the Superintendencia.

Masters Responsibility: While the ship is at this Terminal, the Master will continue to be responsible for the security of the vessel.

While the ship remains at the buoys, its main engines must be ready for any emergency. If they are turbines they must be in reverse.

Vessel's Obligations in Port:

1. It is the obligation of the Master of the ship, or his representative, to receive the Pilot and the Loading/Mooring Master at the gangway, and provide them with all the information they may need.

2. The Master will delegate the First Officer or another responsible officer to receive the Port Authorities at the gangway and provide them with the documents and other information they may request while on board.

3. The Master must present the Superintendencia with a Certificate of Pollution Insurance issued by TOVALOP, the Ship's Register and any other document that may be required.

4. Meals must be provided for Superintendencia personnel and Customs, Police, etc. that are on duty.

5. A cabin and meals must be provided for the Loading/Mooring Master on duty during the loading operation.

6. The ship must provide meals for the 4 hosemen on board.

7. Meals and cabins must be provided for the Superintendencia's Safety and Pollution Control Inspectors when necessary.

8. Meals and a cabin must be provided for the Pilot if on board at mealtime.

9. All required materials and personnel must be placed at the disposition of the Terminal's Representative so that he can adequately carry out his job especially for easy and safe access of personnel on board.

10. The ship must provide personal assistance and other facilities required by the Ministry of Natural Resources Engineers on duty, so that they can efficiently control and inspect the oil being loaded and the tanks used.

Reports to the Superintendencia: During their stay in Port, the Master of the tanker must report any problem on board concerning:

1. Breaches in safety measures during mooring, deballasting, loading and unmooring operation.

2. Oil spills produced by bad hose connections, breaks in the hoses, filtration due to improper plugging of scupper holes, or any other reason.

3. Pollution caused by bilge pumping, tank washing, or any other operation that is not permitted.

4. Any abnormal situation that might affect the operating safety of the tanks.

5. Personnel accidents during work.

6. Theft on board or discovery of commercial transactions between crew members and Terminal workers etc. (contraband)

7. A copy of the measurements on board once the vessel is loaded.

Safety Regulations: The deck officer on duty must check the list of questions one by one to make sure the vessel's safety measures are in order. Some of the points that must be observed are as follows:

11. Are the mooring lines in good condition? (TEPRE – 12 nylon or polypropylene lines according to the tonnage of the tanker. SBM - 2 nylon or polypropylene lines, 600 ft. long.)

12. Are the short lines in good condition? (TEPRE: 12 short nylon lines, 1 in. thick and 10 ft. long each one.)

13. Is the derrick in good condition and has capacity for at least 5 tons?

24. Is the hydrocarbon log up-to-date? Check it!

25. Is the Master aware of the port regulations?

Safety Precautions for Ships:

1. Verify that mooring conditions are in accordance with Terminal requirements.

2. As a safety measure during operations, ships headed for Balao to load crude oil must arrive with enough ballast to correspond to 25% to 30% of its cargo capacity and down no more than 10 ft. by the stern.

9. The red flag, BRAVO, must be raised during the day and a red light must shine at night.

10. Ashtrays in the smoking room must contain water.

11. Due to the underwater chains, pipes and hoses, it is absolutely forbidden to use anchors close to the buoys.

12. All of these rules will be enforced by the Safety and Pollution Control Inspectors, along with the Loading and Mooring Masters.

AUTHORITY: Superintendencia del Terminal Petrolero de Balao, Casilla 286, Esmeraldas, Ecuador. *Tel:* 711-100, 712-200, 712-300. *Telex* 7579. *Contact:* Captain Fernando Gavilanes Granja, Superintendent. Captain Victor H. Morales P., Chief of Operations.

AGENT: *Main Office:* Yagua Ltd., Shipping Agency, P.O.Box No. 69 Quito, Ecuador. Victor Hugo 114e, Isla Pinzon, (Jipijapa), Quito (Ecuador). Cable: Yagua Quito (Ecuador). Telex: 022220 Yagua E (Monday through Friday. See Operations Office for Saturdays and Sundays). Tel: 554-484, 554-485, 543-429.

Operations Office: Avenida Kennedy 1100 (Las Palmas). Cable: Yagua Esmeraldas (Ecuador). Tel: 710-370, 711-180 (available 24 hours a day). Telex: 7589 Yagua Ed.

Also on VHF Channels 16, 6, 12 and 71.

ESMERALDAS: 01.00 N. 79.39 W. (See Plan

PORT LIMITS: Between the meridians 79° 38′ W. and 79° 39′ W. and the parallels 00° 59′ N. and 01° 02′ N.

NAVIGATION AIDS: The port complex of Esmeraldas has navigation aids consisting of the installation of 6 lighted buoys which mark the access channel to the port; 1 landfall buoy in the waiting area for Pilots 4 lights located at the head of quays, 2 on the 2 breakwaters (principa and secondary) which limit the commercial quay and in the accesses the dock of the Fishing Port and 2 pairs of leading lights – one pair the top of Coquito Hill to the S.W. of the port and another pair near the residential area of Tachina towards the S.E. of the port.

DOCUMENTS: The documents required by the Port Authorities arrival of vessels are as follows:

Clearance From Last Port.
4 General Declarations.
1 Health Declaration.
5 Lists of Crew Members.
5 Lists of Passengers.
6 Sets of Cargo Manifests.
4 Sets of Bills of Lading.
1 Stevedoring Plan.
Certificates of Tonnage and Radio to be checked.

PILOTAGE: Pilotage is compulsory.

Prior to commencement of manoeuvring and navigation, the Pilot will require from the Master the following information: conditions of steering, conditions of ship machinery, condition of the aids to navigation, conditions which may limit the manoeuvres which are about to be effected, the draft forward and aft, nature of the cargo, availability of mooring lines and the system of anchorage.

The Pilot will require the presence of the Master of the vessel on the bridge at all times during manoeuvres.

ANCHORAGE: The area for awaiting the Pilot and quarantine is located between meridians 79° 39′ 15″ W. and 79° 40′ 00″ W. and the parallels 01° 01′ 00″ N. and 01° 01′ 50″ N.

MAX. SIZE: The port is limited to receiving vessels not greater than 200 m. LOA and 35 ft. max. draft.

RADIO: The Port of Esmeraldas currently has no radio service, but the Terminal of Balao: Lat. 01° 02′ N., Long. 79° 44′ W., which is relatively close, has a radio service.

To communicate through Balao, vessels arriving at Esmeraldas must advise or communicate their ETA to the Naval Superintendency of Esmeraldas, 72 and 24 hours prior to arrival. Messages must contain the names of the vessel, ETA and name of the Master.

24 hours listening out is maintained on HF-SSB-2182 – 2136.3 kHz call-up frequency and 4139 – 6210 kHz working frequency and on Channel 16. Generally vessels will have contact with this channel at a distance of 20 to 30 miles from the port. Channel 14 will be used for contact between the vessel and the Naval Superintendency before arrival in port.

BERTHING: All systems of maritime transport of general cargo (Ro/Ro LASH, USO multiple and containers with own crane equipment) can be used in the Port of Esmeraldas, since there is:

An ample dock of some 35 hectares with direct access. The port is not affected by winds, tides or undertow.

A marginal quay, 350 m. long and 26 m. wide at its forward part, giving facilities for handling and transfer of any kind of cargo.

Areas of free spaces for the storage of containers, semi-trailers and other types of cargo with an area of 66,000 sq.m. A closed warehouse of some 6,000 sq.m. area, and areas reserved for future usage of 110,000 sq.m.

A ramp for Ro/Ro vessels whose position is perpendicular to the quay designed so that vessels operating in loading and unloading are not interrupted by tidal differences.

Equipment for handling containers, semi-trailers, palletised cargo and others. Mobile cranes 2×60 tons, 2×35 tons, 2×15 tons, 20 loaders of 7.5, 6 and 3 tons and 8 trucks with platforms.

STEVEDORES: The port offers services to vessels without any restrictions and uninterrupted during all days of the year, 24 hours a day, with the exception of the 24th December when work is interrupted from 1700 hrs. until 0800 hrs. on the 26th December and the 31st December from 1700 hrs. until 0800 hrs. on the 2nd January.

MEDICAL: Doctors available.

FRESH WATER: Available.

FUEL: Available.

DEVELOPMENTS: The second stage of port works which have been projected, comprise:

Construction of a container quay 210 m. long with a storage area of 8 hectares.

A marginal quay 140 m. long with the same characteristics as the quay of 350 m. long and is a continuation of it, which will permit the berthing of 3 deep-sea vessels at one time.

Two additional warehouses of 6,000 sq.m. each.

Open air storage surface areas covering 3.5 hectares.

Extension of electric and sanitary services to the new areas.

SHIPMASTER'S REPORT: June 1979.

Navigation: Two orange coloured beacons on the land to the East side of the river, act as leading marks (bearing 166°T) from approx. 4 miles to seaward, right up to the entrance of the port. They are not lit. Depths along this line were not less than 100 m.

Off the entrance to the port, two orange coloured beacons on the West side near Coquitos Point Lighthouse, are the leading marks into the harbour. They are not lit. Entering the harbour, the deep water shoals rapidly to about 12 m., but at no time were echo soundings of less than 11.5 m. MLWS encountered either in the entrance, or in the manoeuvring area inside, or alongside. Beacons mark the extremities of the breakwaters but they are not lit.

Two buoys mark the East and West edges of the deep water channel outside of the breakwater. They are lit. Further buoyage is planned to mark the deep water area.

Pilots: 2 Pilots on board, 1 to communicate with each tug. Only 1 Pilot and 1 tug equipped with 'walkie-talkie' radios.

Tugs: 2 square bowed American type river-barge pusher tugs are available and they have adequate power to assist in manoeuvring on and off the berths. Unfortunately, the 2 vertical posts on their bows are likely to cause sharp indentations in vessels' bow and stern plating when the tugs are used for pushing. They should only push against the flat vertical surfaces of the hull.

Berthing/Facilities: There are 2 berths and a Ro/Ro facility, but only 2 large vessels can be accommodated alongside at any one time. A large cargo shed is under construction opposite Berth No. 2, and the container and open cargo areas have been surfaced. Both berths are to be supplied with bunkering and fresh water facilities, but these are not operative at present time. No actual assessment of cargo handling equipment could be made, but it was noted that there were 2×30 ton mobile cranes and 5×7.5 ton forklift vehicles in the parking area in the compound. The Agent reported that low-loaders and trailers were available for the movement of containers and that forklifts could be hired for use in the hatches.

The loading of bundles of balsawood was carried out directly from lorries which brought the cargo alongside and the rate of loading was about 165 bundles (20,600 board feet) per gang hour.

At present the harbour is somewhat obstructed by anchored fishing boats and small craft, but these are to be shifted to the new fishing port being constructed to the South of the main harbour.

AUTHORITY: Autoridad Portuaria de Esmeraldas, Casilla 280, Avda. Jaime Roldos-Las Palmas, Esmeraldas, Ecuador. *Tel:* 711-910, 710-800, 711-996. *Telex:* 7586 Aupesm-Ed. *Cables:* Aupesm. *Contact:* Ing. Teddoro Moran Moran, Manager.

GUAYAQUIL: 02.12 S. 79.52 W. (See Plan)

DOCUMENTS:

Port Doctor:

Derat Certificate.

Maritime Declaration of Health.

Crew Roll.

Passenger List.

Passenger List in Transit.

Harbour Master's Office:

Voyage Report.

Clearance from last port.

Crew Roll with original visa from Ecuador Consul in first port of voyage (3 copies).

Passenger List with original visa from Ecuador Consul in embarking port, or declaration that they have no visa, signed by Master (2 copies).

Passenger List in transit signed by Master or declaration that they have no passengers in transit (2 copies).

Provisions List, Stock and Medicines on ship (3 copies).

Cargo Manifest in transit (1 copy).

Combustible or inflammable Cargo (1 copy).

Customs:

8 copies of Manifest.

Sealed envelope of Manifests, consular and commercial invoices and non negotiable vouchers.

Cargo index and copy of Cargo Manifest in direct transit (8 copies).

A Register (8 copies) of spare parts for vessel and provisions.

Crew Roll and detailed list (8 copies) of personal belongings of officers and crew.

Passenger List, with indication of their suitcases and list of suitcases that travel without their owners; in this case should be specified the port where they were put on board and personal declaration of each passenger (8 copies).

If the vessel with ballast, Master will be obliged to produce (besides the ballast certificate) documents already mentioned in each respect. Master or Maritime Agency will produce a written statement to Customs within 12 hours from arrival of vessel whether they decide to take any cargo for exporting. If not loading vessel must leave within the following 24 hours.

Immigration:

Crew List signed by Master.

Passenger List of those who disembark there or a declaration of none for this port, signed by Master.

Passenger List in transit, or a negative declaration signed by Master.

In case of having passengers to disembark in this port, Master should produce passports and visas.

Crew identification cards or similar documents.

Inspection of ship by Authorities will be done (compulsory) within 3 hours of arrival, usually as soon as ship berths, or in quarantine.

PILOTAGE: Vessels approaching port to notify their arrival by Naval Radio Station HCG, 24-hour service, frequency 8476 kHz and 500 kHz. Traffic list broadcast every hour on 8476 kHz.

Advance notice of not less than 12 hours required, addressed to Capuerto Aportuaria Agencia in either English or Spanish with the following details: date, and time of ETA, destination (whether Buoy No. 1 or Puna), maximum draft, cargo details, details of passengers or mail, and if Pilot required.

Pilot Station for Puerto Maritime: Situated in position Lat. 02° 43′ 18″ S., Long. 80° 17′ 30″ W. Pilot boat needs 1 hour to go from pilot station to Buoy No. 1. Contact by VHF Channel 16, 24-hour service. Pilot boat is wooden, 45 ft. long, black hull, white cabin, with letter "P" on sides. During day carries blue flag with letter "P" and by night has regulation pilot lights.

Pilot Station for River Guayas: Situated in village of Puna. Pilot boat requires a minimum of 30 minutes to move from pilot station to vessel. Vessels requiring Pilot signal Morse letter "X" by lamp or sound.

Pilot boat has grey iron hull, white cabin with Lancha de Practicos written on both sides. By day carries blue flag with letter "P". By night regulation pilot lights.

ANCHORAGES: *Puerto Maritime:* 1 mile South and 2 miles West of Sea Buoy in position Lat. 2° 44′ 26″ S., Long. 80° 24′ 44″ W. Min. depth in the area is 35 ft.

Guayas River: Inside area between bearings 180° and 135° from the lighthouse of Punta Mandinga at Puna, 1 mile from the lighthouse.

MAX. SIZE: Max. length for ships entering Puerto Maritime is 650 ft., with a max. draft of 33 ft. Vessels of deepest draft should begin to enter 1 hour before high tide. For Guayas River max. length 600 ft., max. draft 23 ft. 6 in.

HEALTH: Procedure to obtain Free Pratique is to produce health certificates to port doctor upon arrival. To get Free Pratique by radio, ship must radio to port doctor any changes in health situation on board since leaving last port.

TUGS: Normally join vessel beyond Buoy No. 80. Tugs are compulsory, also use of their lines is compulsory. Cost of both services is included in total cost of port duties.

BERTHING:

Berth	*Length* (m.)	*Depth* (ft.)	*Remarks*
Marginal Pier	960	31	5 berths
New Port			
Berth 1A	185	33	Bananas,
1B	185	33	General,
1C	185	33	Containers.
1D	151	33	Bulk, sugar, grain, vegetable oil.

BRIDGES: No bridges that restrict traffic either in Estero Salado nor in Guayas River, but ships that are to berth in village of Eloy Alfaro (Duran) should take into consideration height of telephone lines between Guayaquil and El Islote, minimum height 48 ft.

STEVEDORES: Radio message to ship's Agent will give agency enough data to make all arrangements required for operations of loading/discharging. In Maritime Terminal an average discharge/loading rate of 25 tonnes/p.h. per hook.

MEDICAL: If ship requires medical attention, a notice of 12 hours should be given to Agents. Guayaquil Hospital and clinics are available.

TANKERS: Discharge asphalt in Guayas River at a special quay, max. draft 23 ft. 6 in. Discharge of petrol for aviation in Puerto Maritime is to lighters, max. draft permitted is 33 ft.

DENSITY: 1012.

FRESH WATER: Available. Three pipes at each berth delivering at a rate of about 20 tonnes/p.h. each.

FUEL: Not available.

REPAIRS: All types of deck and engine repairs are possible.

DRY DOCKS: Dry dock with capacity of 3,600 tonnes.

GANGWAY/DECK WATCHMEN: Capitania del Puerto provides members of the Policia Maritima. Ships to supply watchmen with food. *Piracy:* Acts of piracy have taken place alongside. The pirates boarded from a speedboat and threatened crew with knives.

OPENING/CLOSING HATCHES: Carried out by crew.

CERTIFICATES: All ship's certificates required.

CUSTOMS ALLOWANCES: Each member of crew allowed 600 cigarettes. Each Crew member or passenger allowed 1 litre of wine and 1 litre of spirits.

REPATRIATION: Facilities for effecting crew changes and arranging any necessary repatriation.

AIRPORT: Airport is 8 miles from Maritime Terminal and has scheduled international flights.

TIME: Local time is GMT minus 5 hours. There are no alterations during year.

HOLIDAYS: 1st January; Good Friday, 1st and 24th May; 24th and 25th July; 10th August; 9th and 12th October; 2nd and 3rd November; 25th December. Only on the 1st January and 25th December is there no working in port.

POLICE/AMBULANCE/FIRE: For any of these services call 211 (interno del Puerto).

TELEPHONES: Arrangements for placing telephone on board ships on request.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

PURSER'S REPORT: (March 1975)
The government have now issued their own set of papers. These must be made out in sets of 7 i.e.: 7 Crew Lists. 7 Passenger Lists, 7 Crew Customs Declaration Forms, 7 Cargo Manifests, 7 Dangerous Cargo Manifests (if carried), 7 Lists of Mail (if none – nil returns on sheet), 7 General Declarations, 1 Maritime Health Form, 7 Stores Lists.

All Forms should be certified by Ecuadorian Consul or friendly Nation at Port of departure.

AUTHORITY: Capitan del Puerto de Guayaquil, Puerto Maritimo.

LA LIBERTAD: 02.12 S. 80.55 W. (See Plan)

DOCUMENTS: Port clearance is effected at La Libertad.
The following papers must be ready for presentation to the authorities on arrival:

1 Bill of Health signed by the Master and visaed by the Ecuadorian Consul at port of departure.
1 Ballast Certificate visaed by Ecuadorian Consul at port of departure.
6 copies of Cargo Manifest (if any cargo for the port).
6 copies Bills of Lading.
9 Crew Lists (original visaed by Ecuadorian Consul at port of departure).
9 Passenger Lists for the port (if no passengers state "without passengers"). If applicable, the list should show names, sex, age, nationality, port of embarkation, occupation and whether married or single. Passengers must make a declaration of their luggage on Ecuadorian Form No. 94.
9 Stores Lists.
5 Lists of Crew's personal effects (new articles only).
4 Lists of unaccompanied baggage (if none, state "without them").
4 Lists of Encomiendas (list of small private parcels to be landed in Ecuador – if none, state "without them").
4 Lists of Mail (if none, state "without them").

If there is no Ecuadorian Consul at the port of departure, the documents must be visaed by the Consul of a friendly nation.

PILOTAGE: Compulsory. Pilots boarding in position Lat. 2° 08′ S. – Lat. 2° 10′ S. and Long. 80° 55′ W. – Long. 80° 56′ W. ETA should be given to port 12 hours before arrival. Open roadstead.

ANCHORAGE: No limitations except depth 36 ft.

Vessels proceeding to oil terminal should anchor about 1 mile N.N.E. of the mooring buoys (which are about 15,000 ft. off-shore) where the Port Authorities and Mooring Master board. The anchorage is an open roadstead with sandy bottom.

RESTRICTIONS: *Tankers:* Daylight berthing only.

MAX. SIZE: *Tankers* –
LOA 650 ft.
Beam 84 ft.
Max. loaded draft 34 ft. 6 in.
Depth MLWS at mooring is 43 ft.

HEALTH: Vessels arriving from foreign ports should fly appropriate International Code signals to advise state of health and request Free Pratique. Vessels put in quarantine required to fly signal "QL" all the time they are in port until Port Health Authority advises to the contrary.

RADIO: ETA messages may be sent by radio to Radio Naval, HCG Guayaquil Radio, 8476 kHz, 500 kHz. Radio Naval would then repeat the message to the Naval Station in Salinas, or to the Telegraph Office. Radio Naval has VHF/RT and Telex.

TUGS: Only tankers require tugs to berth at the buoys. Other vessels work cargo at anchor.

BERTHING: No wharves for large vessels, only for coasters.

STEVEDORES: Arranged by Agent; separate ETA not required.

MEDICAL: If urgent medical attention required, Master should radio details in advance. All facilities available.

TANKERS: The Anglo-Ecuadorian Oil Fields Terminal is located in Santa Elena Bay. Four small marker buoys indicate the seaward end of the submarine pipe-line. An Easterly current usually prevails, rate being from 0.5 to 1.5 knots. There is 1×14 in. submarine pipe-line fitted with 2×10 in. flexible hoses for connecting to ship. Max. loading rate is about 450 t.p.h, and max. pressure is about 150 p.s.i.

Mooring Master assists in berthing vessels. Vessels are moored port side to, using starboard anchor off the starboard bow and mooring buoys for lines to the port bow and astern. Vessels moored during daylight hours only; however, they may unmoor at any hour of the day or night. Recommended that at least 1 tank of clean ballast be retained on board vessels until mooring has been completed. Ballast will then be pumped overboard. Vessels should be equipped with three 9.5 in. or 10 in. (circ.) – 200 fathom hawsers for use in mooring and 7 rope stoppers each at least 3 fathoms long. The following signals are used in connection with the loading of cargo.

By Day: Start loading 2 long blasts of vessel's whistle or siren, 1 red flag hoisted; stop loading 4 long blasts of vessel's whistle or siren, flag hauled down.

By Night: Start loading, 2 long blasts of vessel's whistle or siren, 1 red light hoisted; stop loading, 4 long blasts of vessel's whistle or siren, 1 red light hauled down.

To summon the launch, 3 long blasts are to be blown on the vessel's whistle.

DENSITY: 1028

FRESH WATER: Not available.

FUEL: Bunkers available, but have to be requested 72 hours prior to arrival in order to make transport arrangements.

CONSULS: There is no consular representation of any country at La Libertad. The nearest are at Guayaquil.

REPAIRS: Anglo-Ecuadorian Oil Fields Company can effect small repairs.

GANGWAY/DECK WATCHMEN: Available, but not compulsory.

OPENING/CLOSING HATCHES: Can be done by the crew or stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits per man.

REPATRIATION: Can be effected from port of Guayaquil.

AIRPORT: At Guayaquil, 130 km. away, served by regular airlines.

TIME: GMT minus 5 hours.

HOLIDAYS: January 1st; Carnival; Good Thursday; Good Friday; May 1st; May 24th; July 24th; August 10th; October 9th; October 12th; November 2nd; November 3rd; December 25th.

TELEPHONES: No connections to vessels possible, except at tanker moorings which is direct to loading installation only.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Required.

GENERAL: Dirty ballast or slops not admissible at La Libertad.

AUTHORITY: Terminal Superintendence La Libertad.

MANTA: 00.56 S. 80.43 W. (See Plan)

DOCUMENTS:

A. List of documents, 1 copy.
B. Sailing Permit from last port. Original to Captain of Port.
C. General Declaration, 5 copies – Health Department 1, Captain of Port 1, Immigration 1, Custom House 1, and Port Authority 1. (See Note No. 2 below):
  1. Health Declaration.
  2. Stores Declaration.
D. List of passengers destination Manta, including list of their baggage, 2 copies – Customs 1, Immigration 1.
E. List of Passengers in transit, 2 copies – Immigration 1, Port Authority 1.
F. Crew List (including and indicating any members leaving vessel at Manta), 4 copies – Customs 1, Immigration 1, Captain of Port 1, Port Authority 1.
G. Manifest of Cargo for discharge at Manta including transhipment 4 copies – Customs original and copy, Port Authority 2.
H. Checking Books, 5 copies, plus 1 copy for each point of possible discharge of cargo from vessels for Port Authority.
I. Bills of Lading, 1 complete set for Port Authority.
J. List of vessel supplies including liquors, cigars, cigarettes, other tobacco products, matches, lighters, clothes, novelties, and provisions will be maintained in Purser's Office for review by Custom House.
K. Tissue Manifest, hatch list and cargo plan. 1 copy of each for Port Authority prior to arrival of vessels. These papers to be sent by air mail as per regulations.
M. General Manifest. This manifest will include all cargo loaded during voyage which will include all cargo in transit – 1 copy. General manifest will be maintained in Purser's Office for review by Custom House, and be accessible for Customs at all times.

Note No. 1: Port Authority reserves the right to refuse berthing facilities until all documents received. Of course, this authority will be handled with discretion to avoid unnecessary or unwarranted delay to vessels, passengers, and cargo.

Note No. 2: General Declaration should contain the following:
A. Name of vessel, length and registered tonnage.
B. Owners.
C. Voyage number and ports of call on voyage.
D. Total number of passengers aboard.
E. Total tonnage (of 1,000 kilos) of cargo aboard.
F. Total number of passengers for Manta.
G. Total tonnage (of 1,000 kilos) of cargo for Manta.
N. Health Declaration.
O. Stores Declaration that ship's consumable foodstuffs and consumable supplies are under lock and key; that the slop chest, shop, and store-rooms containing liquors, cigars, cigarettes, other tobaccos, matches, lighters, clothes, novelties, sports material, toilet articles, cosmetics, medicines, etc. have been locked and sealed with metallic non re-usable seals with serial numbers. The seals are identifiable by their non-repeat numbers.

All vessels should have these seals aboard and should equip doors and door frames with suitable secure hardware through which seals can be passed. (Model of the form for the above document may be obtained from the Port Authority).

PILOTAGE: Compulsory. Pilot boat by day will show Pilot flag at mast head; by night red light 2 ft. 6 in. below mast head light, both visible around the horizon.

Pilot will board at point located at distance of 1 mile, 000° from Manta Breakwater Light (Lat. 00° 56′ 20″ S., Long. 80° 43′ 02″ W.). He will immediately proceed to conduct ship to inner harbour and dock at assigned pier or anchor in assigned anchorage.

Vessels will not have to anchor, but will reduce speed to steerageway and stop propeller. Lower pilot ladder so Pilot may board safely on port side of vessel. Pilot will act as Representative of Port Authority. Other Officials and Representative of steamship Agency will embark once ship has tied up.

Pilotage compulsory for all foreign vessels over 500 tons, with following exceptions:

(1) Fishing craft, yachts, tugs, barges and other craft of less than 500 tons total displacement whose handlers are suitably licensed by Captain of the Port of Manta.

(2) Vessels of the Ecuadorian Navy.

Note: Masters of large vessels and handlers of small craft who do not follow all rules of safety, including Rules of the Road may lose their right to navigate within jurisdiction of the Port Authority and may be subject to additional sanctions.

ANCHORAGES: Free anchorage area located around a point 1 mile from Manta Lighthouse (Lat. 00° 56′ 03″ S., Long. 80° 43′ 01″ W.). Depth 45 ft. Anchorage inside breakwater will be assigned by Pilot.

RESTRICTIONS: No restrictions upon entry. Vessels up to 33 ft. draft may enter at any time of day or night.

MAX. SIZE: Max. permissible length 600 ft., breadth 60 ft., draft 33 ft.

HEALTH: Radio Pratique granted all ships in accordance with International Sanitary Regulations. Health documents will be delivered to boarding officer of Port Authority. When Pratique granted by radio, not necessary for port doctor to board vessel.

In request by radio for Pratique, vessels should give following data 12 to 24 hours before arrival.
A. Date and hour of expected arrival.
B. Number of Ecuadorian passengers.
C. Number of alien passengers.
D. Statement regarding existence or non-existence of communicable diseases aboard.

RADIO: Manta HCM 8372 kHz. Radio telephone 2182 kHz. VHF Channels 10 and 16 (Costera Manta).

TUGS: 2 tugs. 1×1,300 h.p. and 1×1,800 h.p. Tugs join vessel in vicinity of pier. Ship's lines usually used. Use of tug for docking and undocking is at discretion of Port Authority.

BERTHING: Berth will be assigned by Pilot at boarding time.

Berthing Facilities:

2 Piers Length 200 m. for vessels with draft up to 10 m. 2 Roll-on/Roll-off ramps, facilities at 2 piers., depth 22 ft.
Marginal Quay, length 150 m., for vessels with draft up to 7.5 m.
Marginal Quay, length 150 m., for vessels with draft up to 5.7 m.
Marginal Quay, length 150 m., for vessels with draft up to 3.8 m.

Cranes: Mobiles cranes with capacity 12 – 35 tons.

Storage Area: 100,000 sq.m. of open storage available.

STEVEDORES: Arrangement for stevedores made by ship's Agent prior arrival.

FRESH WATER: Fresh water available in small quantities.

FUEL: Diesel oil available in small quantities by truck.

FIRE PRECAUTIONS: Regular fire precautions should be taken by all ships. Smoking should be prohibited in any section of the ship used for cargo. No smoking on the weather deck, cargo decks, and the ship's holds, whether cargo being worked or not. Smoking around hatches or at cargo winches must be prevented.

Smoking should be restricted to the passenger section of vessels, and to officers' and crew's quarters where suitable receptacles are available.

Persons including officials can be fined or refused entrance to terminal at discretion of Port Authority for careless or intentional disregard of reasonable fire prevention precautions.

Port Authority reserves right to inspect cargo working sections of vessel, to check precautions against fire, and to determine whether there are any undue accumulations of combustible materials.

Pumps and other fire fighting equipment aboard should be maintained in a state of readiness as long as vessels are in the terminal.

CONSULS:

Panama: Mr. Jorge Alava, Banco del Pichincha, Tel: 612411 – 611089.
Germany F.R.: Mr. Wolf Harten, Tel: 610740.
Spain: Mrs. Pilar Quilez de De Genna, Tel: 613548.

REPAIRS: Minor repair facilities available.

GANGWAY/DECK WATCHMEN: Custom police keep watch at the gangway.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: Tobacco, small amounts for personal use while in port. Wine and/or Spirits, wines and liquors by the glass for consumption on board while in port.

CARGO GEAR: Ship should have cargo nets, but Port Authority can provide cargo nets at extra cost.

REPATRIATION: Repatriation of crew members through Port of Guayaquil.

AIRPORT: Airport with 2,500 m. runway. Flights to Quito at 0915 hrs. on Monday to Saturday. From Portoviejo (36 km.) flights to Quito on Monday to Friday at 1700 hrs. Air taxis on request.

TIME: Local time GMT minus 5 hours.

HOLIDAYS: No movement of cargo within the terminal on 1st May, Christmas Day, or after 2000 hrs. on the 31st December, or on New Year's Day.

POLICE/AMBULANCE/FIRE: Police 610900; Ambulance 612014; Fire 610100.

TELEPHONES: Telephone service can be obtained at Terminal Office, at same rate as public telephones.

SHORE LEAVE: Crew members are welcome ashore.

IDENTIFICATION CARDS: Crew members should have identification cards while ashore at all times.

DELAYS: In rainy season, from January to April, irregular swell is present in the Manta Bay (3 days before and after full moon), also at new moon tides.

AUTHORITY: Autoridad Portuaria de Manta, Apartado 4768, Manta, Manabi, Ecuador. *Tel:* 613111. *Telex:* 04-6182. *Cables:* Aportuaria. *Contact:* The General Manager.

PUERTO BOLIVAR: 03.14 S. 80.01 W.

DOCUMENTS:

3 Voyage Memorandums.
2 Maritime Health Declarations.
1 Consular Despatch.
1 Port of Origin Certificate.
10 Crew Lists.
8 Stores Lists.
3 Individual Declaration List for each member of the crew.
8 Lists Passengers Disembarking at this port.
8 Lists Passengers in transit.
4 Luggage, Mail and Commissions Lists.
4 Manifest of Cargo Lists.

Documents for Port's Authority should be supplied by Agents:

1. General Cargo Manifest in complete sets (Importation in triplicate, Exportation one set).
2. Bill of Lading, complete sets: Importation (one set), Exportation (one set) at time of sailing.
3. Export Customs House Clearance Document (one set). This document is replaced by the Bill of Lading.
4. Certificate of Ballasting.
5. Request for Mooring Berth.
6. Stevedore's cargo plan per hatch.
7. Muster-roll of cargo.
8. Tally books: 15 copies in Spanish. These must be in accordance with the current Tally Law.

PILOTAGE: Send ETA through Radio Naval of Guayaquil 24 hours before arrival. Pilot will board vessel on the port side 1 mile from the Sea Buoy on arrival and disembark on the starboard side. In case Pilot not available it is recommended to anchor 1 mile from "Punta Jambeli" between the buoy and the lighthouse of Lambeli. Pilot boat is steel, black hull and white cabin, it carries pilot signals in accordance with International Regulations. Service available 24 hours a day. Pilotage is compulsory.

ANCHORAGES: Pilot will indicate recommended anchorage.

RESTRICTIONS: Depths 30 ft. at LW, from 0600 hrs. to 1800 hrs. draft allowable 30 ft. From 1800 hrs. to 0600 hrs. draft allowable 27 ft.

MAX. SIZE: At Espigon Quay depths alongside 30 ft. inner end to 36 ft. at quay head.

HEALTH: On the arrival of vessel the authorities come on board. If there are no illnesses aboard, the doctor gives Free Pratique. In case of any illness, Master should advise by radio and the vessel waits in quarantine for the visit of Port Health Doctor.

RADIO: Radio Naval of Guayaquil, Radio Naval of Puerto Bolivar VHF available call pilot station on Channel 16, effective reception 30 miles.

TUGS: 2 tugs available one at 1,200 h.p. and one of 500 h.p. Usually, ship's lines are used. This service is free.

BERTHING: At Espigon Quay should be carried out within 1 hour before or after slack water. Tidal currents of 1 – 3 knots in dry season and 3 – 5 knots in Winter are at right angles to berthing face of the quay.

Wind: From 000° in the morning, speed 3 – 5 knots. From 210° in the afternoon and night, speed 3 – 5 knots.

STEVEDORES: Agents take charge of gangs.

MEDICAL: Hospitals, clinics and dental surgery in Machala, 6 km. from the port. There is also a medical service for vaccination.

DENSITY: Salt water.

FRESH WATER: Only available by tanker truck, capacity 7 tons.

FUEL: No fuel in this port. In case required one has to contact Guayaquil and they send it by small tankers.

CONSULS: Consul of Peru, Tel: 920608.

REPAIRS: There are no facilities in this port.

GANGWAY/DECK WATCHMEN: The Agent names 1 or 2 watchmen for the vessel besides the Maritime Police and Coast Guard.

OPENING/CLOSING HATCHES: Carried out by shore gang supervised by someone on board.

CERTIFICATES: Vessel's Register and Tonnage Declaration required.

CUSTOMS ALLOWANCES: 100 cigarettes per person and 1 bottle wine or spirits per person.

REPATRIATIONS: The Immigration Office can arrange.

AIRPORT: Distance to the airport is 6 km. It has 6 daily flights in connection with Guayaquil.

TIME: GMT minus 5 hours; there is no change.

HOLIDAYS: No work from 1700 hrs. on 24th December till 0800 hrs. on 26th December, and 1700 hrs. on 31st December till 0800 hrs. on 2nd January; Carnival; Maundy Thursday; Good Friday and Saturday; 1st May; 24th and 25th July; 9th October.

POLICE/AMBULANCE/FIRE: There are services.

TELEPHONES: Can be connected to the vessel.

IDENTIFICATION CARDS: Not necessary.

SHORE LEAVE: Passengers or crew do not need any special permit to land.

DEVELOPMENTS: A marginal pier for general cargo is being built. Length of pier 360 m.

GENERAL: When the vessel is anchored, landing service is done by launches. They are called by 1 long whistle and 2 short ones. This service works 24 hours a day.

At Night: A flashing light is to be used to call launches and not the whistle.

SHIPMASTER'S REPORT: 1978

Fresh Water: Water is available at anchorage by a barge of 48 ton capacity. For ships berthed alongside, water is delivered by modern trucks of 7 or 8 ton capacity.

Surveyor: A non-exclusive surveyor acting for Lloyd's, Det Norske Veritas, and the Japanese Classification Society, is based at Guayaquil. Loadline survey and engine survey work done. He travels by air from Guayaquil (45 minutes).

Watchmen: One Customs and one Naval guard are obligatory, and should be fed and provided with room to sleep. Ship's crew should be employed day and night, one as accommodation watchman and one as deck watchman. Store-rooms should be locked up, and all loose equipment and lifeboat equipment stowed in lockers or accommodation. Only one accommodation door should be left unlocked, and a ship's watchman posted there, day and night.

Banana Cargoes: Loaded through side doors from the quay or from barges, or both together. No cranes, derricks or mechanised equipment used. About 400 men employed at one time. Very fast.

Casual Labour: This is freely available for painting hull, cleaning engine room, etc.

PURSER'S REPORT: See "Guayaquil".

AUTHORITY: Port Captain.

NOTES

Please also advise Shipping Guides Ltd.

Arab Republic of Egypt

GENERAL

NAVIGATION REGULATIONS:
The following rules for ships navigating in the Gulf of Suez have been approved by IMO.

1.1 Ships should take into account that crossing traffic may be encountered in the traffic junction Eastward of Ain Sukhna and in the precautionary area off Ras Shukheir, and should be in a high state of readiness to manoeuvre in these areas.

1.2 Exceptional care is needed, when overtaking another ship within a lane, not to enter the separation zone or force the overtaken ship to do so.

1.3 Ships navigating in the Gulf of Suez are requested to keep continuous listening watch on the Suez Gulf Traffic Information Broadcasts and report any aids to navigation which are malfunctioning or are out of position and which are not already included in the Suez Gulf Traffic Information Broadcasts.

2.1 All ocean ships should have their radar in effective use by day and night throughout the passage between Shaker Island and Suez Port as an aid to achieving maximum feasible lane conformity and avoiding risk of collision. Particular care is required for strict adherence to the confines of relevant traffic lanes.

2.2 Ships proceeding South from Suez should be alert for tankers heading for the Sumed Oil Terminal off Ain Sukhna.

2.3 Northbound tankers heading for Sumed Oil Terminal should report their intention of using the traffic junction off Ain Sukhna on the appropriate frequencies.

2.4 All ships North and Southbound when navigating through the precautionary area off Ras Shukheir or in the vicinity of the July Oilfield should avoid overtaking in the traffic lanes in these areas.

2.5 All ships including service and supply craft serving the oil workings in July, Ramadan and Morgan Oilfields proceeding in and out of Ras Shukheir Oil Terminal, should only cross the South and Northbound traffic flow through the precautionary area off Ras Shukheir. Within the precautionary area local rules relating to crossing traffic apply.

2.6 Tankers leaving the Ras Shukheir Oil Terminal and intending to join the Northbound traffic lane should only do so when no through Southbound traffic is in the vicinity and should always report their movements to other ships beforehand on VHF.

2.7 Ships anchored in the designated waiting area for Ras Shukheir should ensure that they are never less than 0.25 miles from the edge of the Southbound traffic lane and should pay special regard to their correct light signals for ships at anchor. They should also show their deck lights.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer from 1st May till late September.

AIN SUKHNA: 29.32 N. 32.24 E. (See Plan)

Also see "General" before first Port.

LOCATION: Ain Sukhna Sea Terminal is situated in the Northern end of the Gulf of Suez.

The position of the sea terminal is: Lat. 29° 32′ N., Long. 32° 24′ E. As a reference point, there is a light which is exhibited from a metal structure standing close to the seaward side of an old abandoned lighthouse on Ras Abou Darag.

DOCUMENTS: All vessels calling at Ain Sukhna have to deliver directly their official documents, as indicated below, to SUMED's Port Authority:

Certificate of Registry.
Load Line Certificate.
Safety Certificate.
Derat Certificate.
Radio Certificate.
Suez Canal Tonnage Certificate when applicable.
Panama Canal Tonnage Certificate when applicable.

Vessel's official documents, after being reviewed, will be handed to the vessel's Master after discharging and before vessel departs from SUMED's port.

LOCATION OF BUOYS: (SBMs)

S1: Lat. 29° 35′ 16″ N., Long. 32° 23′ 35″ E.
S2: Lat. 29° 34′ 12″ N., Long. 32° 22′ 42″ E.
S3: Lat. 29° 35′ 17″ N., Long. 32° 22′ 16″ E.

The 3 SBMs are painted orange and have the following characteristics: *Lights:* A flashing light, activated by an automatic photo-electric sun switch.

Light frequencies are as follows:

SBM No. 1	Morse Code	A
SBM No. 2	Morse Code	B
SBM No. 3	Morse Code	C

Fog Horn: An acoustic signal with an approximate range of 2 miles.

Hose Line Marker Beacons: 3 flashing lights with the following characteristics are fitted to the floating hose strings to mark the line during darkness.

Flashing character 1-10 at 20-60 flashes/minute activated by an automatic photo-electric sun switch. Lens: white.

Radar Reflector: Each buoy is provided with an octahedral radar reflector constructed in stainless steel with a diameter of 0.5 m. installed on top of the rope guard.

PILOTAGE: SUMED's Mooring Master and his assistant board the tanker 2 miles S.E. of Buoy "S2".

Notifications: ETA messages should be sent by cable via Alexandria/Port Said Radio on leaving previous port. Cables should be prefixed "For urgent delivery send via Telex 54108 or 54033 SUMED UN" and be confirmed 72, 48 and 24 hours prior to arrival. (Day and Night berthing and operation). Arrival draft should be indicated.

ANCHORAGES: Tankers can anchor to the S.E. of the buoyfield.

RESTRICTIONS: *Maximum Weather Conditions for Occupying SBMs:*
The SBMs are designed to accommodate tankers up to the following weather conditions.

Wind velocity (knots)	35 (65 km./hr.)
Maximum tidal range	2.0 m.
Maximum wave height	3.4 m.
Maximum surge/seiche conditions	0.5 m.
Current: Surface	2.0 knots.
Seabed	1.0 knot.

The above conditions are not relevant to the safety of the ship but to the safety of the buoys. Consequently the Mooring Master shall have the authority to decide whether the ship should remain moored or vacate the buoy due to adverse weather conditions.

MAX. SIZE: The three berths are spaced one from the other so that each has:

Mooring Area Radius: 410 m. for S1 and S2 (accommodates vessels up to 285,000 d.w.t.); 320 m. for S3 (accommodates vessels up to 13,000 d.w.t.); Manoeuvring Area Radius: For S1 and S2, 1,220 m.; For S3, 915 m.

Water Depth and Draft Limitations:

For S1 and S2:	85 ft. minimum water depth
	75 ft. maximum draft
For S3:	65 ft. minimum water depth
	55 ft. maximum draft

HEALTH: Vessels proceeding to Ain Sukhna must be in possession of the following documents:

(a) Maritime International Declaration of Health.
(b) Valid Derat or Derat Exemption Certificate.
(c) Valid Vaccination Certificates for all passengers and crew members.
(d) Certificates of inoculation against any communicable diseases prevailing at the Ports of departure.

Masters are required to immediately notify SUMED by cable in the manner outlined in "Radio – ETA" in case of any epidemic diseases or illness onboard while the vessel is bound for Ain Sukhna. The same message is to be conveyed to the terminal as soon as an HF or VHF contact is established, at least 6 hours before arrival.

RADIO: *ETA:* In order to avoid undue delays it is essential that Masters of vessels proceeding to Ain Sukhna Terminal cable their ETAs to "SUMED" Alexandria.

The cable to be prefixed quote "to be conveyed via telex (54108) or (54033) SUMED UN operations office-oil movement" unquote.

ETA notifications to be sent as follows:
Immediately upon sailing from loading port/s
In case of a change in ETA exceeding 6 hours
72, 48 and 24 hours prior to arrival.

Confirmation of ETA: An additional contact can be made with the Ain Sukhna Terminal on HF 2182 kHz 24 hours before arrival.

Moreover, Masters are required to contact the terminal on VHF 6 hours before arrival on Channel 16 (or preferably Channels 78 and 79 if available).

Information from the Vessel: All vessels proceeding to unload their cargoes at Ain Sukhna are required to convey the following information to SUMED.

(a) Immediately upon sailing from loading port/s vessel is to cable, in the manner outlined in "Radio – ETA" the following information:
  (i) ETA (in GMT) and expected arrival draft at Ain Sukhna, vessels are requested to arrive even keel.
  (ii) All B/L data and ship's figures at loading port/s, stating quantity of free water on board after loading.
  (iii) Whether the vessel loaded on top of slops stating grades of crude that were commingled with residues, quantity and API of contents of slop tank/s.
  (iv) If the vessel is loaded with more than one grade of oil, Master is requested to confirm ability to unload according to the sequence agreed upon with the shipper (vessel's owner or charterer as the case may be).
  (v) SUMED is to be immediately notified in the case any repairs are required that could delay commencement of discharging.
  (vi) Estimated time for unloading the cargo if no restrictions are imposed by shore.

(b) On arrival at Ain Sukhna the following written information is to be handed to SUMED's Mooring Master:
  (i) Whether vessel equipped with inert gas system. Vessels arriving with gas inerting blankets should, on arrival depressurise their system sufficiently to allow visual sampling and ullaging of cargo tanks. Upon completion of ullaging, pressurisation of inerting system shall be resumed and maintained throughout discharge.
  (ii) Whether the vessel has external impressed cathodic protection.
  (iii) Vessel's readiness to connect 2×16 in. hoses ASA 150.
  (iv) The pressure which the vessel expects to maintain at the ship's rail and which is required to be a minimum of 100 p.s.i. unless otherwise specifically requested in writing by shore.
  (v) Whether vessel requests to perform crude washing and in the affirmative the relevant check list should be filled in by the Master. See "Crude Oil Washing" under "Discharging".
  (vi) Full names and addresses of Owners, Managers and Charterers of the vessel and their Agents in Egypt if any.
  (vii) Whether the tanker's Owners/Bareboat Charterers are members of a P & I club stating name and address of such club, if available.

Information from Terminal:

The following information will be given to the vessel upon arrival at the anchorage area or when SUMED's Pilot boards the vessel:

(i) Any expected pre-mooring delays and their likely duration.
(ii) Any special mooring instructions.
(iii) Details of any restrictions on discharging rate.

All such restrictions and their duration will be confirmed in writing by SUMED.

VHF: Channels 16, 78 and 79.

TUGS: Tug "Sukhna" 3,200 h.p. with fire fighting and with anti-pollution equipment is available as required.

Mooring Launches: 500 h.p. mooring launches assist in mooring and hose operations.

BERTHING: Ain Sukhna Sea Terminal consists of 3 sea berths all of which are single point mooring buoys (SBMs).

2 large buoys for vessels up to 285,000 d.w.t. and 1 small buoy for vessels up to 120,000 d.w.t.

Subject to SUMED's prior approval and acceptance in each case the buoys can accommodate vessels larger than those specified above within the following limits:

Large Buoys (S1 and S2)	up to 350,000 d.w.t.
Small Buoy (S3)	up to 200,000 d.w.t.

maintaining all other length and draft limitations. Each of the larger buoys is connected to shore by a submarine line 48 in. (1.22 m.) in diameter and approximately 8 km. in length.

The small buoy is connected to shore by a submarine line 42 in. (1.067 m.) in diameter and approximately 5 km. in length.

Ropes: All SBMs are equipped with twin 15 in. circumference nylon ropes each 180 ft. long ending with a 20 ft. chafing chain 2.3125 in. diameter. A support buoy is connected to the chain.

The port side mooring rope has a 350 ft. polypropylene 10 in. pick-up rope with a 3 ft. soft eye at the end.

The starboard side is the same but the pick-up rope is only 150 ft., 10 ft. or 12 ft. snotters with shackles are used for connecting the chafing chain to ship's bollard.

Mooring Master Duties: When the Mooring Master boards he will advise the ship's Master or officer in charge of the bridge on the approach to the berth, arrangements for mooring and unmooring, connecting and disconnecting of the hoses, and all other operations within the berthing area. The Mooring Master will submit and receive from the Master all forms, documents and papers required, to be filled and signed or received by the Master.

Adequate Lighting: There must be adequate search lights rigged on both wings of the bridge when mooring at night to facilitate running lines to the buoys.

VHF: The Mooring Master will be in direct charge of the portable VHF ship to shore radio telephone communications.

Mooring: Pick-up from the mooring boat:

2 wire rope snotters of 12 ft. or 20 ft. length (to suit tanker bollard location).

Weight of 12 ft. – 80 kg	23.8 in. diameter
Weight of 20 ft. – 135 kg.	23.8 in. diameter

2 bow shackles 55 tons SWL (weight of shackle = 43 kg.) or 2 bow shackles 75 tons SWL (weight of shackle = 68 kg.) for tankers over 130,000 d.w.t.

Tool box.

Move these items to bow.

Slip the soft eye of the snotter onto bollard having a good lead to forward fairlead. The forward winches should be tested, drained and be in good working order.

Ensure that both anchors are secured by stoppers in the hawse pipe. Anchors must not be dropped at the berth.

Prepare messenger line, (about 10 in. circumference × 500 ft. length polypropylene), and pass through the forward fairlead and lower as directed by Mooring Master, starting at the port side.

The mooring boat will fasten this messenger to the 10 in. × 350 ft. polypropylene pick-up line on the buoy mooring system.

Upon the boat's signal, heave away until the chafing chain is in the fairlead or Panama lead with the support buoy close outside.

Shackle the free end of the wire snotter to the open end link of the chafing chain.

Ease back on the pick-up line until the weight falls on the bollard wire snotter.

Should the vessel have a "Smit" type towing bracket, release the pin, install the open link and lead the pick-up so that the end link of chain is directly fastened to the open link with the bow shackle.

Same procedure will be adopted to the starboard polypropylene pick-up rope of 150 ft. length connected to the buoy mooring system.

Mooring Sequence:

Prompt Berthing: SUMED will make every effort to moor ships arriving according to agreed schedules as promptly as operational circumstances permit.

Notice of Readiness: To be tendered when vessel arrives at Ain Sukhna anchorage area provided that vessel is ready in all respects to unload her cargo. NOR will be accepted according to SUMED's agreement with the relevant shipper.

Arrival Time: Arrival time will be considered at the time the vessel anchors.

Cargo Operations: Vessel moored to the SBMs must limit their stay to the allowed berth occupancy time stipulated in the transportation agreement between SUMED and the relevant shipper.

Unless vessel sizes are otherwise classified in the said agreement the allowed berth occupancy time is as follows:

More than 285 KDWT	52 Hours
Over 240 to 285	42
From 200 to 240	36
Less than 200	28

Delay due to weather: In the event that berthing delayed on account of adverse weather conditions the vessels will maintain their position in line.

Port Closure: Should vessels be requested to vacate the berth on account of adverse weather conditions closing the port, they shall keep in contact by VHF with the terminal in order to be readily available for re-entry as soon as the terminal so requires, after weather conditions permit.

Port Re-opening: When the port is re-opened discharging will recommence according to the firm schedules agreed upon with SUMED's shippers.

Vessel refusal: SUMED reserves the right to decline to berth a specific vessel should it consider that such vessel's condition or facilities are unsafe.

Unmooring: Take the weight of the moorings on the pick-up starting with the starboard side first, using windlass. Unshackle the wire snotter (or unpin the "Smit" brackets).

Slack the pick-up until the support buoy is in the water. Pay out the pick-up line (as ship clears from the berth). Return the wire snotters, bow shackles and tool box to mooring boat prior to Mooring Master's departure.

The tug and mooring launches will be in attendance.

HOSES: SBMs No. 1 and 2 contain twin crude floating hose strings each 297.2 m. (975 ft.) in overall length consisting of:

23 hoses	24 in. × 35 ft.
1 hose	24 in./20 in. × 35 ft.
1 hose	20 in./16 in. × 35 ft.
2 hoses	16 in. × 35 ft.
1 hose	16 in. × 30 ft.

SBM No. 3 contains twin crude floating hose strings each 243.9 m. (800 ft.) in overall length.

Each consists of:

19 hoses	20 in × 35 ft.
1 hose	20/16 in. × 35 ft.
2 hoses	16 in. × 35 ft.
1 hose	16 in. × 30 ft.

All tail hoses are 16 in. in diameter and the gear attached to each of the 16 in. crude oil hose tails consists of a lifting eye, butterfly valve, spool piece with camlock and light weight blind flange.

The camlock is suitable only for connections with tanker manifold flange of 16 in. ASA 150.

Quick Release Safety Couplings: Quick coupling (Camlock) are connected at each hose end and they will be used as follows:

In case of emergency the butterfly valve shall be immediately closed and the quick coupling immediately disconnected.

Hose Connecting and Disconnecting: The connecting and disconnecting of cargo hoses shall be performed by the crew of the vessel under instructions from SUMED's Mooring Master.

Preparations: The tanker crew are required to lift 2×16 in. crude hose strings and connect them to the vessel's port side manifold.

To avoid delays the following items should be prepared prior to berthing, otherwise the vessel will not be considered ready to discharge.

3×16 in. standard 150 ASA flange connections in position on selected lines for discharging crude oil.

Port derrick with a minimum 10 ton SWL rigged for maximum height and load lifting. The derrick shall be guyed to plumb the vessel's rail-hose bolster bar at the vessel's manifold.

If possible, the topping lift of the boom shall be on its own winch. All winches shall be tested, drained and in ready running condition.

Drip trays, sand bags, dispersant and fire fighting equipment in position.

A steel basket to contain tools, gaskets, nylon lifting slings and other equipment for lifting on board from the mooring boat.

Equipment to be Onboard Before Berthing: In order to expedite the connection of the hoses the following equipment must be available.

2 polypropylene messenger lines
(about 10 in. circumference 500 ft. long).
Sledge hammer.
Large crowbar.
Large marlin spike.
Large flashlight.
Bags of sand.

Manifold on the port side must be used:

All manifolds to be ready with 16 in. flange ASA 150.
Hose derrick rigged.
Derrick fall fitted with cargo hook 10 ton SWL.
Heaving line.
2 × 1-1-2 ton pullers.
Copper hammer.
Steel spike.
Spare bolts and 16 in. gaskets.
Nylon lifting slings.

DISCHARGING:

Terminal Design: The design of the discharging terminal is based on the following flow rates with crude oil characteristics as follows:

Viscosity		= 17 cst
Specific gravity		= 0.867 kg/cu.cm.
SBMs No. 1 & 2	Max.	12,500 tonnes/p.h. 200 p.s.i.
	Min.	7,400 tonnes/p.h. 100 p.s.i.
SBMs No. 3	Max.	7,400 tonnes/p.h. 120 p.s.i.
	Min.	5,900 tonnes/p.h. 100 p.s.i.

Inert Gas System: Vessels equipped with inert gas system are t depressurise tanks before berthing in order to allow for sampling an ullaging upon arrival and after completion of discharge to chec remainders on board. Pressurisation of inerting system should b resumed as soon as ullaging and sampling are completed an throughout the discharge.

Crude Oil Washing: COW is usually acceptable if the ship can maintai an average flow rate of no less than 7,400 tonnes/p.h. (100 p.s.i. a ship's rail throughout discharging). However, COW is subject to th terminal's approval depending on both operational circumstance and this operation has been previously carried out by the vessel.

When vessel requests permission to perform COW the Master must respond in writing to the "Crude Oil Wash Check-off List".

COW of slop tank is prohibited.

Crude Oil Wash (COW) – Check-off List: Vessels requesting permission to perform crude oil wash while unloading at Ain Sukhna, are requested to respond to the following check-off list:

Inert gas system is fully operational and tested.

Each tank will be positively pressurised and method of recording pressure will be available.

Each tank will be kept below 8% oxygen before and during operation.

Inert gas system flue gas oxygen content will be continuously monitored and maintained below 8% oxygen.

Oxygen alarm in cargo control room set to give visual indication when to abort crude washing.

Pressures in cargo tanks are available to vessel's control room personnel.

Washing systems have permanent steel pipework and will be pressure tested to 10 to 15 p.s.i. above expected working pressure but to minimum of 150 p.s.i. prior to use.

All tank openings are sealed and remote tank gauging system is operational.

All necessary throttling of discharge for crude spraying will be done on vessel's valves.

There is a responsible designate person in charge of operation. (Give name.)

Effective communication will be maintained between vessel and shore.

Water will not intrude into the crude wash cycle.

Washing to be commingled and discharged at the same time with the rest of the cargo.

Previous crude wash exprience of key personnel is (list).

Tanks crude washed last 2 voyages are (list).

Any additional vessel requirements or comments.

Emergency Communication: If ship-to-shore communication fails the ship's whistle shall be sounded continuously. Discharging shall be immediately stopped and will not be resumed until communications have been re-established.

Overside Lighting: During night discharging sufficient overside lighting must be provided to readily detect any oil spill so that immediate appropriate action may be taken.

International Code of Signals: During discharging operations the following signals shall be displayed:

By Day	: The International Code flag "B".
By Night	: A red light visible all round the horizon for distance of at least 2 miles.

Unloading Procedures: Upon being informed by the vessel's Master or responsible officer that the vessel is ready to start discharging, the Mooring Master will contact the Terminal Control Room to co-ordinate the commencement of unloading in accordance with the terminal's instructions.

The control room operator will normally give a "standby warning" by VHF approximately 10 minutes before the shore tanks are ready to receive cargo.

When the request to commence discharging is received the Mooring Master will ensure that discharging commences at slow speed. This starting procedure will always be adhered to.

Discharging will commence utilising 1 pump only with circulating system and when it has been confirmed that there is no significant rise in pressure on the discharging line which could indicate a blocked or closed valve on the shore or ship's discharging system, the crude oil will be discharged at the steady operating flow previously agreed upon.

Should there be any significant rise in pressure, discharging must be immediately stopped. The ship will be advised to check the on-board systems, take any necessary remedial steps and inform the terminal's control room.

At the same time the underwater and floating hoses should be checked to ensure that there are no obstructions.

Should the Master be requested to increase or decrease the cargo discharging rate this should be promptly implemented provided the vessel's pumps are capable of an increased rate.

SUMED may allow vessels to simultaneously ballast while unloading provided they are equipped to properly segregate the ballast and avoid any possible commingling with the cargo. Pumping ballast water into the sealine is strictly prohibited.

Any suspension and subsequent resumption of discharging of cargo must be logged both ashore and in the "Tanker Time Sheet".

All events regarding mooring, commencement, termination of unloading, stoppages, if any, and unmooring are both logged and recorded ashore at the terminal's control room as and when they are received from the Mooring Master.

These events shall jointly be logged in the Tanker Time Sheet by the vessel's Master and SUMED's Mooring Master.

Vacating Berth: Vessels shall vacate berth immediately after disconnection of hoses, allowing the least possible time to take ballast if essential for the safe manoeuvering of the vessel while vacating the berth.

Emergency Shut-Down: In case of emergency such as fire, sudden deterioration of sea and weather conditions, failure in ship to shore communications, etc, the discharging operations must be immediately suspended at the request of the Mooring Master. The ship's discharging pumps must be stopped immediately, the butterfly valves of the floating hoses and the manifold valves must be closed.

Depending upon the reasons causing the emergency, the ship's Master and Mooring Master will decide whether or not to disconnect the hoses and vacate the berth. In case of dispute the final decision will be taken by the Mooring Master.

Sampling: Representative samples of the cargo will be taken either from the vessel's cargo tanks or from the online automatic samplers.

The samples will be divided into 3 equal portions of about 1 gallon each, one portion will be handed to the quality control laboratory, the second to the ship's Master (sealed by SUMED) and the third retained by SUMED for 60 days (sealed by the Master).

The ship's Master will sign a receipt on receiving the ship's sealed and stamped container of the sample.

MEDICAL: Neither medical nor hospital facilities are provided by SUMED. In case urgent medical assistance is required the vessel should contact SUMED's Harbour Master by VHF radio. Private doctors and facilities are available at Suez.

CONSULS: Consular or diplomatic representatives for most maritime nations are in Cairo.

REPAIRS: Masters of vessels discharging at Ain Sukhna Terminal are instructed that under no circumstances may engines be shutdown for repairs whilst their vessel is moored to the SBMs. There are no facilities at Ain Sukhna Terminal for repairs. Repair facilities are available at Suez.

It is emphasised that all vessels at the SBMs must be prepared to clear immediately on instructions from the Mooring Master.

REPATRIATION: Crew changes are only permitted in cases of emergency.

SHORE LEAVE: There is no shore leave for personnel of vessels whilst at Terminal.

WEATHER:

Climate: The climate in the Ain Sukhna area is generally good. Summers are hot and dry and winters are relatively cool.

The visibility is usually excellent with few sand storms and infrequent fog. Sub-zero temperatures are unknown and there are very few rain squalls.

Summary of Weather Statistics (1884 – 1967):

Average rainfall year	0.8 in.
Mean maximum temperature	84°F (29°C)
Mean minimum temperature	62°F (16.7°C)
Extreme maximum temperature	111°F (44°C)
Extreme minimum temperature	35°F (1.7°C)
Average relative humidity	60%

Winds: The prevailing winds at Ain Sukhna are from the N.W. throughout the year.

Tides: The tidal range is up to a maximum of 7.4 ft.

Waves: The estimated characteristics of the 100 year extreme waves are:

Maximum height	12.0 ft. (3.7 m.)
Maximum crest elevation	11.0 ft. (3.3 m.)
Period	7.5 secs.
Length	280 ft. (85 m.)
Speed	22 knots (41 km./hr.)
Direction from	North

Tidal Streams: At Ain Sukhna the tidal streams set parallel to the coast line Northwards on the flood tide and parallel to the coast Southwards on the ebb tide. Maximum rate is 0.5 knots (0.9 km./hr.) at the surface.

Currents: There is no fixed current in this area and any flow is caused entirely by the prevailing tidal stream and winds.

Sea Salinity: The Red Sea and Gulf are extremely saline and salinity is around 40,000/50,000 parts per million.

Sea Temperature: The surface temperature of the sea ranges between 66°F (19°C) in February and 80°F (26.7°C) in August.

GENERAL:

Navigation: When entering, manoeuvering or leaving the Port Limits of Ain Sukhna, the Master has to conform with the conditions setforth in this Manual and has to adhere to the 1972 International Regulations for preventing Collisions at Sea which will be complied with at all times.

The Master guarantees that his vessel fulfils all navigational and worthiness conditions in particular those required for vessels carrying dangerous cargo, (crude oil) in accordance with the provisions setforth in the Appendix for vessels carrying Dangerous cargo annexed to Rules of Navigation of the Suez Canal Authority to the extent that such provisions are applicable.

Master should submit the respective certificate and declarations whenever required in this respect.

Helicopters (available in emergencies): Should the services of a helicopter be required by SUMED for any purposes whatsoever the vessel will be given a minimum of 30 minutes warning notice before the helicopter's approach in order that cargo operations can be stopped and all tanks and vents closed.

A responsible officer should be on deck to assist the helicopter in making the approach to the vessel. Although the safety of the helicopter remains at all times the responsibility of its pilot, helicopter services shall not be employed in any event without the express prior consent of Shipper and vessel's Master.

Supplies: Stores and supplies are available through an Agent and can be delivered from Suez to Ain Sukhna anchorage area after unloading but entirely at the vessel's own risk.

Government Officials: A.R.E. officials, such as Customs Director, Quarantine Officer and Immigration Officer are stationed at Ain Sukhna. Should Customs guards be stationed on board vessels whilst moored it is expected that vessels will extend all courtesies to them and or other officials while on board.

Ship's Readiness: This terminal is an open roadstead and therefore, during the time a ship is moored, the engines must be ready with full power for immediate use.

Vessels at berths must clear immediately upon advice of the Mooring Master or as directed by SUMED's terminal superintendent. Ship's personnel should be at their respective stations at all times during mooring, unmooring and cargo transfer operations.

Courtesy Flag: All vessels are required to fly A.R.E. Ensign on the foremast during daylight hours.

Quarantine Regulations: The rules governing quarantine regulations are the same as for Suez.

Unauthorised Craft: The presence of unauthorised craft alongside is extremely hazardous.

SUMED prohibits the boarding of individuals other than those authorised to do so in the bona fide conduct of the vessel's operation. No unauthorised person is allowed to board the vessel whether at anchorage or while moored.

Contraband: SUMED prohibits unauthorised craft from coming alongside vessels. To avoid the possibility of undesirable items getting aboard vessels, it is requested that Masters discourage craft coming alongside whilst the vessel is in the terminal.

AGENCY SERVICES: Not required under normal circumstances.

AUTHORITY: Arab Petroleum Pipeline Company (Sumed), 431 El-Guish Avenue, Loran, Alexandria, Egypt. Postal Address: P.O.Box 158, El-Saray, Alexandria, Egypt. *Tel:* 5866723, 5866711, 5866712. *Telex:* 54033, 54108 Sumed Un. *Contact:* Captain M. W. Sharaf, Marine Manager.

ALEXANDRIA (Including El Dekheila): 31.09 N. 29.53 E. (See Plan)

DOCUMENTS:

4 copies of Crew List.

Complete set of Manifests covering all cargo on board showing names of Shippers and Consignees.

4 copies List of Passengers in Transit.

Landing cards for passengers landing finally in A.R.E. and for those landing in A.R.E. in transit.

4 copies List of passengers finally landing in A.R.E. (if any) together with their addresses in A.R.E.

Deck log books showing date of last call at a A.R.E. port, completed up to the time of arrival.

For Quarantine: Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showing all ports of call, as well as dates of sailings for the last 30 days, nature of cargo on board, destination, as well as sickness among crew or passengers, if any, specially when it is presumed that the sick will be hospitalised. These forms can be filled on arrival if not available on board before arrival.

1 Crew List and 1 Passenger List.

Derat Certificate should be handy for inspection.

Clearance from Last Port.

For Immigration Officer:

Arrival Immigration Form, duly completed.

1 Passenger List.

List of Passengers Finally Landing, in duplicate.

Crew List.

Valid passport with entry visa is required for landing in A.R.E. for passengers landing. Emergency visa can be granted on arrival if so required.

For Customs Use:

Bonded Stores List, in duplicate.

Crew List and Passenger List in duplicate.

PILOTAGE: Compulsory. Pilot boards off harbour entrance. International code signals used.

Vessels are not to proceed from the waiting area (Lat. 31° 12.6′ N., Long. 29° 44.5′ E. with radius of 1.5 miles) without a Pilot onboard.

RESTRICTIONS: Entrance channels 13.0 m. depth × 220 m. width and 9.14 m. depth × 91.4 m. width. Arriving vessels should keep 50 miles offshore between sunset and sunrise.

MAX. SIZE: Up to 32 ft. draft at general cargo berths in Alexandria.

HEALTH: On entering, vessels must hoist the International Quarantine Signal for compulsory quarantine. Any sickness must be reported to the doctor. The Quarantine Doctor meets ships whilst entering the port and ships are boarded in turn.

In the event of a vessel arriving from a port that has been internationally declared infectious and the incubation period has not yet expired at the time of the ship's arrival at an A.R.E. port, the vessel is put under compulsory quarantine, moored at an isolated berth and no shore contact is allowed. Nevertheless the ship can still carry out her normal operations on condition that all shore personnel are holding valid vaccination and/or inoculation certificates issued by the Quarantine Administration. The ship's personnel should also carry International Vaccination and/or Inoculation Certificates. Final landing passengers, not carrying such certificates, will be landed under quarantine supervision and will be kept isolated at the lazarette until incubation period is over.

Pratique may be granted prior to ship's arrival provided the following conditions are adhered to:

1. The vessel must be a regular liner known to the Quarantine Authorities and have a doctor on board.
2. Details shown on the Quarantine Statement should be wirelessed to the Quarantine Authorities 24 hours prior to ship's arrival.
3. Masters of vessels must declare before their arrival any accidents, which might have taken place on board prior to the arrival in port.
4. The ship must not have called at any infected port.

RADIO: Alexandria Radio, call sign SUH, operating 24 hours daily on 444, 500 and 8578 kHz and between 0600 to 1800 GMT on 12,974 kHz. Also harbour VHF Channel 16.

TUGS: 5 tugs available up to 1,200 h.p.

BERTHING: Alongside quays in depths up to 39 ft.

Refrigerated store with capacity of 6,000 tons.

Ro/Ro facilities available.

Cement to silos and bagged in heavy cloth (no paper bags permitted).

Coal: Discharged at Berth Nos. 63 and 64. Max. draft 33 ft. 4×25 ton cranes. Rate 10,000 tonnes per day.

Cranes: Capacity 5 tons-50 tons. Floating cranes of 70 tons, 100 tons and 120 tons capacity.

Fertiliser Terminal: Length of quay 447 m. Depth alongside 10.0 m.

Timber: Handled at 3 quays. Depths 7.0 m. – 9.0 m.

Grain: 2 silos, 1×48,000 tonnes and 1×100,000 tonnes. Depth alongside 10.0 m. Max. size 40,000 d.w.t.

El Dekheila: Located 7 km. West of Alexandria and managed by Alexandria Port Authority.

Industrial Port: Access channel: Length 3.5 km. and depth 20.0 m. Turning circle: 750 m. diameter and 20.0 depth. Approach channel Width 250 m., depth 20.0 m. One jetty (2 berths). Length 640 m. Depth alongside: Inner Berth 16.0 m. Outer Berth 20.0 m. Max. Size: 60,000 d.w.t. and 160,000 d.w.t. respectively, max.draft 18.0 m. An additional berth to handle vessels up to 250,000 d.w.t. may be constructed later. 2×30 ton capacity grab cranes and 2 belt conveyors for handling iron ore pellet at 1,000 t.p.h. each (900 t.p.h. for coal).

Commercial Port: Access channel 1.2 km. in length is a branch off the access channel to the industrial port. Depth of channel 14.0 m. Width 210 m. – 150 m. Commercial port will have over 1,500 m. of berthing space with 15.0 m. of water alongside. Cargoes to be handled wi include containers, general cargo, timber, chemicals and Ro/Ro vessels. Available mid-1990: 300 m. of berthing space with depth 15.0 m. and max.draft 13.0 m.

CONTAINER FACILITIES: Length 700 m., depth alongside 14.0 m. 3×32 tonne container gantry cranes, 2×32 tonne transtainers and 4×42 tonne forklifts.

MEDICAL: All facilities available. International Vaccination Certificates required.

TANKERS: Petroleum Basin: in West part of Outer Harbour, Berth Nos. 3 and 4, depth alongside 38 ft., max. length 700 ft., draft 35 ft. Berth Nos. 3 and 4: in East part of Outer Harbour. Stern to moorings.

It has been reported that tankers are required to take on ballast in excess of that deemed to be necessary by the Master, even in fine weather. One Master was ordered to bring his forward draft to 21 ft. Once the vessel was alongside a charge was made for deballasting the vessel.

LNG/LPG: Max. LOA 122 m. Max. draft 28 ft.

FRESH WATER: Available by barge, and alongside most quays.

FUEL: Available by barge.

REPAIRS:

Alexandria Shipyard: Builds vessels up to 40,000 tons. One drydock capacity 85,000 d.w.t., cranes with up to 30 tons capacity. One drydock capacity 20,000 d.w.t., cranes with capacity up to 30 tons. Fully equipped engineering workshops capable of carrying out extensive repairs alongside quays length 1,200 m. Depth alongside 11 m.

Alexandria Ship Repair Co.: Ship repairs including engine repairs and boiler repair. Fully equipped workshops.

The Egyptian Shipbuilding and Repairs Co.: Floating dock for ships up to 12,000 d.w.t. 100 ton floating crane. All types of hull and machinery repairs possible.

HOLIDAYS: See "Suez Canal".

DEVELOPMENTS: Control tower with radar and VHF being constructed.

SHIPMASTER'S REPORT: 1976

Approaches: Ships making the passage from Port Said to Alexandria are obliged to keep to the route laid down by the Egyptian Authorities. The coastline is rather featureless and a good operational radar i invaluable. Radar conspicuous objects were found to be – Ras el Bar Lighthouse and fort, forts numbers 2 & 4, the forts and lighthouses a Brulos and at Rosetta Mouth and also Nelson Island.

The anchorage can be identified from a considerable distance by th number of ships at anchor off the port – often more than fifty. Th prohibited area marked on Chart No. 243 to the East of Great Pass i ignored and ships anchor as convenient but as near to the pilot groun as possible. Ras el Tin Lighthouse, Great Pass Beacon and the Minare (248) were found to be good marks. There is a latticed beacon to th West of Great Pass Beacon which should not be confused with th latter. The new beacon is not marked on the chart and was stated b the Pilot to be for a new channel which is being constructed.

Arrival Procedure: It is important to register one's arrival by VHF wi the Alexandria Port Control as soon as possible.

At 1100 hrs. (approx.) a traffic list is broadcast and ships mentione should contact Port Control and obtain berthing instructions. They wi probably be told to move in to the pilot boarding ground 2 miles N.W of Great Pass Beacon. When there, they should anchor again and awa either further instructions or the unannounced arrival of the Pilot.

Berthage is decided at a meeting held around Noon so there may b a supplementary traffic list around 1400 hrs. In any case, it is a goo idea to call Port Control at least once a day to remind them that you a still awaiting a berth.

A Pilot will take the ship into the anchorage in the Outer Harbo where Health, Immigration etc. officials board and clearance given. Th Agent may also board. The main radio transmitter is sealed at this tim The ship will then await allocation of a berth.

Anchorages: At the anchorage outside the port depths vary from 20 30 fathoms but the holding ground seems to be good. This ship l comfortably with 7 shackles of cable out. Ships usually leave each oth ample room in case of bad weather. There are good anchor bearings.

The anchorages inside the Outer and Inner Harbours are ve congested and the holding ground (said to be sand) is not good. Tim spent at anchor here can be a very anxious period.

The ship was anchored in the Inner Harbour just off the end of th Passenger Quay. When it was pointed out to the Pilot that, in th Master's opinion, she was too close to the 3 fathoms line at the Aircraft Moorings, the Pilot stated that it would be all right because th ship wouldn't swing that way. If the vessel had swung the other way s would have gone aground.

At 0300 hrs. the following morning the ship began to swing onto th sand bank. Fortunately there was no wind and it was possible to t her, weigh anchor and find another anchorage. A call to Port Control VHF was made for a tug and Pilot but was not acknowledged.

The main engine should be kept at very short notice when at anch inside the harbour.

The accommodation ladder should never be left down while at anchor but should be raised and lowered as required.

It is usually an easy matter to hail a passing boat and bargain for a trip either ashore or to another ship. However, all ship movements and boatwork are officially prohibited after dark.

Pilotage: The pilot launches are Fairmiles (ex H.D.M.L.s) painted light blue with white wheelhouses and the word 'Pilot' in black on the side of the bridge.

All the Pilots employed spoke good English and were competent. They board at any time during the day and often without the slightest warning. They order tugs as they think necessary.

The beacons and leading marks in the Great Pass were good but the Fairway Buoy at the outer end of the channel is no longer there. Most of the mooring buoys marked on Chart No. 3119 have either been removed or changed.

As a result of experience, the Pilots have considerable skill in handling ships in very congested situations and they are to be relied upon.

Arrival Formalities: These are carried out at the Outer Harbour Anchorage. A list of documents required follows.

Documents:

2 Health Declarations*
1 Crew Customs Manifest
1 Arrival Form†
1 Stores List
1 Bond Stores List
8 Crew Lists‡

* Supplied by Quarantine Officers
† Brought out by Agent.
‡ This is the minimum number required.

Notes: Customs Manifests, Stores Lists and Crew Lists should be typed out on plain paper – there does not appear to be any proper forms.

Immigration Officers wish to see all Dis 'A' Books and will then issue Shore Passes which will have to be filled in by the ship. On departure, the Officials ask for the passes but, if they have not been collected will only request that they be destroyed when the ship sails.

Berthage: Every foot of wharfage is used and space is at a premium. This ship lay at Berths 16 to 20 and in both cases had ships ahead and astern with very little room between.

Berth 16 has unequal but good fendering, Berth 20 has none at all. Both are concrete wharves. There are an adequate number of bollards.

Berths 16 and 20 are both at the Passenger Quay and the soundings obtained by hand lead are shown on the plan. In theory, telephones are available at both berths. Water is laid on but the pipe is of small bore and delivery is slow (about 8.5 t.p.h.). Arrangements should be made through the Agent.

Berthage is said to be under the sole control of the Harbour Master. Ships may be ordered to berth, shift or move out to anchor without any warning. It should be noted that the Pilots always insist that Agents are told of a move the day before. In no case did this ship receive official notice. It is wise to hand a written notice to the Agent informing him of the time required to prepare the main engine for a move. However, in our case, the Agent did not bother to forward the information to the Harbour Master.

Being at the Passenger Terminal means that a cargo vessel has to move out to anchor frequently to allow passenger ships to berth. Unfortunately there seems to be only one other berth with enough water alongside for a fully loaded ship such as our vessel.

Repairs: Repair firms are available. There is a shipbuilding yard and graving and floating docks. Radio and radar servicing as well as gyro are available. There is a Lloyd's Register surveyor.

There is an abundance of small firms offering to do scaling and painting quite cheaply.

Medical: The Agent will arrange for a doctor to visit the ship if required. Unless special equipment and/or facilities are necessary, this is the best arrangement.

Repatriation: Apparently available via Cairo Airport.

Stores: Only small quantities of fresh fruit and vegetables were bought and these were good and cheap but the Catering Officer should be prepared to bargain.

Bunkers: The barges arrived alongside without any warning. There were separate barges for D.O. and I.F.O. The pumping rate for D.O. was 75 t.p.h. and for I.F.O., 143 t.p.h. It is reported that it is advisable to check the viscosity of fuel.

Communications: While at anchor outside the port, the ship's radio station is available and is by far the best means of communication.

Port Control, Pilots and launches all use Channel 16 both for calling and working. Making contact with Port Control to report arrival or request information is a matter of perseverance.

Agents: Memphis Shipping Agencies.

There is a main office in the city (Sesostris St.) to which the Master must go to draw money. Two hours will be needed for this plus an hour for travelling. In addition there are two offices in the Main Hall of the Passenger Terminal between Berths 16 and 20.

The Agents will arrange for doctor, waterman and watchmen. They will advance cash to the Master.

Garbage: Subject to negotiations with a private company. An old lighter will be moored alongside while the ship is in port. All garbage should be thrown into it. It is completely uncovered and after a while, in Summer time, would probably become highly offensive.

Fresh Water: Although there was no reason to suspect the water supply, Stabochlor was added as a precaution. As the ship may be sent out to anchor without notice for an unspecified time, it is wise to keep the water tank topped up.

Watchmen: The civilian watchmen employed were obtained through the Agent.

Two uniformed guards are put aboard by one or other of the authorities. Both the official and civilian guards will stop and search stevedores and take from them the cargo they have taken.

Tugs: These are arranged by the Pilot. There are several ranging from old coal burners to fairly modern diesels and they are well handled and efficient.

Cargo Work: It is supposed to be against the law to work frozen cargo during daylight hours. Therefore work was mainly carried on between 1700 hrs. and 0500 hrs. with a break about 2300 hrs., the same labour working through.

A gang consists of a total of 20 men. There is a foreman, two winchmen and eight stevedores in the hatch. The rest work ashore and on the lorries. The men in the hatch 'spell' each other and this is a major cause of lost time.

The butter and cheese was loaded onto pallets which were landed on the lorries and the cargo transferred. There are three pallets per gang but shortages often occur and the gear is not very good, two of the pallets breaking under load.

Crane and Velle derrick drivers were generally competent.

Lloyd's Agency was asked to appoint a surveyor to witness the opening of the hatches and later to conduct a continuous survey during discharge. The surveyor was particularly helpful at the commencement of discharge. His firm asked for and received an advance of one hundred Egyptian pounds in cash from the ship because payment through the Agent was said to be slow.

Miscellaneous: Photography is forbidden within the port area and a permit must be obtained to take a camera ashore.

It is important to fit rat guards. A fine of £20 may be imposed for each one not fitted.

There is at least one floating crane with a SWL of 150 tons.

The Port Surveyor will ask to see the Suez Canal Certificate. If this has been retained by the Canal Authorities, he will require a signed statement to that effect.

Departure: The Agent will inform the various authorities of the expected time of departure.

Immigration Officers will board to check any changes in the crew.

The Agent will put aboard the clearance and the sanitary clearance and the senior official guard will demand a written statement that all crew are aboard.

The Sea Pilot will board with the Harbour Pilot. The latter disembarks into a motor boat as soon as the ship is clear of the berth, the former when she is clear of the Great Pass. If the weather is rough, a pilot ladder will be required outside instead of the accommodation ladder.

SHIP'S OFFICER'S REPORT: September 1979.

Arrival: On arrival at waiting area (BA Chart 243), vessel is required to register with "Alexandria Port Control" on VHF Channel 16.

The following information is required:

Ship's name and country of registry.
Time (local) of anchoring in waiting area.
Length overall and max. draft.
Description and tonnage of cargo for discharge at port.
Bearing and distance from Ras el-Tin Lighthouse.
Last port of call.
Name of Agent in Alexandria.

It is also necessary to confirm arrival time by W/T, with the Harbour Master and ship's Agent via Alexandria Radio on 454 kHz or 8578 kHz.

Traffic Lists, giving the names of vessels programmed for port entry that day, are generally broadcast on VHF Channel 16 at 0600 hrs. and 1400 hrs. daily. However, times may be altered without prior warning or list may be omitted altogether.

Fresh Water: Fresh water is unavailable in August at anchorage. Within port, fresh water is available from barge said to contain 150 tons, at an approx. rate of 40 t.p.h. No information on water supply at berths.

Also see "General" below.

Services: Doctor and hospital facilities are available on order via Agents or chandler.

Chandlers will approach vessel at anchorage – complete proof of identity should be obtained before trading commences. Also see "General" below.

Local labour is available for tank cleaning.

General:

(1) All telegrams via Alexandria Radio to addresses in Alexandria should contain a request for confirmation of receipt from addressee.

(2) Within the first 24 hours of anchoring the vessel is besieged by numerous persons, claiming to be chandlers, Agent's runners, watermen, receivers of the cargo, etc. Their proof of identity should be most carefully checked.

(3) The fresh water situation during this vessel's anchorage was desperate. It appears that from late July to mid-September, no water is available for vessels outside the harbour. Rationing is required on board, even if a water barge is ordered for the next day. Several ships ran out of fresh water at the anchorage during our stay and had to lower their boats to obtain minimal supplies from nearby ships. A good supply can apparently be obtained at Cyprus. Stores will not be brought out to the anchorage and boats cannot be ordered through Alexandria Port Control for medical or personnel transport.

SHIPMASTER'S REPORT: October 1987.

Documents:

12 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (Ship's Stores, Bonded Stores, Currency, etc.).
1 copy Health Declaration.
8 copies Cargo Manifest.
All Passports.
Vaccination Certificates.

Port Health Officials board on arrival.

Immigration boarded with the Security Police about 3 hours after arrival. They require all passports and issue shore passes. Prior to departure they again check all passports and collect all shore passes.

The Security Police seal the radio room.

Customs Officers boarded 24 hours after arrival. They sealed the bond and left the beer room open.

Clearance on departure is given by Agent and endorsed by Immigration. Pilot sights Clearance before departure.

Pilotage: Vessels always take 2 pilots. One for Great Pass and one for Inner Harbour (Berthing). Great Pass Pilot boards about 1 mile W.N.W. of Great Pass Beacon from large launch with blue hull and white superstructure (ex-naval craft).

Berthing Pilot boards inside Outer Breakwater near the Petroleum Harbour, or off New El Dekheila Mineral Jetty. On departure, Pilot leaves at the same position.

The Quarantine Flag (Q) and Pilot Flag (H) must be displayed.

Great Pass Pilot leaves at Great Pass Beacon. No night pilotage for tankers. Pilots operate in winds up to about Force 6, although swell is the important criteria.

Approaches: The coast is low and featureless. Ras El Tin Lt. observed at 20 miles. El Agami Island and El Atta Fort observed on radar at 30 miles.

Channel: Depths are as charted. The navigation marks are poor, buoys either out of position or unlit, Great Pass Beacon destroyed.

The new channel of 20 m. depth to El Dekheila Mineral Berth is reported by pilots to lie 153°, commencing just West of Great Pass Beacon to 31° 09.20′ N., 29° 48.85′ E.

Anchorage: As per BA. Chart No. 243 Waiting Area. Very exposed, in Winter months, can be untenable due to wind and heavy swells.

Dependent on density of ships, most small vessels anchor in S.W. corner of Waiting Area. Vessels can approach coast at night, no restrictions advised.

We tried to contact Port Control on VHF Channel 16 at 0300 hrs. without success, so sent telex on anchoring. We had previously advised Port Authority by telex of approach course and speed and ETA at Waiting Area. Only 2 ships waiting at anchor on this visit.

VHF: Channel 16 seems to be used for all Pilot and Port operations. It is difficult to raise Pilots/Port Control at night or before 0600 hrs. Port Authority has telex which is useful - 54310 APA UN.

Tugs: 8 tugs of 2,500 h.p. available.

Port Regulations: Up to 270 ft. no tugs required. 270 ft. to 400 ft., 1 tug required. Over 400 ft., 2 tugs required.

For Petroleum Harbour we had one tug fast forward, using ship's line, entering and leaving. Tugs are well handled.

Berthing: Butane for E.G.C.P. discharged at Berths No. 1 and 2 on Quarantine Breakwater in Petroleum Harbour.

Both berths in a poor state of repair, fendering also poor. Vessel berthed port side alongside. Starboard anchor let go to 2 shackles approaching berth which keeps bow off forward landing (see BA. Chart No. 3119).

Moorings: 3 head lines, 2 stern lines, 2 stern back springs and 2 head back springs from after end of main deck. This seems to work with no hull contact with unfendered concrete.

Berths exposed to N.W. winds. Ship's gangway used. Petroleum Harbour can take up to 750 ft. length and 11 m. draft. (Re-checked several times as Echo sounder and chart indicate considerably more water. With Easterly wind depth can fall about 1.0 m.)

Berths as per BA. Chart No. 3119, Berth No. 3 (Product Pier), vessels berth head in. Berths Nos. 4 and 5 (Crude Oil), vessels berth head out. Berths Nos. 85, 86 & 87 now flat faced to make stockyard for cattle ships, also used to load oil products from road tankers.

In Outer Harbour area 10 m. is generally the maximum draft, and Pilots report channel dredged to 13.4 m. and water as charted elsewhere. Pilots report greater draft handled at Container Quay (31° 10.3′ N., 29° 51.9′ E.)

New LPG (Ethylene) Sea Island in position 31° 08.9′ N., 29° 49.13′E. Berthing on West side of Island, head out starboard side to.

One Pilot stays onboard throughout stay at Island with 1 tug on standby nearby.

Mineral Pier at El Dekheila now in full operation with berthing on west face, port side too, head in. Pilots report 20 m. depth alongside. So far, vessels up to 110,000 d.w.t. handled, for iron ore and coal serving new steel mill nearby.

Cargo Handling: Ambient temperature. Butane discharged for domestic use at Berths Nos. 1 and 2 into 3 × 3,600 cu.m. and 4 × 1,000 cu.m. pressure tanks situated 4 km. from berths. 6 in. line – 300 ASA coupling. Rubber hose, ship's derrick required.

Maximum back pressure of 10 Bar allowed. With 5 pumps we reached 8.5 Bar. With 2 pumps and a booster pump we again reached 8.5 Bar.

No Surveyor as such, Receiver's Representative is very particular over gauge readings and checking sample cocks for liquid on completion.

Density in air differed substantially when compared with Bill of Lading in vacuum.

Generally maximum size of vessel handled is 3,000 cu.m. LPG imports for domestic use will probably stop next year when natural gas comes on stream. At present, there is one shipment every 10 days, mainly from Augusta, Sicily. VHF Channel 6 used to contact E.G.C.P. and Channel 74 for "Petrogas", both are butane receivers.

One Receiver's Representative onboard throughout, cabin required.

At LPG (Ethylene) Sea Island the maximum size of vessel so far handled is 2,600 cu.m. Believe product heated to minus 60°C. on platform before pumping to Chemical Plant about 1.5 km. onshore, through undersea pipeline. Sea Island opened in June 1987. I believe it is taking in feedstock over 1 year then maybe exporting.

Fresh Water: By barge at berths and inner anchorage, and in calm weather at El Dekheila area and Waiting Anchorage.

General: Difficult to contact agent in port.

Make sure "everything" locked and sealed. We kept just one door unlocked. Lifeboats half out and all fire hoses charged and 2 ship's crew on duty at night.

Not necessary to employ watchman or use garbage boat, however you will be encouraged to do so.

Rat guards are required on all lines.

Development/Changes:

1. El Dekheila Mineral Jetty now open, berthing on West face, two large grab gantries in use.
2. Container Quay under construction just south of El Agami Island
3. Area to West of New Mineral Jetty all built up with flats and houses. Believe El Dekheila Airport no longer exists.
4. Petroleum Harbour Berths Nos. 85,86 and 87 formed into Livestock quay by extending Quarantine breakwater inshore face line 150° to shore line and infilling.
5. Signal Station Tower (Conspic.) in position 31° 09.65′ N., 29° 51.10′ E. just behind livestock jetty, although of modern construction with microwave dishes, Pilots report not used.
6. New Port Authority Control Tower (Conspic) with Radar Scanner on top at Coal Quay (31° 11.25′ N., 29° 52.10′ E.).
7. Outer breakwater S.W. Lt. in position 31° 09.92′ N., 29° 50.68′ E. Fl. R. 4 secs.
8. Quarantine breakwater lighthouse in position 31° 09.93′ N., 29° 50.95′ E. Qk. fl. 2 G. ev 3 secs.
9. Kamaria Port (works in progress 1984) completed with 2 moving discharge suckers associated with adjacent grain silo.
10. Expunge hulk in position 31°10.12′ N., 29° 51.22′ E.
11. Floating Dock located in position 31° 09.10′ N., 29° 48.18′ E.
12. LPG Terminal located in position 31° 08.90′ N., 29° 49.13′ E.
13. Expunge Approach Buoy in position 31° 10.95′ N., 29° 47.55′ E.
14. Fairway Buoy in position 31° 10.25′ N., 29° 48.15′ E. is unlit.
15. Great Pass Beacon partly destroyed and unlit has been replaced by light in position 31° 10.00′ N., 29° 48.45′ E.
16. No. 8 Buoy in position 31° 09.70′ N., 29° 49.65′ E. is unlit.
17. There is a new light at Head of New Mineral Jetty (Fl. G.) in position 31° 08.38′ N., 29° 48.48′ E.
18. There are 2 new unlit pillar buoys (Green) in position 31° 09.40′ N., 29° 49.75′ E. and 31° 09.20′ N., 29° 48.18′ E.
19. Naval Base in position 31° 11.20′ N., 29° 51.50′ E. is a prohibited area.

AUTHORITY: Alexandria Port Authority, 106 El Horreya Avenue Alexandria, Egypt. *Tel:* 4834321/24 (4 lines). *Telex:* 54310 APA UN. *Contact:* Rear-Admiral Abou El-Exx, Chairman. Admiral Hamdy, General Manager. Admiral Mahmoud Yousef, Harbour Master.

DAMIETTA: 31.29 N. 31.45 E. (See Plan)

LOCATION: The new port is 60 km. West of Port Said and 250 km. East of Alexandria in position: Lat. 31° 28.5′ N., Long. 31° 45.25′ E.

DOCUMENTS:

Arrival Declaration.
Crew List.
Cargo Manifest.
Cargo Plan.
Bills of Lading (To be presented with copies of the Manifest at time of report).

PILOTAGE: Compulsory for all vessels. Vessels proceeding to Damietta Port are to inform Damietta Port Authority by cable 7 days and 24 hours before their arrival. On arriving at the waiting area, the Master must call the pilot station by VHF Channel 16 and advise time of arrival, draft length, cargo, etc. Vessels are advised to approach through the Northwestern side of the waiting area. Vessels are not allowed to approach the Access Channel without a Pilot on board.

ANCHORAGE: The Waiting Area is located about 11 km. North of the port entrance and is marked by 5 light buoys.

MAX. SIZE: The port can receive vessels up to 250 m. LOA, with draft 42 ft. for bulk and container vessels, and draft 11.0 m. for general cargo vessels.

HEALTH: Usual international health regulations are to be observed.

RADIO/VHF: Port Authority on VHF Channel 16 throughout 24 hours working on Channels 10 and 14.

TUGS: 3 tugs of 2,200 h.p. available.

Tug Requirements:

Vessels 375 ft. – 400 ft. require 1 tug.
Vessels over 400 ft. require 2 tugs.
A third tug is available at Master's request.
Ship's lines used on departure.

BERTHING:

4 Berths for container vessels – Length 250 m. and depth 14.5 m.
8 Berths for general cargo vessels – Length 200 m. and depth 12
2 Berths for bulk grain carriers – Length 300 m. and depth 14.5 m.
2 Ro-Ro berths.
Loading and discharging at bulk berths by shore equipment.
For general cargo, by shore equipment or ship's own gear.
For container berths by terminal equipment.

CRANES/EQUIPMENT:

4 Quay gantry cranes for container of 40 tons each.
1 × 30 ton telescopic crane.
4 × 40 ton and 2 × 25 ton top lifters.
4 × 15 ton, 4 × 5 ton and 3 × 3 ton fork lifts.
1 × 30 ton and 1 × 10 ton Gott wald.

BRIDGES: None.

STEVEDORES: Stevedoring undertaken by a public company.

MEDICAL: Hospitals available, inoculations and vaccinations can carried out. Advance notice only required in an emergency.

FRESH WATER: Available at berths.

FUEL: Various grades of oil and diesel can be supplied by barge.

REPAIRS: Radar and radios can be repaired by specialists, order through Agent.
SURVEYORS: Cargo inspectors available locally. Ship's surveyors located in Port Said and Alexandria.
CUSTOMS ALLOWANCES: 200 gms. tobacco or 200 cigarettes and one litre of spirits permitted for each crew member to be held out of bond per week.
HOLIDAYS: Sham El Nesim; Sinai Liberation Day, 25th April; Workers Day, 1st May; El Fetr Feast, 3 days; Evacuation Day, 18th June; Revolution Day, 23rd July; El Adha Feast, 4 days; Hejri New Year; Army Forces Day, 6th October; Prophet Mohammed's Birthday.
CARGO WORK: Work can be arranged on official and local holidays and the work continues for 24 hours.
POLICE/AMBULANCE/FIRE: Police 325934; Ambulance 322217; Fire 325967.
EMERGENCY COORDINATION CENTRE: Contact Pilot Station at Damietta Tower by VHF Channel 16, or telephone 325964.
SERVICES: Fire fighting tugs and trucks; international telephone, post and telex centres.
BANKS: Official banks available.
STORING: See "Prelims".

1. Ships can be stored by trucks or barges.
2. Yes.
3. Yes.
4. Yes.
5. Yes.
6. Yes.

SHIP SUPPLY SERVICES: By boat in the Waiting Area or by shore facilities alongside the berth.
SHORE LEAVE: Crew members are allowed ashore within Damietta Area. A quick visit to other cities can be arranged through Agent.
IDENTIFICATION CARDS: Seamen's Passport is sufficient.
DELAYS: None.
AUTHORITIES: Damietta Port Authority, P.O. Box 13, Damietta, Egypt. *Tel:* 057-325940. *Telex:* 63204 Dampa UN. *Contact:* Rear-Admiral Adel Abbas, Chairman. Rear-Admiral Ahmed Medhat, Deputy Chairman.

EAST ZEIT TERMINAL: 27.51 N. 33.36 E.

LOCATION: The C.A.L.M. is located in position Lat. 27° 51′ N., Long. 33° 36′ E. and is approximately 85 km. North of Hughada.
ANCHORAGE: Tanker should call East Zeit Terminal before approaching and enquire if necessary to drop anchor in the anchorage area.

Vessel is not permitted to anchor outside the anchorage area.

Waiting Area: South of C.A.L.M. The Southern half of a circle of 1 mile radius around position: Lat. 27° 48.5′ N., Long. 33° 37.0′ E. depth 20 m. - 44 m. with 39 m. at centre.
RESTRICTIONS: No night berthing. Unberthing at any time.
MAX. SIZE:

Max. 85,000 tons d.w.t. fully loaded.
Min. d.w.t. of tanker 35,000 tons
Max. length decided by d.w.t. but distance bow to manifold not greater than 450 ft.

RADIO/VHF: Tankers calling at East Zeit Bay must send ETA message 72, 24 and 12 hours before arrival at the terminal to "Esso Suez Inc.", office Telex No. 21148 Esosz Un, addressed to "Exploresso" for East Zeit Terminal attention Marine Supervisor, via any coastal radio station: Port Said (Suez and Kosseir).

ETA messages to Esso Suez Inc. should give the best estimates of ship's arrival time at the terminal. This ETA message should also include a definite statement of details of any equipment required from shore for connecting 12 in. floating hoses. Bearing in mind that such hose needs tanker to be equipped with crane classed/certified up to 10 tons capacity.

Master must call East Zeit Terminal 4 hours prior to arrival on VHF Channel 13 which is considered the calling (by the vessel's side only) and working channel.

BERTHING: *Terminal Facilities:*

C.A.L.M. (Catenary Anchor Leg Mooring).
Cargo hose 12 in. type, with camlocks.
Max. loading rate for crude oil 3,000 tonnes/p.h.
Loading from port side.

If cargo hose or connection is different, Master should contact "Esso Suez Terminal Office" 72 hours prior to his arrival at East Zeit stating the tanker hose and connection type.

Mooring facilities on tankers's bow should be ready prior arrival. Tanker must be trimmed about 4 ft. by the stern and have adequate ballast for manoeuvring.

BALLAST: *Deballasting Facilities:* Available at East Zeit Terminal. Shore facilities can accept up to 75,000 bbls. over 12 in. floating hose connected for this purpose. If Master will require deballasting of clean cargo tanks ballast while loading in operation, letter should be submitted to the terminal that all bulkheads are fully tight and no leakage to avoid any contamination. Master on behalf of Owners and/or Charterers will bear all costs and expenses for cleaning operations required to remove any pollution which might occur due to pumping ballast overboard as well as a fine of U.S.$15,000.

SHIPMASTER'S REPORT: August 1989.
Vessel: 89,000 tons d.w.t.

The Pilot for the Esso SBM prefers vessel to arrive at about 0400 hrs. (i.e. berthing at daylight), so it is not necessary to delay vessel to arrive at 0600 hrs.

Pilot will board between the 2 SBMs. The N'ly SBM (red) is for Esso cargoes, and the S'ly SBM (yellow) for SUCO cargoes.

While mooring to SBM, 2 seamen are required to standby aft with a heaving line, ready to give a mooring line to towing tender if necessary.

Papers arrive on board about 4 hours after completion of loading. Once loading finished, ullages taken and ship's figure obtained. Vessel can unmoor and anchor in waiting area, where cargo sampling may be carried out.

OPERATOR: Esso Suez Inc.

GEISUM MARINE TERMINAL: 27.38 N. 33.43 E. (See Plan)

LOCATION: Geisum Marine Terminal is a closed sheltered mooring inside the Tawila Channel, in Egyptian waters and known as Hurghada Area. The Terminal lies about 1.2 nautical miles SE of the South point of South Qeisum Island and 9 nautical miles East from the nearest land, East Coast of Gulf of Suez, Egypt.

The Terminal consists of a 228,700 d.w.t. VLCC converted to a Floating Production Storage and offloading facility (FPSO) which is permanently moored to an 8-point spread mooring system, fixed in position:

Latitude : 27° 38′ 08.47″ N.
Longitude: 33° 43′ 03.70″ E.
Ship's head is 141°, stern to the prevailing winds.

Geisum Oil Company, as operator, produces crude oil from Geisum Oil field, known as "Geisum Crude Oil" and delivers the crude oil to tankers for export.

Nominations: Tanker nominations for Geisum Crude Oil Liftings are coordinated through Egyptian General Petroleum Corporation, (EGPC).

All crude oil sales and tanker chartering are arranged by EGPC.

Tanker scheduling is coordinated through Geisum Oil Company of Cairo, Egypt.

PORT LIMITS: *Terminal Limits:* The area South of parallel 27° 42.8′ N.

North tip of coral ridge of South Geisum and Gubal Islands is a prohibited area and must not be entered without a Company Mooring Master onboard. Anchoring of vessels within this area is strictly prohibited.

DOCUMENTS:

Bill of Health.
Health Declaration.
Manifest, if cargo on board.
Last Port Clearance.
Certificate of Registry.
Ship's Construction Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio/Telegraph Certificate.
Derat Certificate or Derat Exemption Certificate.
Crew List.
Passenger Manifest.
Stores List.

Clearance: A.R.E. officials, Immigration, Customs, Quarantine, Captain of the Port and Police stationed at Hurghada or Ras Al Bahr will board the vessel after arrival to grant clearance. The Port Health Officer will provide Health Clearance. On arrival the Master must fill out International Health forms. The rules governing quarantine of vessels are the same as normally found in other parts of the world.

Should Customs Guards be stationed onboard vessels while in the mooring, it is expected that ships will provide food for these guards and other officials. All vessels calling at Geisum Terminal must provide an accommodation ladder, rigged if possible on the starboard side for the officials.

PILOTAGE: Pilotage is compulsory within the Terminal Limits. Vessels to be berthed at Geisum Marine Terminal will normally be boarded by Mooring Master in the Anchorage Area.

The Mooring Master will advise the Ship's Master on approaches to the FPSO, mooring and unmooring, connecting and disconnecting hoses and in all other operations within the Terminal area. All manoeuvreing of ships within the Terminal area shall be done in accordance with the advice of a Geisum Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible, on behalf of his vessel's Owner for the safety and proper manoeuvreing of the vessel. The Ship's Master or a qualified deck officer must be on the bridge at all times while the ship is manoeuvring.

Pilot Ladder: Vessel's are requested to have a pilot ladder, clean, safely and securely rigged, ready for immediate use, and long enough to reach the Mooring Master's tug boat. If at night, adequate lighting must be rigged overside for the Mooring Master's ladder. Vessels will provide a lee for the Mooring Master, both when boarding and leaving. If a pilot ladder is not suitable for use, then it is the responsibility of the Master to change it. Any delay regarding this matter will be charged to the vessel and will be indicated in the vessel's time report. Vessel with a freeboard greater than 9.0 m. is requested to use a combination pilot and accommodation ladder.

Signals to be Displayed on Arrival: In accordance with the practise in A.R.E. ports: A.R.E., Quarantine and Pilot flags must be displayed by all vessels approaching Geisum. These signals shall be displayed continuously until clearance is granted. The signals are as follow:

Sunrise to Sunset: A.R.E. Ensign and Quarantine flag "Q".

The "G" flag (Request for pilot) should be flown until the Mooring Master boards. As soon as the Mooring Master boards, the "G" flag should be replaced by "H" flag.

ANCHORAGES: If tankers are requested to anchor, the recommended anchorage area is located N.N.E. of South Qeisum Island and is centred on position as follows:

Latitude : 27° 43.9′ N.
Longitude : 33° 45.0′ E.

This position represents the centre of a circle with a radius of one mile which should be used by vessels required to wait at anchor.

Anchoring within the Terminal Limits is strictly prohibited.

Prior to arrival, the Master of tankers should contact the Floating Production Storage Offloading Facility for information concerning anchorage positions.

Submarine Hoses: There are no submarine hoses or submarine communications cables in the vicinity of Geisum Marine Terminal. However, Masters are requested to anchor their vessels in the recommended anchorage area.

APPROACHES: *Landmarks:* Ashrafi Island Lighthouse is a landmark by day and night for vessels approaching from the North (Gp. Fl. (3+1) 15 sec. 38 m. 17 M.), but caution should be exercised regarding the 2 mile long shoal extending South of the lighthouse.

For vessels approaching from the South, Bluff Point lighthouse (Fl. WR. 3 sec. 25 m. 14 M.) at the North point of Gubal Island is an excellent landmark, but caution should be exercised regarding a shallow coral reef extending 2.5 miles N.E. of Bluff Point.

Navigational Aids: Inside the Tawila Channel there are 3 unlighted navigation buoys.

In addition to the FPSO, there are 3 drilling platforms located West of the FPSO. The FPSO has a flare boom on the bow, 150 ft. high during normal operating conditions. The flare may be observed from a considerable distance depending on prevailing atmospheric conditions.

The FPSO and structures within the Geisum Marine Terminal will by day and night, exhibit the shapes and lights as required by the Regulations for Preventing Collisions at sea, Rule 30, paragraph (a) and (c) and during periods of restricted visibility the sound signals prescribed in Rule 35, paragraph (g) shall also be given. During the hours of darkness, various working lights will also be in use to illuminate the decks and structures.

Navigational Charts: The British Admiralty Charts No. 757 and 2375 cover this area, also U.S. Defense Mapping Agency Chart No. 62191. There is a private chart of Tawila Channel for the use of the Mooring Master only.

RESTRICTIONS: *Hours of Operation:* The Geisum Marine Terminal will operate 24 hours per day, 7 days a week. Ships are loaded at any hour, weather and other circumstances permitting and at full discretion of Field Manager. Vessels are berthed and unmoored during daylight hours only. In special circumstances, at the sole descretion of the Terminal, night unmooring may be allowed. The Terminal will never be closed due to Religious Holidays.

Also see "Max. Size".

MAX. SIZE: *Maximum and Minimum Size Export Tankers:* When the FPSO is in full storage condition, the greatest single lift which could be expected would be approximately 1,250,000 bbls. However, the physical restrictions of the terminal are:

Maximum length overall of export tanker:	270 m. (886 ft.)
Maximum distance from stern to centre manifold:	138 m. (452 ft.)
Maximum distance from forward to centre manifold:	131 m. (430 ft.)

There are no restrictions on beam or draft. The overall restriction is up to maximum 150,000 s.d.w.t., with midship manifolds and sufficient fairleads/Panama leads to make a secure and safe mooring, which is at the sole discretion of the Field Manager.

The minimum size export tanker would be that which can accept a 12 in. discharge hose (midship manifold) and safely accept oil at more than 15,000 barrels per hour and, in any event, not smaller than 20,000 s.d.w.t.

Water Depth: The water depth in the vicinity of the FPSO is typically 50 m. with individual "high spots" not shallower than 42 m. Water depths start reducing until 35 m. is encountered 2 miles N.E. of the FPSO, then water depths increase from 50 m. to 79 m. all along the North Channel.

RADIO: *Geisum Oil Company:*

Cable address: GUSUAR CAIRO.
Telex address: 92375 GEISO UN.
Telephone: Cairo 3529414.
Office address: Geisum Oil Company,
30 Road 276,
Maadi, Cairo,
Egypt.

Initial ETA: It is important that all in-coming tankers advise Geisum Marine Terminal at least 72 hours before the estimated time of arrival, giving best estimate of the ship's arrival time at the Terminal via the operator.

Time to be used for ETA is local time.

The first message should also include the following information:

1. Name of tanker and radio call sign.
2. Cargo requirements.
3. De-ballasting time and quantity of ballast.
4. Maximum loading rate.
5. Arrival draft, forward and aft.
6. Last port of call.
7. Confirm that vessel has clean Bill of Health.
8. If there is any sickness onboard, give all available information as to the possible type of sickness.
9. Distance in feet from the stern to the tankers loading manifold.
10. Total LOA (length overall).
11. If the ship's hose connections are different from 12 in. standard.

Subsequent ETAs: Further ETA messages should be sent to Geisum Marine Terminal via the above address, telex or telephone number when the tanker is 48 hours and 24 hours from the Terminal and additional notification shall be given if the vessel's ETA will vary from the original notification by 6 hours or more. Notwithstanding the foregoing, in case the sea passage from the vessel's last port is less than 72 hours from the Geisum Terminal, the first notice shall be given immediately after leaving such port of call and subsequent notices shall be given at the regular times.

Should the ETA change by one hour or more following the 24 hou notice, the vessel shall promptly notify the terminal of the new ETA.

Geisum Control Radio Stations: Ships may send their cables to Geisum Oil Company office through the Commercial Coast stations in Alexandria, Kosseir and Port Said. Upon receipt of such cables, the coast station will immediately relay it to the Geisum office through Cairo Radio telegraph office teleprinter circuits. The cable address for Geisum is "Gusuar Cairo".

However, should any difficulty arise in communicating with the coast radio stations, ships may send their messages via their agents or owners by International Telex Service. The International Telex Number for Geisum is 92375 GEISO UN.

Cable or telex messages addresses to Geisum Marine Terminal would undergo the same procedures but upon receipt in Cairo would immediately be relayed to Geisum Terminal.

Cables from Geisum Marine Terminal to the ship would be given to Geisum Cairo radio office on the radio teletype channel and will immediately be sent on a teleprinter line to Cairo telegraph office which would, in turn, send it over in the same manner through one of the Coast radio stations.

Unauthorised Radio Communications: The use of the vessel's radio station while at anchor in terminal waters is forbidden by law.

The ship's Master is responsible to ensure that no communication by radio is made within the Terminal area. Unauthorised radio communications will be cause for cessation of all operations, except when clearing the berth, and the vessel's Notice of Readiness will be immediately nullified.

Radar or other electrical equipment must not be energised while the vessel is alongside, except VHF radios, telephone and communications equipment approved by the Terminal.

VHF: The FPSO maintains a continuous watch on Channel 16 and Masters are recommended to use this channel when they are within range of Geisum Marine Terminal, particularly when approaching the port. Attention to VHF/FM communications minimise risk of delays in berthing.

During berthing, the ship's radio will be under sole control of the Maste and the FPSO radios will be under sole control of the Field Manager. Masters are reminded that if their vessel is requested to anchor to awai berthing, it is their responsibility to maintain a constant listening watc on VHF Channel 16 to receive Terminal instructions. Any delay due t failure to maintain constant listening watch on Channel 16 will be for the ship's account and will not be included in a subsequent laytim calculation.

The communication equipment onboard the FPSO is capable o switching to all VHF marine frequencies.

Communications after Mooring Master has Boarded: For subsequen inter-ship communications with the Terminal, portable VHF radio telephone units will be utilised by the Mooring Master. These sets wi be intrinsically safe.

TUGS: *Tugs, Mooring and Hose Equipment:* Tug or tugs may assist i berthing vessels and these will be under the direct control an supervision of the Mooring Master.

READINESS: *Notices of Readiness:* The Mooring Master will act o behalf of The Company to acknowledge receipt of the Vessel's Notic of Readiness, which should be tendered at time of arrival.

Arrival time will be considered as the time the anchor is dropped a the anchorage area.

Notice of Readiness will be accepted at time of Mooring Maste boarding the vessel, or the tanker shall have dropped anchor within th recommended anchorage area and has advised the Terminal of the tim of anchoring. Exception to the above will be if the tanker is in th anchorage area awaiting arrival of the Mooring Master and has bee requested by the Terminal not to anchor. In this case Notice o Readiness will be accepted from the time the Terminal requested th ship not to anchor.

Port Closed: Notice of Readiness will not be accepted during period when the port is closed, only received. The port is closed when th weather is such that it is too rough for exporting tankers to berth o remain safely alongside the FPSO. Any decision regarding the openin and closing of the port will be made solely at the discretion of the Geisu Field Manager. In such cases the Terminal will provide the Master wi a written notice of the times during which the port was closed due t adverse weather conditions. In the event that berthing is delayed o account of weather, vessels will keep their position in line. Vesse required to leave the port area on account of weather should keep contact with the Terminal via radio in order that they will be read available when weather moderates. The Company reserves the right decline to berth a specific tanker if in the Field Manager's opinio existing conditions or facilities are considered unsafe for berthing loading, even though the berth may be open to other tankers. Vario combinations of wind, sea and tidal conditions as well as the size, lengt ballasted trim and handling qualities of a vessel can affect the decisi to berth a vessel at Geisum Marine Terminal. All these factors have be evaluated before a final berthing decision is made. Should a vess be rejected for any of the aforesaid reasons the Terminal will supply t vessel and Owners/Charterers with written reasons for non-acceptan

BERTHING: *Order of Berthing:* Vessels will normally berth in order arrival with due regard to nominated date ranges, etc. And except whe in The Company's judgement, there exist extenuating circumstan which make it necessary to berth the vessels in a different order.

MOORING: *Preparation for Mooring:* Preparation for mooring will advised by the Terminal through VHF communication prior to tanke arrival or by the Mooring Master before the mooring operat commences. The export tanker will moor with her port side to t Terminal FPSO port side and Masters are required to have all mooring lines and mooring equipment pre-rigged and ready in respects for port side berthing. Prior to mooring, tankers are required have ready on the port side, a derrick of at least 5 tons SWL, rigg and ready for connecting and disconnecting loading hoses.

When alongside the Terminal FPSO, on the forecastle, 5 good mooring lines shall be required for head and breast lines. On the port main deck, 2 forward springs and 2 aft springs are required. At the stern 5 good mooring lines must be ready for stern and breast lines.

Note: All the mooring ropes must be polypropylene or nylon ropes. Use of mooring wires (without rope tails) is forbidden. If in the opinion of the Mooring Master, the vessel is not equipped with adequate mooring facilities, lines or gear, he will so inform the vessel's Master and in such an event, the vessel shall not be brought into the berth until facilities, lines or gear are deemed satisfactory. Mooring lines coming out from the same point shall all be of the same material.

Tending of Mooring Lines and Loading Hoses: It is the responsibility of the vessel to ensure that all mooring lines are properly tended. The Mooring Master may direct at any time that additional ship's lines be secured to the FPSO as necessary.

At all times sufficient crew must be available to carry out, under the supervision of a responsible licensed officer, the instructions given by the Mooring Master.

Raising, lowering, connecting and disconnecting of oil loading hoses as well as other labours and duties on the export tanker connected with the loading of cargo or maintaining mooring lines in a correct manner will be performed by the ship's crew directed by a responsible officer as required by the Mooring Master.

Ships must have an adequate supply of reducers, nuts, bolts, gaskets and wrenches to connect cargo and deballasting hoses.

TERMINAL FACILITIES: The "Al Kahera-1" is a VLCC used as The Company's Crude Oil Floating Production Storage Offloading Facility and Terminal Administration Office. There is a laboratory onboard, capable of carrying out a limited number of tests on the crude oil stock, an injection skid, a Generator skid, a production skid, a fuel gas skid, a flare scrubber and flare boom, a compressor skid and a meter skid. The FPSO tanker is of 228,700 d.w.t. long tons in salt water and is registered under the Egyptian flag. It has an overall length of 324.973 m. (1,060 ft.) and a loaded Summer draft of 20.443 m. (67 ft.). Total crude oil storage capacity is 1,327,020 barrels at 98%. Total dirty ballast reception capacity is 62,656 long tons.

The FPSO tanker is permanently moored (stern to the prevailing winds) to an 8-point spread mooring system. To load crude oil, the export tanker will be moored alongside the port side of the FPSO, i.e. bow of the export tanker to the stern of FPSO, for this purpose 4 large (3.3 m. × 6.5 m.) "Yokohama" pneumatic marine fenders are laid on the water along the port side of the FPSO approximately 150 ft. apart and interconnected by lengths of wire. The two groups of fenders are made fast using wires to the mooring winches on main deck forward and aft. These wires can be adjusted as necessary to compensate for any change of draft of the FPSO and also to match on each end of the parallel body of the offtanker. Masters of offtankers are reminded that when their vessel is being berthed alongside the FPSO, it is desirable that the "Yokohama" fenders should uniformally absorb the impact of the two ships coming together side by side. To achieve this goal, advice provided by the Mooring Master regarding the handling of mooring lines during berthing should be utilised.

N.B. The Master of the export tanker will always be responsible for the safety of his own vessel and has the right to make the final decision relating to the safety of his own vessel.

Laboratory: The crude oil testing laboratory is equipped to perform the following tests: API Gravity, pour point, basic Sediment & Water, Sulphur and salt content.

LOADING: *Loading Hoses and Flange Sizes:* The crude oil loading hoses are connected from the port side midship manifold of the FPSO to the port side midship manifold of the export tanker. The loading hoses consist of two strings of 12 in. diameter (each 75 ft. length) with (150 ASA) flanges and quick release systems. It is therefore necessary that the export tanker presents a 12 in. diameter (150 ASA) manifold connection and if her manifold flange is not 12 in. diameter (150 ASA), then suitable reducers must be fitted to the export tanker to facilitate hose connection without undue delay. For this purpose, reducers and various quick connection fittings will be carried out onboard the FPSO to facilitate connection, should the export tanker be unable to supply the necessary flange connection.

The Terminal will have a limited number of reducers available but will accept no liability or obligation to provide them.

Rate of Loading: The minimum loading rate on the storage tanker is 15,000 barrels per hour, the maximum being 25,000 barrels per hour. However, to save time and make the berth available for other vessels, it is requested that export tankers receive crude oil as fast as it can be delivered, and it is requested that ballast water be pumped as fast as possible, both operations consistent with regard to safety. Masters are reminded that for safety reasons, it is advisable to have the export tanker loaded as quickly as possible. For "topping-off" cargo tanks, the loading rate can be reduced as necessary. The export tanker should advise FPSO at least 30 minutes prior to completion of loading, so that cargo oil pumps can be stopped immediately on export tanker's request.

Inspection of Cargo Tanks: The tanker's cargo tanks are to be inspected by a Geisum Marine Terminal representative and if suitable for loading, a signed notation to this effect will be made on the Company "Tank Inspection Report".

Scuppers to be Plugged: Before loading commences, all overside scuppers shall be plugged and made oil-tight.

Completion of Loading: Normally completion of loading is by ship's stop and any request for the Terminal to stop the flow of oil at a predetermined tonnage must be in writing. The request must include the statement by the export tanker's Master that The Company will not be held responsible for any error and that in the case of the vessel being overloaded, the excess cargo cannot be pumped back to the FPSO (only in a real emergency and all costs and delays will be on account of export tanker). The Ship's Master will be responsible for any oil spills caused by this request.

Communication during Loading: All communications relative to the loading of the vessel shall be routed through The Geisum Terminal Representative who will remain in contact with the Terminal Control constantly via portable VHF units. In case of temporary breakdown of the portable VHF circuits, contact may be continued on International VHF Marine Channels 16,13,10 and 9.

Failure of Communication: In the event of a total failure of communications with the Terminal, the vessel should sound the emergency signal. Continuous blasts of the vessel's whistle will be sounded to notify the Terminal of the radio failures. Upon hearing this signal from a loading tanker, the FPSO will immediately cease loading to the export tanker until radio communications have again been established.

Leaking Oil Tankers: If it is discovered that oil is leaking from an export tanker whether at anchor, deballasting or during loading so as to constitute, at the sole discretion of the Field Manager, a safety or pollution hazard, then the tanker will cease operations and may be requested to leave the Terminal limits. Completion of loading will only be undertaken when satisfactory evidence of repair is duly certified by Lloyd's, ABS or Det Norske Veritas Surveyors or an other recognised classification society and is submitted.

Valve Closure during Loading: No valves which stop or reduce the flow rate of oil from the pumps of the FPSO are to be operated without prior agreement of Geisum Terminal Representative. It is extremely dangerous to close a ship's valve against the incoming stream, as such a procedure creates excessive pressure, which may damage hoses, ship's piping, or Terminal facilities. Vessels will be held responsible for damage resulting from failure to observe this precaution. The practice of throttling back on the ship's cargo valves is to be avoided. If a lower loading rate is required, the Terminal is to be advised and pumping rate will be reduced to the agreed rate.

A reduction in loading rate before topping-off a final tank or tanks may be arranged through the Mooring Master by the ship's officer in charge. On advice from the ship, a minimum of 3 minutes is required to stop the flow of crude oil.

Crude Oil Overflow during Loading: Masters are warned that if, at any time an overflow of crude oil occurs, loading will be suspended immediately. Loading will only be resumed when the oil is cleaned up and removed from the decks of the vessel and/or from the surface of the sea and any damage is repaired and no further danger exists.

All spillages of oil must be reported immediately to the Geisum Field Manager and subsequently a detailed report is to be made in writing, by the Master of the vessel concerned, giving all relevant details.

A joint survey of the vessel by its Master and the Field Manager or his designate will be required.

BALLAST: *Precautions Regarding Pollution:* It is the export tanker's Master's responsibility to observe International Convention Laws and Egyptian Government Regulations and to ensure that no crude oil, bunker C, diesel, bilges or dirty ballast is pumped or spilled overboard from his vessel whilst in the area of Geisum Marine Terminal. Drip pans should be used, especially when disconnecting hoses in order to prevent any spillage.

Facilities for Receiving Dirty Ballast: "FPSO Al Kahera-1" has facilities for receiving dirty ballast. Tankers are recommended to arrive with clean ballast. In the event a tanker does have dirty ballast, the tanker may discharge ballast as desired into the proper line as soon as all arrangements have been made for this action. "FPSO Al Kahera-1" has dirty ballast water tanks equipped with oily water separator and oily water content monitor, and can accommodate approximately 62,000 tons of dirty ballast.

Inspection of Ballast Tanks: As soon as practical after arrival, all vessel's cargo oil tanks, cofferdams, bunker tanks, and other void spaces will be inspected by a Geisum Marine Terminal representative. If evidence of oil appears during the discharge of "clean ballast" or any other sea pollution becomes evident, the vessel will automatically be requested to discharge the ballast to the FPSO and her Notice of Readiness will be modified accordingly.

Discharging Ballast at Night: In addition to the lights usually displayed, vessels discharging ballast or loading cargo during darkness, will illuminate the area around the ship, to the satisfaction of the Mooring Master, in order that any oil on the surface of the sea may be readily detected, and appropriate action taken. Vessels unable to illuminate the sea satisfactorily, may not discharge ballast during darkness. Vessels should provide suitable flood lights for working on deck during night operations. Vessels equipped with a separate system of tanks (SBT) will be allowed to discharge ballast and load oil simultaneously, providing that approval from both the Field Manager and the Petroleum Inspector is secured.

Ballast Required for Berthing: A vessel must have sufficient ballast for safe manoeuvring. However, by a careful watch of the weather information, berthing instructions and frequent exchange of information between ship and terminal, and by a knowledge of the behaviour of his own vessel, a Master may desire to come to the Terminal with minimum safe ballast.

Load-on-Top or Discharge of Slops: Most responsible shipowners have adopted a system of tank cleaning using circulatory methods of transfer of tank washings. The result is that no oil is discharged into the sea and the oil separated is collected to avoid pollution and with the written permission of the Lifting Company, the Terminal will load-on-top of such slops.

Penalties for Pollution of the Sea: The categories of pollution include crude oil, bunkers, bilges and dirty ballast or any other matter that may result in pollution of the sea, any fines imposed for such pollution will be for the ship's account.

DEPARTURE PROCEDURE: *Government Requirements:* Prior to the vessel's departure, the Immigration Official requires copies of the Crew List to be marked for "Departure Clearance". The Customs Official on duty will issue Customs Departure Clearance.

Harbour Master will issue the Port Clearance.

Final clearance formalities will be carried out onboard the FPSO or in the Anchorage Area. The Master should advise the Terminal of the vessel's ETA at destination. This should be done through the Company Mooring Master.

Cargo Documentation: Crude oil loading documents such as Bill of Lading, Quality Certificate, Quantity Certificate, Dry Certificate, Ullage Report, Time Loading Report, Certificate of Origin, Cargo Manifest and Master's Receipt for shipping documents and samples are prepared at Geisum Marine Terminal.

Signing of these documents by the Master will take place at the same time as the final departure formalities are being carried out.

Protest: Notes of Protest if any, should be handed to the Mooring Master for onward delivery to the Geisum Oil Company of Cairo, Egypt.

Masters are required to pay particular attention to the fact that the Mooring Master will only acknowledge receipt of any Note of Protest and *is not authorised to accept* such letters.

MEDICAL: *Hospital Facilities:* Neither medical or hospital facilities are provided by Geisum Oil Terminal. Hospitals are available in Hurgada.

Emergency Medical Assistance: Vessels requiring emergency medical assistance should hoist International Code Flags (VV) in daylight and at night send (VV) in morse on signal lamp to attract immediate attention. If the Mooring Master is onboard he should be advised. Ship's agent will be advised as soon as possible of the emergency medical aid required.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: There are no consulates available at Geisum Marine Terminal. However, consular or diplomatic representatives for most nations maintain offices in Suez or Port Said.

CUSTOMS: *Bonded Stores List:* Present regulations allow each seaman to retain in his possession a maximum of 50 cigarettes or 1 ounce of tobacco or 5 cigars. The balance of all smoking items must be collected and carefully listed prior to arrival. This list will be checked by Customs before sealing locker. If there are any discrepancies, the vessel will be subject to a fine.

Contraband: Geisum Oil Terminal prohibits unauthorised craft from coming alongside ships while in the mooring. To avoid the possibility of undesirable items getting onboard vessels, it is recommended that Masters discourage bumboats or similar craft coming alongside while vessel is in the vicinity of the Terminal.

REPATRIATION: Crew changes can be arranged between the ship's agent and the Immigration Office. All expenses incurred will be for vessel's account. Crew members proceeding ashore on medical grounds will be repatriated to country of origin. They will not normally be returned to the ship.

SHORE LEAVE: Ship's personnel (other than medical or emergency cases) are not allowed to disembark or embark at the Terminal, if shore leave was not arranged between ship's agent and the A.R.E. Security Office.

WEATHER: *Climate:* The climate in the Gulf of Suez is generally good. The visibility is usually excellent with dust storms and infrequent fog. Freezing weather is unheard of and there are very few rain squalls.

Weather Data and Summary:

Average rainfall:	0.16 inch/year
Relative humidity:	80%
Mean Maximum temperature:	84°F.
Mean Minimum temperature:	41°F.
Extreme maximum temperature:	108°F.
Mean temperature:	72.5°F.

Winds: Winds are usually from N.-N.W. direction (80% of time) with average speeds of 12 knots. Southerly winds with maximum velocity of 45 m.p.h. are encountered occasionally.

Tides: The tidal range is between 2 ft. and 3 ft.

Sea Conditions: Sea and swells are usually from N.N.W. and wave height can reach up to 20 ft. but average is less than 6 ft.

Currents are generally experienced in mid-channel and set North when the tide is rising in Suez and South when the tide is falling. The rate is about 2 knots maximum.

Sea Salinity: The salinity of the sea is 41,000 PPM to 47,000 PPM.

Sea Temperatures: The surface temperature of the sea ranges from minimum 63°F., maximum 85°F., mean 72°F. (depending on the season).

GENERAL: *Language:* Language of the port is English and Arabic.

Visitors: Only authorised personnel or visitors are permitted on the FPSO and/or export tankers. Visitors must obtain a special pass from Geisum Oil Company and the A.R.E. Security office. It is strongly recommended that visitors be restricted to a minimum.

Currency: The unit of currency is the Egyptian pound (L.E) or (100 piastras). The rate of exchange varies from time to time. The Master can obtain the current exchange rate from the agent.

Supplies: Commissary supplies as well as steward's stores are not available. Marine lubricants are not available, except through marketing representatives in Cairo, Suez or Port Said by arrangement through ship's agent.

AGENCY: *Appointment of Agent:* Geisum Oil Company does not perform any vessel's agency functions. Owners of vessels calling at Geisum Marine Terminal must arrange for their own ship's agents.

The following information should be given in the telex or cable to the agent:

1. Name of vessel.
2. Flag.
3. Port of Registry.
4. Registration Number of Certificate.
5. Name of the Master.
6. Number of crew.
7. Last Port of Call.
8. ETA at Geisum Marine Terminal.

OPERATOR: Geisum Oil Company, P.O.Box 282, 30 Road 276, Maad Cairo, Egypt. *Tel:* Cairo 3529414. *Telex:* 92375 Geiso Un. *Cables* Gusuar Cairo. *Contact:* H. El Shanawy, Operations General Manager

HAMRAWEIN: 26.15 N. 34.12 E. (See Plan)

APPROACHES: *Daytime Leading Marks:*

Front mark: Lat. 26° 15′ 05.984″ N., Long. 34° 12′ 01.622″ E.
Rear mark: Lat. 26° 15′ 01.46″ N., Long. 34° 11′ 54.95″ E.

BERTHING: Length of quay 67 m. Max. draft 33 ft. Conveyor belt and mechanical apparatus available. Daily average loading rate 4,000 tons. In addition to mooring bollard on the quay there are 4 mooring buoys.

SHIPMASTER'S REPORT: April 1988.

As berthing is carried out during daylight hours only, vessel shoul adjust ETA accordingly. The nearest anchorage is at Quseir, abou 8 miles to the South, where good anchorage is obtained about 2 miles offshore (See B.A. Chart No. 3043).

Radio: Quseir Radio – SUK.

Health: Quarantine inspection for Pratique can be done at berth or a anchorage at Quseir.

Pilotage: Arranged by Agent or Misr Phosphate Co. There is no VHF communication with berth or pilot boat. Pilot boards about one mile East of the breakwater by a motor launch displaying flag 'H'. Vessel may give a few blasts on the whistle to attract attention. Pilot is unlicensed and does not speak English. It is advisable to discuss mooring plans with him prior to approaching the berth. It is further recommended that the Master should con the vessel himself to avoid confusion due to difficulty in communication. Vessel should have good long ropes ready to be sen out to the mooring buoys from quite a distance away. There are no tugs available and the vessel is turned around by warping. Vessel should be prepared to join 2 ropes together if length of one is insufficient. Extreme care is advised as windshifts can be quite abrupt and this vessel had to abandon attempts to berth mid-way through approach and put to sea and wait for the wind to subside.

Tugs: No tugs available.

Berth Facilities: The berth is exclusively operated by the Misr Phosphate Co. for loading rock phosphate in bulk. There is a mechanical loader with 2 loading chutes about 50 m. apart. They are stationary and only one is used at a time. The vessel has to be warped forward and aft to bring the appropriate hatch under the chute.

General: Limited quantities of fresh provisions are available. Watchmen and garbage disposal services were provided by the same supplier. Masters are advised to scrutinise all bills thoroughly prior to signing as attempts are made to obtain signature on blank bills on the pretext tha they are requisition slips.

SHIPMASTER'S REPORT: January 1989.

Location: Lat. 26° 15.5′ N., Long. 34° 12.2′ E.

Hamrawein Phosphate Terminal has a single jetty of 67 m. length and belongs to Misr Phosphate Company, Hamrawein. There are 2 moorin buoys. There are no leading beacons as mentioned in NP.64. Al mooring operations and pilot are arranged by the shippers (Mis Phosphate).

Port Limits: 4 nautical miles off the coast.

Documents: Register, Safety Construction Certificate, Load Line Certificate, I.O.P.P., Safety Equipment and Safety Radio Certificates 4 copies Crew List. 2 copies Stores List. 2 copies Crew Declaration 2 copies Currency Declaration.

Free Pratique is usually granted after berthing when vessel boarde by Quarantine Officials.

Pilotage: Pilot is compulsory and boards 2-3 cables North of the Nort Mooring Buoy. The vessel is then turned around and re-approaches th North Mooring Buoy.

Approaches: Vessel should approach from sea, heading for the Nort Mooring Buoy. Vessel sets South towards the dangerous reefs whic can be visually seen or picked-up on radar when at close range. Th reefs are not marked by buoys, etc., but can be recognised by chang in water colour.

Anchorage: The only anchorage available is one mile East of Kossie as marked on B.A. Chart 3043.

Maximum Size: Vessels drawing 33 ft. can be accommodated.

Radio: Kossier Radio, call sign SUK, is recommended for a communications with agents, shippers, etc.

There is no VHF or WT station at the Terminal. There is no contac with pilot as pilot boat is not equipped with a radio. The pilot boarde from a rowing mooring boat with the pilot flag hoisted. The pilot bo was out of order.

Tugs: Not available.

Berthing: Vessel heads for the North end of the breakwater, keepin close to the North Mooring Buoy on the starboard side. When 30 m. o the breakwater, starboard anchor is let go to 4 shackles in water an vessel is swung around to make fast port side alongside. Mooring bo is used for sending lines ashore. A line is also made fast to the Sou Mooring Buoy. This assists when leaving the berth.

Loading: Two chutes are available with a good outreach, but only o can be used at a time. Vessel has to be shifted fore and aft frequen to place holds in position for the fore and aft chutes. Loading rate high and a maximum rate of 7,000 tonnes per day can easily achieved.

Medical: Seamen can be sent to doctor at Kossier or Safaga, af special permission granted by Immigration. Advance notice required

Density: Average 1029.

Fresh Water: Not available at berth. Water has to be ordered from Safa by barge. Rate U.S.$22.00 per tonne, with minimum supply 200 tonnes.

Fuel: Not available locally. Any requirements to be obtained from Safaga.
Repairs: No facilities available.
Customs Allowance: 200 cigarettes. Beer allowed. No liquor except wines allowed.

Watches, clocks, radios, cassette recorders, cameras, T.V. and videos are placed under seal by Customs.
Repatriation: Facilities exist for repatriation and for crew changes.
Airport: Nearest airport at Hurghada, which has regular flights to Cairo.
Shore Leave: Generally no shore leave allowed. If permitted, shore passes required.
Provisions: Fresh provisions and meat available and supplied by ship chandler from Kossier. No bonded items available.
Authority: Misr Phosphate Company, Hamrawein (Red Sea), Egypt. *Tel:* (Kossier) 39. Cables: Hamerpho, Kossier.
Agent: Damanhour, Safaga. Cables: Canal Shipping Safaga.

MARSA AL HAMRA (El Alamein): 30.59 N. 28.52 E.

WEPCO Terminal:
The Mono Mooring Buoy is in an open and unsheltered roadstead. The mooring buoy is located at Lat. 30° 58′ 07.5″ N., Long. 28° 52.2′ E. It is 53 miles on a bearing of 255° from Ras-el-Tin Lighthouse, Alexandria, and 3 miles offshore in approximately 66 ft. of water.

DOCUMENTS:
4 copies Crew List.
Deck log books showing date of last call at a A.R.E. port, completed up to the time of arrival.

Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showing all ports of call, as well as dates of sailings for the last 30 days, nature of cargo on board, destination, as well as sickness among crew or passengers, if any, specially when it is presumed that the sick will be hospitalised. These forms can be filled on arrival if not available on board before arrival.

Derat Certificate should be handy for inspection.
Clearance from Last Port.
Bonded Store List, in duplicate.
Crew List and Passenger List in duplicate.

PILOTAGE: The S.-S.W.-W. quadrant from the buoy is a Prohibited Anchorage Area. Gebisa Reef is at Lat. 30° 58′ 30″ N., Long. 28° 49′ 10″ E., at 2.7 miles on a bearing of 260° from the buoy.

The mooring buoy carries a light, flashing red 6 times per minute, and visible all round to a distance of 4.5 – 5 miles in clear tropical weather. It also has a fog horn, sounding "U" and a radar reflector.

Surface current sets East at 10 miles offshore at the rate of 1 knot. Maximum rise and fall of tide in the mooring area is 2 ft.

Vessel arriving should approach to within 2 miles North of the buoy, where they will be met by the Harbour Master or Pilot who will advise the ship's Master on approaches to the mooring buoy, mooring and unmooring.

ANCHORAGE: 15 miles N.E. of SBM.

RESTRICTIONS: Normally vessels are moored during daylight hours only, but permission can be obtained to sail at night.

MAX. SIZE: 100,000 d.w.t.

HEALTH: Hoist International Code Quarantine Signals when entering. Any sickness must be reported to local authorities.

RADIO: The commercial radio station at Alexandria will handle WEPCO radio traffic. Alexandria Coast Radio Station (call sign SUH) operates 24 hours a day on 444, 500 and 8,578 kHz, and between 0600 hrs. and 1800 hrs. GMT on 12,974 kHz.

Ships nearing Al Hamra Terminal may contact the terminal by FM/VHF radio on 156.70 MHz or 2182 kHz.

While at the mooring, ship-to-shore communication is by portable VHF radio-telephone units, under the direct charge of the Mooring Master. The terminal uses Channel 10 VHF for all communications.

TUGS: Not available and not required.

BERTHING: 2 good lines must be ready on the forecastle to be sent to the buoy plus a further 2 lines for use as messengers. Ship's lifting gear must be ready near the port manifold for lifting and connecting 2×12 in. hoses, with proper reducers if the manifold does not fit 12 in. hose with 150 ASA standard flanges. The total weight per hose assembly is approximately 5 tons. Maximum loading rate is 3,700 t.p.h.

A pilot ladder must be safely rigged for immediate use and long enough to reach the Mooring Master's launch. At night adequate lighting must be rigged overside to enable the Mooring Master to approach and board the ship safely, and searchlights should be rigged on both sides of the bridge to assist in running lines to the buoy.

BALLAST: No dirty ballast may be pumped overboard, and it is the ship's Master's responsibility to ensure that no oil – whether crude, diesel, bunker or bilge – is pumped or spilled into the waters of and surrounding the Terminal. Ballast can be pumped ashore through one or both of the floating hoses direct to disposal facilities on shore.

MEDICAL: Nearest hospital facilities are at Alexandria, at least 90 minutes drive from the terminal.

First Aid could be provided and if necessary, transportation to hospital in Alexandria.

CUSTOMS ALLOWANCES: Present regulations at El Alamein allow each seaman to retain in his possession a maximum of 50 cigarettes or 1 ounce of tobacco or 5 cigars. All other smoking items must be collected and listed before arrival. The list will be checked by Customs before sealing the locker, and any discrepancies will be subject to fines.

FRESH WATER: Not available.

FUEL: Not available.

AUTHORITY: Western Desert Operating Petroleum Company – (WEPCO), Borg El Saghr Building, Safia Zaghloul Street, P.O.Box 412, Alexandria, Egypt. *Tel:* 28710/17/18/19. *Telex:* 54075 Un. *FAX:* 4934016. *Cables:* Wepoil Alexandria. *Contact:* A. Abou Ouf, Operations Manager.

RAS BUDRAN: 28.56 N. 33.08 E. **(See Plan)**

Ras Budran is an open area, unsheltered roadstead. There are presently 5 large storage tanks with a total capacity of 120,000 cu.m., painted a pale yellow colour. To the North of the tank farm is the production area with ballast receiving and treatment facilities. There is a flare structure S.E. of the storage tanks and another small flare on the production platform in position: Lat. 28° 58.2′ N., Long. 33° 07.8′ E. located 2.3 miles North of SBM.

Vessel will moor to a single mooring buoy located 2.3 miles off Ras Budran Lighthouse on a bearing of 260°.

The yellow painted SBM is located in a water depth 34 m. in position: Lat. 28° 56′ 05″ N., Long. 33° 07′ 49″ E.

The SBM has an orange light, visible 5 miles.

Cargo vessels can be loaded and/or discharged alongside the jetty at Ras Budran. The length of the jetty is 120 m. and the depth of the water is 6 m.

PILOTAGE: SUCO (Suez Oil Company) Pilot/Mooring Master boards approximately 2.5 miles S.S.W. of SBM with mooring gangs. Pilot will normally meet and embark incoming vessels at Lat. 28° 51′ N., Long. 33° 06′ E. Vessel provides leeside on a course away from the shore.

Pilot ladder and/or accommodation ladder should be kept in good order, cleaned and should be of adequate length and strength. Ladder should be provided with a safety line. A light shall be provided at night so that the pilot ladder is adquately lit.

When Mooring Master boards, he will advise the Ship's Master, on the approach to the SBM, arrangements for mooring and unmooring, connecting of the hoses and all other operations within the mooring area. The Mooring Master will submit and receive from the Master all forms, documents and papers required, to be filled in and signed or received by the Master.

ANCHORAGES: SUCO will make every effort to moor ships arriving according to the agreed schedules as promptly as operational circumstances permit.

If mooring is not possible, vessel will anchor in Anchorage Area in position: Lat. 28° 52.5′ N., Long. 33° 06.9′ E.,

Area within 1 mile radius of this area has been surveyed and is considered clear of any obstruction. Anchoring outside the area is strictly prohibited.

The ground at Anchorage Area is sandy mud.

RESTRICTIONS: Weather conditions may prevent berthing. This is the case when wind speed exceeds 25 knots. Vessel will then remain in the anchorage until weather improves. Daylight berthing only. Unberthing anytime.

MAX. SIZE: 30,000 tons (s.d.w.t) to 250,000 tons (s.d.w.t) with a max. permissible draft up to 18.0 m.

HEALTH: Masters are to indicate in their ETA, notification of any sickness on board. SUCO will arrange with Health Authorities if so required.

RADIO/VHF: SUCO installation is to be supplied with relevant information on lifting gear, connections, ballast/segregated/dirty and quantity.

On the berth (SBM) communications by VHF Channels 12 (24 hours listening) and 74 (Marine Office, 0700 – 1800 hrs.). SSB 2638 kHz to be used during office hours.

TUGS: 2 mooring boats (1×500 h.p. and 1×1,100 h.p.), available to assist with mooring and hose connection. The boats are equipped for anti-pollution operations.

1 fire fighting tug is available on a standby basis whilst loading operations are in progress.

BERTHING: All mooring equipment is available and will be placed onboard the vessel when Mooring Master boards.

A vessel can make the final approach and moor to buoy from any direction bearing in mind prevailing weather and tidal conditions. The approach shall be made from the direction which is consistent with a safe approach and speed shall be subject to the prevailing forces (i.e. wind, current and tidal stream) at the location at the time of berthing with the assistance from mooring boats stationed at the buoy.

Once moored the vessel is free to turn through 360° under the influence of the prevailing forces.

HOSE CONNECTION: 16 in. standard 150 ASA flange connection for crude oil and ballast hoses. Port derrick with minimum 10 tons SWL rigged for max. height and load lifting.

Ship's crew shall be responsible for connecting and disconnecting hoses, with assistance of shore crew.

A quick release coupling (camlock) is connected to each hose end and is to be used as follows:

1. In case of emergency the butterfly valve shall be immediately closed and quick release coupling immediately disconnected.
2. Do not hammer but try to use the camlock wrench supplied or use copper hammer only.
3. Tanker should be ready with reducer if it's manifold is not 16 in. size.
4. Bags of sand to be available.
5. Weight of the hose is approximately 6 tons.

LOADING: Upon being informed by the vessel's responsible officer that vessel is ready to start loading, Mooring Master will normally advise the Control Room and ensure that the loading commences at a low rate (by gravity).

When it has been confirmed that there is no significant rise in pressure on the loading line, the crude oil will be loaded, pumping with a maximum rate of 6,000 tonnes/p.h.

Crude oil is delivered through the submarine pipe-line to the buoy and thence via a floating hose to the vessel's port side midship manifold. Hose diameter is generally 24 in., changing at the ship's end to 16 in.

It is forbidden to close any valve onboard the tanker against the flow of the crude oil until the butterfly valve of the loading hose has been closed.

If ship-to-shore communications fail during loading operations the emergency whistle signal is a continuous blast on the tanker's whistle.

Loading shall immediately be stopped and will not be resumed until communications have been re-established.

Before loading, cargo tanks are dipped by an independent Inspector and a Terminal Inspector. If dirty ballast is retained on board until the next discharge port then amount of water and oil on top will be checked.

Density of Ras Budran Crude is approximately 0.900/15°C. Temperature when received on board approximately 31°C.

Immobilisation of engines at SBM not permitted.

BALLAST/POLLUTION: *Deballasting System:* It is preferable that vessels load crude oil while discharging ballast, but Master or officer-in-charge must be sure that no contamination or pollution takes place.

If the vessel is not equipped with 2 lines in order to load and deballast at the same time, a quantity of crude should be loaded prior to deballasting to ensure proper segregation.

Dirty ballast must not be in the emulsion form and is not to contain chemicals or detergents.

Deballasting will be effected by ship's pumps delivering the ballast water to the dedicated submarine ballast line.

The floating hose is normally 20 in. diameter, and the ship's end connection is 16 in. diameter.

It is strictly forbidden to discharge dirty ballast overboard.

Pollution: The Master has to comply with all regulations and instructions prohibiting pollution under A.R.E. laws and under any pertinent instructions issued by SUCO when conveyed to Master.

Also the provisions for International Convention for Prevention of Pollution from Vessels 1973 and the Protocol of 1978 relating to this connection will be applied to the extent that such Convention and Protocol are in force in A.R.E. Owner/operator shall be liable for any damage resulting from the pollution caused by the vessel and shall pay for all the expenses incurred for its removal and elimination.

Oil Spill: In the event of a spill or its detection, SUCO Mooring Master must be notified instantly for the necessary action to be taken.

MEDICAL: In case urgent medical assistance is required the vessel should contact SUCO Marine Manager by VHF radio. A doctor and facilities are available but no hospital in the area.

DENSITY: 1030.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Not available.

REPATRIATION: Possible in an emergency only.

HOLIDAYS: Ras Budran Terminal will never be closed due to religious holidays.

SHORE LEAVE: There is no shore leave for personnel of vessels whilst at the terminal.

HELICOPTER: Should the services of a helicopter be required in emergency or for any purpose whatsoever, the vessel will be given a minimum of 30 minutes' notice.

WEATHER: Gales can be expected from a North-Westerly direction from October through May.

Maximum weather condition for keeping the vessel on SBM is 40 knots.

The above conditions are only for guidance and are not relevant to the safety of the vessel but the safety of the buoy.

The Mooring Master shall have the authority to decide whether the ship should remain or vacate the buoy.

Climate: The climate in the Gulf of Suez is generally good. The visibility is usually excellent with few dust storms and infrequent fog. There are a few rain squalls.

Winds: The general flow of the wind over this part of the Gulf of Suez is predominatly from the N.N.W. Winds are steadier in the Summer months (May-October) and almost nil from June to September. Gales can mainly be expected from a North-Westerly direction from October through May.

The maximum velocity is approximately 45 knots, whilst the mean wind speed is approximately 20 knots and is prevalent for some 98% of the year. There are occasional light Southerly winds.

Tides: The tidal range is between 3 ft and 4 ft.

Sea Condition: The surface temperature of the sea ranges from 18°C to 27°C depending on the season.

Seas and swells are usually from the N.N.W. and wave height can reach 18 ft. but average is about 6 ft. During the Summer months (May/August) there are many day's of 12 ft. – 15 ft. seas.

Currents are generally located in mid-channel and set North when the tide is rising in Suez and South when the tide is falling. The rate is about 1.5 knots at Springs and 0.5 knots at Neaps.

AUTHORITY: Suez Oil Company (SUCO), 21 Ahmad Orabi Street, El Mohandessin, P.O.Box 2622, Cairo, Arab Republic of Egypt. *Tel:* 650723, 650544, 807922, 813554, 807854. *Telex:* 93455 Suco Un, 92300 Suco Un. *Cables:* Dexgulf. *FAX:* 3422734. *Contact:* A. Nassef, Planning and Follow-up Manager.

RAS GHARIB: 28.21 N. 33.06 E.

A natural port at the Western side of Suez Gulf sheltered by the Cap and a chain of reefs.

DOCUMENTS:

4 copies Crew List.
Derat Certificate should be handy for inspection.
Clearance from Last Port.
Bonded Store List, in duplicate.
Crew List and Passengers' List in duplicate.

Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showin all ports of call, as well as dates of sailings for the last 30 days, natur of cargo on board, destination, as well as sickness among crew o passengers, if any, specially when it is presumed that the sick will b hospitalised. These forms can be filled on arrival if not available on boar before arrival.

PILOTAGE: Compulsory. International Pilot flag must be hoisted an Pilot will board vessel on arrival. Vessels should approach the anchorag from South-eastward and wait Southward of the Prohibited Anchorag until boarded by the Harbour Master who will pilot them either t moorings or to an anchorage clear of the prohibited area of the pipe lines.

2 pairs of leading beacons stand about 4 and 5.5 cables, beside others that stand about 12 cables Southward of Ras Gharib ligh structure. About 2 cables further Southward are 2 leading beacons All the above beacons are difficult to identify until close inshore.

ANCHORAGES: Ras Gharib Anchorage, South-westward of the Cape affords some shelter, but a moderate swell round the Cape i experienced on most days. Vessels can obtain anchorage in depths o about 5 fathoms.

During most of the year there are Northerly winds, Force 3 – 5, bu in December and January there are occasionally calms. On very rar occasions, there are Southerly gales of short duration which make th anchorage untenable.

The Northerly wind causes some swell in the anchorage, but it is no normally severe enough to interfere with the working of lighters or boat of moderate size. It is, however, unpleasant for small boats, excep alongside the piers, which are well protected.

N.N.W. winds of 20 m./sec (40 knots) are experienced in Summer bu it is mostly calm in Winter. Care should be taken if wind changes t West and even more care should be taken if wind shifts to South.

Except in the vicinity of the piers, there is usually some swell on th beaches. There is practically no rainfall and sand storms occur only ver occasionally and they do not interfere with work in the anchorage.

Anchorage is prohibited, owing to the existence of pipe-lines, withi an area indicated by pecked lines on the chart.

HEALTH: On entering, vessels must hoist the International Quarantin Signal for compulsory quarantine. Any sickness must be reported to th doctor, specially when it is presumed that the sick will be hospitalise

The vessel's personnel should carry international vaccination and/o inoculation certificates.

VHF: General Petroleum Co. on Channel 16.

TUGS: 2 tugs, 400 h.p. and 80 h.p. available.

BERTHING: There is an ore pier where vessels may berth with ma draft of 11 ft. without any restrictions in length. Vessels with deeper dra may discharge whilst at anchorage on to supply boats.

Two cranes are available with capacities of 30 tons and 35 tons Towage is also available.

TANKERS:

	Northern Pier No. 1	*Southern Pier No. 2*	*New Pier No. 3*
Depth at the pier	27 ft.	36 ft.	78 ft.
Max. permissible draft	20 ft.	27 ft.	55 ft.
Max. length for tanker	400 ft.	500 ft.	980 ft.
Min. length for tanker	350 ft.	500 ft.	600 ft.
Diameter of crude hose	8 in.	10 in.	12 in.
Diameter of water hose	8 in.	10 in.	12 in.
Min. capacity of tanker's derrick	5 tons	5 tons	5 tons
Loading capacity (t.p.h.)	650	1,200	2,000
Max. permissible load (tons)	8,000	20,000	120,000

Cargo: Ras Gharib Blend: API 21.0. Loading temperature 92°F/33°C

Moorings: Vessels require 20 mooring ropes for sending to 6 buoy and 4 spare ropes.

SUPPLIES: Transit and fresh provisions as well as deck and engi stores provided by the United Arab Contracting and Marine Supp Company (Cunsup).

FRESH WATER: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: Present regulations allow each seaman retain in his possession a max. of 50 cigarettes or 1 ounce of tobac or 5 cigars. All other smoking items must be collected and listed befo arrival. The list will be checked by Customs before sealing the lock and any discrepancies will be subject to fines.

AGENCY: See "Suez Canal".

AUTHORITY: General Petroleum Company, Ras Gharib, Egy *Tel:* 7, 9, 11 and 23. *Telex:* 92998 Petgn Un. *Cables:* Petrog *Contact:* Captain Mohamed El Sayed Fattoutt.

RAS SHUKHEIR: 28.08 N. 33.17 E. (See Plan)

Also see "General" before first Port.

ADVICE OF ARRIVAL: It is important that ships establish radio contact with "GUPCO" (Gulf of Suez Petroleum Co.) when 3 days distant from Terminal and maintain this contact until just previous to arrival at the Terminal. All ships should send a 72 hour ETA message to "Panintoil Cairo" giving the best estimate of ship's arrival time at the Terminal. This ETA message should also include a definite statement of the details of any equipment required from shore for connecting submarine hoses to ship's manifold. Further ETA messages should be sent to "Panintoil Cairo" when the vessel is 24 hours and 12 hours distant from Ras Shukheir and at any other time any appreciable change occurs in the original ETA or those subsequent thereto. The 12 hour ETA should include a positive statement regarding ship's readiness to load on arrival and the number of hours that will be required to discharge ballast after ship is berthed in mooring.

-6 hours before arrival, tankers should call Ras Shukheir on VHF Channel 16 to be advised if berthing is available or not, also to be advised of the approximate time for berthing.

DOCUMENTS:

4 copies Crew List.

Deck log books showing date of last call at an A.R.E. port, completed up to the time of arrival.

Derat Certificate should be handy for inspection.

Clearance from Last Port.

Bonded Store List, in duplicate.

Crew List and Passenger List in duplicate.

Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showing all ports of call, as well as dates of sailings for the last 30 days, nature of cargo on board, destination, as well as sickness among crew or passengers, if any, specially when it is presumed that the sick will be hospitalised. These forms can be filled on arrival if not available on board before arrival.

PILOTAGE: Compulsory. International Pilot Flag must be hoisted and Pilot will board vessel on arrival. Ras Shukheir Lighthouse is located in Lat. 28° 08′ 15″ N., Long. 33° 16′ 20″ E. It is a white flashing light, flashing every 3 seconds and visible for 10 miles.

Gebal Gharib, situated about 18 miles South-westward, 5,742 ft. high. It makes a nearly perfect equilateral triangle with Ras Shukheir and Ras Gharib Lighthouse. Ras Gharib Lighthouse is an excellent landmark whether by day or night for vessels approaching from North, but caution should be exercised since this Light is obscured from 308° to the Westward. The sea-berth buoys are unlit.

The Company's Mooring Master will meet all incoming tankers about 2 miles from Ras Shukheir Terminal on a bearing of 290/300° from Ras Shukheir Lighthouse and will advise ship's personnel in mooring and unmooring, raising and lowering of hoses.

Vessels are requested to have a pilot ladder safely and securely rigged, ready for immediate use, and long enough to reach the Mooring Master's launch. If at night, adequate lighting must be rigged overside for the Mooring Master to approach the side and climb the ladder safely.

ANCHORAGES: There are a number of oil well installations, structures and submarine pipelines located in the Gulf of Suez opposite Ras Shukheir Terminal and approaching vessels are warned of these obstacles in manoeuvring and anchoring. Vessels should approach from the Eastward and if necessary anchor S.E. of the sea berth.

Never anchor North of the sea berth.

Tankers should only anchor in Ras Shukheir Anchorage Area which is located as follows:

Lat. 28° 04′ 30″ N.
Long. 33° 30′ 15″ E.

RESTRICTIONS: The Ras Shukheir Terminal operates 24 hours per day, 7 days a week. Ships are loaded and unmoored at any hour, weather and other circumstances permitting. Vessels are moored during daylight hours only, however, an exception may be made at the discretion of the Terminal.

MAX. SIZE: See "Berthing".

HEALTH: The vessel's personnel should carry international vaccination and/or inoculation certificates.

RADIO: The Alexandria or Port Said coast radio stations will handle GUPCO radio traffic. Ships may contact GUPCO through their cable address "Gupcoil Cairo". The message will be received on their Cairo Radio Telegraph Office local teleprinter circuit, tape perforated and relayed to the Ras Shukheir Terminal.

Cables from Ras Shukheir Terminal to the ships would be handled in the same manner. The Alexandria or Port Said coast radio stations transmit traffic lists at regular intervals listing the call signs of all ships for which they have traffic on hand. Thus any ship hearing its call sign in the traffic list of the coast station would call the coast station immediately after the traffic list.

VHF: When ships are near Ras Shukheir Terminal, they may use their FM/VHF radios to contact the Terminal using Channel 16.

BERTHING: One pier where vessels with max. length of 76 m. are alllowed to berth alongside with a max. draft of 16.5 ft. Vessels may discharge whilst at anchorage and propeller type lighters are available for such cargo operations.

Four cranes with capacities of 15, 30, 40 and 50 tons respectively are available together with floating crane with capacity up to 200 tons. Towage is also available.

TANKERS:

	Seaberth No. 1	*Seaberth No. 2*	*Seaberth No. 3*
Depth	95 ft.	95 ft.	90 ft.
Max. permissible draft	55 ft.	55 ft.	50 ft.
Max. length for Tankers	1,000 ft.	1,000 ft.	800 ft.
Min. length for Tankers	750 ft.	750 ft.	600 ft.
Numbers of Crude hoses	3	3	2
Diameter of Crude hoses	12 in.	12 in.	12 in.
Diameter of Ballast hose	12 in.	12 in.	12 in.
Min. capacity of –Tanker's derrick	5 tons	5 tons	5 tons
Loading capacity (t.p.h.)	6,000	4,000	3,000
Max. permissible load (tons)	150,000	150,000	70,000

LPG: In addition to the 3 Sea Berths, there is Sea Berth No. 4 for loading L.P.G. tankers which is located 6 miles South of Ras Shukheir lighthouse.

The specifications are as follows:-

The Channel Entrance is marked by one radar reflecting (turning buoy), 6 pontoon guiding light buoys with radar reflectors, 3 green lights located on the starboard side of the channel, and 3 red lights on the port side of the channel. Flashing characteristic of the signal is "U" with 3.6 second intervals. The max. water depth in the channel and the berth is 24 ft. The berth consists of 4 mooring buoys, 8 loading hoses and 6 vapour hoses.

The max. capacity of vessels using this berth is 1,600 tons with a length no greater than 330 ft. Max. draft after loading is 17 ft.

SUPPLIES: Transit and fresh provisions as well as deck and engine stores provided by United Arab Contracting and Marine Supply Co.

SUBMARINE HOSE LOADING BERTH: Tanker is loaded by means of submarine pipe-lines to which are attached 2 or 3 hoses for loading and 1 hose for discharging ballast. A 36 in. pipe-line transports the oil and a 24 in. line in No. 1 Seaberth, or 16 in. lines in Nos. 2 and 3 Seaberths transports the dirty ballast to a ballast pit ashore. The loading berths are located approximately 3,580 ft. offshore in a water depth of approximately 95 ft. The loading and ballast lines are laid in the same trench and run in a direction 055°. The mooring buoys are numbered 1, 2, 3, 4, 5, 6, 7 and 8 (on the port bow) and running consecutively in a clockwise direction.

LOADING READINESS AND ARRIVAL TIME: The company will make every effort to load vessels upon arrival or as promptly as berth is available, weather permitting. Notice of Readiness will not be accepted as at time of arrival unless the vessel is in all respects ready to load. Arrival time will be considered as the time the Mooring Master boards the vessel or the time that vessel anchors, whichever occurs first.

FRESH WATER: Not available.

FUEL: Not available.

CUSTOMS ALLOWANCES: Present regulations allow each seaman to retain in his possession a max. of 50 cigarettes or 1 ounce of tobacco or 5 cigars. All other smoking items must be collected and listed before arrival. The list will be checked by Customs before sealing the locker, and any discrepancies will be subject to fines.

REPATRIATION: Not recommended.

AUTHORITY: *Operator:* Gulf of Suez Petroleum Co. – GUPCO, (P.O. Box 2400) Palestine Street, 4th Sector, New Maadi, Cairo, Egypt. *Tel:* 3522846, 3521365. *Telex:* 92248 Gupco Un. *Cables:* Gupcooil, Cairo. *Contact:* Captain Hassan Hafez, Marine Division Manager.

AGENCY: See "Suez Canal".

SAFAGA: 26.46 N. 34.00 E.

DOCUMENTS: The following documents are required on arrival:

Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showing all ports of call, as well as dates of sailings for the last 30 days, nature of cargo on board, destination, as well as sickness among crew or passengers, if any, specially when it is presumed that the sick will be hospitalised. These forms can be filled on arrival if not available on board before arrival.

1 Crew List and 1 Passenger List.

Derat Certificate should be handy for inspection.

Clearance from Last Port.

Complete set of Manifests covering all cargo on board showing names of shippers and consignees.

4 copies List of Passengers in Transit.

4 copies Crew List.

Deck log books showing date of last call at an A.R.E. port, completed up to the time of arrival at Port Said or Suez.

PILOTAGE: Compulsory. International pilot flag must be hoisted and Pilot will board vessel on arrival. Vessel should endeavour to arrive at the N. end of the island by sunrise, at Safaga Port by early morning; the light behind them will show up the reefs clearly. Wind, light in the morning, gains strength during the day, making tying up more difficult. A beacon (Morewood Beacon), visible a mile off, is erected on the Southern spit of the island. After rounding the spit, Masters keep 5 cables clear of visible reefs and enter the harbour keeping the 2 large beacons to the North of the pier in line. The Manager, or his representative, of the Safaga Phosphate Company will meet ships in launch with instructions on berthing.

MAX. SIZE: Safe draft in the fairway, over reefs and alongside pier: 27 ft. 6 in.

HEALTH: On entering, vessels must hoist the International Quarantine Signal for compulsory quarantine. Any sickness must be reported to the doctor especially when it is presumed that the sick will be hospitalised.

The vessel's personnel should carry international vaccination and/or inoculation certificates.

BERTHING: There are 2 mooring buoys marked B and C and 2 mooring posts marked A and D.

(1) The anchor position is marked by a small red or white flag. When mooring, manila ropes only should be used, as wire ropes can be run out afterwards when ship is alongside.

(2) Due to rocky nature of sea bottom, it is very desirable that ship in coming into berth, does not override her anchor, as, if this happens, chain is apt to foul coral bottom and cause trouble later on.

(3) Endeavour to have all way off ship when anchor position is reached. Drop anchor as close to flag as convenient and go astern. If necessary check cable when 2 shackles have been paid out.

(4) Run rope to Buoy C, run rope to Buoy B, run rope to Post D, then run rope to Post A. Run Spring to S1, S2, S3, and pull alongside. Company's launches will run all ropes.

(5) If wind is blowing strongly off shore, a Spring may be run to S3, immediately a good rope to Buoy B is made fast.

(6) The best way to reach the anchor position is to steer straight for same, keeping Buoy C on port side. This will keep vessel clear of Buoy C and when anchor is dropped, the stern should swing clear of this Buoy. If it does not, a rope can be run to S3 and the stern pulled in before falling back on pier.

(7) With anchor dropped as shown, 6 shackles should see No. 1 hatch at the pier, but if chain is slackened carelessly, it may foul bottom and be insufficient to reach pier.

If visibility is very good, a course can be made between the Hyndman and Cannon Reefs, and altered to bring the beacons referred to into line.

Rock phosphate and ground phosphate are loaded at this port for shipment all over the world. The mines are situated some 30 km. away and are connected by company's own railway. Rock phosphate loaded (1,000 metric tons per day) from elevator and phosphate in bags by ship's gear.

Cargo vessels can berth alongside a new quay of 600 m. with a draft of 27 ft. Quay used for loading and discharging general cargo. It can accommodate 2 medium size vessels and one large vessel. Part of the quay is used by vessels discharging aluminium.

STEVEDORES: Canal Stevedoring Co.

SERVICES: Water, deck and engine stores and provisions provided by Egyptian Contracting and Marine Supply Co.

HOLIDAYS: See "Suez Canal".

DEVELOPMENTS: Grain berth has been extended to accommodate vessels up to 900 ft., 42 ft. draft and 75,000 d.w.t. Travelling gantry will have a discharge rate of 600 t.p.h.

SHIPMASTER'S REPORT: January 1981.

Pilotage: Pilotage for berthing is compulsory, and the Harbour Master acts as Pilot.

Entry or departure at night is forbidden, without special permission from the Naval Authorities.

Anchorages: Vessels are allocated an anchor berth in the inner harbour by the Harbour Master. Vessel anchored in the Northern part of the anchorage, with Morewood Beacon bearing 135.5° × 2.8 miles, in 30 m. of water, with 6 shackles of cable out, and no difficulties were experienced, despite a period when wind from the North of Force 5, gusting 6, occurred when the ship had a 3,000 tonne coaster alongside.

Approaches: Vessel arrived off Safaga Island at approximately 2130 hrs. and no difficulty was experienced in anchoring with Morewood Beacon bearing 334° × 11 cables. The N.E. point of Safaga Island, and the headland near Bir Safaga showed up well on radar, as did Morewood Beacon, once identified.

Upon entering harbour the next morning at first light, a little difficulty was experienced in locating the leading beacons. From outside the harbour, the most prominent object visible is the alumina silo and elevator, and this uncharted feature being mistaken initially for the charted phosphate transporter, we were looking in the wrong place. Once sighted, however, the beacons were found to show up well in the early morning light. (These leading beacons are fitted with Fixed Red lights, but these are only turned on when Naval Vessels are entering or leaving port by night). A can shaped mooring buoy situated in the middle of the inner anchorage just North of the leading line is of assistance, but the buoys marking the dredged channel are non-existent. This mooring buoy is a handy turning point for ships proceeding to the Northern part of the anchorage.

A partly ruined beacon is visible on the sand spit at the Southern end of Safaga Island approximately 3 cables from Morewood Beacon.

Of the two stranded wrecks charted on the S.W. shore of the inner anchorage, the Northern one (marked PA) has been salvaged. The Southern one is conspicuous, and afloat at high water. It is reported that this one may well be salvaged soon.

There appeared to be little or no tidal stream or current to speak of in the inner anchorage, vessel lying to the wind most of the time.

Max. Size: The largest size of ship handled is about 50,000 tonnes d.w.t., with a max. draft of about 11 m.

Radio: There is no radio station at Safaga, and telephone/telex links are minimal. Harbour authorities wishing to communicate with ships entering use VHF sets of ships alongside. We maintained a normal sea watch (1 Radio Officer) both at anchor and alongside, and good communications were obtained with Portishead Radio.

Tugs: There are no tugs available.

Berthing: Commercial Wharf: Approximately 500 m. in length.

This has 3 berths at present. No. 1 Berth is the one at the N.E. end, Berth No. 2 in the middle, and the alumina berth at the S.W. end.

Berths No. 1 and 2 are kept exclusively for the discharge of wheat; cement ships use the alumina berth by private arrangement. Depth alongside Berth No. 2 is officially 9.1 m., but reported deeper. (We berthed drawing 9.6 m.) and at Berth No. 1 the depth is stated to be 9.7 m. alongside, but 11.0 m. if barges are placed between the ship and the quay. Works are in progress to extend the commercial wharf Northeastwards from Berth No. 1 almost up to the Naval Wharf, which extends as marked on the chart.

The Oil Jetty charted to the South of the town is reported to be part of the Naval Base.

Cargo Handling: Bulk wheat is discharged by portable pneumatic conveyors (vac-u-vators) into hoppers on the quay, where it is bagged and taken away by lorry. (Discharge rate for this vessel approximately 1,900 tonnes/day).

Alumina is discharged direct to the silo by fixed elevator.

Cranes: There are no cranes on the wharves. It was reported that there is a mobile floating crane, of 15 tonnes SWL at 35 m. radius, although this was not seen by us. A small floating crane is in use for the extension works.

Medical: A doctor is available, and will visit ships at the inner anchorage. Cholera Vaccination Certificates are required, and the doctor will do vaccinations.

Density: 1030.

Fresh Water: There is a limited supply of fresh water, the quota being 500 tonnes a month for all ships, but this is expensive.

Fuel: No fuel oil of any kind available.

Consuls: None locally.

Repairs: The nearest repair facilities are at Suez.

Gangway/Deck Watchmen: Employment by the ship of shore watchmen is compulsory, and they have to be accommodated on board both alongside and at the inner anchorage. Whilst shore labour is onboard a policeman is placed on board to guard the ship's accommodation.

Shore Leave: Permitted, passes being issued when ships are alongside although apart from one hotel there is very little to do in Safaga. Agents can arrange trips to the River Nile, Valley of the Kings, etc., but special passes are required.

General: Provisions: Fresh provisions are available in season, and a chandler will visit ships without prior appointment.

Cargo Handled:

The principal activities of the port are:

(i) Import of wheat: approximately 100,000 tonnes/month.
(ii) Import of alumina: 60 – 75,000 tonnes/month. (3 – 4 ships).
(iii) Import of cement: 13 – 15,000 tonnes/month. (1 – 2 ships).
(iv) Export of phosphates: approximately 20,000 tonnes/month. (1 – 2 ships).

(i), (ii) and (iv) are all under the control of the Egyptian Government (iii) is carried out privately.

SHIPMASTER'S REPORT: September 1982

1. Pilot does not board on arrival.

There are very good visible leading markers (red and white), also 5 buoys have been laid out marking the dredged canal. They are ordinary unlit mooring buoys. Pass between these buoys with the leading beacons 310° True and vessel is clear of dangers. On the 5th buoy which is (single) on vessel's starboard side vessel can turn out of the channel and proceed to any place outside the 310° lead.

2. Discharging grain, draft limit 36 ft. 6 in. With 30 ft., vessel shifts t Berth No. 2 to finish. Daily rate of discharge is about 3,600 tonnes.

3. Water comes by pipe-line from Nile River not by barge from Suez

4. Berthing: Use starboard anchor. A motorboat takes first 2 head ropes then 2 stern ropes ashore and then heave the ship alongside Pilots are careful.

Mooring: Have 3 headropes, 2 breastlines and 1 spring ready (same aft).

When shifting from Berth No. 1 to No. 2 ship does not shift along the berth but makes a new berthing due to anchor.

SHIPMASTER'S REPORT: January 1983.

Pilotage: The Harbour Master has ceased allocating anchorage and ships now anchor wherever they like inside bay. Our vessel is 610 f long and drawing 36 ft. 6 in. and like your earlier report arrived and anchored half a mile South of Morewood Beacon at 2140 hrs. and moved up to anchor four cables from grain berth in the morning. Passage over reef crossing bay (apart from clearly shown leads) is now marked b four mooring buoys and channel is 13 m. depth.

Berthing: There is now a 900 h.p. tug to assist. The new berth towards the Naval Wharf is nearing completion. We berthed at No. 1 drawing 11.13 m. with barges between ship and quay.

Fresh Water: Service is prompt when needed.

SHIPMASTER'S REPORT: March 1988.

Approaches: (B.A. Chart 3043). Vessels approaching from the South should keep on Ras Abu Soma which shows up well on Radar at about 24 miles. Panorama Reef Beacon shows up well on Radar at about 10 miles. Safaga Beacon bearing 265° gives a good echo on Radar a 24 miles.

After coming abeam of Panorama Reef Beacon at a distance o 2 miles to the North, steer 211° passing abeam of Morewood Beacon at a distance of about 9 cables. Morewood Beacon shows up well o Radar at about 14 miles. Cnsult soundings continuously as vessel ha to anchor 1 mile South of Morewood Beacon. This is on the instruction of the Pilot (VHF Channel 16), who always boards in the roads from tug. Entering the harbour with Pilot is compulsory. There are n difficulties and no significant current was experienced. The tide i considerable. The roads have good holding ground.

Weather conditions are mostly good. Visibility also good. No rai drizzle on no more than a few days a year.

If approach is adjusted for dawn the reefs show up clearly

A conspicuous white cubiform building lies to the South of Safag Island at approximate position 26° 42.7′ N., 33° 59.7′ E.

Entering and leaving the Harbour is only possible during daylig hours.

The 4 buoys marking the dredged channel of about 14 m. depth, four to be in the charted position. They are "can-shaped" unlit mooring buoy with the colour of rust (unpainted). There is another (fifth) buoy on th North side, of same characteristics (uncharted), at approximate positi 25° 43.32′ N., 33° 57.55′ E. The tug is usually made fast to the buoy

The leading beacons can easily be located. There is a conspicuous sharp mountain summit far behind (see picture in Pilot Book), in line with the leading beacons. Vessels sailing from the Harbour disembark the Pilot inside the Harbour, West of the fifth buoy. Pilot is picked up by a pilot boat. Accommodation ladder is usually used.

Anchoring inside the Harbour (7 shackles in the water), is always with the assistance of the Pilot. Good holding ground.

Restrictions: Vessels have to arrive with a max. draft of 36 ft. 6 in. (11.13 m.) which is the maximum according to local regulations. However, 1.0 cm. – 2.0 cm. by head or by stern is not a problem, but if over 2 cm. vessel is in trouble. If she is not covered by Charterer's orders and instructions, a big problem could arise against the vessel. Receivers will not accept N.O.R. and Charterer puts vessel "off-hire" for the time she takes to discharge the quantity corresponding to the said 2 cm. overdraft and the vessel has also to pay about U.S.$ 10.0 per tonne of the quantity discharged up to 11.13 m. alongside berth. This happened to us, but as vessel proved that it was not responsible, the Egyptian Charterers accepted the entire liability for time and expenses. Since both Charterers and Receivers are government companies, I did not understand the problem.

Grain Berth: The new grain berth, close to the Naval Wharf, was completed in March 1987. Depth alongside berth is 39 ft., and 36 ft. reported at the South West end of the berth. Vessels of 225 m. in length are warped ahead when the draft reaches 10.0 m. or less. Berthing is as described in "Shipmaster's Report" September 1982, paragraph No. 4. One tug assists when berthing.

The grain silo has 100,000 tonnes capacity. Trucks continuously load from the silo. The 2 movable modern "Buhler Miag" unloaders with two pipes each, work continuously from 0730 hrs. to 2345 hrs., 7 days a week. When other ships are waiting at the anchorage they may work overtime up to 0200 hrs. next morning. Discharging is fast, average rate about 8,800 t.p.d.

There is a plan to accommodate a special 100,000 tonne grain vessel.

Repatriation: Possible by air from Luxor or Harghada Airport via Cairo or by car to Cairo via Suez (10 to 12 hours). Repatriation can only be arranged through state agents' head office in Suez.

Density: 1030.

Fuel: Not available in Safaga but large quantities can be arranged and come from Suez by bunker barge (small tanker). Fuel and gasoil of very good quality.

Fresh Water: Limited supply and expensive. Quality may be poor.

Provisions: Fish available in Safaga. Other provisions could also be supplied from Suez, transportation cost is U.S.$125.00, including Customs formalities.

Communications: Harbour Master/Pilot and Agent have VHF. There is a telephone station in Safaga. It is easier to call overseas in the afternoon. From Luxor it is very easy and clear with automatic telephone in telephone station or in hotels.

Telexes: For vessels with INMARSAT telex on board, the following telex numbers are very useful as Egyptian Charterers do not provide telex numbers.

Martrans Cairo: 00 91 92909/92243; Arabnavi Alex: 00 91 54131/54509/54311; Estram Cairo: 00 91 93472/92062; Egyptalum Alex: 00 91 94131; Silo Cairo: 00 91 23154; Maramon Alex: 00 91 54507/54127; Minship Port Said 00 91 63263/63034; Minship Suez: 00 91 66042; Memship Alex: 00 91 54162/54502; Mishipco Alex: 00 91 54193.

General: Pilot Book No. 64S/1986 shows phosphate silo.

In addition fo cargo ships (phosphate, grain, cement), cruise ships call at Safaga and anchor in the inner anchorage and passengers visit Luxor which is 3 hours away from Safaga (about 220 km.). Crew are able to visit River Nile, ancient Kings' and Queens' tombs and the museum in Luxor. Permission from Immigration is required but could easily be arranged by state Agent who also arranges the transportation. A visit to the nearby tourist village of Harghada is also possible (20 minutes from Safaga by car) where there are very good hotels and tourist shops. Permission can again be obtained through state Agent. Crew interested in diving can hire divers suits, etc. from special companies (Rate 80 Egyptian pounds for 2 hours, including transportation).

AUTHORITY: Ports and Lights Administration.

AGENCY: See "Suez Canal".

SIDI KERIR: 31.06 N. 29.37 E. (See Plan)

DOCUMENTS: Free zone area, no entry documents to the offshore terminal are required.

PILOTAGE: SUMED's Mooring Master and his assistant board the tanker 2 miles North of Buoy A1.

Notifications: ETA messages should be sent by cable via Alexandria/Port Said Radio on leaving previous port. Cables should be prefixed "For urgent delivery send via Telex 54108 or 54033 SUMED UN" and be confirmed 72, 48 and 24 hours prior to arrival. (Day and night berthing and operation). Arrival draft should be indicated. Vessels should arrive with a trim of 8 ft. by the stern and appropriate ballast to ensure that propeller is completely submerged.

LOCATION OF BUOYFIELD: (SBMs)

A1: Lat. 31° 06′ 26″ N., Long. 29° 36′ 46″ E.
A2: Lat. 31° 05′ 32″ N., Long. 29° 35′ 38″ E.
A3: Lat. 31° 04′ 24″ N., Long. 29° 35′ 37″ E.
A4: Lat. 31° 04′ 54″ N., Long. 29° 37′ 39″ E.
A5: Lat. 31° 05′ 40″ N., Long. 29° 38′ 24″ E.

ANCHORAGES: Tankers can anchor to the North and N.W. of the buoyfield.

MAX. SIZE: The five berths are spaced one from the other so that each has:

Mooring Area Radius: 410 m. for A1 and A2 (accommodate vessels up to 285,000 d.w.t.); 320 m. for A3, A4 and A5 (accommodate vessels up to 130,000 d.w.t.); Manoeuvring Area Radius: For A1 and A2, 1,220 m.; For A3, A4 and A5, 915 m.

Water Depth and Draft Limitations:

For A1 and A2:	85 ft. maximum water depth
	75 ft. maximum draft
For A3, A4 and A5:	60 ft. mimimum water depth
	54 ft. maximum draft

TUGS: 2 tugs × 2,200 h.p. and 2 supply boats × 4,000 h.p. with fire fighting and anti-pollution equipment is available as required.

Mooring Launches: 500 h.p. mooring launches assist in mooring and hose operations.

RADIO: All messages to be sent via Alexandria/Port Said Radio. Sidi Kerir has a HF long range radio working on 2182 kHz and 4142.5 kHz.

VHF: Channels 16, 78 and 79.

BERTHING: *Ship's Derrick:* The ship's derrick should be capable of lifting 10 tons and rigged on the port side ready on arrival to take the gear on board for berthing the ship and connecting the hoses.

Hoses: Each berth has two cargo hoses with a 16 in. connection (ASA 150). There is a ballast unloading facility with 16 in. connection. Connection of hoses to be performed by the vessel under the supervision of SUMED's Mooring Master.

Loading/Deballasting Rates:

Buoys A1 & A2	Loading	Max. 12,000 tonnes per hour
	Deballasting	5,000 tonnes per hour
Buoys A3, A4 & A5	Loading	Max. 10,000 tonnes per hour
	Deballasting	3,000 tonnes per hour

Shipmaster's Report: January 1986.

Dirty ballast reception: 1×16 in. floating hose. Hose to be connected by ship's crew together with cargo hoses. Maximum discharge pressure 100 p.s.i. according to Loading Master there is no limit on quantity.

SUPPLIES: No bunkers or supplies are available or permitted.

MEDICAL: Private doctors and hospitals are available in Alexandria.

SHORE LEAVE: There is no shore leave for personnel of vessels loading at Sidi Kerir Terminal (disembarkment from vessels is strictly forbidden except in emergencies).

AGENCY SERVICES: Not required under normal circumstances.

SHIPMASTER'S REPORT: *General:* Sidi Kerir is the Northern end of the pipe-line from Ain Sukhna in the Gulf of Suez. The pipe-line is owned by the Arab Petroleum Pipeline Co. and operated by SUMED Co. (Suez – Mediterranean).

The Sidi Kerir Terminal (Tankfarm) position is at Lat. 31° 03′ N., Long. 29° 40′ E. There are at the moment 5 SBMs for loading vessels, more are planned for the future. The buoy field is marked by the following points: "A" Lat. 31° 08′ N., Long. 29° 37′ E., "B" Lat. 31° 04′ N., Long. 29° 31′ E., "C" Lat. 31° 01′ N., Long. 29° 35′ E., "D" Lat. 31° 05′ N., Long. 29° 41′ E.

The area within ABCD is a prohibited anchorage area and may not be entered without a Pilot.

The position of the 5 SBMs is within the area:

1. Lat. 31° 06.7′ N., Long. 29° 35.7′ E. For loading Arabian Light & Kirkuk Crude.
2. Lat. 31° 05.9′ N., Long. 29° 36.9′ E. For loading Arabian Light & Kirkuk Crude.
3. Lat. 31° 04.6′ N., Long. 29° 36.9′ E. For loading Arabian Light & Kirkuk Crude.
4. Lat. 31° 05.0′ N., Long. 29° 37.9′ E. For loading Arabian Light & Kirkuk Crude.
5. Lat. 31° 05.1′ N., Long. 29° 38.6′ E. For loading Basrah Crude.

(a) The current sets usually from N.W. at about 0.5 knots but may increase during Summer to 1 knot; there is no considerable tide.

(b) References: BA Chart 3356; BA Pilot Book 49, 6th edition 1976.

Documents: One crew list, one ship's stores list and clearance from last port.

Pilotage: Pilot also acts as Loading Master and boards vessel at the anchorage. A pilot ladder/accommodation ladder combination is to be rigged on the starboard side. Vessels must give a lee for the pilot launch. Pilots work preferably during daylight hours.

Anchorage: The anchorage is one to two miles North of the buoyfield in 20 to 40 fathoms of water. There is good holding ground on sandy bottom; no shelter during Northerly winds or swell. The port closes during strong winds and swell. An open sea approach; no dangers on the way to the anchorage. The coastline is low desert and gives a poor echo, the best radar echo during the approach was the tankfarm and the pipe-line.

Max. Size: Max. draft 75 ft. Max.size 400,000 d.w.t.

Radio: ETA information to be given preferably via Alexandria Radio to telex number 54108 attention "SUMED operations – Alexandria" at 72, 48, 24 hours prior to arrival. Initial message should give call sign; Summer deadweight; Summer draft; cargo requirements with name of crude and approximate quantity required in cubic metres and long tons, also maximum loading rate required in cubic metres; last port; whether vessel carries 2 × 16 in. reducers.

Health: Free Pratique is given by the Pilot/Loading Master.

Tugs: One tugboat, 2,200 h.p., is on standby at the buoyfield and will assist on request.

Berthing: The vessel moors to a SBM. The mooring equipment, 2 wire slings, 2 shackles and a toolbox, are taken from the launch.

SBM Loading Berth: The hoses are connected by the ship's crew under the supervision of the Loading Master. The (2×16 in.) hoses are of a floatable type with a Camlock connection.

The maximum loading rate is given as 15,000 cu.m./h. or as requested by vessel. Before completion of cargo the pumps are stopped and the balance loaded by gravity. At the present time the dirty ballast facilities are under construction.

Repairs/Drydocks: At Alexandria about 12 miles to the East. No facilities at Sidi Kerir.
Density: 1026.
Supplies/Services: None.
Authority: The Pilot/Mooring Master acts as Government Representative.

SHIPMASTER'S REPORT: November 1987.
Pilotage: The Pilot/Loading Master and the surveyor boarded by helicopter. No Notice of Arrival was given.
Documents: The pilot takes the vessel's Register, Load Line Certificate, Safety Construction Certificate, Derat Certificate and Safety Radio Certificate for clearance. Various local forms are supplied by the pilot for completion.
Anchorage: Vessel used B.A. Chart No. 3356 (New edition March 1976).

Vessel anchored with the radio mast bearing 113° (True) and the water tower bearing 141.5° (True). The distance from the stern to the shore by radar was 2.6 miles and the distance from the stern to the buoy was 1.2 cables.
Notice: The following notice was handed to the Master on arrival:
QUOTE
Ship's Alertness.

This Terminal is on an open roadstead, therefore, during the time a ship is moored at the Terminal, the ship's engines and gear must be ready with full power for immediate use.

A vessel in a submarine berth must be able to clear and shall clear immediately upon advice of the Mooring Master or as directed by Sumed's Terminal Superintendent.

Ship's personnel should be at their stations and alert at all times during mooring, unmooring, and during cargo transfer operations.

Watchman must be stationed forward to watch the buoy, ropes and floating hoses.

Watchman must be stationed beside the manifold to watch the connection.

The vessel must stand-by on the VHF (Channel 78) at all times during the loading operations.
UNQUOTE

SHIPMASTER'S REPORT: September 1989.
Vessel: VLCC, 268,000 d.w.t.
Charts: BA. Chart No. 3323 is somewhat out of date in the information it contains, according to local sources. This is probably because the Admiralty has not been advised of the latest information by local officials. It appears that the strictures about old surveys no longer apply to the area of approach, but which parts have been surveyed, and when, I was not able to discover. Suffice it to say that about 50 vessels per month use the terminal, ranging from fairly small ships up to and including those of the same size or larger than this vessel, having a loaded draft in the region of 21.0 m., and all have managed to arrive and leave without mishaps.

The pilot station and Waiting Area to the S.W. and West of the SBMs is the original one which was in use when terminal was first started. Nowadays this is only used by vessels which arrive for the first time and have no alternative information.

The preferred waiting area is now to the N.E. of the SBMs and this is used by the majority of vessels, especially those which trade regularly to the terminal.
Pilots: Pilots now prefer to board by a small helicopter and if possible during daylight hours only. If movements are performed after dark, the more conventional method of boarding from a launch is used.

The Pilot boats come from a depot near Alexandria, which is another reason why the area N.E. of the terminal is preferred, being that much nearer.
Pilot Boarding Position: We were requested to come to a position 1.5 miles East of the buoy, to which we were to moor, and similar instructions were heard being given to other vessels which were berthed, although the helicopter can go to any position.

Helicopter prefers vessel to be heading into wind for landing.

Cargo documents are delivered by helicopter and pilot leaves in same way, except as stated above, when night-time movements are made and a launch is used.
Documents: The SUMED Loading Master/Pilot acts on behalf of the relevant Government Departments and requires 4 copies of Crew List, 2 copies of Vaccination List and 2 copies of Stores List. Also required, were the following Ship's Documents, which are taken ashore for verification and returned with cargo documents prior to sailing:
Certificate of Registry.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
Safety Radio Certificate.
Suez Canal Tonnage Certificate (if applicable).
Panama Canal Tonnage Certificate (if applicable).
Communications: We used telex communication throughout without problem, the numbers for the SUMED office are 54108 and 54033. No information was received from them, and on arrival, the same information was requested on VHF Channel 78.
Ballast: Vessels are preferred with clean ballast, but reception facilities, for which a charge is made, do exist. Another hose is connected for dirty ballast discharge to reception ashore. This can sometimes be a slow process if the system has been heavily used and is near the limit of its capacity.
Loading: This vessel loaded 2 grades, a maximum rate of 10,000 cu.m.p.h. being available on each. The grades were loaded one after another, two hoses being used. A "short stop" of 10,000 cu.m. was necessary, as the second grade then follows the first down the pipeline.

SUEZ CANAL (including Port Said and Suez): (See Plan)

Also see "Rules of Navigation".
DOCUMENTS:

The following documents are required on arrival:
The last Classification Certificate issued.
Information concerning a vessel transiting the canal.
4 copies Crew List.
*Ship's Register and Suez Canal Special Tonnage Certificate.
General arrangement and capacity plans of the vessel, if transiting the Suez Canal for the first time, or, undergone any alterations.
Suez Canal Authority's double bottom tanks capacity form.
Navigability form.
Complete set of Manifests covering all cargo on board showing names of shippers and consignees.
4 copies List of Passengers in Transit.
Landing cards for passengers landing finally in the A.R.E. and fo those landing in the A.R.E. in transit.
4 copies List of Passengers finally landing in the A.R.E. (if any) together with their addresses in the A.R.E.
Deck Log Books showing date of last call at an A.R.E. port, completed up to the time of arrival at Port Said or Suez.
Mail Waybills for ports beyond Suez Canal ports and alternatively, a document from the Master is required (cargo and passenger ships only).
Quantity of bunkers, water and cargo on board.
Free Pratique Certificates issued by the local Quarantine Doctor.

In case of a Northbound vessel loading or discharging alongside quay staying more than 24 hours in Suez, the following documents should also be presented.
(1) Load Line Certificate.
(2) Safety Equipment Certificate.
(3) Radio Safety Certificate.
(4) Documents covering names and ratings of ship's officers and their certificates.

* It is essential, to have amongst ship's documents, on board the vesse valid National Ship's Registry Certificate showing latest ship's name and her present Owners.

The above procedure is requested by the Suez Canal Authority, Traffic Control, to avoid delay for ships in joining the first convoy, or being liable to be stopped in the Canal in case of direct transit from Roads.

Advance notice to both Suez Canal Authority's Traffic Control and Measurage, with minimum period of 48 hours prior arrival.

For Pilot's Use:
(1) Arrival form of the Suez Canal Authority.
(2) Declaration "E" form for dangerous cargo on board in transit.
(3) Any other documents relating to shipments of dangerous cargo radio-active or fissile.

N.B. Plain Suez Canal Forms are normally handed to Master by Pilots or ship's Agents, to be filled on arrival and also for use on consequen voyages.

Quarantine Authorities:

Quarantine Questionnaire in duplicate (Form No. 15 Q.A.) showin all ports of call, as well as dates of sailings for the last 30 days, natur of cargo on board, destination, as well as sickness among crew o passengers, if any, specially when it is presumed that the sick will b hospitalised. These forms can be filled on arrival if not available on boar before arrival.
1 Crew List
1 Passenger List.
Derat Certificate should be handy for inspection.
Clearance from last port.

Passports:

For Immigration Officer the following documents are required o arrival:
Arrival Immigration form, duly completed.
1 Passenger List.
List of Passengers finally landing, in duplicate.
Crew List.
Valid passport with entry visa is required for landing in A.R.E. f passengers landing. Emergency visa can be granted on arrival so required.

For Customs Use:
(1) Bonded Store List, in duplicate.
(2) Crew List and Passengers' list in duplicate, showing rate o consumption of each.

Arrival Formalities - Documentation:

Upon arrival at Port Said or Suez for transiting the Suez Canal, Mast will be presented with the following documents by the local authoriti

1. Maritime Declaration of Health	4 pages
2. Ship's Report	1 page
3. Notice for Port Officer	1 page
4. Declaration for Ships in Ballast	1 page
5. Statistical Declaration	1 page
6. Information Concerning a Ship	1 page

7. Information Concerning a Vessel Transiting the Canal	1 page
8. Declaration of State of Navigability	1 page
9. Declaration Concerning Use of Double Bottom Tanks and Lower Parts of High Tanks	2 pages
10 Passport Control Office Declaration on Arrival	2 pages
11. Requisition for Canal Projector Apparatus	1 page
12. Canal Mooring and Lights Co. (receipt)	1 page
13. Passport Control Office - Declaration on Arrival and Departure	1 page
14. Declaration on Departure	1 page

Note: Shipmasters should pay special attention to Document No. 9, being the Declaration Concerning Use of Double Bottom Tanks and Lower Parts of High Tanks, which document will assist the Suez Canal Authorities in assessing the Canal tolls. The schedule on the reverse side of the form must be filled thus avoiding any over-assessment of the Canal tolls.

Moreover, and when Shipmasters are requested to sign 2 copies or more of the same document, they should ensure that the first page is marked/stamped as "original" and all other copies to be marked/ stamped as "copy".

Shipmaster's Report: January 1984.

Crew Personal Effects Declaration, Bonded Stores Declaration andStores List are not required.

The Bonded Store is not sealed.

The ship's Log books are not taken ashore but the Certificate of Registry is taken in Port Said and returned at Suez.

Shipmaster's Report: October 1988.

The following documents are required for Suez Canal transit:

Agent: 1 copy Crew List.
State Agent: 1 copy Vessel Information Form.
5 copies Crew List.
1 copy Navigability Form.
1 copy Cargo List.
1 copy Shipping Agency Inward/Outward Form.
1 copy Liferaft Certificate.
1 copy CO2 Certificates.
Vessel's Safety Certificates.
Customs: Free Zone Certificate.
Quarantine: Quarantine Questionnaire.
1 copy Crew List.
1 copy Clearance from Last Port.
1 copy Vaccination List.
Suez Canal Authority: 1 copy Crew List.
1 copy Vessel Information Form.
1 copy Double Bottoms Tank Capacity Form.

The following documents are required for vessels berthing at Port Said:

Agent: 1 copy Crew List.
Immigration: 2 copies Crew List. (Shore passes and Passports obligatory).
Quarantine: 1 copy Clearance from Last Port.
1 copy Quarantine Questionnaire.

Circulars: Issued by Canal Shipping Agencies Company, Port Said:

Circular No. 42/81: To all Shipowners and Masters.

We append hereunder free translation of Circular No. 2004/T81 received from the Deputy Manager, Transit Section, Suez Canal Authority, Port Said:

"It has been noticed that the necessary notification which should be given before the ship's entry in harbour in case of carrying dangerous cargo on board is neglected by Masters who also fail to fulfil the relative declarations, as stipulated in the Suez Canal Authority's Rules of Navigation Appendix for Vessels Carrying Dangerous Cargo (Edition 1977), which may expose both the vessel and the port to risks arising from the goods in question.

Kindly, therefore, draw the attention of Owners and Masters to the necessity of adhering to the said rules, noting that the Master will be entirely responsible navigably and criminally for any occurrence which may arise from failure to give the required notification, inaccuracy of details or omitting to take the necessary precautions on board".

Circular No. 23/82: To all Shipowners and Masters.

We once again should like to draw your kind attention to the fact that some Owners abroad do not provide the Protection Centre, Nuclear Research Centre of the Atomic Energy Establishment, Cairo with sufficient information in respect of such shipment on board their vessels.

In this connection, we would refer to our Circular No. 3/79 dated 6th January, 1979, text of which is quoted hereunder for your easy reference.

"According to Circular No. 4/3BA-406012, dated 1st September, 1964 and the amending Circulars issued by the Transit Section of the Suez Canal Authority and also the Suez Canal Authority's Rules of Navigation Appendix for Vessels Carrying Dangerous Cargo, the transport of radioactive substances carried by vessels transiting the canal are subject to protective conditions concerning transportation and transit, as specified therein, with the object of ensuring the safety of the said water channel and its environment.

However, it has lately been noticed that due attention is not given by Shipowners and Shippers abroad to forwarding the relative complete data which must reach the Atomic Energy Establishment before each shipment with regard to substances of Group 1 or on shipment with regard to substances of Group 2, this being in accordance with Item 3 of the aforesaid circulars and also Chapter 3 of the Appendix in question.

Kindly, therefore, advise Shipowners and Shippers that all the said conditions should be fulfilled, especially regarding the complete information relating to radioactive substances which should be sent immediately upon its receipt to: Head of the Protection Section, Nuclear Research Centre, Atomic Energy Establishment, Atomic Energy Post Office, Cairo.

This will enable us to take the necessary action to safeguard public interest.

We add that it is of vital importance that you also supply your Agents with all the required relative information and documents sufficiently in advance, to enable them to take the necessary action with both the Suez Canal Authority and the Atomic Energy Establishment in Cairo.

MAX. SIZE: *Directorate of Transit, Suez Canal Authority Circular No. 434408.*

As from 1st January 1990, our Circular No. 432842 dated 7.3.1985 to be amended as follows:

"Possibility of transit SOUTHBOUND": Vessels with draft over 42 ft.

Recently several shipowners contacted the S.C.A. requesting the possibility of transiting their vessels at a draft over 42 ft. Southbound.

To help canal users, specially nowadays, with the present world situation in shipping, the S.C.A. undertook some studies and decided to allow such vessels to transit the Canal, on the following conditions:

1. Any tanker or vessel may transit the Canal Southbound at a draft over 42 ft. and subject to our Circular No. 432144 dated 24.10.83, regarding beam and speed of 13 km./hr. (Also see "Rules of Navigation").
2. The Suez Canal Authority is to be informed at least one week before loading.
3. Owing to special traffic arrangement and precaution taken by the S.C.A., additional charges will be levied for each case separately.
4. Applications will be studied case by case. For that reason the following information is required:
   - (a) Port of loading and discharging.
   - (b) T.P.I.
   - (c) Beam, d.w.t., S.C.N.T.
   - (d) Last transit and maximum draft.
   - (e) Transit draft for particular transit Southbound.
5. Vessels over 47 ft. draft:

If vessel is up to 170,000 tons d.w.t., one tug escort.
If vessel is over 170,000 tons d.w.t., two tugs escort.

A rate of 6,000 S.D.R will be charged for each tug escort.

HEALTH: On entering, vessels must hoist the International Quarantine Signal for compulsory quarantine. Any sickness must be reported to the doctor specially when it is presumed that the sick will be hospitalised. The Quarantine doctor meets the ships whilst entering the port and the ships are boarded in turn. To get a quick clearance and not to be left for later attendance, Masters are requested to receive the doctors as soon as they board and to have the following documents ready:

Quarantine Forms in Duplicate: When inserting the ship's register net tonnage special care should be taken in indicating same on the 2 quarantine forms (Form No. 15 Q.A.) as the dues are calculated on that tonnage, as incorrect information may cause complications.

Derat Certificate should be handy for inspection.

Clearance from Last Port should also be handy.

All ports at which the vessel has called as well as dates of sailings for the last 30 days should be inserted in the form.

Quarantine Signals:

By day: "Q" flag (signifying vessel healthy). *"Q" Over first substitute (QQ).* (Vessels have cases of infectious diseases more than 5 days ago, and there have been unusual mortality among the ratings or crew on board.) *"Q" over L flag (QL)* signifying (vessel is infected and has cases of infectious diseases less than 5 days ago.)

By night: red light over white: The flags and lights must remain hoisted until Free Pratique is granted. Ships in transit under Quarantine through the Suez Canal will use the same signals until they clear the other end of the Canal.

Important: In the event of a vessel arriving from a port that has been internationally declared infectious and the incubation period has not yet expired at the time of the ship's arrival at an A.R.E. port the vessel is put under compulsory Quarantine, moored at an isolated berth and no shore contact is allowed. Nevertheless, the ship can still carry out her normal operations on condition that all shore personnel are holding valid vaccination and/or inoculation certificates issued by the Quarantine Administration. The ship's personnel should also carry International Vaccination and/or Inoculation Certificates. Final landing passengers, not carrying such certificates, will be landed under Quarantine supervision and will be kept isolated at the lazarette until incubation period is over.

Pratique Granted by Radio: Pratique may be granted prior to ship's arrival provided the following conditions are adhered to:

(1) The vessel must be a regular liner known to the Quarantine Authorities and has a doctor on board.
(2) Details shown on the Quarantine Statement should be radioed to the Quarantine Authorities 24 hours prior to ship's arrival.
(3) Masters of vessels must declare before their arrival any accidents which might have taken place on board prior to the arrival in port.
(4) The ship must not have called at any infected port.

RADIO: *Authorised Personnel Checks:* Masters of vessels are requested to contact the Suez Canal Authority via its wireless station "SUQ" (watch frequencies 425 kHz, 454 kHz and 468 kHz) whenever they want to make sure of the identity of any Suez Canal personnel embarking their vessels, either in the approaches or in the harbours or in the Canal waters. Also in case of any urgent complaints which may need quick investigation.

Radio Officer's Report: May 1990.

"SUQ" receives on 425 kHz, 454 kHz, 468 kHz and transmits on 421 kHz.

The station comes on watch at 0900 hrs. (L.T.), with CQ general call, till 1300 hrs., only for messages regarding convoy. It will not accept public correspondence, but will accept messages for Port Authorities regarding joining or missing convoy, etc.

General messages are sent and accepted at 1500 hrs. (L.T.).

VTS: Vessel Traffic Management System in operation.

TUGS: Highly qualified crew are available on board several tugs owned by the Suez Canal Authority in Port Said, Suez and in all Suez Canal stations. These tugs assist vessels to berth in Port Said harbour as well as in Canal if a case arises. It is left solely to the Canal Authority to decide whether more than 1 tug is needed (free of charge) to assist any ship to moor in the Port Said harbour, but if a Master of a vessel finds it necessary to employ an extra tug for berthing or if he needs a tug for any other reason, such an operation will then be charged against the vessel.

Salvage Tug Boats:

(1) 3,200 h.p. *Mounir, Moawen 1, Moawen 2.*
(2) From 3,500 to 5,000 h.p. *Antar, Bassel, Barei, Fahd.*
(3) 6,400 h.p. *Mared, Shahm.*

Harbour Tug Boats:

1,600 h.p. *Bori, Wakar, Chadid, Hout, Kirsh, Morgan, Shabar.*

**Note:* In good weather the length on buoys may be increased from 3 m. to 9 m. according to the length of the berth and height of the vessel.

Quays at Port Said: The Suez Canal Authority has quays to enable vessels to berth alongside at Cheriff and Abbas Basins. Length about 1,300 m. Height about 2 m. from sea level. Also 14 cranes of 3 tons lifting capacity each, running on rails have been installed. Maximum draft allowed is 27 ft. The best part of these quays is ready and vessels with full cargo for discharge are now berthing alongside. Vessels drawing more than 27 ft. have to lighten their cargo into lighters to that draft before berthing.

The distance between Bollards 23 and 24 South of deep Abbas Quay (30 m.) has been reserved for the berthing of one Ro/Ro vessel by the stern, within the present allowed draft (27 ft.).

Height of quay from sea level: 2 m.
Average tide all year: from 40 to 50 cm.
Thickness of fender: about 50 cm.
Breadth of quay edge: from 50 to 60 cm.

Container quay with length 350 m. and depth 45 ft. 2×45 ton cranes are being installed. An additional 250 m. multi-purpose quay has been built adjacent to it.

Grain vessels of 45,000 d.w.t. can berth alongside a 100 m. length hulk with 2 barges as spacers. Rate of discharge 400 t.p.h. Storage capacity: 10×400 ton silos and 1×20,000 silo.

Suez:

Port Ibrahim: Port Ibrahim is the Port of Suez. It consists of North and South Basins.

North Quay: The North Basin has, on the North side, a quay length of 2,415 ft. a total breadth of 975 ft. and depth of 26 ft. at high tide. Quay can accommodate 4 large ships.

Berths 4 and 5, where stores are available, are suitable for general cargo.

Khedivial Quay: Berths No. 9, 10 and 11, length 119 ft., depth 24 ft at high tide.

Mobile cranes available; 5 tons, 15 tons and 30 tons capacity.

Pilgrim's Quay: (Pontoon Berth) No. 6, 1 berth, length 1,000 ft., dra 26 ft.

Adabiya Quay: This quay is situated on the Western shore of the Sue Bay, and is under the control of the Naval Authorities. The max. draft i 26 ft. 06 in. and can accommodate 4 large vessels. Max. length of vesse allowed to berth alongside quay 500 ft. Mainly bulk wheat discharge an direct delivery of general cargo. Also see "Developments".

Marakib Quay: Situated at the entrance of the Canal depth 28 ft.; ca accommodate passenger and cargo vessels.

Storage Capacity at Suez:

North Quay	40,150 sq.ft.
Pilgrims Quay	20,952 sq.ft.
Khedivial Quay	8,448 sq.ft.
	69,550 sq. ft.

While stacking spaces on the quays are: 332,050 sq.ft.

STEVEDORES: As stated in the ETA messages, Masters are advise to include in their messages details of cargo to be discharged in eithe Port Said or Suez, hatch by hatch and gangways required, if possible All loading and discharging operations in Port Said Harbour and Sue Roads are effected by lighters. There are steel lighters, and self-propelled barges available for this purpose that will allow rapid work t be carried out. At Port Said several reefer ships are provided with fla floating pontoons to facilitate discharge of cargo. At Port Said the dra of water does not allow ships to be berthed alongside quays to carr out cargo operations except in Cherif and Abbas Quays whic accommodate vessels up to 27 ft. and consequently same are carrie out also from and into lighters which are brought alongside the vesse whilst at anchor.

MEDICAL: It is very essential for Agent to receive advance notice o required medical attendance at least 24 hours prior to ship's arrival. A ordinary medical supplies are available and prescriptions are execute at any time at moderate prices and delivered during ship's stay in por Medical assistance at Port Said and Suez is available. Consultations o board could be arranged through ship's Agent at any time by day o night. Reliable dentists are available at Port Said and could be consulte on board, if necessary, and during the following period at their clinics From 0900 to 1300 hrs. and from 1600 to 1900 hrs.

Oculists are available for consultations at town clinics in Port Sa during usual working hours. Opticians are also available at Port Said The following hospitals are available with ample first, second and thir class accommodation, accepting patients irrespective of nationality a reasonable charges:

At Port Said	*At Suez*
Al Mabarra Hospital	Al Mabarra Hospital
Notre Dame de la Deliverande Hospital	Abou El-Azayem Hospital
Two General Government Hospitals	General Government Hospital
T.B. Hospital	Isolation Hospital
Isolation Hospital	Ophthalmic Hospital
Ophthalmic Hospital	

Ship's personnel should carry international vaccination and/o inoculation certificates if a vessel is arriving from a port that has bee internationally declared infectious and the incubation period has not y expired at the time of arrival.

TANKERS: There is a bunkering station at Port Said harbour which ca accommodate 4 tankers with not more than 38 ft. draft for the purpos of discharging their cargo of fuel or diesel oil to the different oil bunkerin companies.

Tankers in Suez discharging bunkers and changing crew do so in th New Suez Terminal or the Suez Petroleum Basin. Tankers in Port Sa discharge bunkers only.

Oil Storage: There is ample tank storage for bulk petroleum products

New Suez Terminal: The terminal is situated in Suez Roads.

(1) Presently one berth has been reconstructed and is used b tankers chartered by EGPC.
(2) Minimum depth of water at LWOST in the approach Channel 38 ft.
(3) Minimum depth of water at LWOST alongside each berth is 38
(4) Maximum safe length of tanker applicable 750 ft.
(5) Six pipe lines each berth:–
    4 lines × 20 in.
    2 lines × 16 in.
    1 line × 4 in. (fresh water)
(6) All types of oil products can be handled at this berth.
(7) Facilities are available for reception of ballast. There is a charg for the service.

Suez Petroleum Basin:

Jetty No. 4 can take tanker length 500 ft. with 26 ft.draft.
Jetty No. 5 Max. length 530 ft. Max. draft 26 ft.
Jetty No. 7 Max. length 570 ft. Max. draft 26 ft.

There are sufficient pipes for discharge.

FRESH WATER: Available for supply ex self-propelled barges to a quantities required at all times with minimum supply of 50 tonnes vessels exceeding 500 tonnes gross provided vessels inside harbours, vessels at anchorage areas minimum supply quantity 200 tonnes.

Canal Shipping Agencies Company – Circular No. 123/84:

Fresh water supply for Southbound vessels in Bitter Lakes and Ba West Branch:

Owners and Masters are hereby notified that Southbound vess entering the Canal direct from sea, will be able to have their fresh wa supply while at anchor in the Bitter Lakes or in Ballah berths as fr 20th November, 1984.

The Suez Canal Authority has its lightening vessel "Nagda I" statio at Ismailia and ready for this purpose.

The vessel "Nagda I" is 3,200 d.w.t., 85 m. long, 15 m. breadth a her fresh water tanks capacity is 1,200 tons.

Demands for fresh water should be made through the Agent representing the vessel, 24 hours pre-arrival, to Port Said Harbour, price per ton of fresh water is the same as in Port Said harbour against receipts signed by Masters for the quantities received (minimum quantity is 200 tons).

FUEL: Different grades of fuel oil are available from different firms. It is customary that the Master should advise in his ETA message of the vessel's requirements, fuel or diesel oil, at least 24 hours prior to ship's arrival into port. Bunkering is by contract between the Owners and the different bunkering firms, and nominations should be arranged for each vessel separately between the Owners and Head Office of the bunkering firm abroad, and for which payment is also effected abroad. Only the Compagnie Orientale des Petroles accepts payment in cash out of Shipping Account No. 2 for supplies effected by them and in which case a nomination is not required. Vessels can be berthed in the oil installation and thus can effect their bunkering requirements through pipe-lines. Tankers which are not gas-free, cargo vessels carrying dangerous materials and passenger vessels, which are moored opposite the town, can be supplied with requirements of fuel and diesel oil ex self-propelled barges with max. capacity of 700 tons.

Port Said: Vessels can also be supplied at the anchorage areas and in Port Berths by means of supply tankers and self-propelled barges respectively.

Suez: Bunkering always done ex-barges.

FIRE PRECAUTIONS: In accordance with the Suez Canal Authority's regulations, tankers and vessels carrying dangerous materials must comply with their requirements, concerning fire regulations.

CONSULS: The following countries have Consulates or Consular Agencies in Port Said:

Denmark
Finland
France
Germany F.R.
Greece
India
Italy
Netherlands
Norway
Panama
Republic of China
Spain
Sweden
U.K.
U.S.A.
U.S.S.R.

The following countries have Consular Agencies in Suez:

Denmark Finland Norway Sweden

REPAIRS: Most types of repairs whether temporary or permanent can be carried out here by the Suez Canal Authority's shipyard or its subsidiary companies, under the supervision of the appropriate surveyors, if necessary. Suez workshops are well equipped for undertaking all kinds of marine repairs to hull, main and auxiliary engines, boilers, navigation aids, radar and cooling, and installations.

Vessels carrying explosives are not allowed to carry out repairs. Tankers loaded or in ballast but not gas free are not allowed to carry out repairs, except in cases of force majeure of which the Canal Authority is sole judge. Gas-free tankers must present Gas-free Certificate before they are allowed to carry out any repairs. If unavailable, a chemist approved by the Suez Canal Authority can be appointed for testing the tanks and issuing the Gas-free Certificate. The aforementioned restrictions are applicable at Port Said only and not at Suez where vessels anchor at roads and are of no danger.

Other Repair Facilities: Exist at Port Said for air conditioning, wireless telegraphy, radar, course and rudder recorder, refrigerators, and refrigerating units.

All kinds of repairs to echo sounding devices are carried out at Port Said and Suez by experienced specialists at reasonable charge. In Port Said different types are dealt with by the Port Said Engineering Works and Eastern Electronics. The electrical repair workshop in Suez is operated by Suez Electronics.

CARGO GEAR: These are normally supplied by the stevedores to comply with the nature of cargo discharged or loaded from cargo ships. Rope lengths and other cargo gear may be additionally required to expedite ship's discharge.

DRY DOCKS: A floating dock of 25,000 tons, capable of docking vessels up to 50,000 d.w.t., is available at Port Said as well as a dry dock at Suez. Sufficient notice is required to book the date for either the floating or the dry dock.

Repair facilities are available at Suez, where a dry dock is suitable to accommodate vessels up to 8,000 d.w.t.

Dimensions:

Extreme length to inner sill	464 ft.
Breadth at entrance	73 ft.
Height of water over keel blocks:	
at Spring tide	22 ft. fore, 26 ft. 3 in. aft
at Neap tide	19 ft. fore, 23 ft. 3 in. aft

The max. draft at which a vessel can use the dry dock is 17 ft. fore and 20 ft. aft. Deeper drafts may be arranged with the management.

The Suez Canal Authority's Floating Dock and Shipyard is situated at the Northern entrance of the Suez Canal, opposite to Port Said lighthouse.

Ships up to 50,000 d.w.t. may undergo all kind of repairs in the shortest possible time. Tankers, by gas-freeing during their voyage from their home harbour to Port Said, will save at least 4 days if they carry out their repairs in our dock.

Port Said Shipyard has 3 floating cranes, 1×40 ton, 1×100 ton and 1×200 ton capacity available for hire.

GANGWAY/DECK WATCHMEN: In both basins Cherif and Abbas at Port Said, where cargo vessels are normally berthed, ships' gangways can be used for disembarkation and embarkation. Passenger vessels are moored in special berths, i.e. Red Buoys, opposite the town, and can be supplied with 1 or 2 floating bridges (snake pontoon) which can connect the ship with the shore to enable the transit passengers and members of crew to proceed ashore. Cargo ships and other vessels mooring at the different buoys must lower their gangway to facilitate disembarkation and embarkation of ship's personnel as well as different officials. As far as Suez is concerned, all vessels must lower their gangway for the same purpose stated above. A deck watchman is recommended.

Also see "Police/Ambulance/Fire".

Circular No. 1/87:

1. Each vessel, tanker and/or floating unit of any type which berths in Port Said and/or Suez either to transit the Suez Canal and/or to carry out operations has to engage watchmen in the following procedure:

Gross Tonnage of Floating Unit	*Minimum No. of Watchmen to be engaged per Unit*
(a) up to 999 tons	1 watchman
(b) from 1,000 tons to 2,999 tons	2 watchmen
(c) from 3,000 tons and over	3 watchmen
(d) passenger ships	According to Master's requirements with a minimum of 3 watchmen.
(e) Large cargo ships	

2. Each Contactor has to submit to the Master a list showing names of watchmen engaged and their serial numbers.

3. The vessel has to ascertain that each watchman is in possession of an identity card and/or badge bearing a serial number, photo and name of the marine contractor through whom he has been engaged.

4. Masters are kindly requested not to sign blank receipts as it is recommended to keep a copy of same onboard for perusal in case of need.

5. Any incident concerning watchman's attitude on board has to be reported immediately to the Agents so that necessary steps can be accomplished on the spot for the safeguard of ship's interests.

Circular No. 86/84:

On the occasion of the current security precaution measures adopted at present, kindly advise Owners and Masters to the following steps:

1. Upon ship's arrival in Canal waters, security personnel may board vessels with at least two persons with certified identity cards issued by the Suez Canal Security Directorate. The above procedure is a part of security plan to safeguard ships' transit in the Canal due to the prevailing circumstances.

2. Utmost care and accuracy to be taken in relaying information about ship's tonnage and all particulars concerning cargoes onboard, thus complying with manifests, avoiding ship's delay or checking.

3. Special attention to be given on passing information for expected vessels either from the North or the South, and immediate notice for any alteration to be relayed to concerned parties with a minimum period of 6 hours before arrival at Anchorage Area to avoid being delayed.

OPENING/CLOSING HATCHES: In accordance with Charter Parties, the opening and closing of hatches are dealt with as instructed in this Agreement, but for vessels carrying out minor cargo operations, it is customary that stevedores open and close ships' hatches against ships' account. To expedite vessel's transit, it is always recommended that ship's crew, during vessel's entering into the harbour should open the hatches and rig ship's derricks in order that they may be ready for cargo operations immediately upon ship's arrival at either Port Said or Suez.

CUSTOMS ALLOWANCES: Every member of crew is entitled to have 1 carton of cigarettes, 8 ounces of tobacco, and 1 bottle of spirits for his own consumption during ship's stay in Port Said, Suez Canal transit, until vessel exits the Canal or vice-versa. Same applies to passengers, and a limited quantity of bonded stores can be permitted in public rooms and bars on passenger ships. Crew and passenger list, in duplicate, showing the amount in possession of each must be ready on vessel's arrival for submission to the Customs Representatives who normally proceed on board on arrival to seal up the Bonded Stores.

CREW CHANGES:

By law, only the official State Agents are permitted to handle reception or repatriation of crew in Egypt.

Crew members arriving at Cairo Airport to join a vessel must have a letter of introduction addressed to the Manager of Cairo Shipping Agency, 7 Abdel Khalek Tharwat Street, P.O.Box 468, Cairo, telephone number 745755 or 745863. This introductory letter is to be produced immediately upon arrival to the representative attending at the airport.

Note: A representative is usually in attendance when the crew member steps off the bus and passes through the doors at the entrance hall. Distance from the bus about 20 m. – 25 m. – just in front of the banks.

Visas can be obtained at the airport.

The Suez Canal Authorities have also stipulated the following requirements for arriving crew members:

(a) Be of same nationality as the vessel's flag.
(b) Be in possession of a contract signed and stamped by the shipowners.
(c) Be holding a valid Seaman's Book.

Note: Crew members joining vessels at Suez Canal are not permitted to bring with them spare parts, equipment, electrical apparatus, etc., for vessels unless the goods in question are accompanied by an air waybill which must indicate the words "in transit", together with an invoice from the suppliers stating description and value of the goods.

Principals are requested to telex their Agent giving full details of crew changes including names, flight numbers, dates and times of arrival.

Agent's Notice: This is to bring to your kind attention due to the fact that Owners are sending the return tickets for repatriation of crew members by PTA which procedure entails delay in reserving a place on board the aircraft in addition to the delay that results in tracing the whereabouts of the PTA. This in turn causes extra hotel expenses and we are therefore requesting that Owners leave the ticketing to us in order to cut hotel expenses. Please note the usual crew discount is obtained.

AIRFREIGHT: The Official State Agents are the only Agents legally entitled to handle airfreighted consignments such as parcels, spares, etc., and the following procedure should always be followed:

All parcels should indicate:

(a) Name of vessel to which consignment is intended and port of delivery.
(b) Name of Official State Agent.
(c) The wording . . . . "delivery at Cairo Airport to Cairo Shipping Agency only, on behalf of (insert name of Official State Agent)".

(d) All parcels to be encircled with a wide self-adhesive tape, coloured red. In addition a self-adhesive label to be affixed bearing the name of Cairo Shipping Agency and also the name of the Official State Agent in large capital letters.

(e) The parcel and air waybill must indicate the words "In Transit for M/V......".

(f) Suppliers of the spare parts must always be instructed to enclose with the parcel, copy of their invoice stating description of the contents and value and to ensure that the commodity of the cargo can be indicated precisely on the relative Bill of Lading.

Note: Crew members joining vessels at Suez Canal are not permitted to bring with them spare parts, equipment, electrical apparatus, etc., for vessels unless they are accompanied by an air waybill and an invoice duly completed as instructed above. Please note that any goods for vessels arriving with embarking crew members must also follow precisely points (e) and (f) as indicated above otherwise the Customs Authorities will refuse to release such goods "In Transit".

In order to enable check upon airfreighted consignments, Principals are requested to telex advise their Agent giving full details of flight number, date, air waybill number, etc.

Circular No. 19/83: Dated 8th February, 1983.

Parcels of spare parts, equipment and electrical apparatus arriving care of crew members without transit shipping documents.

Reference is made to our previous circulars, dealing with the above subject, ending with No. 101/82, dated 31st October, 1982, requesting you to kindly ascertain that the air waybill covering a parcel of spare parts must show that same is "In Transit for M/V......".

The object of the present circular is to bring to your kind attention that, considering that, according to Regulations, a crew member is allowed to be accompanied only by his personal effects, the Customs Authorities refuse to release "In Transit" other goods, such as spare parts, various equipment, electric apparatus of high value (T.V., video etc.) arriving care of crew members. As already explained, the goods in question should be accompanied by an air waybill and an invoice duly completed as described previously.

Kindly, therefore, arrange for parcels of spare parts, equipment, apparatus etc. not to be forwarded care of crew members unless they are accompanied with complete shipping documents, otherwise it will not be possible to have them released "In Transit".

Circular No. 114/1983:

We would refer to our various Circulars ending with No. 19/1983 (see above), dated 8.2.1983, dealing with the necessity of instructing Suppliers of spare parts to ensure that:

(a) the parcels be accompanied by copies of invoices showing description of their contents and its value.

(b) that the relative Bills of Lading should point out the commodity of the cargo precisely.

Moreover, you are also kindly requested to make certain that the respective Air Waybill should clearly show that the parcel is "In Transit for M/V......", indicating the vessel's name to enable the Customs to avoid dealing with the parcels as "Import Cargo", which irregularity causes much complication and delay.

In this respect, it is also recommended that parcels be airfreighted to Cairo four days before ship's arrival, taking into consideration the weekends and official holidays.

Circular No. 121/84: Arrival of ship's stores consignments by airfreight to Cairo Airport: Notice is hereby drawn to the urgency of notifying all concerned as regards the arrival of airfreighted ship's stores consignments in ample time before reaching Cairo Airport, prior ship's arrival at one of the Suez Canal ports, with a minimum period of four days before ship's arrival. This will enable our Cairo branch to complete the necessary Customs formalities, and ensuring delivery to respective vessels.

Kindly be guided accordingly.

AIRPORT: The distance between the international airport at Cairo and Port Said or Suez is normally 2.5 hours. International airlines serve this airport. Cairo Shipping Agency is on constant contact with Agent for the necessary instructions.

In the interest of all and in order not to lose any time and to avoid any restrictions when sending crew members by plane to join their respective vessels, it is essential that the Agent concerned should notify by cable in good time the flight number as well as the time and date of the arrival in Cairo, thus enabling the Agent to notify Cairo Shipping Agency for the necessary clearance and as to whether they should be sent to join their vessels.

HOLIDAYS: *General Holidays.*

February 22nd	Unity Day
May 1st	Labour Day
May 9th	Sham El Nessim (Spring Holiday)
June 18th	Evacuation Day
July 10th – 13th	Ramadan Bairam (End Of Ramadan)*
July 23rd	Revolution Day (National Day)
September 16th – 20th	Courban Bairam (Pilgrimage Feast)**
October 6th	Armed Forces Day
October 7th	Islamic New Year***
October 24th	Suez Day
December 16th	Mouled El Nabi (Birth of the Prophet)

*Possibly observed July 11th – 14th
**Possibly observed September 17th – 21st
***Possibly observed following day.

The Dates of the Islamic holidays are stated approximately. Working hours: 0600–1800 hrs. Overtime: 1800–0600 hrs. Friday is the weekly day of rest but it does not affect labour.

If a holiday falls on a Friday it is possible that the following working day will be decreed a holiday also.

Ramadan: Thirty days' fast and how it affects labour; Cargo operations can be carried out at night and on Fridays and General Holidays agains payment of overtime rates. Arrangements should be made on th previous working day to enable Customs to delegate the necessar personnel in time.

Local Holiday

Port Said:

December 23rd – Port Said Day

POLICE/AMBULANCE/FIRE: Vessels which are moored in the harbou either in Port Said or Suez requiring assistance from the Port Police should hoist the International Code Signal (YM). There is always a police guard appointed by these Authorities on each ship in either Port Said or Suez harbour. First-aid assistance can provide ambulances at a request through the Agent. In case of fire on board when in port, the Master must inform the Port Authorities (the Suez Canal Authority imediately and at the same time give a general warning by means of a long blast of whistle or siren and be prepared to move his ship to another berth if so required. The Suez Canal Authority own 7 tugs and other craft distributed in various points of the Canal with individual output from 10 to 950 t.p.h. well equipped with fire-fighting appliances, ready for use at any moment.

Police guards are placed onboard vessels in Suez Roads for vessels protection.

TELEPHONES: There are no telephone facilities available in Port Said except at Berth No. 4 Red where passenger ships are normally berthed and this can be connected when snake pontoon is fixed with ship's gangway.

SERVICES: Port Said and Suez being situated at a middle poin between the East and the West, have become an ideal centre fo replenishing stores and provisions which can be obtained in bond o from town.

Delivery of provisions and stores is effected 24 hours a day at Por Said and Suez.

It is recommended that Masters should order their requirements prio to their arrival with a view to avoiding any delay specially for ships joining the 0700 hrs. convoy Southbound.

Deck and engine stores are ample and are also available and sold a (in bond) prices.

Paints: All kinds (bottom, boot-top, topside, enamel, engine ready mixed heat resisting, varnishes) are also available at "in bond" prices. Painting of ships or undertaking any maintenance work on board is permitted while ship is in port waiting to join the North or the Southbound convoy as well as while transiting the Suez Canal.

The following companies are represented here:

International Marine Paint	Sole agent in Egypt: Internationa Shipping Enterprise.
Hemples Marine Paint Camrex Marine Paint	Represented by The Egyptia Marine Supply and Contracting C (cable address: "Consup")

Chemicals: The following chemical firms are represented in Port Sai and Suez:

Gamlen & Co.	Represented by The Egyptia Marine Supply and Contracting C (cable address: "Consup")
Bird Archer/Norus (Tommons & Chartes) Chemicals. Drew Chemicals Cameroid Products. Paroline Chemicals Cameroid Products. Walker Bow.	Represented by The Internationa Marine Services Co. (cab address: "Marinco")
Houseman Marine Chemicals	International Shipping Enterprise

Grease and lubrication oils. Available from:

Esso Petroleum Co.
Misr Petroleum Co. (ex Shell)
Mobil Oil Co.
Caltex Oil Co.
Ocean Oil Co.
Wisure Oil Co.
Fina Oil Co.
Gulf Oil Co.
Castrol Burma Oil.

An advance notice of 48 hours is necessary to arrange for lubricatin oils and/or bunkers required.

Charts: Admiralty Charts are available at Port Said from the Egyptia Marine Supply and Contracting Co. If any order has to be supplied a Suez, arrangements can be made for the required charts to be se there.

Defense Mapping Agency, Washington and British Admiralty Char available from International Shipping Enterprise, who also act a distributor for Pains-Wessex Marine distress signals and line-throwin equipment.

Cigarettes: American and British cigarettes are available "in bond".

Technical Gases: Technical gases are also available at Port Said an Suez, and empty containers can be exchanged.

Fish: Bream, prawns, crab, rock fish available throughout the year; Mul available June/February; Slip soles available November/March.

Vegetables: Beans, beetroots, cauliflower, cabbages, carrots, eggpla endive, garlic, herbs, lettuce, marrows, parsley, radishes, spinac tomatoes, turnips, escarole, onions, potatoes: *Available throughout t year.*

Green peas, celery, pumpkins: *Available January/March.*
Artichokes: *Available October/April.*
Parsnips, spring onions: *Available November/May.*
Green pepper, mint, lady's finger: *Available June/September.*
Capsicum: *Available May/December.*
Cucumber: *Available February/December.*
Lemons, limes: *Available throughout the year.*
Fresh figs, fresh dates: *Available August/October.*
Bananas: *Available October/June.*
Grapefruits, oranges, tangerines: *Available October/May.* (When o of season import citrus are Available).
Apricots: Available May/June.

Water melons, sweet melons: *Available May/October.*
Grapes: *Available June/October.*
Plums, peaches: *Available June/October.*
Mangoes: *Available August/September.*
Pears: *Available August/October.*
Apples: *Available November/February* (also imported the whole year).

Eggs: Eggs are available throughout the year.

Meat: Fresh meat is only supplied to vessels having a Mohammedan Crew after permission is obtained from the Customs. Other vessels are supplied with "frozen" in bond.

Laundry: Well equipped, reliable and fast services are available at Port Said, through the ship's contractor. Ship's laundry is usually delivered within 24 hours. For vessels remaining a few hours in Port Said and transiting the Canal, their laundry could be collected, washed and ironed and then transported to Suez by special car or lorry for delivery to them there.

Garbage: No refuse or ashes are allowed to be thrown whilst ships are moored in Port Said, transiting the Canal or in Suez Roads. Small barges are available in Port Said and Suez for disposal of garbage or ashes, which craft can be obtained at a reasonable hire.

Divers: Suez Canal Authority's Divers as well as other Contractors' experienced divers are available, capable of carrying out any kind of underwater repairs including welding and fees are subject to the kind of job to be performed. Anchors and other articles left behind by any ship in Canal waters are retrieved on no cure no pay basis.

SHORE LEAVE: Crew members are allowed ashore provided that they obtain a shore leave pass issued by the Immigration Authorities through the local Agent. They can proceed ashore by means of motor launches or rowing boats at their own expense. For vessels mooring opposite the town and connected with the shore by snake pontoon, crew, together with passengers, can proceed ashore free of charge.

IDENTIFICATION CARDS: Every member of crew must have a Seaman's Book deposited with the Officer in charge for inspection, if so required by the Immigration Authorities. If a vessel is stopping in Port Said or Suez for a lengthy time, these Seamen's Books are normally taken off the ship by the said Authorities and kept in their departing office pending ship's sailing day when they are placed on board by the proper officer on a previous advice. Identity cards are also needed if a crew member wishes to proceed ashore for a short visit to the town or for proceeding to any excursion inland.

DEVELOPMENTS: There is a modernisation plan underway at Suez. When the modernisation is complete, cargo handling will be largely mechanised, resulting in a great increase in the port's capacity. The first stage of the expansion will provide 3 multi-purpose berths, shoreside installation, container-handling facilities, and grain storage facilities. An offshore grain pier connected to onshore storage silos is expected to be built during the next phase.

Additional berthing facilities under construction at Adabiya with depth 11.0 m. – 13.0 m.

Also see "Berthing – Port Said".

SHIPMASTER'S REPORT No. 1: *Suez Canal Transit (South/North) (1976)* - updated 1986.

Cape Guardafui light was clearly seen and identified at a range of 39 miles.

There was an oil rig operating Southwards of the Cape in approximate position Lat. 11° 44′ N., Long. 51° 21′ E.

The Straits of Bab El Mandeb were congested but the traffic separation scheme seems to be satisfactory. The passage of the Red Sea does not seem to be any different from the past.

When passing Aden, a preliminary message was sent to the Suez Agent. This was of doubtful value but it is advisable to send a message addressed to 'Port Authorities Suez', via station "SUK", giving the following information:–

Ship's name and flag.
Whether transit of canal is desired.
Destination.
Where from.
Cargo aboard.
Whether any dangerous cargo carried.
Draft.
ETA at – 23° North, Straits of Gubal, Suez.

All radio messages through the Egyptian radio stations must have a signature, i.e. 'Master'.

The ETAs can be updated as necessary. The message to the Port Authorities is mandatory.

Approaches: The Gulf of Suez is congested by oil rigs – particularly in the vicinity of Ras Shukheir and the Ramadan and July oil fields where there are many rigs and flares and supply vessels crossing the Gulf. One oil rig was working in the middle of the fairway East of Ras Dib. With poor visibility, if a Southbound convoy were to be met in this region, it might be wise to proceed at manoeuvring speed.

A pilot cutter operates just South of the waiting area but an approaching ship will be called by signal lamp from ashore, asking for the ship's name and making "VHF". Contact is then established on Channel 16, changing to 6 when the ship will be told whether to anchor in the waiting area or remain underway until the Pilot boards.

Pilotage: The Pilot boards from a launch by means of the accommodation ladder (which should be lowered to within 3 ft. of the water) and takes the ship to her designated anchorage in Suez Bay.

Arrival Formalities: Quarantine and Customs authorities (about 8 people) board the ship at the anchorage together with the Agent. The accommodation ladder is used for all boarding and disembarkation within the canal. It should be raised when not actually in use otherwise the ship will be boarded by numerous "Businessmen".

A list of forms required is listed below but there are others which the various authorities bring with them and some are presented for filling in more than once and by different officials. This ship's transit was delayed because the Agents had not received funds from London. Deck log books for the past six months have to be landed.

The Suez Canal Cargo Declaration Form (in duplicate) is handed to the Pilot who disembarks at Ismailia.

At Anchor: With 3 shackles out, this ship lay comfortably at A8 berth. Some difficulty, however, was found in reconciling the various anchor bearings with the chart.

A bumboatman will seek permission to set up shop aboard. Care should be taken to agree methods of payment beforehand.

A listening watch should be kept for Suez Control on Channel 6. Water can be ordered through the Control and will be delivered in a large water boat carrying about 300–400 tonnes. Rate of delivery is about 50 t.p.h.

Convoy lists are made out at about 0300 hrs. and ships can call Suez Control soon after that to learn their convoy number and time of Pilot boarding. Convoys can start as early as 0500 hrs. This vessel was number 10 and hove up at 0830 hrs. Our searchlight was brought out at 1700 hrs. and the boats at 0500 hrs. We were asked to carry 4 extra boats but Pilots advise against this as the time taken to unload 6 boats can cause delay at the other end of the canal.

Transit: The Pilots change at Ismailia. The convoys cross in the Great Bitter Lake, anchoring as necessary. There is now one convoy from each end every day.

A Harbour Pilot takes over on reaching Port Said and, as soon as the searchlight and boats have been off-loaded and the ship has entered the approach channel, he disembarks.

The Agent will board at Port Said with yet another form to be filled in and he will return the log books.

Documentation:

2 Health Forms (Egyptian)
1 Passport Form (Egyptian)
1 Radio Frequencies Form
1 D.B. Tank Statement (Egyptian)
2 Cargo Declarations
*4 Cargo Manifests
8 Crew Lists

Plus several others which will be produced by the various officials.

*It was explained that our company's vessels do not carry cargo manifests but the Agent said that a typed statement of the amount of cargo aboard, destination and where loaded would suffice.

SHIPMASTER'S REPORT No. 2:
Suez Canal Transit (South/North) – (1976) - updated 1986.

After clearing Aden a radio message was sent to the Port Authorities Suez via Port Said Radio advising them of the following:

Ship's name and flag.
Whether desire transit.
Destination and last port.
Cargo aboard total tonnage and type of cargo.
Whether dangerous or explosive cargo carried.
Draft.
British tonnages gross and nett.
Date Suez Canal Certificate issued.
Tonnages gross and nett from Suez Canal Certificate.
Advice as to whether searchlight required.
ETAs 23° North, Straits of Gubal, Suez.

During the passage in the Red Sea both Port Authorities and Agents received up-dated ETA messages. When using SUK radio to give up-dated ETA this station advised that a cable was necessary to be sent to Port Authorities Port Safaga via SUK giving ETA Strait of Gubal.

Navigation in the Red Sea does not seem to be any different from the past. The Traffic separation scheme in the Straits of Bab El Mandeb seems satisfactory.

Straits of Gubal and passage in the Gulf of Suez was in daylight. Especially in the Straits of Gubal very few seem to adhere to any form of traffic separation scheme. There is no doubt that if it were night time or poor visibility then it would be advisable to be on 'Stand-by'. There is now an oil rig Lat. 27° 57′ N., Long. 38° 41.2′ E., or 349°, 5.7 miles from Ashrafi Lt. Ho.

The Ramadan and July Oil Field area has many oil supply ships, most of the Southbound traffic was met in the Straits of Gubal thus further North it was very quiet.

The ship was anchored in the waiting area South of Newport Rock but alas this area shown as being to the East of the 2 green flash buoys is *now wrong!* The waiting area is to the S.E. of the most Southern Green flash buoy. About 1 mile South of the previous position. Evidently there is shoaling in the old area and ships have grounded.

On arrival at the waiting area the ship had to anchor as the Southbound convoy was clearing. A tug with Pilot Signal closed the ship to ask for information with regard to tonnages, cargo etc. After first vocal contact Channel 6 VHF was used. The ship was not called up by lamp nor did the Port Control answer any VHF requests etc. It would seem that if the Tug is on station advice is received from there. They did not, however, attempt to advise the ship that the waiting area had been altered.

As the ship anchored a boat came alongside with two watchmen but as I had not requested these and the visitors had not boarded they were sent ashore.

Later a Pilot boarded via the accommodation ladder to shift the ship from the waiting area to a designated anchorage, in our case '1B'. Ship was anchored in '1B' by 0030 hrs. on 12th, having arrived at the waiting area at 1947 hrs. on the 11th.

As the ship had some essential repairs to the main engine which would only take a short time, engines were immobilised. Pilot had advised that 0800 hrs. would be earliest time for transit. During the middle watch the area was hit by a fierce short lived blow from a Southerly direction. Although the vessel did not drag, ships close by did. It was necessary to pay out more cable to ensure a bulk carrier cleared us comfortably. During this time a ship called Port Control to say they had dragged some 3 to 5 cables.

As the weather for some 3 hours was considered bad for small boats the first of the visitors did not board until 0515 hrs.

The Canal Surveyor, who was the first to board was quite helpful and pleasant. He took the Suez Canal Tonnage Certificate for verification as the ship was making a first transit. This I have been informed will be returned to the Company in about 2 months.

Later other officials boarded about 0700 hrs. The Agent also came off with the mail. The 2 electricians for the searchlight insisted on being given a cabin or they would not remain on board. As there was no spare cabin, except one in the crew accommodation, I endeavoured to explain that a reasonable shelter had been built on the after end of No. 2 hatch. It transpired that in the end I moved a patient who had tonsilitis out of the hospital. Later the Canal Pilot informed me that the electricians cannot be so demanding provided a reasonable shelter is provided.

Documentation was found to be as advised in the report above. One small difference is that the Cargo Declaration form is only required as 1 copy and is now in English with one form for South to North ship's and another for North to South ships.

At the moment there is only the 1 convoy each way per day. Hours of commencing transit seem a little doubtful. I gather that first Southbound ship leaves Port Said at 0100 hrs. while the first Northbound ship now leaves Suez at 0600 hrs.

Searchlight and 2 boats were brought alongside and loaded in ample time prior to the Canal Pilot boarding at 0909 hrs. I gather that because of the 'bad' weather for those few hours the delivery of searchlights and boats was delayed. Also no advice was obtainable on the VHF after 0300 hrs. with regard to convoy number or time of proceeding. About 20 minutes' notice was given over the VHF.

The Transit was quite straight forward. Ship was anchored in the North Anchorage, Bitter Lakes for 3.5 hours, the Southbound convoy passing. Transit was commenced at 0947 hrs. At Ismailia the Pilot changed. He took the Cargo Declaration with him.

Port Said was reached at 0033 hrs. on the 13th. The Sea Pilot boarded here as did the Agents who returned the Ship's Register and Log Books which had been landed at Suez. The ship had to keep moving while the boats and searchlight and personnel were either off-loaded or disembarked. At night this is not easy and the whole crew are required to ensure a safe and quick operation. Once these matters were completed the Sea Pilot left well within the breakwater. Accommodation ladder was used at all times for Pilots, Officials and Agents boarding and disembarking. Fairway Buoy was abeam at 0148 hrs. on the 13th.

SHIPMASTER'S REPORT: September 1979.

The Pilot advises that vessels anchoring further South than the 0.5 mile limit South of No. 1 Buoy at Suez may not receive Pilot.

SHIPMASTER'S REPORT: June 1982 - updated 1986.

Suez Canal – Northbound.

Vessel was 8th in convoy and joined convoy at about 0600 hrs. On arrival Suez contact Suez Agent on VHF Channel 6 or 13. When Northbound and messages are sent to Agents at Port Said we found it was necessary to repeat the messages to Agents at Suez otherwise you do not receive any advance information. The Port Said Agents pass the messages to Suez Agents but Suez Agents do not repeat to the ship.

We transited with experimental loaded draft of 46 ft., plus one tug escort. The tug changes twice during transit so have altogether 3 tugs during transit. If the Pilot gives a bad report about the vessel then SCA will assign 2 tugs, one ahead and one astern.

According to the Pilots, maximum permissible draft is 53 ft.

We were clear of Canal about 1730 hrs. and full away 1 hour later.

In the Gulf of Suez there are now drilling rigs in the traffic lanes but they give out good and regular navigational warnings.

SHIPMASTER'S REPORT: October 1983.

Anchorages: Northbound:

Anchorage area for Northbound VLCCs, 3rd generation container ships and vessels over 38 ft. draft is rarely used as Agents are understandably reluctant to board vessel there.

To ensure prompt transit vessel should anchor in the Northern waiting area. However, it would be prudent for deep draft ships arriving after midnight to anchor in the deep draft area and move to the Northern anchorage around 0800 hrs.

SHIPMASTER'S REPORT: July 1984.

ETAs and information on ship's data were sent after departure Jeddah as per Shipmaster's Reports No. 1 and 2 to both Agents "Assiuship Suez" and Port Authorities Suez and updated at entering Gubal Straits. First VHF contact was made by Chabana Shipchandlers who called us and relayed our message in Arabic to the Port Authorities. Pilot station called vessel only after having anchored at the outer waiting anchorage to tell us that we were anchored in a wrong position while at least 12 other ships were anchored in the prohibited anchorage area. However, the pilot station did not come back so the vessel stayed anchored where she was. When vessel approached the waiting area several heavily manned and well equipped business motorboats approached and besieged the ship and could only be stopped from entering the ship by placing seamen along the ship's rail. I knew these businessmen from years ago but they seemed to have become more aggressive by trying to enter the ships and they even followed the ship to the inner anchorage which they had never done before. The Pilot boarded the ship at very short notice and brought her inside. Clearing by Agent and Immigration was as usual, the only difference I noted was that the logbook did not have to be handed to be checked ashore. The next morning (Friday!) vessels were not called as usual to receive their number and Pilot boarding time. The Pilot suddenly came on board without any notice and therefore it is wise to have the engine standing by all the time while expecting to join the convoy. Suez Canal passage was as usual and vessel left the Canal through the new channel.

SHIPMASTER'S REPORT: August 1984 – updated 1986.

Vessel transited Canal Northbound. At the time of the Pilot boarding at Suez the Canal boat had not yet arrived although the boatmen were on board. The Pilot on being informed, contacted the Port Control and then asked if vessel would agree to using a lifeboat if the need arose. This was agreed and vessel transited Canal.

SHIPMASTER'S REPORT: February 1986.

If vessel has engine trouble and is unable to join convoy as designated it is necessary to have a classification surveyor issue certificate stating repairs have been carried out satisfactorily. After repairs completed a Pilot will board for engine trials.

If vessel has only one crane amidships and carries 2 Canal boats then one boat must be carried over the side during transit.

SHIPMASTER'S REPORT: May 1987 (Vessel Northbound).

The deepwater anchorages South of Conry Rock originally designated for VLCC's, 3rd. Generation Container ships and vessels over 38 ft. draft are no longer used and all vessels must proceed to the waiting area North of Conry Rock to undergo pre-transit formalities and subsequent embarkation of Pilot. Vessels over 38 ft. draft are not required to shift anchorage into Suez Bay but enter the Canal directly from the waiting area at the appointed time. Pilot boards at the waiting area. I would assume this also applies to VLCC's and 3rd. Generation Container ships. Our own transit draft was 39 ft.

Rigging of Accommodation Ladders for Canal Transits: Pilots advise that the following may safely be regarded as standard procedure due to the prevailing winds. On Northbound transits, rig ladder on starboard side. On Southbound transits, rig ladder on port side.

SHIPMASTER'S REPORT: June 1988.

Departure Port Said (Northbound):

When entering the Mediterranean from the Suez Canal (East Channel), and as soon as the searchlight and boats have been off-loaded the Pilot departs, even though the vessel is still within the breakwaters.

The East Channel is 11 miles in length and strong currents prevail. In 1987 a tanker grounded even though a pilot was on board, due to the vessel having violated local traffic regulations.

When proceeding Southbound into the Canal, the Pilot boards at the Fairway Buoy of the West Channel leading into Port Said.

SHIPMASTER'S REPORT: August 1989.

Port Said – Southbound:

If mooring in Port Said, lashings not required to be supplied by ship. The lashings are carried by the mooring boats.

Passes and passports required to be carried by persons going ashore. Pakistani crew members require special passes.

If transitting in the 0100 hrs. convoy, vessel can call Canal Authorities on VHF Channel 13 from 2100 hrs. (previous evening), to ascertain time of pilot boarding and convoy number.

2 electricians and mooring boats arrive at 2230 hrs.

As a rough guide for 0100 hrs. convoy from Port Said, it is about 4.75 hours to Ismailia, 2 hours from Ismailia to Bitter Lakes Anchorage (3.5 hours at anchor), then 3 hours to Suez.

For the 0600 hrs. convoy from Suez, about 6 hours to Ismailia, then 5 hours to pilot departing Port Said.

For convoy from Suez, an electrician and mooring boats arrive about 0130 hrs. Call Canal Authorities at about 0200 hrs. for convoy information.

TRANSIT SERVICE: Gulf Agency Company operate a Suez Canal Transit Service the purpose of which is to assist Owners and Shipmasters with the numerous formalities applicable to transit of the Canal including supervising the pre-payment of Canal Dues and ensuring no delay in entering or clearing the Canal. Full details of the service are obtainable from Gulf Agency Co. Ltd., P.O.B. 61033, GR-15110 Amaroussion, Greece. Tel: 6830613-17 (5 lines). Telex: 214548, 216344, 218687 ("GAC GR"). Fax: 6830611. Cables: "Gulf Agency" Athens.

SUEZ CANAL – RULES OF NAVIGATION*

JANUARY 1986 (with amendments)

Part I Navigation
Part II Canal and Lakes (Characteristics)
Part III Communications – Signals

*Not all the Rules of Navigation are printed herein. Part IV is concerned with tonnage and dues and the Appendix with carriage of dangerous goods.

GENERAL

Article 1: Transit Through the Suez Canal

(a) Transit through the Suez Canal is open to vessels of all nations, subject to their complying with the conditions stated in the present Rules of Navigation and all the references and circulars which shall be issued by the Suez Canal Authority. They will constitute an integral part of these rules, and the provisions of the International Regulation for Safety Of Life At Sea, and its amendments, as well as the provisions of the International Regulations for Preventing Collision at Sea, and all laws, orders and regulations issued by the A.R.E. Government.

However, the Suez Canal Authority reserves the right to refuse access to the Canal Waters, or order the towage or convoying of vessels considered dangerous or troublesome to navigation in the Canal. Non or erroneous declaration of dangerous cargo (see "Article 47 Bis").

(b) By the sole fact of using the Canal Waters, Masters and Owners of vessels bind themselves to accept all the conditions of the present Rules of Navigation, with which they acknowledge being well acquainted, to conform with these conditions in every respect, to comply with any requisition made with a view to their being duly carried out, and to adhere to the Canal Authority's private Code of Signals as shown in Part III of these Rules.

Article 2: Agents

Every vessel other than warships intending to transit the Suez Canal or staying at Port Said or Port of Suez, or in the Suez Canal Basins or docks must have a recognised Shipping Agent.

The Egyptian Authorities are to be notified of intended transit of warships in the Suez Canal : *Viz* : Ministry of Foreign Affairs, Ministry of Defence as well as Ports and Lights Administration.

Article 3: Canal Waters (Definition)

Canal Waters mean the Canal proper, and the access channels thereto,(1) the waters within the Canal Authority's Concession adjacent to the Canal proper and Port Said Harbour and Port of Suez.

The Canal proper, as to its length, is reckoned to run from Km. 3.710 West Branch for vessels entering from Port Said Harbour and from Km. 1.333 East Branch for vessels entering through the East Approach Channel, to Hm. 3 at Suez, including the 2 channels of the Great Bitter Lake and all Canal by-passes.

As to its width the Canal is bounded by the banks when they are above water; when the banks are submerged, the width of the Canal is limited to the perpendiculars at the point of intersection of the sub-marine bank with the horizontal plane corresponding to the max. draft authorised including squat.

(1) Port Said Eastern and Western Entrance channels, Suez Entrance channel which includes the Port of Suez Eastern channel leading to the Canal entrance.

Article 4: Responsibilities

When in Canal Waters, the Owners and/or Operators of any vessel or floating structure of any description are responsible for any damage and consequential loss it may cause either directly or indirectly to the Canal Authority properties or personnel without option for the Owners and/or Operators to release themselves from responsibility by purely and simply abandoning the vessel, floating structure or wreck.

The words "Owners and/or Operators" for the purpose of the present article, shall be construed to mean person, persons or corporate body responsible for the vessel at the time of the navigational accident or incident.

Moreover, the vessel guarantees to indemnify the Canal Authority in respect of any claim against the latter by reason of any damage whatsoever she may cause either directly or indirectly to third parties.

The vessel waives the right to claim against the Suez Canal Authority for any damages caused by third parties that she may sustain while in Canal Waters.

Vessels carrying petroleum or dangerous cargo must comply with these regulations and also with the Appendix to the Rules of Navigation for vessels carrying dangerous cargo.

Article 5: Temporary Delaying of Vessels

The Canal Authority may delay a vessel for the purpose of investigating any claim or dispute that may arise, or any formal or informal complaint, or allegation of violation of the laws of the Canal.

A vessel may be delayed until in the opinion of the Canal Authority, its tenderness, trim, list, cargo, hull, machinery have been put into such condition as will make the vessel reasonably safe for her passage through the Canal.

No claim for damages is accepted or considered because of any such temporary delaying of vessels.

Article 6: Pilotage

Pilotage is compulsory for all vessels whatever their tonnage,(2) when entering, leaving, moving, changing berth or shifting in Canal Waters or Port Said and Port of Suez harbours.

Any exemption must be explicitly authorised by the Suez Canal Authority (See Art. 11(e)).

(2) Except Egyptian vessels under 300 Tons Suez Canal Gross Tons authorised to work in Canal Port and Accesses and Egyptian fishing vessels under 300 tons S.C.G.T. This does not apply for the Canal proper.

Article 7: Changing Berth in Road Anchorages

Vessels in Port Said Anchorages Area (Northern and Southern Anchorages), Suez VLCCs and 3rd generation container ships Anchorage, Suez Roads, the Bitter Lakes or Timsah Lake are not authorised to change berth or anchorage without explicit authorisation from the Suez Canal Authority.

PART I – NAVIGATION

CHAPTER I: SUEZ CANAL FEATURES

SECTION I: Approaches

Article 8: Port Said (See "Plan")

Ten miles before arrival to Approach Buoy,(3)(4) all vessels arriving from seaward should contact the Suez Canal Harbour Office by VHF (Channel 16). If not able to, by R/T (2182 kHz) or by W/T via S.U.Q. for instructions (see Part III – Articles 87 and 88).

Approach Buoy: Position: Lat. 31° 25′ 30″ N., Long. 32° 22′ 00″ E. Height 10 m., black and yellow horizontal bands.

Daymark: 2 black cones points in.

At Night: Group flashing white light (9) every 13 seconds.

Fitted with a Racon and fog horn.(5)

(3) See "Plan".

(4) All buoys in the Canal and access channels may be replaced temporarily by others of smaller size.

(5) Not fitted at time of printing.

(A) ANCHORAGE AREAS(6): The incoming vessels have two anchorages.

(1) The Northern Area

(i) For VLCCs, 3rd generation containerships and vessels over 38 ft. draft.

(ii) The area is limited as follows:

North Limit Latitude	31° 25′ 00″ North
South Limit Latitude	31° 23′ 12″ North
East Limit Longitude	32° 20′ 30″ East
West Limit Longitude	32° 16′ 00″ East

(6) All vessels arriving from sea have to anchor in the berth allocated to them by the Suez Canal Port Authority.

(iii) V Berths: Centre of Circle (radius 750 m.)

Berth	*Latitude*	*Longitude*
V1	31° 23′ 42″ North	32° 19′ 30″ East
V2	31° 24′ 30″ North	32° 19′ 30″ East
V3	31° 23′ 42″ North	32° 18′ 30″ East
V4	31° 24′ 30″ North	32° 18′ 30″ East
V5	31° 23′ 42″ North	32° 17′ 30″ East
V6	31° 24′ 30″ North	32° 17′ 30″ East
V7	31° 23′ 42″ North	32° 16′ 30″ East
V8	31° 24′ 30″ North	32° 16′ 30″ East

(iv) Vessels at anchor in this area when entering the Canal (East Channel) will proceed between the East and West Buoys at Hm. 135.(7)

At. Hm. 150 (East) a buoy is fixed to be used as a lead when approaching the 2 Entrance Buoys of Hm. 135 (course 194°).

Hm. 150 Buoy: Red Buoy. Red St. Andrew's Cross. At Night: Occulting red (1) every 4 seconds.

Hm. 135 Buoys: West: Black Buoy. At Night: Quick flashing green light. East: Red Buoy. At Night: Quick flashing red light.

(7) All the buoys in the Suez Canal and its approaches are fitted with Radar Reflectors.

(2) The Southern Area

(i) For all other vessels.

(ii) The area is limited as follows:

North Limit Latitude	31° 23′ 03″ North
South Limit Latitude	31° 21′ 15″ North
East Limit Longitude	32° 20′ 30″ East
West Limit Longitude	32° 16′ 42″ East

(iii) C Berths: Centre of Circle (radius 500 m.)

Berth	*Latitude*	*Longitude*
C1	31° 21′ 30″ North	32° 20′ 06″ East
C2	31° 22′ 06″ North	32° 20′ 06″ East
C3	31° 22′ 42″ North	32° 20′ 06″ East
C4	31° 21′ 30″ North	32° 19′ 24″ East
C5	31° 22′ 06″ North	32° 19′ 24″ East
C6	31° 22′ 42″ North	32° 19′ 24″ East
C7	31° 21′ 30″ North	32° 18′ 42″ East
C8	31° 22′ 06″ North	32° 18′ 42″ East
C9	31° 22′ 42″ North	32° 18′ 42″ East
C10	31° 21′ 30″ North	32° 18′ 00″ East
C11	31° 22′ 06″ North	32° 18′ 00″ East
C12	31° 22′ 42″ North	32° 18′ 00″ East
C13	31° 21′ 30″ North	32° 17′ 18″ East
C14	31° 22′ 06″ North	32° 17′ 18″ East
C15	31° 22′ 42″ North	32° 17′ 18″ East

(iv) Vessels at anchor in this area will enter the Port of Port Said through the West Approach Channel as follows:

(a) Take on their starboard: Fairway, No. 8, No. 7 and No. 6 Buoys.

(b) On the port are 3 yellow buoys showing yellow lights.

(c) On reaching No. 5 pair of buoys at Hm. 80 showing occ. green and red, one every 4 seconds, they will proceed through the Old Channel to port (course 217.5°).

(3) Prohibited Area for Anchorage

The area between the East limit of the 2 anchorage areas and the approach channels is prohibited for anchorage to all vessels and floating units.

(B) DANGEROUS AREAS

(1) Wreck. A wreck buoy is situated on the Western side of a sunken ship at Hm. 195 West of the approach channel:

Lat. 31° 25′ 19″ North Long. 32° 23′ 00″ East.

Height 5 m., painted black and red horizontal bands, with day mark 2 black balls. Showing group flashing white (2) every 10 seconds. (See "Plan").

(2) Dumping Areas. The hopper dredgers, dredge underway for several months every year in the entrance channels and dump in the following areas.

3,140 m. East of the axis of the East channel at Hm. 140.

Lat. 31° 20′ 48″ North Long. 32° 25′ 48″ East.

4,000 m. East of the axis of the East channel at Hm. 80 approximately.

Lat. 31° 18′ 42″ North Long. 32° 24′ 42″ East.

(C) PORT SAID APPROACH CHANNELS

(1) Buoyage (See "Plan" – "Suez Canal North Entrance").

The Port Said West approach channel extends from the port of Port Said till Hm. 80 where it joins the East approach channel.

The Port Said East approach channel extends from the land boundary, East of Port Said, till Hm. 195.

The 2 channels are marked, on each side, by light buoys of 5 m. height. The light is red on the Eastern side and green on the Western.

(a) East Approach Channel (See "Plan").

The buoys of the East Approach Channel are black with day mark cone point up in the West and red with day mark can in the East, showing by night flashing lights, except: the 2 buoys indicating the Northern end of the channel, at Hm. 195, are Isophase (2 secs. on, 2 secs. off). The distance between them is 745 m.

(b) Junction of East and West Approach Channels

Three yellow buoys mark the junction of the East and West approach channels. They are placed at Hm. 83, Hm. 95 and Hm. 105.

Buoy at Hm. 83: Yellow in colour, is fitted with a yellow St. Andrew's cross day mark and shows by night group flashing yellow (5) every 20 seconds.

Buoy at Hm. 95: Yellow in colour, shows a fixed yellow light.

Buoy at Hm. 105: Yellow in colour, is fitted with a yellow St. Andrew's cross day mark and shows by night group flashing yellow (4) every 15 seconds.

(c) West Approach Channel

The buoyage of the West approach channel of Port Said Harbour, is as follows:

(i) Port Said Fairway Buoy (See "Plan").

Off Port Said, a fairway light buoy, height 10 m., painted black with yellow vertical stripes, surmounted by a day mark 2 cones point out, and showing group flashing white light (3) every 10 seconds.

Lat. 31° 21′ 18″ North Long. 32° 20′ 42″ East.

(ii) The buoys of the West approach channel are black with day mark cone point up in the West and red with day mark can in the East and show fixed lights, except the Northern buoy on the West side of the channel which shows occ. green (1) every 4 seconds (Buoy No. 5 of Hm. 80) and is fitted with day mark cone.

(2) Navigation

(a) Northbound Vessels: (i) All Northbound vessels use the East Approach Channel. The end of the navigable channel is the pair of buoys at Hm. 195. (course 014°). From Hm. 195, vessels are to steer North (000°) for 5 miles before altering course.

(ii) Vessels leaving Port Said harbour to sea, use the West Approach Channel (course 037.5°) till Hm. 80 where it joins the East Approach Channel (course 014°) till Hm. 195. From Hm. 195, vessels are to steer North (000°) for 5 miles before altering course.

(iii) Vessels of the Northbound convoys wishing to enter Port Said Harbour shall proceed through the East Approach Channel till Hm. 195, then steer North (000°) for 5 miles and then steer for the anchorage berth allocated by the Harbour Office(8)

(8)This is to avoid crossing incoming vessels to the Northern Anchorage Area.

(b) Southbound Vessels: The maximum draft authorised for Southbound vessels is limited to 42 ft.(9) in accordance with the tables giving the maximum draft according to the vessel's breadth.

(9)Maximum draft will be increased to 42 ft. on further notice.

(i) VLCCs, in ballast or partially loaded, 3rd generation container ships and vessels having a draft of more than 38 ft. and up to 42 ft.(10) maximum, have to use the East Approach Channel (course 194°).

The said vessels enter the channel between flashing green buoys of Hm. 165 and Hm. 135.

(10)Maximum draft will be increased to 42 ft. on further notice.

(ii) All other vessels, either transiting the Canal or berthing at Port Said, have to enter through the West Approach Channel (course 180°) from the entrance, passing between the West green buoys and the East yellow buoys till Hm. 80, then *alter course* to 217.5° passing between green and red buoys, till Port Said Harbour.

(D) BREAKWATERS:

(1) The breakwater protecting the West Approach Channel is situated to the West of the channel and extends from land boundary till Hm. 73 with a submerged part from Hm. 50. This part is marked by cigar shaped unlit buoys.

(2) Two breakwaters protect the East Approach Channel. The Eastern extends 2 km. from the land boundary; the Western, 0.5 km.

Each breakwater has a small fixed white light on its end.

Article 9: Suez (See "Plan")

Five miles before arrival at the First Separation Zone Buoy, all vessels coming from sea should contact the Suez Canal Harbour Office by VHF Channel 16. If not able to, contact by R/T (2,182 kHz) or by W/T via S.U.Q. for instructions. (See Part III, Articles 87 and 88).

(A) Separation Zone

A Separation Zone has been established. Extending 0.3 miles on each side of the line connecting the two Separation Buoys mentioned hereafter. All vessels arriving or leaving have to pass the Separation Zone Buoys(11) on their Port side.

(11)See "Plan".

Separation Zone Buoy No. 1 (Southern Buoy-Lightfloat):

Lat. 29° 39′ 33″ North Long. 32° 32′ 00″ East

Height 5 m., yellow in colour with a yellow St. Andrew's Cross daymark and a fog horn. Showing flashing yellow light (1) every 2 seconds.

Separation Zone Buoy No. 2 (Northern Buoy-Lightfloat):

Lat. 29° 48′ 36″ North Long. 32° 32′ 00″ East

Height 5 m., yellow in colour with a yellow St. Andrew's Cross daymark Showing group flashing yellow light (4) every 15 seconds.

(B) Anchorage Area for Northbound VLCCs, 3rd Generation Container Ships, and Vessels Over 38 ft. Draft

This Anchorage Area is indicated by the following buoys:

(1) South Shoal Buoy:

Lat. 29° 38′ 48″ North Long. 32° 35′ 54″ East

Black, cone shaped, showing a green isophase light, (2 seconds ON-2 seconds OFF); fitted with a 12 mile Racon. (Not fitted at time o printing).

(2) Buoy "K":

Lat. 29° 41′ 12″ North Long. 32° 38′ 42″ East

Black, cone shaped, showing a fixed green light.

(3) Buoy "L":

Lat. 29° 45′ 00″ North Long. 32° 38′ 42″ East

Height 5 m., black, cone shaped and showing a flashing green light.

(4) Conry Rock:

Lat. 29° 48′ 18″ North Long. 32° 34′ 15″ East

Description of the light float:

9 m. length float, painted yellow and black.

Day mark: "Conry Rock".

Top mark: 2 cones one above the other, point to point, painted black

Characteristics of light:

Quick flash light (9) every 15 sec.

Elevation: 6 m.

Range: 9 nautical miles.

(i) V Berths: Centre of Circle (radius 833 m.)

Berth	*Latitude*	*Longitude*
V1	29° 46′ 30″ North	32° 35′ 00″ East
V2	29° 45′ 30″ North	32° 35′ 00″ East
V3	29° 45′ 30″ North	32° 36′ 00″ East
V4	29° 45′ 00″ North	32° 37′ 00″ East
V5	29° 44′ 30″ North	32° 36′ 00″ East
V6	29° 44′ 30″ North	32° 35′ 00″ East
V7	29° 44′ 00″ North	32° 37′ 00″ East
V8	29° 43′ 30″ North	32° 36′ 00″ East
V9	29° 43′ 30″ North	32° 35′ 00″ East

(C) Waiting Area for other Northbound Vessels

The area bounded by:

Conry Rock Buoy	Lat. 29° 48′ 18″ North	Long. 32° 34′ 09.0″ Eas
Buoy (M)	Lat. 29° 50′ 00″ North	Long. 32° 35′ 18.0″ Eas
Buoy (N)	Lat. 29° 50′ 39″ North	Long. 32° 35′ 18.0″ Eas
Spherical Buoy (D)	Lat. 29° 51′ 20″ North	Long. 32° 35′ 18.0″ Eas
Spherical Buoy (C)	Lat. 29° 52′ 00″ North	Long. 32° 35′ 18.0″ Eas
Spherical Buoy (B)	Lat. 29° 52′ 08″ North	Long. 32° 34′ 34.0″ Eas
Spherical Buoy (A)	Lat. 29° 52′ 15″ North	Long. 32° 33′ 51.0″ Eas
Buoy Hm. 60.00 E	Lat. 29° 52′ 22″ North	Long. 32° 33′ 07.5″ Eas
Buoy Hm. 70.50 E	Lat. 29° 51′ 48″ North	Long. 32° 33′ 13.0″ Eas
Buoy Hm. 80.50 E	Lat. 29° 51′ 16″ North	Long. 32° 33′ 17.0″ Eas
Position (R)	Lat. 29° 48′ 36″ North	Long. 32° 33′ 12.0″ Eas

(D) – Arrival to Suez of Northbound Vessels

Vessels coming from sea have to pass East of the separation zone

VLCC's 3rd generation Containerships and vessels over 38 ft. dra have to anchor in the anchorage area specified for these vessels (Berths) in the berth allocated to each vessel by the Suez Canal Authori Other vessels have to pass East of the separation zone and ancho the Waiting Area as previously indicated.

(E) – Prohibited Area for Anchorage. The area bounded by:

	Latitude	*Longitude*
Western Buoy	29° 51′ 16″ North	32° 33′ 17″ East
Eastern Buoy	29° 51′ 15″ North	32° 33′ 06″ East
Position (P)	29° 48′ 36″ North	32° 30′ 54″ East
Position (R)	29° 48′ 36″ North	32° 33′ 12″ East

is strictly prohibited for anchorage for all ships.

(F) – Suez Entrance Channel

(Including the Eastern Channel leading to the Canal Entrance).

This channel is used for vessels entering or leaving Suez Canal and also by those entering Port of Suez and using its anchorages (12)

Buoyage of Suez Entrance Channel.

This channel is buoyed as follows:

(1) A pair of light buoys at Hm. 80.5 (entrance buoys):

(i) The Eastern Buoy, height 5 m., black, cone shaped and showing a green occulting light (1) every 4 seconds.

(ii) The Western Buoy, height 5 m., red, can shaped and showing an occulting red light (1) every 4 seconds.

The distance between the Eastern and Western Buoys is 340 m.

(2) Proceeding Northward, the channel is marked on both sides by light buoys, height 5 m.

(i) On the Eastern side of the channel, the buoys are black, cone shaped and show a flashing green light.

They are placed as follows:

Hm. 70.50
Hm. 60.00
Hm. 44.40
Hm. 24.00
Hm. 7.00
Km. 162.150 (Occ. green light)

(ii) On the Western side, the buoys are red, can shaped and show a flashing red light.

They are placed as follows:

Hm. 70.50
Hm. 60.00
Hm. 44.40
Hm. 21.00
Hm. 17.20
Hm. 1.00 (Occ. red)

Course: From the entrance buoys (Hm. 80.50) (New Port Rock Channel) to the green light buoy of Hm. 24.00.

Northbound: 352.5°
Southbound: 172.5°

(G) – Canal South Entrance

The Canal South entrance is marked by 2 light buoys, height 7 m.

(1) The Eastern at Km. 162.150 is black, cone shaped and showing occulting green light (1) every 4 seconds.

(2) The Western at Hm. 1.00 is red, can shaped and showing occulting red light (1) every 4 seconds.

(H) Port of Suez: Port of Suez is delimited by the imaginary line which extends from Ras Misalla to Mersa Sadat and comprises the coastal zone North of this line, up to Suez Canal entrance.

(1) **Navigation:**

(a) General Rules:

(i) All vessels shall conform to the International Regulations for Preventing Collision at Sea.

(ii) Navigation in the port is limited to approved channels only.

(iii) Crossing or overtaking in the channels is strictly forbidden.

(iv) Vessels must proceed in the port with caution and at reduced speed.

(v) Vessels must not let go their anchors except in the anchorage.

(b) Traffic Regulation:

(i) Vessels entering the port from sea and vessels leaving the port for sea.

These movements shall be effected through the Western channel, except for vessels to which the following anchorages have been allocated: 1C – 2C – 3C – 4C – 5C. They should use the Eastern channel.

(ii) Vessels entering the Canal from the Port, the Zone N.W. of Green Island, anchorages 8C to 16C and anchorage groups A and B shall pass through the Western channel, then South of Green Island to join the Eastern channel and then proceed to the entrance of the Canal.

Vessels entering the Canal from the Zone N.E. of Green Island and Anchorages 1C to 7C shall proceed directly from their anchorages to the entrance of the Canal.

If the number of vessels exceeds the number of anchorages, vessels in excess shall anchor South of the Western channel, parallel to anchorages 2A, 4A, 6A, 4B and 7B, making sure to leave the Western channel clear for navigation at all times.

Vessels entering the Canal from the Zone South of Green Island and anchorages 1D to 6D shall proceed directly from their anchorages to the entrance of the Canal; or if leaving for sea, shall use the Eastern Channel.

(iii) Vessels coming from the Canal shall proceed to sea through the Eastern Channel. If anchoring in the Zone N.W. of Green Island or anchorages 8C to 16C and anchorage groups A and B, shall proceed through the Eastern Channel, then the Western Channel, until reaching the designated anchorage. If anchoring in the Zone N.E. of Green Island or anchorages 1C to 7C, they shall proceed directly from the Canal to the designated anchorage.

(c) Priority of Movement in the port:

Priority of movement in the port shall be as follows:

(i) Vessels coming out of the Canal.

(ii) Vessels proceeding to the Canal.

(iii) Vessels coming from sea must wait outside the port until the Eastern channel is clear.

(iv) Vessels leaving the anchorages of the Port of Suez.

(v) Vessels coming out of the Basins (Ibrahim Basin – Adabeya – Petroleum Basin).

(vi) Vessels using the New Petroleum Jetty.

(d) Priority of Passage in the Eastern Channel:

Vessels leaving:

(i) The Canal.

(ii) Anchorages of Port of Suez, and proceeding Southward to sea, have to pass through the Eastern channel.

Ships approaching Port of Suez from seaward should wait outside until the channel is clear.

Buoys:

Buoy 2A	281.5° – 20.9 cables from Newport Rock Light
Buoy 3A	278.5° – 26.9 cables from Newport Rock Light

These buoys show flashing red light (1) every 5 seconds.

(2) Buoyage of Port of Suez:

Position of Green Island Light: Lat. 29° 54′ 39″ North, Long. 32° 31′ 48″ East.

(a) Eastern Channel (East of Green Island) is limited by the following buoys:

(i) In the East:

Buoy	*From Green Island Light*	*Distance (m.)*
Hm. 7.00 East	062°	2440
Hm. 14.00 East	080°	1820
Hm. 24.00 East	111°	1720
Hm. 44.40 East	144°	3300
Hm. 60.00 East	153°	4720
Hm. 70.50 East	166°	5720
Hm. 80.50 East	159°	6680

(ii) In the West:

Buoy	*From Green Island Light*	*Distance (m.)*
Hm. 1.00 West	050°	2600
Hm. 17.20 West	082°	1390
Hm. 21.00 West	108°	1260
Hm. 44.40 West	150°	3110
Hm. 60.00 West	157°	4640
Hm. 70.50 West	160°	5630
Hm. 80.50 West	162°	6630

(b) Shallow water in the Green Island Zone is limited as follows:

North Buoy bearing 000° at a distance of 1,490 m. from Green Island Light, showing flashing green light (1) every 2 seconds.

Red Buoy of Hm. 17.20.

Red Buoy of Hm. 21.00.

South-West Buoy bearing 239.5° at a distance of 780 m. from Green Island Light, showing group flashing green (3) every 7 seconds.

West Buoy bearing 308° at a distance of 820 m. from Green Island Light, showing group flashing green (2) every 5 seconds.

Oil Jetty quick flashing white light.

(3) Anchorages of Port of Suez:

Anchorage	*Bearing of Green Island Light*	*Distance from Green Island Light* (cables)
(a) Group "A":		
1A	308.0°	6.1
2A	333.0°	7.2
3A	334.5°	4.2
4A	358.0°	6.4
5A	018.0°	3.9
6A	023.0°	7.1
7A	048.0°	5.8
8A	041.5°	8.9
9A	061.5°	8.2
10A	083.0°	7.2
(b) Group "B":

(4) In Bad Weather When Harbour is Closed:

(a) Vessels coming from sea:

It is recommended not to enter the Port of Suez when it is closed by foul weather which prevents the Pilots from boarding the vessels.

However, any vessel who would like to enter on her own responsibility will have to contact the Suez Canal Authority wireless station (SUQ) and ask permission for doing so, giving her draft and length in feet, by the following cable:

"I wish to enter Suez Anchorage on my own responsibility.
Length ....ft. Draft ....ft.

If permission is granted, the Master will receive the following cable:

"Port is closed. Entering on your own responsibility.
Available Anchorage ....".

(b) Vessels coming out from the Suez Canal:

In case when the embarkation of the Road Pilot is not possible the following cable will be sent to the ship:

"Owing to bad weather Road Pilot will not board your ship".

The following will be added in case the vessel would ask for an anchorage:

"Available Anchorage ...."

(c) Vessels anchored in the Port of Suez leaving for sea:

Vessels who would like to sail on their own responsibility, will have to hoist the signal for Pilot, send the following cable to SUQ and wait for orders:

"I wish to go to sea on my own responsibility. Please confirm".

They may proceed if they receive the cable:

"You may proceed to sea on your own responsibility".

Article 10: Roads and Harbour Pilot Signals:

Vessels requiring a Pilot for:

(a) Entering from sea
(b) Sailing out to sea
(c) Changing berth
(d) Entering the Canal

should hoist a black ball over G by day and 3 white lights by night in a vertical line. These signals are to be hoisted where can best be seen.

SECTION II
Article 11: Pilotage

(A) Pilotage is compulsory in Canal waters:

All vessels (13) entering or leaving Canal waters, must take a Pilot.

However, the Suez Canal Authority reserves the right to put on board vessels under 1,500 tons gross a tug Master and under 800 tons gross a patron conducteur, instead of a Pilot.

Men of war and any vessel carrying dangerous cargo must have a Pilot regardless of their tonnage.

Roads Pilots, on boarding vessels arriving from sea, hand over to the Master the present Rules, the Declaration of State of Navigability and the Pilotage Form.

(13) See footnote as attached to Article 6.

(B) Port Said:

VLCCs, 3rd generation containers, and vessels over 38 ft. draft are piloted from Northern anchorage area for Canal transit through the East Approach channel. Other vessels, either for local trade or intending to transit the Canal, are piloted from Fairway Buoy to berths in the harbour through the West channel. Vessels are piloted between Port Said harbour and Port of Suez by Canal Pilots who are relieved at Ismailia. Northbound vessels either through East or West Branches are piloted till Hm. 80.00.

(C) Port of Suez:

VLCCs, large bulk carriers, 3rd generation containers, and vessels over 38 ft. draft are piloted from anchorage area South of Conry Rock for Canal transit. Other vessels are piloted from waiting area to anchorage area in the Port of Suez. These vessels are also piloted from Port of Suez by Canal Pilots who are relieved at Ismailia. Southbound convoy and vessels in Port of Suez Anchorages sailing South are piloted to Hm. 80.50. Pending Master's request, piloting may end at Hm. 44.40 (Newport Rock).

Vessels have to maintain course through the channel till the last pair of buoys keeping the separation zone on the port side.

(D) Master and Pilot:

(1) Master:

When a vessel is transiting the Canal, the Master or his qualified representative should be present at all times on the bridge; he has to keep the Pilot informed concerning any individual peculiarities in the handling of the vessel so that the Pilot might be in a position to give better advice to control the navigation and movement of the vessel.

(2) Pilot:

The duties of Pilots commence and cease at the entrance buoys of Port Said and Port of Suez. He only gives advice on manoeuvring the vessel, courses to steer, etc. He puts at the disposal of the Master his experience and practical knowledge of the Canal, but as he cannot know the defects or difficulties of manoeuvring every vessel, the responsibility falls completely upon the Master. The Pilot has to ensure the execution by the vessel of:

(a) The Articles of Rules of Navigation.
(b) The orders of transit given by Movement Control.

The manoeuvre and orders are carried out under the direction of the Master who is solely responsible.

It is therefore for the Master, taking into account the indications given by the Pilot, to give the necessary orders to the helm, to the engines, and tugs. If, in the interest of quick manoeuvres the Master thinks it preferable to allow the Pilot to give orders direct, manoeuvres carried out in these circumstances shall be considered as having been carried out on the order of the Master and on his sole responsibility.

Masters are held solely responsible for all damage or accidents of whatever kind resulting from the navigating or handling of their vessels directly or indirectly by day or night.

(3) The Pilot must inform the Movement Control Office or the Port officials immediately by WT and/or VHF or UHF if their advice and/or their orders, regarding the safety of navigation are not accepted or respected by the vessel.

The vessel in this case if underway is considered navigating without Pilot and an additional due of 15,000 Egyptian Pounds is charged.

(E) Moving in Suez Canal Waters without Pilot's assistance:

(1) Unless explicitly authorised by the Suez Canal Authority:–

(a) Whenever a vessel moves in Canal Waters or Port Said Harbour without having a Pilot on board she shall be charged an additional due of 15,000 Egyptian Pounds(14).

(14) Vessels under 300 tons SCGT are subject to Rules of Navigation for small craft.

(b) An additional due of 2,237.5 Egyptian Pounds shall be charged to vessels moving in Port of Suez Anchorages, or entering or leaving Basins at Port of Suez without having a Pilot on board(15).

(15) Vessels under 300 tons SCNT are exempt.

These dispositions do not apply in the event of the Pilot being suddenly unable to carry on with his duties owing to sickness or death, in this case the Master must:

Warn the vessels astern of his intended manoeuvre by means of the visual and sound signals as well as VHF and W/T.

Reduce speed and make fast if in the Canal, or the entrance channels, or anchor if in the Lakes.

The Movement Office at Ismailia is to be informed at all times by UHF and confirmed by W/T.

(2) Exceptions:

In case of bad weather to the extent of not allowing pilotage in Canal Approach channels, Masters will be authorised by notice from the Suez Canal Port Offices, to sail with their vessels on their own responsibility at the following positions:

(a) For Southbound convoy, from Km. 162 to sea.

(b) For Northbound convoy, from Hm. 30 in East Port Said channel Northward.

(c) For vessels leaving Port Said Harbour through West Approach channel, from Hm. 30 Northward.

(d) For vessels anchoring in Port of Suez anchorages wishing to head to sea, also for vessels in Waiting Area wishing to enter Port of Suez anchorage area.

(e) For vessels entering Port Said Harbour either for transiting Canal or for trade, through West Approach channel till Hm. 50 approximately where Roads Pilot will board vessels.

(f) For vessels entering Port Said East Approach channel, between Hm. 165 and Hm. 135 from VLCCs anchorage area to join Southbound convoy, Canal Pilot will board vessels at Km. 0 of East Port Said channel.

(g) For VLCCs and other large vessels joining Northbound convoy from new anchorage area South of Conry Rock, Canal Pilots will board vessels at Km. 161 approximately.

(h) For other vessels joining Northbound convoy from Port of Suez anchorages, Canal Pilots will board vessels at Km. 161 approx.

N.B.: (1) For items c, d, e, f, g and h, the time of proceeding will be fixed by Suez Canal Port Authority.

(2) In all cases advice will be given if necessary by shore radars to vessels(16).

(16) Vessels in Port Said Anchorage Area (Northern and Southern Anchorages), the Bitter Lakes or Lake Timsah, if changing berth or mooring without explicit authorisation from the Suez Canal Authority, shall be charged an additional due of 3,600 Egyptian Pounds and 2,237.5 Egyptian Pounds in Suez VLCC anchorage and waiting areas.

(F) Calling Pilots unnecessarily:

When a vessel signals for Pilot, and it is found when boarding that she is not ready to get underway in the limited time, the vessel is liable to be delayed and Pilot disembarked. The vessel will pay extra pilotage dues for the new Pilot as mentioned before.

(G) Extra Pilots:

(1) Additional Pilots shall be assigned in the following cases:

(a) Vessels over 80,000 SCGT.

(b) Vessels having cargoes or installations impeding visibility from inside the wheelhouse (obstructions to all-round view).

(c) If a Pilot is disembarked and relieved by another Pilot, in case of slow speed vessels, vessels having troubles which prevent continuation of transit with same convoy, or vessels that have to transit by day only.

(d) If vessel has no accommodation for the Pilot to rest while anchored in Bitter Lakes or making fast in mooring places for a long period.

(e) An extra Pilot for assisting the Pilot in charge, may be assigned on Master's request or by the Canal Authority if deemed necessary.

(2) A due of L.E. 200 (200 Egyptian Pounds) for every additional Canal Pilot and L.E. 100 (100 Egyptian Pounds) for every additional Road Pilot is charged.

CHAPTER II: ARRIVAL AND PREPARATION FOR TRANSIT

SECTION I: Pre-Arrival of Vessels
Article 12: Booking for transit

Vessels may book for transiting the Canal. The booking notice should reach the Suez Canal Authority Offices not later than four days prior to the transit date. It must contain the name, nationality of the vessel, her type (container, Ro-Ro, etc. . . .) her draft, Suez Canal Gross Tonnage and deadweight tonnage.

Vessels booking for fixed date will have priority to catch the convoy on that date, if they arrive within the time limit defined by the present Rules.

Booking can be cancelled or altered by notice to the Suez Canal Authority offices at least 24 hours before the date booked, otherwise the vessel shall be charged 100 (one hundred) Egyptian Pounds.

In case of VLCCs and similar vessels, this charge will be 1,000 (one thousand) Egyptian Pounds on account of the special arrangements made by S.C.A.

Vessels arriving without previous booking will catch the convoy if capacity of movement in the Canal permits, otherwise they may catch the following convoy.

Article 13: Notice of Arrival

Masters of vessels fitted with wireless apparatus are requested to transmit the following information to their Agents, 48 hours prior to the vessel's arrival.

The name and nationality of the vessel, her ex-name if any.

Suez Canal gross tonnage and deadweight tonnage.

Whether they intend transiting or merely stopping in the harbours and, in this case, mention the duration of stay required.

The ETA.

Whether they carry dangerous cargo, stating quantity and class according to IMO's regulations.

Number of crew on board plus number of passengers on board and their nationalities.

Furthermore, upon arrival anchorage areas vessels have to contact the Harbour Office by VHF (Port Said on Channel 9 – Port of Suez on Channel 15) giving full details either for transit or stoppage in harbour.

Vessel carrying dangerous cargo: Advance notice of arrival must reach the Canal Authority Offices at least 48 hours before the vessel's arrival to the Canal entrances. Masters of vessels carrying dangerous cargo, are required to furnish the Canal Authority with the detailed list of the dangerous goods they have on board, stating quantity and their IMO Classification. Moreover, the Master must inform the S.C.A.office by wireless telegraphy (SUQ) – NOT V.H.F.– of the above mentioned information as soon as possible. (Non or erroneous declaration of dangerous cargo – see "Article 47 Bis").

The above mentioned list, sent directly or through the shipping agency, must reach the Suez Canal Authority offices at least 48 hours before the vessel's arrival; failing which the vessel may be subject to delay before being authorised to enter the Canal Waters.

Article 14: Contacting Port Offices on Arrival

(a) Vessels have to contact the harbour office by VHF[17].

(1) Ten miles before arrival at Approach Buoy off Port Said.
(2) Five miles before arrival at separation Zone Buoy No. 1 off Port Suez.

(b) When in touch, give the following information:

(1) Latitude and longitude.
(2) Vessel's name.
(3) Vessel's call sign.
(4) Suez Canal official number, if any.
(5) Suez Canal gross tonnage and deadweight tonnage.
(6) Draft.
(7) Loaded or not.
(8) Kind of cargo.
(9) If transiting the Canal for the first time she has to send[18]:
  (i) Date of building.
      Having Suez Canal Tonnage Certificate or not.
      Date of issue if any.
      Call sign or official number.
  (ii) Length overall.
  (iii) Beam.
  (iv) Type of engines.

This information will assist the Harbour Master to identify the vessel through his radar, acquire and assign her identification "ID" tag which will follow her path until the other end.

(c) If failing to contact by the assigned Channels, Masters may use, with the consent of the Harbour Master through the International R/T (2182 kHz) or SUQ (W/T), any of the following frequencies:

(1) 156.650 (Channel 13) Port Said.
(2) 156.600 (Channel 12) Port Said.
(3) 156.550 (Channel 11) Port of Suez.
(4) 156.700 (Channel 14) Port of Suez.

(d) Any vessel who does not contact the Port offices during her approach is subject to delays in catching the convoys.

(e) When berthing, changing berth or sailing, the Master must handle the mooring ropes by means of ship's boats or mooring boats of a firm approved by the Suez Canal Authority.

Article 15: Documents to be produced

(a) Suez Canal Special Tonnage Certificate.
(b) Certificate of Registry.
(c) Statistical Declaration.
(d) Extract from the vessel's official documents and information concerning the vessel's type and her cargo (containers, barges, etc.).
(e) Declaration concerning the use of double bottom tanks and the lower parts of the high tanks.
(f) Declaration concerning vessels in ballast.
(g) Declaration of State of Navigability (see Art.79).
(h) The last Classification Certificate issued.
(i) Any other information necessary for transiting the Canal.

The Master of a vessel wishing to transit the Canal must register at the Canal Authority offices and pay the various dues.

He must furnish the Canal Authority's officials with all the particulars requested.

The vessel must in addition comply with the requirements of the A.R.E. Government Authorities.

In case the Authority deems it necessary to be supplied with a new Seaworthiness Certificate, the following Classification Societies are recognised to deliver same:

(1) Lloyd's Register of Shipping.
(2) Bureau Veritas Francais.
(3) American Bureau of Shipping.
(4) Registro Navale Italiano.
(5) Germanischer Lloyd.
(6) Norske Veritas.
(7) U.S.S.R. Register.
(8) Nippon Kaiji Kyokai.

Seaworthiness Certificates are accepted by the Suez Canal Authority in Arabic or English. If written in any other language, it is to be translated in one of these two above mentioned languages and duly certified by the Embassy or Consulate of the Arab Republic of Egypt.

In case of impossibility of obtaining said translation, it may be translated by the Embassy or Consulate to which the vessel belongs, in Egypt.

Failing to do same, a Seaworthiness Certificate is to be obtained locally from one of the recognised Classification Societies in the Canal Zone.

(A) Warships:

Warships transiting the Suez Canal Waters must be provided with a Suez Canal Special Tonnage Certificate showing the Suez Canal Gross and Net Tonnages.

If such document is not onboard, the Commanding Officer has to give, in writing, the following information:

(1) Name of Ship.
(2) Name of Commanding Officer.
(3) Call sign of the ship (Radio Call).
(4) LOA, beam overall and depth of the ship.

As long as the ship is not provided with the Suez Canal Special Tonnage Certificate, transit dues will be levied on the temporary Gross Tonnage product of the empirical formula without any allowance till the presentation of the documents required.

(B) Erroneous Declarations:

If the Canal Authority Officials discover false information concerning the cargo carried[19] or the ship's situation ballast or loaded, resulting from the shipping clerk's or the Master's negligence, in statistical declarations held, the tolls difference will be doubled.

The tolls difference means the difference between the correct and the wrong amount of transit dues.

Article 16: Stay in the Harbour

(a) The Master is responsible for the mooring of his vessel in Port Said harbour and Port of Suez.

(b) He must pay special attention to the instructions in the following paragraphs.

(c) When the vessel is moored to the buoys, the mooring ropes must be watched to ensure safe mooring. If two vessels are moored to the same buoy, when one leaves, the other must adjust her moorings.

(d) Masters must comply with the Harbour Master's advice regarding mooring ropes during the stay of their vessel in port; especially when, in case of expected bad weather, it is necessary to increase the moorings if required.

(e) When a vessel is moored with her stern to the bank, the Master must keep himself continuously informed of the depth of water aft, to avoid grounding on the submerged slope either as a result of the settling of the vessel as she loads, or her proximity to the bank.

(f) At night, the vessel, whether moored or manoeuvring, must show the lights prescribed by the International Regulations for Preventing Collisions at sea, in addition to the Suez Canal Light Signals.

(g) Unless authorised, barges alongside a vessel must not be more than two abreast.

(h) It is forbidden to try projectors, or to turn the propellers during the process of warming-up, in the absence of the Pilot, or without informing him when onboard.

(i) Vessels must not put their engines out of working order for any reason whatsoever without permission from the Canal Authority.

(j) The Master must always keep onboard sufficient crew to ensure efficient handling of the moorings, fire fighting and damage control.

(k) The Harbour Master or his delegate should have free access onboard to ensure the carrying out of the Regulations, to verify the vessel's seaworthiness, and to ascertain that dangerous cargo onboard complies with the Suez Canal Regulations.

Article 17: Change of Berth

(a) If the Master wishes to change the berth of his vessel, he should notify the Harbour Office stating the desired time when the shift should take place. A tug or more will be imposed to assist in the manoeuvres. The change of berth will take place at the time fixed by the Harbour Office. A Pilot will be sent to the vessel in due time.

(b) Shifting at the Master's request and the tugs used are charged for as per rates set down by the Suez Canal Authority.

(c) Charges for shifting due to erroneous or incomplete declarations by the Master must also be paid by the vessel.

(d) When necessary, the Harbour Master may order a vessel to shift; when so ordered, it should be made as quickly as possible. In such a case it is free of charge.

SECTION II: Preparations for Transiting the Canal

Article 18: Measures taken before entering the Canal

All vessels ready to enter the Canal must have their ladders and jib-booms run in, their boats swung in and any derricks or cranes obstructing the view forward, lowered.

---

[17] Port Said on Channel 16 – Port of Suez on Channel 16.

[18] In all cases the Master must inform whether aiming to transit the Canal or just stay in the harbour.

[19] e.g. The carriage of sweet water as cargo and declared as ship's water ballast; the omission of declaring the presence or quantity of containers on the weather deck or any cargo onboard, passengers, etc. . . .

Article 19: Mooring Ropes

At least 6 flexible floating mooring ropes of appropriate size for the vessel, in good condition, fitted with spliced eyes, must be in readiness for any emergency, at suitable points on deck. All arrangements must be made for their quick handling. For vessels equipped with tension mooring wires the number of floating ropes may be reduced to 4. It is to be noted, however, that any mooring lines, likely to produce sparks by their manipulation are absolutely forbidden on board petroleum tankers, LPG or LNG or any vessel carrying flammable substances.

It is recommended that:

(a) One of the ropes which is selected as "first line ashore" must be of floating material to ensure quick securing to the shore.

(b) Wires should not exceed 5.5 in. circumference to facilitate handling.

(c) All vessels should have:

Two fire ropes (wire) made fast, one forward and one aft, and hung over the vessel's side ready for use in case of emergency.

Article 20: Mooring Boats

(a) Vessels transiting the Canal must have mooring boats as mentioned hereafter hired from a mooring company approved by the Suez Canal Authority. In case no mooring boats from the said company are available, ship's boats if suitable for mooring in the Canal can be used and must be manned by shore crew, hired from the same mooring company. Each boat is to be manned by three men.

These vessels are required to have their lifeboats in constant readiness for mooring and unmooring operations.

(b) One mooring boat or one motor boat for vessels under 2,500 tons gross, SCGT (SCGT = Suez Canal Gross Tonnage).

(c) One mooring boat and one motor boat or two mooring boats for ships from 2,500 to 30,000 tons SCGT.

(d) Two motor boats for vessels over 30,000 tons SCGT.

(e) Ships may ask for additional motor boats or mooring boats according to Master's request. These mooring boats must be in constant readiness for lowering to run the ropes to the mooring posts without any delay during the transit of the vessel. (Vessels contravening (b), (c) and (d) above will not be permitted to transit).

(f) Ships must be fitted with lifting appliances capable of lifting mooring boats of 4 tons weight.

(g) Ships may carry extra mooring boats for safety of navigation. However, LPG, LNG and Loaded Tankers are not allowed to carry any extra boats.

(h) The handling of mooring boats must be carried out well clear from the ship's propellers.

(i) If the vessel has no means for lifting mooring boats and ship's boats are not suitable for mooring in the Canal, the vessel shall not be allowed to transit the Canal.

Article 21: Spreaders (Slings)

Container ships are advised to have their own spreaders (slings) to assist unloading and reloading containers in case of necessity. Those carrying different sizes of containers must have their own spreaders.

Article 22: Indicators

There must be a rudder angle indicator and an engine RPM indicator in the wheelhouse so located and illuminated as to be easily visible by the Pilot.

Article 23: Bow Anchors

The bow anchors must be ready to let go. (If only one anchor, see Article 57, paragraph f).

Article 24: Accommodation and Pilot Ladders

(a) Pilot Ladder: In anchorage areas, outside the Canal, North or South, pilot ladders can be used to embark and disembark Pilots.

The ladder shall be secured in such position that each step rests firmly against the vessel's side and so that the Pilot can have safe access to the vessel. Whenever the distance from sea level to the point of access to the vessel is more than 12 ft. (or 3.65 m.), access from the pilot ladder to the vessel shall be by means of an accommodation ladder or other equally safe and convenient means.

The treads of the pilot ladder shall not be less than 19 in. long, 4.5 in. wide and 1 in. in thickness. Steps shall be joined in such a manner as will provide a ladder of adequate strength with treads maintained in a horizontal position and not less than 12 in. or more than 15 in. apart.

A man-rope properly secured, and a safety line shall be available and ready for use if required. Handholds are to be provided to assist the Pilot to pass safely and conveniently from the head of the ladder into the vessel or on to the vessel's deck and vice versa.

If necessary, spreaders shall be provided at such distance as will prevent the ladder from twisting.

Arrangements shall be such as:

(1) The rigging of the ladder, the embarkation and disembarkation of the Pilot is supervised by a responsible officer of the vessel.

(2) A self igniting life buoy is to be available at hand.

(b) Accommodation Ladders: Accommodation ladders are to be used in the Canal, harbours and lakes to embark and disembark Pilots.

In case no accommodation ladder is available, or difficult to rig, the vessel has to inform S.C.A. before entering harbour or Canal. The change of Pilot which is originally carried out at Ismailia, will take place in the Bitter Lakes after anchoring. In such case, the vessel will be charged an extra 200 L.E. (Egyptian Pounds) as pilotage dues for each relieving Pilot.(20)

(20)Ships with freeboard of less than 10 ft. may use pilot ladder.

Article 25: Efficiency of Vessel's Equipment

Before entering the Canal it must be ascertained that main engines, steering gear, engine room, telegraph, rudder angle and r.p.m. indicators, W/T, VHF and radar are in good working order.

Every vessel navigating in the Suez Canal Waters under the advice of the Suez Canal Pilot, should maintain bridge and engine bell books.

In the bridge bell book, each engine movement and the time of its transmission from the bridge to the engine room is to be recorded as well as in the engine room bell book.

No vessel is required to maintain any bell books if equipped with an automatic device which produces a permanent legible record of every engine movement.

The bell books and the automatic records referred to, must be handed upon request, to the Suez Canal Officials for the purpose of investigation if necessary.

Note: Gyro Pilot should not be utilised on board during the transit of the Suez Canal, the ordinary steering Telemotor apparatus is to be utilised making sure of the steersman's ability, with a view to realising the safety of navigation and avoiding any risk of error involving grounding or any other accident.

Article 26: Deck Cargo

Deck cargo is to be stowed in a way so as to provide a clear view from the navigating bridge while transiting the Canal, as well as not to affect the vessel's stability.

The deck cargo should not protrude more than half the vessel's breadth on any side with a maximum of 15 m. if breadth exceeds 30 m.(21)

Note: Vessels having a deck cargo protruding in excess of the fixed limit, may be exceptionally granted authorisation to transit on the following conditions:

Each case is to be studied separately. If authorisation is granted, an additional due of 2 per cent of the transit dues is levied on each foot or fraction of foot in excess.

(21)Containers on containerships are not considered as deck cargo. Specially built vessels and barges carrying drillers or bulky deck cargo to be studied separately.

Article 27: Water Ballast

Vessels in ballast must fill spaces intended to be used for carrying water ballast in such proportion as the Officials of the Suez Canal Authority may direct.

Article 28: Searchlight

(A) Before transiting the Canal, the vessel should be provided with a searchlight (projector) placed on the Bow in the axis of the vessel which shows the Canal clearly. It must have the following characteristics:

1. Minimum range of radiation of single beam 1,800 m. ahead (brightness of Lux approximately at the atmospheric transmission factor = 0.85).
2. The power of the lamp must give a luminous intensity of single light beam not less than 3 million candela, which is equivalent to high efficiency incandescent lamp of:
   2,000 Watts for vessels up to 30,000 S.C. tons gross.
   3,000 Watts for vessels over 30,000 S.C. tons gross.
3. The drum and stand should be of high corrosion resisting material and can be operated both horizontally and vertically.
4. The front glass must be of hardened type and can stand rapid cooling.
5. The reflector must be in two halves of precise ground glass mirror of highest quality or of polished aluminium having at least 95% the reflective capacity of the glass mirror.
6. The two halves of the reflector can be brought together (zero position) to make a single reflector light beam and can be parted to give two separate light beams each of 5° at least, on the horizontal level with adjustable dark sector from 0 to 10°.
7. The searchlight drum must be watertight (presssure test 0.25 kg. sq.cm.) and gastight (according to the classification rules for the vessel's electric appliances within dangerous areas) and provided with a vent-out to which a flexible hose can be fitted on the drum to dissipate the heated air out of the searchlight in addition to a safety vent.
8. The searchlight must be equipped with 2 lamps carrier that can be turned into position to let the lamp exactly in the focus of the reflector, and the current must be switched on automatically.
9. The electric system (switches, plug, socket and cables) must be of first class marine type. The degree of protection IP 55 or similar standards.
10. The searchlights must have a certificate for the "type test" issued by one of the Classification Societies (Lloyd's Register, etc.). The original to be submitted to Suez Canal officials and thereby after test by S.C.A. inspection the searchlight can be accepted.

(B) For vessels carrying petroleum products, LPG, LNG, or flammable substances, or vessels Not Gas Free, the searchlight must be gastight and all electrical connections leading to it should be insulated. If a device for expelling the hot air from the interior of the searchlight exists, exit of the air must be effected in a place devoid of flammable gas. For safety reasons it has been decided that on all vessels of whatever type, electric cable installations for searchlight and all electrical connections leading to it must be permanently fixed, insulated and gastight.

At the end of the cables a fixed and gastight socket should be installed close to the searchlight.

(C)The searchlight, to be approved, must have a Certificate for the 'Type test' issued by one of the recognised Classification Societies which will be submitted to the Suez Canal Authority Inspector, and be tested in the Canal and proved to be in good working order. On board vessels electrically propelled or having electrically driven gear (steering winches, etc. . . .) the number of generators and their individual power output must be sufficient to ensure uninterrupted functioning of the searchlight in the event of stoppage of one of the generators.

No exception to this rule will be allowed except when there is an independent generator and circuit on board specifically set apart for the searchlight.

(D) This projector can be hired locally from the Canal Mooring and Light Company and weighs 1.5 tons.

(E) For vessels fitted with their own projector, 2 shore electricians should operate it during the transit.

(F) Vessels with bulbous bow, may be provided with searchlight on condition that top of bulbous bow be lower than sea level by not less than 10 ft.

However, LPG and LNG vessels, without any exception, must be provided with their own searchlight.

Vessels entering the Canal, direct from sea must also be provided with their own searchlight.

(G) If electrical connections and/or searchlight do not conform, the vessel is liable to transit only in daylight and therefore is subject to de

An additional due of 3,000 Egyptian Pounds will be imposed when the searchlight and/or electrical connections do not conform for the 3rd and each following transit.

Article 29: Overhead Lights (Deck Lights)

Overhead lights visible all round the horizon with a minimum range of 200 m. (roughly 650 ft.).

Article 30: Bridge Wing Projectors

Bridge wing projectors on either side of the bridge must be fitted to show the Canal banks clearly during the transit and mooring operations. Characteristics: Power about 4 LUX at an atmospheric transmission factor (T = 0.74) and minimum range 200 m.

Article 31: Funnels

Funnels must be lit to facilitate the identification of the vessel by night.

Article 32: Bridge and Engine Room Communication

Communication system between engine room and bridge must be in good working condition.

Article 33: Pumping Draining Arrangements

The pumps and pumping arrangements including valves, pipes and strainers from holds as well as from the engine and boiler spaces must be in good working condition.

Article 34: Watertight Bulkheads and Doors

All watertight bulkheads and doors are required to be in good efficient condition.

Article 35: Draft Marks

All vessels shall have the draft plainly marked and painted upon the stem, amidships (including Plimsoll Mark and Deck Line) and stern post or rudder post.

Article 36: Whistles and/or Sirens Must Always be Ready for Use

As prescribed in Part III, Article 93.

Article 37: Fire Fighting Equipment on Vessels

As prescribed in Article 61.

Article 38: Side Doors

When side doors are used for boarding, and the minimum vertical distance between the waterline and the bottom of the side door is less than six feet, they should be closed immediately after embarking and disembarking of Pilot and during transit through the Canal.

Article 39: Manning Vessels

The crew of vessels intending to transit the Canal should have efficient and good knowledge of their vessel and be sufficient in number to permit safe handling of the vessel during transit.

Article 40: Deck Watch & Engine Room

When underway in Canal Waters the vessels shall keep a full watch on the bridge and in the engine room, as well as anchor watch.

Article 41: Special Arrangements for VLCCs

(See Article 58).

Article 42: Accommodation

A SUITABLE (OFFICER CLASS) ACCOMMODATION IS TO BE PUT AT THE PILOT'S DISPOSAL WHILE AT ANCHOR IN THE BITTER LAKES OR MADE FAST IN MOORING PLACES ALONGSIDE THE CANAL. IN CASE OF NO SUITABLE ACCOMMODATION AVAILABLE, THE VESSEL WILL PAY EXTRA DUES OF LE200 (TWO HUNDRED EGYPTIAN POUNDS) FOR EACH RELIEVING PILOT. SHE MAY BE DELAYED IF NO RELIEVING PILOT IS AVAILABLE.

A sheltered place is to be provided for the mooring boatmen (6 to 9 men according to the size of the vessel) and 2 shore electricians for the projector, during transit.

Article 43: Vessels Carrying Timber

The timber deck cargo shall be compactly stowed, lashed and secured in a way that it shall not hinder navigation and allow safe access on deck. The loading must not exceed the Tropical Timber Load Line (LT). The height of the deck cargo above the weather deck shall not exceed one third of the extreme breadth of the vessel.

Article 44: Life Saving Appliances

Life saving appliances for vessels navigating in the Canal Waters should meet with the requirements of the International Convention for the Safety Of Life At Sea.

Article 45: Anchor Watch

An anchor watch has to be added during bad weather or poor visibility and when advised by the Pilot.

Article 46: Stoppage in Canal

When anchored in the Bitter Lakes, Lake Timsah or stopped in the Canal, the engines should always be ready for use.

If failing to comply with any of the previous requirements, a vessel may be delayed from joining the convoy and/or may be subject to special arrangements for her transit. This includes imposing convoying tug boats. Access to the Canal may also be refused.

SECTION III: Interdiction to Enter Canal

Article 47: A vessel will not be allowed to transit the Canal in any of the following cases:

(a) Any vessel considered by the Suez Canal Officials, dangerous for navigation.

(b) If carrying dangerous cargo and not conforming to the Appendix of Rules of Navigation for vessels carrying dangerous cargo.

(c) If having a list more than 3 degrees.

(d) If trimmed in a way causing bad manoeuvrability.

(e) If having deck loads protruding from vessel's sides in a manner endangering the safety of transit (see Article 26).

(f) If the vessel is tender or loaded in a manner that dangerously affects her stability.

(g) If her draft is in excess of the maximum permitted according to these Rules.

(h) For VLCCs and ULCCs if there is strong wind.

(i) The Suez Canal Authority may consider delaying the entry to the Canal in cases of bad weather.

(j) Any vessel whose Tropical Load Line is submerged, or Plimsol Marks not plainly visible.

Article 47 Bis:

(a) The Suez Canal Authority reserves the right to refuse access to Canal Waters to any vessel in case of non or erroneous declaration of the presence of dangerous cargo on board such as ammunition, explosives, radioactive substances, etc.

(b) If the dangerous cargo mentioned in para (a) is discovered during the transit, the Suez Canal Authority reserves the right to refuse access to Canal Waters to this vessel for a period not exceeding two years. An additional due of 30,000 L.E. (thirty thousand Egyptian Pounds) will be imposed for this violation.

SECTION IV: Proceeding to the Canal

Article 48: General

Masters shall ask for Pilots by clearly displaying "G" flag by day and 3 white lights at night, at least two hours before the time they expect their vessel to be ready to get underway. *Singling Up* should not be before the Pilot is on board. When several vessels are ready to get underway at the same time, the order of their sailing will be fixed by the Canal Authority.

All vessels must stop whenever the passage ahead is not clear. They must slow down passing collapsed or under repair banks, as well as when passing all vessels in sidings, hoppers, dredgers and other floating plants made fast.

As soon as a vessel is made fast, she must hoist the signals pendant No. 2 by day and red light aft at night. The vessel must be ready to slack down ropes or cut them if need be. Engines must always be ready for manoeuvring.

CHAPTER III: CONVOY SYSTEM – Maximum Dimensions, Towage and Escorting

SECTION I: Convoy System

Article 49: Formation of Convoys

A 3 convoy system is applied in the Suez Canal.

(A) *Northbound Convoy*

Starts about 0615 hrs. at Km. 160 and consists of 2 groups of vessels.

(1) *Group A*

(a) Third generation container ships, LPG and LNG, speed of transit 14 km./hr.[22]

(b) Loaded VLCCs, conventional loaded tankers and heavy bulk carriers,[23] speed of transit 13 km./hr.[22]

[22] Without current and in good weather conditions.

[23] Draft over 38 ft. or length over 950 ft. B.P.

(2) *Group B*

Cargo and other vessels anchored in Suez Anchorages.

The speed of transit of this group is 14 km./hr.[22] The Northbound convoy has a free run from Port of Suez till Port Said. It passes through the East Kabrit Channel, the Eastern Dredged Channel in the Bitter Lakes, the Deversoir East Channel, the East Channel of Lake Timsah, the East Channel of Ballah By-pass and the East Channel from Km. 17 Northward.

In case the Northbound convoy has to stop in the Bitter Lakes due to traffic situation of Southbound convoy or any emergency:

(a) Container vessel heading in convoy will drop anchor in the suitable East Anchorage Areas of the Bitter Lakes.

(b) VLCCs will anchor in the suitable East Anchorage according to their draft.

(c) All other vessels will anchor in the East Areas corresponding to their draft.

(d) 3 berths are available in Kabrit East Branch, in case of emergency. Note: LPG, LNG in ballast or loaded, and loaded chemicals in bulk are included in the Tankers Group for safety.

[22] Without current and in good weather conditions.

(B) *Southbound Convoy (N1)*

Starts from 0100 hrs. to 0500 hrs. and consists of 2 groups of vessels.

(1) *Group A,* consists of vessels who are made fast in Canal West Branch from Km. 15 to Km. 4 and Port Said Harbour.

(2) *Group B,* consists of vessels anchored in the new anchorage areas to the N.W. of Port Said, third generation container ships, VLCCs in ballast and vessels of over 38 ft. draft. This group will be headed by the container ships and the first vessel will enter through the Port Said East Approach Channel as soon as the last vessel Northbound clears Hm. 150. The speed of transit is 14 km./hr.[22]

The Southbound convoy has a free run to the Bitter Lakes. It passes through the East branch of Ballah By-pass, the East Channel of Timsah Lake, the Deversoir West Channel and anchors in the Western anchorages in the Bitter Lakes.

The sequence of vessels when route continues from Bitter Lakes will be the third generation container ships, followed by VLCCs in ballast and then other vessels. The first ship of the Southbound convoy will regulate speed to cross the last Northbound vessel abeam of Kabrit station.

[22] Without current and in good weather conditions.

(C) *Third Convoy (N2)*

A third convoy, Southbound, according to intensity of traffic from North or South. Max. draft 38 ft., max. beam 141 ft.

In case of forming a second Southbound convoy the starting time from Port Said will be at 0700 hrs. and up to 0900 hrs. Vessels will make fast in Ballah West Branch and continue route after last Northbound vessel clears Km. 60.

Vessels not authorised to join this convoy are the following:
Loaded tankers carrying Petroleum Grades and similar substances.
LPG and LNG.
Vessels carrying chemicals in bulk.
Vessels carrying radioactive substances.

NOTICES: Issued by Canal Shipping Agencies Company, Port Said:

Circular No. 80/83: (Amended April 1987).

We have been advised by Suez Canal Authority that as a trial from 23.7.83 convoy timing will be as follows:

First Convoy from Port Said:

From 0100 hrs. until 0500 hrs.
Followed by small vessels up to 5,000 tons until 0600 hrs.
(Limit time arrival waiting area 1900 hrs.).
(Latest time for hoisting the signal asking for Pilot 2030 hrs.).

Second Convoy from Port Said:

From 0700 hrs. until 0900 hrs.
(Limit time arrival waiting area 0300 hrs.
(Latest time for hoisting the signal asking for Pilot 0300 hrs.).

Following vessels are not permitted to join second convoy:

A – Tankers loaded petroleum flash point −23°C.
B – LPG.
C – LNG.
D – Tankers carrying chemicals in bulk.
E – Vessels carrying radioactive materials.

Convoy from Suez:

A – Containers and Ro-Ro vessels from 0600 hrs.
(Limit time arrival waiting area 0100 hrs.)
B – Tankers from 0700 hrs. followed by ordinary vessels until 1130 hrs.
(Limit time arrival waiting area 0300 hrs.)

Masters have to send by radio to the Agents the following information at least 48 hours before vessel's arrival.

Gross and net tonnage indicated by the Suez Canal Special Tonnage Certificate and date of latest certificate.
Gross and net tonnage indicated by Registry Certificate and date of latest certificate.
Vessel's nationality.
Owner's name.
Type of vessel (cargo – container ship – LASH vessel – Ro/Ro, etc.).
If vessel has previously transited canal under her present or former name. Affirmatively mention date of last transit.
If any alteration has been made in the vessel's particulars. In case no alterations made, they have to send "Particulars No Change".

Circular No. 90/83: **Second Convoy from North (Convoy N2)**

We would like to inform you that it has been decided as from the 23rd July, 1983, to authorise the following categories of vessels to join the second convoy from North (Convoy N2) and, therefore, to moor at Ballah Loop:

Loaded tankers carrying Petroleum Grades B – C and similar substances (Flash Point +23°C).
Tankers in ballast NGF.
Vessels carrying Group 1 dangerous cargo (Explosives).

Consequently, vessels NOT ALLOWED to join the Convoy N2 that has to moor at Ballah Loop, are:

1. Loaded tankers carrying Petroleum Grade A and similar substances (Flash Point −23°C).
2. LPG and LNG vessels.
3. Vessels carrying chemicals in bulk.
4. Vessels carrying radioactive substances.

Circular No. 27/87: Directorate of Transit, Suez Canal Authority, Ismailia.
Circular No. 433681 dated 26.4.1987.

As from 1st May 1987 vessels with beam and draft as indicated below are authorised to make fast at Ballah West Branch, excluding tankers in ballast with Suez Canal gross tonnage of over 90,000 tons.

Beam		Draft	
(ft.)	(m.)	(ft.)	(in.)
141	42.98	38	00
142	43.28	37	11
143	43.59	37	07.5
144	43.89	37	04
145	44.20	37	00
146	44.50	36	08
147	44.80	36	04
148	45.11	36	00

Circular No. 434409:
As from 1st January 1990, our Circular No. 432939 dated 28.5.1985, to be amended as follows:

Transit VLCCs:

Owing to the request of several shipowners for the transit of vessels with beam over 218 ft., the Suez Canal Authority taking into consideration the present shipping situation, undertook careful studies to comply with the said request.

The S.C.A. has the pleasure to inform you that the above mentioned vessels may transit the Canal under the following conditions.

1. A pre-approval to be obtained in good time prior to transit.
2. Transit to be effected in good weather (wind not exceeding 10 knots).
3. 10% of the transit dues for precautionary measures and special arrangements.
4. One tug escort against 6,000 SDR. per tug for vessels with beam up to 225 ft.
5. Two tug escort against 6,000 SDR. per tug for vessels with beam over 225 ft.

***Circular No. 23/86:* LNG/LPG:**

We append hereunder, for your information text of Circular No. 433224, dated 2.3.86, received from the Director of Transit, Suez Canal Authority, Ismailia, the contents of which are self-explanatory.

Owing to the great danger involved in the transit of LPG and LNG through the Suez Canal, the following is to be applied:

I *From date of issue*

1. *From North*
   (a) LPG and LNG whatever the tonnage are not allowed to make fast in Port Said Harbour.
   (b) Anchor in the Northern Waiting Area.
   (c) Join the first Southbound convoy direct from sea through the Eastern Branch.
   (d) The turn to be rearranged at the Great Bitter Lake to take the lead of the convoy.
2. *From South*
   (a) LPG and LNG whatever the tonnage are not allowed to ancho in the Inner Bay at Suez.
   (b) Anchor in the Waiting Area South of Conry Rock.
   (c) Join the Northbound convoy direct to the Canal following the 3rd generation containership, Ro/Ro and similar and ahead of the loaded tankers and bulk carriers.

II *As from 1.4.1986*

1. LPG and LNG up to 80,000 tons S.C.G.T. will be escorted by 1 S.C.A. tug against 5,500 s.d.r.
2. LPG and LNG over 80,000 tons S.C.G.T. will be imposed 1 S.C.A. tug as per Rules of Navigation Art. 57.

Suez Canal – Southbound Second Convoy

For your guidance, vessels carrying chemicals in bulk respectively radio-active substances under IMDG Group 2 are now allowed to transi with the second Southbound Convoy (which makes fast at Ballah Loop under conditions stated in S.C.A. Circular No. 154506 dated Octobe 30th 1988.

CLARIFICATION TO ARTICLE 49 REGARDING VESSELS CARRYING CHEMICALS IN BULK.

Reference to our Rules of Navigation, edition January 1986, Article 49 concerning:

A. Vessels carrying chemicals in bulk.
   Allowed to join N.2 Convoy, if having double bottom tanks.
B. Vessels carrying radio-active substances.
   1. Allowed to join N.2 Convoy, if carrying IMDG group two.
   2. Not allowed to join N.2 Convoy, if carrying IMDG group one.

With regard to para (A) above, we have received the following clarification concerning chemical tankers carrying liquid bulk chemicals

Not allowed: to join N.2 Convoy if flash point is below 23°.
Allowed: to join N.2 Convoy if flash point is above 23° provided vesse has complete double bottom tanks and vessels must cable SCA Ismailia (via their agent) of their wishes to join the 2nd Convoy, giving details of cargo on board and flash point.

Circular No. -/87: **Two engines and one propeller:**

We append hereunder, for your information, text of Circular No 433658, dated 31.3.87, received from the Directorate of Transit, Suez Canal Authority, Ismailia, the contents of which are self-explanatory:

A vessel with 2 engines, on 1 propeller, requesting to transit the Canal with 1 engine, as the other is under repair or dismantled, the following to be applied:

1. Undergo sea trails.
2. Valid Seaworthiness Certificate from a recognised Classification Society, mentioned in Suez Canal Rules of Navigation Art. 15, stating that vessel is with 1 engine able to maintain Canal speeds. (Max. speed without current not less than 10 knots.)
3. If sea trials are satisfactory, vessel may transit Canal without imposed tug.

Circular No. 433381: dated 24/7/1986

Possibility of Increase Loading of Partial Loaded Tankers Northbound at 13 km./hr.

Authorising vessels and loaded tankers to transit the Suez Canal from South (13 km./hr.) with draft exceeding the current permissible one stated in Rules of Navigation, edition January 1986 (Table "C-1" (column No. 1, and not to exceed draft mentioned in column No. attached table).

1. On completion of the first stage of Suez Canal development project in December 1980, and after widening and deeping the Canal, loaded vessels from South (speed 13 km./hr.), of beam not exceeding 140 ft. were authorised to transit with draft 53 ft.; the more beam is, the less draft will be.

Table of draft in relation to beam over 140 ft. in column No. 1 extracted from Rules of Navigation, edition January 1986, Art. 54, pages 76-80 attached.

2. As the Authority has recently widened the Northern section of the Canal by 50 m. average width. In this connection, various studies and laboratory experiments have been successfully conducted.

Accordingly the Authority decided to increase the current permissible draft stated in the Rules of Navigation, edition 1986 for loaded vessels from South (speed 13 km./hr.).

3. Column No. 2 of attached table clarifies maximum authorised draft increase.

4. An additional due of 0.6% (six per thousand) will be levied for every inch or fraction of an inch which surpasses the current permissible draft stated in the Rules of Navigation, January 1986 edition.

5. This Circular comes into force as from 26/7/1986.

The Director of Transit

Explanatory Example

Beam	*Permissible Draft* *Before Development* Column (1)	*After Development* Column (2)	*Draft Increase*	*Dues Increase*
(ft. in.)	(ft. in.)	(ft. in.)		
143 09	52 00	53 00	1 ft. (12 in.)	7.2%
176 06	41 04	43 04	2 ft. (24 in.)	14.4%

NORTHBOUND LOADED AND PARTIALLY LOADED VESSELS TRANSITTING AT 13 km./hr.

Article 50: Limit Time of Arrival to Join Convoys

Also see Article 49 – "Notices".

(A) ***Southbound Convoy***

(1) 3rd generation container ships, VLCCs in ballast and loaded vessels over 38 ft. draft who will anchor in the new anchorage area (V berths) N.W. of Port Said and declared by Agents ready for transit, have to reach the anchorage area before 1800 hrs.

(2) Other ships entering from Port Said harbour have to reach the anchorage area before 1800 hrs.

(3) Ships arriving after 1800 hrs. and not later than 0200 hrs. will join the second convoy either from Port or direct from sea and be declared by Agents ready for transit, providing the capacity of the Canal permits.

(B) ***Northbound Convoy***

(1) Ships anchoring South of Conry Rock: 3rd generation container ships, VLCCs, super tankers, heavy bulk carriers and vessels over 38 ft. draft, have to reach the anchorage area (V berths) and be declared by Agents ready for transit before 2400 hrs.

LPG/LNG carriers have to reach Suez anchorage area maximum at 0100 hrs. in order to join the Northbound convoy. These vessels are allowed to anchor in V Berths of the waiting area.

(2) Other vessels who will anchor in the anchorages of the Port of Suez, have to reach the waiting area and be declared by Agents ready for transit before 0200 hrs.

(C) In all cases the documents required should be produced before the passage of the vessel to the Canal office at Port Said or Port Tewfik.

NOTICE: *Suez Canal Authority Circular No. 434150:*

Reference S.C.A. Rules of Navigation Article 50 and Circular No. 433659 dated 1/4/87.

In order to reduce ship's waiting time to a minimum, the following arrival times at anchor will be applied:

A. **Port Said**

1. Southbound Convoy (N.1):

As per Rules of Navigation, limit time of arrival is 1800 hrs.

Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 1900 hrs.

As an additional facility, vessels arriving from 1900 hrs. to 2100 hrs., may join first Southbound Convoy (N.1), against an additional charge of 10% of the canal dues.

2. Southbound Convoy (N.2) – vessels fulfilling No. 2 specifications.

As per Rules of Navigation, limit time of arrival is 0200 hrs.

Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0300 hrs.

As an additional facility, vessels arriving from 0300 hrs. to 0400 hrs., may join second Southbound Convoy (N.2), against an additional charge of 10% of the canal dues.

B. **Suez**

1. Tanker Group (i.e. LPG and LNG loaded or NGF, third generation containerships, vessels over 38 ft. draft and loaded tankers):

As per Rules of Navigation, limit time of arrival is 0000 hrs.

Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0100 hrs.

As an additional facility, vessels arriving from 0100 hrs. to 0300 hrs., may join tanker group against an additional charge of 10% of the canal dues.

2. Other Vessels.

As per Rules of Navigation, limit time of arrival is 0200 hrs.

Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0300 hrs.

No time extension is permissible due to the formation of the convoy.

Note:

1. The limit time of arrival is the actual time of anchoring at the respective anchorage area stated in the Rules of Navigation.
2. This circular will be in force as from 1st December 1988.

Also see Article 49 (Notices) and Article 50.

Article 51: Courses to Keep on Leaving for Sea

(A) ***At Port Said***

Vessels of Northbound convoy have to maintain course through the East approach channel till Hm. 195 then alter course North 000° for five miles before altering to destination.

(B) ***At Port of Suez***

Vessels proceeding to sea have to maintain course through the channel till the last pair of buoys, then keep the separation zone on the port side till the separation zone Buoy No. 1.

SECTION II: Maximum Dimensions (Vessel's Sizes and Drafts)

Article 52: Dimensions of Vessels Authorised to Transit (To be amended in near future)

These dimensions are given hereunder:

(a) *Max. length:* No restrictions.

(b) *Max. beam:* 210 ft.

(c) *Max. draft:* The tables A, B and C give the maximum draft authorised in relation to the beam of vessel according to the following:

(i) *Table "A":* For vessels in ballast transiting in either direction.

(ii) *Table "B":* For loaded vessels transiting Southbound. The speed of transit being 14 km./hr.

(iii) *Table "C":* for loaded vessels transiting Northward and includes two tables C-1 and C-2.

(a) Table C-1 gives the draft for vessels transiting at speed of 13 km./hr.

(b) Table C-2 gives the draft for vessels transiting at speed of 14 km./hr. (including LPG, LNG vessels and vessels carrying chemicals in bulk).

In these Tables the beams are given in metres and feet and the drafts in feet only.

Article 53: Conditions of Transit

(A) For loaded vessels the max. draft for each vessel according to tables B and C or her tropical loadline whichever is less.

Notes:

1. (a) Vessels allowed to transit at a draft of over 53 ft. must for the first passage effectuate a successful sea trial before entering the canal either at Suez or Port Said Roads.

(b) Sisterships are not to get benefit of authorisation granted to a particular ship of the group.

2. Vessels with beam over 200 ft. and up to 210 ft. are allowed to transit only in calm weather, i.e. beam wind not exceeding 10 knots.

3. Northbound LPG, LNG vessels and vessels carrrying chemicals in bulk, are subject to the Tables of Beam and Draft for vessels proceeding at 14 km./hr. speed.

For safety measures they are included in the "tankers" group.

(a) Chemicals in bulk vessels are included in the "tankers" group **only** when they are **loaded.**

(b) LPG and LNG vessels are included in the "tankers" group either loaded or in ballast and they are put ahead of the loaded tankers.

4. Vessels with Load Line Certificate not mentioning the amount of Freeboard of their Tropical Load Line and consequently do not have the Tropical Load Line marked on their sides, will be authorised to transit Suez Canal with a maximum draft up to the SUMMER Load Line only or the maximum allowed draft Tables A, B, C-1 and C-2, whichever be the less.

Table "A" Vessels in Ballast.

Max. draft for different beams for vessel from North or South.

Beam	*Up to* 160 ft. (48.77 m.)	*Over* 160 ft. *Up to* 190 ft. (48.77 m. *up to* 57.91 m.)	*Over* 190 ft. *Up to* 210 ft. (57.91 m. *up to* 64.00 m.)
Draft in feet	*Recommended*		*Maximum*
	Fore 25 *Aft* 29	*Fore* 28 *Aft* 32	*Fore* 29 *Aft* 33

Note: Vessels with beam up to 190 ft. or 57.91 m. are not authorised to transit at a draft over 33 ft.

Table "B" – Loaded Vessels.

Note: For technical considerations LPG and LNG vessels *in ballast* are admitted to transit the Canal at draft of 33 ft.

In case of use of fresh water for ballast, vessel loses the privilege of being in ballast, and therefore, dues will be levied on the basis of laden vessel.

1. *Maximum draft for different beams for loaded vessels transiting Southbound Speed 14 km./h.*

Article 54: Speed

The speed of convoys is the following:

(a) Southbound: 14 km./hr.

(b) Northbound:

(1) 13 km./hr. for loaded tankers and bulk carriers group.

(2) 14 km./hr. for ordinary group.

SECTION III: Towage and Escorting

Article 55: Canal Authority Tugs

(A) At Port Said Harbour, tugs may be placed at the disposal of Masters if the Canal Authority deems it necessary. No charge is made for the assistance given by these tugs to transiting vessels for mooring and getting underway. In all other cases, a charge is levied by the Suez Canal Authority. Vessels manoeuvring in the harbour are required to provide their own ropes. Wire tow-ropes are not allowed.⁽²⁴⁾

(B) In other cases, tugs can be hired for mooring, towing or getting a vessel afloat. Charges paid by the vessel will be according to rates set by Suez Canal Authority.

(C) In accordance with the terms of Article 57 of the present Chapter, the Officials of the Canal Authority may impose on certain defective vessels, or vessels carrying dangerous cargo, a tug or more for towing or escorting during transit of the Canal.

In such cases, charges are paid according to rates set by Suez Canal Authority.

(D) The Master of a vessel using a tug placed at his disposal has the exclusive direction and control of the manoeuvres of both the vessel and the tug.

(E) Whatever may be the conditions or circumstances under which the Canal Authority tugs are made use of by a vessel, the Master of the vessel is responsible for any damage or accidents whatsoever resulting directly or indirectly from the use of the said tugs, including damage which may occur to the tugs themselves, and to equipment.

Article 56: Use of Private Tugs

Shipowners are authorised to have their vessel towed or conveyed by their own tugs under their entire responsibility. Such tugs must be approved by the Suez Canal Authority. Apart from the special towage dues, tugs belonging to private owners are subject to the strict observance of all the parts of the rules relative to vessels manoeuvring, in transit or berthing.

Towing arrangement must be supervised and approved by the Suez Canal Authority personnel.

Article 57: Cases of Imposed Tugs

Chargeable tugs shall be imposed during Canal transit, at the tariff hire rate, in the following cases:

(a) The Canal Authority may require any vessel to take a tug or tugs through the Canal, when in its judgement such action is necessary to ensure safety to the vessel or to the Canal.

(b) LPG and LNG of over 80,000 tons (SCGT). It is also requested that a steering light, to be lit at night, be fitted on the extremity of the tanker's bows.

(c) Any vessel without mechanical power, or the machinery of which is (or becomes) disabled, or steers badly, or which is liable to become unmanageable for any reason, shall be towed through the Canal.

(d) Bad view vessels owing to deck cargo, containers, cranes or constructions impeding the view from the wheelhouse and wings.

(e) Vessels with defective indicators, or vessels without indicators, on their second trip through the Canal.

(f) Vessels unable to use one of her two anchors.

Vessels built with one anchor or without anchors.

Vessel's anchors and chains should comply with specifications of the Classification Society.

(g) Drilling vessels.

Article 58: Escorting

The escort of VLCCs, ULCCs, large bulk carriers and other vessels will be as follows:

(a) Loaded vessels under 130,000 d.w.t. will be escorted by 1 tug if for technical reasons the Suez Canal Authority finds it necessary, or when the vessel's draft exceeds 47 ft.

(b) Loaded vessels from 130,000 d.w.t. to 170,000 d.w.t. will be escorted by 1 tug.

(c) Loaded vessels over 170,000 d.w.t. will be escorted by 2 tugs.

(d) Vessels in ballast over 250,000 d.w.t. will be escorted by one tug.

The mentioned vessels have to prepare 2 polypropylene ropes 16 in. circumference⁽²⁵⁾ to join the stern to the tug during stopping operations. The ropes should be eye spliced to fit in the quick release hook on the tug and with adequate length to give distance between fore of the tug and stern of vessel at about 50 m. On the vessel these ropes will be made fast on stern bitts port and starboard. The eyes will be hanging over the stern about 2 m. above water and lashed with rope stoppers to break loose when necessary.

Transit of drilling rigs and towed units:

1. (a) Drilling vessels.
   (b) Drilling rigs loaded on special vessels are to be escorted by a Suez Canal tug.
2. (a) Drilling rigs with self steering power.
   (b) Drilling rigs without self steering power.
   (c) Drilling rigs with legs which can be lifted so that nothing extends under the rig's bottom.

The above are to be assisted by a Suez Canal tug aft and another Suez Canal tug as escort, in addition to a powerful tug forward to make speed in the Canal not less than 12 km. per hour over the ground. They must also be in good state of stability.

3. Drilling rigs with legs that cannot be lifted and a part remains under the rig's bottom: Each case has to be studied separately to decide whether the unit is allowed to pass the Canal or not.

4. Other towed units are not allowed to transit Suez Canal, unless they are towed by a tug suitable to the size of the unit and powerful enough to maintain a speed in the Canal not less than 12 km. per hour over the ground, in addition to the assisting Suez Canal tugs, whenever found necessary by Suez Canal officials.

General:

(a) All enquiries concerning the possibility and/or approval of transit of towed units, drilling rigs, dredgers, etc., are to be submitted by the Owners of the units or Local Official Agency, accompanied by a General Arrangement plan and all particulars of the unit: name, LOA, beam, draft, height, self steering, etc.

The application must reach the Suez Canal Authority (Directorate of Transit, Ismaila, Egypt) not less than two weeks before sailing of the unit from its base.

(b) Any towed unit must be supplied with floating mooring ropes in good condition and suitable in number (more than six) and size according to the dimensions of the unit.

(c) A responsible person and a crew of at least 10 persons must be on board the unit during the transit.

(d) A valid Seaworthiness Certificate for the towage through Suez Canal must be available.

(e) The unit must comply with the Suez Canal Regulations.

(f) If the transit is authorised a survey of the unit shall be made on the arrival, in order to take the definite steps and make the final arrangements for the transit, if it complies to Suez Canal Rules.

(g) The transit is subject to the circumstances of the Navigation in the Canal, and the weather conditions.

CHAPTER IV: ACCIDENTS – LEAKS – PRECAUTIONS AGAINST FIRE AND POLLUTION

Article 59: Accidents

(A) Whenever a vessel underway is accidently stopped, she must, if other vessels are following, attract their attention by giving five or six short blasts on the whistle or siren. This signal is to be repeated at short intervals. It means "I am reducing speed and may have to stop and make fast". Vessels stopped accidentally at night, must in addition, immediately replace their white light astern with a red light.

In case of grounding, the Master must immediately hoist the following:

	By Day	*By Night*
Passage clear for tugs	Black Ball Pendant No. 2	Red Light
Passage not clear for tugs	Black Ball; Pendant No. 2; International Code Flag "N".	2 Red Lights.

Send also a radio message stating whether a tug is required or not, whether or not passage is clear for the tug and whether lightening is necessary, etc.

---

(24)Wire tow-ropes should not be confused with the fire-wire ropes made fast onboard and fitted with an eye splice or connecting shackle hanging over the side as required. See Article 61 (C).

(25)For vessels under 100,000 d.w.t., if their draft is over 45 ft.

(B) When a vessel runs aground, the Canal Authority Officials are alone empowered to order and direct all operations required to get the vessel afloat and if necessary, have her unloaded and towed. Nevertheless, Masters remain responsible for all damages or accidents of any kind which may be the direct or indirect consequence of the grounding.

All attempts on the part of other vessels to refloat a vessel aground are strictly prohibited.

(C) When a vessel grounds or stops in the Canal itself in consequence of an accident other than a collision, the Canal Authority, in order to clear the way with all possible speed, and to get her underway, will assist with the necessary tugs to refloat her, free of charge. If, once afloat, and the Canal Officials find it necessary to tow or escort the vessel by one tug or more, she must from that moment, pay towage charges as set down by Suez Canal Authority, moreover, it is understood that the vessel bears all expenses necessary for repairs of any damage or breakdown which might interfere with her getting underway regardless of the time when such damage or breakdown takes place.

(D) When a vessel grounds or stops outside the Canal itself or if the grounding or stoppage is due to a collision, all charges for getting the vessel afloat, towing, unloading, reloading, etc., are payable by the vessel and must be settled as per statement drawn up by the Canal Authority before the vessel leaves Port Said or Port of Suez.

(E) Whenever a collision appears probable, vessels must not hesitate to run aground should this be necessary to avoid it.

(F) When a vessel or floating structure of any description runs aground or strands or sinks or is left abandoned, either in the Canal itself or in one of its ports, Waiting or Anchorage Areas, and the Canal Authority deems it an obstruction or a menace to navigation in Canal Waters, the Authority has the right to take of its own accord such action as may be necessary for the purpose of removing or destroying the vessel or floating structure by whatever means the Canal Authority may select and at the risk and expense of the Owner of, or the person responsible for the vessel or the floating structure. The Suez Canal Authority has – in this case – the right to sell the vessel or the floating structure or the wreck salvaged or all of them together in public auctions with a view to covering all kinds of expenses.

Article 60: Leaks

In the case of leaks, when in harbour the Master must inform the Harbour Office at once. When in Canal or anchored in lakes, he must inform immediately the Movement Office. He must at the same time make the appropriate International Signal and call attention by sounding a prolonged blast on the whistle or siren; and take all necessary measures to stop the leakage and ensure the safety of the vessel.

The Suez Canal Authority Officials whose decision shall be final may order any action deemed necessary in the best interest of all concerned: change of berth or mooring, beaching, taking the vessel out to sea. The Master is nevertheless responsible for all damage or accidents arising directly or indirectly from the salvage operations.

Article 61: Fire Fighting

(A) Vessels transiting the Canal should be equipped with the fire fighting equipment in accordance with the requirements of the International Convention for the Safety of Life at Sea. All equipment should be in a good and efficient condition.

(B) Fire hoses with suitable nozzles attached shall be connected to the outlets of fire lines at all times while in Canal Waters. Sufficient hoses shall be connected to reach all parts of the vessel.

(C) Approaching Canal Waters, as precautionary measures, all vessels must have a fire wire hanging over the side ready for use fore and aft, before entering Canal Waters.

Article 62: Fire Onboard

(A) In case of fire onboard, when in harbour the Master must inform the Harbour Office at once. When underway or in the Canal or anchored in Lakes or made fast in Canal, he must inform the Movement Office. He must at the same time make the appropriate International Signal and call attention by sounding a prolonged blast on the whistle or siren. He must make ready to get underway if required to do so.

(B) Neighbouring vessels must in such cases also be ready to change berth.

(C) Masters are responsible for the use onboard their vessels of fire fighting appliances and installations and for the stability and safety of their vessel.

(D) *The Suez Canal Officials will co-operate with the Master for the purpose of directing the fire fighting operations.*

The vessel's crew shall co-operate with the Suez Canal Authority personnel.

(E) If in the opinion of the Canal Authority Officials, whose decision shall be final – there is a risk of fire spreading, they may order any action deemed necessary in the best interest of all concerned (change of mooring, beaching, taking vessel out to sea); it is understood that Masters are nevertheless responsible for all damages or accidents arising directly or indirectly from outbreaks of fire or salvage operations.

Article 63: Fuelling

A vessel at fuel berth or while being supplied by fuel in Waiting Areas shall at all times be ready for immediate fire fighting. She shall keep up steam and be ready to move on short notice.

Article 64: Pollution

Before arrival from sea at either of the Terminal Ports, vessels should comply with the requirement of appropriate Convention currently in force.

(A) Discharge of Substances Polluting Water

Vessels must not discharge or throw into the Canal Waters any polluted water ballast, heavy slops, engine or fire room polluted bilge water, oil or any other substances that will cause pollution.

In case of violation, the vessel shall be charged an additional due of 10,000 L.E. (Ten Thousand Egyptian Pounds), shall be liable for any damage resulting from the pollution and shall pay all expenses incurred for its removal. Moreover, she may be prevented from transiting the Canal.

In case of leakage of any polluting material from a vessel, due to any reason, the Master, the Owners and/or operators of the vessel shall be liable for any damage resulting from the pollution and shall pay all expenses incurred for its removal.

(B) Dumping Garbage

Dumping Garbage is Strictly Forbidden

In case of violation, the vessel will be charged an additional due of 1,000 L.E. (One Thousand Egyptian Pounds).

If a vessel is anchored in Canal Waters for a considerable length of time, she may get rid of garbage by requesting garbage lighter alongside.

(C) Whenever a vessel observes *oil spill* in Canal Waters, she must at once inform the Suez Canal Authority with the following information if possible.

(i) The place and area covered by spill.
(ii) The direction of motion of the spill.
(iii) If known, the name of vessel causing the spill.

CHAPTER V: Prohibitions and Charges

General

When a vessel is in Canal Waters, either in anchorage areas or ports or during transit, the following is prohibited:

Article 65: Use of Anchors and Thrusters

Masters must avoid anchoring and using the thrusters in the Canal except in case of absolute necessity.

Article 66: Misuse of Whistle or Siren

The sounding of a whistle or siren is prohibited except for giving any authorised or required signal, as mentioned in Part III, Article 93.

Article 67: Firing Shots

(A) Firing shots is not allowed.

(B) An additional due of 200 L.E. (two hundred Egyptian pounds) will be imposed for violation of this rule.

Article 68: Picking up Object from Water

(A) Whenever any object or merchandise whatsoever falls overboard it must be immediately reported to the Canal Authority. If it is considered that the picking up cannot be effected by the vessel without impeding transit, the Canal Authority will proceed to carry it out, at the expense of the vessel.

(B) An additional due of 200 L.E. (two hundred Egyptian pounds) will be imposed for violation of this rule.

Article 69: Riveting, Welding etc.

(A) Riveting, welding, burning, metal cutting or similar operations requiring the use of heat, are not allowed unless authorised by the Suez Canal Authority.

(B) An additional due of 500 L.E. (five hundred Egyptian pounds) will be imposed for violation of this rule.

Article 70: Pollution

(A) See Article 64 and following.

(B) An additional due of 10,000 L.E. (ten thousand Egyptian pounds will be imposed for discharge of substances polluting water. Besides the vessel may be prevented from transiting the Canal any more.

(C) An additional due of 1,000 L.E. (one thousand Egyptian pounds will be imposed for throwing waste.

Article 71: Direct Lights

Under no circumstances shall the rays of any blinding lights be directed to the bridge or any other direction which would interfere with the safe navigation of other vessels.

Article 72: Embarking and Disembarking of Persons

(A) Unless authorised by the Canal Authority or Port Officials, no person shall embark or disembark from a vessel while passing through the Canal or in Ballah, Timsah Lake or the Bitter Lake.

(B) An additional due of 200 L.E. (two hundred Egyptian pounds) will be imposed for violation of this rule.

Article 73: Boats, other than the Canal Authority's own are not allowed to come alongside vessels underway or manoeuvring except the following at their own risk.

(A) Quarantine and police boats.
(B) Mooring boats.
(C) The ship's Agent's boats.

Article 74: Vessel Overtaking Another

(A) Vessels proceeding in the same direction are not allowed to overtake one another while underway in the Canal Waters and ports unless authorised by the Suez Canal Control Office.

(B) An additional due of 500 L.E. (five hundred Egyptian pounds) will be imposed for violation of this rule.

Article 75: Boat Drills

(A) No rowing or sailing boat drills are allowed except after authorisation.

(B) An additional due of 200 L.E. (two hundred Egyptian pounds) will be imposed for violation of this rule.

Article 76: Venting

(Tank openings to be closed through the whole transit).

(A) Venting of gas for the purpose of tank cleaning is prohibited in Canal Waters.

(B) An additional due of 10,000 L.E. (ten thousand Egyptian pounds will be imposed for violation of this rule.

Article 77: Long Stay

(A) Unless due to conditions of traffic or incidents in the Canal transiting vessels should not remain more than 24 hours in Port Said berths, anchorages in Port Said and Port of Suez roads, Timsah Lake or Bitter Lakes.

(B) An additional due of 2 P.T. (two Egyptian piastres) per Suez Canal net ton/day will be imposed.

Article 78: Vessels Having Damaged Container With Dangerous Cargo

If upon arrival of a vessel in waiting areas or port or while transiting the Canal, it is found that a container of dangerous cargo has been damaged or is leaking, the Master of the vessel has to notify the Suez Canal Port Authority at once. In cases of dangerous situations the vessel may be ordered to leave the port or waiting area for sea.

Article 79: Declaration of State of Navigability

I, the undersigned, Master of the.................................

(a) Certify that my ship satisfies the conditions laid down in Part I, Articles 22 and 25 of the Navigation Regulations and that, in particular, the engines and the steering gear are in good working order(*).

(b) Declare that my ship has, at the present time, the following defects in engines or steering gear(*).

(c) I declare, also, that the wireless installations of my ship permit to transmit on the frequencies hereafter, in kHz:

Telegraphy..............kHz. Telephony..............kHz.

(d) I state also that my ship is/is not (*) fitted with a rudder angle indicator and engine r.p.m. indicator on the bridge in such a position that the Pilot may read both without having to move away from his station and that the rudder angle indicator/engine r.p.m. indicator(*) is/are in good working condition.

I undertake to bring to the notice of the Suez Canal Authority, before my ship enters the Canal, any defects, not specified above, which may appear.

Made at Port...................., the......................

Signature.....................

(*)Delete where inapplicable.

PART II – CANAL AND LAKES

CHAPTER VI: CANAL AND LAKES

Article 80: Canal and Approaches

(A) Length of the Navigable Channel

(1) East Approach Channel (Port Said).

(a) Distance from outer pair of buoys at Hm. 195 to Hm. 94.90 where it joins the West Approach Channel is 10.010 km.

(b) Distance from Hm. 94.90 to the pair of revolving lights at Km. 3.000^E is 12.490 km.

(2) West Approach Channel (Port Said).

(a) Distance from Fairway Buoy to Port Said Lighthouse is 11.040 km.

(b) Distance from Port Said Lighthouse (Km. 0.000) or (Km. 3 East Branch) to Ismailia is 78.5 km.

(c) Distance from Ismailia to Port Tewfik (Km. 162.250) is 83.750 km.

(d) Distance from Port Tewfik (Km. 162.250) to the outer pair of buoys Hm. 80.50 is 8.500 km.

(e) Total length of the navigable channel is 193.250 km.

(B) Characteristics of the Navigable Channel (Canal and Approaches).

(1) North Approaches

(a) East Port Said Approach Channel from Hm. 195 to Km. 1.333 East.

(i) Depth of water 20.00 m.

(ii) Channel width measured at 20 m. depth – Hm. 195.00, 745 m.; Hm. 80.00 East, 400 m.; Km. 1.333 East, 120 m.

(iii) Side Slopes

Natural land side slopes, ranging from 5/1 near shore to about 20/1 in the off-shore part.

(b) West Port Said Approach Channel from Hm. 95.00 to Port Said

(i) Depth of water 14.00 m.

(ii) Channel width measured at 12.50 m. depth – Hm. 95.00, 1400 m.; Hm. 25.00, 350 m.

(2) Canal Cross Sections (See Plan)

(a) The Canal cross sections are trapezoidal in shape, having side slopes of 4/1 in the Northern part up to Km. 61.00 and of 3/1 in the Southern part. Toussoum Zone is the only place where the Western slopes are 2.5/1.

(b) Tables of main dimensions of cross sections all through the Canal (See below).

(c) Both sides of the Canal are provided with mooring bollards.

(3) South Approach from Hm. 0.00 (Km. 162.250) to Hm. 80.50

(a) Depth of water 23.50 m.

(b) Channel width measured at 18 m. depth, Hm. 0.000 to Hm. 80.50, 298.00 m.

(c) Side slopes 3/1.

(C) Depth and Width of Different Parts of the Canal: i. Main Canal and Bitter Lake West Channel. ii. Canal East Branches and Bitter Lake East Channel

i. *Main Canal and Bitter Lake West Channel*

(D) Bends in the Canal

(1) The bends in the navigable channel have the following characteristics:

(a) Radius of navigation line = 5,000 m.

(b) Width of channel at −11.00 m., depth = 190 m.

(c) Width of channel at −18.00 m., depth North of Km. 61.000 (side slopes 4/1) = 134 m.

(d) Width of channel at −18.00 m., depth South of Km. 61.000 (side slopes 3/1) = 148 m.

(e) At the ends of two bends, there is usually a funnel made to allow increasing the width of the channel gradually from 160 m. to 190 m. (at −11.00 m. depth).

(f) Locations of beginning and end of each bend are included in the following table:

Canal Bends	Kilometric indication of beginning point	Kilometric indication of end point
Km. 53	Km. 52.050	Km. 53.520 West
Km. 57	Km. 56.870	Km. 58.800 West
S. "Curves"	Km. 71.960	Km. 75.300
Timsah Curve	Km. 76.520	Km. 81.700 East
Km. 85	Km. 85.030	Km. 87.400
Km. 103	Km. 102.600	Km. 105.030 West
Km. 130	Km. 129.500	Km. 131.980
Km. 146	Km. 145.500	Km. 146.330
Km. 154	Km. 154.700	Km. 155.720
Km. 157	Km. 156.280	Km. 160.000

(2) At the approaches of the by-passes, bends are made with radius more than 5,000 m. Location of these bends are included in the table hereafter.

Approaches	Kilometric indication of beginning point	Kilometric indication of end point
Km. 51	Km. 49.510	Km. 51.480 West Km. 51.790 East
Km. 61	Km. 60.310 West Km. 59.940 East	Km. 63.300
Km. 122	Km. 121.940 East Km. 122.500 West	Km. 125.510

(E) By-Passes and Loops

(1) Port Said By-Pass (see "Plan").

A new by-pass is dredged East of Port Fouad starting at Km. 17.000 and extending straight to join the existing Port Said Roadstead at Hm. 94.90 and continuing until Hm. 195. This channel (By-Pass) will be used for the exit of Northbound ships, the entry of VLCCs in ballast and vessels with draft over 38 ft. coming from North.

Characteristics and dimensions: The kilometric marks are followed by letter "E" to distinguish them from those of the West branch. The inland part (from Km. 1.500 E. to Km. 15.465 E.) width (at 18 m. depth) is 114 m. with side slopes 4/1 and depth 19.5 m., fitted with bollards on the Western side, spaced every 100 m.

The seaward part (from Km. 1.500 E. to Hm. 94.90 E.) with width (a −20 m. depth) ranging from 120 m. at Km. 1.333 E. to 400 m. at Hm 80.00 E. with natural side slopes (average 5/1 – 10/1).

Two revolving lights, one on each bank to indicate the entrance Canal from East Approach channel at Km. 3.000 E.

(2) Ballah Loop (see "Plan").

Between Km. 51 and 61 the Canal is doubled in the East, by a branc The zone comprising the 2 branches of the Canal limited by the Nort and South ends where the 2 branches meet, is called "Ballah Loop". In the East Branch the kilometric marks are followed by letter "E The length of the East Branch is 8.490 km.

	West Branch	East Branch
Kilometric marking of North end	51.477	51.449 E
Kilometric marking of South end	60.333	59.943 E

Slope of bank 4/1. In the West branch 15 mooring posts are situate on the Eastern bank and numbered South to North.

(3) Timsah By-Pass (see "Plan").

Between Km. 76.580 and Km. 81.700 E.

Characteristics and dimensions

The kilometric marks are followed by letter "E". Length: 5.110 km counted at right angle from Km. 76.578 to Km. 81.700. Width: 148 m at a depth of 18 m. Slope: The side slope is 3/1. The radius of its ax is 4905 m. The by-pass will be used by North and Southbound vessel

(4) Deversoir By-Pass (see "Plan").

A new branch is dredged East of the existing channel at Devers zone. This branch begins at Km. 95.000 and joins the main East chann in the Great Bitter Lake at Km. 104.160. The branch will be used b Northbound vessels.

Dimensions

Width: 148 m. at 18 m. depth. Depths: 19.500 m. from Km. 95.000 Km. 100.670; 19.900 m. from Km. 100.670 to Km. 102.600; 18.500 m from Km. 102.600 to Km. 104.160. Side slope: 3/1.

(5) Kabrit By-Pass (see "Plan").

The By-Pass is situated to the East of the main Canal. It begins Km. 114.960 and ends at Km. 122.100. It is 250 – 118 m. wide at depth of 18 m., the bank slope is 3/1. The By-Pass is separated fro the main Canal by a submerged island at a depth between 2 and 6 m The width of the island varies between 200 m. in the North and 66 m in the South. Some mooring bollards have been installed on th submerged island to be used in case of emergency. The two extremit of the submerged island are marked at Km. 115.025 and 122.150 by light buoy painted horizontally white and red and showing a flash white light. The by-pass (East channel) is to be used by Northbou vessels. Southbound vessels use the West channel.

Article 81: Lakes

(A) Lake Timsah (see "Plan").

Lake Timsah extends from Km. 76.500 to Km. 80.520. In the presen of the new Timsah By-Pass, Lake Timsah will be used mainly as anchorage area.

(B) Great Bitter Lake (see "Plan").

There are 2 dredged channels in the Great Bitter Lake. The East is the main channel about 364 m. wide at 18.00 m. depth and dredged to 18.50 m. for Northbound vessels. The West channel 250 m. wide at 14.00 m. and dredged to 14.50 m. depth for Southbound vessels.

These channels divide the Great Bitter Lake into two anchorage areas, one to the East and the other to the West.

Article 82: Floating Bridges

The fixed parts of floating bridges are outside the line of navigational buoys. The bridges may be rigged day or night.

CHAPTER VII: BUOYAGE SYSTEM IN THE CANAL

Article 83: Buoyage

The navigable channel is marked by pairs of light buoys. On the East side Black buoys showing Green lights. On the West side Red buoys showing Red lights.

In the straight parts, the distance between each pair is 1.5 km. in the North Section, and 1.0 km. in the South Section. In the curves the distances will be less than 1.0 km. All buoys in the Canal and its approaches are fitted with radar reflector.

Article 84: Location of Buoys in the Suez Canal. See "Plan".

CHAPTER VIII: TIDES AND CURRENTS IN SUEZ CANAL

Article 85

The Suez Canal is divided in three main sectors according to the nature of tide in each.

The characteristics of each can be summarised as follows:

(A) The Northern Sector

This part is located between Port Said and the Great Bitter Lake.

1. The height of tide at Port Said co-oscillates with the tides of the Mediterranean sea with 0.50 m. extreme tidal range (difference between highest and lowest levels) at Spring tides. This tidal range decreases gradually going South, to be about 0.20 m. at the entrance of Lake Timsah.
2. In this sector, the peak tidal current may reach 1.0 knot (in case of no wind).
3. Currents can be doubled by strong prevailing winds.
4. Peak currents occur about 50 minutes after predicted HW and LW at Port Said.
5. The duration and velocity of currents in this sector are greatly affected by the relative mean sea levels between the Mediterranean sea, the Bitter Lakes and the Red Sea as follows:

(a) *In Summer:* Between July and October, the mean sea level at Port Said is slightly higher than that of the Bitter Lakes. This difference (which reaches its maximum about 0.20 m. in September), due to the great evaporation at the Bitter Lakes, causes the *predominance of the Southward* current in duration and velocity.

(b) *In Winter:* Between December and May, the mean sea level at the Bitter Lakes is slightly higher than that of Port Said. This difference which reaches its maximum of about 0.30 m. in January, causes the *predominance of the Northward* current in duration and velocity.

(B) The Lakes (Timsah and Bitter Lakes)

1. The Lakes along the Canal have an important role in dampening the effects of sudden meteorological changes.
2. The Bitter Lakes with a surface of about 250 sq.km. reduce the vertical movement of the tide to a minimum between Km. 100 and Km. 130.
3. The high Spring tidal range (MHWS) in the Great Bitter Lake may reach 0.25 m.
4. The phase of the vertical tide in the Great Bitter Lake is about 3 hours later than that of Port Tewfik.
5. The vertical tide in Lake Timsah is almost in phase with the tide in the Great Bitter Lake.

(C) The Southern Region

This part is located between Port of Suez and the Bitter Lakes.

1. The height of tide at Suez co-oscillates with the tides of the Red Sea with extreme tidal range of about 1.90 m. at Spring tides. This range decreases gradually going North till the Bitter Lakes entrance where it is 0.15 m. at Genefa.
2. The tidal volume of the Bitter Lakes is very large compared to the tidal volume of the Southern section. Consequently the currents are relatively strong and almost uniform between Port Tewfik and Genefa.
3. In this region the Northward current is called *Flood* and the Southward current is called *Ebb*.
4. Peak currents about 50 minutes after predicted HW and LW at Port Tewfik.
5. At the entrance of the Canal, Km. 159, the *Flood* tide starts at an average of 3 hours after the LW at Suez. The *Ebb* tide 3 hours after HW in Suez.
6. Generally in Summer, the duration of the *Ebb* exceeds the average of 6 hours. In Winter, the *Flood* is the predominant. The *Ebb* is prolonged by "Strong Northerly Winds". The *Flood* is prolonged by "Strong Southerly Winds".
7. In this region the average peak current is about 1.5 knots. In Spring tides, current may reach 2.5 knots.
8. The change of current occurs 5 to 10 minutes later in the bottom of the Canal, than on its surface.

Article 86: Weather Forecast

Six meteorological stations are installed on the Canal area. Information about local weather will be passed to vessels through Pilots.

PART III – COMMUNICATIONS – SIGNALS.

CHAPTER IX: RADIOCOMMUNICATIONS

Article 87: Wireless and Radio Telephony

Masters of vessels are requested to contact the Suez Canal Authority via its wireless station "SUQ" (watch frequencies 425 kHz, 454 kHz and 468 kHz) whenever they want to make sure of the identity of any Suez Canal personnel embarking their vessels, either in the approaches or in the harbours or in the Canal waters. Also in case of any urgent complaints which may need quick investigation.

(A) Vessels must have their W/T and/or Radio Telephony apparatus in good working order before entering the Canal.

They must also be fitted with a VHF set easily operated from the bridge. It will have the frequency range of 156 to 174 MHz (Channels 9, 11, 12, 13, 14, 15 and 16). If not, they will rent one from the Suez Canal Authority for the transit. Channel 9 may be used as a stand-by channel at Port Said and Port of Suez.

(B) "SUQ" transmits on a frequency of 421 kHz.

Vessels communicating with SUQ must transmit on a frequency of 425 kHz, 454 kHz or 468 kHz.

(C) Master shall place their wireless apparatus at the disposal of Pilots during transit through the Canal.

(D) In addition, vessels arriving at Port Said or Port of Suez from sea can call by Radiotelephony.

Article 88: Radiotelephony (VHF)

(A) Radiotelephony for vessels from sea

(1) *At Port Said*

(a) Harbour Office: Call Sign: "Port Said 16" (HP-1) 156.800 MHz. Working Channel 13 (Inner Harbour), Channel 12 (Outer Harbour).

(b) Pilot Vessel and Radar Guidance:

(i) Outside the Harbour: Call Sign: "Port Said 12" (HP-2) 156.600 MHz.

(ii) Inside the Harbour: Call Sign: "Port Said 13" (HP-3) 156.650 MHz.

(iii) East Branch: Call Sign: "Port Said 8".

(c) Measurement Office: Call Sign: "Port Said 73" (M) 156.675 MHz.

(2) *At Port of Suez*

(a) Harbour Office: Call Sign: "Suez 16" (HP-1) 156.800 MHz.

(b) Pilot Vessel and Radar Guidance:

(i) Outside the Harbour: Call Sign: "Suez 11" (HP-2) 156.550 MHz.

(ii) Inside the Harbour: Call Sign: "Suez 14" (HP-3) 156.700 MHz.

(c) Measurement Office: Call Sign: "Suez 74" (M) 156.725 MHz.

(B) Radiotelephony in the Canal (UHF)

Channel No.	*Transmission Frequency MHz*	*Reception Frequency MHz*	*Function*
1	415.350	412.850	V/Ls from North (SB)
2	415.600	413.100	V/Ls from South (NB)
3	415.850	413.350	Emergency (EM)
4	416.600	414.100	In Port of Suez Harbour HP (T)
5	416.350	413.850	In Port Said Harbour HP (S)
6	416.125	413.600	Emergency Critical (EMC) (V/Ls out of convoy)

Escorting Tugs – Towing Tugs

Channel 1 – 414.750 MHz
Channel 2 – 414.775 MHz
Channel 3 – 414.800 MHz
} another set

Note: Channel 9 (156.450 MHz) may be used as stand-by Channel at Port Said or Port of Suez.

CHAPTER X: THE SUEZ CANAL VESSEL TRAFFIC MANAGEMENT SYSTEM (SCVTMS)

Article 89: Overview

The SCVTMS is a new integral system for traffic management in the Suez Canal. The system offers the following services:

(a) Continuous monitoring of vessel's position, speed, off-track and gap by means of highly accurate computerised tracking radars (at Port Said, Port Tewfik and Great Bitter Lake), also a dedicated Loran-C position fixing chain (covering the Canal and its approaches).

(b) A dedicated voice communication network that enables direct and uninterrupted communication between Pilots and Movement Centres.

(c) A computerised data base containing vessel's information and transit requirements (e.g. early booking) files.

This system greatly enhances safety of transit in the Suez Canal.

Article 90: Sequence of Events for Vessels Transiting The Canal.

(a) At each Port, a radar covers approximately 35 km. offshore. A vessel approaching the Canal at either end[26] is requested to call the Port Office on one of the frequencies listed in Chapter IX of the present Part. The Harbour Pilot boarding the vessel will have his own portable transceiver. The vessel is requested to declare her position when anchored in the anchorage area (if instructed to do so).

(b) When calling the Port Office for the first time, the vessel is requested to give her international call sign and her Suez Canal file number (if any). This file number will be registered on a special card by the Suez Canal Authority and given to any vessel transiting after June 30th, 1981. If the vessel does not carry a file number, she should so advise the Port Office. This file number is used by the computerised data base system in retrieving data pertaining to the vessel.

(c) Approaching the roads, the vessel is requested to call the Port Office declaring her international call sign. This is essential to start radar tracking of the vessel's speed, position, off-track and separation distances. Before entering the road, the Port Office monitors the vessel by radar.

(d) The Port Office follows the vessel as long as the Harbour Pilot is on board. On entering the Canal, the Canal Pilot will board. On boarding, the Canal Pilot will have a special set (Carry On Receiver Transmitter, called CORT) receiving Loran-C signals from SCVTMS dedicated chain continuously. The time difference calculated by the CORT is not displayed at the CORT. Instead, this information is continuously sent by the CORT to Ismailia centre where it is used to calculate vessel's speed, position, off-track and separation distances.

---

[26] Ten miles before arrival to Approach Buoy at Port Said. On Passing Separation Zone Buoy No. 1 at Port of Suez.

Circular No. 73/84:

Masters of vessels transiting the Suez Canal are hereby kindly requested to render all facilities and necessary assistance to the Canal Technician boarding their vessels for the purpose of supervising the Electronic CORT during Canal passage.

Article 91: Some Considerations to be Taken into Account

(a) The CORT should be mounted on the West wing of the vessel. The area around should be clear of any obstruction within 10 ft. radius. A trained technician will mount the CORT in place and operate it before disembarking. The CORT power is self-sufficient and does not need any attendance while in operation. At the other end of the Canal it is dismounted by a SCA technician.

(b) After mounting and operating the CORT, the Pilot is requested to report same to Ismailia Movement Office through VHF or UHF (Canal Pilots are equipped with portable UHF sets linked to Ismailia Movement Office). The Pilot is also requested to declare his approximate position, the vessel's "SCA" file number and "Call sign". This is essential to start the Loran-C tracking of the vessel.

(c) Vessels will be tracked simultaneously by radar and Loran-C at the Great Bitter Lake area.

(d) When approaching either end of the Canal (Km. 3 East Port Said Branch or Km. 162.000), the respective Port Office will be handed the responsibility of following up the vessel to sea.

(e) On passing either end, the Canal Pilot will declare his position together with the vessel's call sign and file number.

(f) The Harbour Pilot will then board the vessel while the CORT will be dismounted by a SCA technician.

(g) Any changes in the vessel's characteristics should be reported to Canal Officials to be filed in SCA vessel's file.

CHAPTER XI: SIGNALS

Article 92: Generalities

All signals used in Canal Waters are shown hereafter.

All flags and pendants to be hoisted by vessels, as shown hereafter, should be those in the International Code of Signals.

Night signals shall be hoisted where best seen by other vessels.

Article 93: Sound Signals

(A) Normal Manoeuvre

(1) The International Regulation for Preventing Collision at Sea Signals.

"One short blast": I am altering my course to starboard.
"Two short blasts": I am altering my course to port.
"Three short blasts": I am operating astern propulsion.

(2) The signal 5 or 6 short blasts repeated several times at short intervals to say: "I am reducing speed and may have to stop or make fast".

At night besides the blasts, four to five long flashes with the Aldis lamp or signal mast lamp.

(3) The signal one prolonged blast to attract attention. The expression "short blast" means a blast of about 1 second duration.

The expression "prolonged blast" means a blast of 4 to 6 seconds duration.

(B) Obstruction in Channel in all Circumstances

A vessel which under any circumstances causes or finds obstruction in the channel must immediately warn the vessels in the vicinity.

That warning is given by whistle or siren:

4 long blasts meaning: "The channel is not free".

That warning must be repeated every 3 minutes until vessels concerned have answered in the same manner. As soon as they hear the signal mentioned above, the vessels take steps to stop and instruct a Radio Watch, to receive full details of the alert given by the vessel that sent the said signal. The vessel should maintain Radio Watch until otherwise advised.

(C) Engine or Steering Failure Approaching Dredger

In case of engine or steering failure making the vessel not under command, while approaching a dredger, the vessel has to give the signal one long blast followed by two short blasts (– · ·).

(D) Vessel Mooring Voluntarily for Fog or Sand

During the mooring manoeuvre, the vessel sounds every 2 minutes a series of 6 short blasts.

Once made fast (Signal Garage Volontaire hoisted), the vessel must rapidly ring the bell for 5 seconds at intervals not exceeding one minute. For vessels over 350 ft. (106.75 m.) they will have to ring the bell forward and in addition a gong aft, at intervals not exceeding one minute, (a gong or any other instrument which tone and sound will be different to that of the bell forward).

These signals are stopped when the vessel is told that all vessels concerned have been notified of her mooring.

(E) Vessel Aground or Across Canal

See Article 93 (B) Obstruction in Channel.

(F) Between Vessels and Tugs

(1) Vessel Aground in Canal

Signals between a vessel aground in the Canal and a tug.

These signals are for manoeuvre of refloating, as long as the vessel has one of the grounding signals.

Pull slowly	(– ·)
Increase	(– · ·)
Stop	(– –)
Slack the line	(– – ·)
I am to let go	(– – · ·)

These signals are to be repeated by the tug.

(2) Vessel Towed in the Canal

Signals between a vessel towed in the Canal and a tug.

Radiotelephony is used as communication between ship and tug, besides the following signals.

By Day (Flag)		*At Night (Sound)*
Slow speed	: "A" hoisted above bridge	(– ·)
Half speed	: "A" hoisted half way	(– · ·)
Normal Tow	: "A" hoisted right up	(– · · ·)
Steady	: "A" lowered	(– –)

(Or sound signals if considered surer).

The sound signals are to be repeated by the tug. The flag signa remains flying as long as the tug is to give the signalled speed. By da every change of flag signals is followed by a long blast.

(G) Signals Between VLCCs and Escort Tugs

(1) Attention to Start Manoeuvre
Prolonged blasts given by the ship.

(2) Stern Tug
Bring my stern to starboard (
Bring my stern to port (· ·
Keep my stern in the axis (· · ·
Pull my stern aft slowly (· · · ·
Increase pulling my stern up to half speed astern (· · · ·
Increase pulling my stern up to full speed astern (· · · · ·
Stop pulling (very long blast) (—

(3) Forward Tug
Give me a push on starboard bow (-
Give me a push on port bow (– –
Stop pushing (– – –

Article 94: See "Plans".

NOTICES:

Circular No. 93/88:

We append hereunder, free translation of Circular letter date 2.10.1988 No. 434128 issued by the Director of Transit, Suez Cana Authority, Ismailia, which reads as follows:

> "Please ask Owners to advise Masters of vessels proceeding to transit Suez Canal to be kind enough and let us know directly and soonest possible of any ship carrying Waste Chemicals or if they observe any sign of Pollution, so that we may act accordingly for their own safety and the safety of the region."
>
> The above is commended to your kind attention.

Circular No. 94/88:

With reference to our Circular No. 11/86 of February 13th 198 concerning the necessity of ensuring the efficiency of vessel's gear an derricks used for heaving and lowering mooring launches an searchlights.

We now wish to advise that a letter from the Canal Mooring and Lights copied to the Director of Transit, Suez Canal Authority, was received o 17.10.1988 to the effect that it has been recently noticed the repetitio of accidents sustained to mooring boats and their crew which are du to:-

- The high speed of vessels whilst heaving up or lowering the moorin launches.
- The necessity of ensuring the capability of vessel's wires and winche before such operations are done.

Therefore, the Canal Mooring and Lights Co., draw your kind attentio to the above, and request your goodselves to put these operations unde the supervision of an officer, and to be kind enough to report an negligence on the part of mooring men in putting on Life Jackets whi heaving up or lowering their boats, avoiding such incidents for the sak of protecting their lives.

WADI FIRAN: 28.44 N. 33.13 E.

An open anchorage on Sinai coast in the Gulf of Suez about 85 nauti miles South of Suez.

There are 12 large and conspicuous storage tanks in 2 parallel row of 6 tanks each lined on shore near the pumping station and painte with aluminium.

DOCUMENTS:

4 Crew Lists.
2 Stores Lists.
2 Vaccination Lists.

PILOTAGE: Pilot boards each tanker at anchorage.

ANCHORAGE: Lat. 28° 44.5′ N., Long. 33° 09.5′ E.

RESTRICTIONS: Mooring and unmooring during daylight only.

MAX. SIZE: 105,000 d.w.t. Max. draft 75 ft. at Berth No. 1.

RADIO: It is essential that vessels bound for Wadi Firan give 72 hou and 24 hours notice to both "Petmisr Cairo 92049 UN" and "Pet 92449 UN", to be accepted on the berth without delay. Contact A Rudeis on VHF Channel 16 when in range. There is no radio station Abu Rudeis. Pilots working on Channel 14.

VHF: VHF radio is used for communication between tanker and pump station.

TUGS: 1×3,080 h.p. and 1×4,080 h.p. available for mooring a unmooring.

BERTHING: Tankers must approach berth from West, never from No and must follow same track on their departure to be entirely clear shallow water. Tankers at berth will be connected to shore pump station by submarine hoses for pumping crude oil (12 in. hose from starboard side).

Two mooring launches available. Both ship's anchors are used, port anchor first, normally 9-10 shackles in the water on each. At stern 4 wire ropes from buoys are taken on board. Special care sho be taken when mooring in Southerly winds. If blowing strong, berth may be delayed.

	Berth No. 1	*Berth No. 2*
Position:	Lat. 28° 45′ N. Long. 33° 11.5′ N.	Lat. 28° 43.5′ E. Long. 33° 11.5′ E.
LOA:	1,200 ft.	1,000 ft.
Water Depth:	75 ft.	58 ft.
Max. D.W.T.	105,000	50,000
Sea Line (Crude):	24 in.	18 in.
Sea Line (Ballast):	18 in.	18 in.
Tanker's Length:	900 ft.	700 ft.
Max. loading rate:	2,800 cu.m.p.h.	1,600 cu.m.p.h.

Reception facilities for 30,000 cu.m. of dirty ballast.

Two tankers can moor simultaneously but only one may load.

DENSITY: 1032.

FRESH WATER: Not available.

FUEL: Not available.

AUTHORITY: Belayim Petroleum Co., 5 El Mokhayam El Dayem Street, Nasr City, Cairo, Egypt. (P.O. Box No. 7074). *Tel:* 2621738, 2621739, 2621740, 2621742, 2621743, 2621744. *Telex:* 21003 Petbl UN, 92373 Petbl UN, 92449 Petbl UN. *FAX:* 2609792 Cairo. *Contact:* Ibrahim El Shafie, Operations General Manager.

ZEIT BAY: 27.50 N. 33.36 E. (See Plan)

(A) SBM. (B) LPG BERTH.

(A) SBM.

LOCATION: Zeit Bay Terminal is approximately 60 km. North of Hurgada.

ANCHORAGES: Waiting area centred on Lat. 27° 48.5′ N., Long. 33° 37.0′ E. Radius 1 mile. Depth ranges from 22 m. to 38 m., with 31 m. at centre.

Vessel is not permitted to anchor outside the anchorage area.

RESTRICTIONS: Weather conditions may prevent berthing. This is the case when wind speed exceeds 25 knots. Vessel will then remain in the anchorage until weather improves. Daylight berthing only. Unberthing any time.

MAX. SIZE: 30,000 tons (SDWT) to 250,000 tons (SDWT) with permissible max. draft up to 18.0 m.

HEALTH: Masters are to indicate any sickness on board in their ETA notification. SUCO will arrange with Health Authorities if so required.

RADIO: Tankers calling at Zeit Bay must send ETA message 72, 24, and 12 hours distant from the terminal to SUCO Head Office, via any coastal radio station: Alexandria, Port Said, Suez and Kosseir.

ETA messages to SUCO should give the best estimates of ship's arrival time at the terminal and relevant information on lifting gear, connections, ballast/segregated/dirty and quantity. This ETA message should also include a definite statement of details of any equipment required from shore for connecting 16 in. floating hose, bearing in mind that such hose needs tanker to be equipped with crane, classed and certified to at least 10 tons capacity.

VHF: Master must call "Zeit Bay" 4 hours prior arrival on VHF Channel 16, working Channel 12.

TUGS: Two mooring line boats, 1×500 h.p. and 1×1,000 h.p. are available to assist with mooring and hose connection. The boats are equipped for anti-pollution operations.

One fire fighting tug available on a standby basis whilst loading operations are in progress.

BERTHING: All mooring equipment is available and will be placed on board the vessel when Mooring Master boards.

A vessel can make the final approach and moor to buoy from any direction, bearing in mind prevailing weather and tidal conditions. The approach shall be made from the direction which is consistent with a safe approach, and speed shall be subject to the prevailing forces (i.e. wind, current and tidal stream) at the location at the time of berthing with assistance of mooring boats stationed at the buoy.

Once moored the vessel is free to turn through 360° under the influence of the prevailing forces.

HOSE CONNECTION: 16 in. standard 150 ASA flange connection for crude oil and ballast hoses. Port derrick with minimum 10 tons SWL to be rigged for max. height and load lifting.

Ship's crew shall be responsible for connecting and disconnecting hoses with assistance of shore crew.

A quick release coupling (Camlock) is connected to each hose end and is to be used as follows:

1. In case of emergency, the butterfly valve shall be immediately closed and quick release coupling immediately disconnected.
2. Do not hammer but try to use the Camlock wrench supplied or use copper hammer only.
3. Tanker should be ready with reducer if its manifold is not 16 in.
4. Bags of sand to be available.
5. Weight of the hose is approximately 8 tons.

LOADING: Upon being informed by the vessel's responsible officer that vessel is ready to start loading, Mooring Master will normally advise the Control Room and ensure that the loading commences at a low rate (by gravity).

When it has been confirmed that there is no significant rise in pressure on the loading line, the crude oil will be loaded, pumping with a maximum rate of 5,000 tonnes/p.h.

Crude oil is delivered through the submarine pipeline to the buoy and thence via a floating hose to the vessel's port side midship manifold. Hose diameter is generally 24 in., reducing to 16 in. at the ship's end.

It is forbidden to close any valve onboard the tanker against the flow of the crude oil until the butterfly valve of the loading hose has been closed.

If ship-to-shore communications fail during loading operations, the emergency whistle signal is a continuous blast on the tanker's whistle. Loading shall immediately be stopped and will not be resumed until communications have been re-established.

Before loading, cargo tanks are dipped by an independent inspector and at Terminal Inspector. If dirty ballast is retained on board until the next discharge port, then the amount of water and oil on top will be checked.

Density of Zeit Bay Crude is approx. (0.854/15°C.). Temperature when received on board is approximately 34°C.

Immobilisation of engines at SBM is strictly prohibited.

BALLAST/POLLUTION: *Deballasting System:* It is preferable that vessels load crude oil while discharging ballast, but Master or officer-in-charge must be sure that no contamination or pollution takes place.

If the vessel is not equipped with 2 lines in order to load and deballast at the same time, a quantity of crude should be loaded prior to deballasting to ensure proper segregation.

Dirty ballast must not be in the emulsion form and is not to contain chemicals or detergents.

The floating hose is normally 20 in. diameter, and the ship's end connection 16 in. diameter.

It is strictly forbidden to discharge dirty ballast overboard.

Pollution: The Master has to comply with all regulations and instructions prohibiting pollution under A.R.E. laws and under any pertinent instructions issued by SUCO when conveyed to Master.

Also, the provisions for International Convention for Prevention of Pollution from vessels 1973 and the Protocol of 1978 relating to this connection will be applied to the extent that such Convention and Protocol are in force in A.R.E. Owner/operator shall be liable for any damage resulting from the pollution caused by the vessel and shall pay for all the expenses incurred for its removal and elimination.

Oil Spill: In the event of a spill or its detection, SUCO Mooring Master must be notified instantly for the necessary action to be taken.

MEDICAL: In case urgent medical assistance is required, the vessel should contact SUCO Marine Manager by VHF radio. A doctor and facilities are available but there is no hospital in the area.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

REPATRIATION: Possible in emergency only.

HOLIDAYS: Zeit Bay Terminal never closes on religious holidays.

SHORE LEAVE: There is no shore leave for personnel of vessels whilst at the SBM.

GENERAL:

Helicopter: Should the services of a helicopter be required in emergency or for any purpose whatsoever, the vessel will be given a minimum of 30 minutes notice.

Weather: Gales can be expected from a North Westerly direction from October through May.

The above conditions are only for guidance and are not relevant to the safety of the vessel but to the safety of the buoy.

The Mooring Master shall have the authority to decide whether the ship should remain or vacate the buoy.

Climate: The climate in the Gulf of Suez is generally good. The visibility is usually excellent, with few dust storms and infrequent fog. There are a few rain squalls.

Winds: The general flow of the wind over this part of the Gulf of Suez is predominantly from the N.N.W. Winds are steadier in the Summer months (May/October) and almost nil from June to September. Gales can mainly be expected from a North-Westerly direction from October to May.

The maximum velocity is approximately 45 knots, whilst the mean wind speed is approximately 20 knots and is prevalent for some 98% of the year. There are occasional light Southerly winds.

Tides: The tidal range is between 4 ft. and 5 ft.

Sea Condition: The surface temperature of the sea ranges from 18°C. to 30°C., depending on the season.

Seas and swells are usually from the N.N.W. and wave height can reach 18 ft., but average is about 6 ft. During the Summer months (May/August) there are many days of 12 ft. – 15 ft. seas.

Currents are generally located in mid-channel and set North when the tide is rising in Suez, and South when the tide is falling. The rate is about 2.5 knots at Spring tides and 0.5 knots at Neap tides.

(B) LPG BERTH.

LOCATION: Zeit Bay is an open area and unsheltered.

LPG tankers will moor alongside a pier which is perpendicular to the shore. The pier length is 50 m. and water depth is 8 m.

Pier position: Lat. 27° 48.1′ N.
Long. 33° 33.7′ E.

There are 2 mooring buoys, located North and South of the pier and about 50 m. off pier's edges, to secure the tanker in its proper position while undertaking operations.

DOCUMENTS: Masters are requested to hand the following original documents to "SUCO" Mooring Master upon arrival. These documents will be returned when cargo documents are signed on departure.

Certificate of Registry.
Load Line Certificate.
Safety Certificates.

PILOTAGE: SUCO Mooring Master will board the vessel in the LPG waiting area. Pilot ladder should be kept in good order, clean and should be adequate in length and strength.

When Mooring Master boards the vessel, he will advise the Master on the approaching, berthing operations and provide him with all necessary information.

Mooring Master will check all original Certificates and receive them from the Master.

(D) Bends in the Canal

(1) The bends in the navigable channel have the following characteristics:

(a) Radius of navigation line = 5,000 m.
(b) Width of channel at −11.00 m., depth = 190 m.
(c) Width of channel at −18.00 m., depth North of Km. 61.000 (side slopes 4/1) = 134 m.
(d) Width of channel at −18.00 m., depth South of Km. 61.000 (side slopes 3/1) = 148 m.
(e) At the ends of two bends, there is usually a funnel made to allow increasing the width of the channel gradually from 160 m. to 190 m. (at −11.00 m. depth).
(f) Locations of beginning and end of each bend are included in the following table:

Canal Bends	*Kilometric indication of beginning point*	*Kilometric indication of end point*
Km. 53	Km. 52.050	Km. 53.520 West
Km. 57	Km. 56.870	Km. 58.800 West
S. "Curves"	Km. 71.960	Km. 75.300
Timsah Curve	Km. 76.520	Km. 81.700 East
Km. 85	Km. 85.030	Km. 87.400
Km. 103	Km. 102.600	Km. 105.030 West
Km. 130	Km. 129.500	Km. 131.980
Km. 146	Km. 145.500	Km. 146.330
Km. 154	Km. 154.700	Km. 155.720
Km. 157	Km. 156.280	Km. 160.000

(2) At the approaches of the by-passes, bends are made with radius more than 5,000 m. Location of these bends are included in the table hereafter.

Approaches	*Kilometric indication of beginning point*	*Kilometric indication of end point*
Km. 51	Km. 49.510	Km. 51.480 West
		Km. 51.790 East
Km. 61	Km. 60.310 West	
	Km. 59.940 East	Km. 63.300
Km. 122	Km. 121.940 East	
	Km. 122.500 West	Km. 125.510

(E) By-Passes and Loops

(1) Port Said By-Pass (see "Plan").

A new by-pass is dredged East of Port Fouad starting at Km. 17.000 and extending straight to join the existing Port Said Roadstead at Hm. 94.90 and continuing until Hm. 195. This channel (By-Pass) will be used for the exit of Northbound ships, the entry of VLCCs in ballast and vessels with draft over 38 ft. coming from North.

Characteristics and dimensions: The kilometric marks are followed by letter "E" to distinguish them from those of the West branch. The inland part (from Km. 1.500 E. to Km. 15.465 E.) width (at 18 m. depth) is 114 m. with side slopes 4/1 and depth 19.5 m., fitted with bollards on the Western side, spaced every 100 m.

The seaward part (from Km. 1.500 E. to Hm. 94.90 E.) with width (−20 m. depth) ranging from 120 m. at Km. 1.333 E. to 400 m. at H 80.00 E. with natural side slopes (average 5/1 – 10/1).

Two revolving lights, one on each bank to indicate the entrance Canal from East Approach channel at Km. 3.000 E.

(2) Ballah Loop (see "Plan").

Between Km. 51 and 61 the Canal is doubled in the East, by a branc The zone comprising the 2 branches of the Canal limited by the Nor and South ends where the 2 branches meet, is called "Ballah Loop". In the East Branch the kilometric marks are followed by letter "E The length of the East Branch is 8.490 km.

	West Branch	*East Branch*
Kilometric marking of North end	51.477	51.449 E
Kilometric marking of South end	60.333	59.943 E

Slope of bank 4/1. In the West branch 15 mooring posts are situate on the Eastern bank and numbered South to North.

(3) Timsah By-Pass (see "Plan").

Between Km. 76.580 and Km. 81.700 E.

Characteristics and dimensions

The kilometric marks are followed by letter "E". Length: 5.110 k counted at right angle from Km. 76.578 to Km. 81.700. Width: 148 at a depth of 18 m. Slope: The side slope is 3/1. The radius of its a is 4905 m. The by-pass will be used by North and Southbound vesse

(4) Deversoir By-Pass (see "Plan").

A new branch is dredged East of the existing channel at Devers zone. This branch begins at Km. 95.000 and joins the main East chann in the Great Bitter Lake at Km. 104.160. The branch will be used Northbound vessels.

Dimensions

Width: 148 m. at 18 m. depth. Depths: 19.500 m. from Km. 95.000 Km. 100.670; 19.900 m. from Km. 100.670 to Km. 102.600; 18.500 from Km. 102.600 to Km. 104.160. Side slope: 3/1.

(5) Kabrit By-Pass (see "Plan").

The By-Pass is situated to the East of the main Canal. It begins Km. 114.960 and ends at Km. 122.100. It is 250 – 118 m. wide a depth of 18 m., the bank slope is 3/1. The By-Pass is separated fr the main Canal by a submerged island at a depth between 2 and 6 The width of the island varies between 200 m. in the North and 66 in the South. Some mooring bollards have been installed on submerged island to be used in case of emergency. The two extremit of the submerged island are marked at Km. 115.025 and 122.150 b light buoy painted horizontally white and red and showing a flash white light. The by-pass (East channel) is to be used by Northbou vessels. Southbound vessels use the West channel.

Article 81: Lakes

(A) Lake Timsah (see "Plan").

Lake Timsah extends from Km. 76.500 to Km. 80.520. In the prese of the new Timsah By-Pass, Lake Timsah will be used mainly as anchorage area.

(B) Great Bitter Lake (see "Plan").

There are 2 dredged channels in the Great Bitter Lake. The East is the main channel about 364 m. wide at 18.00 m. depth and dredged to 18.50 m. for Northbound vessels. The West channel 250 m. wide at 14.00 m. and dredged to 14.50 m. depth for Southbound vessels.

These channels divide the Great Bitter Lake into two anchorage areas, one to the East and the other to the West.

Article 82: Floating Bridges

The fixed parts of floating bridges are outside the line of navigational buoys. The bridges may be rigged day or night.

CHAPTER VII: BUOYAGE SYSTEM IN THE CANAL

Article 83: Buoyage

The navigable channel is marked by pairs of light buoys. On the East side Black buoys showing Green lights. On the West side Red buoys showing Red lights.

In the straight parts, the distance between each pair is 1.5 km. in the North Section, and 1.0 km. in the South Section. In the curves the distances will be less than 1.0 km. All buoys in the Canal and its approaches are fitted with radar reflector.

Article 84: Location of Buoys in the Suez Canal. See "Plan".

CHAPTER VIII: TIDES AND CURRENTS IN SUEZ CANAL

Article 85

The Suez Canal is divided in three main sectors according to the nature of tide in each.

The characteristics of each can be summarised as follows:

(A) The Northern Sector

This part is located between Port Said and the Great Bitter Lake.

1. The height of tide at Port Said co-oscillates with the tides of the Mediterranean sea with 0.50 m. extreme tidal range (difference between highest and lowest levels) at Spring tides. This tidal range decreases gradually going South, to be about 0.20 m. at the entrance of Lake Timsah.

2. In this sector, the peak tidal current may reach 1.0 knot (in case of no wind).

3. Currents can be doubled by strong prevailing winds.

4. Peak currents occur about 50 minutes after predicted HW and LW at Port Said.

5. The duration and velocity of currents in this sector are greatly affected by the relative mean sea levels between the Mediterranean sea, the Bitter Lakes and the Red Sea as follows:

(a) *In Summer:* Between July and October, the mean sea level at Port Said is slightly higher than that of the Bitter Lakes. This difference (which reaches its maximum about 0.20 m. in September), due to the great evaporation at the Bitter Lakes, causes the *predominance of the Southward* current in duration and velocity.

(b) *In Winter:* Between December and May, the mean sea level at the Bitter Lakes is slightly higher than that of Port Said. This difference which reaches its maximum of about 0.30 m. in January, causes the *predominance of the Northward* current in duration and velocity.

(B) The Lakes (Timsah and Bitter Lakes)

1. The Lakes along the Canal have an important role in dampening the effects of sudden meteorological changes.

2. The Bitter Lakes with a surface of about 250 sq.km. reduce the vertical movement of the tide to a minimum between Km. 100 and Km. 130.

3. The high Spring tidal range (MHWS) in the Great Bitter Lake may reach 0.25 m.

4. The phase of the vertical tide in the Great Bitter Lake is about 3 hours later than that of Port Tewfik.

5. The vertical tide in Lake Timsah is almost in phase with the tide in the Great Bitter Lake.

(C) The Southern Region

This part is located between Port of Suez and the Bitter Lakes.

1. The height of tide at Suez co-oscillates with the tides of the Red Sea with extreme tidal range of about 1.90 m. at Spring tides. This range decreases gradually going North till the Bitter Lakes entrance where it is 0.15 m. at Genefa.

2. The tidal volume of the Bitter Lakes is very large compared to the tidal volume of the Southern section. Consequently the currents are relatively strong and almost uniform between Port Tewfik and Genefa.

3. In this region the Northward current is called *Flood* and the Southward current is called *Ebb*.

4. Peak currents about 50 minutes after predicted HW and LW at Port Tewfik.

5. At the entrance of the Canal, Km. 159, the *Flood* tide starts at an average of 3 hours after the LW at Suez. The *Ebb* tide 3 hours after HW in Suez.

6. Generally in Summer, the duration of the *Ebb* exceeds the average of 6 hours. In Winter, the *Flood* is the predominant. The *Ebb* is prolonged by "Strong Northerly Winds". The *Flood* is prolonged by "Strong Southerly Winds".

7. In this region the average peak current is about 1.5 knots. In Spring tides, current may reach 2.5 knots.

8. The change of current occurs 5 to 10 minutes later in the bottom of the Canal, than on its surface.

Article 86: Weather Forecast

Six meteorological stations are installed on the Canal area. Information about local weather will be passed to vessels through Pilots.

PART III – COMMUNICATIONS – SIGNALS.

CHAPTER IX: RADIOCOMMUNICATIONS

Article 87: Wireless and Radio Telephony

Masters of vessels are requested to contact the Suez Canal Authority via its wireless station "SUQ" (watch frequencies 425 kHz, 454 kHz and 468 kHz) whenever they want to make sure of the identity of any Suez Canal personnel embarking their vessels, either in the approaches or in the harbours or in the Canal waters. Also in case of any urgent complaints which may need quick investigation.

(A) Vessels must have their W/T and/or Radio Telephony apparatus in good working order before entering the Canal.

They must also be fitted with a VHF set easily operated from the bridge. It will have the frequency range of 156 to 174 MHz (Channels 9, 11, 12, 13, 14, 15 and 16). If not, they will rent one from the Suez Canal Authority for the transit. Channel 9 may be used as a stand-by channel at Port Said and Port of Suez.

(B) "SUQ" transmits on a frequency of 421 kHz.

Vessels communicating with SUQ must transmit on a frequency of 425 kHz, 454 kHz or 468 kHz.

(C) Master shall place their wireless apparatus at the disposal of Pilots during transit through the Canal.

(D) In addition, vessels arriving at Port Said or Port of Suez from sea can call by Radiotelephony.

Article 88: Radiotelephony (VHF)

(A) Radiotelephony for vessels from sea

(1) *At Port Said*

(a) Harbour Office: Call Sign: "Port Said 16" (HP-1) 156.800 MHz. Working Channel 13 (Inner Harbour), Channel 12 (Outer Harbour).

(b) Pilot Vessel and Radar Guidance:

(i) Outside the Harbour: Call Sign: "Port Said 12" (HP-2) 156.600 MHz.

(ii) Inside the Harbour: Call Sign: "Port Said 13" (HP-3) 156.650 MHz.

(iii) East Branch: Call Sign: "Port Said 8".

(c) Measurement Office: Call Sign: "Port Said 73" (M) 156.675 MHz.

(2) *At Port of Suez*

(a) Harbour Office: Call Sign: "Suez 16" (HP-1) 156.800 MHz.

(b) Pilot Vessel and Radar Guidance:

(i) Outside the Harbour: Call Sign: "Suez 11" (HP-2) 156.550 MHz.

(ii) Inside the Harbour: Call Sign: "Suez 14" (HP-3) 156.700 MHz.

(c) Measurement Office: Call Sign: "Suez 74" (M) 156.725 MHz.

(B) Radiotelephony in the Canal (UHF)

Channel No.	*Transmission Frequency MHz*	*Reception Frequency MHz*	*Function*
1	415.350	412.850	V/Ls from North (SB)
2	415.600	413.100	V/Ls from South (NB)
3	415.850	413.350	Emergency (EM)
4	416.600	414.100	In Port of Suez Harbour HP (T)
5	416.350	413.850	In Port Said Harbour HP (S)
6	416.125	413.600	Emergency Critical (EMC) (V/Ls out of convoy)

Escorting Tugs – Towing Tugs
Channel 1 – 414.750 MHz
Channel 2 – 414.775 MHz } another set
Channel 3 – 414.800 MHz

Note: Channel 9 (156.450 MHz) may be used as stand-by Channel at Port Said or Port of Suez.

CHAPTER X: THE SUEZ CANAL VESSEL TRAFFIC MANAGEMENT SYSTEM (SCVTMS)

Article 89: Overview

The SCVTMS is a new integral system for traffic management in the Suez Canal. The system offers the following services:

(a) Continuous monitoring of vessel's position, speed, off-track and gap by means of highly accurate computerised tracking radars (at Port Said, Port Tewfik and Great Bitter Lake), also a dedicated Loran-C position fixing chain (covering the Canal and its approaches).

(b) A dedicated voice communication network that enables direct and uninterrupted communication between Pilots and Movement Centres.

(c) A computerised data base containing vessel's information and transit requirements (e.g. early booking) files.

This system greatly enhances safety of transit in the Suez Canal.

Article 90: Sequence of Events for Vessels Transiting The Canal.

(a) At each Port, a radar covers approximately 35 km. offshore. A vessel approaching the Canal at either end[26] is requested to call the Port Office on one of the frequencies listed in Chapter IX of the present Part. The Harbour Pilot boarding the vessel will have his own portable transceiver. The vessel is requested to declare her position when anchored in the anchorage area (if instructed to do so).

[26] Ten miles before arrival to Approach Buoy at Port Said. On Passing Separation Zone Buoy No. 1 at Port of Suez.

(b) When calling the Port Office for the first time, the vessel is requested to give her international call sign and her Suez Canal file number (if any). This file number will be registered on a special card by the Suez Canal Authority and given to any vessel transiting after June 30th, 1981. If the vessel does not carry a file number, she should so advise the Port Office. This file number is used by the computerised data base system in retrieving data pertaining to the vessel.

(c) Approaching the roads, the vessel is requested to call the Port Office declaring her international call sign. This is essential to start radar tracking of the vessel's speed, position, off-track and separation distances. Before entering the road, the Port Office monitors the vessel by radar.

(d) The Port Office follows the vessel as long as the Harbour Pilot is on board. On entering the Canal, the Canal Pilot will board. On boarding, the Canal Pilot will have a special set (Carry On Receiver Transmitter, called CORT) receiving Loran-C signals from SCVTMS dedicated chain continuously. The time difference calculated by the CORT is not displayed at the CORT. Instead, this information is continuously sent by the CORT to Ismailia centre where it is used to calculate vessel's speed, position, off-track and separation distances.

Circular No. 73/84:

Masters of vessels transiting the Suez Canal are hereby kindly requested to render all facilities and necessary assistance to the Canal Technician boarding their vessels for the purpose of supervising the Electronic CORT during Canal passage.

Article 91: Some Considerations to be Taken into Account

(a) The CORT should be mounted on the West wing of the vessel. The area around should be clear of any obstruction within 10 ft. radius. A trained technician will mount the CORT in place and operate it before disembarking. The CORT power is self-sufficient and does not need any attendance while in operation. At the other end of the Canal it is dismounted by a SCA technician.

(b) After mounting and operating the CORT, the Pilot is requested to report same to Ismailia Movement Office through VHF or UHF (Canal Pilots are equipped with portable UHF sets linked to Ismailia Movement Office). The Pilot is also requested to declare his approximate position, the vessel's "SCA" file number and "Call sign". This is essential to start the Loran-C tracking of the vessel.

(c) Vessels will be tracked simultaneously by radar and Loran-C at the Great Bitter Lake area.

(d) When approaching either end of the Canal (Km. 3 East Port Said Branch or Km. 162.000), the respective Port Office will be handed the responsibility of following up the vessel to sea.

(e) On passing either end, the Canal Pilot will declare his position together with the vessel's call sign and file number.

(f) The Harbour Pilot will then board the vessel while the CORT will be dismounted by a SCA technician.

(g) Any changes in the vessel's characteristics should be reported to Canal Officials to be filed in SCA vessel's file.

CHAPTER XI: SIGNALS

Article 92: Generalities

All signals used in Canal Waters are shown hereafter.

All flags and pendants to be hoisted by vessels, as shown hereafter, should be those in the International Code of Signals.

Night signals shall be hoisted where best seen by other vessels.

Article 93: Sound Signals

(A) Normal Manoeuvre

(1) The International Regulation for Preventing Collision at Sea Signals.

"One short blast": I am altering my course to starboard.
"Two short blasts": I am altering my course to port.
"Three short blasts": I am operating astern propulsion.

(2) The signal 5 or 6 short blasts repeated several times at short intervals to say: "I am reducing speed and may have to stop or make fast".

At night besides the blasts, four to five long flashes with the Aldis lamp or signal mast lamp.

(3) The signal one prolonged blast to attract attention. The expression "short blast" means a blast of about 1 second duration.

The expression "prolonged blast" means a blast of 4 to 6 seconds duration.

(B) Obstruction in Channel in all Circumstances

A vessel which under any circumstances causes or finds obstruction in the channel must immediately warn the vessels in the vicinity.

That warning is given by whistle or siren:

4 long blasts meaning: "The channel is not free".

That warning must be repeated every 3 minutes until vessels concerned have answered in the same manner. As soon as they hear the signal mentioned above, the vessels take steps to stop and instruct a Radio Watch, to receive full details of the alert given by the vessel that sent the said signal. The vessel should maintain Radio Watch until otherwise advised.

(C) Engine or Steering Failure Approaching Dredger

In case of engine or steering failure making the vessel not under command, while approaching a dredger, the vessel has to give the signal one long blast followed by two short blasts (– · ·).

(D) Vessel Mooring Voluntarily for Fog or Sand

During the mooring manoeuvre, the vessel sounds every 2 minutes a series of 6 short blasts.

Once made fast (Signal Garage Volontaire hoisted), the vessel must rapidly ring the bell for 5 seconds at intervals not exceeding one minute. For vessels over 350 ft. (106.75 m.) they will have to ring the bell forward and in addition a gong aft, at intervals not exceeding one minute, (a gong or any other instrument which tone and sound will be different to that of the bell forward).

These signals are stopped when the vessel is told that all vessels concerned have been notified of her mooring.

(E) Vessel Aground or Across Canal

See Article 93 (B) Obstruction in Channel.

(F) Between Vessels and Tugs

(1) Vessel Aground in Canal

Signals between a vessel aground in the Canal and a tug.

These signals are for manoeuvre of refloating, as long as the vessel has one of the grounding signals.

Pull slowly	(– ·)
Increase	(– · ·)
Stop	(– –)
Slack the line	(– – ·)
I am to let go	(– – · ·)

These signals are to be repeated by the tug.

(2) Vessel Towed in the Canal

Signals between a vessel towed in the Canal and a tug.

Radiotelephony is used as communication between ship and tug, besides the following signals.

By Day (Flag)		*At Night (Sound)*
Slow speed	: "A" hoisted above bridge	(– ·)
Half speed	: "A" hoisted half way	(– · ·)
Normal Tow	: "A" hoisted right up	(– · · ·)
Steady	: "A" lowered	(– –)

(Or sound signals if considered surer).

The sound signals are to be repeated by the tug. The flag sig remains flying as long as the tug is to give the signalled speed. By da every change of flag signals is followed by a long blast.

(G) Signals Between VLCCs and Escort Tugs

(1) Attention to Start Manoeuvre
Prolonged blasts given by the ship.

(2) Stern Tug
Bring my stern to starboard (·
Bring my stern to port (· ·
Keep my stern in the axis (· · ·
Pull my stern aft slowly (· · · ·
Increase pulling my stern up to half speed astern (· · · ·
Increase pulling my stern up to full speed astern (· · · · ·
Stop pulling (very long blast) (—

(3) Forward Tug
Give me a push on starboard bow (-
Give me a push on port bow (– –
Stop pushing (– – –

Article 94: See "Plans".

NOTICES:

Circular No. 93/88:

We append hereunder, free translation of Circular letter date 2.10.1988 No. 434128 issued by the Director of Transit, Suez Cana Authority, Ismailia, which reads as follows:

> "Please ask Owners to advise Masters of vessels proceeding to transit Suez Canal to be kind enough and let us know directly and soonest possible of any ship carrying Waste Chemicals or if they observe any sign of Pollution, so that we may act accordingly for their own safety and the safety of the region."

The above is commended to your kind attention.

Circular No. 94/88:

With reference to our Circular No. 11/86 of February 13th 198 concerning the necessity of ensuring the efficiency of vessel's gear an derricks used for heaving and lowering mooring launches an searchlights.

We now wish to advise that a letter from the Canal Mooring and Lights copied to the Director of Transit, Suez Canal Authority, was received o 17.10.1988 to the effect that it has been recently noticed the repetitio of accidents sustained to mooring boats and their crew which are du to:-

- The high speed of vessels whilst heaving up or lowering the moorin launches.
- The necessity of ensuring the capability of vessel's wires and winche before such operations are done.

Therefore, the Canal Mooring and Lights Co., draw your kind attentio to the above, and request your goodselves to put these operations unde the supervision of an officer, and to be kind enough to report an negligence on the part of mooring men in putting on Life Jackets whi heaving up or lowering their boats, avoiding such incidents for the sak of protecting their lives.

WADI FIRAN: 28.44 N. 33.13 E.

An open anchorage on Sinai coast in the Gulf of Suez about 85 nautic miles South of Suez.

There are 12 large and conspicuous storage tanks in 2 parallel row of 6 tanks each lined on shore near the pumping station and painte with aluminium.

DOCUMENTS:
4 Crew Lists.
2 Stores Lists.
2 Vaccination Lists.

PILOTAGE: Pilot boards each tanker at anchorage.

ANCHORAGE: Lat. 28° 44.5′ N., Long. 33° 09.5′ E.

RESTRICTIONS: Mooring and unmooring during daylight only.

MAX. SIZE: 105,000 d.w.t. Max. draft 75 ft. at Berth No. 1.

RADIO: It is essential that vessels bound for Wadi Firan give 72 hou and 24 hours notice to both "Petmisr Cairo 92049 UN" and "Pet 92449 UN", to be accepted on the berth without delay. Contact A Rudeis on VHF Channel 16 when in range. There is no radio station Abu Rudeis. Pilots working on Channel 14.

VHF: VHF radio is used for communication between tanker and pumpi station.

TUGS: 1×3,080 h.p. and 1×4,080 h.p. available for mooring a unmooring.

BERTHING: Tankers must approach berth from West, never from Nor and must follow same track on their departure to be entirely clear shallow water. Tankers at berth will be connected to shore pumpi station by submarine hoses for pumping crude oil (12 in. hose from starboard side).

Two mooring launches available. Both ship's anchors are used, port anchor first, normally 9-10 shackles in the water on each. At stern 4 wire ropes from buoys are taken on board. Special care sho be taken when mooring in Southerly winds. If blowing strong, berthi may be delayed.

	Berth No. 1	Berth No. 2
Position:	Lat. 28° 45′ N. Long. 33° 11.5′ N.	Lat. 28° 43.5′ E. Long. 33° 11.5′ E.
LOA:	1,200 ft.	1,000 ft.
Water Depth:	75 ft.	58 ft.
Max. D.W.T.	105,000	50,000
Sea Line (Crude):	24 in.	18 in.
Sea Line (Ballast):	18 in.	18 in.
Tanker's Length:	900 ft.	700 ft.
Max. loading rate:	2,800 cu.m.p.h.	1,600 cu.m.p.h.

Reception facilities for 30,000 cu.m. of dirty ballast.

Two tankers can moor simultaneously but only one may load.

DENSITY: 1032.

FRESH WATER: Not available.

FUEL: Not available.

AUTHORITY: Belayim Petroleum Co., 5 El Mokhayam El Dayem Street, Nasr City, Cairo, Egypt. (P.O. Box No. 7074). *Tel:* 2621738, 2621739, 2621740, 2621742, 2621743, 2621744. *Telex:* 21003 Petbl UN, 92373 Petbl UN, 92449 Petbl UN. *FAX:* 2609792 Cairo. *Contact:* Ibrahim El Shafie, Operations General Manager.

ZEIT BAY: 27.50 N. 33.36 E. (See Plan)

(A) SBM. (B) LPG BERTH.

(A) SBM.

LOCATION: Zeit Bay Terminal is approximately 60 km. North of Hurgada.

ANCHORAGES: Waiting area centred on Lat. 27° 48.5′ N., Long. 33° 37.0′ E. Radius 1 mile. Depth ranges from 22 m. to 38 m., with 31 m. at centre.

Vessel is not permitted to anchor outside the anchorage area.

RESTRICTIONS: Weather conditions may prevent berthing. This is the case when wind speed exceeds 25 knots. Vessel will then remain in the anchorage until weather improves. Daylight berthing only. Unberthing any time.

MAX. SIZE: 30,000 tons (SDWT) to 250,000 tons (SDWT) with permissible max. draft up to 18.0 m.

HEALTH: Masters are to indicate any sickness on board in their ETA notification. SUCO will arrange with Health Authorities if so required.

RADIO: Tankers calling at Zeit Bay must send ETA message 72, 24, and 12 hours distant from the terminal to SUCO Head Office, via any coastal radio station: Alexandria, Port Said, Suez and Kosseir.

ETA messages to SUCO should give the best estimates of ship's arrival time at the terminal and relevant information on lifting gear, connections, ballast/segregated/dirty and quantity. This ETA message should also include a definite statement of details of any equipment required from shore for connecting 16 in. floating hose, bearing in mind that such hose needs tanker to be equipped with crane, classed and certified to at least 10 tons capacity.

VHF: Master must call "Zeit Bay" 4 hours prior arrival on VHF Channel 16, working Channel 12.

TUGS: Two mooring line boats, 1×500 h.p. and 1×1,000 h.p. are available to assist with mooring and hose connection. The boats are equipped for anti-pollution operations.

One fire fighting tug available on a standby basis whilst loading operations are in progress.

BERTHING: All mooring equipment is available and will be placed on board the vessel when Mooring Master boards.

A vessel can make the final approach and moor to buoy from any direction, bearing in mind prevailing weather and tidal conditions. The approach shall be made from the direction which is consistent with a safe approach, and speed shall be subject to the prevailing forces (i.e. wind, current and tidal stream) at the location at the time of berthing with assistance of mooring boats stationed at the buoy.

Once moored the vessel is free to turn through 360° under the influence of the prevailing forces.

HOSE CONNECTION: 16 in. standard 150 ASA flange connection for crude oil and ballast hoses. Port derrick with minimum 10 tons SWL to be rigged for max. height and load lifting.

Ship's crew shall be responsible for connecting and disconnecting hoses with assistance of shore crew.

A quick release coupling (Camlock) is connected to each hose end and is to be used as follows:

1. In case of emergency, the butterfly valve shall be immediately closed and quick release coupling immediately disconnected.
2. Do not hammer but try to use the Camlock wrench supplied or use copper hammer only.
3. Tanker should be ready with reducer if its manifold is not 16 in.
4. Bags of sand to be available.
5. Weight of the hose is approximately 8 tons.

LOADING: Upon being informed by the vessel's responsible officer that vessel is ready to start loading, Mooring Master will normally advise the Control Room and ensure that the loading commences at a low rate (by gravity).

When it has been confirmed that there is no significant rise in pressure on the loading line, the crude oil will be loaded, pumping with a maximum rate of 5,000 tonnes/p.h.

Crude oil is delivered through the submarine pipeline to the buoy and thence via a floating hose to the vessel's port side midship manifold. Hose diameter is generally 24 in., reducing to 16 in. at the ship's end.

It is forbidden to close any valve onboard the tanker against the flow of the crude oil until the butterfly valve of the loading hose has been closed.

If ship-to-shore communications fail during loading operations, the emergency whistle signal is a continuous blast on the tanker's whistle.

Loading shall immediately be stopped and will not be resumed until communications have been re-established.

Before loading, cargo tanks are dipped by an independent inspector and at Terminal Inspector. If dirty ballast is retained on board until the next discharge port, then the amount of water and oil on top will be checked.

Density of Zeit Bay Crude is approx. (0.854/15°C.). Temperature when received on board is approximately 34°C.

Immobilisation of engines at SBM is strictly prohibited.

BALLAST/POLLUTION: *Deballasting System:* It is preferable that vessels load crude oil while discharging ballast, but Master or officer-in-charge must be sure that no contamination or pollution takes place.

If the vessel is not equipped with 2 lines in order to load and deballast at the same time, a quantity of crude should be loaded prior to deballasting to ensure proper segregation.

Dirty ballast must not be in the emulsion form and is not to contain chemicals or detergents.

The floating hose is normally 20 in. diameter, and the ship's end connection 16 in. diameter.

It is strictly forbidden to discharge dirty ballast overboard.

Pollution: The Master has to comply with all regulations and instructions prohibiting pollution under A.R.E. laws and under any pertinent instructions issued by SUCO when conveyed to Master.

Also, the provisions for International Convention for Prevention of Pollution from vessels 1973 and the Protocol of 1978 relating to this connection will be applied to the extent that such Convention and Protocol are in force in A.R.E. Owner/operator shall be liable for any damage resulting from the pollution caused by the vessel and shall pay for all the expenses incurred for its removal and elimination.

Oil Spill: In the event of a spill or its detection, SUCO Mooring Master must be notified instantly for the necessary action to be taken.

MEDICAL: In case urgent medical assistance is required, the vessel should contact SUCO Marine Manager by VHF radio. A doctor and facilities are available but there is no hospital in the area.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

REPATRIATION: Possible in emergency only.

HOLIDAYS: Zeit Bay Terminal never closes on religious holidays.

SHORE LEAVE: There is no shore leave for personnel of vessels whilst at the SBM.

GENERAL:

Helicopter: Should the services of a helicopter be required in emergency or for any purpose whatsoever, the vessel will be given a minimum of 30 minutes notice.

Weather: Gales can be expected from a North Westerly direction from October through May.

The above conditions are only for guidance and are not relevant to the safety of the vessel but to the safety of the buoy.

The Mooring Master shall have the authority to decide whether the ship should remain or vacate the buoy.

Climate: The climate in the Gulf of Suez is generally good. The visibility is usually excellent, with few dust storms and infrequent fog. There are a few rain squalls.

Winds: The general flow of the wind over this part of the Gulf of Suez is predominantly from the N.N.W. Winds are steadier in the Summer months (May/October) and almost nil from June to September. Gales can mainly be expected from a North-Westerly direction from October to May.

The maximum velocity is approximately 45 knots, whilst the mean wind speed is approximately 20 knots and is prevalent for some 98% of the year. There are occasional light Southerly winds.

Tides: The tidal range is between 4 ft. and 5 ft.

Sea Condition: The surface temperature of the sea ranges from 18°C. to 30°C., depending on the season.

Seas and swells are usually from the N.N.W. and wave height can reach 18 ft., but average is about 6 ft. During the Summer months (May/August) there are many days of 12 ft. – 15 ft. seas.

Currents are generally located in mid-channel and set North when the tide is rising in Suez, and South when the tide is falling. The rate is about 2.5 knots at Spring tides and 0.5 knots at Neap tides.

(B) LPG BERTH.

LOCATION: Zeit Bay is an open area and unsheltered.

LPG tankers will moor alongside a pier which is perpendicular to the shore. The pier length is 50 m. and water depth is 8 m.

Pier position: Lat. 27° 48.1′ N.
Long. 33° 33.7′ E.

There are 2 mooring buoys, located North and South of the pier and about 50 m. off pier's edges, to secure the tanker in its proper position while undertaking operations.

DOCUMENTS: Masters are requested to hand the following original documents to "SUCO" Mooring Master upon arrival. These documents will be returned when cargo documents are signed on departure.

Certificate of Registry.
Load Line Certificate.
Safety Certificates.

PILOTAGE: SUCO Mooring Master will board the vessel in the LPG waiting area. Pilot ladder should be kept in good order, clean and should be adequate in length and strength.

When Mooring Master boards the vessel, he will advise the Master on the approaching, berthing operations and provide him with all necessary information.

Mooring Master will check all original Certificates and receive them from the Master.

APPROACHES: *Approaching the Anchorage Area:* When an LPG vessel arrives at position Lat. 27° 50.2′ N., Long. 33° 37.2′ E., Master can alter vessel's course to 172°(T) for heading towards anchorage area, a sailing distance of about 2.9 nautical miles.

Below are 4 objects that can be seen by day or night that will be of assistance to vessels.

A. Two grounded ships on North of Saab's Ashrafi:
   First position: Lat. 27° 49.5′ N., Long. 33° 38.7′ E.
   Second position: Lat. 27° 49.3′ N., Long. 33° 39.2′ E.
B. On marine chart No. 2375, East Zeit Bay Terminal SBM flashing Mo(U) 15 sec.
C. Zeit Bay Terminal, located one mile S.S.E. of East Zeit Bay Terminal flashing Mo(D) 30.5 sec.
D. Lighthouse in position Lat. 27° 49.6′ N., Long. 33° 34.9′ E. Black and white colour with approximate height of 30 m., flashing white every 10 seconds.

Approaching Zeit Bay Channel and Shipping Lane: The vessel under her Master's command and Mooring Master's advice will navigate on a course of 155°(T) from anchorage area for about 1.5 miles.

When Ashrafi Lighthouse is observed abeam, course is to be altered to 195°(T). This course will lead toward entrance of Zeit Bay Channel. While passing through Zeit Bay Channel, true course to be 270°/090°.

Due to relationship between a vessel traversing the channel and the prevailing N.N.W.'ly wind and current, there is the possibility of a sideways drift.

When vessel arrives at the end of the West entrance of the channel, course will be altered to 335°(T). After sailing for about 2.5 miles, vessel will alter course to 310°(T) for about 1.1 miles.

Final approach to L.P.G. Pier will be on a course of 010°(T), for about 1.5 miles.

Use of anchor is forbidden from the time the vessel reaches the Western entrance of Zeit Bay until final approach to pier, because of pipelines.

Outside the shipping lane on the port side, there are 4 yellow platforms provided with navigation aids. Vessels navigating in the shipping lane will pass near Platform "C" at a safe distance.

Zeit Bay Channel and Shipping Lane: Channel is guaranteed to be 6.0 m. below L.A.T.

Channel length is about 2 nautical miles and about 200 m. width.

Channel is marked by lighted buoys, each equipped with a radar reflector. When ship is heading Westerly (270°(T)), there will be 3 green buoys on the starboard side and 3 red buoys on the port side.

The shipping lane between Ghanim and Ras Elbahar Islands is marked by red marker buoys, showing the end of shoals and reefs.

Buoys coordinates: (a) Lat. 27° 45′ 39″ N., Long. 33° 34′ 10″ E.
(b) Lat. 27° 46′ 18″ N., Long. 33° 33′ 22″ E.

All vessels should keep at least 30 m. from the buoys as a safety measure.

All marker buoys can be seen from any direction and in poor visibility, according to international specifications and regulations of port navigational aids.

ANCHORAGE: SUCO will make every effort to moor ships arriving according to the agreed schedule. If not berthing, vessel will drop anchor at the Anchorage Area in position: Lat. 27° 47.3′ N., Long. 33° 37.6′ E. This position is located South of the Crude Oil Carrier Waiting Area.

LPG anchorage area is half mile radius with 18 m. depth. The area is considered clear of obstructions.

Anchoring outside the waiting area or in Crude Oil Carrier Area is strictly prohibited.

RESTRICTIONS: Weather conditions may prevent berthing. This is the case when wind speed exceeds 18 m.p.h. The vessel will then remain in the anchorage area until weather improves.

The decision of acceptance is subject to Master's and SUCO Mooring Master's approval.

Berthing/unberthing during daylight hours only.

Also see "Berthing".

READINESS: Arrival time will be considered to be the time the vessel arrives at the Anchorage Area.

Notice of Readiness will be accepted when vessel is in all respects ready to receive her cargo, usually after loading arms are connected.

RADIO: Incoming tankers must advise ETA 48 hours prior to arrival.

VHF: Zeit Bay radio room maintains a 24 hour listening watch on Channel 12.

Fully detailed instructions for berthing, loading, etc., will be given to vessel's Master while approaching the waiting area.

TUGS: *Mooring Boats:* Two mooring line boats are available at all times, (500 h.p. and 1,000 h.p.) The vessel will be assisted by the mooring line boats, which are deemed essential for safe operations.

BERTHING: The pier is equipped with 2 positive hydraulic fenders, in addition there are 4 bitts for mooring ropes.

Vessel's ropes will be used, and handled by the pier crew.

When vessel is completely moored and secured alongside pier, vessel's heading will be 330°/150°, depending on which side is alongside.

Mooring and Unmooring: All berthing operations and passage of the channel inward and outward, should be executed with adequate daylight. Final approach shall be made from the direction which is consistent with a safe approach. Speed shall be subject to the prevailing forces (current, tide, stream).

Mooring line boats will assist during approach to prevent drifting on to the pier. Ship's anchor can be used in case of necessity.

When ship is finally moored and properly secured, ship's crew have to hang off the towing wires (fire towing wires), forward and aft, for line boats in case of emergency.

Jetty details:

Max. Size:	Max. draft: 5.0 m. Max. length: 108 m. Max. beam: No limit. Max. deadweight: 2,500 tons.
Product:	LPG (butane and propane mixtures).
Loading arms:	Two. Designed for connection to 6 in. Camlock quick coupling and 3 in. vapour return line.
Loading rates:	Up to 280 t.p.h.
Nitrogen:	Available for line purging only. Vessel's tank purging only with previous agreement.
Atmospheric vent:	Not available.
Flare line:	Yes.
Fire line:	2.5 in. hose available.

LOADING: Before loading commences the LPG Check List is to b completed. Emphasis is placed on close cooperation and goo communications between mutually interested parties to achieve sa operations.

Operations Meeting and Inspection: The following will take place befor any operations commence:

(a) Complete the Safety Check List.
(b) Complete the LPG safety and observed Check Lists.
(c) Discuss any additional precautions required.
(d) Ensure that tanks are in a fit condition to receive cargo without an hazards or contamination.
(e) Discuss and agree tanks inspection and samples required.
(f) Discuss and agree loading programme, including quantity, loadin rate, pressure, temperature, connecting and disconnecting hose purging requirements and any other necessary requests.

Pressure, Temperature and Loading Rates for LPG:

Product: LPG.
Pressure: Up to 10.3 bar.
Temperature: Ambient to 60°C.
Loading rate: Up to 280 t.p.h.

Recommended maximum vapour concentration in ship's tanks befor loading LPG:

Previous cargo in vessel	*Recommended Maximum Concentration*
Ammonia	100 ppm.
Ethylene oxide	30 ppm.
Propylene oxide	50 ppm.
Vinyl chloride	30 ppm.
Acrylonitride	30 ppm.

The above concentrations refer to vapour concentrations considere safe for venting. They do not infer that these concentrations a acceptable from a cargo contamination point of view.

Operational Procedures: Loading will not commence until all the safe checks have been carried out to the satisfaction of the Company.

I. The Company Operators will connect the shore boom/hose to th correct ship's manifold as indicated by the Master. Under n circumstances will a ship be connected to a vapour return/ve system if oxygen content of any tank is above 0.5% volume. If an of the ship's tanks are under vacuum the ship will be connecte only if prior agreement has been reached.

   The boom/hose will be purged to shore vent line and pressu tested to approximately 100 p.s.i. with nitrogen. The nitrogen w then be vented and the vent closed.

II. The Jetty Supervisor and Master will agree that systems a correctly lined up for operations to begin.

   Loading must now commence slowly to avoid rapid pressu build up.

   Ships must check that pull-off does not cause cargo temperatu to drop below tank minimum operating temperature.

III. During loading the ship's tank pressures must be checked eve 30 minutes and the information logged by the Jetty Operator. Th Master must inform the Jetty Supervisor of any deviation from th agreed cargo handling plan.

IV. Company Operator will remain on the jetty at all times duri loading.

V. A crew member with a good command of the English languag must remain on deck at all times during loading.

VI. The ship must not shut valves against the shore pumps wh loading.

VII. The ship must give at least 10 minutes' notice of the requireme to stop or start pumping, except under emergency conditions.

VIII. The Company Operators will clear the boom/hose with nitroge A watch on ship's pressure must be maintained during this time hose contents are cleared to ship.

IX. The ship's valves will then be shut and Company Operators w purge and depressure the boom/hose.

X. The cargo loaded will be calculated from shore dips.

XI. The Jetty Supervisor will witness ship's dips/ullage and obtain fro the Master the quantity loaded according to ship's figures. Th quantity entered on cargo documents will be calculated from sho figures.

Cargo Handling Requirements:

I. Chemist's Certificate: The Company reserves the right to requ an independent chemist to check the condition of ship's tanks the quality of cargo before commencing to load. Reasonable noti of this requirement will be given.

II. Emergency shutdown systems: When ship is loading and it necessary to manually initiate an emergency shutdown, the je system must be used.

III. Nitrogen: Nitrogen is available at approximately 7 bars and t berth nitrogen is available for line purging only.

IV. Portable instruments: The Company reserves the right to requ intrinsically safe portable instruments to be placed on board s during loading operations.

   Reasonable notice of this requirement will be given.

V. Purging: Purging from ship's tanks to atmosphere is not permitted at the jetty. The Master must ensure the ship's tanks are in a fit condition to load cargo before arrival.

VI. Third party Independent Surveyor: The Company reserves the right to instruct a third party Independent Surveyor for the sampling and measuring of cargo. Reasonable notice of this requirement will be given.

VII. Vapour return line: Vapour return lines are provided to enable ships to return compatible vapour to storage tanks to be pressured up with vapour from storage. Oxygen content of returned vapour must be less than 0.3% volume.

Under no circumstances may nitrogen or other uncondensible gases be returned along the vapour line to storage tanks.

VIII. Vent line: Vent lines are provided to enable uncondensible vapours to be vented to flare system. Permission to use the flare system will only be granted if oxygen content of ship's tanks as determined by Company analysis is less than 0.5% volume.

The ship's intention to use the vent system must be clearly specified to the Jetty Supervisor at the pre-operations meeting.

Use of ship's mast vent is not permitted without Company Authorisation.

All operations shall, in general, be conducted in accordance with the requirements of the International Chamber of Shipping Tanker Safety Guides for Liquid Petroleum Gases and the International Maritime Dangerous Goods Code.

Communications on Loading Pier:

1. The jetty will be continuously manned by company personnel while a ship is loading. All normal communications should be passed through the Jetty Operator. In emergency situations, ship's personnel may use the jetty head telephone.
2. A responsible English speaking crew member must be on duty at all times and must remain on deck during loading/discharging.

FRESH WATER: Not available at berth.

FUEL: Not available at berth.

POLICE/AMBULANCE/FIRE: Fire 3333.

GENERAL: The following should be taken into consideration when vessel is alongside:

(a) Visiting is not permitted.

(b) Smoking and/or usage of naked lights is forbidden.

In emergency cases, a special permit is to be issued by authorised SUCO personnel to cover situation.

Vessel refusal: Owing to special hazards associated with LPG and the degree of expertise required during its handling and carriage, SUCO reserves the right to refuse to load any vessel where in the Mooring Master's opinion, the condition of the ship or the conduct of her operations give rise to concern over the safety of ship, personnel, company premises, or the environment.

Fire Fighting Vessel: There is a vessel fully equipped with fire fighting equipment. The vessel will be available at all times during operations. It has 4 monitors installed on the main and upper deck, each 12,200 cu.m.p.h. and able to reach 120 m. and a height of 45 m., foam compound is available.

Towing of Ships to Hazardous Waiting Area in Inner Bay: In the event of an emergency, Jetty Superintendent will immediately stop the loading operation and will inform SUCO Mooring Master whether to wait alongside or pull the ship away with the assistance of the mooring line boats.

The following position already surveyed, with a water depth of 8.0 m. and co-ordinates Lat. 27° 47.7′ N., Long. 33° 32.2′ E. is reserved as a waiting area.

Climate: The climate in the area is generally good and the visibility is usually excellent, except for occasional sandy storms during Summer time. Fog can be seen in Winter time. Occasional rain during Winter time.

Wind: The direction of the wind in Summer is from N. or N.W., occasionally wind reaches 40 m.p.h.

During Winter, average wind speed is about 15 m.p.h. – 20 m.p.h.

Southerly winds are encountered occasionally, but are usually light airs and accompanied by calm sea.

Tide, Current and Sea Swell: The tidal range is between 3 ft. and 4 ft. Current reaches 2 knots to 3 knots.

Sea swell is from N. or N.W. and/or S. or S.E., with a maximum height of 4 ft.

AUTHORITY: Suez Oil Co. (SUCO), 21 Ahmed Orabi St., El Mohandessien, P.O. 2622, Cairo, A.R.E. *Tel:* 650723, 650544, 807922, 813554, 807854. *Telex:* 93455 SUCO UN or 92300 SUCO UN. *Cables:* Dexgulf. *FAX:* 3422734. *Contact:* A. Nassef, Planning and Follow-up Manager.

NOTES

Please also advise Shipping Guides Ltd.

El Salvador

ACAJUTLA: 13.35 N. 89.50 W. (See Plan)

PORT LIMITS: Not determined.

DOCUMENTS:

Consular Documents:

Only the requirement for visa of shipments of firearms and narcotics, which must be carried out at the port of embarkation, remains in force.

Prior to Arrival:

Arrival Notice:

24 hours before the vessel's arrival, notification is submitted in writing to the Autonomous Port Executive Committee (CEPA) on the time of arrival and the number of stevedores that will be needed. The CEPA serves as a kind of single shipping agency. In that capacity, it arranges for entrance and clearance of vessels, payment to other Official Agencies and draws up the port account for the ship's Agent.

Information on Cargo for the Port:

Prior to the vessel's arrival, the following documents are to be submitted to CEPA:

16 copies of the Cargo Manifest.
1 set of the Shipper's Manifest.
1 Mail Guide.
4 copies of the cargo distribution for each hold.
1 Stowage Plan.
1 List of Container Contents.
14 to 16 Cargo Tally Books, depending on the number of stevedores.

If this information is not available before the vessel's arrival, it may be submitted at the time of the reception visit (boarding party).

On Arrival:

Type of Documents	*Number and Distribution of Documents*				
	Captain of Port	*Customs*	*Plant Health*	*CEPA*	*Total*
Basic Forms					
General Declaration	1	1	1	1	4
Cargo Manifest	1	2	1	16	20
Crew List	2	1	1	1	5
Passenger List	2	1	1	1	5
Ship's Stores List	1	1	1	1	4
Crew's Effects Declaration	–	–	–	–	–
Maritime Health Declaration	1	–	–	–	1
Mail List	–	–	–	1	1
Additional Documents:					
Clearance from Last Port	1	–	–	–	1
Consular Manifest	–	1	–	–	1
Set of Bills of Lading	–	–	–	1	1
Cargo Distribution	–	–	–	4	4
Contents of Containers	–	–	–	1	1
Stowage Plan	–	–	–	1	1
Cargo Tally Books	–	–	–	14/16	14/16

Prior to Departure: The CEPA draws up the clearance permit and has it signed by Customs before submitting it to the Captain of the Port. When loading and unloading is completed, a representative of the Captain of the Port delivers the clearance permit on board.

PILOTAGE: Compulsory. *(a)* Vessels should apply for Pilots calling VHF radio station through Channel 27 which operates on 157.36 MHz to receive and 161.95 MHz to transmit. Channel 16 operates on 156.8 MHz ships calling and safety.

Notice of ETA must be made to Port Manager not less than 48 hours before arrival at the port limits. Confirmation of ETA is required 10 hours before arrival. VHF radio station is on service 24 hours a day, so vessels may call at any time. *(b)* Pilot boards vessel between one or two km. before arrival at the port limit; where vessels should stay with engine running, Pilot ladder ready. Gangways should be raised and folded. Derricks and cranes inboard and anchors ready for berthing. Pilot is equipped with walkie talkie for communicating with tugs. *(c)* Inform radio station if cargo manifests are carried on board or if they were air mailed to vessel's Agent.

ANCHORAGE: There is no specific anchorage area. Water depth is over 15 m. Bottom nature: Sand laying over volcanic tuff.

RESTRICTIONS: Vessels can berth any time day or night. Main engines should always be on short notice, due to swell as mooring lines often break. Vessels are advised to make use of extra shore mooring lines which may be provided if Agent makes request. The least depth in the berths is 30 ft.

MAX. SIZE: "C" Pier (breakwater berth) has 12 m. of water alongside and can berth vessels of up to 40,000 d.w.t. It is well fendered. Containerised, general and bulk cargoes can be handled at this pier.

Also see "Tankers".

HEALTH: On arrival, vessel should always fly a yellow flag. If there is any suspicion of illness aboard, Master has to inform by radio 24 hours in advance, indicating nature of disease and all details.

Free Pratique will not be granted to vessels at anchor. It will be granted to tankers discharging at buoys and in emergency cases.

RADIO: Advise ETA to Agents at San Salvador 96, 48, 24 and 12 hours before arrival. Telex available at Port Facilities. Area Code 301. Telex No. 27000.

VHF: There is no special time for calling. VHF service is open 24 hours a day. Contact through Channels 16 and 27.

Business operations: Channel 27 receives on 157.36 MHz and transmits at 161.95 MHz.

Channel 16 for ship calling and safety.

RADAR: There is no port radar service.

TUGS: Tug lines are not used. If required, the tug's line will be used and the charge is included in the docking and undocking services. There are four tugs available with the following capacities: 800, 1,200, 1,400 and 1,800 h.p. Tugs meet vessels off the docks at all times.

SPECIALISED CARGO HANDLING FACILITIES: Pier "A" with liquid cargo facilities for vegetable, animal and mineral oil, as well as chemical liquids.

BERTHING: Vessels can berth in safety at any time during day or nigh

In the case of cargo vessels it should be stressed that the swe experienced alongside is sometimes a serious problem and Maste would be well advised to make use of the shore lines offered on hire t save undue wear and tear on their moorings.

Berth	*Max. Draft* (m.)	*Depth at MLW* (m.)	*Vessel Length* (m.)
A–1	9	10	140
A–2	10	12	160
B–3	9	10	140
B–4	10	12	195
B–5	9	10	180
B–6	10	10	180
C–7	12	13.7	128
C–8	12	13.7	128

There are three piers. The first one "A" consists of a breakwater mol 760 m. long. The access mole in its first section from land side to pi "B" has a width of 10.50 m. and is 260 m. long. The second sectio from Pier "B" to Pier "A" has a width of 7 m. and is 180 m. long. Th overall length of access is 450 m.

Pier "A" is 37 m. wide and 310 m. long, it consists of a mooring doc with two berths called "A–1" and "A–2", for general bulk and liqu cargoes and has a transit shed of 4,500 sq.m. At the end of Pier "A" constructed another breakwater section in a N.W. direction, in line wi the existing Pier "A", connecting this pier with the Pier "C" with a leng of 35 m. Then direction of Pier "C" is changed to the North, with a angle of 30° and extended over 270 m. with a width of 18 m. Th breakwater offers two berths, "C–7" and "C–8", capable of handlin containerised, general and bulk cargoes.

The third pier called "B", with four berths is 348 m. long and has free width of 28 m. This pier handles containerised (max. gross weig 20 tonnes), general and bulk cargoes.

CRANES: Two semi-portic cranes of 3 tonnes capacity are available a Pier "A". At Pier "B" there is a 25 tonnes crane for general bulk an containerised cargoes. Pier "B", berths "B–5" and "B–6" as well as Pi "C", berths "C–7" and "C–8", have no cranes available and vessels ar required to use their own cranes or derricks.

BULK CARGO FACILITIES: For berthing length of quays and ma permissible draft in salt water at MLW see "Berthing".

Cargoes handled: Importation: Grains, fertiliser, soda ash, phosphor rock sulphur, soya flour, etc.

Exportation: Raw sugar cane, cotton seed meal and flour, grains, et

Berth Equipment: 25 tonne cranes which operates for imports at Ber "B–3" and "B–4" and unloads vessels with clamshells of differe capacities ranging from 5 cu.m. to 9 cu.m., and feeds the conveyo systems through a hopper of 85 tonnes. Maximum height of discharg gear above MWL: 19 m.

Conveyor System: Two belt conveyor systems exist for importation an exportation. Both systems interconnected with port warehouses as we as private silos and warehouse facilities. Loading/discharge rate 500 tonnes/p.h.

BRIDGES: None.

STEVEDORES: ETA advice required to arrange gangs, should be mad 12 hours before vessel's arrival. A line handling gang is always standin by and also attends gangways without charge. Stevedores are availab for nightwork.

Average load and discharge rates:

General cargo	35 tonnes/p.h.
Bulk cargo	190 tonnes/p.h.
Liquid cargo	110 tonnes/p.h.

MEDICAL: There are doctors in the port who attend normal cases an specialists and hospitals in Sonsonate City (20 km. by road) and at Sa Salvador, capital of the Republic, 85 km. from the port.

TANKERS: Mooring at RASA (Refineria de Acajutla Socieda Anonima). This refinery is the property of Esso Standard Oil and She Petroleum Co.

Buoy berth: Depth of water is about 15 m. Diameter of buoy hose 2×25 cm. for clean products and one of 75 cm. for crude and fuel o There are no facilities for residue discharge.

DENSITY: 1027.

FRESH WATER: Delivered by hoses. Rate approximately 40 t.p.h., co U.S.$1.60 per metric ton.

FUEL: Possible to supply diesel (Grade "2") and Bunker "C" only limited quantities, delivered by tank truck. Viscosities: Bunker "C 175 sec. Saybolt furol. Diesel 40 sec. Saybolt universal.

FIRE PRECAUTIONS: Inspection of hoses; no smoking; not allowed weld or light any kind of fire; isolation of the place of loading ar discharging operations; fire equipment to be ready to use at all times

CONSULS: There is a Consular representative of The Republic Guatemala at this port and most countries have Consu representatives in San Salvador City, Capital City, at 85 km. from th port.

REPAIRS: Possible to make minor engine and deck repairs. Oth repairs can be carried out at Capital City, San Salvador. Any repa that will delay sailing of vessel cannot be made without previous ar specific authorisation of the Port Manager.

DRY DOCKS: None.

SURVEYORS: At the port there is P & I representative and survey and independent marine surveyors. G.L. Surveyor at San Salvador C

GANGWAY/DECK WATCHMEN: Gangway is watched by Custo Police and marine members without charge. Deck watchmen availa on request.

HATCHES: The opening and closing of hatches is carried out stevedore gangs, and its costs are included in the loading or discharg tariff rate. Whenever vessel's Master decides to carry out the operations with his crew, a stand-by charge will be debited.

CUSTOMS ALLOWANCES: Customs only allow tobacco for perso use to be taken out of the vessel. Not allowed to take any wine or spi out of the vessel.

CARGO GEAR: Ship's gear has to be used on request. Semi-portic cranes for general cargo may be used at Berths "A–1" and "A–2". Heavy lift crane at Berths "B–3" and "B–4". This crane is also used to unload bulk cargoes to a conveyor belt system.
REPATRIATION: There are facilities for repatriation, it is also possible to effect crew changes.
AIRPORT: The "El Salvador International Airport" is 134 km. from the port (by road), which is served by regular airlines.
TIME: No alterations in time during the year; local time is GMT minus 6 hours.
HOLIDAYS: The port has the following official holidays:
(*)1st January; 2nd February; (b) Thursday, Friday and Saturday of Easter Week; (*)1st May; (c) 10th May; 3rd and 6th August; 15th September; 15th October; (*)2nd November; (a) 24th; (*)25th and (a) 31st December.
(*) No work.
(a) Port operations cease at 0700 hrs.
(b) Port operations cease at 1700 hrs. on Thursday until 2300 hrs. on Saturday (Easter Week).
(c) 10th of May port operates only from 0700 hrs. until 1500 hrs.
POLICE/AMBULANCE/FIRE: National Police (Sonsonate) Tel: 51-0838; Ambulance (Sonsonate) Tel: 51-0374 – 51-0200; Fire Department (CEPA, Acajutla) Tel: 52-3200.
TELEPHONES: No possibilities of installing telephones aboard.
SERVICES: No facilities to discharge tank-washings. No equipment for tank cleaning or facilities to adjust compasses. Minor electronic repairs at Agent's request.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Valid passport must be shown to Authorities on request.
REGULATIONS: None.
DELAYS: Normally there are no delays to be expected during berthing, loading, discharging or bunkering. Bunkering operates at a slower rate than normal loading and discharging.
GENERAL: Quarantine Authorities pay strict attention to garbage and any residue must be kept aboard properly covered. It is forbidden to drop garbage or any residue in the sea whilst vessel is in the port area.
In the case of swell, special hawsers and wires can be requested on hire at U.S.$ 1.50 on every 1,000 g.r.t. per day or part of a day.

SHIPMASTER'S REPORT: 1979.
Port Limits: No port limits stated.
Documents:
Clearance from last port.
5 Crew Lists.
4 Voyage Memorandums.
4 Store Lists.
4 Passenger Lists, (negative required).
1 Ship's Health Declaration.
Manifests prepared by the Agent:
2 Copies for the Customs.
1 Copy for the Port Captain.
1 Copy for Quarantine Inspector.
16 Copies for the Stevedores.
Customs seal the spirits and tobacco, but not the beer. No private declarations required.
Boarding party of about 8 persons board the vessel with the Agent who will attend to documents and other needs of Officials.
Pilotage: Pilotage is compulsory, Pilot boards vessel up to 3 miles from "A" Pier.
Restrictions: Vessels can berth any time day or night, main engines should always be on short notice, due to swell at berths, as moorings often part. Vessels are advised to make use of extra shore moorings provided, these can be requested via the Agent.
The least depth at the berths is 30 ft.
Max. Size: "C" Pier (outer berth) has 46 ft. of water alongside and can take vessels of up to 40,000 d.w.t., it is well fendered. General cargo and liquid cargo can be handled at this berth.
Health: Standard Health message to be sent to Agents who will make the necessary arrangements, every vessel coming in should fly the "Q" flag, this is to avoid fines.
Radio: Advise ETA to Agents at San Salvador 96, 48, 24 and 12 hours before arrival. For Telex messages use "WLO" Mobile. For W/T messages use "KSF" San Francisco.
For Port Control use VHF Channels 16 and 27. (Range 40 miles). Hours of operation 24 hours. Call sign: "Acajutla Tower" also R/T on 2182, 2163 and 2169 kHz. Tugs work on 2182, 2163, 2196, 2638 and 2738 kHz.
Radar: There is no Port Radar service.
Tugs: There are three tugs available with the following power: 800 h.p., 1,200 h.p. and 1,800 h.p. Tug's lines are used at no extra charge.
Berthing:

Pier	*Berth No.*	*Depth* (m.)	*Remarks*
"A"	1	9.0	General Cargo, 2×3 ton cranes. Liquid cargo (Berth No. 1)
	2	10.0	
"B"	3	9.1	General cargo, bulk cargo. 25 ton crane on Pier "B".
	4	10.0	
	5	9.1	
	6	10.0	
"C"	7	14.0	General cargo, liquid cargo. No cranes available.
	8	14.0	

Stevedores: Arranged by the Agents, and based on information passed in ETA advise, vessels arriving from New Zealand may well be at the port before the cargo plans arrive. Stevedores work round the clock.
Medical: Doctor available but nearest hospital 13 miles away, Doctor will board the vessel, advise the Agents before arrival.
Density: Observed density 1025.
Fresh Water: Available at about 20 t.p.h.
Fuel: Only available in emergency.
Provisions: Limited quantity available, 24 hours notice required.
Fire Precautions: Tugs have fire fighting equipment on board. As no phones on board, contact can be made on VHF with "Acajutla Tower".
Consuls: British Vice-Consul at Sansonate 14 miles away from the port.
Repairs: Minor repairs only possible.
Dry Dock: No dry dock available.
Surveyors: Arie Van-Helden (Lloyd's Agents only), San Miguel, Cutuco, La Union.
Gangway/Deck Watchmen: Shore gangway available and recommended due to swell at the port, full deck patrol necessary during night time.
Hatches: For safety it is better to open and close the hatches with the ship's crew, which is allowed at this port.
Cargo Gear: Ship's gear and shore cranes used depending on which berth the vessel at.
There are no Reefer points ashore. There are no tower units ashore. Containers can be landed on flats. Forklift trucks are well maintained.
Repatriation: Not advisable from this port.
Airport: Ilopango Airport is 8 miles from San Salvador, flights from this airport connect with international flights at Mexico City.
There are three flights a week from Mexico City to London.
Holidays: December 25th, January 1st, also Special Holiday for this region being August 5th and 6th. (From 1500 hrs. 5th to 1900 hrs. on the 6th).
Police/Ambulance/Fire: This is covered by the Agent who remains on board all the time the vessel is in port, the Agent will require a room to live in whilst he remains on board.
Services: No special services available.
Shore Leave: Permitted.
Identification Cards: Not required, but Crew Members are advised to carry some means of identification.
Regulations: No unusual regulations.
Delays: Vessels have to leave the berth due to swell, this decision is left to the Master of the ship.
General: Vessels alongside the berth, move quite a lot, but the shore fenders are well maintained. Stevedores will unpack containers on board the vessel.

AUTHORITY: Comision Ejecutiva Portuaria Autonoma (CEPA), Boulevard de Los Heroes, Torre Roble, Apartado Postal 2667, San Salvador, El Salvador, Central America. *Tel:* San Salvador (Area Code 503) 24-1133; Acajutla 52-3200. *Telex:* San Salvador (Area Code 301) 20194; Acajutla 27000. *FAX:* Acajutla 52-4100. *Cables:* CEPA. *Contact:* Pedro Armengol Ramos, Port Manager, Acajutla.

LA LIBERTAD: 13.29 N. 89.19 W.

CLOSED TO CARGO VESSELS SINCE MAY 1976

AUTHORITY: Comision Ejecutiva Portuaria Autonoma (CEPA), Apartado Postal 2667, San Salvador, El Salvador. *Tel:* (503) 241133. *Telex:* (503) 20194. *FAX:* (503) 241355. *Cables:* CEPA. *Contact:* Arturo German Martinez, General Manager.

LA UNION (Cutuco): 13.20 N. 87.50 W. (See Plan)

DOCUMENTS: *Consular Documents:*
Only the requirement for visa of shipments of firearms and narcotics, which must be carried out at the port of embarkation, remains in force.
Prior to Arrival:
Arrival Notice:
24 hours before the vessel's arrival, notification is submitted in writing to the Autonomous Port Executive Committee (CEPA) on the time of arrival and the number of stevedores that will be needed. The CEPA serves as a kind of single shipping agency. In that capacity, it arranges for entrance and clearance of vessels, payment to other Official Agencies and draws up the port account for the ship's Agent.
Information on Cargo for the Port:
Prior to the vessel's arrival, the following documents are to be submitted to CEPA:
16 copies of the Cargo Manifest.
1 set of the Shipper's Manifest.
1 Mail Guide.
4 copies of the cargo distribution for each hold.
1 Stowage Plan.
1 List of Container Contents.
14 to 16 Cargo Tally Books, depending on the number of stevedores.
If this information is not available before the vessel's arrival, it may be submitted at the time of the reception visit (boarding party).

On Arrival:

Type of Documents	*Number and Distribution of Documents*				
	Captain of Port	*Customs*	*Plant Health*	*CEPA*	*Total*
Basic Forms					
General Declaration	1	1	1	1	4
Cargo Manifest	1	2	1	16	20
Crew List	2	1	1	1	5
Passenger List	2	1	1	1	5
Ship's Stores List	1	1	1	1	4
Crew's Effects Declaration	–	–	–	–	–
Maritime Health Declaration	1	–	–	–	1
Mail List	–	–	–	1	1
Additional Documents:					
Clearance from Last Port	1	–	–	–	1
Consular Manifest	–	1	–	–	1
Set of Bills of Lading	–	–	–	1	1
Cargo Distribution	–	–	–	4	4
Contents of Containers	–	–	–	1	1
Stowage Plan	–	–	–	1	1
Cargo Tally Books	–	–	–	14/16	14/16

Prior to Departure: The CEPA draws up the clearance permit and has it signed by Customs before submitting it to the Captain of the Port. When loading and unloading is completed, a representative of the Captain of the Port delivers the clearance permit on board.

PILOTAGE: Pilot is on the staff of FENADESAL and can be requested from Port Manager at Cutuco.

ANCHORAGE: La Union Bay – up to 34 ft. Approximately 14 Class II and a large number of Class III anchorage berths are available in the harbour. 5 Class II berths are in the vicinity of the pier in depths of 33 ft. to 30 ft., and approximately 9 more, in depths of 70 ft. to 30 ft., are just Westward of Isla Zacatillo. The first area has a mud bottom; the second is sandy and rocky. The large number of Class III berths are in an area Northward of the pier and in the area between the 2 anchorages providing Class II berths. The least depth in each of the areas is 25 ft. A large number of relatively unsheltered anchorage berths of all classes are available outside the harbour in the Gulf of Fonseca.

RESTRICTIONS: Enter any time – preferable on flood tide with draft over 24 ft.

MAX. SIZE: Largest vessel that can be accommodated in harbour would occupy an anchorage berth with a min. depth of 43 ft. and a diameter of 3,300 ft. Largest vessel that can be accommodated alongside wharf would occupy a berth with least depth of 25 ft.; length is not a limiting factor, although a max. 550 ft. is recommended due to strong currents, 3 – 4 knots, and pressure on part of any vessel extending for any greater distance beyond length of wharf.

HEALTH: Disease should be reported. Pratique necessary on each occasion.

RADIO: Direct to Agents or Fenadesal, Telex: 20-194, Area 301, San Salvador.

TUGS: No tugs required.

BERTHING: Berthing usually carried out on slack tides due to cross currents, up to 3 – 4 knots. The estimated military port capacity is 1,800 tons of general cargo per day. Port can accommodate 2 standard-type ocean-going cargo vessels, and possibly one alternative class T/C (small ocean-type tanker under favourable conditions) alongside berths, and approximately 14 ocean-type cargo vessels, and a large number of Class III (coaster-type cargo vessels) at anchorage berths. Ro/Ro pier, depth alongside 16 ft. LW.

STEVEDORES: Prior advice preferable. Stevedore force consists of 9 gangs of up to 16 men per gang for on-board work. Similar gangs are available on pier, and up to 300 labourers, crane and fork-lift operators comprise shore gangs.

MEDICAL: Services available – no special restrictions.

TANKERS: Drafts 25/34 ft. fore and aft. Tankers of up to 550 ft. in length can be accommodated at either side of pier, where adequate connections of 6 in. – 8 in. and 10 in. pipe-lines are located. Largest vessel that can be accommodated alongside would occupy a berth with a least depth of 25 ft.; length is not a limiting factor, except as noted previously.

FRESH WATER: Four 2 in. connections on each side; volume estimated at 10 t.p.h

FUEL: Bunkers and diesel – can be delivered when berthed.

CONSULS: Only Honduras is represented.

REPAIRS: No facilities.

GANGWAY/DECK WATCHMEN: Not required – National Marines on guard.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: Not controlled, but restricted ashore.

REPATRIATION: Can be arranged.

AIRPORT: "El Salvador", 102 miles away in the "Comalapa's Valley".

TIME: GMT minus 6 hours. No alterations.

HOLIDAYS: Easter Thursday, Good Friday. Port not worked only on those dates.

POLICE/AMBULANCE/FIRE: In La Union – Close to the Port.

TELEPHONES: Available.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Passes for leaving ship to have Master's signature.

AUTHORITY: Ferrocarriles Nacionales de El Salvador (FENADESAL), Cutuco-La Union, El Salvador. *Tel:* 64-4200, 64-4055. *Telex:* (301) 20-194. *Cables:* Fenadesal. *FAX:* 24-1355. *Contact:* Rafael Paniagua Santos, Port Manager.

Ferrocarriles Nacionales de El Salvador, Apartado Postal 2292, San Salvador, El Salvador C.A. *Tel:* 715632, 22-9000. *Telex:* (301) 20-194. *FAX:* 24-13-55. *Cables:* Fenadesal.

Comision Ejecutiva Portuaria Autonoma, Apartado Postal 2667, San Salvador, El Salvador. *Tel:* 24-11-33. *Telex:* 20194. *FAX:* 24-13-55. *Cables:* Cepa. *Contact:* Arturo German Martinez, Manager.

NOTES

Please also advise Shipping Guides Ltd.

Equatorial Guinea

GENERAL

PIRACY/TERRITORIAL WATERS: *Shipmaster's Report:* Whilst steaming from Lagos towards Douala (passing North of the island Fernando Poo which is considered the normal route) the vessel was hailed at 0640 GMT by Equatorial Guinean Patrol Boat "LP 009" with two 20 mm. double automatic guns pointed at vessel. The vessel's position was Lat. 03° 48.4′ N., Long. 09° 03.0′ E. (about 10 nautical miles from the island).

An Officer with the rank of Lieutenant and 2 men boarded the vessel. They claimed that the vessel had violated Equatorial Guinean territorial waters having passed inside the 12 nautical mile limit. The Officer wished to take a crew member ashore to prove that the vessel had been boarded, but when the vessel's Master protested, the Officer claimed cases of whisky as proof. Having no alternative, the vessel's Master was forced to accept and the patrol boat departed 0745 GMT.

BATA: 01.52 N. 09.46 E. (See Plan)

SHIPMASTER'S REPORT

Roadstead with single point mooring buoy connected to the shore with 6 in. pipe-line, 6 in. hose: (everything in a deplorable state). No tugs or Pilots available. Master should have local knowledge when approaching berth in hours of darkness. Vessels are moored with 2 anchors forward and 2 ship's lines (plus two 8 in. shore lines) to the single point mooring buoy. 5 lengths of 15 m. hose available. Preferable stern discharge connection to be used. Max. pressure: 4 kg./sq.cm. All grades through this line. Linewash of water in between the different grades. There is rubber ball for cargo separation.

ADVICE: 1. In view of the deplorable state of buoy, lines and hose, Master should be very careful in mooring his vessel – which has to be done by himself – in order not to damage same.

2. Master should have ship's motorboat ready to run ship's lines to the buoy because motor launch, which is supposed to do this is very old and liable to breakdown at a crucial moment.

3. Anchors should be dropped in a position S.W. of the buoy in order to stay well clear of the unmarked wrecks, in good holding ground with 4 to 5 lengths of chain.

4. Tidal currents move the ship relative to the mooring buoy – so it is necessary to heave anchors tight – bearing in mind that the construction, etc. of the buoy is very weak.

5. The buoy carries a light but the light does not work. Anyway mooring after dark is not advisable.

DOCUMENTS: Only a small Customs Post available here:

1 Cargo Manifest.
1 Store Manifest.
1 Crew List.

CUSTOMS ALLOWANCES: No restrictions – no sealing of bonded stores.

SHORE LEAVE: Allowed by ship's boat.

RADIO COMMUNICATION: None. Though there are officially coast radio stations in this country, they do not operate on schedule. Telegrams should be sent via coastal radio stations of other countries. No VHF.

Also see "Purser's Report", Rey Malabo.

SHIPMASTER'S REPORT: June 1990.

BUOYS: See "Plan".

Buoy No. 1:	Missing.
Buoy No. 2:	Estimated displaced 15 m. North, 120 m. off wharf.
Buoy No. 3:	Estimated displaced 50 m. North.
Buoy No. 4:	Missing.
Buoy No. 5:	Estimated 110 m. off. Hook collapsed on a vessel's sailing manoeuvre this year.
Buoy No. 6:	Missing.
Buoy No. 7:	Estimated 100 m. off and 50 m. South of Jetty Head.
Buoy No. 8:	Partially sunk.

GENERAL: Pilot has an assistant who boards and speaks some English.

Customs seal Bond.

Currency is C.F.A.

There are 2×25 tonne mobile cranes for working vessels and 3×23 tonne cranes with short jibs for working in the stacking area.

PUERTO MACIAS (Puerto Nuevo): 01.49 N. 09.44 E.

Situated about 1 mile South of the mouth of the Rio Ekuku. This is quite a new jetty – developed in 1973 – shaped like the letter "L", where the long leg of this "L" is connected to the shore and 4 dry cargo vessels can moor alongside the short leg in about 14 m. of water. Every vessel has on her off-shore side 2 mooring buoys to assist in mooring and unmooring. No tugs available. Though it is stated that a Pilot is available, this information should be treated as unreliable. The pier is used for the discharge of general cargo and the loading of logs and sawn wood. According to information received this jetty will be made available to tankers for discharge of oil products.

DOCUMENTS: See "Bata". This new jetty falls under the jurisdiction of Bata Authorities.

RADIO COMMUNICATION: See "Bata".

SHIPMASTER'S REPORT: October 1979.

Documents:

Crew List	6 copies	(vessel's care)
Passenger List	6 copies	(vessel's care)
List of Ports of Call	6 copies	(vessel's care)
Crew Declaration	6 copies	(vessel's care)
Store List	6 copies	(vessel's care)
Cargo Declaration	2 copies	(vessel's care)
Arms & Ammunition	2 copies	(vessel's care)
List of Narcotics	2 copies	(vessel's care)
List of Animals on Board	2 copies	(vessel's care)
Vaccination List	2 copies	(vessel's care)
Cargo Manifest for discharge cargo	6 copies	(vessel's and loading port Agent's care)

Authorities boarded the ship on the Roads.

Pilotage: Pilot is available, native, has knowledge of local currents and winds, otherwise is not skilled. Speaks only Spanish.

Anchorage: Half a mile West of the breakwater or further in depths from 12 to 25 m., sand, the holding ground is good but swell can be heavy.

Restrictions: Berthing possible only during daylight.

Berthing: The jetty can accommodate four ships, two on each side but at present all mooring buoys are removed, except Buoy No. 8. For this reason only ships equipped with stern anchor could be moored outside, to keep herself (with anchor) clear from the breakwater owing to swell, current and wind from S.W. Also the inner berth is not protected against the swell, because the breakwater was constructed of concrete piles. According to information the mooring buoys will be replaced in near future.

Loading/discharging with ship's gear, no shore cranes available. Oil products can be discharged by pipe-line connected with shore storage tanks.

Stevedores: Available, arranged through Agent of shippers/receivers.

Medical: Hospital facilities available, but there is total shortage of drugs.

Fresh Water: Available from quay.

Opening/Closing Hatches: Normally done by crew.

Customs Allowance: No limit. No sealing of bonded stores.

Airport: There is an airport close to Bata with flights to the capital (Malabo) and Douala.

Time: GMT plus 1 hour.

Currency: Ekuela.

Stores: Not available.

Shore Leave: No restrictions. Identification cards not needed.

REY MALABO, (formerly Santa Isabel): 03.46 N. 08.48 E.

Situated on the Island of Macias Ngueme Biyogo (formerly Fernando Poo) Capital of the Republic of Equatorial Guinea.

DOCUMENTS:

9 Crew Lists.
3 Stores Manifests.
3 Crew Declarations.
2 Lists of Arms and Ammunition.
4 Lists of Ports of Call.
2 Passenger Lists or negative.

GENERAL: No tugs.

PILOTS: Effectively none. Only a locally informed inhabitant of this port comes on board to inform the Master, he is equipped with a large scale Spanish chart of this bay, but he has no nautical knowledge and he does not know how to handle a ship.

Note: 1. Masters should bear in mind that they have to manoeuvre and moor the vessel themselves.

2. In view of the continuous breakdowns (and insufficient power) of the mooring-launch it is absolutely necessary to have the ship's motor boat at stand by to run the ship's mooring-lines ashore.

MOORING PROCEDURE: Tanker Berth: Old jetty (Muelle Viejo). The ship should be moored stern-to to this jetty. On entering the port with the lights in line starboard anchor is dropped in the middle of the bay and the ship has then to manoeuvre around with her own engines, until in line with the berth.

N.B. Because there is very seldom anybody present at the jetty to accept the mooring lines (on arrival as well as on departure) the vessel's crew should be kept on standby to do this job.

ARRIVAL/DEPARTURE: Between 0600 hrs. and 1800 hrs.

TANKERS: Preferably stern discharge into a 6 in. line with 6 in. hose. All grades through one line – linewash with water in between – pressure 4 kg./sq.cm. max.

DRY CARGO VESSELS: Berth at a new jetty on the West side of the bay. No cranes available.

ADVICE: 1. Masters should be very careful when dropping their anchors as some vessels (Men of war) moor with their sterns to the dry cargo jetty and have their anchors in the middle of the bay. These anchors are very easily fouled by incoming vessel's anchors. A useful suggestion might be to put anchor buoys on the anchors in order to show another incoming ship their position.

2. Because it is quite difficult to manoeuvre a tanker around in this bay without any tug assistance, it should be borne in mind that when the wind is over Force 2 manoeuvring with a sizeable vessel is apt to falter, and no assistance can be expected from any quarter.

DEPARTURE: Vessels are free to leave within mentioned hours without Pilot.

RADIO COMMUNICATION: See "Bata".

CUSTOMS ALLOWANCE: No limit – no sealing of bonded stores.

SHORE LEAVE: No restrictions, but with own motor boat.

Currency: Equatorial Guinea Peseta = Spanish Peseta.

PURSER'S REPORT:

Documents:

9 Crew Lists.
9 Passenger Lists (Marked "none" if no passengers on board).
3 Customs Declarations.
3 Stores and Provisions.
4 Arms and Ammunition.
1 Vaccination List (Cholera and Yellow Fever).
9 Cargo Manifests.

Stores: No stores were purchased at this port, advise top up prior to calling at this port.

Mail: Advisable to send to next big port.

Bata: Same papers as above. No officials come out to the ship at this port, however, papers should be kept ready. Vessels moor to a buoy for discharge.

SHIPMASTER'S REPORT: May 1984.

Pilotage: There are no Pilots at Malabo. Masters are expected to berth the vessel themselves on receiving instructions from Agents via VHF to proceed to the berth. If requested an Agents' representative may board the vessel but they are not persons with nautical knowledge and can be helpful only in communicating with the mooring boat.

Berth: The general cargo berth on the S.E. side of the bay is 200 m. long and fitted with good fenders. Depths alongside vary from 6.0 m. at the extreme S.E. end to about 7.0 m. one third of the length from the end and nearly 9.0 m. at the N.W. end of the pier.

There is no definite draft restriction but a vessel with a maximum after draft of 24 ft. can safely berth alongside. Off the pier the water is deep with depths of 14 m. to 17 m.

Berthing Procedure: Vessels berth starboard to without using anchor. After passing the red buoy about 20 m. off to port swing to starboard to bring vessel as close to and as parallel to the pier as possible. Mooring boat takes the ship's lines ashore.

Unberthing Procedure: Using headline and forward springs swing vessel off pier sufficiently to drop astern to the centre of the bay. Then swing using engines to proceed out. (Note: It is advisable not to attempt berthing or unberthing if the wind is unfavourable, particularly with large vessels. There are no other craft in the port other than two mooring boats).

Cargo Handling: Vessels discharge cargo using their own gear. There is one small wooden barge fitted with outboard motor for handling small consignments. There are no lighters or towing boats or tugs in Malabo.

Radio Communications: All the radio stations in Equatorial Guinea are unreliable and mostly not operating. Messages should be sent via Douala or some other major coastal station.

Lights: None of the lights shown on the chart were functioning. At night only vessels with radar should approach close. There has been a complete breakdown of the power supply to the town of Malabo for 8 weeks. It is uncertain when the power supply will resume.

Consulates: Spanish, Belgian, French, American, U.S.S.R. and Cameroon.

Fresh Water: Available, laid on to the pier, good pressure.

SHIPMASTER'S REPORT: June 1990.

Anchorage offshore: At least 7 cables clearance reduces considerably the number of sand flies at night.

All navigational lights working as per Light List, Volume "D".

Leading beacons for entrance now painted red with white bands. The Easternmost of the two prominent white advertising boards lies nearly between the two beacons.

The Pilot was competent and cautious, usually only berths vessels, normally starboard side alongside using port anchor, he speaks good English.

Fresh water available, but should always be treated.

No difficulty sailing, except if wind is strong, stern sprung off, and vessel turned round in bay. Strong winds usually moderate quickly, and less effect is felt in the bay.

The two buoys formerly marking the shoals, either side of the entrance, are stowed on the wharf. There are said to be plans to replace them.

NOTES

Please also advise Shipping Guides Ltd.

Ethiopia

ASSAB: 13.01 N. 42.44 E. (See Plan)

PORT LIMITS: A line drawn from Ras Gombo to the Northern point of Umm al Baher (Islands) to Southern point of Umm al Baher, then to Ras Marcanah.

DOCUMENTS:
5 Manifests for Transit Passengers and passports.
5 Manifests for Landing Passengers and passports.
5 Crew Lists.
1 Complete Crew Provisions List.
1 Crew Personal Effects List.
1 Store List.
6 Cargo Manifests.

PILOTAGE: Compulsory Pilots take tankers in and out of oil harbour only during daytime. Pilots embark about 1 mile N.N.E. from Northern extremity of breakwater. Commercial harbour gives 24 hour service. Vessels calling Assab must advise Agent through Assab Coastal Radio Station by call sign ETC. Assab Radio Signal Station is available.

ANCHORAGES: Assab Bay provides good anchorage in 42 ft. to 48 ft. of sand and coral bottom, good holding ground. Generally weather in Assab can be divided into two: Summer time and Winter time weather, during Summer (May–September) Northerly wind blows with a maximum force of 3/4 BS. During Winter time (October-April) South-easterly local monsoon winds blow usually 5/6 BS but reaching Force 7/8 BS during daytime and generally drop at night. This 7/8 BS force is mainly experienced about December to February.

RESTRICTIONS: There are 2 entrances, the North and the South entrance, the depth at the entrances is 38 ft. Least width 1,300 ft.

Vessels of any size enter or leave port during hours of darkness except tankers, and vessels carrying dangerous cargo. In these cases, where vessels are carrying explosives or other dangerous cargoes, Agents of calling vessels must notify the Port Office in advance of discharging and/or loading of explosives. Inflammable and other highly dangerous cargoes in commercial harbour are permitted from 0600 to 1800 hrs. local time.

MAX. SIZE: Largest vessels which can enter commercial harbour 180 m. LOA, 80 ft. beam, 33 ft. draft.

HEALTH: Quarantine and sanitation services available. Quarantine officer boards arriving vessels and necessary medical clearance given.

RADIO: Coastal radio station available *(a)* Position Lat. 13° 01′ 24″ N., Long. 42° 44′ 38″ E.

(b) Coastal radio station in service for 13 hours per day 0700 hrs. to 2200 hrs. Call sign ETC. Transmits traffic lists on 489 kHz after a preliminary announcement on 500 kHz, 30 minutes past each odd hour starting at 0500 and ending 1700 hrs. (0530, 0730, 0930, hrs. etc.).

(c) Transmit traffic lists on 6509 at 0500, 0900 and 1300 hrs. and searches 6265.5 – 6280.5 between 0515 – 0600, 0915 – 1000, and 1315 – 1400 hrs.

(d) Transmit traffic lists on 8618 at 0700, 1100 and 1500 hrs. and searches 8354 – 8374 between 0715 – 0800, 1115 – 1200 and 1515 – 1600 hrs.

(e) Rates shall include station charges and charge of transmission over telecommunication network within Ethiopia.

(f) Accepts ship letter telegrams (SLT) from ships for delivery in Assab.

(g) For radio telephone service. Station keeps watch and replaces on 2182 for radio telephone service at 0615 – 0700, 0815 – 0900, 1015 - 1100, 1215 – 1300, 1415 – 1500, 1615 – 1700 hrs. and transmits traffic same hours on 4379.3. Service hours will be extended to 24 hours.

VHF: VHF system is in operation in the port area.

TUGS: Tug service compulsory for ships over 300 n.r.t. 3 tugs of 600, 1,200 and 1,400 h.p. attend ships during arrival and departure.

BERTHING:
(a) North Half Jetty 1,620 ft. length, 36 ft. depth.
(b) South Half Jetty.
  (i) 1115 ft. length and 33.8 ft. depth.
  (ii) 459 ft. length and 29.5 ft. depth.
  (iii) 164 ft. length and 19 ft. depth

Fenders are good and protect ships from impact; harbour is modern and has modern breakwater 711 m. length. 7 large vessels can be accommodated at a time. In addition stern ramp ro/ro vessels are accommodated at the ends of the North and South Jetties.

Salt Loading Terminal: Located 1.7 miles from the Commercial Harbour, salt loading ships drawing up to 33 ft. are berthed at this terminal using 2 anchors and mooring to buoys and dolphins. Not in use at present time.

STEVEDORES: 14 stevedoring agencies, any kind of cargo can be discharged and loaded. Skilled labourers and loading/discharging capacity are respectively 30-15 t.p.h. Crane lift capacity 50 tons.

Normal working hours: 0700 to 0600 hrs. (23 hours a day).

MEDICAL: 1 hospital in town and clinic in port. When sick person on board, hoist (by day) International code flag "W", (by night) 3 lights in vertical line upper one red, and middle and lower, white lights. Doctor may be called on board at any time to attend sick crew or passengers by arrangement with Agents.

TANKERS: Oil harbour about 1.5 miles S.E. of commercial harbour with draft 33 ft. Crude oil discharging terminal 500 m. from Southern end of breakwater open sea buoy berth – tankers of 800 ft. length, and 36 ft. draft can be accommodated. Diameter of pipe-line for loading and discharging black products – 16 in., white products 10 in.

Tankers at the Shell Berth are moored by dropping 2 anchors and tying up 2 ropes from each quarter to the buoys, and 1 rope from each quarter to the dolphins. All grades of oil in bulk discharged into shore storage tanks from this harbour, and fuel oil is discharged from the Commercial Harbour.

In Assab, the petroleum installations are of Shell Red Sea Co., Mobil Oil East Africa Co. and Ethiopian Petroleum Corporation

DENSITY: At berths is 1030 while the tides are negligible for all seasons; max. 1 ft.

FRESH WATER: Available. Supplied upon request by Agent and can be delivered at 60 t.p.h.

FUEL: All grades available, at commercial harbour. Advance notice necessary. Rate of 300 t.p.h.

FIRE PRECAUTIONS: Modern fire brigade.

CONSULS: Only Italian Consulate in Assab, others in Addis Ababa.

REPAIRS: Minor repairs can be carried out at Port Office workshop.

GANGWAY/DECK WATCHMEN: Watchmen on deck necessary, and rate arranged as per agreement of employer and employee.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CERTIFICATES: All ship's International Certificates should be on board.

CUSTOMS ALLOWANCES: Tobacco, 400 cigarettes. Wine and/or spirits: 1 litre or bottle of spirit.

CARGO GEAR: Different types of certified cargo handling equipment available.

REPATRIATION: Possible.

AIRPORT: 15 km. from Assab.

TIME: GMT plus 3 hours.

HOLIDAYS: See "Massawa".

POLICE/AMBULANCE/FIRE: Port Police Tel: 60049; Hospital Tel: 60119; Port Office Fire Brigade Tel: 60102.

GENERAL: 1 modern hotel and 1 motel available in town.

SHORE LEAVE: Crew allowed ashore, with boarding passes.

IDENTIFICATION CARDS: Needed.

DEVELOPMENTS: Berths No. 13 and 14 to be dredged down to 12.0 m. from the current 10.0 m.

Deepwater berth with length of 500 m. to be constructed. It will have heavy duty paving and will be used for handling containers. No cranes on order at present.

SHIPMASTER'S REPORT: January 1983.

VHF: VHF system is installed. Call sign "Assab Signal Station". Working Channel 12.

Medical: No dentist available in city.

Fresh Water: Available in emergencies only, Port Authority advises that all vessels should take sufficient water at previous port.

We advise that water should be purified before drinking.

Repairs: Not possible. No oxygen or acetylene available.

General: No spares of any description available. Provisions can be supplied in small quantities.

SHIPMASTER'S REPORT: February 1985.

Documents: No cargo documents whatsoever were received by Agent prior to ship's arrival. The day after arrival at the roads, the Agent came on board to collect a full set of cargo documents. This procedure seemed to be a fairly normal practice on ships other than regular liner ships and tankers arriving at Assab.

After having berthed, Authorities came on board to collect 5 Crew Lists, 3 Stores' Declarations and 3 Crew's Effect Declarations. Ship's Certificates were not examined. Ship's lockers with tobacco and spirits were sealed by Customs. Beer-store not sealed. No search of crew cabins.

Pilotage: Signal station working VHF Channels 16 and 14, giving berthing instructions and other information. Also signal station is most willing to pass any messages to Agents, etc.

Pilot boards ships on the roads approx. 0.5 miles off the breakwater. 2 Pilots are serving the port. This ship was handled by the Chief Pilot, who is very skilled in handling ships, making effective use of wind when berthing/unberthing/shifting ships in port.

Anchorages: Ship arrived on the roads 14th January, 1985 and was at anchor for 18 days. In that period the wind blew during the night with Force 4/5 from S.E., shifting E.S.E. Force 6/7 during daytime – often reaching Force 8. Holding ground good.

Restrictions: Draft restriction 33 ft., but Pilot advised me that 34 ft. has been handled. The problem is not the depth alongside the pier but a small patch of sand close to the breakwater, with a minimum depth over it of 35 ft. Ships with the deepest draft are berthed at Pier No.1 (The outer end of the Northern Pier).

Health: After arrival in roads, ships are called by a Quarantine Officer on VHF Channels 16/14, who asks relevant questions such as last port, crew members on board, if any sickness, gross/net tonnage. If satisfied with answers ship is granted Free Pratique.

Radio: Assab Radio (ETC) was impossible to use during voyage to Assab, and all messages were passed via Aden Radio (7OA). After having anchored at Assab Roads, Assab Radio did answer and arrival message and Notice of Readiness were sent via ETC.

Tugs: Tugs meet ships inside the breakwater. 1 tug built 1979 and 1 built 1981, respectively 1,200 and 1,400 h.p. Both of them are working very effectively. Large ships are normally berthed at Pier 1 or 2 – the outer ends of piers – bow heading out. An anchor is used to hold the ship's bow while tugs are pushing the ship into position. 1 larger tug and 1 smaller tug were seen in the port, but they were not in use during our visit.

Cranes: On the Northern pier there are 9 cranes, and on the Southern pier 7 cranes. All were electric cranes working well and well maintained. 2 of the cranes on each pier are 20 ton capacity and the others 6 ton. At least 3 mobile cranes were seen, one with capacity up to 60 tons.

Bulk Cargo Facilities: Bulk grain is discharged by grab to portable bag filling equipment on the pier. Capacity unknown. Simultaneously, dump trucks are used to carry bulk grain from ship to warehouse. 2 cranes are normally used and an outturn of 2,500 tons is said to obtainable.

Stevedores: Agents arrange gangs. Shifts worked: 0600 hrs. – 1400 hrs., 1400 hrs. – 2200 hrs., 2200 hrs. – 0600 hrs. It seems normal practice that all ships work around the clock with maximum possible gangs.

Density: 1023.5.

Fresh Water: Available but in very limited quantities, 10 to 30 tons per ship only. Quality said to be poor.

Watchmen: Gangway watchman compulsory. One watchman works from 0600 hrs. to 1800 hrs. The other from 1800 hrs. to 0600 hrs. Meals are to be supplied by ship.

Customs Allowances: Each crew member had 200 cigarettes and some had a bottle of spirits on arrival. No comments were made to this quantity.

Repatriation: Said to be possible. Local plane to Addis Ababa and from there international flight connections.

Shore Leave: Immigration Department issue a special shore pass, which is shown when passing the gate to and from the port.

Supplies: Ships should not rely on any supplies. At a local market, some supplies of fresh vegetables can be obtained, but most are of poor quality.

Delays: Depending on type of cargo. Army material seems to have priority over other cargo. Berths No. 1 and 2 are said to have been promised to ships with food aid.

Notice:

TO:
THE MASTER
M/V "................."
ASSAB

Assab Port Authorities: General Instructions to be followed:

1. The hours between 2400 and 0600 are curfew hours.
2. Any crew member going ashore should hold his passport or seaman's book together with a shore pass given by the Immigration Officer. Misuse or loss of a shore pass card will not only lead to payment of Birr 10.00 (Ten) per card but also strong measures will be taken upon the individual crew member who involves himself in such misuses.
3. Attempts to exchange foreign currency on black market leads to serious prosecution. Official bank exchanges are authorised. (Rate of exchange 1 U.S.$=2.05 Birr.)
4. Ship's crew are not permitted beyond the following limits:
    (A) The hospital to North East
    (B) Starlite Hotel to the West, and
    (C) The Agip Motel to the South West.
5. All crew's personal belongings should be shown in Crew Declaration. The Customs Authorities will inspect all individual cabins upon arrival and departure.
6. Rat guards should be fitted to all mooring ropes immediately after berthing. Contravention of this will incur a fine Birr 300.
7. Anchoring in Ethiopian Territorial Waters and generally from "T10" to "Ras Damera" is strictly prohibited. When entering territorial waters you must open your VHF Channel 16 and inform Naval Base of your identity.
8. Two hours before departure, "G" flag should be hoisted by day and vertical "Red White Red" should be lit by night, for Pilot.
9. Before sailing from our port you must institute a thorough search of your vessel to ensure that no unauthorised persons or stowaways are on board at the time of departure.
10. Any crew member found in illegal possession of harmful and toxic drugs or found circulating same directly or indirectly shall be seriously dealt with according to the penal code
11. Diving, swimming and fishing within and or near by the premises of the harbour is strictly prohibited.
12. Photography within the port or around the town is strictly prohibited.
13. Smoking inside port area is strictly prohibited.

SIGNED:.............................
MASTER

SHIPMASTER'S REPORT: July 1987.

Fresh Water: Available, no limits. We received 200 tons in 7 hours.

Shore Leave: Allowed. Crew must take U.S. Dollars ashore to change to local currency. No other currency accepted.

AUTHORITY: Ministry of Communication, Department of Marine.

MASSAWA: 15.37 N. 39.28 E.

PORT LIMITS: The coastline of Gurgussum Peninsula, at Lat. 15° 39′ N. to a point Lat. 15° 39′ N., Long. 39° 30′ E. to Lat. 15° 35′ N., Long. 39° 30′ E. to the coastline at Lat. 15° 35′ N., Long. 39° 26′ 50″ E.

DOCUMENTS:
2 sets Manifests.
2 sets Bills of Lading.
5 Crew Lists.
5 Passenger Lists.
2 Stores Lists.

APPROACHES: Through North Channel and South Channel. In channel, in direction of leading lights 243°, max. depth 31 ft. (but alongside 30 ft.) Marker buoy showing a wreck in position approximately 200 m. S.E. of North Breakwater.

PILOTAGE: Pilotage is compulsory for all vessels over 100 n.r.t. Pilot section headed by a Chief Pilot and 2 other Pilots.

There is 1 pilot boat. ETA should be given to Agent who will inform Pilot 72 hours prior to arrival. Signal tower located in port area contacts vessel on arrival informing Agent and Pilot, and receiving or transmitting by Morse lamp messages to and from vessel.

ANCHORAGES: 8 cables East of main lighthouse. Anchorage North o leading light not recommended.

Tides: Normally the range of tide varies between 1.5 and 2.0 m., bu during spring tide season the range varies up to 3 m.

MAX. SIZE: Length 180 m., draft 29 ft.

HEALTH: Doctor normally boards with Pilot, but can be asked to boar together with Customs and Immigration while vessel on roads. All crew members must be vaccinated against yellow fever, and posses necessary certificates. Derat and other health certificates required. Dera cannot be effected at Massawa, but exemption certificate can b obtained.

RADIO: Assab Radio, call sign ETC, Djibouti Radio, or Aden Radio ma be used. Asmara Radio, call sign ETC 2, working hours 0500 t 1700 GMT. Radio-telegraphy and radio-telephone services.

TUGS: Compulsory. Join vessel in port.

3 tugboats are available, two of 350 h.p. and the third 1,000 h.p. The smaller motor tugboats used for assistance mainly within the port limits and the deep-sea salvage motor tugboat, for salvage operations, bu whenever conditions demand, is also employed for assistance withi the port.

BERTHING: Vessels normally drop anchor before berthing.

Commercial Harbour: 6 berths, namely 1 to 6, and the overall distanc from Berth No. 1 to Berth No. 6 is 907 m. These berths normally use by vessels handling general cargo, bagged cargo and livestocks. Dept of water at mean low water springs (MLWS) is shown below:

Berth No. 1 – 16 ft. 6 in.	Berth No. 4 – 28 ft. 0 in.
Berth No. 2 – 24 ft. 6 in.	Berth No. 5 – 27 ft. 0 in.
Berth No. 3 – 28 ft. 6 in.	Berth No. 6 – 30 ft. 0 in.

Salt Berth: This is a single berth where vessels load salt in bul The depth at the berth is 32 ft. Max. draft 29 ft. Loading with the hel of conveyor belt at the rate of about 300 t.p.h.

Cement Berth: Depth 18 ft.

American Jetty: Depth 18 ft.

However, dredging will be carried out to accommodate vessels of a greater draft in the future.

STEVEDORES: Radio 24 hours' notice of ETA stating number of gang required. Loading discharging rates 5 t.p.h. on general, 10 – 15 t.p.h on bagged cargo.

DENSITY: 1025.

MEDICAL: Notice should be given to Agent only when specialist needed Hospital treatment available. Dental facilities available at Asmara 110 km. away.

TANKERS: AGIP, Arkiko Oil Station Terminal: Max. draft for enterin channel 29 ft.

Total Pier, depth alongside 36 ft., max. draft 30 ft.

FRESH WATER: Supplied alongside, Max. rate 600 tons per day or b barge of 50 tons on roads. Barge can be loaded/discharged in 8 hours

FUEL: Can be obtained alongside oil terminals and at Berth Nos. 5 an 6 for heavy fuel only. Diesel can be supplied by lorries alongside No bunker barge available.

CONSULS: Italian Vice-consulate, Box 62. Tel: 52214. Other consulate at Addis Ababa for Belgium, France, Italy, Sudan, U.S.A., U.K. an others.

REPAIRS: Good workshops for minor engine repairs. Slipway for vesse up to 600 g.r.t.

GANGWAY/DECK WATCHMEN: Compulsory when alongside.

OPENING/CLOSING HATCHES: Normally by labourers, but can b done by crew.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Ne allowance can be delivered after 1 week. Wine/Spirits: 1 bottle of wine spirits (opened). Wine and beer quantity necessary for the stay in po allowed upon reasonable request on arrival.

REPATRIATION: Via Asmara by chartered air-taxi, then by internation flights. Or Massawa-Asmara by road, 110 km., asphalt road (dai convoy).

TIME: GMT plus 3 hours.

HOLIDAYS: January 7th (Christmas Day – Coptic); January 19 (Epiphany); March 2nd (Victory of the Battle of Adowa); March 13 (Prophet's Birthday); April 6th (Victory Day); April 23rd (Good Friday Coptic); April 25th (Easter Sunday – Coptic); May 1st (Labour Day September 11th (New Year's Day); September 12th (Abolition o Feudalism); September 27th (Finding of the True Cross); October 6–8 Id-al-Fatir; December 18th Id-al-Kebir and Sundays.

POLICE/AMBULANCE/FIRE: Police, Tel: 52425; Ambulance, Te 52234-5-6; Fire Brigade, Tel: 52220.

TELEPHONES: Possible to place telephones on board. Arranged b Agent.

SERVICES: Radar and gyro compass technician available, but speci spare parts not available.

SHORE LEAVE: Crew cannot leave vicinity of Massawa without spec immigration permit.

IDENTIFICATION CARDS: Not needed. Immigration gives port ent card (without crew member's name) which must be given back prior departure. In case of loss a fine is likely.

AUTHORITY: Department of Marine.

Falkland Islands

PORT STANLEY: 51.42 S. 57.51 W. (See Plan)

PORT LIMITS: West of the line joining Mengeary Point and Cape Pembroke.

DOCUMENTS:

2 Copies Crew Lists.
2 Copies Passenger Lists.
2 Copies Customs Documents.
Health Document.
Manifest and Bills of Lading.
Ship's Papers.
Ship's Certificates.

PILOTAGE: Pilotage not available.

ANCHORAGES: For large vessels, the anchorage is somewhat confined; except South of Navy Point, where there is good swinging room in depths of from 8.2 m. to 10.4 m. (27 ft. to 34 ft.). There is good anchorage N.N.E. of the cathedral, but, owing to the prevailing strong Westerly winds, a vessel may have some difficulty in turning, when leaving this position. The best time to leave is after 1800 hrs. or before 0800 hrs. as, unless there is a widespread area of bad weather over the islands, the wind, which is local, is seldom strong between these hours. The holding ground is good, and vessels have not dragged during winds of up to Force 8, though a second anchor is often necessary.

The bottom of the harbour is stiff mud, which is very noisome and sticky; it is necessary to allow plenty of time for cable washing when weighing.

Several small boats, none of which exhibit a riding light at night are moored at the South side of the harbour.

RESTRICTIONS: No restrictions on night berthing, but advance warning should be given via Agent.

MAX.SIZE: Max. LOA 120 m.

RADIO: Cable & Wireless Ltd.

VHF: Port Radio, call sign "Port Control", listening on Channels 16 and 12 from 0800 hrs. – 1200 hrs. and 1315 hrs. – 1630 hrs.

RADAR: No port radar service.

TUGS: No harbour tugs.

BERTHING: Falkland Islands Company jetty with a depth of 1.5 m. at its "T" shaped Head.

Flexiport: Tel. 22671.

3 berths, each 91 m. in length and a Ro-Ro facility. Depth at West End 7.3 m., shoaling to 6.1 m. at Eastern End. Discharge is by ship's gear, 20 ft. containers accepted with a maximum weight of 18 tons. Working hours are 0800 hrs. – 1200 hrs. and 1300 hrs. – 1700 hrs., overtime to vessel's account.

CRANES: 1×5 ton crane.

BULK CARGO FACILITIES: None. Drummed cargoes only are handled.

STEVEDORES: No notice required at Flexiport.

If Falkland Islands Company charter vessel (4 voyages a year) is being worked then stevedores will not be available until work on the charter vessel has been completed.

MEDICAL: Advance notice required.

TANKERS: Advance information should be sought.

Mare Harbour: Tanker mooring buoy and pipe-line in position: Lat. 51° 54.11′ S., Long. 58° 29.87′ W.

DENSITY: Full salt water.

FRESH WATER: Available from jetty, cost £5.00 per ton.

FUEL: Fuel is available by special arrangement with Stanley Services Ltd. Grade 47 Cetane (viscosity cSt 100° F – 1.8; s.g. at 15° C – 0.840). Delivery by lighter and pump.

FIRE PRECAUTIONS: Normal safety requirements.

CONSULS: Norwegian.

REPAIRS: Minor repairs to machinery.

DRY DOCKS: None.

SURVEYORS: Lloyd's and B.V.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: By ship's crew.

CUSTOMS ALLOWANCES: Quantity permitted by crew is one bottle of spirits, 200 cigarettes or 1 lb. of tobacco, 6 bottles of wine, 1 case (24 cans) beer.

CARGO GEAR: There is 1×5 ton crane. Ship's gear may be used.

AIRPORT: 32 miles from Port.

TIME: GMT minus 4 hours. Summer time from October to end of March.

HOLIDAYS: Cargo may be handled on the 10 public holidays.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: Available in East warehouse (card only).

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seaman's Book sufficient.

REGULATIONS: No particular or unusual regulations.

DELAYS: Delays may be experienced if berthing alongside the only commercial jetty if firms charter vessel is being handled. Four voyages a year: – turn around 1 week.

AUTHORITY: Harbour Master, Customs and Harbour Dept., Port Stanley, Falkland Is. *Tel:* 27260. *Contact:* Captain R. Gorbutt, Harbour Master.

Manifest.
Bill of lading.

PILOTAGE: Not compulsory but available. Give ETA via Torshavn Radio, OXJ, 1 or 2 hours before arrival, and Pilot will meet vessel in Roads. International signals can always be used. VHF Channels 16, 12, and 6 in use.
ANCHORAGE: In Roads in 12 to 20 fathoms; good anchorage.
RESTRICTIONS: No restrictions upon entry.
MAX. SIZE: Up to 450 ft. length, but draft must not exceed 20 ft.
HEALTH: Pratique usually automatic.
RADIO: Torshavn Radio, OXJ, is only coast station in Faroe Isles.
TUGS: No tugs available.
BERTHING: Ships will be berthed on arrival, if ETA announced 12 hours before arrival.
New quay with depth 7.0 m. available.
STEVEDORES: Ship's Agent will arrange stevedores.
MEDICAL: Inform doctors before arrival. Hospital facilities available.
TANKERS: Only small tankers, up to 2,000 – 3,000 tons can be handled.
FRESH WATER: Available from quay. 30 t.p.h.
FUEL: Diesel oil available, usually without notice (or short notice).
CONSULS: British, Tel: 55109 and 55489; Norwegian, Tel: 55018 and 55353.
REPAIRS: All types of deck and engine repairs possible. Slipways for ships up to 200 ft. length.
GANGWAY/DECK WATCHMEN: Watchmen usually unnecessary, but available if desired.
OPENING/CLOSING HATCHES: Normally done by crew.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 litre of spirits.
REPATRIATION: Small changes in crew can usually be arranged and, for example, sick seamen/fishermen are often sent home, when recovered.
AIRPORT: Nearest airport on Vagoy, about 6 hours travelling. Regular flights, 6 times a week.
TIME: GMT. GMT plus 1 hour (Summertime) from last Sunday in March until last Sunday in Spetember.
HOLIDAYS: Cargo work can be arranged on holidays.
POLICE/AMBULANCE/FIRE: Police 55348; Ambulance 55464; Fire 04.
TELEPHONES: Can be arranged on board at one berthing place, at about 50.00 kr plus dues for conversations.
SERVICES: Compass adjusting, day and night.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Not needed.
DELAYS: Normally there are none.
AUTHORITY: Klakksvikar Havn, P.O.Box 26, FR-700 Klakksvik. *Tel:* 55081.

AGENT: Christen Joensen Stengavegur, P.O.Box 179, FR-700 Klaksvik, Faroe Islands. Cables Christen Joensen. Tel: Klaksvik 55922.

SOERVAAG: 62.04 N. 07.18 W.

DOCUMENTS:
Bill of Lading.
Customs Documents (including Crew List).
Ship's Certificate (stating size of ship).

PILOTAGE: Ships can call Pilot via Torshavn Radio. Pilot has good knowledge of local conditions.
ANCHORAGES: Danish Chart No. 82 (B.A. Chart No. 85) – on Soervaag Fjord – can be recommended as good. Bottom gravel.
RESTRICTIONS: Difference between high and low water up to 2 m. on Spring tide and up to 1 m. on Neap tide.
MAX. SIZE: Largest vessel reported in Soervaag was 12,000 d.w.t. tanker. Harbour about 150 m. long and formed with one long pier and another one stretching from it. Depth at pier 8 m. Pier runs N.E./S.W. Max. draft permissible 26 ft.
HEALTH: Ships coming from countries having epidemic-disease have to fly the flag "Q". No persons allowed connection with shore, before official doctor given Free Pratique.
RADIO: Only civilian radio on Faroe Islands is Torshavn-Radio (Int. call sig.: OXJ) via this radio ships can call for medical assistance and weather forecast. These 2 services are free. All traffic to Faroe Islands via Torshavn-Radio.
VHF: Port Office on Channels 16 and 12 during working hours (0800–1700).
TUGS: No actual tugs can be obtained, but many small vessels which can be used as tugs.
BERTHING: Masters should take care when berthing not to come on to East side of pier – owing to very low water.
CRANES: 2×30 ton mobile cranes available.
STEVEDORES: Arranged through Agent.
MEDICAL: Hospital in Torshavn with all facilities. There is a doctor in Soervaag.
TANKERS: Ordinary pier also used by tankers, size of load/discharge-lines: 3 in. and 6 in.
FRESH WATER: Ships can obtain fresh water direct from pier.
FUEL: Marine diesel fuel; turbo-jet A1–100; gasoline-petroleum.
CONSULS: Belgium, Finland, Greece, Iceland, Norway, Spain, U.K., Germany F.R., Brazil, France, Netherlands, Italy, Portugal, Sweden.
REPAIRS: Small deck and engine repairs carried out.
DRY DOCKS: On Skaalefiord, dry dock up to 1,500 d.w.t.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: By crew.
CUSTOMS ALLOWANCES: Tobacco, each crew member is allowed to have 200 cigarettes or 250 gm. of tobacco. Wine and/or Spirit, 1 litre spirits and 1 litre wine.
REPATRIATION: Can be arranged.
AIRPORT: Faroe Island has 1 airport – only 3 km. from Soervaag. Flights 12 times a week to Copenhagen, and 3 times a week to Iceland.
TIME: GMT. Summertime from last Sunday in March to last Sunday in September.
HOLIDAYS: Same as Denmark. Cargo work can be arranged on holidays.
POLICE/AMBULANCE/FIRE: Police Tel: 33448; Ambulance Tel: 326011. Fire Tel: 000.
TELEPHONE: Telephones can be placed on board.
SERVICES: Compass adjusting only.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Not required.
REGULATIONS: Per ordinary regulations in Danish Ports. Harbour dues to be paid before ship's departure.
DELAYS: Usually none.
AUTHORITY: Harbour Master, Soervaag 3867, Faroe Islands. *Tel:* Office 32046. Residence 32283.

TORSHAVN: 62.00 N. 06.45 W. (See Plan)

DOCUMENTS: See "Klakksvik".
PILOTAGE: Not compulsory. Can be obtained through Torshavn Radio 2182 kHz or Channel 16 VHF (Harbour Office).
ANCHORAGES: Due South of breakwater in depths about 30 fathoms.
MAX. SIZE: Max. draft 25 ft. This is only restriction.
HEALTH: Pratique usually automatic.
RADIO: Torshavn Radio, OXJ.
TUGS: No tugs available.
STEVEDORES: Must be arranged with the Agent.
FRESH WATER: 100 t.p.h., by pipe-line.
FUEL: All kinds of fuel at 100 t.p.h.
REPAIRS: All kinds are possible.
DRY DOCKS: Slipway for vessels up to 2,000 tons.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: By crew.
CUSTOMS ALLOWANCES: Tobacco (1 carton); 1 litre of spirits or 2 litres of wine.
REPATRIATION: Can be arranged.
AIRPORT: Regular airlines, 2 hours by car from Airport.
TIME: GMT. Summertime GMT plus 1 hour (late March – late September).
HOLIDAYS: Cargo work can be arranged on holidays.
POLICE/AMBULANCE/FIRE: Police, 11448; Ambulance, 13540; Fire, 000.
TELEPHONES: No facilities.
SERVICES: Compass adjusting only.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Torshavnar Havn, Torshavn, Faroe Islands. *Tel:* 1-1762. *Contact:* Hogni Mohr, Port Director. P. Hansen, Harbour Master.

TRANGISVAAG: 61.33 N. 06.50 W.

DOCUMENTS:
1 Crew List.
1 Passenger List.
1 Bill of Lading.
1 Bonded Store List.

PILOTAGE: When Pilot required pre-arrange with Agent by telegram or telephone, 2 hours notice of ETA required. Pilot boat is local fishing-boat, usually boarding vessel at harbour entrance.
ANCHORAGES: Safe sheltered harbour up to 30 fathoms deep along the entrance transit bearing. Vessels anchor 1 cable offshore in 8 fathoms, clay bottom.
RESTRICTIONS: Vessels may enter harbour day and night.
MAX. SIZE: Vessels may berth with draft up to 7 m.
HEALTH: Pratique granted if no contagious illnesses aboard and all arrival formalities accomplished by the boarding officials.
RADIO: Torshavn Radio, call signal OXJ, 24 hours service, listens 2482 kHz, replies and transmits traffic on 1778 kHz, traffic lists on 1778 kHz 35 minutes past each even hour. VHF service: Channel 16 (156.80 MHz) Channel 26 (161.90 MHz). All ETA messages, etc. must be routed through Torshavn Radio.
TUGS: None; if required local fishing-boats are capable to act as tugs.
BERTHING: Tveraa at Northern side of fjord. Outer side of quay 280 m. length and 20/21 ft. alongside. Inner side length 170 m. and 15 ft. alongside. Quay is for general cargo, fish and salt.
Harbour basin length 58 m., depths 7 ft. to 18 ft. alongside.
Drelnes on South side of fjord. Quay length 89 m. Depth alongside outer side 23 ft.; inner side length 43 m., depth 22 ft.

STEVEDORES: In order to enable Agent to arrange gang important obtain in good time accurate ETA from vessel. Work normally not carried out on Sundays.
MEDICAL: Advance notice to Agent preferable, good hospital facilities for both surgery and medicine.
DENSITY: 1024.
FRESH WATER: Water available at main quay, rate 50 t.p.h.
FUEL: Diesel gas oil available, 50 t.p.h., no advance notice required.
CONSULS: Spanish Vice-Consul.
REPAIRS: Local marine repair companies can undertake all repairs of general nature to deck, engines, hull, electric and radio equipment, etc. Slipway available for small vessels.
GANGWAY/DECK WATCHMEN: Available, but not compulsory.
OPENING/CLOSING HATCHES: Crew allowed to open and close hatches.
CUSTOMS ALLOWANCES: Each crew member allowed 200 cigarettes or 200 grams tobacco out of Bond. Limited quantity wine and spirits.
REPATRIATION: May be arranged by sea or air.
AIRPORT: (Vagar) Served by regular airlines, located 50 miles from Trangisvaag.
TIME: GMT. Summertime (GMT plus 1 hour) from last Sunday in March to last Sunday in September.
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Labour Day; Ascension Day; Whit Monday; Christmas Day; Second Christmas Day; work not carried out these days.
POLICE/AMBULANCE/FIRE: Police Tel: 10 and 53; Ambulance 134; Fire 159.
TELEPHONES: Usually not placed aboard, but can be arranged.
SHIP SUPPLY SERVICE: Contact Vaktar-OE Bjargin-Gartenastan, Torshavn, Faroe Islands.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
DEVELOPMENTS: New quay under construction as extension of existing quay.
AUTHORITY: Tvoroyrar Havn, 3880 Tvoroyri, Faroe Islands. *Tel:* 71055. *Contact:* Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Fiji Islands

LABASA: 16.26 S. 179.22 E.

SHIPMASTER'S REPORT: January 1983.

PORT LIMITS: Port limit is up to the entrance of Mali Passage.

DOCUMENTS:

1 Crew Personal Property Declaration.
8 Crew Lists.
5 Passenger Lists.
4 Stores Lists.
3 Parcels Lists.
4 Maritime Declarations.
3 Form 'D' Regulation 46.
Maritime Declaration of Health.
1 Vaccination List.
1 Copy Fiji Quarantine Ordinance cap–92.

PILOTAGE: Compulsory. Agent arranges booking for Pilot. Pilot boards at entrance to Mali Passage from 30 ft. long, white hulled boat (no flag). Docking/undocking carried out during daylight hours only. Pilotage is also available for inshore passages to Suva, Lautoka, etc. Reef navigation is carried out by Pilots during daylight hours only.

ANCHORAGES: Safe anchorage is available only after passing Mali Passage; about 6 miles to the S.E.

If vessel arrives early, she can drift safely about 20 miles N.N.W. of Mali Passage.

RESTRICTIONS: Docking/undocking only during daylight hours. Max. draft 10.5 m.

MAX. SIZE: LOA 174 m., draft 10.5 m. Max. shipment available 27,000 tonnes as this is the max. storage capacity at Labasa.

HEALTH: Anti-malarial squad boards vessel with Pilot. They inspect and spray the vessel; only then is Pratique granted.

If vessel is coming from a "Malaria Infested" region, spraying is done twice daily during the vessel's stay in port.

TUGS: None available. 2 mooring boats are used for taking lines ashore.

BERTHING: *Malau Wharf:* Length 150 m., depth alongside 11 m. Vessel berthed starboard side to, using 1 head/sternline, 2 breastlines and 1 spring at each end.

As the sugar loader is fixed, this mooring system enabled vessel to shift fairly easily when loading in different hatches.

Caution must be exercised while docking, undocking and shifting to avoid contacting the middle piled dolphins of the wharf, as they are unfendered and non-loadbearing.

No tidal restrictions for wharf or port.

BULK HANDLING FACILITIES: Raw bulk sugar: 400 t.p.h./24 hours a day.

MEDICAL: Facilities available in local hospital and from private practitioners.

DENSITY: 1024.5.

FRESH WATER: Not available.

FUEL: Available at Suva only. Very expensive.

SURVEYORS: Pilot carries out hatch inspection prior to loading. Also see "Suva".

GANGWAY/DECK WATCHMEN: None.

HATCHES: Attended to by crew.

AIRPORT: Local airport with connections to Suva and Lautoka.

HOLIDAYS: Most of the population is of Indian descent, hence some Indian holidays observed.

TELEPHONES: No telephone provided for berth.

DELAYS: Normally 12 hours documentation time (non-laytime) after completion is provided for in the Charter Party; which may not be necessary.

GENERAL: *Communications:* Well connected via Suva. Telexes can be sent via Suva or Lautoka, by telephoning Agent's office there.

Formalities, Clearance, etc: Labasa is not a 'Port of Entry' (about 2 vessels per month call here). Pilot, Agent, Surveyor, Customs, Immigration, Agricultural Inspector, Malaria Prevention Squad, etc., all have to come from Suva or Lautoka. Customs Officer *only* stays on board the vessel until departure.

Pilferage: None reported.

Bonded Stores: Not available.

Provisions: No shipchandler. Fresh fruit, vegetables, etc., are available at reasonable prices from the local market, about 8 miles from the wharf.

AUTHORITY: See "Suva".

LAUTOKA, (Vuda Point): 17.36 S. 177.26 E. (See Plan)

DOCUMENTS/HEALTH: Refer to "Suva".

PILOTAGE: Not compulsory at present. However, most vessels avail themselves of a Pilot, who boards at Navula Passage, 20 miles South of Lautoka. Masters should telegraph to their Agents ship's ETA at Navula and indicate whether they require a Pilot or not at least 24 hours in advance.

Note: Radio communications with Fiji can be difficult and Masters are advised that telephone or telex messages worked via New Zealand or Australia direct to their Agents are far more reliable.

The Pilot normally boards from a 26 ft. wooden launch, blue hull with white superstructure, buff cabin top with orange liferaft on forward cabin. The pilot vessel can be contacted on VHF 16/6. Listening watch only when vessels are expected. Pilot normally boards 1 mile seaward of the passage on the leads. In heavy weather it may be necessary for a vessel to enter the passage to embark the Pilot. There is no anchorage outside the passage.

Vessels requiring Pratique should anchor approximately 1 mile to the Westward of Vio Island in Lautoka Harbour. If prior arrangements have been made through Agent, Health Officers may board inside Navula (The Health Officers inspect vessels only from 1 hour after sunrise to 1 hour prior to sunset). The Pilot for those vessels not employing one from Navula but requiring a Pilot for berthing will board at the Quarantine Anchorage off Vio Island.

ANCHORAGES: The whole of the area enclosed by a circle of diameter approximately 1 mile between Vio Island and Pinder Reefs is an acceptable anchorage with depths ranging from 9 to 13 fathoms.

MAX. SIZE: Minimum depth in approaches to wharf 32 ft., depth alongside 36 ft. Generally speaking, any vessel not exceeding 32 ft. draft can be accommodated. Main wharf is only 457 ft. long but overhangs are allowable, ("Oriana" LOA 804 ft., berthed at Main Wharf), dolphins for mooring lines being situated off each end of the wharf. Range of tide approximately 5.5 ft. at Springs and 3 ft. at Neaps, but state of tide does not affect the foregoing.

At Vuda Point, the tanker berth of Lautoka, tankers in the 18,000 to 24,000 d.w.t. class can be handled. This is a submarine pipe-line installation, the ship mooring to 4 buoys, available depth being about 36 ft.

VHF: Port Control on Channels 12 and 16 during normal office hours.

TUGS: No tugs available. Can be obtained from Suva if reasonable notice is given.

BERTHING: Berthing and unberthing at Vuda Point only in daylight. Berthing at Lautoka is at discretion of Harbour Master or Pilot, but in normal conditions is effected at any hour of day or night.

Berthing in Lautoka is generally effected port side to.

Wharf	*Length*	*Depth*
Queens West	457 ft.	36 ft.
Queens North	257 ft.	24 ft.
Queens East	423 ft.	12 ft.
*F.S.C.	577 ft.	32 ft.

*Bulk sugar loading installation for Fiji Sugar Corporation Ltd.

TANKERS: See "Max. Size". No slop discharge facilities. Discharge line 8 in. diameter.

FRESH WATER: Fresh water is available at all berths, there may be some restrictions in the dry season.

FUEL: Diesel fuel is available at the North and East berths on Queens Wharf.

DENSITY: 1025.

CONSULS: None.

REPAIRS: Only comparatively minor repairs can be effected such as welding jobs and repairs to pumps and other auxiliaries.

SURVEYORS: Cargo and Marine Survey Ltd., P.O.Box 3395, Lautoka. Tel: 63922. Telex: FJ 5194.

REPATRIATION: Repatriation can be effected through vessel's Agents.

AIRPORT: Nandi International Airport is 16 miles from Lautoka. Frequent flights to all parts of the world by several major airlines operating through Nandi.

TIME: GMT plus 12 hours. No alterations to clocks.

HOLIDAYS: *Public holidays:* New Year's Day, Good Friday, Easter Saturday, Easter Monday, Queen's Birthday, Bank Holiday, Fiji Day, Deepwali, Prince Charles' Birthday, Prophet Mohammed's Birthday, Christmas Day, Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 000 in emergency. Police, 60222; Ambulance, 60399; Fire, 60211.

SERVICES: Tank-cleaning labour and labour for painting, chipping, etc. can be provided, but no equipment. No facilities for discharge of slop tanks etc. Compass adjustments can be arranged.

Telephone connection on wharf (3 lines). Police post on wharf.

AUTHORITY: Ports Authority of Fiji, G.P.O. Box 780, Suva, Fiji. *Tel:* 312700. *Telex:* 2203 PAF FJ. *Cables:* Pafiji Suva. *Contact:* Isimeli Bose, Director General.

LEVUKA: 17.41 S. 178.51 E. (See Plan)

DOCUMENTS:

Goods carried in Unregistered Space (C.E. 148) (1 only).
List of articles in possession of Crew, Officers and Master (1 only).
Crew List (8 only).
Passenger List (8 only).
Parcel List (2 only).
Primary Health Report (1 only).
Special Malaria Forms (1 only).
Vaccination Certificates (1 for each person).
Derat Certificates (1 only).

PILOTAGE: Pilots are arranged through Agents. Pilot boards in position – Lat. 17° 40.64'S., Long. 178° 52'E.

MAX. SIZE: Length 560 ft. Max. draft 25 ft.

HEALTH: Radio Pratique may be granted when any vessel has not visited any malarious port and Master declares that crew and passengers are healthy and vessel has not come from any area where internationally quarantinable diseases are endemic or in epidemic. Vessel may then enter port by day or night. On berthing, Master must immediately deliver to Quarantine Officer fully completed Primary Health Report and Derat or Derat Exemption Certificate. If there is any suspected case of disease or fever on board, vessel must be anchored at Quarantine Anchorage until cleared by Port Medical Authority. Pratique is automatic if a vessel has been granted Pratique at another port in Fiji.

TUGS: No tug service available.

BERTHING: Only 1 vessel berthing at a time.

Berthing in Levuka is generally effected starboard side to, outside Queens Wharf. Both dry cargo vessels and tankers use the one berth available for overseas shipping at Levuka.

Wharf	*Length*	*Depth Alongside*
Outer Face	255 m. (837 ft.)	7.9 m. (26 ft.)
Inner Face	208 m. (683 ft.)	6.7 m. (22 ft.)

STEVEDORES: Estimated time of arrival of any vessel and tonnage of cargo to be discharged should be received at least 24 hours from time of arrival.

MEDICAL: Normal hospital facilities are available. Specialist services not available but can be arranged for within 24 hours. Cholera and yellow fever valid Vaccination Certificates are required to be held by ship's crew and passengers, except those coming from New Zealand, Australia, Kiribati, Tuvalu, Tonga or Samoa.

TANKERS: Load and discharge lines 8 in. steel pipe. 1 berth only.

DENSITY: 1025.

FRESH WATER: Available only during normal working hours, which is from 0600 to 1600 from Monday to Thursday, and Friday up to 1500. Rate of delivery of water is about 15 t.p.h.

FUEL: Light marine diesel only – viscosity kin. at 100°F. = 3.4.

FIRE PRECAUTIONS: Bunkering only permitted during period between sunrise and sunset.

CONSULS: None.

REPAIRS: Minor engine repairs are possible, but deck and major engine repairs could be carried out at Port of Suva, which is about 57 miles away.

SURVEYORS: See "Suva".

GANGWAY/DECK WATCHMEN: Services of watchman highly recommended to stop unauthorised persons from going on board.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: All crew and Officers will be issued with 25 cigarettes per day. A maximum of 4 days' allowance may be given at any one time. Cigars or tobacco may be taken in lieu of cigarettes. Masters and other Officers may be allowed to keep in their possession small quantities of liquor.

Daily allowances: Spirits, 1 reputed quart to Master; 0.25 reputed quart to other Officers; Beer, 2 reputed quarts to Master; 2 reputed quarts to other Officers.

REPATRIATION: Facilities exist for repatriation.

AIRPORT: Situated on island of Viti Levu and the distance is about 200 miles. It is served by regular airlines (international). Connections twice daily from local airport, 12 miles from port.

TIME: GMT plus 12 hours.

HOLIDAYS: Working of cargo is not permitted on Sundays, Good Friday and Christmas Day. Application to work on Sundays to be made to the Ports Authority of Fiji at Levuka.

Public Holidays: See "Lautoka".

POLICE/AMBULANCE/FIRE: Police, 44222; Ambulance, 44015; Fire, 44014.

TELEPHONES: Arrangements may be made with Postmaster for installing telephone on board.

SHORE LEAVE: All crew members are allowed shore leave unless there is a special restriction from any Government authorities.

IDENTIFICATION CARDS: Not compulsory.

DELAYS: No berthing at night (lines cleared by Quarantine Authorities). Bunkering from sunrise to sunset. No loading or discharge during rain.

GENERAL: Rat guards must be affixed to all shore moorings or cables greased when alongside to prevent the advent of rats.

AUTHORITY: Port Authority of Fiji, G.P.O.Box 780, Suva, Fiji. *Tel:* 312700. *Telex:* 2203 PAF FJ. *Cables:* Pafiji Suva. *Contact:* Isimeli Bose, Director General.

SUVA: 18.08 S. 178.26 E. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" having passed the West Reef Beacon at the entrance to Suva Harbour.

DOCUMENTS:

1 Last Port of Clearance Certificate.
2 Declaration of Nett and Unregistered Tonnage form.
8 Passenger Lists.
8 Crew Lists.
6 Stores Lists (for high duty goods).
Passenger liners are required to submit Transit Passenger Lists and also a Letter of Guarantee from Master.
Vaccination Certificates for Passengers and Crew.
Derat Certificates.

PILOTAGE: Arranged through vessel's Agents. 24 hours notice of ETA with confirmation 12 hours before arrival. Suva Harbour Control should be contacted on VHF Channels 16 and 20 when within range. Pilot vessel is a white clipper bow launch with word "Pilot" in black on each side and will leave wharf 30 minutes before signalled ETA of vessel. Pilots board on leads 5 miles from front lead. Vessels may stand in on leads to meet pilot vessel. Vessels are advised to provide 2 manropes for pilot ladder which will usually be required on the port side. No anchorage for vessels awaiting a Pilot.

ANCHORAGES: Safe anchorage may be found in depths of 10 to 20 fathoms within the harbour. Holding is good, mud bottom.

RESTRICTIONS: Vessels may enter at any time of day or night.

MAX. SIZE: No length or draft limitation for conventional vessels entering port. Largest vessel regularly entering is 42,000 tons.

HEALTH: Health authorities require that vessels cable details of ports visited within 50 days of ETA. Radio Pratique will be granted to vessels which are healthy and have not visited a port in a malarial area within 50 days. Health authorities board and inspect any vessel which has visited a malarial port within 50 days and will spray any vessel which has visited a malarial port. Vessels arriving from malarial areas are no permitted to berth during hours of darkness. Authorities board from a launch as vessel enters harbour. Quarantine Officer will sight Maritime Declaration of Health and Derat Certificate on boarding. No furthe Pratique formalities are required in Fiji ports other than first port of entry.

RADIO: Suva Radio, call sign 3 DP. 500 kHz., 24 hours listening watch.

VHF: Port Control maintains a 24-hour port radio control watch at Suva on VHF Channels 16 and 20. The call sign is "Suva Harbour Control".

TUGS: One tug available – 1,125 h.p. Compulsory for vessels of 3,000 g.r.t. and upwards.

BERTHING: Vessels berth port or starboard side to King's Wharf or port or starboard side to Walu Bay Wharf as may be necessary. King's Wharf is 495.0 m. in length, having a least depth alongside of 11.6 m. at MLWS at the North end and 10.6 m. at the South end, whilst Walu Bay Wharf is 183.0 m. in length, having a least depth alongside of 9.0 m. MLWS. Ro/Ro cargoes handled.

Vegetable Oil: Vessels loading vegetable oils berth at Walu Bay or North King's Wharf.

LPG Carriers: Berth North King's Wharf or Walu Bay.

Equipment: 1 × 10 ton crane. Fork lift trucks 2.5 tonnes – 25 tonnes capacity.

STEVEDORES: Arranged by ship's Agents.

Working Hours:

Day Shift:	0800 – 1300 hrs.	: 5 hours
	1300 – 1400 hrs.	: unpaid meal break
	1400 – 1600 hrs.	: 2 hours
		7 hours
Afternoon Shift:	1600 – 2100 hrs.	5 hours
	2100 – 2200 hrs.	unpaid meal break
	2200 – 2400 hrs.	: 2 hours
		7 hours
Night shift:	2400 – 0500 hrs.	: 5 hours
	0500 – 0600 hrs.	: unpaid meal break
	0600 – 0800 hrs.	: 2 hours
		7 hours

MEDICAL: Advance notice of medical assistance is desirable. Hospita facilities available. Current international vaccination certificates required.

TANKERS: Discharge lines 8 in. diameter. Tankers discharge at King's Wharf, North and South Berths. Depths alongside 42 ft. No residue discharge facilities.

DENSITY: Salt water, density 1025 approx. No tide effect on density.

FRESH WATER: Available at all berths. Delivery rate 30 t.p.h. per hose Hose diameter 75 mm.

FUEL: Furnace fuel oil, diesel fuel oil, gas oil available by prio arrangement through oil company.

CONSULS: *Diplomatic Heads of Missions Resident in Fiji:*

Australian High Commissioner
British High Commissioner
French Ambassador
Indian High Commissioner
Japanese Ambassador
New Zealand High Commissioner
Papua New Guinea High Commissioner
Ambassador for the People's Republic of China
Tuvalu High Commissioner
United States Ambassador
Malaysian Ambassador
South Korean Ambassador

Consular Representatives in Fiji:

Denmark
Finland
Italy
Nauru
Netherlands
Norway
Pakistan
Philippines
Sweden

REPAIRS: Engine and deck repairs may be carried out at local machin shops. 3 slipways for vessels up to 1,000 tonnes.

SURVEYORS: *Non-Exclusive Classification:*

Lloyd's Register of Shipping
Panama Bureau of Shipping Inc.
Det Norske Veritas
Nippon Kaiji Kyokai
Germanischer Lloyd
Korean Register of Shipping
China Corporation Register of Shipping

American Bureau of Shipping

The resident Surveyor Mr. D. Sunderland of Billett, Wright Associates Ltd. is based in Suva, however attendance in other Fiji po is possible providing adequate notice is given. Surveyor may b arranged by contacting Ship's Agents.

Cargo Surveys:

Cargo & Marine Survey Ltd. of Lautoka (See "Lautoka") provide manner of services including draft surveys and damaged ca inspection.

Resident Surveyor Captain D.E. Worthington is also available attend at Malau Labasa. Surveys may be arranged through Sh Agents.

GANGWAY/DECK WATCHMEN: Employment of deck/gangway watchmen is recommended and normally provided by ship's Agents.
OPENING/CLOSING HATCHES: Normally opened and closed by stevedore labour but crew may be employed at Master's discretion.
CERTIFICATES:

Load Line.
Certificate of Registry.
Safety Equipment Certificate.
Radio Certificate.
Derat Certificate.
Maritime Declaration of Health.

CUSTOMS ALLOWANCES: 1 oz. tobacco per man per day. No alcohol.
REPATRIATION: Facilities exist for crew changes and repatriation.
AIRPORT: 15 miles to Nausori (Suva) Airport, serving Pacific Islands on weekly basis. Numerous daily flights to Nandi International Airport.
TIME: Local time is 12 hours ahead of GMT.
HOLIDAYS: See "Lautoka".
Cargo is not worked on Public Holidays.
POLICE/AMBULANCE/FIRE: Police, 311222; Hospital, 313444; Ambulance, 312439; Fire, 22688; Emergency, 000 for any of the above services.
TELEPHONES: Telephone connections to ships are provided.
SERVICES: Compass adjusting may be carried out.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not compulsory.
DELAYS: Delays are not usual except for rain during hurricane season from November to April.
AUTHORITY: Ports Authority of Fiji. G.P.O.Box 780, Suva, Fiji. *Tel:* 312700. *Telex:* 2203 PAF FJ. *Cables:* Pafiji Suva. *Contact:* Isimeli Bose, Director General.

OUT PORTS OF SUVA: Customs and Pilot are embarked at Suva or Lautoka.
Ellington: Lat. 17.20° S., Long. 178.14° E. Private wharf for loading sugar and molasses from Raki Raki Mill.
Naikorokoro: North Coast of Kandavu. Anchorage for loading sawn timber.
Savu Savu: Lat. 16.47° S., Long. 179.21° E. Government wharf for local coast trade and anchorage for cruise vessels.
Vatia Point: Lat. 17.25° S., Long. 177.46° E. Private wharf for discharging explosives and fuel to gold mines.

NOTES

Please also advise Shipping Guides Ltd.

Finland

GENERAL:

DEEP-SEA PILOTAGE: See "Baltic Deep-Sea Pilotage" – Page 174.

EKENAS / TAMMISAARI (Including Skogby): 59.58 N. 23.26 E. (See Plan)

DOCUMENTS:
International or Finnish Measurements Certificate.
1 Personal Effects List.
1 Ship's Provisions List.
2 Crew Lists (passengers to be included).
1 Customs Declaration (official forms supplied by the Customs Authorities).
4 Manifests.
2 Bills of Lading.

PILOTAGE: Pilots for Ekenas / Tammisaari applied for at Hango Pilot Station by approaching pilot station outside Hango/Hanko, where pilot boat will meet vessel right outside pilot station.

Telegram address: Hango Pilot.

MAX. SIZE: Max. draft 15.1 ft. (4.6 m.). No other restrictions. At Skogby, draft up to 24 ft. – No tide.

RADIO: Helsinki Radio, Call sign OHG.

VHF: Helsinki Radio, Channels 5, 28 and 85. When in the Hanko/Ekenas area use Channels 86, 03 and 25.

TUGS: Normally no tugs stationed at Ekenas but can be arranged from Koverhar or Hanko (12 nautical miles and 20 nautical miles from Ekenas respectively).

BERTHING: Two quays at Ekenas: "Trakajen", length about 160 ft.; "Stenkajen", length about 500 ft.

3 mobile cranes, capacities 27, 36 and 56 tons are available. Two of the mobile cranes are equipped with grabs suitable for discharging of bulk cargoes such as coal, coke, china clay, ball clay, salt and grain.

STEVEDORES: ETA to be given to Agent 1400 hrs. Finnish time on the day before arrival in order to prepare loading/discharging (Stevedore: J. A. Westerlund).

Working Hours: Normal working hours are Monday to Friday 0700 – 1600. Daily overtime can normally be arranged for up to 4 hours (1600 – 2000). All overtime is, however, voluntary.

MEDICAL: Hospital treatment can be arranged when needed.

DENSITY: 1001.

FRESH WATER: Fresh water is delivered to the ship's side by means of hose in summertime.

FUEL: Bunkering available at Ekenas by means of tank trucks.

REPAIRS: Minor electrical and deck repairs may be carried out.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: 200 cigarettes permitted for each crew member. 1 open bottle of 1 litre wine or spirit is allowed for each crew member over 18 years of age.

AIRPORT: Nearest airport is Helsinki Airport, situated about 100 km. from Ekenas.

HOLIDAYS: On Saturdays and days preceding Church holidays, the eve of Independence Day, the day preceding May Day, on Whitsun Eve and on New Year's Eve the working day consists of four working hours, starting from 0700 hrs. or 0800 hrs. and lasting to 1100 hrs., or 1200 hrs. respectively without break for meals. May Day, Independence Day, (6th December), Easter Saturday, Midsummer Eve and Christmas Eve are considered as labour free days.

POLICE/AMBULANCE/FIRE: Police, Tel: 000; Ambulance, Tel: 000 or 14100; Fire, Tel: 000.

TELEPHONES: There are no arrangements for placing telephones on board the vessel but telephone calls can be made from the Harbour Constable's Office.

SUPPLIES: Ship stores and provisions can be ordered from Hango through Agent.

SHORE LEAVE: Shore leave allowed for crew members.

IDENTIFICATION CARDS: Not needed.

AUTHORITY: Hamnkontoret i Ekenas, Postbox 58, SF-10601 Ekenas. *Tel:* 911-14600, 949-471663 or 911-43374. *Telex:* 911-711826. *Contact:* Svante Rasin.

HAMINA: 60.34 N. 27.11 E. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" subject to Charter Party Terms, when arrived at roads.

DOCUMENTS: Normally required:
1 Crew List.
1 Passenger List.
3 Manifests.
1 Bill of Lading of each consignment.

Customs Documents:
1 Special List (personal effects).
1 Provision List (Ship's Articles).

Ship's Papers Required:
Safety Equipment Certificate.
Radio Safety Certificate.
Construction Certificate.
International Tonnage Certificate.
International Load Line Certificate.
Certificate of Registry.
Tonnage Dues and Ice Dues Certificates if vessel called previously.

PILOTAGE: Sea Pilot boards at Orrengrund. Fairway 33 miles from Orrengrund to Hamina, depth 9.0 m. New Fairway 38 miles long, dept 10.0 m. VHF radio telephone Channel 16; pilot boat: hull red superstructure yellow. Vessels coming from Eastward can take Pilot a Haapasaari (Aspo), but must order Pilot by radio via Coast Radio Station at least 6 hours before ETA Haapasaari.

Harbour Pilotage: Harbour Pilot takes over at Roads. Harbour pilo boat: hull black, superstructure yellow, word "Pilot" painted with black letters. Harbour pilotage optional.

ANCHORAGES: 2 anchorages with good holding grounds at Roads.

RESTRICTIONS: Usually no restrictions. Max. draft 10.0 m. Port open throughout year.

MAX. SIZE: Draft is governing factor. No tide but prolonged Easterly winds can cause lower water level, which must be checked before entering berths.

HEALTH: Bill of Health not required. In case suspected disease or fever on board, doctor to be contacted, preferably via Agent, by radio before arrival.

RADIO: Vessels in Baltic Sea usually contact Helsinki Radio/OHC, A1 and OHG, A3. VHF Channels 16 and 26.

RADAR/VHF: There is no land radar service. Harbour is equipped with VHF radio telephone, Channels 16 and 12. Also see "Radio".

TUGS: Join vessels at Roads. Ship's lines usually used.

BERTHING:

Quay	*No.*	*Depth* (m.)	*Length* (m.)
Coal Quay		6.9	345
Lakulahti (L)	L1 – 2	8.6	216

Coal Quay	3	5	
	2	6.5	
	6	36 – 55	mobile
Hiirenkari Quay	1	33	container

STEVEDORES: ETA is expected in good time before arrival.

MEDICAL: Advance notice helpful but not compulsory. Hospital facilities available at town.

TANKERS: Possibility to discharge oily water ballast.

Also see "Berthing".

DENSITY: 1003.

FRESH WATER: Available at majority of quays; elsewhere supplied by boat.

FUEL: Fuel and diesel oils available at short notice. Delivery by tan truck.

CONSULS: Denmark, Netherlands, Norway, Sweden, United Kingdom

REPAIRS: Minor repairs effected.

GANGWAY/DECK WATCHMEN: Shore watchmen available, Sundays and holidays 100% extra.

OPENING/CLOSING HATCHES: Crew close automatic hatch covers Hatches to be covered manually are usually covered by stevedores.

CUSTOMS ALLOWANCES: Tobacco: Master 200 cigarettes or 20 grams tobacco. Others, 100 cigarettes or 100 grams tobacco. Wine and or Spirit: Master, 3 bottles wine or spirits. Others, 1 bottle.

REPATRIATION: There are facilities for repatriation.

AIRPORT: Helsinki Airport, distance 145 km. Regular flights.

TIME: Local time is GMT plus 2 hours. GMT plus 3 hours in Summer

HOLIDAYS: New Year's Day (Jan. 1); Epiphany (Jan. 6); Good Frida Easter Monday; Labour Day (May 1); Ascension Day; Whit Monda Midsummer Day; All Saints' Day; Independence Day (Dec. 6); Christma (Dec. 25 and 26); Midsummer's Eve.

POLICE/AMBULANCE/FIRE: Police 1; Ambulance 1; Fire 000.

TELEPHONES: None available for placing on board.

REGULATIONS: Regular terminal vessels have preference at certa berths.

AUTHORITY: Port of Hamina Authority, PL 14, SF-49401 Hamin *Tel:* 952-54940. *FAX:* 952-54222. *Contact:* Tapio Mansikka, Harbo Master. H. Heikkila, Port Director.

HANKO: 59.49 N. 22.58 E. (See Pla

DOCUMENTS:
Ship's Register.
Crew List.
Manifests.
Bills of Lading.
Provisions List.
Health Certificate.

PILOTAGE: Compulsory, distance from sea to port is 6 miles. Pilot bo painted red, arriving outside Russaro called by radio via Hanko Ra or by flag, sound or Morse: "G".

ANCHORAGES: Inside Gustavsvarn.

RESTRICTIONS: Draft 26.5 ft., length/breadth no restriction; no tide

RADIO: Cable Agents giving ETA via Hanko or Helsinki Radio.

TUGS: In Winter harbour tug assists ships to and from the quay.

BERTHING: Quay height about 6 ft. above sea level. Shore fenders keep vessel about 2 ft. off quay. Special quays for Ro/Ro traffic.

Quay	*Permitted draft* ft. in.	*Length of quays* (m.)

Free Harbour: One mobile crane, lifting capacity 40 tons. 21 fork lift trucks available.

RADAR: At pilot station; service for ships entering port, contact by ship's radio.
STEVEDORES: Ordered by Agents.
FRESH WATER: Delivered from shore installations during daytime. Rate of delivery about 20 t.p.h.
FUEL: Delivered by rail cars only.
DENSITY: 1005.
WATCHMEN: Available but not compulsory.
HATCHES: Crew allowed to open and close hatches.
CUSTOMS ALLOWANCES: No restrictions in the Free Port, outside about 200 cigarettes and limited amount spirits per man.
CONSULS: Denmark, Iceland, Netherlands, Norway, Spain, Sweden.
REPAIRS: Small repairs possible.
SURVEYORS: Surveyors and cargo inspectors available.
TIME: Local time GMT plus 2 hours. GMT plus 3 hours in Summer.
POLICE/AMBULANCE/FIRE: Police 003; Fire 005; Ambulance 82228.
STORING: Storing possible by barge or truck. Fork lift trucks and riggers available.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Port of Hanko, Bulevardi 15, 10900 Hanko. *Tel:* (911) 83131. *Contact:* Tom Luoma, Port Director, *Tel:* (911) 81217.
Harbour Master, *Tel:* (911) 81201.

HELSINKI: 60.10 N. 24.57 E. (See Plan)

DOCUMENTS: See "Oulu".
PILOTAGE: Compulsory. ETA required 24 hours prior arrival. At present there are 5 different channels available for vessels approaching Helsinki.

1. *Helsinki Lighthouse-Harmaja-Helsinki:*
The main approach to Helsinki, this channel starts from East of the Helsinki Lighthouse, a caisson beacon on the shoals South of Helsinki, at a distance of around 22 km. from the port. It proceeds via the Harmaja pilot station and the Kustaanmiekka Strait between the islands of Suomenlinna and Vallisaari, to the open area of water beyond, known as Kruunuvuorenselka. To this point the channel is navigable by vessels drawing up to 9.6 m. The fairway branching off North of the Harmaja pilot station and leading to the West Harbour has a depth of 8.9 m. Pilots are taken on board from the station at Harmaja.
2. *Helsinki Lighthouse-Melkki-Helsinki:*
This 11 m. channel leads from the Helsinki Lighthouse to the East of the Graskarbadan Light and then between the islands of Pihlajasaari and Melkki to the West Harbour. Pilots are taken on board from the Harmaja pilot station.
3. *Porkkala-Helsinki:* (Southern Finland Winter Fairway).
The Winter fairway into Helsinki begins from roughly 8 km. West of the Porkkala Lighthouse. The channel is 10 m. deep from Sommaro, decreasing to 9 m. from Ronngrund. The fairway joins the 11 m. channel (see above) leading to the West Harbour S.W. of Katajaluoto, and joins the 9.6 m. lead to Helsinki North of Harmaja.
During the Winter months, when the passage from the Helsinki Lighthouse to Harmaja is closed owing to ice conditions, all vessel traffic into Helsinki is directed via the route above. Pilots are taken onboard from the Porkkala pilot station.
4. *Porkkala-Helsinki:*
In addition to the above channel, there is a 7.9 m. fairway leading from Porkkala to Helsinki, which begins from about 1 km. West of the Porkkala Lighthouse and joins S.E. of Pihlajasaari with the 8.9 m. channel leading to the West Harbour. Pilots are taken onboard from the Porkkala pilot station.
5. *Emasalo-Helsinki:*
From the East there is a 9 m. channel leading to Helsinki through the outer islands, which joins with the main approaches to Helsinki North of Harmaja. Pilots are taken onboard from the Emasalo pilot station.

Pilots are obtainable from:

Emasalo Pilot Station	VHF Channels 16 or 13.	Tel. (915) 27710.
Harmaja Pilot Station	VHF Channels 16 or 13.	Tel. (90) 668122.
Porkkala Pilot Station	VHF Channels 16 or 13.	Tel. (90) 2984112.
Port Authority	VHF Channels 16 or 13.	Tel. (90) 17333274.

DIRECTION FINDING: Harmaja Radio Beacon (frequency 298.8 kHz. Signal "HA") transmits:
Non-directional radio signals, with a modulation frequency of 395 kHz. By listening to these signals with a direction finding receiver, equipped with frame aerial, a ship can determine her bearing to the beacon.
Harmaja lighthouse and Helsinki lighthouse fitted with "Racon" for 3 cm. radar (X-area).

APPROACHES: *Directions for arrival in the port:* Vessels using the main approach to the port from Helsinki Lighthouse should keep the Harmaja Lighthouse Beacon in line with the church tower on the island of Suomenlinna. The light from Harmaja is visible at a distance of 37 km. (20 nautical miles), and the approach channel has a bearing of 007°. The islet of Harmaja is left on the Western side of the fairway. In the event that the Master of the vessel is not thoroughly acquainted with the fairway and its markings, he is strongly advised not to proceed without the assistance of a Pilot any closer than 3.7 km. (2 nautical miles) to Harmaja, where the channel veers to a bearing of 010°.
ANCHORAGES: Good anchorage available outside harbour, depth 26 ft. – 32 ft. clay bottom.
MAX. SIZE: Draft 31 ft., length no limit.
HEALTH: See "Oulu".
DEPTH OF CHANNELS:
From Helsinki to East 9 m.
From Helsinki Lighthouse to Helsinki 9.6 m. and 11.0 m.
From sea South via Porkkala 9.0 m.
Variations in water level: There are no tidal variations as such in the port, but rather the differences noted are the result of weather or climatic conditions.

Max.	+1.30 m.
MHW	+0.85 m.
MLW	−0.65 m.
Min.	−0.90 m.

VHF: Harmaja Pilots, Porkkala Pilots and Port Authority call VHF Channel 16 or 13.
TUGS: Several available. Charges based upon time when tug leaves station berth until moment of return to same station.
BERTHING: Port and equipment owned by Municipality of Helsinki. 5 principal parts of port are South Harbour and West Harbour, Sornainen Harbour, and Herttoniemi and Laajasalo Oil Harbours.
Foreign passenger traffic is concentrated on the South Harbour.
West Harbour handles main part of transoceanic traffic; heavy goods and container terminal in West Harbour fitted with 3 container cranes and 1 multi-purpose crane (lifting capacity of each 40 tons), also silos of 2 flour-milling plants (Vaasanmylly Oy and State Granary), into which grain discharged by suction. On silo quay pneumatic grain unloader owned by State Granary travels along 71 m. long bridge alongside ship to be unloaded. Equipment is 30 m. above quay level and range of suction pipe 11 m. from edge of quay. Unloading equipment can handle 100 t.p.h. Mass export articles such as cellulose, paper and wood goods, loaded chiefly in this harbour. In West Harbour is free-zone warehouse, which offers same privileges as free port.
The Sornainen Harbour operates mainly as a North Sea general cargo harbour. The area contains a coal harbour.
Herttoniemi and Laajasalo form the oil harbour, where the leading oil companies have oil storage tanks and their own piers.

Neste Co's pier	58	10.2	

DENSITY: 1004 – 1005.

FRESH WATER: Unlimited amount available by hoses from hydrants at quays.

FUEL: All grades available; any amount at short notice.

CONSULS: All maritime countries are represented in Helsinki.

REPAIRS: All types available.

DRY DOCKS: *Helsinki Shipyard, Hietalahti:*

Dock	*Extreme length* (m.)	*Breadth at entrance* (m.)	*Depth on sill* (m.)
Dry dock 1	142	20	6.6
Dry dock 2	208	34	9.6

Masa Yards also have a shipyard in Helsinki.

GANGWAY/DECK WATCHMEN: Recommended but not necessary.

OPENING/CLOSING HATCHES: Crew/Stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 1 litre wine and 1 litre spirits each man.

IDENTIFICATION CARDS: Required.

REPATRIATION: Available.

AIRPORT: Distance to airport 25 km. Flights every day all over Europe.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

HOLIDAYS: New Year's Day (1st January); Epiphany; Good Friday; Easter Monday; 1st May; Ascension; Whitsun; Midsummer's Eve and Day; All Saints' Day; Independence Day (6th December); Christmas Eve; Christmas Day (25th December); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Police 002; Ambulance 006; Fire 005. General alarm 000.

TELEPHONES: Available.

SERVICES: Compasses are adjusted by competent adjusters approved by the Board of Navigation. For compass adjustment the port has constructed piles or buoys with direction markings. These appliances can be used also for radio direction-finders.

Vessels using the compass-adjustment facilities must have on board a Harbour Pilot, who is entitled to the same compensation as for harbour pilotage.

CLASSIFICATION SURVEYORS: Lloyd's Register of Shipping, Bureau Veritas, Germanischer Lloyd, Det Norske Veritas.

ICEBREAKERS: Icebreaking work within the harbour area is carried out by privately-owned tugs.

During the winter months, the following government ice-breakers are assigned to assist vessels from the open sea to the harbour area and vice versa.

Name	*Power kW*
Urho	16,181

Kontio	15,000
Voima	10,240
Tarmo	8,826
Varma	8,826
Apu	8,826
Hanse	5,516

GENERAL: *Waste Management:* In accordance with the terms of the Convention on the Protection of the Marine Environment of the Baltic Sea Area, the discharge or jettisoning of solid or liquid waste into the sea is, with certain exceptions, prohibited throughout the Baltic Sea Area.

On their arrival at the quay, vessels are provided with numbered special waste sacks (yellow), intended for the reception of all special waste carried by vessels arriving from a foreign port. This category of special waste includes raw meat from mammals or birds or poultry, raw offal, meat packaging materials and wrappings, and bones. Vessels are specifically required to take the filled, sealed sacks only to the yellow special waste storage bins on the quay, which bears the same text and markings as on the sacks.

Normal waste and refuse should be deposited in the transparent refuse sacks which are also delivered to vessels on arrival in the port, and the filled sacks are to be taken to the grey storage bins provided for the purpose on the quayside.

Port Authority duty personnel and shipping agents can provide more detailed directions on the reception of waste in the port.

Oil pollution control: In the event of an oil spill or accident involving the risk of oil pollution, contact should be made immediately with the Helsinki Fire Department, emergency Tel. 000.

AUTHORITY: Port of Helsinki Authority, Olympiaranta 3, 00140 Helsinki. Mailing Address: P.O.Box 193, 00141 Helsinki. *Tel:* 358-0-173331. *Telex:* 124913. *FAX:* 90-17333288. *Contact:* Mr. Eljas Muurinen, Managing Director (*Tel:* 17333201.) Mr. Juha Lainio, Harbour Master (*Tel:* 17333201).

INKOO: 60.01 N. 23.55 E. (See Plan)

PILOTAGE: Pilot station is Porkkala pilot station. Pilotage service 24 hours a day, VHF watch on Channels 16 and 13, 24 hours a day. Notice must be given 2 hours before arrival at boarding place (Lat. 59° 54′ N., Long. 24° 12′ E.). Distance from boarding place to harbour area about 14 miles. Pilot may also be ordered by telephoning Helsinki 2984112.

APPROACHES: Max. draft 13 m.

MAX. SIZE: See "Berthing".

ANCHORAGES: 5 miles S.W. of Sommaroe Island.

VHF: Call sign "Inkoo Harbour", watch maintained 16 hours a day on Channel 16.

TUGS: Tugs are available at any time, notice required is same as Pilot. If the vessel is over 200 m. LOA tug joins at Fageroe Island about 5 miles before harbour area, otherwise tugs join at the turning place 1 mile before harbour area. Tugs use ship's lines.

BERTHING:

Oy Lohja Harbour: Max. draft 7.8 m.

Coal Quay: Length 175 m., 2 cranes, 10 tons and 6 tons by hook and half the capacity by grab.

Paper Quay: Length 140 m.

Imatran Voima Oy Inkoo Power Plant: Max. draft 10 m., West part of quay.

Ingaa Hamn Ab – Inkoon Satama Oy: Max. draft 13 m., East part of quay.

Total length of quay 455 m. Max. draft 13 m. at the East part of the quay (240 m.), and max. draft 10 m. at the West part of the quay (215 m.). 4 cranes, 3 cranes capable of lifting 10 tons hook or 6 tons by grab and 1 crane capable of lifting 20 tons by hook or 12 tons by grab.

FRESH WATER: Available.

DENSITY: 1004.

REPAIRS: Possible.

TELEPHONES: Available.

DEVELOPMENTS: Dredging underway.

FUEL: Available by tank truck.
CONSULS: None.
REPAIRS: Only small repairs.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes. Wine/Spirit: 1 bottle spirit.
AIRPORT: Distance to Vasa Airport 100 km. Served by regular airlines.
TIME: GMT plus 2 hours.
HOLIDAYS: See "Oulu".
POLICE/AMBULANCE/FIRE: Police 002; Ambulance 006; Fire 005.
TELEPHONE: Can be connected. Cost for connection is 60 Fmk.
SHORE LEAVE: Allowed.
GENERAL: Port is open throughout Winter.
AUTHORITY: Kasko Hamnkontor (Harbour Office), 64260 Kaskinen, Finland. *Tel:* 962 – 27201. *Contact:* Jukka Inkio, Harbour Master.

KEMI (Ajos): 65.40 N. 24.31 E. **(See Plan)**

LOCATION: Ajos harbour is a municipal port owned and managed by the city of Kemi. It is located at Ajos, about 10 km. (6 nautical miles) South of Kemi, Lat. 65° 40′ N., Long. 24° 31′ E. The area is shown on Finnish Charts Number 275 and Number 59.
APPROACHES: The distance from Kemi lighthouse to the harbour is about 21 nautical miles (39 km.). The minimum width of the channel is 100 m. (328 ft.), and approved depth up to the oil harbour is 10 m. (32.8 ft.).
The water level varies between +1.5 m. and −0.75 m. (+5 ft. and −2.5 ft.) depending on winds (water level rises during Southerly and falls rapidly during Northerly winds). There are no tides in the area.
During normal winters the harbour is frozen from the beginning of December to the end of May. Over this period the channel from the open sea to the harbour area is kept navigable by state-owned ice-breakers. The Finnish Board of Navigation determines the restrictions and requirements for vessels allowed to enter the harbour during this period. The port has been kept open throughout the year since 1971.
DOCUMENTS: Documents to be handed over after berthing:
2 Crew Lists.
1 Provision List.
1 Special List (Customs).
Tonnage Certificate.
Cargo Documents.
PILOTAGE: Pilot boards from "Kemi I" Lighthouse or Nukkujanmatala Lighthouse. VHF and radio telephone watch maintained.
RESTRICTIONS: Ships can enter and leave Ajos harbour 24 hours a day.
MAX. SIZE: Sea to Fairway at Ajos. Max. draft 10 m. Sea to Fairway at Veitsiluoto. Max. draft 7.1 m. Also see "Berthing".
RADIO: *Entering the Harbour:* Time passing Kiel/Holtenau/Copenhagen is to be given via Harnosand Radio, Mariehamn Radio or Stockholm Radio.
ETA to be given 12 hours before the calculated time of arrival.
Notice is to be given to the pilot station, which is situated at the S.W. end of Ajos Island via VHF Channels 16/13 two hours before ETA a the pilot embarking point, which is between Kemi lighthouse and lighthouse Nukkujanmatala depending on the weather.
The notice is to include the name, call sign and the nationality of the vessel, n.r.t., the draft and length of the vessel, time of arrival (at the Pilot's boarding site) and tugs needed for berthing.
TUGS: Icebreaker tugs of 3,500 h.p. and 1,300 h.p. Ship's lines used.
BERTHING:

Quays:	*Length* (m.)	*Depth* (m.)	*Permitted draft* (m.)
Oil Quay	90	11.4	10
No. 1	420	7.3–8.3	6.7–7.6

SERVICES: Compass adjusting service available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GENERAL: It is prohibited to let or throw any substance or refuse causing pollution or shoaling in the harbour area.
NOTICE: Port Authority Notice to Masters.
Instructions Concerning Waste Disposal:
The Port Authority of Kotka informs you hereby that in the Port of Kotka the rules and regulations concerning the protection of the marine environment of the Baltic Sea Area as stated in the Helsinki Convention have to be followed by all ships.

On the strength of this convention no waste shall be discharged into the water while the ship is in the port area. Breaking of these rules cannot be accepted. The Port Authority will check that the instructions are observed without exception.

While your ship is in the port an amount of sacks for waste disposal will be delivered to the ship. The waste emanating from your ship shall be put into these sacks and before the departure of your ship the sacks shall be delivered *by your crew* to the waste container in the vicinity of the berth of your ship.

In case you want to get rid of oily residues please inform the Harbour Master either through your Agent or directly. For the reception of these wastes the Port Authority does not charge you separately as the cost of this service is included in the general waste disposal fee.

In case your ship is a tanker loading oil products and you wish to dispose of oily water such as tank washing water or ballast water it has to be agreed separately with the Port Authority.

All questions in connection with the waste disposal service will be answered by the Harbour Master (Tel: 11672).
Signed: Port Director.

GENERAL: Timber pier in Port of Kristinestad closed from the end of December to the middle of April owing to ice. Oil port will be kept open according to the general ice situation of Gulf of Bothnia.
AUTHORITY: Kristinestad Harbour Office, 64100 Kristinestad, Finland. *Tel:* 962-11051. *Contact:* Sakari Laipio, Harbour Master.

LOVISA (Valkom): 60.25 N. 26.16 E. **(See Pla**

PILOTAGE: Pilot arrives from pilot station at Orrengrund (Tel. 91 565334, radio telephone). Station equipped with radar. Distance to po 12 miles.
APPROACHES: Depth in fairway (Orrengrund – Valko) – 8.5 m.
TUGS: 1 tug available, 1,250 h.p., between December and April.
BERTHING: *Coal Quay:* Length 141 m., depth 8.5 m.
Middle Quay: Length 280 m., depth 7.30 m.
Connection Quay: Length 115 m., depth 7.30 m.
Roll-on/Roll-off Berth: Length 20 m., depth 7.30 m.
South Pier (East Side): Length 130 m., depth 8.50 m.
Inner Harbour: Length 80 m., depth 4.20 m.
CRANES: 6 mobile cranes, lifting capacity 6 – 36 tons. 2 shore crane lifting capacity 6 tons. 1 shore crane lifting capacity 6 – 28.5 tons.
DENSITY: 1003.
DEVELOPMENTS: Land area from 23 ha. to 76 ha. (1983-90).
AUTHORITY: Lovisa Port, 07910 Valkom, Finland. *FAX:* 915-51505
Contact: Bengt Sandvik, Harbour Master. Tel: 915-515163.

MARIEHAMN: 60.06 N. 19.56 E. **(See Pla**

PORT LIMITS: The Southern boundary of the port is on a line betwee Lat. 60° 03.5′ N., Long. 19° 56.1′ E. and Lat. 60° 04.2′ N Long. 19° 55′ E.
DOCUMENTS:
1 Crew List.
1 Passenger List.
3 Provision Lists.
2 Special Lists (in possession each crew member – cigarette tobacco, spirit, radios, etc.).
2 Bills of Lading.
Registered Tonnage Certificate.
PILOTAGE: Pilot arrives from station at Hamngatan 4, in Westerham harbour, and meets entering vessels about 2 nautical miles S.W. Marhallan lighthouse. 3 hours' notice of ETA is required. Pilot stati and cutter are fitted with VHF radio and keep watch on Channel 1 24 hours a day. Working Channel is 13. Pilot can also be ordered b cable via Mariehamn Radio.

Pilot can also be taken from Nyhamn pilot station 12 miles from t port. Nyhamn has VHF, Radio 2182 kHz and Radar.

At Nyhamn, Sea Pilot may be obtained for the Baltic Sea, Bay Bothnia and Bay of Finland.
ANCHORAGES: Good anchorages North of Grano Island in 10 m. 20 m. water.
MAX. SIZE: Ships of 160 m. length and 7 m. draft can enter the po but require twin screw and bow thruster for safe manoeuvring.
RADIO: Mariehamn Radio, call sign OHM on telegraphy and OFH telephony. Connected to the public telegraph and telephone service.
VHF: Following stations keep watch on VHF Channel 16: Marieha Radio, Mariehamns Pilot, Mariehamns Hamn (Harbour Offic Sjobevakningen Mariehamn. (The Coast Guard at Mariehamn.)
TUGS: 1 tug of 320 h.p. available. The m/s *Gustaf Erikson* belongs the Alands Lifeboat Society. Usually ships' lines are used.
BERTHING: *Quays for Passenger Vessels:*

Berth No.	*Length* (m.)	*Depth* (m.)	*Remarks*
1	100	7.5	
2	150	7.5	
3	190	7.5	Ro/Ro
4	120	7.5	Ro/Ro
5	140	7.5	Ro/Ro

Power Station Pier: Depth 5.0 m.
CRANES: 7 mobile cranes can be rented. Maximum lift, 2 cranes 25 tons and 5 of 16 tons on the shortest radius.
SPECIALISED CARGO-HANDLING FACILITIES: 3 berths for Roll- Roll-off traffic, used by car ferries.
STEVEDORES: Ordered by Agents. ETA in good time to obtain gan
DENSITY: 1005.
TANKERS: Max. LOA 100 m. Depth alongside 5.5 m.
MEDICAL: All services available.
FRESH WATER: Most berths supplied by shore installations ab 15 t.p.h., otherwise by truck.
FUEL: Only diesel oil, no heavy products.
CONSULS: Denmark 11 454, Netherlands 12 070, Iceland 21 8 Norway 12 050, Sweden 11 624, U.S.S.R. 11 524, Germany F 16 270. France 13 931
REPAIRS: Most repairs possible.
DRY DOCKS: Slipway for small vessels, max. about 300 d.w.t.-400 d.w
SURVEYORS: No permanent surveyors at Mariehamn.
GANGWAY/DECK WATCHMEN: Available but not necessary.
OPENING/CLOSING HATCHES: Normally done by crew.
CERTIFICATES: International Tonnage Certificate or National Tonn Certificate.
CUSTOMS ALLOWANCES: 200 cigarettes and limited amount sp for each crew member.
REPATRIATION: Mariehamn is a good place for repatriation, with m connections to Sweden and to the Finnish mainland every day, with ferries and aeroplanes. About 1 million tourists visit Aland Island every y
AIRPORT: About 5 km. from town, daily traffic to Stockholm Abo/Turku.
TIME: GMT plus 2 hours. Summertime GMT plus 3 hours.
HOLIDAYS: See "Oulu".
POLICE/AMBULANCE/FIRE: Police 002 or 15 444; Ambulance Fire 000 or 11 000.
TELEPHONES: Available at berths for passenger ships.

IDENTIFICATION CARDS: Not needed for Scandinavian citizens. Passports for all others.
AUTHORITY: Port of Mariehamn, Harbour Office, Box 5, SF-22101 Mariehamn, Finland. *Tel:* 928-13962/11302. *Contact:* Captain Uno J. Gottberg, Harbour Master. Jan Sundstrom, Port Director.

NAANTALI: 60.28 N. 22.01 E. (See Plan)

DOCUMENTS:
Health Certificate.
Crew List.
Passenger List.
Dangerous Cargo List.
Ship's Register.

PILOTAGE: Pilot compulsory at Uto Pilot Station. When approaching Uto communicate via VHF Channel 16 – ETA, name of vessel, destination, draft. Change of Pilot takes place in Lohm. Harbour Pilots available at the port. Distance Uto-Lohm, 25 miles. Lohm-Naantali, 28 miles, depth 10.0 m. Uto-Houtskar-Naantali, 62 miles, depth 13.0 m.
ANCHORAGES: Good safe anchorage in harbour area. Max. draft for vessels 10 m. Anchorage for vessels with draft 13.0 m. at Airisto.
MAX. SIZE: Maximum permissible length for tankers 210 m., main quay – maximum length for any vessel 250 m.
HEALTH: International Quarantine flag required in case of suspected disease or fever including preliminary report by VHF, otherwise ask Agent.
RADIO: Hanko Radio; Mariehamn Radio; VHF Turku 26; VHF Mariehamn 27; VHF Korpo 23.
VHF: Communication on Channel 16, own working Channel 11.
RADAR: When Radar Service needed, contact Agent.
TUGS: Harbour icebreaker tug *Naantali* 1,200 h.p., equipped with bow steering propeller. Use ship's lines. Additional tugs on application from Turku.
BERTHING: No special requirements. Harbour/Drafts: No tide. Main quay, length 370 m., draft 13 m. Timber quay, length 110 m., draft 8.0 m. 3 car-ferry piers, length 80 m./165 m./95 m., drafts 9 m./6.4 m./6.0 m. Lubricating Oil pier/Car Ferry pier, length 95 m., draft 6.0 m. Sugar quay, length 32 m., draft 4.5 m.
CRANES: 2 cranes owned by electric powerplant of 6 tons each.
BULK CARGO FACILITIES: Grain handled by two pneumatic elevators and belt conveyor, Loading/Discharging 500 t.p.h., maximum reach for outlet/inlet 15 m. and 18.7 m., maximum height above quay level 9.0 m. and 16.0 m. when loading, discharging limits are 11.6 m. and 18.6 m., 200 m. of main quay intended to be for handling of grain, 170 m. for coal, which is handled by 2 cranes of 6 tons each and belt conveyor, discharging rate about 2,000 t.p.h.
SPECIALISED CARGO-HANDLING FACILITIES: Ro/Ro traffic possibility.
STEVEDORES: Available, ordered by Agent.
MEDICAL: Advise by radio prior arrival if medical attendance required aboard.
TANKERS: Oil Harbour, Neste Oy. Discharge lines ashore 10 in., 12 in., 18 in., Diameter of cargo hoses and respective depth of tanker berths:
Berth No. 1, 6 in., 5.7 m.
Berth No. 2, 10 in., 10.0 m.
Berth No. 3, 8 in., 10 in., 12 in., 13.0 m.
DENSITY: 1007.
FRESH WATER: Supplied by shore installations at most berths.
FUEL: All grades available.
FIRE PRECAUTIONS: Usual precautions.

AUTHORITY: Naantalin Satamalaitos, Satamatie 13, 21100 Naantali, Finland. *Tel:* 921-755111. *FAX:* 921-751727. *Contact:* Harbour Manager or Hannu Haatainen, Port Captain.

OULU: 65.00 N. 25.25 E. (See Plan)

PORT LIMITS: The seaward boundary of the port is drawn West of Oulu Roads. The arriving vessel passing the line Hermanni Island – Kyrokari Ice Buoy is inside the boundaries and if necessary to anchor on the roads, is considered to be an "arrived vessel".

Port consists of four separate parts: Toppila, Nuottasaari, Oritkari and Vihreasaari harbours.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Customs Documents.
2 Crew Bond Declarations.
2 Ship's Bond-store Lists.
Derat Certificate.
4 Manifests.
2 Bills of Lading.
Ship's Register, Certificate of tonnage.

PILOTAGE: Vessel requiring Pilot applies from Marjaniemi. Pilot station, Lat. 65° 02′ 4″ N., Long. 24° 34′ E., near West point of Hailuoto Island. Pilots require 12 hours' notice of ETA to Peltinmatala lightbuoy (Pilots) or to alternative position 3 miles North of Kelmi lightbuoy. Pilot boat red coloured displaying usual international pilot signs. Pilot station equipped with MF (2182) and VHF, listening on Channels 16 and 13, radar and RC. Morse signalling by light. No specific requirements on part of Pilots boarding, only safe pilot ladder according to rules. Anchorage near lightbuoy Peltinmatala, when awaiting for Pilot in fine weather; in bad weather advisable to ride against weather and wind. Pilot for Oulu can also be obtained near the "Kemi 1" light-tower. Vessels with a draft more than 8.0 m. can use both fairways, depth 10.0 m. Pilot either from Marjaniemi or "Kemi 1" pilot station, wireless 2182 or VHF Channels 16 and 13.
ANCHORAGES: Safe anchorage on Oulu roads. There are no safe anchorages West of Hailuoto Island.
RESTRICTIONS: Day and night service, no tides. Winter season, contact ice-breaker 24 hours in advance on MF (2182), or VHF Channel 16.
MAX. SIZE: *Marjaniemi Fairway:* 10.0 m.
Kemi Fairway: 10.0 m.
Toppila Harbour: Toppila Quay depth 6.1 m., Hietasaari Quay, depth 6.1 m.
Oritkari Harbour: Main Quay, depth 9.0 m. Stern Door Quay, depth 7.0 m. North Quay, depth 10.0 m.
Nuottasaari Harbour: Main and Chemical Quay, depth 6.4 m.
Vihreasaari Harbour: Oil Quay, length 72 m., depth 10.0 m. Bulk Quay, length 150 m., depth 10.0 m.
Also see "Berthing".
HEALTH: No special rules existing in obtaining pratique. If disease or fever is suspected on board report to ship's Agent; will contact the Health Authority for necessary arrangements.
RADIO: Helsinki Radio (North Quarken). Close to Hailuoto Island call "Helsinki Radio" VHF Channel 27 or Channel 24.
RADAR/VHF: At Marjaniemi Pilot station, radar range 30 miles. Contact with MF (2182) or VHF (Channel 16). All ice-breakers keep watch on frequency 2182 and VHF (Channel 16).
TUGS: Tug optional, but for vessels over 140 m. long use is advisable. Tug ("Tuura", 3,600 h.p.) will meet on Oulu Roads according to agreement; customary to use ship's lines in open water and lines from tug during ice operations.
BERTHING: *Toppila Harbour:* Depth 5.0 – 6.1 m. Toppila Quay length 992 m. Hietasaari Quay length 600 m.
Nuottasaari Harbour: Main Quay, length 320 m. Chemical Quay, length 125 m.
Oritkari Harbour: Main Quay, length 270 m. Stern Door Quay, length 85 m. North Quay, length 170 m. Facility for Ro/Ro service.
Vihreasaari Harbour: Oil Quay, length 72 m. Bulk Quay, length 150 m.
CRANES:

	No.	*Capacity* (tons)	*Reach of arm* (m.)	*Type*
Nuottasaari Harbour	1	5	12	Movable
Toppila	1	5	12	"
Toppila	1	3	12	"
Vihreasaari	1	6	22	"
Vihreasaari	1	8	26	"

CARGO HANDLING FACILITIES: Toppila Harbour is equipped with 2 cranes, Vihreasaari Harbour with 2 cranes and Nuottasaari Harbour with 1 crane to load and discharge bulk cargoes and general cargoes with hook. 10 mobile cranes available from stevedores in all ports.

Ro/Ro berth is adjacent to the Oritkari Harbour.

Oritkari Harbour is built to mechanically handle paper cargoes.

Free zone warehouse in Toppila (700 sq.m.) and free zone area in Oritkari (18,000 sq.m.). Warehouses in Toppila and Oritkari of 31,500 sq.m. There is a large amount of open storage in all harbours.
BRIDGES: No bridges. Electric cable across Toppila fairway, 50 m. above water.
STEVEDORES: 24 hours' notice of ETA to be given to Agent who arranges necessary gangs.
MEDICAL: Medical attention arranged through Agent, 2 – 4 hours' notice required. Good hospital facilities available.
TANKERS: One principal tanker berth in Vihreasaari Oil Harbour, depth 10.0 m. Discharge lines of 12, 14 and 18 in. Pressure 10 kg./sq.cm.
DENSITY: Fresh water.
FRESH WATER: Available at main berths and Oil Harbour from pipeline, cost about 9.00 Fmk/ton. Elsewhere water is delivered by boat, cost about 10.00 Fmk/ton.
FUEL: Small quantities of all grades available, delivered by lorries.
CONSULS: Sweden, Norway, Denmark, Netherlands and United Kingdom.

REPAIRS: Minor deck and engine repairs carried out. Docking only for small tug boats.
SERVICES: Compass adjusters and ship's cleaning.
DRY DOCKS: One small slipway. Max. vessels of 25 m. length and 8 ft. draft.
GANGWAY/DECK WATCHMEN: Watchmen recommended.
OPENING/CLOSING HATCHES: Normally carried out by crew. Stevedores will do it by order of Master and will charge as shipwork.
CERTIFICATES:
Nationality Certificate.
Measuring Certificate.
Load-line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Derat Certificate.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 200 gm. pipe tobacco or equal amount of cigars allowed to each member of crew. Wine and/or Spirit: One bottle wine or spirit allowed for each member of the crew.
CARGO GEAR: Tested cargo gear to international safety regulations. Test certificates to be on board vessel.
REPATRIATION: Good facilities for effecting crew changes and to arrange necessary repatriation.
AIRPORT: Oulu Airport 15 km. from harbour served by regular airlines. Six daily flights to Helsinki (worldwide connections) and six flights from Helsinki to Oulu with continuous connection to Kemi and Rovaniemi.
TIME: Local time GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: General holidays in Finland: New Year's Day (January 1st); Good Friday; Easter Monday; Labour Day (May 1st); Independence Day (December 6th); Christmas Day (December 25th); Boxing Day (December 26th).
POLICE/AMBULANCE/FIRE: Fire 005, Reserve 006; Ambulance 006, Reserve 005; Police 002, Reserve 003.
TELEPHONES: A telephone connection available in all harbours.
SHIP SUPPLY SERVICE: English speaking Pilots keep watch round the clock at Oulu pilot station on VHF Channels 13 and 16. The have pilot boats for ship-to-shore transport in emergency cases. In other cases Oulu Harbour Radio keeps English speaking watch in office hours VHF Channels 13 and 16. At other times the Pilots help to translate messages to tugowners. Oulu Harbour and a few private Owners have tugboats for service around the clock. Helsinki Coastal Radio has watch around the clock on Channels 16 and 27. They can arrange a helicopter in emergency cases for service in whole Bay of Bothnia area.
IDENTIFICATION CARDS: Not needed.
DEVELOPMENTS: The 8.0 m. channel from Marjaniemi Pilot to Oulu Roads is under dredging to 10.0 m.
AUTHORITY: Port of Oulu Authority, Harbour Office of Oulu, P.O.Box 48, 90521 Oulu, Finland. *Tel:* 981-344266. *Cables:* Satama. *Contact:* Veikko Lauriala, Port Captain. Tel: 358-81-344266.

PARGAS: 60.18 N. 22.18 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
2 Customs Provisions Lists.
2 Customs Special Lists.
2 Passenger Lists.
2 Copies each Bill of Lading.
Tonnage Certificate and in special instances other regular documents.
PILOTAGE: On arrival at Pargas, from Gulf of Finland, from Baltic via Uto, from Gulf of Bothnia via Enskar, information of ETA to be given in good time to respective pilot stations. VHF Channel 16 for calling, 13 for further communication. Charge for pilotage in accordance with official Finnish tariff. Harbour Pilot available, but not compulsory, and can be ordered through Sea Pilot.
ANCHORAGES: Well sheltered and safe anchorage, immediately outside harbour area.
MAX. SIZE: Maximum depth both in channel and along quay 6.70 m. As regards length of quay and possibilities for a quick dispatch, it is desirable (though not an absolute stipulation) that discharging vessel be a bulk carrier with the engines aft.
HEALTH: Free Pratique automatic for all vessels, but temporary exceptions in and according to regulations issued by WHO and Authorities may occur.
RADIO: Radio-telephone contact with Agent and consignee/shipper is obtained via Mariehamn, radio-call 2196 kHz, reply 1852 OHF; or via Hango, radio-call 1967 kHz, reply 2649 OFO. Contact with VHF is made via Abo, Channel 26.
TUGS: A small motor tug of 200 h.p. available.
BERTHING: Directions to berth via nearest pilot station, Pargasport. Quay level above water 1 – 2 m., dependent on berth.
Length of quays, 800 m. 2 electric coal-discharging bucket cranes and one electric conveyor belt.
STEVEDORES: Arrangements will be made by Agent, who must be advised of ETA previous day to enable arrange men, trucks, etc.
MEDICAL: Medical Officer available locally. Necessary examination and taking of tests usually done in Abo. Regular appointment with local physician can be arranged by telephone with Agent or doctor.
DENSITY: Brackish water 1002.
FRESH WATER: Delivery from installation on quay.
FUEL: No local supply. In case of need delivery by truck from Abo.
CONSULS: See "Turku".
REPAIRS: Facilities for arranging small repairs on deck and engine in Pargas, but usually carried out by reliable companies in Abo.
DRY DOCKS: No local docking facilities. See "Turku".
GANGWAY/DECK WATCHMEN: Available but not necessary.
OPENING/CLOSING HATCHES: Must always be performed by crew
CERTIFICATES: Normally Tonnage Certificate only but in speci instances other regular ship's documents may also be needed.
CUSTOMS ALLOWANCES: Tobacco, Wine and/or Spirits. I accordance with the decision of Customs Authorities.
AIRPORT: Nearest airport in Abo. Distance about 25 km.
HOLIDAYS: Whit Monday, Midsummer (2 days), All Saints' Da Independence Day (6th December), Christmas (25th Decembe Work in harbour carried out during these days only under very pressin circumstances.
POLICE/AMBULANCE/FIRE: Police 744048; Ambulance 744064; Fir 005; Life-saving Corps 356595.
TELEPHONE: No facilities for placing telephone on board. Telephon available on quayside.
SHORE LEAVE: No restrictions for crew members.
IDENTIFICATION CARDS: Not required.
DELAYS: Vessels dispatched in order of arrival. Usually no delays occu as work has generally been carried out within the time limit stipulate in C/P. Port activity aimed at good dispatch of vessels, and consequent work in 2 shifts has been arranged.
AUTHORITY: Oy Partek Ab., 21600 Pargas, Finland. *Tel:* 921-74211 *Telex:* 62220. *Cables:* Pkpar Finland. *Contact:* Karl-Erk Lindholm Manager of Shipping Department.

PATENIEMI: 65.06 N. 25.23 E. (See Plan

OPERATORS: Veitsiluoto Oy, Pateniemi Sawmill. Port used for expor of timber only, about 120,000 cu.m. per year. 12 km. North of Oulu.
DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Customs Documents.
2 Crew Bond Declarations.
2 Ship's Bond Store Lists.
Derat Certificate.
4 Manifests.
2 Bills of Lading.
Ship's Register, Certificate of Tonnage.
PILOTAGE: Pilot station at Marjaniemi. Marjaniemi – Oulu Road 40 nautical miles, 7.0 m. depth. Oulu Roads – Pateniemi 6.0 m. depth
ANCHORAGES: Safe anchorage on Oulu roads. There are no saf anchorages West of the Hailuoto Island.
RESTRICTIONS: Day and night service, no tides. Winter season contact ice-breaker 24 hours in advance on HF (2182), or VHF Channel 16.

CARGO HANDLING FACILITIES: Three Ro/Ro berths (Berths No. 2, 18 and 19)., 30-ton and 40-ton cranes able to handle containers.
Tahkoluoto Bulk Harbour: Transhipment berth (Berth No. 21) equipped with conveyor, rate 1,200 t.p.h. Unloading capacity at new Deep Water Harbour is 1,000-1,400 t.p.h. by Siwertell travelling ship unloader.
STEVEDORES: The vessels receive workers in the order in which they enter the harbour. ETA advices appreciated in order to facilitate arranging gangs.
MEDICAL: No advance notice for medical attention required. Hospital facilities available.
TANKERS: Berth No. 22. Depth 11.5 m. Max. draft 10.0 m.
DENSITY: 1004.5.
FRESH WATER: Supply by shore installation.
FUEL: All grades available.
CONSULS: Vice-Consuls: Britain, Tel: 939/443122; Denmark, Tel: 939/443122; Netherlands, Tel: 939/443222; Norway, Tel: 939/443222; Sweden, Tel: 939/11141.
REPAIRS: Most repairs possible.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: This work normally carried out by crew.
CERTIFICATES: Load Line Certificate; and during Winter season Ice Dues Certificate which issued by authorities for each season.
AIRPORT: Distance from airport 22 km. Served regularly by Finnair.
TIME: Local time 2 hours ahead of GMT. 3 hours ahead in Summer. (end March – end September.)
GENERAL: Harbour icebreaker "Porin Karhu", 3,500 h.p. available.
AUTHORITY: Port of Pori Authority, 28880 Pori 28, Finland. *Tel:* 39-343700. *FAX:* (35839) 443911. *Contact:* Simo Hermonen, Port Manager.

PORKKALA (Kantvik): 60.05 N. 24.23 E. **(See Plan)**

Documents and all general information, refer to "Helsinki".
PILOTAGE: A Pilot can be obtained from the Pilot Station of Porkkala, Tel. 90–2984 112 or VHF Channels 13 and 16. Distance to port about 14 miles. Pilotage in the harbour area may be carried out only by State-appointed Pilots. Pilotage in the harbour is not obligatory.
MAX. SIZE: Maximum draft 30 ft. 2 in. (9.2 m.).
APPROACHES: There are four official ship routes leading to the port of Porkkala (Kantvik) of Suomen Sokeri Osakeyhtio. The deepest one is 9.2 m. (30 ft.) and the shallowest one is 5.5 m. (18 ft.). The port does not have an ice-breaker of its own and the fairway is kept open by means of the State's ice-breakers.
CLEARANCE: The Customs formalities of the port are attended to by the Custom House of Helsinki.
TUGS: A tug is available.
BERTHING: The Port of Porkkala (Kantvik) is owned by Suomen Sokeri and it is located at Kantvik. Directly in the vicinity of the port there is the factory of Suomen Sokeri Osakeyhtio (sugar mill). The port basin has 3 quays:
The outer quay is 110 m. long, draft 9.2 m. (30 ft. 2 in.).
The inner quay is 50 m. long, draft 5.3 m. (17 ft. 4 in.).
The fairway of the port basin is 120 m. wide, narrowing up at its end to 76.5 m. South quay (at the South bank of Kantvik Bay) is 60 m. long, draft 9.2 m. (30 ft. 2 in.).
DENSITY: 1004.
CRANES: Two cranes, capacity 8 tons. One crane is on the outer quay and one on the South quay.
FRESH WATER: Available at quays.
CONSULS: Nearest in Helsinki.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally by the crew.
AIRPORT: Nearest Helsinki, distance 45 km.
TIME: Local time is GMT plus 2 hrs. GMT plus 3 hours in Summer.
HOLIDAYS: On Saturdays, Sundays and General Holidays in Finland no cargo work is done.
POLICE/AMBULANCE/FIRE: Contact the Gatehouse of Factory.
TELEPHONES: Can be arranged on board. Telephone calls can be made from the Harbour Office during day-time.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not needed.

SHIPMASTER'S REPORT: The sugar discharging berth for Porkkala is at Kantvik, situated in Lat. 60° 05′ N., Long. 24° 23.25′ E., about 21 miles West of Helsinki.

The Pilot for the port is embarked at the position indicated on British Admiralty Chart No. 2331, 115°×3.5 miles from Porkkala lighthouse. From there to the berth is 12 miles and the passage presents no difficulties. It is well lit, and there is ample water. The least depth recorded was 31 ft. and that was alongside the berth. There is a powerful tug for assisting in berthing and unberthing.

The discharging berth, alongside which vessels lie port side to, is modern and well fendered. It is sheltered from most directions. Unfortunately, the berth is short for a 500 ft. vessel, and additional moorings have to be placed from amidships.

There is only 1 crane on the berth and to work either of the end hatches a shift would be necessary. Work was continuous while the vessel discharged her part cargo at Kantvik, and an out-turn rate of 100 t.p.h. was achieved.

Fresh water is readily available from the Jetty, and presumably, fuel could be obtained from Helsinki. Telephones in the dock offices are available for official use.

There is a bus service to and from Helsinki, the journey taking about 40 minutes.

AUTHORITY: Kantvik Port Co. Ltd., 02460 Kantvik, Finland. *Tel:* 358-0-2985166. *FAX:* 358-0-2985163. *Contact:* Harbour Master.

PORVOO (Skoldvik): 60.18 N. 25.33 E. (See Plan)

The harbour is a private oil harbour owned and managed by Neste Oy.

The harbour is located at Skoldvik in the municipal area of Porvoo about 45 km. (28 miles) East of Helsinki, Lat. 60° 18′ N., Long. 25° 33′ E. The area is shown on Finnish Marine Chart Nos. 17 and 902.

The distance from the Kallbadagrund Lighthouse to the harbour is 20.5 nautical miles (38 km.). The minimum width of the harbour channel is 270 m. (885 ft.) and the approved depth is 15.3 m. (50 ft.).

The water level varies between +1.5 m. and −0.75 m. (+5 ft. and −2.5 ft.) depending on the wind. There are no tides in the area.

The Winter period is from January to the end of April. During this time the channel from the open sea to the harbour is kept open by icebreakers owned by the State. The Finnish Board of Navigation determines the requirements for vessels allowed to enter various ports during this period.

DOCUMENTS: The following documents shall be handed over after berthing:
4 Crew Lists.
2 Lists of Visitors.
3 Passenger Lists.
1 Provision List.
1 Special List (Customs).
Ship's Register, Certificate of Tonnage.
Cargo Documents.

PILOTAGE: Pilotage is compulsory. The Pilots are Sea Pilots employed by the State. They also perform the pilotage inside the port area.

The pilot station is at the outer end of Emsalo Island. Vessels entering from the sea are boarded by the Pilot at Kallbadagrund, Lat. 59° 59.1′ N., Long. 25° 36.1′ E.

The Pilot shall be called by using the international code, VHF Channels are 13 and 16.

The Sea Pilots serve as Docking Masters berthing the vessel with the help of 2 tugs when the vessel is over 15,000 tons.

RESTRICTIONS: Vessels can enter and leave the harbour 24 hours a day. However, vessels whose keel clearance is minimal are not allowed to berth in darkness or under unfavourable wind conditions.

In Winter, port kept open by ice-breakers.

MAX. SIZE: Up to about 260,000 d.w.t. Max. draft 15.3 m.

HEALTH: Bill of Health not required. In case suspected disease or fever on board, radio Agent full details before arrival to advise Port Health Officer in advance.

RADIO: Notice of arrival shall be given 12 hours before the calculated time of arrival by the ship's Agent (Helsinki Radio). Two hours before arrival at the boarding site for the Pilot, the same notice shall be sent, including
(1) The name and the nationality of the vessel
(2) Nett registered tonnage
(3) The time and date of the notice
(4) The draft of the vessel
(5) Time of arrival at the boarding site for the Pilot.

VHF: The harbour office is open 24 hours a day. It is provided with the VHF station "Neste". The following Channels are available: 6, 9, 13, 15, 16, 17 and 21. Telex connection is 12467159.

TUGS: The harbour tugs "Esta" and "Esko" owned by Neste are available to handle vessels. Respective capacities are:
"Esta" 1,000 kW (1,330 h.p.) "Esko" 2,352 kW (3,200 h.p.)

Vessels over 80,000 d.w.t. need additional tugs, which the ship's Agent shall order from Helsinki.

The ship's own lines shall be used for towing.

Tug to stand-by whilst vessel discharging if vessel over 130,000 d.w.t.

BERTHING: There are 5 berths available for discharging crude oil and loading of oil products. 2 additional berths are available for handling of petrochemical products.

Loading and discharging is possible around the clock. During the icefree period all berths are surrounded by oil booms.

Berth 1: Face direction 023° 42′
Water depth 12.6 m. (41 ft.)
Maximum vessel size about 50,000 d.w.t.

Berth 2: Face direction 128° 42′
Water depth 17.6 m. (57 ft.)
Maximum vessel length 330 m. (1,082 ft.) without special permission
N.B.
Vessel to be moored starboard side alongside
Shore gangway
Maximum reach of loading arms +21.5 m. (+70 ft.) from sea level

Berth 3: Face direction 128° 42′
Water depth 17.6 m. (57 ft.)
Maximum vessel length 280 m. (918 ft.)
N.B.
Vessel to be moored starboard side alongside
Shore gangway
Maximum reach of loading arms +19.5 m. (+64 ft.) from sea level

Berth 4: Face direction 017° 56′
Water depth 15.3 m. (50 ft.)
Maximum vessel size about 150,000 d.w.t.

Berth 5: Face direction 002° 58′
Water depth 8 m. (26 ft.)
Maximum vessel size about 8,000 d.w.t.

Berth 8: Face direction 004° 42′
Water depth 13.5 m. (44 ft.)
Maximum vessel size about 40,000 d.w.t.

Berth 9: Face direction 333° 18′
Water depth 7.3 m.
Maximum vessel size about 7,000 d.w.t.

The water depths correspond to the normal water level.

All loading arm flanges are ANSI 150 lb. RF. For tugs and carg vessels there are separate berths in the harbour.

DISCHARGING/LOADING: The usual methods are applied i discharging and loading. While discharging and loading the safety rule for Neste tank vessels and oil harbours shall be followed.

Crude oil can be discharged simultaneously at a maximum of thre berths. However, at Berths 2 and 3 only one ship at a time can b discharged because of a common pipe-line.

Berth 8 is used for benzene loading, capacity 500 cu.m./h. an propylene loading, capacity 400 cu.m./h.

During cargo handling adequate crew shall be on board. A gangwa watchman is not required.

Loading and Discharging Facilities:

Berth 1: Discharging rate 4,000 cu.m./h., shore line 24 in. diameter, arm No. 12 and No. 13, 2×12 in. diameter.

Loading rate for heavy fuel oil 3,500 cu.m./h., shore line 20 i diameter, arms No. 12 and No. 13, 2×12 in. diameter.

Loading rate for diesel oil 2,000 cu.m./h., shore line 14 in. diamete arm No. 14, 1×12 in. diameter.

Loading rate for gasoline 2,000 cu.m./h., arm No. 15, 1×12 i diameter.

Loading rate for jet fuel 500 cu.m./h., arm No. 16, 1×8 in. diamete

Deballasting 1,000 cu.m./h., arm No. 12, 1×12 in. diameter.

Bunkering rate 600 cu.m./h., arm No. 11, 1×8 in. diameter.

All flanges ANSI 150 lb., RF.

LPG loading rate 80 cu.m./h., hose 1×4 in. diameter, flanges ANS 300 lb., RF.

Berth 2: Discharging rate 11,000 cu.m./h., main shore line 40 i diameter, arms No. 22, No. 23 and No. 24, 3×16 in. diameter.

Loading rate for heavy fuel oil 5,000 cu.m./h., arm No. 22, 1×16 i diameter.

Deballasting 1,000 cu.m./h., arm No. 22, 1×16 in. diameter.

Bunkering rate 600 cu.m./h., arm No. 21, 1×10 in. diameter.

All flanges ANSI 150 lb., RF.

Berth 3: Discharging rate 6,000 cu.m./h., main shore line 40 in. diamete arms No. 34 and No. 35, 2×12 in. diameter.

Loading rate for heavy fuel oil 5,000 cu.m./h., arms No. 34 and N 35, 2×12 in. diameter.

Loading rate for diesel oil 2,500 cu.m./h., arm No. 33, 1×12 i diameter.

Deballasting 1,000 cu.m./h., arm No. 35, 1×12 in. diameter.

Bunkering rate 600 cu.m./h., arm No. 37, 1×8 in. diameter.

All flanges ANSI 150 lb., RF.

Berth 4: Discharging rate 6,000 cu.m./h., shore line 24 in. diamete arms No. 42 and No. 43, 2×12 in. diameter.

Loading rate for heavy fuel oil 4,000 cu.m./h., shore line 20 in. or 24 i diameter, arms No. 42 and No. 43 or No. 43 and No. 44, 2×12 i diameter.

Loading rate for diesel oil, cat cracked spirit and unleaded gasolin 2,000 cu.m./h., arm No. 44, 1×12 in. diameter.

Loading rate for gasoline 2,000 cu.m./h., arm No. 45, 1×12 i diameter.

Loading rate for straight-run naphtha 1,500 cu.m./h., arm No. 4 1×12 in. diameter.

Loading rate for bitumen 1,000 cu.m./h., arm No. 40 1×8 in. diamete

Deballasting 1,000 cu.m./h., arm No. 42 and No. 44, 2×12 i diameter.

Bunkering rate 600 cu.m./h., arm No. 41, 1×8 in. diameter.

All flanges ANSI 150 lb., RF.

Discharge rate for coal: 11,000 tons per 24 hours.

Berth 5: Discharging rate 1,000 cu.m./h., arm No. 51, 1×8 in. diamete

Loading rate for heavy fuel oil 1,000 cu.m./h., arm No. 51, 1×8 i diameter.

Loading rate for diesel oil 1,000 cu.m./h., arm No. 52, 1×8 i diameter.

Loading rate for gasoline 1,000 cu.m./h., arm No. 53, 1×8 i diameter.

Deballasting 1,000 cu.m./h., arm No. 51, 1×8 in. diameter.

Bunkering rate for heavy fuel oil 600 cu.m./h., arm No. 51, 1×8 i diameter.

Bunkering rate for diesel oil 40 to 1,000 cu.m./h., arm No. 52, 1×8 i diameter and hose 1×2 in. diameter.

All flanges ANSI 150 lb., RF.

LPG loading rate 80 cu.m./h., hose 1×4 in. diameter, flanges AN 300 lb., RF.

Berth 8: Loading rate for benzene 500 cu.m./h., arm No. 81, 1×8 diameter.

Loading rate for phenol 100 cu.m./h., hose 1×6 in. diameter.

Loading rate for propylene 400 cu.m./h., hose 1×8 in. diameter.

Loading rate for oily water 100 cu.m./h., hose 1×4 in. diameter

Loading rate for acetone 300 cu.m./h., arm 1×8 in.

Flanges for propylene loading ANSI 300 lb., RF.

All other flanges ANSI 150 lb., RF.

Berth 9:

Discharging rates for:

Styrenemonomer	500 cu.m./h.
Ortoksylene	500 cu.m./h.
Hexanol	500 cu.m./h.
Glykol	60 cu.m./h.
Oktanol	500 cu.m./h.
VCM	45-200 cu.m./h.
Isobutene	270 cu.m./h.
Ethylene	270 cu.m./h.
Vinylasetate	200 cu.m./h.
Alfol-610	500 cu.m./h.
Butadiene (loading)	270 cu.m./h.

BALLAST: There are facilities for discharging ballast at oil berths. However, discharging can be effected simultaneously only from 2 berths.

The capacity of the ballast handling system of the refinery is 30,000 cu.m. and the maximum discharging rate at each berth is 1,000 cu.m./h. Ballast over 5,000 cu.m. must be reported 48 hours prior to arrival.

The harbour office collects a charge to cover treatment costs for receiving ballast.

Berth No. 8: Flushing water for the tanks can be discharged provided that the pollutants can be handled in the Neste waste water treatment system. In that case the capacity is 100 cu.m./h.

MEDICAL: In emergency a doctor can be called on board. To call ambulance, dial 69-2222. The nearest hospitals are in Porvoo and in Helsinki. Ship's Agent helps in other medical problems, such as providing medicines.

DENSITY: 1006.

FRESH WATER: Drinking water can be supplied from:

Berths 1, 4 and 5	25 cu.m./h.
Berths 2 and 3	50 cu.m./h.(2 connections)
Berths 8 and 9	20 cu.m./h.

FUEL: Bunkering facilities are installed at oil berths. Two grades are available, marine fuel oil and marine diesel oil.

The bunkering capacities:

Marine fuel oil	600 cu.m./h.
Marine diesel oil	up to 1,000 cu.m./h.

The diesel oil can be delivered through product lines. Bunkers must be ordered with 72 hours' notice addressed to Neste Marine Product Sales, Telex: Hki 12-4641.

Bunkering at Berths No. 8 and 9 is by truck only.

REPAIRS: Only minor repairs can be effected following the safety rules and with the permission of the harbour office.

GANGWAY/DECK WATCHMAN: Not required.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine or spirits for each man.

REPATRIATION: Disembarking is possible. A foreigner needs a passport. Distance to Porvoo is 20 km. (12.5 miles) and to Helsinki 45 km. (28 miles).

AIRPORT: There are daily flights from Helsinki – Vantaa Airport with good connections all over the world. Distance to the airport is about 50 km. (30 miles).

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

TELEPHONE NUMBERS: After berthing a telephone connected to the local automatic exchange will be placed on board all vessels, the respective dial numbers being:

Berth 1	23333
Berth 2	23334
Berth 3	23335
Berth 4	23336
Berth 5	23337
Berth 8	23341
Berth 9	(90) 224304

Important Numbers:

Harbour Office	23339 693115 and 693117
Customs	23293
"Esta"	23423 or 693134
"Esko"	23423 or 693134
Fire Alarm/ Ambulance	69-2222

Bus Connections, Taxi:

Bus connection daily to Porvoo from 0700 to 2300 hrs.

Taxi 24 hours

	Tel.
Neste Oy Taxi Station	23245
Pekema Oy Taxi Station	23390
K-O Johansson	22252

GENERAL: *Inspections:*

To avoid oil accidents, an inspection based on the checking list is carried out before loading/discharging to find out the preparedness of the vessel to act in an emergency.

Vessels loading/discharging oil products are surrounded by oil booms.

Inspections are carried out and loading/discharging is supervised by the Loading Master, whose instructions must be followed. If he is not on board, he can be contacted by telephone, No. 23339 or 693115 or 693117.

REGULATIONS: In addition to the existing Finnish laws, statutes and other regulations the Port Regulations of Neste Harbours must be followed.

Some excerpts:

Entering the Harbour: Vessels carrying explosives or flammable liquids or gases shall observe what has been separately laid down concerning such cargo. The vessel shall show the prescribed caution sign in the harbour area.

Traffic in the Port Area: In the port area the speed of the vessel shall be according to the circumstances, so that no harm or danger shall be caused to anyone. Oil booms, underwater jobsites etc. shall be passed with special care. The maximum speed allowed in the port area is 6 knots, unless otherwise stated by the Harbour Office.

Berthing of the Vessel: Without urgent need, anchorage is prohibited in the marked fairway, in the vicinity of the submarine pipe-lines or cables or in any place where the vessel may disturb the traffic.

The vessel shall be moored alongside the berth appointed by the Harbour Authorities and it shall not be removed without permission.

While berthing or unberthing or whilst moored at the berths the relevant safety precautions shall be taken to avoid any damage to the berths.

All ships' scuppers must be plugged or closed by mechanical means so that no water, steam or dirt comes into contact with the berth or its immediate vicinity.

A sufficient crew shall be maintained on board to ensure that the ship can be removed, if necessary.

Prevention of Shallowing and Contamination of the Harbour: In the port area it is prohibited to discharge oil or oil-emulsified water. In the Baltic Sea the existing restrictions must be observed.

The jettisoning of garbage and refuse is prohibited in the port area. The blowing of tubes and boilers of the ship while at the berth is prohibited.

AUTHORITY: Neste Oy, Porvoo Works, Harbour Office, 06850 Kulloo, Finland. *Tel:* 693106. *Telex:* 12464159. *Contact:* Harbour Master.

RAAHE (Rautaruukki Oy): 64.41 N. 24.29 E. (See Plan)

PORT LIMITS: Vessel is considered to be an "arrived vessel" subject to Charter Party Terms, when passing breakwaters if not ordered to anchor near Raahe Lighthouse by Port Authority.

DOCUMENTS:

- Crew Lists.
- Passenger List.
- Ship's Register.
- Custom List.
- Provisions List.

PILOTAGE: Compulsory. To avoid delay in obtaining a Pilot the Owners, Master or Agent of the ship bound for Raahe must report vessel's ETA 6 hours in advance of ETA. ETAs must be confirmed or corrected not less than 2 hours prior to ETA by VHF contact with pilot station on Channel 16. Departing vessels must also give 2 hours' notice.

Pilots board and disembark by pilot cutter (red) near Raahe Lighthouse (Lat. 64° 39′ N., Long. 24° 13′ 5″ E.). Day and night service. Distance from lighthouse to port is 6 miles.

ANCHORAGES: Vessels can anchor outside Raahe Lighthouse, depth 15 m. – 20 m. No anchorages inside breakwaters.

RESTRICTIONS: No restrictions night entry.

MAX. SIZE: Max. sailing draft at MLW from Port of Rautaruuki Oy is 7.8 m.

RADIO: Helsinki Radio, 2182 kHz, call sign OHG, Mariehamn Radio, 2182 kHz, call sign OFH; Vaasa Radio 2182 kHz and VHF Channels 16, 24 and 27, call sign OFW.

RADAR/VHF: No port radar services. Pilot station. Radio, 2182 kHz, VHF Channel 16. Rautaruukki Oy Harbour Office, VHF Channel 16 and 9 (0600 hrs. – 2200 hrs.) and tugs on VHF Channel 16.

TUGS: 2 tugs, 600 h.p. and 350 h.p. Tug assistance not compulsory but recommended. Ship's lines used.

BERTHING:

Pier	*Berth* No.	*Length* (m.)	*Depth at MLW* (m.)
Import Pier	1,2,3	370	9.05 (280 m.) 7.40 (90 m.)
Export Pier	4,5	270	9.05 (180 m.) 7.40 (90 m.)
Oil Pier	6,7	200	9.05
Lapaluoto	8	140	6.70 (outer berth) 5.40 (inner berth)
Ore Harbour	9		6.70

STEVEDORES: Rautaruukki Oy, in Steelworks Harbour; August Lindberg Oy at Lapaluoto.

SPECIALISED CARGO – HANDLING FACILITIES: Lapaluoto Harbour, no shore cranes, Ore Harbour (Helmi), only conveyor. Rautaruukki Oy Harbour, import quay equipped with 3×12.5 ton shore cranes and conveyor; export quay equipped with 1×12.5 ton and 1×40 ton shore crane, straddle carriers, forklifts, payloaders, lorries and equipment for handling steel, bulk and general goods.

LIFEBOAT STATION: Lifeboat cutter "Niilo Saarinen", 360 h.p., 10 knots. Radio 2182 kHz, VHF Channel 16, Radar, fire and suction pump 4,000 litres/minute. Alarm through Helsinki Coastal Radio Station on 500 kHz, 2182 kHz and VHF Channels 16, 24 and 27. Raahe Pilot Station, Kalajoki Coast Guard Station and Rautaruukki Harbour office on VHF Channel 16.

DENSITY: Average density 1003.

FRESH WATER: Available at all berths in Rautaruukki's harbour.

FUEL: Small quantities available, one day's notice required.

FIRE PRECAUTIONS: No special precautions in Lapaluoto Harbour.

CONSULS:

Denmark	31146 – 37269
Norway	31146 – 37269
Sweden	37300 – 37007

REPAIRS: Mechanical workshops available. Slip for small ships.

DRY DOCKS: None.

SURVEYORS: Lloyd's and Norske Veritas.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally by the crew.

CUSTOMS ALLOWANCES: About 200 cigarettes and limited amount spirits per man.

REPATRIATION: Crew changes and repatriation can be carried out without difficulties.
AIRPORT: Oulu Airport, about 70 km. from Raahe.
TIME: Local time is GMT plus 2 hours. GMT plus 3 hours in Summer, (early April – late September).
HOLIDAYS: New Year's Day; Twelfth Night; Good Friday; Easter Monday; Labour Day (1st May) holiday when no work takes place; Ascension Day; Whitsun Monday; Midsummer Day; All Saints' Day; Independence Day (6th December); Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Police 37911; Ambulance; Fire and First Aid 005.
TELEPHONES: Telephones may be placed on board at a charge.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
DEVELOPMENTS: The new Lapaluoto Quay (length 100 m.) ready for use mid-1990.

The old Lapaluoto Pier No. 8 is to be shortened and will be used by tugs, lifeboat and other small craft.

GENERAL: *Shipping Season:* Normal shipping season for non-ice strengthened vessels is May – December. During the rest of the year icebreaker assistance is normally necessary and given only to ice strengthened vessels.

Harbour basin stays free of ice throughout the year because of factory's warm cooling water.

The installations of the harbour are operated throughout the year.

Services: Lub. oil, drinking water, boiler water, provisions, stores, launches, facilities to receive garbage and oily water and minor repairs.

Consult Rautaruukki Oy Harbour Office for further information.

Litter: Littering is forbidden. In such cases, harbour authorities will activate the cleaning process and charge the ship for expenditure. All garbage must be sent ashore.

Spirits: Selling of alcohol on board a cargo vessel is forbidden by the law. Penalties in such cases are high.

Drunken workers will be relieved of their duties immediately.

Cameras: The steelworks area is private property. Photographing is forbidden in the whole area. Exceptions may only be made by the owner.

Safety: All necessary precautions must be taken for the safety of the workers.

A protective net must be placed under the gangway stretching about 2.0 m. over its lower part in order to prevent any falls.

Safety inspection is undertaken on ship's arrival by the harbour authorities.

Visitors: Visitors will be allowed into the harbour area if they have a pass card signed by the ship's Master and the security service of the factory.

AUTHORITY: Rautaruukki Oy, Raahe Steel Works, Harbour Office, Box 93, 92101 Raahe, Finland. *Tel:* 358-82-302304. *Telex:* 32132 Steel SF. *FAX:* 358-82-302239. *Cables:* Rautaruukki, Raahe. *Contact:* Captain R. Rahja, Port Captain. Tel: 982-302304.

RAUMA: 61.08 N. 21.30 E. (See Plan)

PORT LIMITS: Southern entrance port limit when passing Tankkarit, northern entrance port limit when passing Riskonpoella.
DOCUMENTS: 2 Crew Lists and 1 Passenger List. Ship's Register, Customs Documents, Ship's Papers, etc. (Ship's Agent will give the necessary advice).
PILOTAGE: Pilot station at Kylmapihlaja-island, Lat. 61° 08′ 7″ N., Long. 21° 18′ 4″ E. Pilot boards vessels East of Rauman Majakka light. International Pilot signals, VHF Channels 16 and 13. Fairways: Valkeakari 6.5 m.; deep passage 9.0 m.
ANCHORAGES: Ample area for anchorage in Archipelago.
RESTRICTIONS: Entrance: North Channel 6.5 m., South Channel 9.0 m., max. draft 9.0 m. Harbour open all year round.
MAX. SIZE: Draft limit only.
HEALTH: In the event of any suspect contagious disease ask for orders by wireless. Port Regulations do not allow such a ship to come alongside or closer than 350 yards. Pilot must not leave ship before allowed by the Doctor. Pilot does not board an infected ship but ship piloted to safe anchorage by pilot boat.
RADIO: Helsinki Radio, Hanko Radio, Mariehamn Radio and nearest station Vaasa Radio.
VHF: Vaasa VHF, intermittent watch on Channels 16, 26 and 28. Channel 16 used for calling Pilot, tug etc. Channels 13 and 12 for further operations.
RADAR: When required pilot station radar used for advising Pilot onboard.
TUGS: 3 ice-breaker tugs available (up to 3,500 b.h.p.) 24 hours per day. 2 hours' notice recommended.
BERTHING:

Quay		*Length* (m.)	*Depth Alongside* (m.)	*Remarks*
Petajas		314	10.9 – 11.1	Bulk Cargo
Hakuni		250	6.7 – 7.3	General Cargo
Central		410	6.6 – 7.3	General Cargo
Laitsaari		280	9.15	General Cargo
Suoja		110	5.7	General Cargo
Chemical I		100	5.5	Liquid Cargo
Chemical II		110	7.25	Liquid Cargo
Oil		125	9.15	Oil Carriers
Ro-Ro	No.1	—	6.6 – 6.8	—
	No.2	250	6.7 – 7.3	—
	No.3	120	9.0	—
	No.4	110	9.0	—
	No.5	110	9.0	—

CRANES: 2×6 tons; 1×5 tons; 2×3 tons. 15 mobile cranes 5 – 42 tons available. 1 jib crane of 40 tonnes for containers and 30 tonnes for bulk.
STEVEDORES: 24 hours' notice to Agent recommended.
BULK CARGO FACILITIES: Part of Central Quay for bulk carrie shore cranes, max. draft 7.0 m.

Petajas Quay for bulk carriers, max. draft 9.0 m. (depth alongsi 10.9 – 11.1 m.).

Facilities for grain cargo (storage capacity 150,000 tons).

SPECIALISED CARGO-HANDLING FACILITIES: Containers can b handled by harbour cranes and mobile cranes.

Good berths for Roll-on/Roll-off traffic.

Different kinds of liquid chemicals can be handled in special berths

MEDICAL: Advance notice recommended if possible. Hospital availab (231 beds).
TANKERS: See "Berthing".
Storage:

Oy Teboil Ab. 200,000 cu.m.
Rauma-Repola Oy. 280,000 cu.m.

Both storage facilities are underground.

Ballast: Facilities available for dirty ballast.
DENSITY: 1004 – 1003.
FRESH WATER: Fresh water available on any quay. Charge depending on amount taken. An extra fee is charged if tug is used.
FUEL: Fuel brought by tank-trucks.
CONSULS: Denmark, Norway and Sweden.
REPAIRS: All types available.
DRY DOCKS: Rauma-Repola Oy: Dry dock 159 m.×21.7 m.×7.3 m All sorts of repairs. Hollming Oy: Slipway for ships up to 600 d.w.t.
Cranes: Movable electric crane up to 80 tons.
SURVEYORS: Oy Saletra Ltd. (independent marine surveys) Tel: 358 38-221440. Fax: 358-38-211939.

SGS Inspection Services Oy. (chemical surveys). Tel: 358-38-24117 Fax: 358-38-222332.

GANGWAY/DECK WATCHMEN: Available if wanted. Watchme supplied by private company.
OPENING/CLOSING HATCHES: Performed by ship's crew or b Stevedores at request of ship.
CUSTOMS ALLOWANCES: Tobacco: 6 day's ration (about 20 cigarettes or 200 gm. tobacco). Wine and/or Spirits: 1 opened bottle o wine or liquor, subject to Customs Regulations.
CARGO GEAR: At Central Quay and Petajas Quay shore gea available. Other quays mobile gear or ship's gear.
REPATRIATION: Repatriation and signing on or off.
AIRPORT: Pori Airport 50 km. away. Regular connections.
TIME: Local time is 2 hours ahead of Greenwich (Long. 30° E.). GM plus 3 hours in Summer.
HOLIDAYS: See "Turku".
POLICE/AMBULANCE/FIRE: Police, 002 and 003; Ambulance, 00 Fire alarm, 005. Public emergency, 000.
TELEPHONES: Oil quay, Laitsaari Quay and Iso-Hakuni Quay.
SERVICES: Compass adjusting facilities and compass adjusters.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Normally no identification card needed b Passport or Seaman's Book preferable.
DELAYS: No delays in berthing, loading and discharging weathe permitting.
DEVELOPMENTS: New warehouses and storage fields unde construction.

Bulk berth and Ro/Ro No. 5 Berth completed. Ro-Ro Berth No. under construction, to be completed December 1991.

AUTHORITY: Port of Rauma Authority, 26100 Rauma, Finland. *Tel:* 35 38 3411. *FAX:* 358-38-226369. *Cables:* Rauma Harbour Maste *Contact:* Seppo Koskinen, Harbour Master.

SAIMAA CANAL AND PORTS IN LAKE AREA O SAIMAA (See Pla

APPROACH CHANNELS: The canal can be reached from th international waters of the Gulf of Finland through an approach chann South of Someri. The channel passes the Island of Vihrevoi a continues, at the Island of Malyj Vysotski, as the Vysotski-Viip Channel, from which the approach channel departs at a distance 10 km. from Malyj Vysotski. The length of the approach channel fro the point of departure to the Brusnitchnoe Lock is 14 km. The distan from the international water area to the Island of Vihrevoi is 94.5 k and the length of the section Vihrevoi-Malyj Vysotski 12 km. The to length of the channel from the territorial waters of the Soviet Union the Brusnitchnoe Lock is thus 131 km.

From the territorial waters of Finland the canal may be reach through the so-called coastal channel starting from the Finnish bord at the island of Santio and joining the above sea channel at the Isla of Vihrevoi. The length of the channel from the border to Vihrevo 49 km. and the overall length to the Brusnitchnoe Lock is 85.5 km. T channel and its refuge harbours have been marked on the Soviet s charts Nos. 1131 and 1132 and on Finnish charts Nos. 11 and 12. T coastal channel may also be used by vessels of other nationalities.

Canal: The length of the canal on the Finnish side of the border 23.3 km. and that of the part on the Soviet side 19.6 km. The ove length of the Saimaa Canal is thus 42.9 km. The average differenc the height between Lake Saimaa and the Gulf of Finland is 75.6 m. T canal has 8 locks, the heights of fall of which range between 5.54 and 12.69 m. Earth transports will use the 7 moving bascule brid and the 6 stationary bridges across the canal.

NAVIGATION SEASON: The natural open water season of the Saimaa Canal lasts on average 211 days. Since most vessels navigating in the Canal have been strengthened and inspected for navigation in ice, a season of navigation of nine months has lately been reached, the season beginning in early April and ending in January. The goal is to prolong little by little the season to ten months long.

The opening and closing of the season of navigation on the Canal is decided each year by the Finnish and Soviet Saimaa Canal Delegates. The opening will be announced not later than 1 day before the opening day and the closing not later than 7 days before the closing day.

During the season of navigation the Saimaa Canal and the other deep channels are kept open 24 hours a day.

PILOTAGE: *Use of Pilot is compulsory in the Soviet territory:* Pilotage in the Soviet water area is carried out by the Soviet Pilot Service. Pilotage is needed when using the outer channel between Vihrevoi – Brusnitchnoe and when using the coastal channel between the border – Brusnitchnoe. All vessels must use Pilot on these channel sections.

Pilotage on the Saimaa Canal: Pilotage on the section Brusnitchnoe – the lock of Malkia is carried out by canal pilots subordinated to the Saimaa Canal Office. All vessels, excluding small Finnish vessels less than 25 m. in length, shall use a Pilot when proceeding through the Canal. The Canal Office may grant upon application to a Master of a vessel the right to navigate a certain vessel on the Canal without a Pilot provided that the Master of the vessel has passed an examination required for the purpose.

Pilot must be ordered 12 hours in advance of point of receipt of Pilot: In navigation from the Gulf of Finland the Pilot must be ordered from the Viipuri Section of Inflot 12 hours before the arrival at the point where the Pilot is taken on board. The order must be checked 4 hours before the start of the pilotage. When using the coastal channel it is recommended, however, that the checking is done 6 hours before the start of the pilotage. To avoid excessive work by the Pilot Service and to eliminate delays special attention is to be paid to the accuracy of the time the pilotage is to be started, particularly in the last notifications.

In navigation from the Lake Saimaa the Pilot must be ordered from the Canal Office 12 hours before entrance into the Canal. The order must be checked two hours before the pilotage is to be started.

In navigation from the Gulf of Finland a Canal Pilot need not be ordered separately. Similarly, a Soviet Pilot for the approach channel need not be ordered separately when the vessel proceeds from Lake Saimaa.

Pilotage in the water system of Saimaa: Pilotage in the water system of Saimaa is carried out by Pilots of the National Board of Navigation in Finland. The order for Pilots shall be made 6 hours before the start of the pilotage to the pilot stations of Saimaa of the National Board of Navigation in Finland.

MAX. SIZE: The canal can be used by vessels with dimensions not exceeding the following:

Length	82.0 m.
beam	11.8 m.
draft	4.35 m.
height of mast	24.5 m.

The draft of a vessel in tow, however, shall not exceed 4.5 m. For vessels larger than those mentioned above, a permit for navigation on the canal may be granted upon application to the Canal Office of the Saimaa Canal.

The permit may contain regulations concerning the structure or equipment of the vessel or special provisions pertaining to navigation of the vessel on the canal such as good manoeuvrability, liability to wait or speed restrictions.

The Canal Office of the Saimaa Canal may also grant a vessel or equipment with slightly larger dimensions, carrying exceptional cargo, a Trip Let Pass for one passage through the canal.

The Rules and Regulations for Traffic on the Saimaa Canal also contain more detailed directions – among others on the permissible dimensions of vessels in tow and timber rafts using the open canal sections.

NEW VESSELS: When designing new vessels, to be used also in traffic through the Saimaa Canal, the designers are advised to consult the main dimensions and the structure of the vessels with the canal authorities. The conditions of navigation in the canal depend, first of all, on manoeuvrability, though certain other factors are also important.

MAXIMUM PERMISSIBLE SPEED AND TIME OF PASSAGE: The highest permissible speed on the actual channel of the Saimaa Canal is 9 km./hr. for vessels with a draft greater than 3.9 m. For vessels navigating on lesser drafts the speed is graduated within the limits of 9–15 km./hr. depending on the draft. In the lake parts of the Canal the highest permissible speed varies between 15–18 km./hr. depending on the size of the vessel. Detailed regulations available from the Canal Office. The time of passage through the part of the Canal provided with locks (mouth of the Canal on Lake Saimaa–Lock of Brusnitchnoe) is 5–8 hours depending on waiting time at locks caused by heavy traffic volumes, and on size of vessels.

SIGNS AND SIGNAL LIGHTS: The sign system of the approach channel of the Saimaa Canal, the canal and the channels on Lake Saimaa is adequate to ensure safe navigation throughout the day, also at night and in poor visibility.

The approach channel is provided with beacons, light buoys and signs in accordance with the Lateral System. The signs have been erected by Soviet authorities. The illumination and the signalisation systems of the Saimaa Canal are based on the same principles with beacons and signs, but in the signal system of the canal, sign lanterns, signboards, line markers, water traffic signs and radar reflectors have been used. The colour of sign lanterns is orange on the West bank and green on the East bank of the canal. In marking of the lake channels of Saimaa according to the Cardinal and Lateral System, leading and warning lights, light buoys, range beacons, landmarks and signs have been used. Information of the marking of the water system of Saimaa has been issued as a booklet by the National Board of Navigation in Finland: "Sisavesistojen loistot I 1983" – "Beacons of Inland Water Areas I 1983".

RADIO: There are two radiotelephone networks for marine use in the sphere of influence of the Saimaa Canal. On the frequency of 160 MHz reserved for actual marine radio communications there are also the Pilot radiotelephone and the public radiotelephone networks.

The Pilot radiotelephone network covers all stationary radiotelephone equipment at all locks, on the Kansola Bascule Bridge, at pilot stations and in the traffic office in the administrative building at Mustola as well as portable radiotelephone apparatus used by canal Pilots. The radiotelephone equipment of the canal Pilots operate on Channel 11 of the international marine radio. The telephone of the Brusnitchnoe Lock and the Lock of Malkia and the radio telephone in the Administrative Centre of the canal are also provided with a general calling and safety Channel 16.

When approaching from the sea the vessel makes a radio contact with the Brusnitchnoe Lock by using Channel 11. After this all radio communications required by navigation on the canal also use Channel 11. On Lake Saimaa, radio communications move over to Channel 13 on which the traffic office of the Saimaa Canal and the pilot station of Lauritsala are also able to operate.

The general radiotelephone network on Lake Saimaa (the so-called Saimaa Radio) uses Channels 23–28 of the international marine radio. The network covers the entire region of the water system of Saimaa extending from Lappeenranta to Iisalmi and Lake Pielinen. Channel 24 is the calling channel of the Saimaa Radio.

Two marine radio stations for general traffic have been built at Nuijamaa and Virolahti especially for navigation on the Saimaa Canal. Both radio stations are on duty and they are remote-controlled from the Coast Station of Kotka. The stations have the calling and safety Channel 16 and a calling Channel 24 for public traffic. The Nuijamaa Station operates on Channel 28 and the Virolahti Station on Channel 23. The range of the Nuijamaa Station extends from South of Viipuri to Southern Saimaa and the range of the Virolahti Station covers the entire Bay of Viipuri. The stations can be called either on Channel 16 or on the operating Channel. The Kotka Radio calls vessels either on Channel 16 or 24.

The principal purpose of both the Saimaa and the Kotka Radios is to ensure the communications of the safety service of navigation. These stations may also be used to transmit calls to the public telephone network – also to foreign countries – or vice versa, to receive calls from the public telephone network.

BERTHING:

THE HARBOURS OF LAKE SAIMAA:

Mustola Harbour:

Situated in the Saimaa Canal.
Authority: The City of Lappeenranta, Harbour Office,
Address: Kipparinkatu 7, 53100 Lappeenranta, Finland.
Tel: Nat. (953) 518841, Int. + 358 53 518841.
Room for six ships, draft 4.35 m. Railway connection.
Terminal store of 3,200 sq.m., first class storage yard of 10,000 sq.m., second class storage yard of 30,000 sq.m..
Electricity, water, telephone, etc., services available.
Harbour Master, Tel: 518841.

Kaukas Quay:

Owner: Oy Kymme Ab, Kaukas Mills.
Address: 53200 Lappeenranta, Finland.
Tel: Nat. (953) 5141, Int + 358 53 5141.
Telex: 58211.
Room for two ships, draft 4.35 m.
Pilotage distance from the canal entrance 1.5 nautical miles.

Rapasaari Quay:

Authority: The City of Lappeenranta, Harbour Office.
Address: Kipparinkatu 7, 53100 Lappeenranta, Finland.
Tel: Nat. (953) + 518841, Int. + 358 53 518841.
Room for one ship, draft 4.35 m.
First class storage yard of 3,000 sq.m., second class storage yard of 3,000 sq.m. Railway connection.
Pilotage distance from the canal entrance 6 nautical miles.
Harbour Master, Tel: 518841.

Harbour of Joutseno:

Owner: Honkalahden Teollisuuslaituri Oy.
Address: 54100 Joutseno, Finland.
Tel: Nat. (953) 50560, Int. + 358 53 50560.
Room for one ship, draft 4.35 m.
First class storage area 3,000 sq.m.
Pilotage distance from the canal entrance 13 nautical miles.

Kaukopaa Quay:

Situated in the City of Imatra.
Owner: Enso-Gutzeit Oy.
Address: 55800 Imatra, Finland.
Tel: Nat. (954) 31866, Int. + 358 54 31866.
Telex: 5710.
Room for one ship, draft 4.35 m.
Pilotage distance from the canal entrance 25 nautical miles.

Harbour of Vuoksi:

Situated in the City of Imatra.
Owner: Enso-Gutzeit Oy.
Authority: Oy Saimaa Terminals Ab.
Address: Raatimiehenkatu 18, 53100 Lappeenranta, Finland.
Tel: Nat. (953) 50560, Int. + 358 53 50560
Telex: 58107 sterm sf.
Telefax: 50710
Room for three ships, draft 4.35 m.
Terminal store of 3,673 sq. m.
First class storage yard of 30,869 sq. m.
Railway connection.
Electricity, water, telephone, etc., services available.
Pilotage distance from the canal entrance 25 nautical miles.

Harbour of Ristiina:
Authority: The Community of Ristiina.
Address: 55800 Ristiina, Finland.
Tel: Nat. (955) 41310, Int. + 358 55 41310.
Room for one ship, draft 4.35 m.
First class storage yard of 5,000 sq.m.
Pilotage distance from the canal entrance 49 nautical miles.

Harbour of Savonlinna:
Authority: The City of Savonlinna, Technical Office.
Address: Olavinkatu 40, 57130 Savonlinna, Finland.
Tel: Nat. (957) 12771, Int. + 358 57 12771.
Room for one ship, draft 4.35 m.
First class storage yard of 6,000 sq.m., second class storage yard of 5,000 sq.m. Railway connection.
Electricity, water, telephone, etc., services available.
Pilotage distance from the canal entrance 84 nautical miles.
Harbour Master, Tel: 12771.

Harbour of Joensuu:
Authority: The City of Joensuu, Harbour Office.
Address: Ukonniemi, 80220 Joensuu, Finland.
Tel: Nat. (973) 201335, Int. + 358 73 201335.
Room for three ships, draft 4.35 m.
Sawn goods shed of 1,200 sq.m., first class storage yard of 6,000 sq.m., second class storage yard of 60,000 sq.m. Railway connection.
Electricity, water, telephone, etc., services available.
Pilotage distance from the canal entrance 188 nautical miles.
Harbour Master, Tel: 201335.

Harbour of Puhos:
Situated in the Community of Kitee.
Owner: Puhoksen Satama Oy.
Address: 82430 Puhos, Finland.
Tel: Nat. (973) 421151, Int. + 358 73 421151.
Telex: 46160.
Room for one ship, draft 4.35 m.
First class storage yard of 5,000 sq.m.
Pilotage distance from the canal entrance 169 nautical miles.

Harbour of Akonniemi:
Authority: The City of Varkaus, Harbour Office.
Address: P.O.B. 208, 78710 Varkaus, Finland.
Tel: Nat. (972) 292508, Int. + 358 72 292508.
Room for one tanker and one dry cargo ship, draft 4.35 m.
Pilotage distance from the canal entrance 123 nautical miles.
Harbour Master, Tel: 292508.

Harbour of Taipale:
Authority: The City of Varkaus, Harbour Office.
Address: P.O.B. 208, 78100 Varkaus, Finland.
Tel: Nat. (972) 292508, Int. + 358 72 292508.
Room for two ships, draft 4.35 m.
Quays are located in the Lock of Taipale, waiting berths for ships passing the Lock of Taipale.
First class storage yard of 6,000 sq.m.
Pilotage distance from the canal entrance 125 nautical miles.
Harbour Master, Tel: 292508.

Harbour of Kosulanniem:
Owner: Enso-Gutzeit Oy, Varkaus Mills.
Address: P.O. Box 185, 78261 Varkaus, Finland.
Tel: Nat. (972) 251, Int. + 358 72 251.
Telex: 4315.
Room for two ships, draft 4.35 m.
Water, etc., services available.
Pilotage distance from the canal entrance 126 nautical miles.
Harbour Master, Tel: 25874.

Harbour of Kumpusalmi:
Authority: The City of Kuopio, Harbour Office.
Address: Kuopion Satama, 70100 Kuopio, Finland.
Tel: Nat. (971) 185191, Int. + 358 71 185191.
Room for two dry cargo ships and for one tanker, draft 4.35 m.
Terminal store of 2,500 sq.m., sawn goods shed of 2,000 sq.m., first class storage yard of 25,000 sq.m., second class storage yard of 28,000 sq.m. Railway connection.
Electricity, water, telephone, etc., services available.
Harbour Master, Tel: 185191.

Oil Harbour of Kelloniemi:
Situated in the City of Kuopio.
Owner: Oy Esso Ab.
Address: Kelloniemi, 70460 Kuopio, Finland.
Tel: Nat. (971) 343333, Int. + 358 71 343333.
Room for one tanker, draft 4.35 m.
Pilotage distance from the canal entrance 169 nautical miles.

Siilinjarvi:
There are two quays, each with berthing for one vessel, in the Community of Siilinjarvi, draft 4.35 m.
Owner: Kemira Oy.
Address: 71800 Siilinjarvi, Finland.
Tel: Nat. (971) 421144, Int. + 358 71 421144.
Owner: Lohja Oy.
Address: 71800 Siilinjarvi, Finland.
Tel: Nat. (971) 431300, Int. + 358 71 431300.

TOLKKINEN (Tolkis): 60.20 N. 25.35 E.

PILOTAGE: Pilot arrives from port station at Emsalo (tel. 915 – 27710 Station equipped with VHF, radiotelephone and radar. Pilot board between Kalbadagrund and Porvoo Lighthouse. Pilotage distance to po 22 miles.
APPROACHES: Max. draft of fairway from sea to roads 15.0 m., an from Roads to quay 7.0 m.
TUGS: Several tugs available from oil harbour.
BERTHING: Tolkis North Quay, depth 7.0 m. Tolkis South Quay, dept 5.2 m. Oil Harbour (see "Porvoo").
CRANES: Tolkis South Quay equipped with 1 movable crane. Lifting capacity 2.5 tons with grab and 5 tons with hook. Several mobile crane up to 70 tons available for hire.
STEVEDORES: Working hours from 0700 – 1600 hrs. 3 – 4 gang available Monday to Friday. On Saturday only 1 gang on overtime.
FRESH WATER: Fresh water available. Rate 8 t.p.h.
FUEL: Small quantity available by tank-car.
DENSITY: 1004.
AGENT: Oy Borga Stuveri Ab., 06750 Tolkis, Finland. Tel: 915 – 2453 After office hours: Tel: 915 – 143952. Telex: 1758 clear sf. Fax: 915- 24285. Cables: Stevedore. Contact: Captain Christer Lindstrom. (Ca Telephone No. 949-203952).

TORNIO: 65.51 N. 24.09 E. **(See Pla**

The outer harbour of Tornio is Roytta situated about 6 miles S.W. o Tornio.
DOCUMENTS:
2 Crew Lists.
2 Provisions Lists.
Passenger List.
One set of Bills of Lading, Ship's Papers, Health Documents.
PILOTAGE: Ajos pilot station VHF Channel 16. Pilot to be taken o board by lighthouse "Kemi 2" in position 65° 30.3′ N., 24° 22.5′ E 10 miles from Ajos.
ANCHORAGES: In Roads, depth is 24 ft.
MAX. SIZE: At same time there can be 2 vessels of 100 m. – 120 m length, draft 21 ft. 06 in.; 2 vessels of 50 m. – 60 m. length alongsid Main Quay; and 2 vessels of 50 m. – 60 m. length, draft 14 ft. at O Quay.
RADIO: Vaasa Radio/OHX or Harnosand Radio, Sweden/SAH.
TUGS: No tugs available at Tornio. To be ordered from Kemi 12 hour before arrival.
CRANES: 3×20 ton mobile cranes for general cargo and several crane for discharging bulk cargo.
STEVEDORES: Ordered by Agent (Telex 35 – 12). Agent must be give 24 hours ETA. Normal working time 0700 – 1100 hrs., 1200 – 1600 hr and 1600 – 2400 hrs. (Two shifts).
DENSITY: Fresh water.
FRESH WATER: Fresh water can be delivered by tank lorry (8 tons)
FUEL: Ordinary fuel by lorries from Kemi.
CONSULS: France tel. 40473; Sweden tel. 23651; Norway tel. 1441
REPAIRS: No docks but accommodation for small repairs.
OPENING/CLOSING HATCHES: By the ship's crew.
CUSTOMS ALLOWANCES: 200 cigarettes or 200 grams tobacco an 1 bottle spirits.
AIRPORT: At Kemi, 20 km. from Tornio; served by Finnair.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
POLICE/AMBULANCE/FIRE: Police 003; Fire 005; Ambulance 00 Salvage 47472.
AUTHORITY: Tornion Satamakonttori, PL60, SF-95400 Tornio, Finlan *Tel:* 980 – 40416. *Contact:* J. Arvola, Harbour Master.

TURKU (Abo): 60.27 N. 22.15 E.

DOCUMENTS: See "Oulu".
PILOTAGE: Telegram to Agent with 24 hours ETA to sea pilot statio
There are 4 entrances:
Uto: Fairway 10 m., Radio Beacon, VHF, coastal radar, telephone v Hanko or Mariehamn Radio. A 13.0 m. channel is to be establish between Uto and Turku.
Nyhamn: 8.2 m. on Rodhamn, radio beacon.
Isokari-Enskar: 7.1 m., radio beacon, VHF radio.
Hanko: 7.3 m., radio beacon, telephone via Hanko Radio.
Lighthouse and Pilot at each.
All fairways sheltered. No tide. Channel to main harbour 10 m.
When approaching port ETA by VHF to Port Information Cent international VHF Channel 12 for Harbour Pilot. Cutter whilst in actio same Channel, but takes orders from Port Traffic Control Centre o Pilot cutters painted red with white circular field marked "L" on the bo Flying flag in daylight, showing red and white lights vertically at nig Coming out when required to pilot station 0.75 miles from Main Harbo
All ships arriving from sea will get necessary information from S Pilot, whose service is compulsory. Harbour Pilot not compulsory.
ANCHORAGES: Outer anchorage at Bay of Airisto, 2 miles from P 15 m. – 18 m.
MAX. SIZE: Maximum draft in Commercial Harbour 11.0 m. fresh wa In Oil Harbour 9.0 m. in fresh water. Max. length 230 m. and breadth minor importance. No tides.

HEALTH: International Quarantine flag required in case of suspected disease or fever including preliminary report by VHF, otherwise, ask Agent.

RADIO: Hanko Radio and Mariehamn Radio. In addition these have telephone and VHF service. Local telephone network on VHF, Mariehamn on Channels 26 or 23 and Hanko on Channel 2.

TUGS: Advisable to apply for tugs in advance. 6 tugs available.

BERTHING: Priority given to arriving and departing passenger ships on regular lines. 4 hydraulic stern loading Roll-on/Roll-off berths and 4 without hydraulics. One berth for train ferry.

Total length of quays 5,145 m.

Berth depths 5.00 m. – 11.0 m.

Container facilities available.

CRANES:

No.	*Capacity* (tons)	*Type*
9	5	Movable
9	6	Movable
1	60	Movable
1	40	Multipurpose, movable.

STEVEDORES: Agent should be well informed about ETA and Master's Requirements. Normal working hours: 0630 – 1030, 1100 – 1500, 1500 – 2300. Saturdays and days preceding public holidays 0700 – 1530 hrs. The Port Office: 0900–1700 hrs. Saturdays and days preceding public holidays closed.

MEDICAL: All medical and hospital facilities available. No special requirements regarding inoculations, etc.

TANKERS: No special requirements. Small slop discharge facilities. 1 berth, depth 9.0 m. for larger ships.

DENSITY: 1004.

FRESH WATER: From pipe-lines along berths. Approx. 12.00 fim. per ton.

FUEL: Most grades available. No advance notice neccessary if from motor vehicles. In case of greater quantities, from Oil Harbour only. This requires advance notice to Agent.

CONSULS: The following countries are represented by Consuls or Vice-Consuls in Turku: Austria, Belgium, Denmark, France, Germany (F.R.), Great Britain, Greece, Honduras, Iceland, Italy, Norway, Portugal, Spain, Sweden and U.S.S.R.

REPAIRS: All types of repairs possible.

DRY DOCKS: Graving dock: Length 183 m.×25.6 m.×8.3 m.

Floating dock: 155 m.×23.5 m.×7.0 m. with lifting capacity of 8,500 tons. Owner: Turku Repair Yard Ltd. Tel: (21) 638711. Telex: 62484 Try SF. Fax: (21) 6387250.

GANGWAY/DECK WATCHMEN: Gangways to be rigged out so that they do not obstruct quay crane movements. Watchmen customary, but not necessarily hired.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

REPATRIATION: Good connections everywhere.

AIRPORT: 10 km. from port, regular lines.

TIME: GMT plus 2 hours.

HOLIDAYS: New Year's Day (January 1st); Good Friday; Easter Bank Holiday; May 1st; Midsummer Day; All Saints' Day; Independence Day (December 6th); Christmas Day; (December 25th); Boxing Day (December 26th).

POLICE/AMBULANCE/FIRE: Dial 000.

TELEPHONES: Ships' telephones available.

IDENTIFICATION CARDS: Not needed.

GENERAL: Ice-breakers maintain Winter traffic.

AUTHORITY: Port of Turku Authority, Linnankatu 80, SF-20100 Turku, Finland. *Tel:* (21) 674 111. *Teletex:* 244-1021502 tuport. *FAX:* (21) 674 125. *Contact:* Tom Joutsia, Harbour Master. Henrik E. Pettersson, General Manager.

UUSIKAUPUNKI: 60.48 N. 21.24 E.

APPROACHES: 3 fairways lead to harbour through sheltering archipelago; Uto-Uusikaupunki, 78 miles; Isokari-Uusikaupunki, 13 miles; Kylmapihlaja-Uusikaupunki, 24 miles.

Good sheltered anchorage in the roads. Depth of fairways 10.0 m.

DOCUMENTS:

Agent will prepare during clearance:

2 Ship's Report.
1 Declaration List, Arrival (Board of Navigation).
1 Declaration List, Departure (Board of Navigation).

To be prepared before Arrival:

2 Provision Lists (own provision of the ship).
2 Special Lists (must be signed by each member of the crew).
2 Crew Lists.
Bill of Admeasurement.
Certificate of Registry.
Ice-class Certificate (during Winter, 1st December – 30th April, issued by hull surveyor).
Bill of Lights (issued by Customs).

PILOTAGE: Embark Pilot at Isokari or Uto Pilot Stations. Distance through archipelago Isokari-Uusikaupunki 13 miles, Uto-Uusikaupunki 78 miles. Under normal circumstances first fairway recommended. During Winter months, if ice-situation difficult in Gulf of Bothnia, traffic goes via Uto.

Both pilot stations equipped with radio 2182 kHz, Channels 16 and 24, VHF duplex-Channels 18, 20 or 22 and radar. Pilot-boat red, with letter "L" and fitted with VHF Channels 13 and 16. Pilot boards usually between Sandback-Isokari, to where "Hauteri" light leads in line 134.5° – 314.5° (T). Notice of ETA at least 4 hours prior reaching station.

ANCHORAGES: Many areas of safe anchorages in Archipelago. Pilot advises.

RESTRICTIONS: No entry restrictions. No tide. During North and East winds sea-level can fall about 40 cm. below normal, which may sometimes delay deep loaded vessels reaching port.

HEALTH: Pratique not necessary. In the event of any disease/fever on board or in last port of departure, vessel has to inform before arrival, hoist quarantine-flags, or in darkness 2 lights, red light above white, showing all round horizon.

RADIO: Mariehamn Radio OFH; Helsinki Radio OHG.

TUGS: 2 available; normally tugs join vessel at port, ship's lines used.

BERTHING: *Kemira Quay:* 340 m. long, owned by fertiliser factory Kemira Oy, has depth 10 m. alongside, two 8 ton cranes, two discharging pipes, one for discharging ammonia at minus 32°C and one for sulphur acid. Discharging capacity depending material 140-170 tons/hour/crane and loading/discharging bags 45-50 tons/hour/crane.

Esso Quay: 40 m. long, owned by Oy Esso AB, depth in channel and alongside 5 m. Terminal is used for discharging LP gas.

Telakka Quay: 140 m. long, owned by Uudenkaupungin Telakka Oy, has depth alongside 5 m. Quay is only used for ship repairs, and fitting works for new buildings. There is also a floating dock with 5,000 ton capacity.

Hepokari Pier: 90 m. long and 18 m. breadth, owned by town. Channel and alongside depth 7 m. There is terminal on South side for Ro-Ro traffic.

Saunasilta Quay: 60 m. long and depth 3.5 m., owned by town. Used only by small coasters.

STEVEDORES: Available. Contact Agent.

MEDICAL: Hospital facilities, vaccination, certificates, etc., available. Contact Agent.

TANKERS: For discharging and loading liquid ammonia – Marine Loading arm "Luceat/Chicksan, Type RCMA" 8 in., ASA 300.

DENSITY: No tide, density 1004.

FRESH WATER: Water-hoses, about 20 t.p.h.

FUEL: Fuel available, contact Agent.

CONSULS: None.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: Uudenkaupungin Telakka Oy has a floating dock, lifting power 5,000 tons, draft 6.1 m., breadth 19.6 m., and length 130 m.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CERTIFICATES: All certificates according to International Convention for the Safety of Life at Sea, Class Certificate, etc.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per each member of the crew. Wine and/or Spirit: 1 bottle wine or spirit per each member of the crew.

CARGO GEAR: No additional requirements.

REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriations.

AIRPORT: Distance to Turku Airport about 90 km. Airport is served by regular Airlines.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

HOLIDAYS: Official Holidays are: New Year's Day (January 1st); May 1st; Midsummer Day (Saturday between June 20th and June 26th); Independence Day (December 6th). Usually no work on those days.

POLICE/AMBULANCE/FIRE: Police 002 or 3002; Ambulance 3005; Fire 005 or 3005.

TELEPHONES: Available.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Not needed.

AUTHORITY: Uusikaupunki Harbour Office, Satamantie 9, 23500 Uusikaupunki. *Tel:* 922 – 22963/21511. *Cables:* Satamatoimisto. *Contact:* Harbour Master.

VAASA: 63.06 N. 21.36 E. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists.
2 Customs Documents.
2 Health Documents.
5 Manifests.
5 Bills of Lading.

PILOTAGE: Pilot vessel not cruising in open sea. Pilot meets vessels at boarding ground (63° 09.8′ N., 20° 45.0′ E.).

Pilot signals: Letter "G" as flag, light or sound. Radio telephone call: Pilots watching 24 hours on 2182 kHz, also VHF.

Pilot vessel: 30 ft. motor yacht with wheelhouse and radar. Hull red all over with letter "L" painted on bow.

Harbour Pilot available from Vaasa Pilot Station Tel. 527725.

ANCHORAGES: To Pilot's advice.

RESTRICTIONS: No locks. Fairway lit all the way. Depth of Channel 9.0 m.

No tide, but water level may be reduced by up to 30 cm. in Spring and early Summer, or increased by 30 cm. in Autumn.

MAX. SIZE: Depth alongside piers up to 9.0 m. At the Oil Harbour, max. recommended LOA is 185 m., depth 9.0 m.

HEALTH: See "Documents" – no restrictions. Hospital and Doctor for any purpose available.

RADIO: Vaasa Radio – OFW 2803 kHz.

RADAR/VHF: No radar service in port area. Pilot vessels at sea pilot stations equipped with radar. VHF radios on pilot stations, harbour tug-boat and Harbour Office. Channels 16, 13 and 12.

TUGS: Harbour tug-boat and ice-breaker 1,200 h.p., 727 kW. available 24 hours. Radio telephone/VHF – call sign OIQE. Charge according to size.

BERTHING: 2 piers of 180 m. length and the Reins Quay of 240 m. length. Depth 5.0 m. to 9.0 m. New Coal Quay length 145.9 m., depth 9.0 m. There are 3×5 ton cranes on the South Pier.

The Ferry Pier, 106 m. and 118 m. length, depth alongside 5.5 m. with berths for Ro/Ro traffic (4 Ro/Ro ramps).

CRANES: 3×5 tons and mobile cranes up to 100 tons.
STEVEDORES: ETA as usual according to C/P to Agent, etc.
MEDICAL: If serious illness advance notice to Agent necessary.
TANKERS: The Oil Harbour is at Vasklot. Depth alongside 9.0 m. Tankers discharge through three arms of 500 mm. and 400 mm. diameter. Storage capacity 500,000 cu.m.
DENSITY: 1004-1006. No tide.
FRESH WATER: Available, no limit. Direct from quay-side, through pipes, rate about 25 t.p.h.
FUEL: All grades of bunker fuel available – direct from oil jetty or by lorries to berth.
FIRE PRECAUTIONS: Dry cargo ships; no smoking in holds. Tankers: usual restrictions. Tankers with petrol cargo not allowed to berth at dry cargo piers.
CONSULS:

Belgium
Denmark
France
Netherlands
Norway
Sweden
United Kingdom

REPAIRS: Nearest dry dock at Rauma.
GANGWAY/DECK WATCHMEN: Not compulsory, ship's own crew can be used.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CERTIFICATES:

- Safety Equipment Certificate.
- Stability Certificate.
- Load Line Certificate.
- Derrick and Hoisting Gear Test Certificate.
- Derat Certificate.
- Nationality Certificate.
- Measurement Certificate.
- Ice-class Bill.

CUSTOMS ALLOWANCES: Tobacco: Max. 200 cigarettes per man or 50 gm. of tobacco. Wine/Spirit: Maximum 1 bottle of each per man to be opened and used on board only.
CARGO GEAR: Cargo gear test book to be in order – all gear to be tested within a year otherwise risks for breaks in discharging/loading.
REPATRIATION: Can be carried out easily.
AIRPORT: Vaasa Airport (about 8 miles from town) served by regular airlines, domestic and abroad, Stockholm, U.K., Continent, etc.
TIME: Local time GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: Working hours in port: 0700 – 1100 hrs., 1200 – 1600 hrs. Monday to Friday, Saturday: 0700 – 1100 hrs. Sunday free. Working days in port: Monday to Saturday. Working days ashore: Usually Monday to Friday. All banks closed on Saturday. Shops open all weekdays. Other holidays: 6th December – Independence Day – Christmas, etc., as usual.
TELEPHONES: Can be arranged on board.
SERVICES: Compass adjusting available.
POLICE/AMBULANCE/FIRE: Police 002; General Emergency No. 000.
IDENTIFICATION CARDS: Not needed.
DELAYS: Only Winter time when Government ice-breaker is arranging, waiting or assisting in outbound convoys of ships.
GENERAL: Ships approaching port of Vaasa in Winter time (January-May) when sea area icebound, have to call any of Government ice-breakers operating in area or to inform Harbour Authorities of exact ETA – engine power, size and nationality, and whether strengthened for ice or not. Call signs, etc., for Government ice-breaker can be obtained from nearest coast radio station.
AUTHORITY: Vaasa Harbour Office, SF-65170 Vaasa 17, Finland. *Tel:* 358-61-251111. *FAX:* 358-61-128862. *Contact:* Captain Lars Holmqvist, Harbour Master.

VEITSILUOTO: 65.42 N. 24.37 E. (See Plan)

DOCUMENTS: Usual documents for Finnish ports. In addition the Harbour Master requires a copy of the Crew List.
PILOTAGE: Inwards compulsory for vessel in foreign trade. Boarding about 8 miles before Ajos. Ajos Pilot Station may be contacted on VHF Channel 16/13.
ANCHORAGES: Good holding ground about 1 mile from Rautakallio and by Koivuhauta 2 miles from harbour entrance.
RESTRICTIONS: No tide. Entry by day or night. Approach Channel, depth 7.1 m. It is recommended that vessels longer than 150 m. and with a minimal keel clearance avoid berthing under unfavourable weather conditions.
MAX. SIZE: See "Berthing".
VHF: Make initial contact on Channel 16/13.
HEALTH: See "Oulu".
TUGS: Available when required, charges according to net tonnage. Use ship's lines.
BERTHING: Total length of Quays 574.5 m.

Berth No. 1: Length 135.5 m. Depth 7.1 m.
Berth Nos. 2 and 3: Total length 209 m. Depth 7.1 m.
Berth Nos. 4 and 5: Total length 230 m. Depth 7.1 m.
Max. draft at all berths 7.1 m.

CRANES: Load/discharge by ship's gear or mobile cranes.
SPECIALISED CARGO HANDLING FACILITIES: 2 Ro/Ro berths, no special equipment.
STEVEDORES: Ordered by Agent.
MEDICAL: Hospital at Kemi. Masters to advise if medical attendance required aboard.
FRESH WATER: Available at short notice.
FUEL: Ordinary fuel, diesel and gas oil. Deliveries by lorries only.
FIRE PRECAUTIONS: No special precautions. Company's fire-fightin corps.
CONSULS: Norway, others at Kemi.
REPAIRS: Available at Kemi.
GANGWAY/DECK WATCHMEN: Available, ordered by Agent.
OPENING/CLOSING HATCHES: By crew.
AIRPORT: At Kemi, approx. 15 km. from port.
POLICE/AMBULANCE/FIRE: The nearest emergency services a available through the Alarm Centre of the Veitsiluoto Compan telephone number 22. If you phone outside the Company, call first 81 (the number of the Company), and then ask for number 22.
SERVICES: Radar repairs possible in Kemi.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Not required.
DELAYS: Not normally expected.
REGULATIONS: Port regulations delivered to ship on arrival on reque
AUTHORITY: Veitsiluoto Oy, SF-94830 Kemi, Finland. *Tel:* (98 814452. *Telex:* 3614 Vto Sf. *Contact:* Harbour Master, Tel: (980) 820

NOTES

France

GENERAL

NOTICE TO MARINERS: No. 2005/81

Regulations concerning vessels laden with hydrocarbons (including) oil or other dangerous cargoes approaching French ports.

Regulations have been promulgated by the French Authorities concerning vessels laden with hydrocarbons (including oil) or other dangerous cargoes in the approaches to French Mediterranean ports and the ports in Corse.

Any such vessel intending to enter French territorial waters (including Corse) from seaward, or to sail from a French port or anchorage, is required to signal certain details to the Prefet Maritime of the Third Region at Toulon 6, hours beforehand. Should there be any subsequent change in the vessel's intended movements, or in her material state, a further signal should be made. All such vessels are required, throughout their stay in French territorial waters, except when lying alongside in port, to maintain radio watch on Channel 16 or the local frequency, if applicable.

Any such vessel which suffers significant damage at sea, or the threat of damage, from whatever cause, while within 50 miles of the French coasts, is required to signal certain details to the Prefet Maritime at Toulon. Subsequent developments must be reported, including the time of requesting assistance, the expected time of its arrival and the actual time of arrival. Any ship joining the damaged vessel to render assistance is required to signal details to the Prefet Maritime, and to render reports on the casualty on arrival. These signals are informative and do not constitute a request for rescue or assistance.

For details of all signals required above see *Admiralty List of Radio Signals, Vol. 6.*

Vessels exceeding 1,600 gross tons laden with hydrocarbons (including oil) or other dangerous cargoes must not approach the French coasts within 7 miles, unless instructed to do so by the French authorities or within the port approach channels listed below. Exceptions to this rule are made in the channel between Corse and Capraia, where the minimum distance is reduced to 5 miles, and in the Bonifacio Strait.

Such vessels approaching, or departing from, the ports of Port-la-Nouvelle, Sete, l'Espiguette, Golfe de Fos, Marseille, Toulon, Ajaccio, Porto Vecchio, Solenzara, Lucciana and Bastia are required to use the charted port approach channels. When in these channels such vessels are priority vessels and must display Flag "B" of the International Code by day, and exhibit one red light, visible all round, at night. The provisions of Rule 9 of the *International Regulations for Preventing Collisions at Sea (1972)* explicitly apply.

NOTICE TO MARINERS: No. 2379/81.

Regulations concerning tankers laden with hydrocarbons and vessels carrying dangerous cargoes navigating in the approaches to the N. and W. coasts of France.

The French authorities have issued the following regulations concerning the above mentioned vessels.

(a) **Laden vessels exceeding 1,600 tons gross** must keep at least 7 nautical miles from the French coast, unless otherwise instructed by a Prefet Maritime, except within:–

The N.E.-bound lane of the Dover Strait traffic separation scheme.

Race of Alderney.

The access channels to the following ports:

Dunkerque, Calais, Boulogne, Dieppe, Fecamp, Le Havre-Antifer, Rouen, and the ports of the lower Seine, Caen/Ouistreham, Cherbourg, Granville, Val de Saire transhipment area, Saint-Malo, Saint-Brieuc, Roscoff, Brest, Douarnenez, Concarneau, Lorient, ports of the Loire, Les Sables-d'Olonne, La Rochelle/La Pallice, Ports of the Gironde, Bayonne.

(b) **Vessels intending to enter French territorial waters (12 miles) or to sail from a French port or anchorage,** are required to inform Marine Brest and Marine Cherbourg 6 hours beforehand, either by radio or through the port authority, giving the following details:–

Prefix	SURNAV FRANCE
A	Name, nationality and call sign.
B	Date and time (GMT) suffixed "Z".
C	Position.
E	Course.
F	Speed.
I	Destination.
J	Date, time (GMT) and position of entering French territorial waters or of getting underway.
K	Date, time (GMT) and position of leaving French territorial waters, or of arriving at destination in French waters.
N	RT watch being maintained.
P	Draft.
Q	Cargo: type (as defined in MARPOL 73) and quantity.
R	Whether manoeuvring ability is normal or impaired by defects in propulsion, steering or anchoring equipment.
S	Whether operational fitness is normal or impaired by defects in radar, radio, safety or ballasting equipment.

Any subsequent changes should be reported immediately.

Constant listening watch must be maintained on Channel 16, or a frequency specified for this purpose by a local authority throughout the period the vessel is in French territorial waters, except when lying alongside in a port.

(c) **Vessels within French territorial waters suffering from an impairment of normal navigational or manoeuvring capability,** are required to take such an action as the Prefet Maritime may require to ensure, the safety of navigation and to avoid the threat of pollution.

(d) **Vessels within 50 nautical miles of the French coast suffering damage or having defects,** are required to report to Marine Brest and Marine Cherbourg any occurrence (collision, stranding, incident on board or external) which could result in damage to the vessel or cargo.

Any vessel going to the assistance of the damaged vessel is also required to make a report.

These reports are informative and do not constitute a request for rescue or assistance.

Requests for assistance, if required, should be made in accordance with international regulations, keeping Marine Brest and Marine Cherbourg informed.

The damaged and the assisting vessel are required to take such action as the Prefet Maritime may direct with a view to avoiding danger to navigation and threat of pollution, whether they are in French territorial waters or international waters.

Form of signalled report to be made by the damaged vessel:–

Prefix	SURNAV AVARIES
A	Name, nationality and call sign.
B	Date and time (GMT) suffixed "Z".
C	Position.
E	Course.
F	Speed.
I	Destination.
J	Time (GMT) and nature of a call for assistance or towage.
K	Name of assisting vessel, if present, or ETA (GMT).
M	Name and telegraphic address of Owner, Charterer and any French consignee.
N	Radio watch being maintained.
P	Draft.
Q	Cargo: type (as defined in MARPOL 73) and quantity.
R	Nature of damage or development of the situation.
T	Any other information.

Subsequent developments are also to be reported.

Form of signalled report to be made by the assisting vessel:– Prefix and A to I as above, but details applicable to the assisting vessel.

J	Date, time (GMT) and position of casualty.
K	Name, nationality and call sign of casualty.
L	Course of casualty, or destination, if known.
M	Speed of casualty, if known.
N	Radio watch being maintained.
Q	Cargo of casualty if known.
R	Damage of casualty.
T	Any other information.

Further reports on the casualty are required after arrival.

(e) **Laden vessels exceeding 1,600 tons approaching or departing from the following French ports:–**

Saint-Malo, Saint-Brieuc, Roscoff, Brest, Douarnenez, Concarneau, Lorient, ports of the Loire, Les Sables-d'Olonne, La Rochelle/La Pallice, ports of the Gironde, Bayonne are required to comply with the following regulations:–

To use the authorised approach and entry channels and waiting areas.

Inform the Port Authority on entering the approach channel.

When in these channels and waiting areas, display Flag B of the International Code of Signals by day and exhibit one red light at night, clearly visible all round.

Anchoring or waiting in the approach and entry channels is not permitted except in emergency, in which event the Port Authority must be informed as soon as possible.

Vessels crossing approach or entry channels should do so as nearly as possible at right angles to the channel and well clear of vessels in the channel.

These regulations do not in any way absolve Masters and Pilots from the requirement to comply with the International Regulations for Preventing Collisions at Sea (1972).

For further details of signals required by the above regulations see *Admiralty List of Radio Signals Vol. 6.*

Similar messages must be sent to Marine Toulon by vessels in the Mediterranean.

Navigation in French Territorial Waters:

Any ship as specified above must keep permanently 7 nautical miles off the French Coast, except:

1. When entering a French harbour, in the specified channel leading to this harbour;
2. In the N.E. lane of the Dover Straits Separation Scheme;
3. In the Channel of Corsica between the Italian island of Capraia and the Corsican shore, where the limit is reduced to 5 nautical miles.

DISTRESS, SEARCH AND RESCUE:

Search and Rescue operations are controlled by the following organisations:

1. Centre Regional Operational de Surveillance et de Sauvetage pour la Manche-Mer du Nord (CROSSMA) covers the North coast of France from the Belgian border to Mont St. Michel (48° 38′ N., 1° 31′ W.). Stations at Cap Gris Nez (50° 52′ N., 1° 35′ E.). and Jobourg (49° 41′ N., 1° 54.5′ W.) maintain a continuous watch on 2182 kHz and VHF Channels 16 and 11.

2. Centre Regional Operational de Surveillance et de Sauvetage Corsen-Ouessant (CROSSCO) covers the N.W. coast of France from Mont St. Michel to the latitude of Pointe du Raz (48° 02′ N.). A station at Corsen (48° 25′ N., 4° 48′ W.) maintains a continuous watch on 2182 kHz and VHF Channels 16 and 11.
3. Centre Regional Operational de Surveillance et de Sauvetage pour L'Atlantique (CROSSA) covers the Atlantic coast of France from the latitude of Pointe du Raz (48° 02′ N.) to the Spanish border. Stations at Etel (47° 39′ N., 3° 12′ W.) and Soulac (45° 31′ N., 1° 07′ W.) maintain a continuous watch on 2182 kHz and VHF Channel 16.
4. Centre Regional Operational de Surveillance et de Sauvetage Mediterranee (CROSSMED) covers the Mediterranean coast of France. A station at Toulon (43° 06′ N., 6° 00′ E.) maintains a continuous watch on 2182 kHz, 2677 kHz and VHF Channel 16. Tel: 94.27.27.11. A station at Agde (43° 18′ N., 3° 30′ E.) maintains 0500–2100 watch from 15th June to 15th September on 2182 kHz, 2677 kHz and VHF Channel 16.

   There is a station for Corsica at Ajaccio, Tel: 95.20.13.63.

VISAS: Foreign visitors (except EEC nationals and Swiss nationals) are required to be in possession of visas before arrival in France.

Companies sending foreign crewmen to join vessels in French ports should arrange visas through French Consulates.

AJACCIO, Corsica: 41.55 N. 08.44 E. (See Plan)

DOCUMENTS:
Cargo Vessels:
1 Stores List.
1 Personal Effects List.
1 Crew List.
1 Passenger List.
2 Manifests.
Ship's Register.
Passenger Vessels:
1 Stores List.
1 Personal Effects List.
3 Crew Lists.
3 Passenger Lists.
Ship's Register.
2 Manifests.

PILOTAGE: No advance notice required for regular ships. Vessels call Pilot with 3 blasts on ship's siren. Pilot boat flies usual Pilot flag. Pilot joins approaching vessel at a line Isolella/Chapelle des Grecs. Available 24 hours a day. Pilot boat has VHF Channel 6.
ANCHORAGES: Several safe anchorages in harbour which can be indicated by Pilot.
MAX. SIZE: Length 200 m., draft 7 m. At anchor, no limit.
HEALTH: Health Officer boards on arrival. Pratique automatic unless suspected contagious disease on board, when it is necessary to notify Agent or Health authorities in advance by cable.
RADIO: ETA cables, etc., via Grasse Radio, Marseilles Radio or Ajaccio Radio. VHF Channel 24.
VHF: Port Captain on Channel 9.
TUGS: None available.
BERTHING: Regular vessels have priority at all berths. 3 Ro/Ro berths.
CRANES: Up to 20 tons.
STEVEDORES: Advice should be sent 24 hours prior to arrival. French vessels have priority of labour.
MEDICAL: Advance notice required Tel: 95.21.52.08. All hospital facilities available. Except in the case of an epidemic in any country from which the vessel has sailed, no inoculations or vaccinations are necessary.
TANKERS: Max. draft 6 m., length 110 m. Preferably with bow thrust unit. Gas tankers also preferable with bow thrust unit.
FRESH WATER: Available at all berths, except Gas Berth.
FUEL: All grades available, 48 hours notice required.
CONSULS: Greek, Dutch, Monaco, Danish, Swedish, Finnish.
REPAIRS: Minor repairs can be carried out.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CERTIFICATES: Ship's Register.
CUSTOMS ALLOWANCES: Tobacco, 2 oz. or 200 cigarettes per member of crew. Wine, no restrictions. Spirits 1×20 oz. bottle.
SURVEYORS: None.
DRY DOCKS: None.
REPATRIATION: Can be arranged by Ship's Agents.
AIRPORT: 8 km. from port. Served daily by Air France regular lines.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: 1st January; Easter Monday; Whit Monday; 1st May; 14th July; 15th August; 1st November; 11th November; 25th December. Cargo work can be arranged on all dates except 1st November.
POLICE/AMBULANCE/FIRE: Police 17; Ambulance 95.21.50.50 (SAMU); Fire 18.
TELEPHONES: Can be placed on board warships only.
BANKS: Banque de France, Tel: 95.21.00.05. Telex: Banfra Ajacc 460083; Banque Internationale pour l'Afrique Occidentale, Tel: 95.21.34.75. Telex: Bancafr 460291; Banque Worms, Tel: 95.21.00.13. BASTIA, Corsica: 42.41 N. 09.27 E. (See Plan

DOCUMENTS: See "Ajaccio".
PILOTAGE: Address, Hangar No. 1, Nouveau Port, Bastia. Te 95.315095. VHF Channel 16. Pilot boats, 12 m. long, black and whi with navigation and pilotage lights. Previous advice to Pilots necessar before arrival. Pilot boards in bay of Porto Vecchio, North of the citade Vessels should call "Bastia Port" or Bastia "Bastia Pilot" one hour befor arrival in the anchorage area.
ANCHORAGE: Anchoring not recommended in Easterly winds. Dept 15 m. to 30 m. in Porto Vecchio Bay. Bastia harbour: up to 4.50 m. dee
RESTRICTIONS: Ships may enter harbour any time, weather permittin It is very difficult to enter if a West wind (Libecciu) of over 25 knots i blowing.
MAX. SIZE: Max. length: 160 m.; draft 7 m.
TUGS: None available.
BERTHING: Ships berth in order of arrival.

Accommodation available for 8 vessels:
3 berths with length 100 m. to 120 m., max. draft 6.50 m. (cemen wine, liquefied gas).
1 berth, length 160 m., max. draft 7.50 m. (Ro/Ro cargo).
2 berths, length 150 m. to 160 m., max. draft 6.50 m. (car-ferries).
2 berths, length 120 m., max. draft 6.00 m. (car-ferries).
Mooring carried out by watermen. Same address as Pilots.

CRANES: One mobile crane with max. lifting capacity 7.5 tons.
MEDICAL: Medical controls made by Customs officer. Doctor availab
FRESH WATER: Supplied ashore.
FUEL: Not available.
FIRE PRECAUTIONS: General rules. One wharf reserved for tanke
CONSULS: Nearest at Ajaccio.
GANGWAY/DECK WATCHMEN: Night watchman supplied by Agen
OPENING/CLOSING HATCHES: Carried out by stevedores.
CUSTOMS ALLOWANCES: None on entry, 10 packets cigarettes whe leaving. Wine/spirits unlimited when leaving.
REPATRIATION: No facilities exist.
AIRPORT: Bastia 20 km. from ports. Departures every day to contine
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
POLICE/AMBULANCE/FIRE: Police, 17; Ambulance, 17; Firemen,
TELEPHONES: As a rule telephone is put only on naval ships.
SHORE LEAVE: Crew may go ashore.
IDENTIFICATION CARDS: Required.

BAYONNE: 43.30 N. 01.28 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
3 Lists of Provisions on Board.
3 Individual Lists of Tobacco and Spirits.
3 Manifests of Cargo.
1 Set Bills of Lading.

PILOTAGE: Station extends 3 miles between the parallel of Ondres to the North and the limit of French territorial waters to the South. When weather permits, the pilot boat comes out of l'Adour and comes alongside ships near the light buoy situated W.N.W. of the port entrance. Contact Pilot at least 12 hours before arrival relaying through Bordeaux Arcachon Radio and stay on radio watch in the pilot zone. VHF Channel 12.

ANCHORAGE: Ships must not anchor in the river.

RESTRICTIONS: In bad weather ships are led to take the Pilot at the pilot boat which is based on St. Jean-de-Luz and are led either towards Adour or to the anchorage of St. Jean-de-Luz.

When alongside, even in fine weather, a swell may be experienced causing lines to part.

MAX. SIZE: The Adour is accessible to ships of 160 m. length (15,000 - 20,000 tonnes). Depth at the mouth varies with the seasons and are maintained by dredging. They are never less than 7 m. during Summer but during Winter can be reduced following Westerly storms. The height of the tide has to be added to these depths but the draft can never exceed 8.0 m.

HEALTH: A Declaration of Health Form is lodged by the Customs Service on arrival; it must be completed by the Master. In case of suspect illness, advise Agent 24 hours in advance.

RADIO: Bordeaux – Arcachon Radio. The signal tower on the South side of the mouth, and the Harbour Master's Office, in the tower, has a VHF radio station, Channel 12.

TUGS: 1 tug available, 1,250 h.p., 10 tons bollard pull. Request for tug through the Agent. Tug waits at the entrance to the Adour.

BERTHING: When working berth is occupied, vessel is directed to a waiting berth. Large ships or those carrying dangerous cargo can be requested to wait outside the entrance.

Berth	Max. Length Vessel	Recommended Draft
Socadour	150 m.	29.5 ft.
Cement Wharf	160 m.	24 ft.
Satec Wharf	160 m.	24 ft.
Grain Silo	130 m.	23 ft.
SNPA Sulphur Quay	150 m.	25 ft.
Other berths	120 m.	22 ft.

BULK HANDLING FACILITIES: Silos with capacity 60,000 tonnes (maize). Rate 450 t.p.h.

3 silos, total capacity 10,000 tonnes at Armand Gommes Quay.

Phosphate handled at Boucau Quay with 3 cranes of 10 tonnes capacity, feeding conveyor belts with capacity 350 t.p.h. - 400 t.p.h.

CRANES: Edmond Foy Quay: 3×3 ton and 2×6 ton cranes.
Pierre Le Roy Quay: 4×3 – 4 tonne cranes.
Boucau Quay (Socadour): 2×10 tonne cranes.
Marcel Forgues Quay: 1×10 tonne and 1×8 tonne crane.
Jean Letellier Quay (private): 1×10 tonne crane.
Armand Gommes Quay: 2×3 – 4 tonne cranes.

STEVEDORES: Arrival must be notified to Agent 24 hours in advance.

MEDICAL: Medical attendance can be organised by the Agent without advance notice, Hospital and private clinic available. However, if medical attendance required as soon as the ship arrives, particularly at night, it is advisable to send a radio message 12–15 hours before the arrival of the ship.

TANKERS: No installation to receive residues. Two berths for unloading of refined products. Refinery de Midi: Max. length 120 m., max. draft 6 m. Saint Gobain, length 150 m. max. draft. 24 ft.

FRESH WATER: Available at each berth, minimum supply 3 cu.m.

FUEL: Available by arrangements in advance through Agent or suppliers.

CONSULS:
Belgium
Brazil
Chile
Finland
Norway
Peru
Portugal
Spain
Sweden
United Kingdom
Uruguay

REPAIRS: Running repairs to hull, machinery, radio and radar can be effected.

SURVEYORS: Bureau Veritas. Tel: 59.25.20.44.

DRY DOCK: Usable length 98 m. Length on stocks 94.1 m. Width of entry 15 m. Depth above sill, neap tides 4.5 m., spring tides 6 m.

GANGWAY/DECK WATCHMEN: Not obligatory except for ships with dangerous merchandise on board.

OPENING/CLOSING HATCHES: Generally carried out by the crew.

CUSTOMS ALLOWANCES: 200 grammes or 250 grammes of tobacco for each crew member and for 8 days (must without fail be declared in the individual list of provisions). 1 bottle of wine or spirits (must without fail be declared in the individual list of provisions).

REPATRIATION: Possible for all countries as well as crew changes.

AIRPORT: At Biarritz: 7 km. away. Regular service with Paris. Two services per week to and from London.

TIME: European Standard Time: GMT plus 1 hour and GMT plus 2 hours from 2nd April to 1st October.

HOLIDAYS: 1st January; Easter Sunday/Monday; 1st May; Ascension Day; Whit Sunday/Monday; 14th July; 15th August; 1st November; 25th December.

POLICE/AMBULANCE/FIRE: Police, telephone 17 or 59.55.84.09., Anglet: 17 or 59.03.76.10 Boucau: 17 or 59.55.29.53. St. Leon Hospital: 59.63.50.50. Fire Station: 18 or 59.59.21.84.

TELEPHONES: Telephones on board not possible.

SHORE LEAVE: Crew are authorised to go ashore.

IDENTIFICATION CARDS: Not necessary – Seaman's Identity Card sufficient.

AUTHORITY: Direction Departementale de l'Equipement Alles Maritimes, 64109 Bayonne. *Tel:* 59.63.08.40. *Contact:* A. Lage, L'Ingenieur Des T.P.E.

Capitainerie du Port, 128 Av. de L'Adour, Anglet. *Tel:* 59.63.11.57. *Telex:* Porbayo 55 04 57.

BORDEAUX (inc. Verdon, Bassens, Ambes, Pauillac, Blaye): 44.50 N. 00.34 W. (See Plan)

DOCUMENTS:
Tonnage Certificate.
2 copies Provisions List.
2 copies Personal Effects List.
2 copies Crew List.
Customs Clearance.
Crew Manifests.
Check List.

PILOTAGE: To embark and disembark at sea from ships entering or leaving the Gironde Estuary, Pilots use either a 17 m. fast launch or a twin-turbine helicopter Ecureuil AS355F1.

With the helicopter, winching is the normal procedure to transfer Pilots. The service at sea extends from 1 hour before to 5 hours after Cordouan LW.

For container ships, special arrangements can be made through the Agent.

When weather conditions do not permit service to ships at sea, the Pilot boards as soon as possible, after the ship has crossed the bar. In that case and after Master's agreement, a Pilot gives navigation assistance from Verdon shore-based radar station, until Pilot's boarding point or for outward ships, from Pilot's disembarking point to sea.

Vessels should announce their arrival at 'BXA' Fairway Buoy at least 24 hours in advance to the Commandant du Port de Bordeaux through Coast Station "Bordeaux-Arcachon Radio". Masters must confirm to the Harbour Master's Office, Channel 12 and the pilot station at least 12 hours before arrival their ETA, ship's draft and speed, and give their agreement for an eventual helicopter operation. *Three hours before arrival at 'BXA',* Masters must contact Gironde Pilot Station on Channel 16 and communicate on Channel 16, 11 or 12. Ships can also call Verdon Pilot Station by Telephone No. 56.09.63.85 or by Telex PILVDON550167F.

Ships leaving ports located between Santander and Lorient, must send the above mentioned message on departure. In case of any change of more than 3 hours of the initial ETA, Masters must send a correcting message.

Helicopter Service: The helicopter is red and white, and "PILOTE BX" is painted in black. The VHF call sign is "PAPA GOLF" or "Gironde Pilot Helicopter". During the flight, VHF contact between the ship and helicopter must be maintained on Channels 6 or 12.

The Pilot is boarding in the vicinity of 'BXA' Fairway Buoy and winching is the normal procedure. Depending on weather conditions, the Master may be requested to alter the course or speed of the ship for safe boarding of the Pilot.

The helicopter is working in accordance with International regulations and particularly with the rules of the International Chamber of Shipping.

Masters are asked to watch very carefully the following points:

– check that there are no horizontal aerials or wires above the helicopter's manoeuvring zone

– check that no loose object, in the proximity of the manoeuvring zone, could be swept up by the effects of the wind created by the rotor blades

– at night, the manoeuvring zone must be well illuminated but in such a way that the helicopter Pilot is not dazzled

– if necessary, provide for washing the area to avoid dust being blown around by the effects of the rotor.

No extra charge for the Pilot boarding by helicopter.

Pilot Launch Service: When operating with a fast launch, the Pilot boards between 'BXA' Fairway Buoy and the entrance to Grande Passe de l'Ouest. Masters are requested to maintain a speed of about 5 knots. The pilot ladder should be rigged well amidships and the bottom of the ladder should be 1.50 m. above the water level. No line or rope shall be attached to the bottom of the pilot ladder.

The pilot launch keeps watch on VHF Channels 16 and 11.

Vessels less than 70. m. long, for which pilotage from the sea to Verdon is not compulsory, may embark River Pilot at Le Verdon providing Masters have advised the pilot station accordingly.

ANCHORAGE: The normal waiting anchorage area is the Roadstead of Le Verdon, depth 10 m. to 12 m. and sand silt bottom. The big tankers with more than 10 m. draft find a good anchoring area in the Saintonge Roadstead with a depth of 15 m. to 20 m. (sand silt bottom).

APPROACHES:

Report: 1986.

Of primary concern in approaching or leaving the berths is the difficulty of the channel between Le Verdon and Ambes, especially for inbound/outbound tankers at the maximum draft.

When loading full cargo at Bordeaux/Ambes, Masters have to pay careful attention to the maximum permissible draft alongside at LW and to the maximum draft (fresh water) allowed for transitting channel outbound, owing to the many shelves especially around the Buoys 20 and 28.

Port Approaches: There is no special navigation difficulty for approaching 'BXA' Light buoy, though there is no noticeable landmark by daytime, but the 'BXA' Racon is efficient and the buoys of the entrance channel Passe de l'Ouest are detected early on the radar. The soundings may also give useful information.

Anchoring outside is *not* recommended during bad weather owing to the heavy swell. Ships have to use the tide to transit the River Channel which takes about 4 hours. They need about 2 hours for taking the Pilot and proceed to the Le Verdon Roads where they enter the river.

Best arrival time at 'BXA' Light buoy is between 4 to 6 hours before the HW of Pointe de Grave; this will avoid anchoring, leaving sufficient time for Master/Pilot exchange on the soundings in the channels which are the major problem during the transit for deep drafted tankers, especially in the river. Movements are carried out on a round the clock basis.

Heights of water are given on VHF Channel 17, every 5 minutes, for many places in the river corresponding to the main shoal areas (given in metres in the French language).

A monthly recommended maximum draft for vessels proceeding to and sailing from Ambes A.P. and E.D.F. is issued and always calculated based on fresh water. This sheet is given to the Agent and may be given to the Master when the Pilot boards.

The Under Keel Clearance considered in this draft calculation is mainly subject to local atmospheric and hydrological conditions but never less than 0.50 m. for the river transit. Meanwhile, in the River Channel, siltation and moving soft mud patches may reduce the deep draft passage width between the buoys. The Pilot must know these latest limitations as the Port Authority cannot give a complete safe sounding statement to Masters.

RESTRICTIONS: The great entrance to the Gironde estuary (Western entrance) is dredged to a depth of 13.50 m. under the zero of French sea charts. It permits the sailing in of ships with a draft of 15 m. (49 ft.) at practically all tides.

MAX. SIZE: Verdon: Vessels up to 12.5 m. draft, 290 m. length.
Bec d'Ambes: Tankers up to 32 ft. 6 in. draft, 210 m. length.
Pauillac: Tankers up to 32 ft. draft, 240 m. length.
Bassens: Vessels up to 9.40 m. – 11.00 m. draft, 245 m. length.
Blaye: Vessels up to 25 ft. draft.

HEALTH: Vessel should ask for Free Pratique by radio at least 12 hours before arriving at port. Message should be addressed to Saniport – Bordeaux routed via Bordeaux/Arcachon Radio. Otherwise, Pratique given by Customs Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique, Master should radio Agent before arrival, advising full details.

Health Control: Hospital Saint Andre, 1me Jean Burguet, Bordeaux. Tel: 56.50.64.52.

RADIO: Arcachon Bordeaux Port Radio: Radiotelephony 1,862 kHz. Radiotelegraphy 421 kHz.

Port Authority by VHF: Calling band 156.8 MHz Channel 16. Traffic band 156.6 MHz Channel 12 (port). Traffic and 156.7 MHz Channel 14 (radar).

Pilots: Telegraphy: watch on 500 kHz at the prescribed hours. Telephony: continuous watch on 2,182 kHz. VHF: continuous watch on Channel 6.

Every vessel fitted with HF radio equipment shall keep a constant watch and be in contact with "Arcachon-Bordeaux-Port-Radio" Station when navigating in the area between the landing buoy and her berth, or at least watch at the sending times of this station, when moored and awaiting orders.

Every vessel fitted with VHF radio equipment, shall also keep permanent watch and maintain contact with the Port Operations Station on 156.6 MHz (Channel 12) when navigating in the zones indicated below, or when moored and awaiting orders.

Le Verdon zone: Call "Radar-Verdon".
Bordeaux zone: Call "Port-Bordeaux".

RADAR/VHF: Port radar is in operation in the Gironde estuary and approaches. Vessels may contact this station for navigation information by calling Verdon Port Radio on VHF Channel 14.

TUGS: Tug assistance is available as advised by the Pilot. Tugs will join vessels at the following places: In Verdon Roads for vessels mooring at Verdon. In Pauillac Roads for vessels mooring at Pauillac. At Buoy BA1 for vessels mooring at Ambes. Off the Harbour Basins for vessels mooring at Bordeaux Docks.

As a rule ship's tow-lines are used; when a tug line is required there will be an additional charge.

BERTHING: *Le Verdon Deep Water Terminal:* 2 containership berths, length 600 m., depth alongside 12.5 m. at LW; slip for quarter ramp Ro/Ro handling. Operations carried out 24 hours a day 7 days a week. 100 power points for reefer containers. 3 container gantry cranes (1×32 ton and 2×40 tons capacity below spreader). One is multi-purpose and can work with a 30 ton grab for bulk unloading.

Riverside Quays: 18 berths, depth alongside 7.5 m. – 9 m. at LW. Now available only for cruise ships and naval vessels.

Enclosed Docks: 2 basins joined by a lock 25 m. wide. Entrance effected by two locks of the following dimensions: Large lock 146 m. long 22 m. wide. Small lock 100 m. long 14 m. wide. Depth of water in the basins is maintained at 6.50 m. These are now used only for repairs and yachting.

Queyries: 493 m. long, depths offered are 7 m. alongside. 3×6 ton cranes.

Bassens-Amont: 270 m. long, depth alongside at LW up to 9.0 m. – 11.0 m (4 berths). The quay caters for general trade. Equipped with 6 cranes of 2.5/6 tons, 2 of 10/12.5 tons, 2 Caillard cranes 15/24 tons and 2 Mague cranes 8 tons.

The heavy bulk storage zone has a capacity of 128,000 cu.m. It is served by two railway sidings with road/rail weighbridges for re-dispatch.

Two of the berths at Bassens-Amont are equipped to cater for molasses which can be stored in 3 reservoirs.

Bassens-Amont is also the centre of the ports phosphate traffic, bound for neighbouring industries and stocked in a silo depot, which is linked to the quay by a conveyor belt network.

During the last quarter of 1982, the bulk trades received at Bassen Amont ceded their place to general cargo. In the context of th redevelopment, which enables better throughput rates and mo flexibility, a 6,000 sq.m. shed has been built.

Letierce: The Letierce grain silos behind the quays are linked by a overhead continuous conveyor to a quayside gantry loader (throughp. 12,000 t.p.h.) at Berth No. 417.

Bassens–Aval: 10 berths, total length 1,474 m. Depth alongside 9.50 m - 11.0 m. at LW. 5×6 ton cranes, 4×2.5 - 6 ton cranes, 2×15 ton 24 ton Caillard cranes, 5×15 ton - 25 ton Ceretti cranes and 1×25 to Duro crane.

A bulk terminal is available with discharge capacity 2,000 t.p. Max. size 120,000 d.w.t.

In addition there are facilities for heavy bulk goods, Ro-Ro; coal; fore products terminal; grain conveyors of 150 t.p.h., 400 t.p.h., 600 t.p.h. an 900 t.p.h.

Bulk Liquid Berth: Berth No.436 is a dedicated bulk liquid berth an caters for tankers carrying butadiene, methanol, phosphoric acid turpentine.

The environment of the berth meets the safety requirements for eac of these commodities and a security company carries out surveillanc and ensures safety and security.

Blaye: Main commodities at Blaye: Grain, liquid bulk and dry bulk.

Total quay length 390 m.

Dimensions of the largest vessel capable of being accommodate (tidal coefficient 45 at low water):

Deadweight tonnage: 15,000 tons (with a half load).
Overall length: 190 m.
Draft: 8.20 m.

Cranage: 1 Wellman crane of 2.5/6 tons (grab or hook, outreach 18 m.

Dedicated handling gear:

Public Wharf (Berth 601): Liquid bulk unloader. Continuous dry bul loader with conveyor belt network.

Grain Wharf (Berth 602): Bulk grain loading gantry and a conveyor t the SEMABLA silo, (throughput 12,000 tons per day). 2 suctio unloaders (throughput 150 t.p.h.) for barges. 1 bagging and shore-to ship bag loading unit (throughput 2,400 tons per day).

Weighbridges: 1 × road/rail and 1 × road.

Storage:
Sheds: 80,000 tons
Silos: 40,000 tons
Tanks: 13,000 cu.m.

The port is currently being deepened to provide access for vessels 20,000 d.w.t. – 25,000 d.w.t.

Pauillac: Public berth for vessels drawing up to 9.75 m. Total quay lengt 280 m.

Left Bank Quays: 3 quays (No. 121, 122 and 123), have been develope to accommodate cruise liners. Max. LOA 240 m., max draft 8.50 m.- 9.00 m. (according to the tide). "Espace Maritime" at Shed No. 5 hav been developed with all amenities for cruise liners.

Also see "General".

MEDICAL: All facilities available. Malaria and cholera vaccinations ca be performed at the Military Hospital or at the Port Vaccination Centr (Shed 14).

TANKERS: *Pauillac:* Oil installation operated by Shell, 33 ft. alongside *Ambes:* Terminal for tankers up to 210 m. length, 32 ft. 6 in. draf Operated by Societe DPA and Esso. Also see "Shipmaster's Report" dated June 1981.

There is a new private wharf at Ambes, catering for liquified ga tankers. Length, 125 m. Maximum ship's length 145 m. Max. dra 7.70 m.

Unloading by articulated arm which connects to ship's manifold. Th manifold should be as close to the central perpendicular as possible.

Standard security measures for handling propane and butane. Th berth belongs to Cobogal and has been allotted Berth No. 515.

Berth 501: Norsk-Hydro Azote are currently building a plant fo processing amonitrates. A jetty (Berth 501) is under construction in fro of the plant, catering for tankers bringing supplies of liquid ammonia Max. LOA 240 m. and max. draft 11.0 m. (according to tide). The ber will be operational in 1990.

Bassens: See "Report" dated March 1981.

DENSITY: Verdon 1023 to 1015. Pauillac 1026 to 1000. Ambe approximately 1000. Bordeaux approximately 1000.

FUEL: Vessels wishing to bunker during their call at Bordeaux-L Verdon, shall make known their needs of quantity and quality to the Agents or consignees before arrival in port. Requests must b forwarded, 48 hours in advance (at least), to one of the bunkering Agent of the following companies:

Shell – Bassens. Tel: 56.81.21.55.
Esso – Worms. Tel: 56.43.56.43.
ELF/SIMA. Tel: 56.50.56.70.
B.P. Floirac. Tel: 56.86.53.25.
Total C.F.R. Tel: 56.85.00.33.

A very large proportion of the bunkering fuels comes from the She refinery at Pauillac. These fuel-oils are mainly intermediate oils mad by viscosity mixing between 80 and 460 centistocks (at 50°). Orde must therefore be for a quantity of at least 400 tons.

The quality control of mixtures is carried out by the Shell refine laboratory, whose opening hours are: Monday: from 0400 to 1630 hr Tuesday, Wednesday, Thursday, Friday & Saturday: from 0400 2000 hrs.

REPAIRS: ARMI, Face au 81 Rue Des Etrangers, 33300 Bordeaux. Te 56.50.35.73.

IDENTIFICATION CARDS: Crew men going ashore should carry passport or identity card.

GENERAL:

Mooring Regulations: Vessels fitted with radio equipment, which, for any accidental cause, (engine damage, fog, etc.) are obliged to moor or ground at any point in the area between the landing buoy "BXA" and the "Ponts de Pierre" (Stone Bridges) at Bordeaux and Libourne, must immediately indicate their mooring or grounding position, by cable to the Harbour Master, Bordeaux. In all cases, the text of the message must specify whether the moored or grounded vessels interferes or not with shipping.

Berthing: Berthing is carried out on the advice of the Pilot, following instructions from the Harbour Officers.

Special precautions are recommended during Spring Tide periods to ensure that vessels in the river are held fast to the quay.

The following instructions apply:

Special Instructions for Securing Vessels at the Quay During Spring Tide Periods (K > 90).

Given the disturbances caused by the strong currents of tides with a K of over 90, the securing of vessels on the quay must receive unremitting attention.

Pilots shall pay close attention to the mooring lines, for which the Master remains constantly responsible.

Masters shall follow Pilot's instructions and provide all means asked for in terms of both manpower and equipment.

A strict surveillance is necessary to ensure that lines remain correctly secured by adjusting them according to the height of the tides.

A sufficient number of crew shall be kept on board, to carry out any handling which might eventually be ordered by the Harbour Officers.

Fire Fighting: 1. All vessels berthed in the Port of Bordeaux, be they loading, discharging, or under repair, must have permanently on board a sufficient watch to keep effective surveillance, to take all preventive measures and to fight any fire on board.

2. It falls to the Master or the watch, and this under their sole responsibility, to use the signalling equipment at their disposal.

3. Communication and signalling equipment. Telephones and fire hydrants available on all quays.

4. Fire fighting is carried out under the direction of the Master, but gangs intervening, especially the fire brigade, remain under the command of their respective officers.

The ship's crew must be able to guide the rescue teams. A plan of the ship and her loading plans, in particular those showing the location of dangerous goods on board, shall be put at their disposal on arrival. Where there is a risk of the fire spreading, for which the Harbour Master is the sole judge, he shall lead operations and order all necessary steps to be taken to safeguard public interests.

REPORT: The following report was received from a Ship Operator in March 1981.

Michelins Reception Facilities at Bassens:

1. The equipment consists of 2 pipes: One 10 in. diameter with a normal capacity of 500 cu.m./h.and the other 6 in. diameter. These capacity limits result from the meter which is fitted. Either pipe can be used independently according to conditions and features of the ship's pumps and equipment.

The absolute maximum pressure allowed in whole system is 10 bars.

Length of pipes:
2,315 m. for 10 in. pipe.
2,274 m. for the 6 in. pipe.

The equipment incorporates a meter post consisting of a Smith LB 250 volumeter normal temperature – 3 degrees normal pressure, 8 bars accuracy, 0.2 outputs of between 110 and 570 cu.m./.h. The equipment does not include a vapour return line.

2. Deliveries must be made by tanker vessels specifically designed and fully equipped for carriage and refrigerated liquid gases. The liquid must be delivered at a temperature of between −2° and −5°Celcius when measured at the ship's discharge connection.

The ship must be fitted with suitable pumping equipment, in full working order and of a capacity sufficient to maintain throughout the whole unloading operation and under the condition of temperature and pressure already specified, an hourly delivery rate at least equal 1/16th the total shipment and in any case not less than 100 cu.m./h. As indicating the pumps must be specifically designed for the movement of butadiene in the order that any premature failure, or suction of gas, be avoided. A further reason for the pumps and compressors being in perfect condition is that the quay is public and any delay prejudicial to the movement of vessels requiring to use it. The ship's discharge equipment must include a security device capable ensuring at all times, both under normal conditions and in the event of accidental or unforeseen mishandling that the delivery pressure at the connection point for the hose never exceeds 10 bars.

The ship must have lifting gear (derrick, hoist, etc.) with a minimum 2 tons capacity and sufficient reach to maintain the flexible hose at right height, even at low tide. The ship must be capable of completely emptying each tank and the systematic use of nitrogen must be avoided, as it is detrimental to the manufacturing process.

To enable receivers to prepare for cargo, following information required at least one week prior arrival of vessel.

1. The position of discharge outlets in relation to central axis of vessel and to the level of the deck.

2. Type and diameter and thread dimensions of the sampling connection.

3. Diameter and details of the ship's outlet union.

4. The details of the discharging equipment for each pump or compressor.

5. The normal and maximum rates of discharge and pressure of delivery should be given.

The vessel is equipped with 2 sampling positions in the middle and lower positions of each tank.

Notice of Arrival: Either the seller or the carrier must give to the Bordeaux Authorities (Port Autonome de Bordeaux) notice of the estimated arrival of the vessel at Bassens either 7 days advance of the tanker getting under way at the previous port of call should this be less than 7 days before arrival. Confirmation of the arrival of the vessel off the Gironde Fairway/Buoy (BXA) must be given to the Bordeaux Port Authorities by cable, telex or other means at least 24 hours in advance.

If the vessel is likely to arrive during a weekend, Michelin Bassens must be informed by Friday mid-day at the latest, otherwise operations will not be able to commence before 0800 hrs. on Monday.

Discharge: The ship's crew must scrupulously observe all general security regulations, together with any particular ones laid down by the officials appointed by the Bordeaux Port Authority to supervise the safety of discharging operations.

Receivers cannot be held responsible for any mishandling, excessive pressure or untimely purging that may occur during the discharge operation due to the vessel, or for the consequences of any failure to observe the security regulations by any person not employed by Michelin.

On arrival of the ship, Michelin, assisted by the crew, will connect up the shore line to the ship's outlets union by means of flexible hose. The ship's crew will be responsible for the use of their own lifting equipment (crane and derricks) for the raising of the flexible pipe to a sufficient level above the quay so as to take into account the tide. Jointly with representatives of the ship and the sellers, Michelin will proceed with, the drawing of samples from each tank (for quality control).

The Liaison of Discharging Procedures: Michelin's representatives are to be introduced to the crew members appointed to the discharging operation.

Throughout the duration of the discharging operations the rate and pressure of the output must remain constant and within the agreed limits in order that the metering equipment shall function correctly. On having completed discharge of the liquid from the last tank, the ship must cease pumping to permit:

The meter post personnel to by-pass the meters.

Michelin in conjunction with the representatives of the seller and the ship, to check the remaining cargo (the weight of liquid butadiene discharged thus being determined).

The gas can then be pumped out – the quantity being determined by measuring the difference in pressure and temperature of the ship's tanks, on the assumption that it contains only gas both before and after pumping out.

Unloading Completion: On the representatives of the sellers and the ship agreeing that the discharge of the butadiene has been satisfactorily completed, the receiver's personnel and the ship's crew will uncouple the flexible hose.

In the event that after complete discharge of all liquid, it is agreed between the ship and the seller to pump out the gas, the quantity involved will be calculated by measuring the difference in pressure and temperature of the ship's tanks, on the assumption that they held only gas both before and after pumping.

SHIPMASTER'S REPORT: June 1981.

Bordeaux – Bec d'Ambes: If proceeding further up river then Sea Pilot leaves at Le Verdon and River Pilot boards. Pilot gives an Inwards Declaration which (different from EEC check list) is to be completed and handed to Port Officer after boarding.

Reference Admiralty List of Radio Signals, Volume 6, 1980, Part 1, Page 205, paragraph (2), vessels wishing to enter La Gironde should address the 24 hour message to "Capiport Bordeaux" and 3 hours before entering French Territorial Waters should request, via 'Capiport' permission to enter La Gironde. These messages are free of charge.

Port regulations require the berthing (River Pilot) Pilot to stand-by, together with 1 tug, until a loaded vessel has lightened to 28 ft. fresh water maximum draft.

When berthing starboard side to then one tug on port bow and second tug just for pushing.

Usually, first ropes on board are one shore head wire and one shore head breast. Final moorings usually 2 shore heads, 2 shore breast, (fore and aft) and 2 shore stern lines, and 2 springs each end from ship.

The shore moorings consist of a chain cable connected to the shore, this is connected to a 57 mm. wire which is made fast on board. The wires are hove on board by means of a messenger (ship) which is attached to a small size, long length pennant attached to the 57 mm. wire. The shore end of the 57 mm. wire is attached to a chain cable thus creating a 'catenary effect' which proves very good in keeping the vessel alongside. For berthing there is one shore rigger each end to advise and assist.

For unberthing one rigger boards to assist in singling up to 1 shore wire and one back spring each end. He then goes ashore by pilot ladder. Vessels berth day and night depending on tide.

Agent requires in advance the distances from bow and stern to centre of manifold.

AUTHORITY: Port Autonome de Bordeaux-Le Verdon, Palais de la Bourse, 2 Place Gabriel, 33075 Bordeaux-Cedex. *Tel:* 56.90.58.00. *Telex:* 570617 Pablv. *FAX:* 56.90.58.77. *Cables:* Poronom – Bordeaux. *Contact:* P. Valls, Port Director. Commandant Bozec, Harbour Master – 56.90.59.31 (32, 33, 34).

BOULOGNE SUR MER: 50.43 N. 01.35 E. (See Plan)

PORT LIMITS: *Seaward Boundaries:* 4 nautical miles from the piers (e.g. Limits of Pilotage Area).

DOCUMENTS: As for "Calais".

PILOTAGE: Compulsory for vessels over 50 m. length. Vessels can communicate with pilot station, tel. 21.31.36.08, through Boulogne Radio. When pilot launch is at sea, contact by VHF Channel 12.

The most favourable boarding point is between the sea buoy and the wreck buoy situated 1.5 miles to the South, or slightly nearer the land if there are strong Westerly winds. In any event, the surf created by the Carnot breakwater must be avoided by keeping at least 1 mile off shore. If Pilot is not immediately available, vessel must wait in Outer Roads, if necessary at anchor, until further instructions received. On no account should vessel attempt to enter Carnot Roads without Pilot.

ANCHORAGE: The outer anchorage for large vessels is midwa between Bassure de Baas and the Carnot Breakwater. Anchorag prohibited in the main approach channel.

RESTRICTIONS: Entrance depends on tidal conditions. For larg vessels best to enter the breakwaters at slack water which occur 2 hours before time of high tide. Arriving vessels are obliged to contac Harbour Master's Office immediately by radio, or VHF Channel 12.

MAX. SIZE: For outer harbour: Length, 230 m.; draft, 10.67 m. springs 11.00 m. neaps. Max. d.w.t., 35,000 (approx.). Bassin Loubet: Lengt 130 m.; draft, 7.5 m. springs, 7.75 m. neaps.

HEALTH: Pratique given by Customs Officers who board on arrival. I case of suspected disease on board, Master should radio Agents prio arrival advising details.

RADIO: Boulogne Radio, call sign FFB, also on VHF Channel 25.

VHF: Harbour Master's Office: Call "Boulogne Port" on Channel 12.

Pilotage: Channel 12.
Tugs: Channel 12.
CROSSMA Gris Nez: Channel 16.

RADAR: No Port radar service at present.

TUGS: 3 tugs, 1×18.5 tons (1,850 h.p.) fitted for fire fighting an 2×14 tons (1,200 h.p.).

The tugs meet vessels as requested by Master on Pilot's advice.

BERTHING:

Sarraz-Bournet Dock: Europe Quay, 775 m., depth 11 m.; Ore Quay 240 m., depth 11 m. max. rate 12,000 tonnes per day.

Carnot Basin: Mooring on dolphins for Ro-Ro vessels up to 146 m. long beam 14 m. – 32 m., depth 9 m., max. draft 8.5 m. Connection to th open area by ramp capable of taking up to 175 tons.

Loubet Basin: (Closed by a lock, depth 5.50 m.) Huguet Quay, 240 m for Ro-Ro/Lo-Lo vessels up to 132 m. LOA; Voisin Quay, 700 m. (fo refrigerated vessels up to 135 m. LOA).

Fore-Port and Tidal Port: Cross-channel terminal with 3 ramps (one o which is dual level/double lane for new generation car ferries), capacit 40/175/144-228 tons. Can accept car ferries up to a length of 145 m and a draft of 4.50 m.

Hoverport: Can receive 3 hovercraft at same time.

The station can accommodate the transit of 10,000 passengers a day Direct connection by railway with Paris.

The port offers 70,000 sq.m. of warehouses and 150,000 sq.m o open-storage area. 250,100 sq.m. of cold storage space.

A silo enables 42,500 tons of clinker to be stored for loading directl on to vessels at a rate of 1,200 t.p.h.

CRANES/EQUIPMENT:

Quai de l'Europe:
  6×3 tonne cranes.
  3×6 tonne cranes.
  3×12.5/30 tonne cranes.
  1×35 tonne covered gantry crane.
  1×1,000 t.p.h. conveyor belt for clinker and ore.
Ore Quay:
  2×25 tonne gantry cranes.
Carnot Berth (Ro-Ro):
  Single lane, single deck ramp.
  Length: 70 m.
  Lane width: 4.50 m.
  Pontoon at end of ramp of 28 m.×28 m.
  Max. Load: One lane for 38 tonne trucks.
Quai Amiral Huguet:
  2×6 tonne cranes.
  Ro-Ro berth for bow, stern or side ramps.
Quai Jean Voisin:
  3×6 tonne cranes.

DENSITY: 1018.4.

FRESH WATER: Supplied by pipe-line to all berths.

FUEL: SMCL quay can supply marine fuel. Quay is limited to vessel less than 100 m. length and 5 m. draft, otherwise fuel obtainable b tanker lorry from Dunkirk.

CONSULS:

REST: 48.24 N. 04.30 W. (See Plan)

OCUMENTS: See "Dunkirk".

ILOTAGE: Pilots do not stay out at sea, but only go to meet ship at stimated time of arrival as sent by ship. Normally pilot boat positioned n the line Toulinguet lighthouse and Beuzec (or Charles Martel) buoy, bout 2.5 miles N.W. Toulinguet lighthouse. If strong S.W. wind, pilot oat waits for ship at entrance of Camaret Bay, about 1.5 miles N.E. oulinguet lighthouse. If sea too rough to allow pilot boat to sail out, oat waits for ship at entrance of Brest Roads, near Portzic lighthouse.

Ships proceeding Brest must send last message giving ETA Pilot tation (stating if *local time or GMT*), about 5 hours before arrival. lessage to be addressed *"Brest Pilot Office"* through Brest Le Conquet adio station (call sign FFU). Day and night watch at pilot office. Radio tation phones message direct as soon as received. Any alteration in TA should be passed pilot office immediately.

Pilot boat sails from Brest harbour about 1.5 hours before ship's ETA, nd 0.5 hour later pilot boat takes radiotelephony watch on 2182 kHz, alling ship from time to time on same frequency. Ships fitted with adiotelephony should listen and call on 2182 kHz. Pilot boat also quipped VHF Channels 16, 9, 6, 12 and Pilot office Channel 9.

NCHORAGE: At Pilot's discretion. Anchoring in main approaches estricted as indicated on charts.

ESTRICTIONS: Entry subject draft and height of tide on day in uestion. Two entrances to port, one dredged to 6 m. below zero of harts and the other 5.8 m. below zero. Depth at quays varies according erth from 6 m. to 11 m. below zero.

UGS: Two port tugs, 1,900 h.p. and 2,900 h.p. Tugs join vessel at ain entrance to port. Marine National places tugs at ship's disposal for ll port movements. Generally, tow rope supplied by tug at additional harge.

One French salvage tug belonging to the Abeille Company is stationed t the port, but only gives assistance for vessels requiring aid outside he port area.

ERTHING: According to draft, ships may have to wait in roads before erthing, depending on height of tide in fairways. Also see "Restrictions".

Complete area of the Port: 250 hectares.

Storage:

1. In open air 100 hectares (with the Industrial Zone near Dry Dock No. 3).
2. Covered sheds 35,750 sq.m.
3. 3 silos 87,000 tons.
4. Refrigerated shed 21,000 cu.m. and shortly 63,000 cu.m.

MAX. SIZE: Inside harbour, max. length 320 m. Draft up to 35 ft. subject to tide.

HEALTH: If from foreign port, cable Maritime Health Service 48 or 24 hours prior arrival requesting Free Pratique. If risk of contagious disease exists, vessel will be held in roads until cleared. If from another French port, Free Pratique automatic.

RADIO: Brest Le Conquet – FFU.

VHF: VTS in operation.

Also see "Pilotage".

BULK HANDLING FACILITIES: See "Berthing".

STEVEDORES: Agent has responsibility of making all arrangements for unloading, and is in touch with stevedores who arrange necessary gangs.

MEDICAL: Hospitals and clinics available. In the case of ship needing medical assistance, request should be addressed to Maritime Health Service through Conquet Radio Station, advising ETA, where vessel coming from and state of patient.

TANKERS: One berth for receipt of refined products destined for local storage tanks. Berth length 142 m., dredged alongside to a depth of 10 m. below zero of charts over an area 250 m. long and 30 m. wide.

FRESH WATER: All berths have fresh water supply. Apply to Chamber of Commerce who make necessary arrangements. Loading rate 13-15 t.p.h.

FUEL: Delivered by Societe de Depot des Petroles Cotiers and by Societe Maritime des Petroles.

CONSULS: The following countries are represented by Consuls at Brest:

Belgium	Germany F.R.	Portugal
Chile	Netherlands	Spain
Denmark	Norway	Sweden
Finland		

REPAIRS: Repair Quay No. 1 at the South of the dry dock No. 2. Length: 320 m.; Depth: 9 m. to 9.50 m.

Repair Quays Nos. 2 and 3. Length: 608 m.; Depth: 8.30 m. to 10.70 m. Can accommodate vessels up to 550,000 d.w.t.

Repair Quay No. 4. Length: 400 m.; Depth 11 m.

Repair Quay No. 5. Length: 400 m.; Depth: 12.5 m.

These two quays are situated to the North and to the South of the dry dock No. 3.

The 5 floating repair piers totalling 1,700 m. in length in water at a depth varying between 9 m. to 12.5 m. at the lowest tide, and connected to a tanker cleaning and bunkering station specially equipped to handle slop and residue from ship tanks.

Several modern lifting machines, among which:

1 crane of a capacity of 80 tons at 25 m.

1 crane of a capacity of 150 tons at 38 m.

Piers and dry docks equipped with electricity, steam, compressed air, oxygen, acetylene, telephone, potable water and fire fighting equipment.

DRY DOCKS: *No. 1:* Dimensions 225 m. by 26.77 m., entrance sill 4 m. below datum, situated at the Northeast angle of Basin No. 5. The entrance lock can receive 2 vessels simultaneously, 1 of 75 m. length and the other of 150 m. length, with some adjustments.

Max. draft, at Spring tides: 11.50 m.; at neap tides: 10 m.

No. 2: Dimensions 338 m. by 55 m. Can accept tankers of up to 280,000 d.w.t. Entrance sill 7.25 m. below datum. Dock situated in the Southeast of the Industrial Port Zone. Can accept vessels of the following dimensions.

At mean Spring tides: length 335 m.; beam 50 m.; draft 12.50 m.

At neap tides: length 335 m.; beam 50 m.; draft 10 m.

No. 3: Dimensions 420 m. by 80 m. Can accept vessels of 550,000 d.w.t. Entrance sill: 9 m.

TANK CLEANING: Station situated at the Southern extremity of the East Mole. Can operate 4 Victor Pyrate machines simultaneously. Equipped with 3 boilers to supply steam, 3 pumps, oily water separator and an extractor for solid residues.

The tank-cleaning station is connected by pipe-line to Repair Quays No. 1, 2 and 3 where tankers of 550,000 d.w.t. may be accommodated.

The new tank-cleaning and bunkering station, situated behind the dry-docks No. 2 and 3 is operational.

This station is connected by pipe-lines to dry docks No. 2 and 3, all repair quays and so to the 6 South for bunkering facilities.

It includes four sections:

A tanker cleaning section with oil-water separator (2,000 cu.m.p.h.).

An oil-treatment section to transform the recovered oil into commercial products;

A bunkering section with tanks of 35,000 cu.m.

A section that is able to separate the solid residues of tankers.

WATCHMEN: Compulsory for ships carrying dangerous materials, non gas-free tankers, vessels with chemical products, munitions, etc.

CERTIFICATES:

Nationality.
Gross Tonnage.
Classification.
Derat.
Vaccination.

CUSTOMS ALLOWANCES: Tobacco, Wine/Spirit. Ship's provisions must be under seal.

AIRPORT: At Guipavas, 7 km. from Brest – 4 daily services to Paris for onward connections.

TIME: Local time GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

POLICE/AMBULANCE/FIRE: Police 98444850 and 98445861; Police Secours 17; Ambulance and Fire Brigade 18 or 98442766.

TELEPHONES: Can be placed aboard at certain berths.

SERVICES: Degassing station, tank-cleaning and slop discharge, adjustment of chronometers, chart and document department, weather forecasting, permanent daytime service for signing on crew, barometer adjustment. Also Compass and D/F adjusting.

Port Weather Service: Port Office, 30 Bis, Quai Commandant Malbert. Health Service: Quai Commandant Malbert.

DEVELOPMENTS: A new port industrial zone with an area of 100 hectares, and frontage of approx. 1,800 m. which will enable the construction of quays with depths of 10 m. – 12 m.

Furthermore, the Port is studying a vast plan to develop the commercial port, so that the latter may adapt itself to the requirements of modern maritime transport (1985-90).

AUTHORITY: Port de Brest, Direction Departementale de l'Equipement, 2 rue Alderic Lecomte, 29200 Brest Cedex, France. *Tel:* 98.80.13.44 (12 lines). *Telex:* 940586. *Contact:* M. Redoulez, Ingenieur des Ponts et Chaussees.

CAEN: 49.13 N. 00.21 W. (See Plan)

DOCUMENTS:
3 copies Crew List.
3 copies Provisions List.
3 copies Crew Personal Effects List.
Derat Certificate or Exemption.

PILOTAGE: Pilot boat is on station from 2.5 hours before HW until 3 hours after HW. Vessels can contact the Pilot on VHF Channels 12 and 16. The pilot boat is stationed in the outer port of Ouistreham and goes out to the roads on vessels approach. International code flag signals are used to call Pilot.

Caen Pilot boat has a black hull with white stripe. The words "Pilote Caen" are written in white letters on the hull. During the Summer months the pilot boat is replaced by a launch bearing the same markings. As soon as the Pilot boards he will hand the Master an Entry Declaration to be completed.

ANCHORAGE: While waiting for the tide vessels may anchor in the vicinity of the light-buoy in Ouistreham Roads. The position of this buoy is Lat. 49° 19′ 50″ N., Long. 00° 14′ 18″ W. The buoy is positioned in depth of 10 m. Anchorage is open to winds from West through North to East; good holding ground. Currents do not exceed 2 knots at spring tides.

RESTRICTIONS: Dimensions of locks – East Lock length 181 m., width 18 m. West Lock length 225 m., width 28.45 m.

The locks are open to navigation from 2 hours before HW to 3 hours after HW. The locks can be used up to a maximum of 1 hour before/after these times by special permission of the Harbour Master and payment of additional dues.

Maritime Canal, length 14 km. The canal is dredged to 9.89 m. depth up to Herouville Dock. Vessels proceeding to the docks at Herouville and Calix must pass 2 bridges: Herouville 30 m. wide and Colombelles 30 m. wide.

Vessels proceeding to new dock must also pass the bridge at Calix, 21.76 m. wide. Maximum speed authorised in the Maritime Canal is 7 knots.

Maximum air draft for New Dock and St. Pierre Dock, 33 m.

MAX. SIZE: *Daytime:* Length 205 m., beam 23.5 m., draft 28.8 ft., sea water.

Night-time:

Blainville/Herouville	Length 160 m.	Beam 20 m.	Draft 25.9 ft. SW.
Calix	Length 150 m.	Beam 20 m.	Draft 25.9 ft. SW.
New Dock	Length 135 m.	Beam 16 m.	Draft 21.4 ft. SW.

HEALTH: Free Pratique is automatic for all ships. Health control is carried out by Customs Officers under the direction of the Havre Port Health Office. For ships coming from ports in Africa, Asia, or Pacific Islands a Maritime Declaration of Health is required.

In case of suspected epidemic or fever on board Master must advise the port authorities who will instruct him to proceed to an appropriate anchorage to be boarded by the Port Health Doctor.

RADIO: Nearest radio station Boulogne Radio, call sign FFB.

VHF: Vessels may communicate with the Harbour Master's Office by VHF Channels 12 and 68. This service only operates during the hours when the locks are operating.

TUGS: The use of 1 or 2 tugs is recommended for vessels over 16.50 m. beam.

BERTHING:

Dock	*Quay*	*Facilities*	*Length* (m.)	*Draft* (m.)(F.W.)
Saint Pierre	Vendeuvre	Reserved for pleasure boats	280	4.0
	Cafarelli		150	4.0

CALAIS: 50.58 N. 01.50 E. (See Plan

DOCUMENTS:
Ship Register.
Manifest of Cargo.
Bill of Lading.
3 Lists of Provisions on board.
4 Lists of Articles held by Crew.
3 Lists of Crew.
List of open spaces.
Health Certificate, endorsed by Master on arrival.
Derat or Exemption.
For tankers, Certificate of Cargo Specification and Certificate o vessel's suitability to transport inflammable liquids in bulk.

PILOTAGE: Compulsory when entering or leaving harbour, except fo ships less than 50 m. length. Pilotage area: 3 miles from piers. Ships required to give notice of their arrival 18 hours before, through Boulogn Radio. Pilot waits between buoys CA4 and CA6. Pilot boat: Black, whit side stripe, bearing the inscription "Pilote Calais". She is equipped wit VHF, Channel 6 and Channel 16.

ANCHORAGES: Between CA6 and CA8, 15 m. to 17 m. deep, sand and gravel. Good anchorage. When bad weather from North, ships ar advised to stand out to sea or anchor in the roads of Les Dunes. Shi will receive instructions from Pilots or Harbour Captain's Office when t enter roads of Calais.

RESTRICTIONS: Harbour channel 230 m. wide. In channel and oute harbour, depths are maintained at 8.40 m. MWL. Vessels should ente harbour preferably about 2.5 hours before high tide or half an hour afte high tide. Because of the shape of sluice at the entrance larger vessel cannot have direct access to the Bassin Carnot at certain tides. These vessels may lighten in outer port, at "Quai Paul Devot", where depth i 9 m. LWOST.

MAX. SIZE: "Bassin Carnot", 150 m. max. length; "Bassin Ouest" (West Dock) 110 m. max. length; "Quai P. Devot", 190 m. max. length "Bassin Carnot", 19 m. max. beam; "Bassin Ouest", 16 m. max. beam Max. draft: 9.15 m. (29 ft. 6 in.). Port accessible to vessels o 45,000 d.w.t.

HEALTH: Sanitary Control can arrange derat and exemptions. Po Sanitary Control, 21-23 rue du Commandant Bonningue, 62100 Calais Tel: 21-977741. Telex: 160758 F.

RADIO: Messages through Boulogne Radio. ETA must reach pilotag station or Harbour Master's Offices 18 hours before arrival. Near Calais ships equipped with VHF can call Harbour Master on Channel 12 o pilotage station on Channel 16.

TUGS: Generally join ships at end of the piers. Towing ropes ar generally ships own but can be supplied by tug.

BERTHING: Max. height of tide 7.30 m. Depth on dock sills 2 m LWOST.

At West dock, entrance between 1.5 hours before and half an hou after high tide. In Bassin Carnot, entrance between 3 hours before an 1 hour after high tide.

There are 2 berths equipped for handling Roll-on/Roll-off traffi situated in Bassin Carnot.

Also see "Developments".

TANKERS: Two posts provided for tankers: "Quai Paul Devot" f medium-sized tankers. "Bassin Ouest" (West Dock) for small tanker "White and black" products can be accepted at "Bassin Ouest". On "black" products admitted at "Quai P. Devot". Tankers are allowed enter harbour only by daytime. They must leave as soon as operation are finished. Hoses 10 in. and 12 in. in diameter. Barges discharg with a 10 in. hose.

CRANES:

Maritime Station Quay	Electric cranes – 6 tons	3
Paul Devot Quay	Electric crane – 6 tons with automatic scoop	1
	Electric crane – 12 tons with automatic scoop	1

PILOTAGE: Pilot available from St. Malo. Tel: 99.81.63.59.

BERTHING: 2 public wharves, depths from 0.5 m. to 13 m. at Spring tides.

CRANES: One 3 ton crane available.

MEDICAL: Hospital facilities available at St. Malo, 15 km. distant. Tel: 99.81.60.40.

FRESH WATER: Available in small quantities.

FUEL: Diesel oil available by truck and by pipeline on wharf.

AIRPORT: Nearest at Dinard, 30 km. away.

AUTHORITY: Subdivision Maritime de l'Equipement, Quai du Pourquoi Pas., 35402 Saint Malo, France. *Tel:* 99.56.07.24. *Telex:* 950197. *FAX:* 99.40.11.70. *Contact:* Xavier La Prairie, Engineer.

CANNES: 43.33 N. 07.01 E.

DOCUMENTS:

To be sent on departure from previous port.
3 copies of Passenger List.
1 copy of Crew List.
Required on arrival:
4 copies of List of Passengers, showing Christian name, surname, age, date and place of birth, nationality.
2 Crew Lists.
5 copies of a Special Arrival form (supplied on arrival).

PILOTAGE: No Pilot station at Cannes. A tender with Company's flag on top of its mast will meet the vessel: *(a)* If ship is proceeding to anchorage No. 1, in Golfe de la Napoule, about half a mile South of the lighthouse at end of Cannes port Pier (Quai Lauboeuf); *(b)* If ship is proceeding to either anchorage No. 2 or 3, in Golfe-Juan, half a mile North of Ile Ste Marguerite.

The tender will lead to anchorage and will give 1 blast of the siren when correct position has been reached. At night, tender has a fixed white light at top of its mast, which replaces the flag. Should it not be possible to advise by wireless before arrival at anchorage and weather conditions making it necessary for ship to anchor at either position No. 2 or 3, boat will meet ship in Golfe de la Napoule, 2 miles South of Cannes port lighthouse. In this event, ship must proceed to anchorage No. 2 or 3 as appropriate, steaming to South of Ile St. Honorat, whilst tender will proceed by channel between Ile Ste Marguerite and the mainland.

ANCHORAGE: Advice of anchorage is passed to Master via Grasse Radio or Monaco Radio, VHF Channel 16 usually about 1 hour before arrival. There are 3 anchorages, any of which may be used according to the weather:

No. 1 off the port of Cannes, approximately half a mile South of end of breakwater, used by calm sea or by East or N.E. winds.

No. 2 is situated to North of Ile Ste Marguerite, used by S.E. or S.W. or South winds.

No. 3 to the East of Cap de la Croisette, used by West or N.W. winds.

It could happen during the call, winds may change direction and movement from anchorage No. 1 to No. 2 or No. 3 become necessary. Shift takes about 1 hour.

HEALTH: Port officials will embark immediately the ship anchors. Free Pratique may be granted by wireless telephone 1 hour before arrival at ship's surgeon request stating: "No illness on board".

FRESH WATER: One water barge (capacity 65 tons) and 2 water barges (capacity 20 tons) available.

12 hours notice required for orders up to and including 100 tons. 24 hours notice required for amounts in excess of 100 tons. Pumping rate 30–40 cu.m./hr. with one or two boats.

GANGWAY/DECK WATCHMEN: Watchmen for gangways should be provided by ship and passengers are requested to present their landing cards every time they use the gangways.

AIRPORT: Nice Cote d'Azur (20 km.).

AUTHORITY: Capitainerie du Port Gare Maritime, 06400 Cannes, France. *Tel:* 93.39.61.77. *Contact:* Patrick Joxe, Harbour Master.

CHERBOURG: 49.38 N. 01.38 W. (See Plan)

DOCUMENTS:
Declaration of Health.
Manifest of Provisions on Board.
Manifest of Crew's Possessions.
Manifest of Cargo – in certain cases.
Manifest of Equipment.

DEEP SEA PILOTAGE: Pilots board off "CH1" Buoy. Radio ETA to "Hutchinson Gravesend" Telex 965225 or "Cherbourg Pilots" Telex 170952 or "Pilotage Hauturier Cherbourg" Telex 171467 Pilhaut and others (48 and 6 hours notice.) On approaching Cherbourg contact Cherbourg Signal Station on VHF Channel 16 confirming ETA. Also see "Pilotage".

HELICOPTER SERVICE:
Air Affaires – Heli-Services, Aerodrome de Cherbourg – Maupertus, B.P.1 – Gonneville, 50840 Fermanville. Tel: 33.44.56.96. Telex: 171348 Helip.

Description of Services: A 24 hours – 7 days per week service, within a radius of 150 nautical miles of Cherbourg, to and from ships without the necessity of reducing speed or changing course, in any sea conditions.

The positioning and pick-up of persons are accomplished either by landing or by winching on all types of vessels, serving even small coasters and fishing boats.

Doctor and stretchers for injured personnel available within minutes of your call.

Note the possibility to put technicians and specialists on board for up to 12 hours work while underway and take them ashore again.

Recommended Procedure:

(A)	48 hours before	Please cable through Saint Lys Radio (FFL) or any radio station to Heli-Services Cherbourg Telex 171348 HELIP the following information: (a) ship's name (b) state you require Helicopter and reason for request (c) ETA rendezvous point requested (d) VHF in good order or not (e) Confirm full landing, restricted or winching area available.
(B)	24 hours before	With the same radio procedure confirm your ETA.
(C)	4 hours before	Call "Jobourg Traffic" (French Marine Traffic Centre) on VHF 16/11 to confirm your ETA. Heli-Services office is directly connected with Jobourg Traffic and transmit information concerning rendezvous point and helicopter operation.
(D)	When helicopter is flying, its pilot contacts you on VHF.	Give information about relative wind and start locked key homing signal on 410 kHz,

Services are assured 24 hours per day with 2 hours' notice, or immediately in case of emergency.

Rendezvous Points:
Standard Points

For normal operations, 4 rendezvous points are recommended.

Point A: 13 nautical miles North of Cap de la Hague.

Point B: 10 nautical miles North of Cap Levi.

Point C: 5 nautical miles North of Cap Levi (prohibited area fo tankers).

Point D: 27 nautical miles North of Cap Levi (ships West bound)

However, if desired by the Master, the helicopter can meet the vesse at any point.

PILOTAGE: Requests for pilotage must indicate arrival time at the buo CH1. They may be addressed to Agent or direct to pilot statio telegraphic address "Pilotage Cherbourg" Telex: 170952, or through th Homet look-out station by means of the usual signals. To avoid delay i is well to warn the pilot station 4 hours in advance of arrival. As a genera rule, the pilot boat always comes out, whatever the weather. In ba weather, the vessel follows the pilot boat and Pilot boards as soon a shelter permits.

Deep-sea Pilots for Tankers: Deep-sea Pilots for loaded tankers carryin hyrdrocarbons or other dangerous cargoes are embarked 7 miles Nort of Fort de l'Ouest Light, or at least 7 miles off the coast, the exac boarding place being given on each occasion by R/T from the Pilotag Service.

ANCHORAGES: Anchoring must be made strictly according to th instructions of the Pilot so as not to get in the way of movements an anchorage of steamers. Depths vary from 6 m. to 12 m. in saf anchorages.

RESTRICTIONS: In the wet dock, the bridge is opened 1 hour befor until 1 hour after high water.

MAX. SIZE:

			Depth Average Tide	
	Length (m.)	*Breadth* (m.)	*Spring* (m.)	*Neap* (m.)

CRANES: 35 ton capacity gantry for road/rail container and kangaroo operations. 40 ton capacity mobile crane for container and kangaroo operations. 30 to 90 ton floating cranes. Various mobile cranes for light and heavy lifts. Fleet of tugmasters and fork-lift trucks.

Also see "Berthing".

MEDICAL: Advise Agent of any requirements at the same time as ETA. There are 2 hospitals, civil and military, both very well equipped.

TANKERS: There is a discharge berth at Querqueville Jetty. Length of berth 200 m., max. draft 9 m.

FRESH WATER: Water points on all quays.

FUEL: Available from local suppliers – Esso, Shell, etc.

CONSULS:

Belgium
Portugal
Denmark
Finland and Norway
Haiti
Venezuela
Greece
Sweden
United Kingdom

REPAIRS: All types of hull and engine repairs are possible.

DRY DOCK: Commercial Port's dock: Length 75 m., width 14 m.

Dry Dock Nos.	*Sill Length (m.)*	*Max. dim. of vessel able to enter* Length (m.)	Breadth (m.)

WATCHMEN: Every ship in port must have a watchman, usually a crew member.

OPENING/CLOSING HATCHES: At the discretion of Master, crew may perform this.

CUSTOMS ALLOWANCES: Free allowance for each crew member – 200 cigarettes or 50 cigars, and 1 litre of alcohol. Common Market Countries – Crew: 300 cigarettes, 75 cigars and 1.5 litres of alcohol.

AIRPORT: At Maupertuis, 12 km. from Cherbourg. There are no regular services in the immediate vicinity.

REPATRIATION: Can be arranged.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: January 1st; Easter Sunday/Monday; May 1st; Ascension; Whitsun Sunday/Monday; July 14th; Assumption; 15th August; November 1st; Victory Day, November 11th; Christmas Day, December 25th.

POLICE/AMBULANCE/FIRE: Police: 33.44.20.22 or 17. Ambulance: 33.53.13.29. Fire: 33.53.01.23 or 18.

TELEPHONE: Generally, ships do not request the installation of a telephone line, unless for a prolonged stay.

IDENTIFICATION CARDS: Each crew member must carry his seaman's card.

DEVELOPMENTS: Deep draft berths (13.0 m. depth), length 300 m. to be built.

AUTHORITY: Capitainerie du Port, Pont Tournant, 50.100 Cherbourg, France. *Tel:* 33.20.41.25. *Telex:* 170849 (Port Director).

Direction Departementale de l'Equipement, Allee Du President Leon Menut, 50100 Cherbourg. *Tel:* 33.43.01.33. *Telex:* 170011 Didello (Saint Lo).

CONCARNEAU: 47.52 N. 03.55 W. (See Plan)

DOCUMENTS:

Ship's Registration Certificate.
Cargo Manifest.
Stores List.
Crew Personal Effects List.
List of Crew and Passengers with dates of Vaccinations.

PILOTAGE: The pilotage area is limited to the East by alignment of the sea marks of Point of Raguenes (Lat. 47° 47′ N., Long. 03° 48′ W.) and the Ile Verte (Lat. 47° 46′ 40″ N., Long. 03° 48′ W.), to the South by the Parallel of the "La Jument Buoy" (Lat. 47° 39′ N., Long. 04° 01′ 20″ W., to the South of the Glenan Islands), to the West by the meridian of the "Basse Rouge" Buoy.

Pilotage is not required for vessels with an overall length of less than 50 m., except for tankers carrying oil products or gas.

It is recommended to warn the Pilot 24 hours in advance, indicating the most accurate ETA (Tel: 98.58.85.05).

The pilot craft is not stationed at sea. The Pilot generally boards to the South of the Cochon Tower or, on request, between Cochon Tower and the Ile aux Moutons; the craft carries the "H" flag by day and white flashing lights at night.

If the state of the sea does not permit the Pilot to board, the pilot craft makes the signal "T" (by flag or morse code) signifying: "follow-me, the Pilot will board in the shelter of the Peneroff Breakwater". If the state of the sea does not allow the pilot craft to come out, it stations itself in the shelter of the Peneroff Breakwater and makes the signal "BT".

Access: It is not advisable for vessels of a certain size whose Masters do not know the channel well to proceed without a Pilot, at LW in particular, to the North of the line Beg-Meil – Trevignon Point.

ANCHORAGE: *Main Roads:* Vessels anchor in the bay, on request, on a muddy bottom, on the alignment at 028.5° from the Beuzec church tower through the la Croix lighthouse.

Small Roads: Vessels anchor in the small roads sheltered from the North to Southeast by East, in 8 m. of water and a bottom of sand and mud, on the access alignment or to the West of this alignment.

At night, when on the access alignment, as soon as the Lanriec Light appears, the alignment is opened so as to see the Beuzec Light to the left of the La Croix Light, and when the Lanriec Light disappears, the vessel anchors in 8 m. of water.

The recommended landing stage is on the La Croix Breakwater.

Kersos Cove (Lat. 47° 52′ N., Long. 03° 55′ W.): It is possible to anchor here sheltered from winds from North to South by East, but with a reduced turning area. Vessels anchor half way between the Kersos Tower and the coast to the N.E. in 3 m. – 5 m. water with a good holding ground of sand and mud.

MAX. SIZE: *Tankers:* By day: 91 m. overall; by night: 81 m. overall. *Other vessels:* By day: 101 m. overall; by night: 91 m. overall.

RADIO: Contact Conquet Radio.

VHF: Tugs on Channel 12 on weekdays during working hours from 0800 – 1200 hrs. and 1400 – 1800 hrs.

TUGS: 2 tugs available on demand, meet vessels near Cochon Light, large vessels use a tug for berthing.

BERTHING: As Concarneau is essentially a fishing port, a commercial vessel of a certain size cannot enter without the authorisation of the port services, who must prepare a quay berth for her in advance.

The Port of Concarneau includes the Port of La Croix located to the West of the La Croix Lighthouse, a fore-port and a rear-port separated by the peninsula on which is Ville-Close. The Lanriec Passage connecting these two port areas is cleared at 3 m. depth and marked by 5 light towers.

Fore Port: In the middle of the fore port are 540 m. of pontoons enabling 265 pleasure craft with a draft of 2.5 m. approx. and length of 10 m. to berth.

Along the Peneroff Quay, deposits formed by a hard bottom covered by a thin layer of muddy water from 1 m. to 2 m. Along Ville-Close, the bottom dries from 2 m. to 5 m. Along the North face of the South Breakwater, a slipway permits careening of craft.

Rear Port: The Rear Port is comprised of 1,537 m. of mooring quay.

Aiguillon Quay: Depth 1 m., length 110 m.
Carnot Quay: Depth 2.50 m., length 250 m.
Lin Quay: Depth 2.50 m., length 250 m.
East Quay: Depth from 2.50 m. to 5 m., length 140 m.
Petrol Tanker Quay: Depth 5 m., length 95 m.
Sand Quay: Depth 5 m., length 25 m.
Right Bank Moros Quay: Depth 5 m., length 257 m.
Left Bank Moros Quay: Depth 5 m., length 220 m.
A Ship's Lift Pier: Depth 5 m., length 90 m.

These quays receive fishing and commercial vessels and vessels under repair. The vessels are positioned according to their characteristics and the nature of the goods to be unloaded or taken on board.

CRANES: 1 × 17.5 tonne (East Quay), 4 × 2.0/13.0 tonnes (mobile).

MEDICAL: Municipal Hospital at Porzou. Tel: (16-98) 97.10.60.

FRESH WATER: Available.

FUEL: Available.

DRY DOCKS: Synchrolift available. Max. capacity 2,000 tons; max. LOA 95 m.; max. keel length 76 m.; max. beam 14 m.; max. draft 5.50 m. Fresh water, electricity, compressed air and cranes available.

There is a slipway which can accommodate vessels of 350 tonnes.

AIRPORT: At Quimper – Pluguffan 30 km. from the town. Twice daily flights to Paris and flights to London during the Summer months.

CUSTOMS ALLOWANCES: *Tobacco:* Fixed at 30 grams per day, at sea, per person.

Alcohol: The equivalent of 5 centilitres of rum at 42° per day, at sea, per person.

These allowances are free of tax for use on board, but may not be landed.

POLICE/AMBULANCE/FIRE: Police Tel: 98.97.17.17; Ambulance and Fire Brigade Tel: 18.

IDENTIFICATION CARDS: Any National Identity Documentation will suffice.

AUTHORITY: Monsieur le Directeur, Direction Departementale de l'Equipement, Cite Administrative de Kerfeunteun, B.P.506, 29325 Quimper Cedex. *Tel:* 98.95.70.32. *Telex:* 940.424.

Capitanerie du Port, Quai Est, B.P. 231, 29182 Concarneau. *Tel:* 98.97.33.80. *Contact:* L. Tanguy, Le Commandant de Port.

DIEPPE: 49.55 N. 01.04 E. (See Plan)

DOCUMENTS:

1. 4 Crew Lists.
2. 2 Lists of Stores.
3. 1 Loading Manifest.
4. 1 Passenger List.
5. 1 Declaration (furnished by Agent) stating that ship possesses up-to-date Safety Certificates.
6. 1 Health Declaration.

PILOTAGE: Pilot boards 4 miles from breakwaters. Pilotage is compulsory in this area except for vessels less than 50 m. long equipped with VHF (Channel 12). Pilot boat is ready to put to sea from 2.5 hours before to 1 hour after high tide when a vessel is expected. During this period maintains radio telephone watch. VHF Channel 12.

All vessels must send ETA to the pilotage authority of the Seine/Rouen/Dieppe at least 5 hours prior to arrival in the Dieppe Roads, any delay greater than 2 hours or where a tide is missed must be signalled at least 3 hours before the initially ETA. Vessels not obliged to take on a Pilot must indicate in their ETA whether or not a Pilot is needed.

Address: PILSEINE – 21 rue du Mont Diboudet – Rouen, Telephone 35.71.68.50; Telex 770575.

APPROACHES: Coming from the West, immediate landfall is Cap d'Ailly which is passed at 3 miles distance and then vessels proceed to the landfall buoy of Dieppe marked D.1. (East Cardinal, black yellow black, very quick flashing light, 3 flash every 5 seconds and a bell).

Location: Lat. 49° 57′ 15″ N., Long. 1° 01′ 20″ E., or 2.5 miles to the N.W. of the port entrance.

The cliffs which surround Dieppe give very good radar echoes.

ANCHORAGE: It is recommended to anchor in zone bounded by following points: *(a)* Lat. 49° 56′ 55″ N., Long. 01° 04′ E.; *(b)* Lat. 49° 58′ 40″ N., Long. 01° 02′ 45″ E.; *(c)* Lat. 49° 57′ 42″ N., Long. 00° 59′ 20″ E.; *(d)* Lat. 49° 55′ 50″ N., Long. 01° 00′ 30″ E.

This anchorage area includes Buoy D.I and depths are from 6 m. to 12 m. with sand and broken shell bottom. Larger vessels anchor approximately 0.5 miles to North of Buoy D.I in depths of 10 m. to 12 m.

Forbidden Anchorage: It is forbidden to anchor in the area defined by the following points: Lat. 49° 56′ 55″ N., Long. 01° 05′ 29″ E. – Lat. 49° 56′ 25″ N., Long. 01° 03′ 03″ E. – Lat. 49° 56′ 05″ N., Long. 01° 04′ 50″ E.

RESTRICTIONS: The lock gates of the commercial basins are only open from 2 hours before to 1 hour after high tide. Vessels remain at anchorage in the roads until the gates are opened. Large vessels enter preferably at the time of high tide to benefit to the maximum from the level of water under the keel and the best conditions of navigation.

Entry and Leaving: Vessels entering must arrive in the roads at the latest 25 minutes after high tide, except for large vessels which must be in the roads at the latest at high tide. Vessels leaving must be ready at the latest 30 minutes after high tide.

Entry and Leaving Signals: Entry and leaving signals are exhibited on the signal post on the West jetty and on the repeater post of the fore port (signals in accordance with the Lisbon Convention of 23rd October, 1930.) At the Colbert Sluice and at the various locks the signals are simplified.

MAX. SIZE: Vessels LOA 155 m. and beam 21.5 m. can enter. In certain cases vessels of LOA 165 m. may be permitted to enter.

Colbert Lock (Dimensions of Lock): 230 m. length, 37 m. width, controls entrance to Inner harbour, where depth maintained about 7.50 m.

Canada Docks: Length 154 m.; width, 21 m.; draft 8 m.

Paris Dock: Length 154 m.; width 21 m.; draft 7 m.

Opening of Canada and Paris basins: 2 hours before to 1 hour after full tide, night or day. The port is accessible to vessels up to 10,000 d.w.t. – 12,000 d.w.t.

HEALTH: Pratique given by Customs Officers who board on arrival. In case of suspected disease, Master required to radio details to Agent in advance.

RADIO: Boulogne Radio (FFB). *Arrival Advice.* Masters of vessels must send to the Port Authority, 24 hours in advance, or at the latest when leaving the previous port where this is located less than 24 hours away, the expected time of arrival in the roads, indicating the name of the vessel, tonnage, length, beam, the date and time of arrival, maximum draft of the vessel on arrival, the nature and tonnage of various items of its cargo and hazardous cargo (in transit or to be landed), possible damage to the ship, its equipment or to the cargo. A rectifying message must be sent in the event of a change. Address: Port Captaincy: 1 Quai de la Cale, Dieppe. Tel: (35) 84 10 55. Telex: Mardiep 180414F.

VHF: Dieppe Radio maintains continuous watch on Channels 2 and 24 and calls vessels on Channel 16. The Port Authority (Call sign "Dieppe Port") maintains watch on Channel 12.

TUGS: 3 tugs available (1,400 h.p., 750 h.p., 600 h.p.). Requests for use must be made to the Port Captaincy. Two tugs in service at all times.

BERTHING:

Dock	*Quay*	*Facilities*	*Length (m.)*	*Sea level chart (m.)*
Paris	Norvege	1 Roll-on/Roll-off ramp (80 t.)	715	7.5/9
	Maroc	6 noria conveyors for banana handling	600	7.5/9
Canada	Indes	1 grain bagging funnel	150	7.5/9
	Quebec	grain silo (cap. 12,000 tons). Capacity 500 t.p.h.	160	7.5/9

Arriere-Port	Quai Guynemer	1 Roll-on/Roll-off ramp (120 t.)		

Handling Capacities:

	Loading:
Colza oil	200 t.p.h. (from the quay)
Colza grains	60 tons/man hour
Grain and wheat	500 t.p.h. (silo)
Rough timber	23 to 28 cu.m./man hour
	Unloading:
Colza oil	(taken from quay)
Colza grains	50 tons/man hour
Sand and gravel	100 to 150 tons/man hour
Bananas	about 3,000 cartons/man hour
Citrus fruit on pallets	55 to 65 pallets/man hour
Citrus fruits not palletised (cases, cartons, crates)	16 to 21 tons/man hour
Pre-slung timber	about 80 cu.m./man hour
Bulk timber	about 25 cu.m./man hour
Iron and steel	50 to 60 tons/man hour

CRANES: One 30 ton crane at Quay de Tonkin. One mobile crane, 40 ton and jib 40 m.

Quay Cranes: 6×3 ton, 2×3-6 ton, 2×6-12 tons and 6×2 ton gantry cranes.

BRIDGES: There are 3 bridges without vertical obstacles, and to request opening of the Colbert Bridge give 3 long blasts on the ship's whistle, to call for the opening of the Admiral Rolland Bridge give 3 long blasts on the whistle, and for the opening of the Jehan Ango Bridge give 2 long blasts on the whistle.

STEVEDORES: Normal hours are 0800–1200 and 1400–1800. Possib to work from 1800–2200 to complete operations. No work on Sunday or holidays.

MEDICAL: All medical facilities available.

FRESH WATER: Supplied by pipe-line. There are a great number o outlets on the quay.

FUEL: Available in small quantities; delivered by tanker lorry.

CONSULS:	Norway	Denmark
	Sweden	Netherlands

REPAIRS: Good facilities exist, all types carried out.

DRY DOCKS: Dry dock in the inner harbour, dimensions 130 m. × 18 m It can receive ships 129×17 m. One lift of 300 tons and 7 repair sites

SURVEYORS: Bureau Veritas at Dieppe; Lloyd's at Le Havre an Rouen; American Bureau of Shipping at Le Havre; Det Norske Verita at Le Havre.

GANGWAY/DECK WATCHMEN: Available if required.

OPENING/CLOSING HATCHES: According to agreement, either b crew or stevedores.

CUSTOMS ALLOWANCES: EEC countries – 300 cigarettes 1.5 litre of spirits and an exemption of 600 francs. Antilles: 400 cigarettes, 1 litr of spirits of more than 22°; Africa: 400 cigarettes and 1 litre of spirits o more than 22° and an exemption of 140 francs per passenger.

REPATRIATION: Good facilities.

AIRPORT: Dieppe Saint Aubin (3 km.) has two daily connections wi Shoreham, England. The nearest main airport is Paris.

TIME: GMT plus 1 hour, but during the period from beginning April t end September (six months) the legal time is advanced by 1 hour (GMT plus 2 hours).

HOLIDAYS: 1st January; Good Friday; Easter Monday; Ascension Day Whit Monday; 1st May; 14th July; 15th August; 1st November; 11t November; 25th December.

POLICE/AMBULANCE/FIRE: Police (Duquesne Quay) 35.84.87.32 o 17. Fire and Ambulance 18 or 35.84.33.00.

TELEPHONES: No connections on the quays.

SERVICES: Compass adjusting, etc. available.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Embarkation card or passport is sufficien

AUTHORITY: Port de Dieppe, Quai de la Cale, 76208 Dieppe *Tel:* 35.84.10.55. *Telex:* Mardiep 180414 F. *Contact:* P. Leminicie Commandant du Port.

DONGES: Refer to Nantes.

DUNKIRK: 51.03 N. 02.24 E. (See Plan

PORT LIMITS: The seaward boundaries of the port within which a vesse is considered to be an "arrived ship" is the Dyck Lightship or the Road if the ship comes from the East.

DOCUMENTS:

Entry Bill (all information about ship), given by Pilot to Master, wh fills it in and gives it to Harbour Officer.

To be given to Customs:

3 Crew Lists.
3 Passenger Lists.
3 Copies Stores/Bonded Stores List
Manifest or copy.
Form for increase of tonnage.
Declaration of open spaces.
3 Lists of objects held by crew.

PILOTAGE: Pilotage station limits – there are 2 pilotage zones.

1. The Outer Zone which is limited:
   To the West by the meridian of Calais Lighthouse (Long. 01° 51′ E
   To the East, by the meridian of Long. 2° 27′ E.;
   To the North, by the line situated 3 miles seawards of the LW mar
   To the South, by the Calais Pilotage Zone, the coast and the Inne Zone defined below.
2. The Inner Zone limited:
   To the West by meridian Long. 02° 08′ E.;
   To the North, by a continuous broken line constituted by the paral Lat. 51° 03′ N., the line of the coast, the meridian Long. 02° 20′ E the parallel Lat. 51° 04′ 30″ N.;
   To the East by the meridian of Dunkirk Lighthouse (02° 22′ E.);
   To the South by the end of the water levels of the autonomous po of Dunkirk.

Pilotage is compulsory in Inner Zone for ships over 150 n.r.t. or ship of max. length 50 m., or with dangerous cargo.

Pilotage compulsory in Outer Zone for ships not fitted with VHF, o over 1,000 nett tons or max. length 100 m. or with dangerous cargo.

Vessels coming from the West should call Pilots 12 hours befo arrival or when leaving the former harbour. Vessels coming from th East should call Pilots 2 hours before arrival. ETA based on time o arrival at Dyck Lightship, should be given through Boulogne Rad (telegraphy) or by radiophone (2182 kHz). ETA to state: ETA (at pi station). Length of the ship. Draft. Place where the Pilot is requeste Dyck/Dunkirk Light Vessel; Dunkirk Roads; Zuydcoote Pass.

ETA will be considered null and void if vessel does not arrive with 2 hours of stated ETA.

In vicinity of pilot boat, vessels may communicate with Pilots by VH Channel 16, or R/T 2182 kHz or by Aldis lamp or flag signals when pi boat is in sight. Telegraphic address of Pilot: Piloduk. Telex: 820902

Pilot boat is about 50 m. long, black hull with white horizontal strip "Pilot Dunkerque" written on hull. Black funnel with white ancho insignia.

Pilot boat is positioned between Dyck Lightship and Buoy CA 2 I bad weather, pilot boat stays on radio watch but may leave for a mo sheltered place, or put into port.

Ship's Departure: Sailings must be ordered at the Harbour Office, pilot station, towage office and linemen's office.

Pilots: For a sailing between 0800 and 2000 hrs. 1.5 hours' notice is necessary to Pilot for the ships moored in Dunkirk-East (Mardyck Bassin excepted) a 2 hours' notice for ships moored in Mardyck Bassin and Dunkirk-West.

For a sailing between 2000 hrs. and 0800 hrs. vessels are required to give notice to the pilot office before 1600 hrs. and to order the Pilot before 1800 hrs.

Report: July 1990.

Following received by Master from Agent:

ETA Dunkirk: Agent will advise all parties, but Pilot Station requires information directly from ship 12 hours, 6 hours (Telex: 820902); 3 hours, 2 hours (VHF); and permanent contact prior to arrival.

New pilot procedure: boarding either by helicopter or fast launch.

ANCHORAGES: Large vessels waiting for entrance must anchor in the area West of Dyck Light Vessel. In bad weather, ships may anchor off English coast, in the roads of Les Dunes, with good mooring ground of sand and mud 20 m. deep. On the Roads of Dunkirk, ships must anchor East of Buoy E.1 so as not to disturb the entrance of ships.

APPROACHES: A new route, which allows vessels with draft 9.0 m. coming from the North Sea to reach Dunkirk more directly, has been buoyed. Vessels drawing 11.0 m. should adjust their course to round the Dunkirk Lanby (51° 03.0′ N., 01° 51.8′ E. approx.) after passing Ruytingen S.E. Buoy.

Buoys have been laid to mark the route.

It is recommended that this route should not be used by vessels not having a pilot on board.

The buoys marking Le Dyck and Haut-fond de Gravelines are liable to change.

RESTRICTIONS/MAX. SIZE: Movement of vessels: Normal operating conditions. Exceptionally, dispensations may be given by port services after study of specific cases.

Eastern Port

VIA CHARLES DE GAULLE LOCK:

ENTRY: By day: Passage to breakwaters from sunrise to sunset.

Before high tide (HW −3 hours). Length 250 m. or under – max. draft 12 m.

After high tide (HW +2 hours). Length 289 m. (tolerance 5 cm.) plus 1% or under if vessel is engine-driven and length 265 m. or under if vessel is turbine-driven – max. draft 14.20 m. Beam 45 m (tolerance 5 cm.).

After agreement of Captaincy/Pilotage/Tugs is obtained, a second vessel can be taken at the entrance, up to 2 hours after high tide, providing its draft is 12.80 m. or under and beam 40 m. or under.

If tugs have to be changed during the entry manoeuvres of 2 large vessels, the Master of the vessel using the tugs must be warned in advance by a message from the Captaincy.

At Night:

Before high tide (HW −3 hours). Length 250 m. or under – max. draft 12 m. Beam 40 m. or under.

After high tide (HW +2 hours). Length 250 m. or under – max. draft 12.50 m. Beam 40 m. or under.

SAILING:

If length 251 m. or over and beam 39 m. or over, register for sailing between 1 hour before sunrise and 1 hour before sunset, except for Berth AP 1, vessel with bow facing West, where the limit is 2 hours before sunset.

From tide-coefficient 95 onwards (h=5.85 m.) no registration required between HW – 3.5 hours and HW – 0.5 hours.

If the length is between 250 m. – 251 m. and beam is under 39 m. sailing registration possible from 0500 to 2200 hrs. (Summer and Winter) except for tankers, where length is still limited to 250 m. and beam under 39 m.

If length is under 250 m. and beam is under 39 m. sailing registration day and night without restriction.

Draft on sailing: 14.00 m.

Conditions for sailing:

Beam 42 m. or less.

Sailing by day with registration of vessel between 1 hour before sunrise and 2 hours after sunset if the vessel is at Quai de Grande-Synthe or 1 hour before sunrise if the vessel is at the Grain Quay.

Registration of vessel: 5.30 hours before high water or 2 hours before high water if vessel at Quai de Grande-Synthe.

4.30 hours before high water or 1 hour before high water if vessel is at Grain Quay.

Navigation depth in the channel – 13.5 m. minimum.

VIA WATIER LOCK:

Passage prior to high tide: Max. draft 10.50 m. – beam 32 m. or under.

Passage after high tide: Max. draft 10.50 m. – beam 32 m. or under.

Max. length (before or after HW).

By Day: Length 230 m. or under with no vessel at Mole V. Length 220 m. or under with vessel at Mole V.

By Night: Length 220 m. or under with no vessel at Mole V. Length 210 m. or under with vessel at Mole V.

VIA TRYSTRAM LOCK:

Max. draft 8 m. – beam 22 m. Length 150 m. or under on leaving port, Tixier Lock pumps stopped on Pilot's request. Length 140 m. or under on entering port, Tixier Lock pumps stopped on Pilot's request.

CHANNEL – MARDYCK LOCK:

Usable length: 144 m.

Usable width: 11.40 m.

Draft: 3.20 m. for canal level of 0.66 m.

Air draft: 5.50 m. for basin level of 6.30 m.

Speed in channel: 10 km./h. in ballast, 8 km./h. loaded.

DUNES CHANNEL – DUNES LOCK:

Connects the East and West sections of the port.

Length of lock: 185 m.

Usable width: 11.40 m.

Max. Draft: 5.0 m.

Air clearance under bridge with 7.0 m. water height.

Bridge lowered – 5.25 m.

Bridge raised, dimensions of side wall – 15.0 m.

Theoretical depth of channel – 3.50 m.

Max. speed – 6 knots.

BP BERTHS:

By day and by night, on direct entry or with tow relinquished: Length 250 m. or under. Draft 12.50 m. or under (this can be extended to 12.80 m. max. dependent on water level in basins).

DRY DOCK 6 – DOVER – PANAMA QUAYS:

Large vessels may manoeuvre in good visibility and wind less than Force 5 Beaufort.

Max. dimensions of vessels admitted to Dry Dock 6:

Length 289 m.×beam 45 m.×draft 6.50 m. Bow/8.5 m. Stern, through de Gaulle Lock.

On Relinquishing Tow: Entry and sailing registration on Dock 6:

By day, registration from sunrise less 1 hour to sunset less 2 hours for vessels length 251 m. or over or beam 39 m. or over.

Registration from 0500 hrs. to 2200 hrs. if length between 250 m. and 251 m. and beam under 39 m. No limit on registration time if length is 250 m. or under and beam is under 39 m.

Entry Direct of vessels length over 250 m. and/or beam over 39 m.: passage to jetties when daylight 2 hours after HW – latest time 2 hours before sunset.

Direct Sailing to Sea from Dock 6 of vessels length over 250 m. and/or beam over 39 m.: Registration 3 hours before sunset.

Note: Mole V, Eastern section, must be clear for vessels of length over 250 m. swinging in front of Dry Dock 6 and Watier Amont Quay free for passage of vessels of length over 250 m. via Brocquaire Channel.

RECOMMENDED DRAFTS FOR SAILING OR TOW RELINQUISHING MOVEMENTS

Length	150 m.-180 m.	180 m.-205 m.	205 m.-230 m.	230 m.-280 m.
Draft	B 5 m.-S 6 m.	B 6 m.-S 7 m.	B 7m.-S 8 m.	B 9 m.-S 10 m.

B=Bow, S=Stern. (except for repairs)

Western Port:

FLANDERS TANKER BERTH:

In Normal conditions of Dredging – Entry: Passage to jetties from sunrise to 1 hour before sunset if length over 300 m.; entry by day and by night if length is equal to or less than 300 m.

Before high tide (3 hours before HW at Dunkirk East). Draft 19.50 m.

After high tide (HW at Dunkirk East plus 2.5 hours). All coefficients draft 20.50 m.

Tugs must be present at "DW 13/DW 14" 45 minutes before theoretical time of passage to berths of the tanker they are serving.

Theoretical Number of Tugs:

D.w.t.	D.w.t.	No. of tugs	
under	125,000	3	According to Pilot's request
125,000 –	175,000	4	According to Pilot's request
175,000 –	250,000	5	According to Pilot's request
250,000	and over	5 or 6	According to Pilot's request

Sailing: Sailing registration from 1 hour before sunrise to 1 hour before sunset if length over 300 m.; sailing without restriction of length if equal to or less than 300 m.

If length is greater than 300 m.: With coefficient over 95, no sailing registration from HW – 3 hours to time of HW. The interval between registration time for sailing of a tanker from the Flanders Tanker Berth at the time of passage to the jetties of an incoming tanker must not be less than 3 hours.

Recommended draft on sailing:

Length 280 m. or under	Length over 280 m.
8 m. bow/9 m. stern	9 m. bow/10 m. stern

No. of tugs to be used:

D.w.t. under 150,000 tons – 3 according to Pilot's request.

D.w.t. over 150,000 tons – 4 according to Pilot's request.

Note: Wherever possible, between buoys DW 14 and DW 16, large vessels leaving Dunkirk East should not cross tankers entering Dunkirk West.

HEAVY LIFT QUAY: (Quai Pondereaux Ouest (Q.P.O.))

Entry day and night without restriction, if length up to and not exceeding 300 m. and vessel's bow southward.

Sailing day and night without restriction if vessel's bow facing northward.

Sailing by day only if vessel is facing southward and length 250 m. or over.

On entry by day the vessel can be positioned with bow facing North if length equal to or less than 270 m. and draft equal to or less than 16.0 m.

Draft before and after high water 18.0 m.

Heaving off at Heavy Lift Quay/Eastern Port – length up to and including 289 m., beam up to and including 45 m., draft 14.20 m. and less.

Minimum registration for heaving off, 5 hours before passage to quays of Eastern port. Priority on entry if length greater than 250 m. and draft greater than 12.5 m.

OPERATION OF S.F. BP OIL BASIN BERTHS:

North BP Berth:

Max. draft 12.5 m. Length 250 m.

Middle BP Berth:

Max. draft 12.5 m. Length 245 m.

Max. distance stern/connection 122.5 m.

South BP Berth:

Max. draft 10.5 m. Length 230 m.

Max. distance stern/connection 120 m.

Coaster Berth – North Face: (No longer equipped for commercial operations).

(a) West Part, from Bollard 2.5 to Bollard 7 (quay length 80 m.) – Max. draft 6.5 m.

(b) East Part, to the East of Bollard 7 (length of quay 90 m.) – Max. draft 7.5 m.

Max. length of vessels admitted to coaster berth is 120 m. with a draft of 6.5 m.

Coaster Berth – South Face: Solely reserved for river traffic.

Bunker Berths: Reserved for bunkering craft.

Note: The drafts shown correspond to a minimum water depth in the basins of 5.3 m.

At all BP berths, vessels are positioned bow facing West.

Simultaneous usage of BP North and Middle Berths is only possible, under normal conditions, if the total beam of the 2 vessels in question is less than 70 m., otherwise the manoeuvring of these vessels, both on entry and sailing, can only be envisaged by day and in fine weather.

Vessels of larger dimensions than those covered by this note can be admitted to the following berths only after prior study and subject to special conditions of draft, berthing and securing cables, etc.

Overflow rafts: See Article 412 of Permanent Instruction No. 57.

Max. length of vessels, with draft of 12.5 m. transiting Brocquaire Channel is fixed at 250 m.

HEALTH: For ships coming from *(a) All European Countries:* Declaration of Health is not obligatory but general International Certificates are controlled. *(b) Other Harbours:* Admission subject to Declaration of Health and usual controls of certificates. Admissions in Free Pratique only in daytime except special cases (intervention of a physician). Request for Free Pratique may be made to Sani-Port, Dunkirk, through Boulogne Radio. In case of necessity, health service can – on request – intervene at night.

RADIO: Dunkirk Harbour Station (FFF), VHF call sign "Dunkerque Port", for messages about port service through VHF Channels 73 and 16. Communications other than in VHF made through Boulogne Radio (FFB).

VHF: Dunkirk Port Station maintains continuous watch on VHF, Channels 73 and 16.

RADAR: There is radar at the control tower of harbour. It is not a guiding radar.

TUGS: Tugs normally join vessel between Buoys DW.28 to DW.30 and DW.16. Smaller vessels are joined by tugs in the outer port.

On departure tugs must be ordered with a 2 hour notice for Dunkirk-East and a 4 hour notice for Dunkirk-West. Moreover, for manoeuvring between 1900 hrs. and 0700 hrs. tugs must be reserved before 1600 hrs. and ordered before 1800 hrs.

It is possible to cancel or delay any order for tugs, without indemnity, provided this request is done with a 1 hour (daytime) and 2 hours' (night-time) notice for Dunkirk-East, with a 2 hours' (daytime) and 4 hours' (night-time) notice for Dunkirk-West.

Also see "Restrictions".

CONTAINER FACILITIES: *Dunkirk-West:* Quai de Lorraine and Quai de Flandre. Total length 1,200 m. equipped with 3 container gantry cranes capable of lifting 45 tons on spreaders for 20 ft. – 40 ft. units. There is an additional 200 m. of quay under construction for container activities.

ROLL-ON/ROLL-OFF FACILITIES: *Dunkirk-West:* Quai d'Alsace is equipped for direct transhipment of vehicles, trailers and wagons. Quai de Lorraine is provided with movable steel ramps for direct transhipment of vehicles and trailers. A fixed quarter ramp has been installed at the West end of Quai de Lorraine. Quai de Ramsgate for shipment of vehicles.

Dunkirk-East: Quay Freycinet VII, the berth South of Freycinet VI, has been provided with a fixed ramp for roll-on/roll-off for ships up to 8 m. draft and 22 m. beam, and Quay Freycinet XIII, South part, is fitted with a fixed ramp for ships up to 12.50 m. draft.

BERTHING: Berthing priority is decided by Port Captain's office. Vessel is informed by radio of the location and priority given to her.

Dock	*Quay*	*Length* (m.)	*Min. Depth of water* (m.)

Mobile Cranes (Port Services): 1 at 6/10 tons and 2 at 17/36 ton
Possibility of mobile cranes from other yards.

BULK HANDLING FACILITIES: Bulk Quay No. 1, formerly known a the ore quay. Equipped with 2 gantry cranes. Principally used for iro ore destined for Usinor Dunkirk and Usinor Valenciennes. There is loader for clinker at the Western part of the Quay.

Bulk Quay No. 2, a common quay with 2 berths belonging to th Dunkirk Port Authorities. Equipped with 2 polyvalent iron ore/coal gant cranes. This quay is accessible for largest ships able to enter the por Used to discharge coal destined for the Usinor coke mill, also receive coal for other operators, manganese ore and all iron ores for receive other than Usinor.

Bulk Quay No. 3, an extension of the Usinor Quay for iron ore carg Equipped with 3 gantries of 50 tons capacity. Permissible draft 14.20

Quai de Grande-Synthe, situated West of Bulk Quay No. 2. Berth 600 m. long with a min. depth alongside of 14.8 m. Bulk carriers 80,000 d.w.t. with a draft up to 14.2 m. can be accommodated.

Unloading equipment consists of 3 cranes with grabs, each with max. discharge capacity of 565 t.p.h.

A new silo is situated at Quai de Grande Synthe. Capacity 100,0 tons. Permissible draft 14.0 m. 1×1,000 t.p.h. shiploader.

The second new silo, (Silonor), will have horizontal handling a storage under a shed of 100,000 tonnes. Half of the capac (50,000 tonnes) currently available.

Sugar is handled at Freycinet No. 9 silo capacity 83,000 tonnes.

Dunkirk-West: The Western Bulk Terminal (Q.P.O.): For lage b carriers (iron ore and coal) with 1 berth for vessels up to 220,000 d. (according to dredging conditions). Equipped with 2×50 ton grab gan cranes linked to storage yard with a 600,000 cu.m. capacity.

BRIDGES: Bridges of locks and wet docks are closed to navigation short periods to allow trains or work hands to go. The maritime traffic practically never disturbed.

OIL TANKERS: The following tanker berths are available:

West Port: Flanders Oil Berth: max. draft 20.50 m. Discharge lines to Total Refinery, and to the B.P. Refinery. The access channel has been dredged to a depth of 22 m. at L.W. The turning circle at the entrance to the Outer Port West has a diameter of 1,400 m. Max. discharge rate 20,000 cu.m./hr.

East Port: S.F.B.P. Oil Dock.

Middle wharf North, max. draft 12.50 m. Loading/discharging lines 2×22 in. and 3×16 in. lines, bunker line 16 in. diameter.

Middle wharf South, max. draft 12 m. Dimensions of lines as for Middle wharf North.

Coasters Wharf, max. draft 7.50 m. Loading/discharge lines 6 in.

Bassin de Mardyck Oil Port: Appt C.F.R. – Poste Est. Max. draft 11.70 m., Poste Ouest draft 14.20 m.

Facilities for discharge of dirty ballast are available at all main tanker berths.

Stocknord Pier: Pier of length 440 m. with 4 platforms.

P.1 – For barges only.

P.2 – For barges and coasters up to 100 m. length and 8.50 m. draft.

P.3 – Oil and Gas. For vessels up to 100,000 d.w.t., 280 m. length and 14.20 m. draft.

P.4 – Gas only. 10,000 d.w.t. Max. length 160 m. and draft 9.5 m.

C.P.A. Quay: Berth at Mole V. Mainly for Fuel and Vegetable Oil. For vessels up to 250 m. length and max. draft 9.60 m.

GAS TANKERS:

Appt. C.F.R.: Bassin de Mardyck: 1 berth for butane and propane. East side of pier for vessels up to 11.60 m. draft.

Stocknord: Bassin de Mardyck. The total length of the quay is 440 m. with a width of 30 m.

Alongside this quay, are berths or platforms P1, P2, P3 and P4.

P1: Oil only.

P2: Oil only.

P3: Coasters of 90 m. LOA and tankers of 280 m. LOA, d.w.t. 100,000 tonnes on East side of pier.

P4: Coasters LOA minimum 60 m. and gas-carriers of LOA max. 160 m., max. d.w.t. 10,000 tonnes on West side of pier.

Products: LPG, ethylene, FR and PP.

P3 can take LPG products and chemical products: Vessels up to 280 m. length.

Distance from P3 to storage areas: Approx. 800 m. with a 10 in. line.

Nitrogen in gas-form available on site (2 in. and 3 in.).

P4 is for vessels of LOA 160 m. max. with a d.w.t. of 10,000 tonnes, and a max. draft of 9.5 m. Beam – no limits.

Products: LPG, derivates, propylene, ethylene, butadine. 10 in. lines and arm flanges of 8 in. ASA 300. Products can be refrigerated or at ambient temperature.

Connection with P3 and with the storage areas.

Nitrogen in gas-form on the quay (2 in. and 3 in.).

Length of platform: 25 m. Width of platform: 12 m. Height above water line: 5 m.

Loading and discharge by 8 in. Luceat arms.

Tidal movement at the quay is minimal: Approx. 1.0 m. min./max. Predominant winds from the West.

Transhipment from vessel to vessel can take place at Berths P3 and P4 by connection line between the two berths.

The possibility of transhipment with a first vessel berthed and a second connected to it is accepted. For this to happen:

1. Advise the authorities minimum of 24 hours before the operation.
2. A technician must be on hand.
3. The owner must supply hoses and defences.
4. Port rights and occupation of the quay is to be discussed with the owner.
5. A tug must be available for both vessels.
6. If the wind is blowing above Force 5, the operation must be stopped and the connected vessel must go out to the roads with Pilot and tug, if the quay which can accept the type of vessel is not free.
7. Transhipment from vessel to vessel via connection lines from Berth P4 and Berth P3. If during this operation a priority vessel must at all costs berth, the operation of transhipment must be stopped and one of the vessels must connect up to continue the operation or go out into the roads (Pilot and tug necessary).

Port Entry: It must be emphasised that the depth of water at the port entrance towards the Mardyck Basin at Charles de Gaulle Lock, foreport East is 14.20 m. max. with a beam of 45.05 m. maximum.

Storage facilities: At approx. 800 m. from the Stocknord quay. 2 LPG – Propylene storage points of around 3,500 cu.m. each take propane for the account of the company CDF Chimie. They have a service pressure of 15 kg/sq.cm. and a temperature of −10°C.

From these 2 facilities, it is possible to load/discharge to and from lorries (18 tonnes) or trucks (45 tonnes).

Consumption of vapocracker (set for between 300 tonnes and 500 tonnes per day) is with the use of propane and naphtha.

List of storage points at Stocknord:

2×3,500 cu.m.	Propane–butane–Btd–propylene operating pressure 15 kg/sq.cm. Minimum temperature −10°C.
1×17,000 cu.m.	C2
1×17,000 cu.m.	C3
1×9,000 cu.m.	C4
8×6,000 cu.m.	Essences
9×6,000 cu.m.	Pyrolised essences
6×20,000 cu.m.	Naphtha, gasoil, diesel and fuel oil
2×2,000 cu.m.	(drums) chemical products
1×1,000 cu.m.	(drums) chemical products

Trains–trucks: Stocknord can hire, load, discharge trucks or lorries.

By truck: convoys of 1,000 tonnes of all products and throughout France.

By lorry: 15–20 tonnes LPG–ethylene, etc.

By truck: 45–50 tonnes each, filling in groups of 6; for each group of trucks filling takes approx. 20 minutes for all liquid products.

Nitrogen: Possibility of degassing at Berths P3 and P4 (from 800 to 1,000 cu.m. per hour of nitrogen in gas-form).

Heater: Currently, there is a propylene land-based heater (350 cu.m./hour) of the steam type working from −47°C to +5°C.

This heater can be connected to the lines of the new propane storage facilities: time involved, approximately 1 month.

STEVEDORES: Each Master will contact his consignee.

MEDICAL: Hospitals and all medical facilities.

DENSITY: Salt.

FRESH WATER: Available in unlimited quantities. Numerous hydrants on all wharves.

FUEL: Supplied by barges or tank lorries if no connection at wharf. Fuel, diesel and gas oil available. Requests for bunkers must be made 48 hours in advance to Agents.

FIRE PRECAUTIONS: The preventive measures are taken for tankers are those of the I.M.O. recommendations. Rounds of the port officers. Ship's Master is given instructions of the harbour concerning tankers if necessary when filling the I.M.O Checklist. In case of storm, the Harbour Officer can stop loading or discharging.

TOVALOP Certificate or similar for tankers.

CUSTOMS ALLOWANCES: Tobacco: Amount allowed for each member of crew: 200 cigarettes or 200 gramme tobacco. Wine and/or Spirits: 1 bottle.

AIRPORT: Calais, Marck, 35 km.; International airport of Lille Lesquin, 80 km.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: 1st January; Easter; Whitsuntide; 1st May; 14th July; 15th August; 1st November; 11th November; Christmas. On public holidays, handling operations can be carried out from 0600 hrs. to 1200 hrs.

POLICE/AMBULANCE/FIRE: Police 17; Ambulance 28646054; Firemen 18.

TELEPHONES: Connections possible at all berths.

SERVICES: No specific port equipment for gas-freeing. Dirty ballast can be received at all oil terminals and by barges of the Port Service. Compass adjustment, radio repairs.

SHORE LEAVE: Crew are allowed ashore.

IDENTIFICATION CARDS: An official identity certificate is compulsory ashore (Passport, Identification Card, Seaman's Book, etc.).

DEVELOPMENTS: Canal des Dunes (connects Dunkirk-West and Dunkirk-East) for barges with length 200 m., beam 12.0 m. and draft 5.50 m.

Construction underway of Pechiney factory with quays to handle bauxite and aluminium to the South of the heavy lift quay.

SHIPMASTER'S REPORT: December 1988 (Updated 1990).

Pilotage: The pilot cutter cruises South of Dunkirk light-float when vessel is expected. The pilot boards from a small launch. Alternatively the pilot can board at Calais. Pilot on VHF Channels 16, 6 and 72. Pilot Office Telex No. 820902.

If vessel wishes to order a pilot for leaving, a minimum of 2 hours notice is required.

The transit time, including lock time, from time of pilot boarding until alongside in Stocknord (Mardyck Basin) is about 3 hours. Only one pilot used.

Anchorage: The anchor is 1.2 miles N.W. of Dunkirk light-float. The anchorage is exposed and the holding ground is poor. Vessels are to report to Dunkirk Pilot before anchoring.

Approaches: The approaches to the East Port are well buoyed. For large vessels the entrance is narrow, especially when swinging to starboard to enter Charles de Gaulle Lock.

Maximum size for entering the Lock: LOA 289.05 m., beam 45.05 m. and max. draft 14.2 m.
